The increase will be perceived to be within the last four years; the casual poor are those who go twice a week, I should say Tuesdays and Fridays, to receive their pittance when they have no work to do.

Mr.
John Ballance.

8 June,
1832.

8379. What is the population of that district?—I take the population of those three parishes at 100,000; I give about 60,000 to Bethnal Green, I give about 20,000 to Spitalfields, and I give about 20,000 to Mile End, I ought to give it at rather more. I have excluded the parish of Shoreditch, because though weaving is carried on there, it is carried on to a much smaller extent than in the other parishes.

8380. Is that population dependent on the silk manufacture for support?—About 50,000 of those are entirely dependent upon the silk manufacture for support; if there be 16,000 looms, it will be found that about three persons will subsist by each loom, that makes 48,000, and the remaining number, 50,000, are more or less interested, as they depend upon the wages that are circulated through this district.

8381. Have you made any comparison of the reduction in the amount of wages, circulated in that district, as compared with the period previous to 1826?—I am satisfied that I considerably understate what I am about to name, when I say that there is at the rate of 300,000*l.* per annum paid less in wages to the operatives of Spitalfields now than was paid to them before the opening of the ports in 1826.

8382. What has been the effect produced, so far as you have been able to observe, by the reduction of wages, on the character and habits of the population?—I should say, generally, very demoralizing effects, and I wish, if the Committee will allow me, to speak more particularly to this subject. The injury done to the labouring classes within the last six years, from the reduction of wages and the loss of work, has been very great. I have been well acquainted with the district of Spitalfields for forty years. I knew its former condition, and I know its present condition, and I have watched the change which has gradually been taking place since 1826, upon the general character and habits of its population. I could detail instances of suffering and wretchedness that would harrow up the feelings of this Committee; but I wish to confine myself rather to general effects, such as idleness, destitution, depraved habits, and I must add disaffection to the Government. In the winter of 1826, from the December of 1825 to the May of 1826, there were 7,721 looms thrown out of work to prepare for the introduction of foreign wrought silks in the month of July following; upon these looms there were 4,400 families dependent for support. I beg to add, this was taken by an actual survey from house to house, and the number put down in the whole district; then the distress began, some thousands parted with every thing they had to procure food for themselves and their children, and Spitalfields has never recovered from the blow which was then struck at it. The foreign manufacturer, from his ignorance of our markets could not immediately avail himself of all its advantages, and therefore trade revived a little in consequence of that, and the great scarcity of manufactured goods, from the abstraction of work; but by the end of the year 1827 and 1828, the knowledge, which the foreigner had obtained of our market, and his increased facilities for smuggling, began to give him a marked ascendancy; the consequence was, that the autumn of 1828, and the greater part of 1829, was a period of severe distress for the silk trade; wages were further reduced, and for nearly nine months there were about 5,000 looms unemployed. I say "about," for at that time we did not go from house to house, but took proportions; this long state of suffering produced a temporary re-action in 1830, but all the while manufactured silks, especially the richer fabrics, where labour is more largely expended, were being undermined by foreign manufacturers, and within the last nine months the distress of Spitalfields has been greater than at those periods to which I referred. I said that from five to 6,000 looms were standing the last winter, and that at once throws out of employment 18,000 persons; the point of difference between the distress of 1826 and now, is this, that those who had work were working at 10*d.* a yard, and those at work in 1832 have been working at 6*d.* and 7*d.* a yard. These repeated calamities have reduced the population to a very miserable and distressed condition; I allude now to many that have been kept at work during those periods. They are to be found in many instances without a bed, without furniture, with scarcely any clothes to cover them, a little straw heaped up in one corner of the room for the family to lie upon. I have known

Mr.
John Ballance.

8 June,
1832.

instances this last winter, I can give names, where a man has had to support himself, his wife, and three children, upon one loom's work, at 5*d.* per yard, which yielded him about 7*s.* per week, I have known his children crying for bread, and there has been none to give them, nor money to get it; yet those very persons could earn formerly, and did earn from 15*s.* to 18*s.* a week, they had the necessaries of life, and were contented and happy; and I must add further that this misery and wretchedness has produced an awful change in the public morals of the district. I speak from personal knowledge when I say, that the weavers of Spitalfields were formerly proverbial for good order and moral conduct, their children were decently clothed and educated; but their overwhelming distresses have produced a recklessness of character in which virtue and good principle are lost. The Sunday is not now as it used to be, a day of rest among them, it is a day of labour, and they say they must work seven days, or they cannot live. I must also observe upon their feelings towards the Government; they attribute to the measures of Government, I do not say whether they are right or wrong, but I speak to the fact, they do attribute to the measures of Government all their privations and miseries; and I do not in the least exaggerate when I say, there is a feeling of deadly hatred working in many thousands of them to the Government of their country, which presents a contrast as striking as it is painful to their former known loyalty and attachment.

8383. There has been during the years you have mentioned a large importation of raw silk, how do you reconcile the distress, you have been describing in Spitalfields to that circumstance?—Silk goods are made heavier now than they were formerly; if I work up a thousand weight of silk in goods, weighing one ounce to the yard, and I work up a thousand weight of silk in goods, weighing an ounce and a quarter to the yard, nothing can be clearer than that; I have one-fourth less in yards length, and paying the work people by the yard there is one-fourth less wages paid, but I do not wish to make this assertion without proof; and I hold in my hand an account of the produce of an hundred looms, from 1822 to 1831, showing the weight of silk worked up by them, with the wages paid in each year, including all charges. I am now exhibiting, not as formerly, the price for weaving only but that of winding and warping also. This is extracted from our accounts upon plain silks.

[The said Account was delivered in, and read as follows:]

In 1822	-	-	100	Looms	worked	up	lbs.	5,964	-	Total	Wages	paid	£.	4,803
1823	-	-	100	-	-	ditto	-	5,530	-	-	-	ditto	-	4,294
1824	-	-	100	-	-	ditto	-	5,516	-	-	-	ditto	-	4,151
1825	-	-	100	-	-	ditto	-	6,232	-	-	-	ditto	-	4,690
1826	-	-	100	-	-	ditto	-	5,543	-	-	-	ditto	-	4,011
1827	-	-	100	-	-	ditto	-	6,102	-	-	-	ditto	-	4,010
1828	-	-	100	-	-	ditto	-	7,210	-	-	-	ditto	-	4,242
1829	-	-	100	-	-	ditto	-	7,500	-	-	-	ditto	-	4,150
1830	-	-	100	-	-	ditto	-	7,730	-	-	-	ditto	-	3,891
1831	-	-	100	-	-	ditto	-	7,680	-	-	-	ditto	-	3,490

This account shows nearly 2,000 lbs. weight of silk more worked up, and 1,600*l.* less paid for it in 1822 than in 1831.

8384. Were the looms employed upon the same goods?—I have selected an hundred looms, that is a large number, in order to give a large surface; they consist of sarsnet, of gros de Naples, of ducapes and satins, an assortment of what I make. I make goods now selling from two shillings to seven shillings per yard.

8385. Have you taken the same proportions?—Precisely; I now beg to give the rate of wages per week that my weavers have earned from 1822 to 1831; from 1822 to 1826, their weekly earnings averaged 15*s.* 6*d.*; in 1826, 12*s.* 10*d.*; in 1827, 12*s.* 6*d.*; in 1828, 12*s.* 10*d.* in 1829, 12*s.* 4*d.*; in 1830, 11*s.* 2*d.*; in 1831, 9*s.* 9*d.*

8386. Is this the amount they earned when they were at work?—Yes, I am now giving averages; they may be fractionally a penny more or less.

8387. Can you give the highest and lowest earnings of any weaver?—The highest earnings of my weavers is 20*s.* 8*d.* per week, and the lowest is 6*s.* 6*d.* per week. The former is taken upon the richest black satins, which I make worth about 7*s.* per yard. I had many of them going in 1826, but the subsequent importations from France, of rich satins, have compelled me almost to discontinue making

making the article. The same weavers are now upon works of a much lower description.

8388. Has there been any change in the description of silk goods manufactured in Spitalfields, at the present time, as compared with the time prior to 1826?—The staple manufacture of Spitalfields, before the opening of the ports, consisted of plain silks and fancy and figured silks, chiefly of fine and rich fabrics.

8389. Does that description apply to plain as well as the figured and fancy, were they generally rich fabrics?—Chiefly.

8390. Have any of those been discontinued?—Yes, especially the richer silks, and almost entirely the fancy and figured branch of the silk trade.

8391. Has the consumption of this description of silk fabrics been as considerable in Great Britain, within the last five years, as formerly?—The consumption of such silk in Great Britain has been much greater; no one will deny that who is at all acquainted with the trade.

8392. How then has this increasing demand been supplied?—From the Continent, especially from France.

8393. Has not Manchester supplied the demand as well as the Continent?—No; the staple silk trade of Manchester does not consist of the same sort of goods as were formerly made in Spitalfields, or are now imported from France.

8394. Are you able to inform the Committee what description of silk goods Manchester does manufacture?—Two sorts, silk goods mixed with cotton or worsted which certainly cannot be called a part of the silk trade; and the goods that she makes wholly of silk, are for the most part low priced, of coarser texture, and with reference to the plain articles more adapted for exportation.

8395. There are three terms used, plain, figured, and fancy, what do you mean them to designate?—Plain are those which have no pattern whatever; fancy is considered the higher class of figured goods, and figured is a technical term occupying a space between both.

8396. On what grounds are those fabrics you call fancy, do you refer to gauzes?—No.

8397. You speak in all cases of solid silk goods?—Yes, my observation is confined to the solid silk goods.

8398. Do you know an article called Gros de Tour?—Yes.

8399. Is that plain or figured?—I should call that plain; the sole difference between a gros de tour and ducape is, that one has about 70 or 80 shutes per inch, the other has between 50 and 60 per inch, the warp being proportionably richer.

8400. Is not the plain article an article that has an even surface?—Certainly; I do not know whether the question referred to the gros des Orleans, that is a figured article. I have said that silk goods, mixed with cotton and worsted, and silk goods chiefly of a low character and texture, whether they be figured or plain, constitute what may be called the staple silk trade of Manchester. I now exhibit two patterns, this is one I call silk mixed with cotton, which is not the silk trade. The Jacquard looms at Manchester are largely employed in making that article. As it regards goods, made wholly of silk, at Manchester, I exhibit this pattern of a figured [*showing a pattern.*] I apprehend the price to be from 2s. to 3s. 3d. per yard; the person who gave it me has had it in his warehouse since the 10th of March, he found it difficult to sell it, and in the interval has sold some hundreds of pieces of French silk, which had been preferred, though 2s. a yard dearer.

8401. Has Manchester carried on the silk trade for many years, or has it recently grown up there?—She has had this trade for a considerable number of years; a manufacturer told me the other day, that as far back as 1806, 1807 and 1808 he had 1,200 looms at work there, upon silk and silk mixed. I place this evidence against that of another witness, who said, that in the year 1819 there were not 50 looms at work at Manchester on silk; and I beg to add, the same manufacturer, who is now out of the trade, told me, and I give it on his authority, that he was not the only manufacturer that had looms at work on silk and silk mixed in 1806, 1807 and 1808; he gave me the names of six or seven other manufacturers at Manchester, who had likewise looms at work on silk and silk mixed, though not quite to the same extent.

8402. Is it not since the opening of the ports to foreign silk that the trade of Manchester has sprung up?—There was a steady increase of the manufacture of

Mr.
John Ballance.

8 June,
1832.

Mr.
John Ballance.

8 June,
1832.

silk goods and silk mixed, from 1806 to 1826, subject, of course, to occasional fluctuations.

8403. Was the trade of Spitalfields affected at that time by the increase of manufactures at Manchester?—I have said that the fabrics at Manchester and Spitalfields were essentially different, and they went to an entirely different class of consumers; in point of fact, throughout that period of 1806 to 1826 I have known seasons when the Manchester silk trade has been depressed and the Spitalfields trade has been active, but I recollect no instance of the reverse; generally speaking, the prosperity of the one indicated the prosperity of the other; I have it on the authority of Manchester manufacturers: one of them said to me—“We stood, before the opening of the ports, relatively with Spitalfields, as we now stand relatively with Lyons; formerly we watched the patterns that came out from the manufactures of Spitalfields for the spring sales in March and April, that we might instantly give them upon a lower coarse texture; we came in with those patterns about three months after, for a second class of consumers; thus Spitalfields was always ahead of us three or four months in respect of fashion, and took the lead of us in respect of quality: we now often do the same in relation to the patterns from Lyons.”

8404. Is that description of silk goods you have mentioned as being made at Manchester confined to that place?—I have said that Spitalfields has lost its trade in rich silks, especially fancy and figured silks, and in some instances it has adopted the low Manchester trade, as a miserable substitute for what it has lost; if I may use the term, I will say Manchester has travelled to London, and hence a competition has arisen between those places, Manchester and Spitalfields, which was not felt before, or at least not to the extent, and which has injured both parties; I am speaking now of the staple trade of those places respectively; I do not mean to say that you will not find a single piece made in Manchester similar to Spitalfields, or in Spitalfields similar to Manchester, but I take the staple trade of the two places, as giving the character of the trade.

8405. You say the change has injured both parties?—I mean, that Spitalfields has taken up the Manchester trade more generally than it used to do; there is a competition existing between Manchester and Spitalfields on the low article, which did not before exist to the same extent.

8406. You state that you recollect no instance of depression in the trade of Spitalfields not felt at Manchester; has it been felt within the last nine months?—Manchester being a cotton manufacture principally, the population engaged in silk is comparatively small. I believe the population of Manchester is about 240,000; of that there are not, I am informed, one-tenth of them in silk, and of course the distress will not be so severely felt as that felt by the districts which are exclusively silk; but through the last winter Manchester itself was distressed; I will only advert to the town of Middleton, which is wholly a silk district, and it will appear in evidence that distress was very severely felt in that district.

8407. To what do you attribute the distress in the silk manufacture of Spitalfields?—I attribute it to the opening of the ports to foreign silk goods, in 1826.

8408. How do you prove that to be the cause of it?—I say, generally it greatly diminished the demand for labour; first, by the facilities which this measure has given to smuggling, which has ever since been carried on to a very great extent, and then, by the ruin, or nearly so, of the rich trade, especially the fancy and the figured branch of the silk trade, peculiar to Spitalfields. It must not be concealed, that the foreigner possesses strictly what may be called a monopoly of the English market, in respect to the fancy and figured branch of the silk trade, and we do ask the Legislature of our country to break down this monopoly, for we say it paralyzes industry in that district, and is producing misery and discontent.

8409. In your opinion the fancy silk goods have been supplied from France, and not from Spitalfields?—Yes.

8410. What advantages does France in particular possess over England?—The advantages of France and the Continent (I link them together, for I by no means restrict these advantages to France); France may have greater advantages than other parts of the Continent; but the other parts of the Continent have immense advantages over England, in relation to the silk manufacture; but to speak more particularly of France, I will mention four advantages, one is the raw material; another the low rate of wages for working up that raw material; another the large amount of her annual exports of manufactured silks; and the last is her possession of

of foreign markets : before I enter upon these points, I wish to be distinctly understood that the stress I lay is upon the combination of all these ; that of the raw material is only one element among several others ; and if that difficulty were removed, it would still leave us incumbered as much as ever with the three others ; I do not mean to say that her possession of the raw material is not an advantage, but it is only one element of her advantages, and if removed would still leave us exposed to great difficulties.

The exclusive possession of the raw material secures to France two advantages ; the one is in respect of quality ; there is a large proportion of that raw material, which is the best in the world, and then it gives her an advantage in relation to price, that superior silk is rendered to her manufacturers, in trams and organzines, from $7\frac{1}{2}$ to 10 per cent. less than the best silks of Italy can be purchased in this country by English manufacturers, independent of the import duties : in proof of this I beg to produce this paper.

[The same was delivered in, and read, as follows:]

Mr.
John Ballance.

8 June,
1832.

This exhibits sometimes 15 per cent. difference between French organzine purchased by manufacturers at Lyons, and Piedmont organzine purchased by manufacturers in London, exclusive of duty. I put this in verification of my declaration, that France, by her exclusive possession of the raw material, secures to herself an advantage of from 7½ per cent. to 10 per cent. I now advert to the second point, the low rate of wages paid for the working up of the raw material; these wages are now about 70 per cent. less than the wages paid in England.

8411. How do you acquire your information as to wages in France?—We sent over, in 1826, an agent to inquire into the state of the manufacture at Lyons previous to the opening of the ports. He brought back particulars of the prices of weaving, winding, &c.; the wages on ordinary works, say gros de Naples, were at 5½ d. per yard, we were then paying 10 d. per yard; in 1829, there was an extensive correspondence conducted with different parts of France on the part of the Silk Committee; the wages then were reduced; the prices were from 3½ d. to 4½ d. per yard; the same article in London was 8 d. per yard.

8412. Is the agent to whom you refer now in London, or is his attendance to be had?—I cannot say; I beg expressly to state that he went over in December 1825 or January 1826; he returned about February; it is from the accounts which he brought with him I give the statement as above for 1826. The wages for dyeing, winding, warping and weaving, at Lyons, in December and January last, were about 70 per cent. less than in Spitalfields; of course I do not bring into comparison the highest wages paid at Lyons with the lowest possible wages paid in Spitalfields;

Spitalfields; I mean those wretched wages that compel the poor to subsist by the poor laws.

Mr.
John Ballance.

8 June,
1832.

8413. You take the average rate of wages in Spitalfields and the tariff at Lyons? —They were working under the tariff; I come now to the third branch, and that is the exportation of French manufactured silks; I was requested by an honourable Member of this Committee to put in on my examination a paper as to what had been submitted in conversation by Mr. Doxat; I saw Mr. Doxat this morning, and requested him to come and put in this paper himself; he said he would come with pleasure if it was desired, but it would be extremely inconvenient; he therefore requested me to put in this paper for him; I beg to add that I have examined these items with the official printed Returns from the French Custom House for 1829, showing the weight and the value of their exports of manufactured silks, and the paper, so far as it is an extract from that official account, is correct; it exhibits this, that the exports of France for the year 1829 amounted in round numbers to 2,100,000 English pounds weight of French manufactured silks; manufacturers will bear me out in the declaration, that the original weight of raw silk producing these manufactured goods must have been very nearly three millions; at any rate I will take it according to the statement as under, 2,800,000lbs.; then there is very nearly three millions pounds weight avoirdupoise raw silk manufactured in France for exportation, and I beg to add, that 1829 will, I apprehend, not appear a very large year for exportation; but that the other years will represent an amount nearly the same.

[The same was delivered in, and read as follows:]

The exports of manufactured silks from France alone, of their own manufacture, in the year 1829, appear to have been

Kilogrammes 958,000, amounting in value to - francs 111,156,000

Equal to lbs. 2,109,000 English, and to - - - £. 4,402,000 sterling.

i. e. The estimate of the prime cost in France.

But which would correspond to about £.6,000,000 sterling, if we consider what would be the market value here of the high and very high classes of goods distinctly enumerated in the said mentioned official Returns of the Exports of French manufactured Silks.

It should be observed here, that according to every calculation that can be made of the correspondence that exists between lbs. 2,109,000 of manufactured silk goods of those high and very high descriptions, they would require even more than lbs. 2,800,000 of raw and thrown silks, at which Mr. Ballance has seen an estimate made by Mr. Doxat, of that corresponding quantity; and it should be further added, that considering the high and very high classes of the said goods, those lbs. 2,800,000 must be for the very major part composed of fine silks.

My argument is this; the export of France is nearly double the amount of Italian raw silk worked up in this country, for the manufacture of similar articles; the importation from Italy is about 1,500,000 pounds of silks of a high standard, calculated to make fine fabrics; France exports of manufactured silks, a quantity that would require very nearly 3,000,000 of raw silk of a similar standard to produce those goods; hence she exports very nearly double what we manufacture; I submit that this incontestibly proves the ability of France, in the event of any occasional obstructions of her commerce with other countries, to overwhelm this country at a given moment with silk goods. France it is well known sends this quantity to Greece, to the North of Europe, to America; and for the last six years, Great Britain has been her customer for those silks; and having this export trade, the possession of those markets, and the controlling influence of them by quantities, it is equally evident that there is a scope for the exercise of talent and skill, and industry, and a confidence in the application of it that must bear down the feeble opposition of the English manufacturer; I say feeble, not because the English manufacturer has not talent and skill, and industry, and capital equal to his rival, but solely that on account of his local disadvantages, he has no confidence in the application of his capital; he has tried it over and over again for the last five years, he has been beaten out of his own market with serious loss, not of profit only but of capital.

8414. With regard to the benefit which France has in the command of the markets, is there any peculiar advantage she has in the expense of the construction of patterns?—That grows out of her command of foreign markets, which is my

Mr.
John Bailance.

8 June,
1832.

fourth point; her possession of all those markets gives that scope to her manufacture of any article, that necessarily reduces the price of the individual sales; if an article of fashion ceases to be fashionable here, she has instantly the markets of North America and Greece to which she can resort; the very reverse is the position of the English manufacturer, for he is compelled to sell an obsolete article to the very persons who have already been glutted, not only with this article, but with the foreign one likewise.

8415. Is there not also this advantage; supposing that you made a pattern, a fashionable article, if you made a great many of that same pattern of that fashionable article for one market, of course you will very much reduce the price, the price being very much in relation to the quantity of any fashionable article; has not the French manufacturer this advantage, that when he contracts for an English house to make a certain number of ribbons of a particular pattern, he can also contract with a German house, and an American house for instance, and consequently the expense of the pattern is spread over a much wider amount of ribbon than that of the English manufacturer, who having only the English market, must put all the expense of his pattern on a certain quantity of ribbon for the English market alone?—There can be no doubt of that, that the restricted supply of English silks, as compared with the large consumption of French silks, must proportionably augment the price of the incidental charges.

8416. How do you propose to counteract those numerous advantages which you state the French to enjoy?—I say at once, and I say it boldly, because I know I am saying that which is strictly true; not by any lowering of duties. The only effectual relief is the exclusion of foreign manufactured silks; I lay great stress upon the word effectual, because I do not mean to say that there may not be partial relief; but I do say that there will be no effectual relief. This partial relief to the trade would be afforded in two ways, by extending the export trade, and by a better system of protection against smuggling.

8417. What description of silk goods are exported from this country?—Chiefly handkerchiefs, and low priced gros de Naples.

8418. How is the export of those articles beneficial to the trade generally?—By giving employment to the throwing mills, and relieving the market from the pressure of low priced goods. Since Spitalfields has been deprived of her rich trade, those coarser goods have been made more generally than formerly; and though the seat of this manufacture of low priced goods is in Manchester, if she could export them, she would not send them to London for sale.

8419. Having to contend with the great advantages you describe as peculiar to France, how can the export trade be extended?—We have been able to export by means of a debenture of 3*s.* 6*d.*, which was granted in 1829; and if this debenture were 5*s.* instead of 3*s.* 6*d.*, the export of those articles, I apprehend, would be greatly extended.

8420. When you speak of a better system of protection against smuggling, would you propose to lower the present duties?—No; this measure would only aggravate the evil it is meant to cure; the smuggler would again lower his price, as he did in 1829, when the experiment was made.

8421. Have you made any calculation as to the amount of reduction that would take place in the cost of manufactured silks, by lowering the protecting duties upon foreign thrown silks?—Assuming that the English manufacturer received the full benefit of this reduction of duty, even in that case the cost upon heavy goods would be reduced not more than about five per cent., and upon rich and light fabrics, about three per cent.

8422. Would this reduction, in your opinion, meet the difficulties of the manufacturers, and enable them to come down to the smugglers' price?—By no means; it is evident in respect of fancy and figured silks, the question would not be in the least touched by it; and in respect of plain silks, there would still remain a difference between him and the smuggler of from 8 to 10 per cent.

8423. At what price per cent. do you consider broad silk goods can be smuggled into the country?—I am told at from 10 to 15 per cent., according to circumstances; but my calculation is upon the higher amount.

8424. When you say you are told, is that authority on which you can entirely depend?—I have no doubt of my authority, and this is further confirmed by my own inspection of the goods; I am satisfied at the price at which they are stated to me to be purchased, the per centage for smuggling cannot have been higher than 15.

8425. Do

Mr.
John Ballance.

8 June,
1832.

8425. Do you advert to seizures?—No; I believe the system is of this kind, that they will offer to smuggle goods in at 20 per cent.; but the question is, on what value is the 20 per cent. taken? in most instances it is upon a reduced value, not the real value of the goods of course; by so much as the estimated value is reduced, by so much is the real price of the smuggler reduced in comparison with the duty that the importer would otherwise pay; therefore the rate per cent. may be 20, while the realization of that, in reference to the duty paid, may be 15 per cent.

8426. You have stated that no benefit would accrue to the manufacturer from lowering the protecting duties; what do you suppose would be the effect, generally, on the trade, of such a measure?—I consider such a measure to be full of mischief; it would accomplish the ruin of the throwster as it regards Italian thrown silk; then a further reduction of the wages in the weaving branch, and a consequent accumulation of misery and wretchedness that one sickens to think of; I have said that the experiment was made in 1829, and the result has proved its mischievous tendency.

8427. Supposing the effect to be produced on the English throwsters which you apprehend, that they would be materially reduced in number and in power, what would be the effect on the manufacturers generally, of their being obliged to procure their supply of thrown silk from Italy?—I consider this to be most disadvantageous to them. The English manufacturer, it will be recollected, has now the choice of two markets, the English and Foreign; he then would be dependent on Italy; he can now select his raw silk and have it thrown just in the way that he requires it; he must then use what the Italians please to send him, and at their price too; this tells greatly against small manufacturers; and I do beg to draw the attention of the honourable Committee to this point. Bales of silk weigh about 240 lbs. whether they be raw or thrown. A manufacturer, as the case now stands, can purchase his bale of raw and have it thrown in two, three or four threads, as suits his purpose, having only fifty to sixty weight of each; but if he has no longer this advantage he must purchase 1,000 weight to get the same proportions. If it be answered he can get some merchant or middle man to divide those bales, my answer is, that he will have to pay for the accommodation; it tells greatly against small manufacturers, and throws every advantage into the hands of large ones.

8428. Do you consider it necessary for the manufacturer to have foreign thrown silk?—I say generally it is not necessary; I use but little myself, and not an ounce for rich goods.

8429. Would the English cost more or less than the foreign?—It costs me rather more than the foreign, as there is now only 3*s*. 6*d*. import duty.

8430. Are you a throwster?—I am not.

8431. The answers you give are as a manufacturer and not as a throwster?—Yes, speaking as a manufacturer only.

8432. As you consider that the lowering the duties on foreign thrown silk would be injurious, can you suggest any plan for the prevention of smuggling?—The only safe and effectual method to prevent smuggling under a system of protecting duties, is not to lower the duties, but to increase the risk of the smuggler.

8433. By what means would you propose to increase the risk of smugglers?—By good Custom House regulations properly enforced; and in that event I am satisfied that even more than the present amount of duty could be collected.

8434. What advantages would result to the silk trade by thus increasing the risk of the smuggler?—I submit, very great advantages; the throwing branch would be preserved, and that is no small advantage; wages protected; the poor better employed, and a measure of confidence restored to the manufacturer.

8435. Do you apply those advantages to the whole of the silk manufacture or to the plain branch principally?—I apply those advantages exclusively to plain silks.

8436. How are the figured and fancy branches to be preserved?—I believe, and I am bound to give an honest opinion, that this branch of the silk trade must be inevitably lost to this country unless foreign fancy and figured silks are prohibited.

8437. How do you come to that conclusion?—I come to it from the possession which the foreign manufacturer has of the English market in respect of fancy silks, and from the present consequent condition of this branch of the silk trade.

8438. What is the present condition of this branch of the silk trade?—From an inquiry

Mr.
John Ballance.

8 June,
1832.

inquiry made in February last, it was found, that the number of fancy and figured looms was reduced to about 300.

8439. What was the condition of this branch of the trade prior to 1826?—The fancy and figured branch of the silk trade of course varies in extent according to the fashion; I therefore give only an average. If I take ten years prior to 1826, I apprehend the average will show at least one-fourth of the trade of Spitalfields to be upon the fancy and figured branch of it; therefore, upon 16,000 looms in Spitalfields, that will give an average of 4,000 looms: this is the estimate which manufacturers, exclusively in the fancy branch, have given to me; I am not a fancy weaver.

8440. Are the Committee to understand that, from the best information you have been able to acquire, there were 16,000 looms?—My opinion is, that there were about the same number of looms in 1826 as there are now.

8441. Do you believe that in any one year to which you have referred, in which it was probable there were 4,000 looms employed in fancy goods in Spitalfields, there were 400 employed in making poplins?—No, I think not.

8442. Do you consider Italian nets as fancy goods?—I do not.

8443. Will you state in what respect this branch of trade is of importance?—This branch of trade is important in respect of wages; if the proportion be one-fourth of the whole trade the wages would be as 40 to 100; then there is the talent and skill that would be called into exercise, which upon the present system will soon be lost to this country; and further, I think it will be found that the other branches of the silk trade will be active and prosperous, just in proportion as the fancy and figured branches of the trade are encouraged.

8444. Has the number of master manufacturers decreased since 1826?—Very considerably.

8445. Are you able to state particulars at the respective periods of 1826 and the present time?—In 1826 there were 167 manufacturers in Spitalfields, of these about 39 were in the fancy trade; there are now about 79 manufacturers, of these 66 are in the plain branch, and only 13 in the figured branch; those that are in the figured branch have not one-third of their former number of looms.

8446. There appears to be a reduction in the number of 88 manufacturers between the two periods?—Yes.

8447. Have they been obliged to discontinue business in consequence of failing in trade?—Sixty-seven of these have failed since 1826; 17 have retired from business; most of these 17 were men of capital. I mean to say that in the spring of 1826 there were 167 manufacturers in Spitalfields, and that in the spring of 1832 there are but 79 manufacturers, and that of the difference 67 have failed chiefly within the last three years; and that 17, who were men of capital, have retired.

8448. What is the condition of the people they then employed?—They are either reduced to a miserably low rate of wages or thrown upon the parish, and receive an allowance of 1 s. 6d. a head.

8449. What do you conceive would be the condition of the other branches of the trade if the figured silk trade continued in the hands of foreigners?—I consider that the silk trade would not be worth following; its character and value would be lost; capitalists would withdraw from it, and the work people would become paupers.

8450. It is your opinion then that these branches of the silk trade have a common interest?—It is my firm conviction, grounded upon an observation of many years, that the supplanting of the one will issue in the ruin of the other. I call that trade ruined where profit and capital are sacrificed, and the labourer is reduced to a rate of wages which makes him dependent on parish allowances.

8451. Do you know any advantage derived by this country, generally, from the importation of foreign silk goods?—I do not.

8452. You stated that the number of casual poor in the parish of Bethnal Green, had increased from 157 in 1821 to 6,218 in 1832?—I believe that is the case.

8453. Are you aware of any increase of crime in consequence of this increase of pauperism in that district?—Yes, the increase of crime has been great.

8454. Are you prepared with any facts in corroboration of that statement?—I am not prepared with particular facts; but I have given in a statement, from which it appears that immorality has been increasing.

8455. Had

Mr.
John Ballance.

8 June,
1832.

8455. Had you any communication with Government in the year 1824, respecting the change of law relative to the silk trade?—Yes, I was one of a deputation that waited upon Lord Liverpool.

8456. What reasons were assigned at the time for the proposed change? They were principally two; the one to put a stop to smuggling, and the other was to give us the benefit of an export trade; it was said by the President of the Board of Trade that British silks, like British cottons, should find a market throughout the whole world.

8457. The benefits expected were, that smuggling would be diminished, and that you would obtain an export trade; did the trade concur in thinking that this advantage would be derived?—No; they could not understand how the taking off the mark of contraband, from foreign wrought silks, for a protecting duty, could possibly put a stop to smuggling; nor how the English manufacturer could have an export trade when he required 30 per cent. protection in his own market; nor how he could be benefited by having two markets open to the dealer, while there was only one to himself, his own, and that market glutted with foreign manufactures.

8458. Did you represent those objections to the system to the Government at that time?—Yes, strongly.

8459. Were there any conditions or propositions then made?—The throwster was promised 7*s.* 6*d.* protection; and it was afterwards reduced, I believe, at three days' notice, by a Treasury order, to 5*s.*; the manufacturer was promised 30 per cent. upon foreign manufactured silks, and it was repeatedly said this duty can and shall be collected.

8460. The proposals made were, to the throwster 7*s.* 6*d.* protection, and to the manufacturer 30 per cent.?—Yes.

8461. Have you a protection of 30 per cent. as a manufacturer?—No; both those proposals were broken in 1829; the import duty on foreign thrown silks was again reduced from 5*s.* to 3*s.* 6*d.* on organzine, and from 3*s.* to 2*s.* on trams, and the duty on foreign manufactured silks was lowered to 25 per cent.; it was found that smuggling, so far from being put a stop to, as was stated, had greatly increased. The distress of the silk trade at the time was attributed by Government to smuggling, which by letters from Calais, as I have said, was stated to be from 25 to 28 per cent. In order to remove the distress of the silk trade they reduced the duty to the smuggler's price.

8462. Did the silk trade make any remonstrance on those changes?—Yes, they remonstrated in 1824, and in 1826 and in 1829, but I am sorry to say without effect; they assured the Government at all those periods that no policy towards the silk trade could be permanent but that which would enable the throwster and the manufacturer respectively to give employment to their work-people; and that to attempt to settle this question upon any other basis is perpetually keeping it unsettled.

8463. Has it been kept unsettled?—Yes; the distress of the silk trade, it is very evident, has again opened the question; the appointment of this Committee is a proof of its having been forced upon the attention of the Legislature; but what has been the effect in the mean time? In the mean time the fancy branch is ruined, the plain branch is not worth following, and thousands of our poor have been starving.

8464. If you were to propose Custom House regulations which you thought would be effectual, what would be the kind of regulations you would suggest?—I should refer to two classes of regulation; I would say those that would affect the smuggler himself, and those which would apply to the receiver of smuggled goods; I submit criminal punishment for the former, and stamping of silk goods to throw difficulties in the way of the receiver.

8465. Do you think that those two regulations, a criminal punishment for the one, and stamping the goods as far as they could for the other, would be effectual?—I have no doubt that a duty of more than 30 per cent. could be collected upon their joint application; but I lay great stress on the stamping.

8466. Why so?—I believe this more than any other measure would close the market against the smuggler; and having to force his goods upon the buyer, who is weighing the increased risk against the advantage, he will not give the price for them he formerly did; I beg to deliver in to the Committee a paper containing my reasons for the stamping of foreign manufactured silks.

[The same was delivered in, and read, as follows:]

Mr.
John Ballance.

8 June,
1832.

REASONS submitted to the Select Committee on the SILK TRADE for the STAMPING
of FOREIGN MANUFACTURED SILKS.

1.—UNDER a system of protecting duties, smuggling can be prevented only by regulations, which, while they increase the risk to the smuggler himself, shall enable the Custom House officers more easily to detect the receiver of smuggled goods.

2.—The fixing a stamp upon foreign manufactured silks, when they pass the customs, appears to be the only plan for securing the latter object.

3.—Whatever other provision may be made for the prevention of smuggling, without stamping the goods, the difficulty of distinguishing smuggled goods from others which have paid the duty will still remain, and present an insuperable obstacle to their being seized; and thus a safe and profitable market will be kept open to the smuggler, of which he will avail himself whenever he succeeds in safely landing his goods.

4.—While this market remains open for the purchase of smuggled goods, the effect of subjecting the smuggler to loss and punishment will not be to put down smuggling, but only to throw it into another channel. The principals will disappear, but the agency will remain.

5.—The acknowledged principle of equal justice requires, that if the smuggler be amenable to the law, effectual measures should also be adopted to detect, in order to punish, the receiver of smuggled goods.

6.—The inducement to purchase smuggled goods manifestly arises from the price at which they are obtained, relatively with those which have paid the duty; and as they are generally offered in large quantities, capitalists, who choose to avail themselves of this mode of purchase, do it to the serious injury of other dealers, whose means are not so abundant, or whose principles restrict them to the legal market.

7.—It may be expected that the advantages which have been derived by many persons from the wholesale trade which has been carried on in smuggling, will excite some opposition to the plan of stamping foreign silks.

8.—To an objection that the stamp will be counterfeited, and the measure thus rendered abortive, it is submitted, that whatever may be the case in a few instances, the general effect of such a regulation will be to deter both wholesale and retail dealers from holding smuggled goods, and thus to cut up the present large traffic in them. It is the general effect of a given measure that determines its utility. Besides,

9.—If the stamps be accompanied by a number, both fixed and moveable, and also a pattern book, it will be very difficult to succeed in counterfeiting the stamp, as so many other particulars must likewise correspond.

10.—The pressing solicitations of the silk trade for the stamping of foreign wrought silks, as a means of preventing smuggling, is most reasonable in itself; it interferes with no question of commercial policy; and any extra trouble that it may occasion to the customs, or to individuals, ought not for a moment to weigh against the miseries and wretchedness of a large suffering population in our silk manufacturing districts.

8467. Are those your reasons for that opinion?—Those are the reasons I submit.

8468. Supposing the system of stamping were allowed, do you not apprehend there would be considerable danger of the stamps being forged?—I think it is not likely; I should suggest collateral checks, which I will refer to presently; though those would not so effectually prevent smuggling as the law of prohibition, yet I feel satisfied that they would put a stop to the present wholesale trade in smuggling.

8469. Do you know what are the sentiments of the dealers in foreign silks upon this subject?—Yes, I do; and I beg leave to hand in a paper declaratory of their sentiments. A paper, of which this is a copy, was presented to the Board of Trade at the beginning of this year, at that time rather hastily got up, otherwise we could have obtained double the number of names.

[The same was delivered in, and read, as follows:]

THE undersigned dealers in silk goods of British and Foreign manufacture, understanding that a proposal has been made to Government to mark or stamp all Foreign silk goods upon the importation of them, and that some persons have objected to such a course as being inconvenient and vexatious, beg leave to state, that the contraband trade in Foreign silks is highly unjust and injurious to all those who deal fairly in them, and they are decidedly of opinion that the contraband dealing in Foreign silk goods will never be effectually stopped unless

unless those regularly imported shall be stamped, and that the obligation to have them stamped will not be inconvenient or vexatious to those who deal in them.

Mr.
John Ballance.

8470. As all parties and all opinions concur in the feeling that the stamping would be no vexation or inconvenience to them, what plan would you recommend?
—The plans contained in the paper which I beg now to refer to the Committee.

[The same was delivered in, and read.]

PLAN OF STAMPING.

THE stamps to be hand stamps, and the impression to be made by ink or paint on the fabric itself.

Each piece to be stamped with two separate stamps, one to denote the royal authority, and also to contain certain variable figures and letters, and the other to be simply a number.

The former of the two stamps to be thus:

The figures 21, signify the day of the month; the figure 1, the month itself; the figures 32, the year; the letter A the importer; and the figures 49, a variable arbitrary number, to be changed once a day, or oftener, as may be thought right. The stamp to be constructed as to allow of the change of letters and figures very easily.

The second stamp to impress a number, thus:

350

351

352

and so on up to 1,000, and then to begin again at 1; so that every piece imported shall have a separate number.

A pattern-book to be kept, into which a pattern cut from every piece imported shall be stuck, and in the margin of which book, opposite to each pattern, shall be impressed the two stamps, which have been impressed on the corresponding piece of goods.

No person to import foreign silk goods without a license, and every licensed importer to be known to the Customs by a certain letter, as A, B, &c., and that letter to be put in one of the quarters of the first stamp.

The stamps to be kept under proper locks, in the care of at least two superior officers, and the variable number in the centre to be changed at the pleasure of

Mr.
John Ballance.

8 June,
1832.

8471. Those regulations would apply to plain goods?—They would.

8472. Would you confine them to plain goods?—Yes; there are contingencies affecting the fancy branch of the silk trade, which in my judgment cannot be met by an import duty; that branch cannot be preserved without a positive law of prohibition.

8473. If you recommend a positive prohibition of fancy and figured silks, do you not apprehend that the trade of the country would be great losers in point of style and fashion?—I apprehend not; the Parisian fashions could and would still be obtained as formerly; but they would be in silks of English manufactures; at the same time the encouragement thus given to British artists would in all probability soon enable them to rival French fabrics, and thus the British public would be gainers rather than losers; they would get French patterns, and at the same time give confidence to the British manufacturer to rival those patterns; at present he cannot do it; he goes to it with a halter round his neck.

8474. If they would not be injured in point of fashion, how would they be affected in point of price?—Doubtless wages would rise, as indeed they ought to rise, and must rise, or the misery must go on increasing; but I apprehend that the price to the consumer would not be much advanced, as the profits of the manufacturer and the dealer would then be more equalized.

8475. You have said that the amount of wages paid in the district of Spitalfields is 300,000*l.* per annum less now than it was in the year 1826?—Yes, at least 300,000*l.* a year less.

8476. If the poor workmen receive 300,000*l.* less, do not the public derive the benefit of that 300,000*l.*?—I should say that they get their silks somewhat cheaper in consequence, but not all the difference by any means.

8477. Can you give the Committee any notion of the proportion the public gets out of that 300,000*l.*?—It is difficult to state the exact proportions.

8478. Who gets it; the manufacturer?—Not the manufacturer, for his profits are all gone, but the middle man between the manufacturer and the consumer, and if he be a man of large capital, he has profited abundantly by this change of system. I do not speak here of individuals, and I do beg to be distinctly understood, I am not alluding to individuals, but I do speak of the system, and of this system I say it has worked most oppressively towards the weaver, reducing him to want and wretchedness; it has worked very injuriously for the manufacturer, depriving him of profit and capital, but it has worked most profitably for the dealer, and the tendency of this system is to ruin the small capitalist, and to throw every advantage in the way of the large capitalist.

8479. You are understood to say, that if Custom House regulations were introduced, we might then collect a duty of 30 per cent. on plain goods?—I am satisfied of that.

8480. Taking that for granted, would you propose to return to the Schedule of Duties of 1826?—The reduction of duties which took place in 1829, I consider as unnecessary as it has been mischievous; and a duty of 5*s.* on organzine and a duty of 3*s.* on tram, with a corresponding increase of protecting duty on foreign manufactured silks, I conceive to be the only measure short of prohibition that would give confidence and health to the British manufacture.

8481. What do you mean by a corresponding increase?—My opinion is according to the different articles, from 2*s.* to 3*s.* for instance, the present duty on plain silk is 11*s.*; I would say 13*s.*

8482. Will you furnish a Table of the Duties which you consider would be sufficient as a protection to the trade?—I can furnish that for plain goods, but I do not consider that any thing less than prohibition would answer, as to figured and fancy goods; I think that by stamping foreign goods Government would be able to ensure the collection of the full amount of duty I have referred to, even 13*s.* or 14*s.* or 15*s.* per pound. I have no doubt 40 per cent. might be collected were the goods stamped.

8483. Is it your opinion, that under such regulations it is still possible for the silk trade to prosper in this country, and that thus we should have a final adjustment of this question?—I have said that the most effectual remedy for the evils of the silk trade is to be found in the law of prohibition, and I am fully of opinion that had the consequences of the repeal of that law been foreseen by the Administration in 1824, that law would never have been touched; but looking at the silk trade as it now is, I am of opinion that if the fancy and figured branches of this trade

trade were protected by prohibition, as an exception to the general rule of commercial policy, and the other interests of the trade were protected by sufficient duties, it would instantly revive, and might become, to a certain extent, a flourishing manufacture. In a few months I apprehend the workpeople would get employment upon a rate of wages by which they could subsist, the manufacturer would have a portion of his profits restored to him, and gain confidence in what he does, and the throwster, who I beg to say has suffered most severely, would receive in the shape of increased employment, some little remuneration for the great loss of capital that he has been compelled to make; but if these measures, or something like them, be not adopted, I feel satisfied that the silk trade will go floundering on till it shall exhibit a mere wreck of its former greatness and importance.

8484. You have stated a degree of distress that is quite astonishing; the number of casual poor increased from 150 to upwards of 6,000 in the space of ten or eleven years; you mean to say that the distress, which is likely to ensue if the present system be continued, is likely to aggravate the distress at present existing?—My opinion is, that the late distress in the silk trade for the last nine months, producing as it must a scarcity of certain articles, will occasion a temporary activity. The looms may get employment for a time, but the consumption of this country cannot permanently take off both the importations from abroad and our own productions of silk goods; and it is only for the silk trade to become a little active for four or five months, and the glut which will ensue will reduce it to its previous situation. Every excessive relapse aggravates the distress, because the poor become if possible poorer, have less furniture and less means of rallying; the poor in Spitalfields, at this moment, are far more destitute than they were in 1826; then they had some little means to fall back upon, but now they have none.

8485. Do you apprehend, that if those regulations were adopted as to the plain silks, and prohibition as to figured silks, in that case Spitalfields and the silk district around would be restored to its former prosperity, and that quantity of wages which you say was once paid and which you state is now withdrawn, would be resumed?—My opinion is, that such has been the shock and such the continuance of the distress, that it would take perhaps a year or two fully to restore Spitalfields to what it was: but I think eventually, at least two-thirds of that amount would be restored to Spitalfields.

8486. You do not consider Manchester as at all likely to come into competition with Spitalfields?—Manchester now comes into competition with Spitalfields and Spitalfields with Manchester, because Spitalfields being deprived of her rich trade is thrown more upon the trade of Manchester than she was formerly, hence the collision.

8487. Supposing that the prohibition of the French figured and fancy goods should have taken place as you propose, do you not think that Manchester would have the same chance of coming into competition with Spitalfields in rich goods, it being open not only to Spitalfields but to the whole country to make them?—It is very evident to me that Spitalfields, from its proximity to the West end of the Town, would always command, as it did before, the lead of the fashion, which would occasion a large quantity of the labour in Spitalfields to be taken up in the production of rich fabrics; to make which, the operatives of Spitalfields are far better qualified than the cotton weavers of Manchester; in proportion as labour is taken up in Spitalfields for the richer branches of the trade, would it diminish in the coarser branches, and therefore Manchester would then have restored to her a larger portion of that common trade in which she now comes into collision with Spitalfields; thus three branches of trade would gradually revert to their former channels, Spitalfields would have the rich and fancy trade, and Manchester would have its own staple trade.

8488. You do not consider that the lowness of wages of the operatives, or the views of the manufacturers at Manchester, would bring them into competition with Spitalfields in rich goods?—I think not; because Spitalfields would have possession of the market.

8489. You mean to say, that the persons who may be said to regulate the fashion, would give their orders to the manufacturer in Spitalfields?—Just so.

8490. That they would not send their orders and their designs to Manchester, their object being to keep the goods to Spitalfields, and not to send them to Manchester?—My answer is, that there can be no doubt that they would send them to Spitalfields, from its proximity to the seat of fashion, and because the artisans of Spitalfields are accustomed to the manufacture of rich goods.

Mr.
John Ballance.

8 June,
1832.

8491. The best weavers in figured goods are in Spitalfields?—The very best.

8492. Is the trade in Manchester in common goods advantageous to Manchester?—That I cannot answer.

8493. The rich fancy goods now making in England are now making in Spitalfields, are they not?—Yes; all the richest goods now made; the few which are made for West end houses are made in Spitalfields.

8494. The peculiar manufacture of Spitalfields has not been depressed by Manchester, but by France?—Certainly by France, not by Manchester.

8495. You say there has been a great decrease in the wages of the workmen; has there been a proportionate decrease in the price of goods to the public?—Not to the full amount, I apprehend.

8496. Has there been a proportionate diminution in the sale price of the manufacturer?—I should say a greater diminution; the profit of the manufacturer is nearly all gone.

Lunæ, 11^o die Junii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. John Ballance, called in; and further Examined.

Mr.
John Ballance.

11 June,
1832.

8497. YOU stated the other day that the exports of manufactured silk that came from France in one year amounted to 2,100,000 pounds weight, and you assumed that they must have consumed about 2,800,000 pounds weight of raw silk?—I said, that in order to export 2,100,000 pounds weight of manufactured silk, I considered it would require 2,800,000 pounds of raw silk to produce that quantity.

8498. You supposed the raw silk had been reduced in the hands of the dealer 25 per cent.?—My reason for that calculation came from my own experience of the process of manufacture in this country on silks of a high standard; we know that France works upon silk of a high standard; the silks made in Spitalfields were of a similar high standard; my own manufacture is in part of that standard; my calculation, therefore, is founded upon the process of throwing and manufacturing silks of that standard.

8499. In the manufacture of goods made from hard silk the reduction of weight in dyeing is inconsiderable, is it not?—In hard silk the reduction of weight is not an ounce.

8500. If the exports of France consist in great part of the articles made from hard silk, that will alter your calculation, will it not?—But I object to the assumption; it is very evident, that whatever manufactured silks are exported from France, from which the gum is not extracted, the reduction of waste will apply chiefly to the waste in the process of throwing, and to the waste in the subsequent process of manufacturing.

8501. Would the decrease be equal, supposing the exports were of hard silk?—There will be a reduction, but not to that extent.

8502. Does the book to which you referred the other day as containing an account of the weight of French manufactured silks exported, distinguish the different articles exported?—There are a variety of articles specified, but under a general character.

8503. Can you state what proportion of that was exported to England?—It is the total exports of France, without giving particulars to any country.

8504. That book does not contain an account of the quantity exported to England?—I did not observe that quantity particularly specified, it is included in the total amount.

8505. You stated that the agent who was sent to the Continent by the Trade Committee in 1825-6, had reported that wages in France were 70 per cent. lower than in England?—No, I stated what the agent said the rate of wages at Lyons actually was. We had two channels of communication at that time with Lyons, the one by the agent we sent over, and the other by means of correspondents altogether apart from the agent; when he arrived, we compared his report from Lyons with that correspondence, and the answer from the correspondents and his report agreed.

8506. Do

Mr.
John Ballance.

11 June,
1832.

8506. Do you mean that of 100*l.* worth of goods manufactured, 70*l.* consisted of labour?—No; the wages at that time for weaving gros de Naples three double at Lyons was 6½*d.* an ell, from which was to be deducted the expense arising to the weaver from winding his shute.

8507. Had you at the same time the prices paid at Zurich?—Yes, we had.

8508. Can you state the prices of weaving gros de Naples there?—I speak now from recollection, but I believe it was 4*d.*

8509. Was that the three double?—I think it was; it was either 4*d.* or 3½*d.*; I could get the whole of these accounts, they were all minuted; I believe, taking the average of wages at Lyons, in the years 1826, 1829 and 1831, with the wages paid in England at those respective periods, the wages at Lyons appear from 70 to 80 per cent. less than in England.

8510. Can you furnish the Committee with a list of the English and Foreign prices at those periods?—I have them by me, but not here; I shall be happy to furnish them on another occasion.

8511. Does that include the broad and narrow goods, or only broad?—Only broad.

8512. Goods similar to those manufactured in Spitalfields?—Yes, from high standards of silk.

8513. Have the goodness to state when the book of prices was abolished in Spitalfields?—I think in 1824; there was an attempt made in 1823; I think it succeeded in 1824.

8514. Did wages fall immediately after that?—Wages rather rose than fell.

8515. How long did that advance in wages continue?—Upon the repeal of the Spitalfields Act, in June 1824, wages for a twelvemonth, I think, were rather higher than lower, and that arose from the demand for English manufactured silks, arising, unquestionably, from the remission of the duty, coupled with the continuance of the prohibition.

8516. Did wages fall considerably in 1825?—No.

8517. Did they fall in 1826?—Wages did not fall till, I think, the spring of 1826, and I will state the reason; we ascertained that upon the run of plain silks, one pound weight of manufactured silk would cost, in England, about 70*s.*; the goods that we imported from Lyons in 1826, to ascertain the value of French silks, exhibited upon the average 50*s.* per pound weight; that value, according to the proposal of 30 per cent. by the Government, would give us a protecting duty of 15*s.*, raising the value of foreign manufactured silks in this market to 65*s.* We placed before Mr. Huskisson those two facts, 65*s.* on the one side, and 70*s.* on the other, and we asked him how we were to get rid of the 5*s.* still against us; his answer was, "The difference of 20*s.* consists of many elements, and by abridging one and another you get rid of the 5*s.*;" one of those elements was wages, and, in consequence, when French goods came into contact with English goods, we were compelled to get rid of the 5*s.*, but it was done by reducing the wages.

8518. You stated on a former day that the trade was bad before French goods were admitted, from the apprehension of a large quantity coming in?—In 1826.

8519. Did that affect wages?—No; to the best of my recollection the looms that were employed received the same rate of wages as they had done two or three months previously. I wish to be understood, when I say that wages fell, that I cannot speak to the particular month.

8520. Can you state what the prices of weaving the gros de Naples were from 1824 to the opening of the ports?—The three double gros de Naples were from 10*d.* to 11*d.* a yard.

8521. It fell in the spring of 1826 to how much?—I should think from 1*d.* to 1½*d.*; some would pay less, some more, according to circumstances.

8522. Did it rise at any time subsequent to that?—I think the price rallied a little in 1827, but not for any length of time.

8523. In 1828, which you have stated to be the period of better trade, wages again fell?—The silk trade began to languish in the spring of 1828, and it continued decreasing gradually in activity during the autumn of that year, and through the greater part of 1829. The wages during this time of gradual decay, settled down in the spring of 1829 to about 7½*d.* and to 8*d.* per yard; I mean that what was paid from 10*d.* to 11*d.* before, was paid about 8*d.* per yard in 1829.

8524. Did it rise again during the period of good trade in 1829-30?—There was no good trade in 1829.

8525. Did it improve in 1830?—No, it did not; the duties were reduced the

Mr.
John Ballance.

11 June,
1832.

5th July 1829, from 15s. to 11s.; this reduction was known to take place the April previous, and the manufacturers to prepare for this reduction in July, instantly reduced their labour from 8d. to 6½d.; the reduction was made to meet the importation in July.

8526. You mean that after the fall in 1828 wages never recovered?—After the fall in 1828, I am not aware that there was any re-action as to the average rate of wages upon the articles to which I have referred, plain silks.

8527. Were not gros de Naples manufactured after 1824, at Manchester, Sudbury, Coggeshall, Macclesfield, and some other places in the country?—They were manufactured in quantities before that time, not I believe more after than before.

8528. Do you know what prices were paid at each of those places for manufacturing the articles you have referred to?—To the best of my recollection the wages were higher at some periods in the North of England, Manchester and Macclesfield, for weaving plain silks, than they were in Spitalfields; I speak of periods from 1817 to 1825.

8529. Can you state what prices were paid at those places in the country subsequent to 1825?—I have no doubt I can obtain the information, but I am satisfied that on some occasions for some months they were actually higher.

8530. Did not the manufacture of plain goods extend very much in the country after the removal of the duties in 1824?—I am not aware that they extended greatly in the country; the duties were taken off the Bengal and China silk, and a species of what is called gros de Naples has since been generally made, in which there is a large proportion of India silks of a low standard, but that was not the trade of Spitalfields.

8531. Has a fall of wages in Spitalfields preceded or followed a fall of wages at Manchester?—That is a question I am not able to answer.

8532. Do the Spitalfields manufacturers regulate their wages by the reports they receive of the prices of wages in Manchester, Macclesfield, Coggeshall, and other places where the same description of goods are manufactured?—I apprehend that Spitalfields weavers regulate their wages essentially by the demand for their goods, combined with the prices which they get for them; and if that demand be not active, or if the price be ruinous, they try to get them made at as low a rate of wages as possible, irrespective of other places.

8533. How do you reconcile that answer with what you have already stated, that the activity which took place in 1830 had no influence in raising wages?—The activity of the trade was not to such an extent as to secure an advance of wages; it was active, as compared with 1829, but not active as compared with the years previous to the opening of the ports. I have said there was activity in the spring of 1830, but that was mainly with regard to black goods; there was an expectation of the death of his late Majesty, and it turned out upon inquiry that there were scarcely any black goods making in Spitalfields, because the sacrifices had been so tremendous on the sales which had taken place about three or four months before.

8534. Can you inform the Committee what prices are paid at Manchester, Sudbury, and other places in the country, for three double gros de Naples?—I do not know what prices are now paid. In London, the price given is 5d. for three singles, 6½d. for three doubles, and 8d. for four doubles; I apprehend that there is very little variation; that there is not a variation of more than a halfpenny between that and the country.

8535. Do you mean of the same quality?—Of the same number of threads; but I apprehend that the quality turned out in the country is not of equal perfection.

8536. Can you state what is now paid for weaving the rich figured goods in Spitalfields?—I cannot state any thing as to figured goods.

8537. What is the state of the trade at this moment in Spitalfields?—I understand that the trade has improved as compared with its distressed situation last winter; this was to be expected from the extremity of the state of suffering, and the consequent scarcity of goods from the number of looms standing.

8538. You mean that this is another of those changes that occurred in 1827 and in 1830?—There have been two re-actions, the one after 1826, and the other after 1829, every re-action found the working classes still worse, and each relapse has been more severely felt than the former.

8539. There

Mr.
John Ballance.

11 June,
1832.

8539. There is a tolerable demand for goods in Spitalfields now, is there not?—
I should say a fair demand for plain silks.

8540. Are wages higher now than they were in December 1831?—I made that inquiry last week, when I was told that the trade was improving; it has improved somewhat as to demand, but there is not a fractional improvement as regards wages.

8541. Has not the same alteration of good and bad trade, which you describe as having taken place in the silk trade, occurred in other branches of manufacture in this country?—I know nothing of other branches.

8542. Have you not understood, that in the cotton and woollen trades they have had those alternatives?—So far as report has come to my ears, I have heard of no instances of distress, at all equal to those which have afflicted the silk trade during the last five years.

8543. Do you know whether they are using the Jacquard loom in manufacturing silk goods in different places now?—I am told the Jacquard loom is used pretty generally at Manchester for the manufacture of palmarines, such as I exhibited here last Friday, a mixture of silk and cotton; the silk exhibits a figure which is made by the Jacquard loom.

8544. Are they in use at Derby as well as in Manchester?—I believe there have been two or three at Derby; but I cannot speak positively.

8545. Are there any at Sudbury?—I cannot say.

8546. Do you know that the weavers at Manchester, or in Lancashire, make two yards per day more than they do in Spitalfields?—I do not know that.

8547. What is the average number of yards made in Spitalfields of three double gros de Naples?—I apprehend, if the weaver make neat and good work, and work reasonable hours, he could not exceed three yards a day, unless he had assistance.

8548. Is depending entirely upon himself the most economical way of working?—I find it difficult to answer that question.

8549. Would it not be more advantageous to him to pay a person to assist him?—I think a very fractional difference; he might make, perhaps, an extra yard; but besides having to pay for such help, he would run the risk of having the work made worse.

8550. Do they use the fly shuttle in Spitalfields?—In some instances they do, I believe.

8551. Is it not generally used in the country?—I understand that they use it there.

8552. Is there any advantage in using the fly shuttle where the work is within the reach of a man's hand?—I should think not; they use the fly shuttle in the cotton looms in Lancashire, and perhaps they may in the silk looms; these are accidental circumstances in the manufacture of silk, to which I attach but very little importance.

8553. Do you not know that they are using Jacquards for making large damask table cloths?—No, I am not aware of that.

8554. Is the work produced by fly shuttle or hand loom the best?—That will depend a good deal, I should think, on what the work is.

8555. Can a weaver make rich goods with a fly shuttle?—I should not like to trust to him. I do not mean to say he could not do it, but there is a great deal in habit; what I mean to say is this, that I conceive there is no advantage either way, it is a point of trifling importance, and does not at all affect any general question of inquiry. Whether the Spitalfields weaver uses a fly shuttle or not he is equally at a distance from successful competition with France.

8556. Do you consider the competition with France a question of price, or a question of fashion and taste?—It is a question of price in relation to plain silks of middling qualities; it is a question both of price and taste in relation to the rich plain silks, and fancy and figured silks.

8557. How much cheaper do you think they can manufacture the plain silks in France than they can in England?—Before I can answer that question I must know the rate of wages I am to pay.

8558. At the present time three double gros de Naples will cost 3s. in Spitalfields, what would it cost in Lyons?—I must know what I am to pay for the labour of those 3s. gros de Naples.

8559. You have stated that at 7d.?—If 7d. be the price paid for the manufacture,

678.

3 R

I consider

Mr.
John Ballance.

11 June,
1832.

I consider it would require full 30 per cent. to protect the English manufacture against the manufacture of France.

8560. Does that arise from a difference in the rate of wages in Lyons and London, or the French obtaining their silks cheaper than they do in England?—It consists of two elements, one of which is the price of their raw material compared with that of England; the other resolves itself into a question of wages in relation to throwing, dyeing, warping, winding and weaving.

8561. Of 100*l.* worth of three double gros de Naples manufactured in England how much per cent. is in wages?—I could not give the per centage at this moment; but I consider that it would cost from 20*s.* to 22*s.* including wages and waste, in the process to commute one pound of raw into a pound of manufactured silk in this country.

8562. Will you confine your answer to the prices in Spitalfields, excluding the throwing?—I cannot at this moment give any thing that would be correct.

8563. Is 3*s.* a fairestimate of the price of a three double gros de Naples?—A three double gros de Naples will vary according to the quality, from 2*s.* 9*d.* to 3*s.* 4*d.* the cost price.

8564. Assuming the wages to be 7*d.*, how much will that be per cent.?—About 20 per cent.

8565. Will the wages which enter into the manufacture of a piece of gros de Naples amount altogether to 25 per cent.?—I should say, speaking off hand, much more than 25 per cent.

8566. How much per cent. would you say would be a protection for the manufacturer in Spitalfields as against the French, independent of the throwster?—I have said that it requires full 30 per cent.; I lay stress upon the word full, because I believe it would require more in respect of plain goods to protect the English manufacturer against the foreigner. If he were to receive his silk free of import duty, he would require five-and-twenty per cent. to protect him against the difference of wages and waste in the process of manufacture.

8567. Will you state how much of that 25 per cent. you think the wages require?—It is impossible to give that fractionally, because different silks and different articles will waste more or less.

8568. Have you reason to think that the waste is less in France than in England, and if so, why?—I do not know any thing about the waste in the process of manufacturing in France.

8569. Have you any reason to believe that it is different?—The waste depends upon the character of the fabric, and as the character of the fabric in France is admitted to be superior to that of England, the waste will be less.

8570. What is the waste upon a yard of three double gros de Naples, will it be a penny?—I could not give it at the moment in money.

8571. Will it be a halfpenny?—I think it would be found, taking the average, that the waste is very nearly two ounces in the pound.

8572. Assuming the prices to be the same in the manufacture of a yard of three double gros de Naples in the two countries, the whole wages in Spitalfields being 20 per cent., how do you reconcile that with the supposition that 25 per cent. protection is necessary?—I have not said that the whole wages are 20 per cent.; I did not separate the waste from the wages; I have said that the cost of manufacturing, including these elements, would require a protection of at least 25 per cent. upon plain silks, middling quality.

8573. You have stated that three double gros de Naples is worth about 3*s.* a yard, and that the wages upon that is 7*d.*, is not that 20 per cent.?—That is the wages of weaving, but there is winding and warping and dyeing.

8574. How much per yard would the other expenses amount to, winding, warping and dyeing?—I could not give that fractionally without taking time; dyeing is 2*s.* a lb.; it has been given here at 1*s.* 3*d.* to 1*s.* 6*d.* a lb.; I have tried dyeing at 1*s.* 6*d.* a lb., and have given it up, having had my silk spoiled; there is the winding the silk, 2*s.* a lb.; the warping the silk, from 6*d.* to 9*d.* a lb. all to be added to the 7*d.* and then there is waste to be added to the whole. I gave in to Mr. Vesey Fitzgerald, in 1829, the result of the items that the question put to me now calls for; and I have not the least objection to present it to this Committee.

8575. Have you any objection to state that the total wages of every description paid by the manufacturer in Spitalfields, independent of dyeing, amount to 25 per cent. on the article?—I mean to say this, that the cost of manufacturing that article, including

including all charges incidental to the manufacture, would make the price of that article when manufactured full 25 per cent. dearer than the French, independent of the import duty upon thrown silk.

8576. Do you believe that the wages, independent of throwing, altogether amount to 30 per cent. upon the article?—It requires full 30 per cent. protection to the English manufacturer against foreign competition. If he were relieved of the import duty on foreign thrown silk, that relief would be about five per cent., therefore he would require five-and-twenty.

8577. You have stated that he would require a protection of 25 per cent. on the score of wages and waste and incidental expenses, independently of dyeing?—No; I include every expense, from his purchase of the thrown silk, dyeing, winding, warping, weaving and waste, till it come out in manufactured silk for sale—the whole of these items, whatever price they may be.

8578. Will the charges on 100*l.* worth of manufactured silk, of three double gros de Naples, amount to 30*l.*?—Very considerably more; but I will make the calculation if desired. I cannot give it at this moment.

8579. Have you taken these points of comparison, when you state that 30 per cent. is required to protect the English manufacturer between England and France, both of them in an ordinarily good state of trade?—That is my point of comparison; I do not now include jobbed goods.

8580. You mean to say that under any circumstances we are not able to make those goods so as to compete with France, without a protection of 30 per cent.?—Unquestionably; I mean to state that this parallel is drawn under the ordinary state of trade, and the most favourable for France, when prices and profits are good there.

8581. Do you think there is any great difference, generally speaking, between the cost price and the selling price in this country?—If I were to answer that from what has taken place to my knowledge within these last nine months, I must say a large portion of the gros de Naples sold in Spitalfields has been sold at a loss; and if there was any doubt of that, I will add that I have sold gros de Naples at a great sacrifice, because I could not get a higher price for them.

8582. Therefore the cost price may be above the selling price?—Certainly.

8583. You would not continue making under those circumstances?—Certainly not; I have not continued to make for that reason; I had this time twelvemonth nearly double the number of looms I now have, because I do not choose to continue to sell at a loss.

8584. Is there a greater waste to the manufacturer in making rich, than in making poor goods?—Yes, according to the number of threads at work, and according to the high standard of the silk; if not of the very best description, there is more waste.

8585. Can you give the Committee an estimate of the probable total value of the whole manufacture in Spitalfields?—No, I cannot.

8586. Can you state what was the difference in price between the goods imported by the trade Committee, with the permission of Government, in the early part of 1826, and similar goods manufactured in Spitalfields?—It was as 50 to 70.

8587. Your manufacture consists principally of black goods?—Exclusively of blacks.

8588. Have there been any considerable quantity of black goods imported since 1826?—I am told that the importations from the Continent consist chiefly of coloured silks, fancy and figured silks, black satins and formerly velvets.

8589. Have you seen any French black gros de Naples?—Yes, I saw several in the seizure of Leaf & Company, at the Custom House.

8590. Did they differ from the English in colour; is the dye better or worse?—The goods which I saw at the Custom House appeared to be much of the same character.

8591. Is not the French black dye inferior to the English?—I am not able to speak to that of my own knowledge; I see them occasionally, but not sufficiently to speak to the comparison.

8592. Have you ever heard of any black goods being imported either from Florence or from Zurich?—I have not heard of the importation of black goods in respect of any places in particular.

8593. The quantity of black goods imported is understood to be inconsiderable, is it not?—I cannot answer that from my own knowledge.

8594. Is not black an article of very large consumption in this country?—

Mr.
John Ballance.

11 June,
1832.

Mr.
John Ballance.

11 June,
1832.

I believe that there are more black goods made than the country requires, large as the consumption may be.

8595. If there is a large consumption of black goods in this country, and if no considerable quantity are imported from abroad, is not that a proof that it is not a question of price and competition between Spitalfields and Lyons?—The greater bulk of consumption in this country of black silks, I apprehend to be of a low and coarse texture, and that is a description of goods with which the Continent, whether in black or coloured silks, does not interfere.

8596. Are there a large quantity of rich black satins imported?—I think there is, and I have felt its effects. At the opening of the ports, I had rather a large trade in black satins; perhaps I do not err when I say that one-third of my manufacture was in black satins; I found the competition with France in that article so serious, that I have now very few making.

8597. Do you happen to remember whether among the goods seized at Messrs. Leaf's, there were any considerable quantity of black satins?—I am not aware.

8598. Are the French black satins imported into this country of good colour?—What I have seen are of a very good colour, and I believe this to be their general character.

8599. If the price of making three double gros de Naples is lowered in colours, must it not be lowered also in black?—Yes, certainly.

8600. If the coloured goods come in competition with those made at home, and you are obliged to reduce the price of weaving coloured goods, the price of weaving black goods would fall as a necessary consequence, would it not?—It is unquestionable, that I can give no more for the manufacture of a piece of black gros de Naples than my neighbour gives for the manufacture of a similar piece of coloured goods.

8601. Did you ever see a pattern of Zurich levantine black?—I have seen foreign levantines, whether from Zurich I cannot say, and I have suffered from their introduction, for I should have sold some of my own instead.

8602. What you have stated on a former occasion respecting smuggling, you stated of course only as matter of gossip in the trade, not any thing from your own knowledge; you spoke it on the authority of other persons?—I spoke from my own inspection of the goods.

8603. Of the cost?—Yes.

8604. Have the goodness to state what you believe to be the actual cost of smuggling 100 l. worth of goods from France?—I speak of those goods that have been shown to me, coloured goods; in consequence of my being asked to manufacture in black a similar fabric at a certain price, I asked the price, and found it was within 15 per cent. of what I could produce it; and when I stated my difficulty, and my suspicion that those goods were smuggled, the answer was, "I did not smuggle them, but perhaps the person did of whom I bought them."

8605. Do you think that the competition which at present exists in this country in the black silk trade is at all owing to the success of the French manufacture in the coloured goods, which gives them a monopoly in that article?—I can point to several manufacturers who, before the opening of the ports, cared very little about the black trade; confining themselves to the rich trade, the coloured, figured and fancy trade, they have been beaten out of their own market, and rather than turn their weavers adrift, who had been working for them some 20 and 30 years, they have given them black to make; this has produced at times an unnatural competition in black goods, which has considerably injured the trade, reduced the profits, and reduced the wages of labour.

8606. Of an hundred looms employed in the manufacture of three double gross de Naples, how many do you believe are employed on black, and how many on colours?—I cannot tell; the proportion is not fixed, but will vary at particular seasons.

8607. If the cost of smuggling be 20 per cent., do you believe that a greater duty than 20 or 22½ per cent. could be collected?—If His Majesty's Government are not more vigilant than they have been, not 20 nor 15 per cent. will be collected, but under good Custom House regulations there would be no difficulty in collecting a duty sufficient to protect the English manufacturer in plain goods.

8608. Supposing that by the precautions which you have alluded to, the cost of smuggling could be increased to 30 per cent., could a higher duty than 30 per cent. be collected?—Yes, there could be no doubt of that.

—8609. How much higher duty than the cost of smuggling can, in your opinion,

Mr.
John Ballance.

11 June,
1832.

be collected?—I should say generally, with good Custom House regulations, rigidly enforced, I think there would be no difficulty in collecting from 30 to 40 per cent.; I have very little doubt that the risk of the smuggler could be increased, so that the price of smuggling would come nearly up to the duty, though that duty were from 30 to 40 per cent.

8610. Do you believe that a higher rate of duty could be collected than the cost of smuggling?—I apprehend that the Custom House can command a higher duty, though perhaps but a fractional one, but the officers of the Customs can speak better than I can to that.

8611. What, in your opinion, is the reason why a higher duty than from 15 to 20 per cent. cannot be safely imposed by the Government, supposing, as the Committee are given to understand, that smuggling could be transacted for 20 per cent.?—In my opinion it arises from this circumstance, that no representation which we have made to His Majesty's Government for the last six years with relation to smuggling has been attended to; I do think it has been in the power of His Majesty's Government to prevent smuggling, had they but listened to our proposals.

8612. You stated on a former day, that in 1826 there were 167 manufacturers in Spitalfields, and that now there are only 79; did you speak of the manufacturers of broad silk goods only?—Yes, I spoke of the broad trade.

8613. You do not include narrow goods?—No; I have got the names of every manufacturer, and I will look over them to see whether there are any; I feel certain I have restricted myself to broad goods in both cases.

8614. You think that in 1826 there were 167 manufacturers of broad silk goods?—Yes, I believe I am quite correct.

8615. Can you state when that number was materially diminished, was it in 1826?—The far greater number, I believe, since 1828; there were several failures in 1829, but in the last three years a greater number than the former two.

8616. Can you state in what year any failed?—I can.

8617. Were they in general manufacturers of plain or of fancy goods?—That I cannot answer at this moment.

8618. Were not a great many of them small manufacturers, who had looms employed in making common gros de Naples?—Not altogether small manufacturers, there were some large ones; when I say large, I mean that they had a great number of looms.

8619. Can you inform the Committee whether the greater proportion of them were manufacturers of common gros de Naples or not?—Since the rich trade, peculiar to Spitalfields, has been surrendered by necessity into the hands of the foreigner, the great bulk of goods manufactured in Spitalfields have been of a low quality; the loss on those goods arising out of the competition in them, I think, has occasioned in great part the failure of those persons.

8620. Are there not a greater quantity of rich goods making in Spitalfields at this time than there were last year?—I do not know what others are doing; mine is considered a rich house; I am making less.

8621. What is the denomination of black satin mostly in use, is it called French black?—I should say, the best dye for black is almost exclusively what is called French black, the colour was introduced from France into this country, I think, about the year 1817.

8622. Is that the same which is used in France?—Yes, we had it from Lyons. There were two or three dyers who came over from Lyons and introduced the colour.

8623. Is it the same in appearance and durability?—I am not aware of any difference, the term French black, includes a variety of shades of black which obtain in this country as well as at Lyons.

8624. Can you inform the Committee what number constitute the committee at Weavers' Hall?—I do not recollect the exact number at this moment.

8625. What is the greatest number who have attended your meeting generally during the last six months?—Our committee has not met since this Select Committee have commenced their inquiry. It was formed in consequence of the distresses of the trade in October, and when, after successive interviews with Government, they obtained from the legislature this inquiry.

8626. Any meetings which have taken place have been meetings of private individuals?—There has been no business transacted; I believe the business was all arranged before hand.

678.

Mr.
John Ballance.

11 June,
1832.

8627. When was that committee instituted?—In the latter end of October last or early in November.

8628. How were they appointed?—By a public meeting at Weavers' Hall.

8629. The members were proposed in the usual way?—They were.

8630. Can you state how many of that committee are interested in throwing?—I cannot.

8631. Are not the larger portion of them interested in throwing?—My impression is, a very small number are interested in throwing. I will not be certain, but I should think about three or four.

8632. When was the first committee appointed which met at Weavers' Hall? In 1815; a general association of the silk trade was formed in 1815.

8633. Have you a prospectus stating the objects for which that was formed?—I do not know whether there is a prospectus or not; that association was dissolved in 1824.

8634. Do the proceedings of that first committee or association exist?—It is only the master of the Court of Assistants of the Weavers' Company that can answer that question.

8635. Was not that committee formed chiefly for the purpose of preventing smuggling?—To look after smuggling was its main object, but it was formed, I should say, for the purpose of protecting the interests of the trade generally, of which that was a main part.

8636. And to get the duties on raw silk lowered?—I beg to say that was no part of the object of that association, it may have been the object of individuals being members of that association, but it was no part of the business of the association.

8637. If the minutes and documents of that committee were produced, would they not show that smuggling existed as far back as in 1815?—I believe if those documents were produced they would go to establish the statement I made last Friday, that smuggling at that time was confined to the coast, goods were brought in in small quantities by stealth. The minutes of that committee would fully establish this.

8638. What is your opinion of the present extent of smuggling?—I do not like to form an estimate, but if I were to judge from the number of smuggled goods that I continually meet with, my opinion would be that the amount smuggled exceeds the amount legally imported.

8639. What proportion do you consider the two combined quantities to bear to the general gross sales in this country?—I consider that this question is necessarily restricted to the sales of goods made from a high standard of silk, in other words, of fine fabrics manufactured from the silks of Italy, and not of coarse fabrics produced from the silks of India and China. The importation from Italy of raw and thrown silk for 1831, is about 1,600,000 lbs. A large portion of this silk is mixed with Bengal and China for the production of low priced gros de Naples of a worse texture, such as the Continent does not make. I consider that at least one-third of the Italian silk imported is thus appropriated, which for the purpose of the present calculation must be deducted from the total amount. Goods of a similar description to those imported from the Continent, if manufactured from the remaining quantity of raw and thrown silk, would cost in round numbers, at the present value of raw silk, about 2,200,000 *l.* Should it appear that manufactured silks, imported from the Continent and France, both legally and illegally, amount to 900,000 *l.*, the cost abroad, (and I imagine it will appear that I understate this amount); when we add the duty and charges to represent the value of these goods in England as compared with those of British manufacture, we then have in answer to the question proposed, the proportions of these combined quantities to the gross sales in this country, stated in round numbers thus:—

Goods manufactured in England of Italian silk value	-	-	£.2,200,000
Manufactured goods imported from France and	}	-	£. 900,000
the Continent			
Average estimate of duty and charges, 34 per cent		306,000	
			£.1,206,000

I submit that these proportions fully explain the cause of distress in the silk districts, more particularly of Coventry and Spitalfields, and show the pressure upon industry in those places as well as upon our throwing establishments throughout the country; and it is further evident, that by so much as I have understated the amount

amount of foreign silk goods imported, in that proportion will the pressure upon our silk districts be greater.

8640. Do you believe there is 100,000*l.* worth imported from France which comes into direct competition with those manufactured in Spitalfields?—Yes, very far beyond that amount.

8641. Do you think that it is to the amount of 400,000*l.*?—I should think when one looks at the consumption of rich silks at the West end of the Town, and the similar consumption in all the principal towns of Great Britain, viz. Bristol, Edinburgh, Liverpool &c., there can be no question but that amount is under-rated.

8642. Are there any other articles in plain and figured gros de Naples in which they interfere?—These are the articles which constitute the principal manufacture of Spitalfields.

8643. Do you think that the quantity smuggled and that imported legally would throw about 100,000 persons out of employment, including throwsters, dyers, and so on?—Yes, I should think it would have the effect either of throwing fully that number out of employment, or of compelling them to make low priced goods, that do not come in competition with France, at a miserably reduced rate of wages, either they would be thrown out of employment or compelled to take work at a starving price.

8644. Are the Committee to understand that, in your opinion, there is imported from France legally and illegally, gros de Naples, plain and figured, to the amount of 400,000*l.*?—It is impossible that I can give a correct opinion without having data for it; from what I am continually seeing of foreign manufactured broad silks, plain and figured, there can be no question that the importation, legal and illegal, is to an amount that exceedingly interferes with the staple manufacture of Spitalfields. It is utterly impossible for me to speak to the precise quantity imported from loose calculations, but I gather it in a more certain way from the pauperizing effect of this importation upon the district itself.

8645. You see a great number of persons thrown out of employment in this particular branch in Spitalfields, and you see a large quantity of goods of this kind in the country?—Yes, I will give an instance; last December I was shown 30 pieces of figured gros de Naples, the purchaser told me that they were French, and the price which he had given for them; this price convinced me either that they were jobbed in France, or that they must have been smuggled at 15 per cent. Goods of a similar fabric and pattern, made in Spitalfields, had been offered to that dealer at a considerable sacrifice, within 2*d.* per yard of what he had purchased these, and refused, in consequence of his being able to buy these French goods cheaper; thus the French were sold and the British not; had there been no such advantage obtained by the dealer, in respect of these goods, the English manufacturer would have disposed of his 30 pieces, though at a loss, and been induced to set his men to work; this is no solitary case. I could instance many others in proof that the foreign manufacturer essentially interferes with the British manufacturer, and especially with the artisans in Spitalfields.

8646. Can you state the number of looms that were employed in the manufacture of figured gros de Naples in 1825?—As far as my recollection goes, taking a series of years, 10 or 12 years, it will be found that the fancy and figured silk, of the higher branches of trade, formed about one-fourth of the whole.

8647. Do you throw your own silk?—No, I do not.

8648. Have you a mill of your own?—I had one.

8649. You do not possess it now?—I told Mr. Vesey Fitzgerald, in 1829, if he reduced the duty from 5*s.* to 3*s.* 6*d.* I should give up that mill, I tried it for about nine months afterwards, and then I gave it up to the person who had superintended it for some years; I employ him as a throwster, but I have no interest in it.

8650. You consider the last reduction of duty as having had an injurious effect on the throwing trade?—I say a most injurious effect.

8651. You are interested in the throwing trade only as a mill owner?—My property lies there; I have given up the trade which I was very sorry to do.

8652. In regard to the committee at Weavers' Hall, was that appointed by a full meeting at Weavers' Hall?—Yes; a meeting was called by public advertisement the week before, and was fully attended.

8653. Have the English throwsters been worse off since the reduction of duty than they were before?—They have been far worse off.

8654. How has the bad condition of the English throwster shown itself?—In

Mr.
John Ballance.

11 June,
1832.

Mr.
John Bullance.

11 June,
1832.

the unexampled low price which he has been compelled to take for throwing, and in the consequent reduction of his wages to the work-people.

8655. Why does not he get a better price?—The manufacturer could not afford to give a higher price; it would not suit the manufacturer's purpose to have English thrown silk stand him in more than he could get Foreign thrown silk, for the difference between the price of raw and of thrown silk in this market must always constitute the protection of the throwster, that is what I call the common sense view of the question.

8656. Has there been a reduction in the wages of throwing?—The reduction of wages has varied in different places; I should say it has been from 25 to 40 per cent. since 1826. There are some instances in which it has been considerably more than that; in the North of England it has been considerably more.

8657. Do you conceive that this lowering the wages is to be attributed to the reduction of duty, or to competition between the throwsters themselves?—Certainly; from 1829 it has arisen not from the competition between the throwsters themselves, but from a reduction of the duty from 5s. to 3s. 6d., and from 3s. to 2s.; it works thus: As a manufacturer, I have the option of purchasing raw silk, or purchasing that silk in a thrown state from abroad. The price for the raw, say, is 18s. the price for thrown 23s. (I give the average difference since July 1829.) If I can get this bale of raw silk thrown, including waste, for about 5s., I buy it and send it to the throwster; if I cannot get it within that limit I purchase thrown silk; of course the price agreed between me and the throwster must have respect to the probable amount of waste in the process. It is well known that Italian raw silk will waste on an average from $7\frac{1}{2}$ to 10 per cent., which, deducted from 5s., will leave him scarcely 3s. 6d. per lb. for throwing fine organzine. This price is relatively much under the cost of throwing in Italy, notwithstanding all the advantages of the Italian throwster. In fact, under the present rate of duty the English throwster has no option but to refuse the offer altogether, or to take it at a price most ruinous to himself, and which compels him to give his work-people those miserable wages that drive them to have recourse for a part of their subsistence to the poor's rates; there is no alternative under the present state of things but this course for the throwster, or his machinery must stand idle. I press this upon the attention of the Committee, because I am quite satisfied that it is the difference of price in the market between raw and thrown silk that is substantially the protection of the throwster, and no other imaginary price founded upon any theoretical calculation whatever. I beg to refer here to a very valuable document submitted to this Committee by Mr. Doxat (No. 22), which shows the difference of price between raw and thrown silk from 1824; and I think establishes the fact, that this difference constitutes the throwster's protection, and which has been lessened as the duties have been lowered.

8658. Do you think it advantageous to the British manufacturer to have his silk thrown in this country rather than to be entirely dependent upon foreign thrown silk?—There exists no doubt of this among manufacturers of experience who understand their business.

8659. Do you think that goods, which are manufactured in this country of British thrown silk, are equally good with those which would be manufactured entirely of Italian thrown silk?—In some respects they are better; the satins are better.

8660. Why are they better?—They are made from the silk called Fossebrone, which we throw in this country in a peculiar way for satins.

8661. Do they throw it in that way in Piedmont also?—Piedmont silk does not give the lustre.

8662. You think that the silk thrown in this country is equal to silk thrown abroad?—Certainly, as regards the throwing.

8663. Supposing the throwing of silk had not hitherto been known in this country, do you think it would be desirable, in order to promote the general prosperity of the silk manufacture, that measures should be taken to introduce it?—It has always been my opinion, that so far from the weaving and throwing branches of the silk trade being at variance with each other, the prosperity of the British silk manufacturer is intimately connected with the prosperity of the throwing branch.

8664. The Committee have heard that it is cheaper to throw in Italy than in England, in consequence of the price of wages and other different circumstances; what do you conceive would be a protecting duty for the throwster on foreign thrown

thrown silk?—I say at once to return to the schedule of 1826, 5 s. for organzine and 3 s. for tram.

8665. What, in your opinion, makes it necessary for the protection of the English throwster, that the duty on foreign organzine should not be less than 5 s. a pound, and on tram 3 s.?—The Italian throwster possesses many positive advantages, and those to a very great extent, and the English throwster has found, the last three years, by bitter experience, that a duty of less than 5 s. on organzine, and less than 3 s. on tram, is not sufficient to counteract those advantages.

8666. Are you aware of the difference of the cost of the plant and power between Italy and England?—It will be found generally as one to eight; a mill in Italy, the rental of which would be about 60 l. per annum, would turn off as much silk as a mill in this country which lets for 460 l. to 480 l. per annum.

8667. Are you aware of any difference in the price of wages?—I should say that the wages result in about one-third of what they are in England; they may not be actually one-third less, but the result to the throwster is one-third.

8668. Do you attach much importance to their being able to throw silks on the spot, and of their having a better selection of raws?—I consider it most important, and that in many respects it diminishes the quantity of labour, and it diminishes the quantity of waste. I cannot give a more striking proof of this than by a reference to the evidence of Mr. Caffi; I think it is in his evidence that a strong boy or man had received per week for nine months at the rate in English money of 7 s. 6 d., which amounts to 5 s. 6 d. per week per annum, could superintend spindles that turn off 20 lbs. weight of fine organzine per week; unless I am very much deceived, nothing of that kind can be done in this country; a proof that the material itself must be of excellent quality.

8669. What effect would a further reduction of duty have on the English throwster?—I am satisfied that Italian raw silk would not be thrown in this country, and the manufacturer would become dependent upon Italy.

8670. There would therefore be an increased importation of foreign thrown silk?—Undoubtedly; and that would reduce many respectable throwsters to great distress by destruction of the capital they have invested in mills and machinery, and what perhaps is still worse, it would fearfully augment the miseries of the labouring classes. A large portion of our female population are now employed in those mills.

8671. Do you not think the manufacturer would receive a corresponding benefit by this reduction?—I think not; because I think that the Italian would receive a portion of the benefit that would arise from the remission of the duty.

8672. Have you had the means of ascertaining the value of mill property employed in throwing silk in England at any given period?—There was a general inquiry instituted in the year 1826 as to the value of mill property by the committee sitting at that time at Weavers' Hall, it was instituted in consequence of the Treasury Order to which I have referred, the reduction from 7 s. 6 d. to 5 s.; and the expected opening the ports on the 5th of July; the inquiry extended over the whole kingdom; and the estimated value of mill property at that time was between 1,500,000 l. and 2,000,000 l. and nearer the latter amount; I do not mean what those mills did cost, but what they would have cost if they had been erected at that time.

8673. Have you any idea what the value of that property is at this time?—Not one-half certainly: this is one effect of the change of the laws of 1824.

8674. You stated, that if the protection be removed from the throwster, the manufacturer would be relieved to the extent of five per cent., do you apply this to English thrown Italian silks as well as Foreign thrown?—No; it appears on evidence that the English throwster already works at a loss, and if compelled to work at a greater loss, he would soon give up the throwing of Italian silks, and therefore I apply it only to foreign thrown silk.

8675. Under what circumstances would the reduction of five per cent. on the value of manufactured goods extend to the whole of the Italian silk imported, said to be about 1,500,000 lbs. weight?—The manufacturer would receive the full benefit of this five per cent. upon the whole quantity imported, only in the event of the English throwster being destroyed, and the Italian throwster taking no advantage of that circumstance.

8676. In the event of the importation of thrown silk continuing the same under the remission of the import duty, how would the manufacturer then be placed in respect of this five per cent.?—It is obvious, that in respect to the entire quantity

Mr.
John Ballance.

11 June,
1832.

manufactured from Italian silks, his advantage would be reduced to $1\frac{1}{2}$ per cent. on heavy goods, and to one per cent on light goods.

8677. You have stated that you have been engaged in the silk trade for nearly 30 years, have you been in the habit of buying Italian raw silk all that time?—Yes; I may say almost every month throughout every year.

8678. What description of raw silk have you chiefly bought?—I buy Fossembrone raws and raws of Lombardy, commonly called Bergam raws, of the best quality.

8679. Of late have you found any difficulty in obtaining the best sorts of those raws?—I should say not so much in Fossembrone, but certainly in Bergam raws.

8680. Can you account for this difficulty?—I speak to the fact as what I have experienced, and this difficulty has been coincident with the late reduction of the import duty on foreign thrown silks.

8681. Are your purchases of Italian raw silk sufficient to give you a knowledge of the general state of the market in them?—We are, I may say, regular and rather considerable purchasers of raw silk, and I am in the habit of seeing samples of all the filatures that come into our market, of the best sorts of raw silk.

8682. Can you state why this difficulty has not applied to Fossembrone raws?—In Lombardy the Italians have throwing mills, and of course they have the option of sending either the raw or the thrown silk; that is not the case in the district of Fossembrone; I believe they have not yet any throwing mills.

8683. How would your manufacture in particular be affected, could you not obtain a good supply from Italy of the best sort of raw silk?—I should be inclined to give it up altogether; I mean to say my manufacture is of that description, if I were compelled to use the silks thrown in Italy, I think it would be of very little use my carrying it on.

8684. Do you think the lowering the import duty on foreign thrown silk would, by possibility, place you in those circumstances?—I have heard something of late that would make me fear it. Some London merchants, within the last two months, have written to their Italian correspondents upon this subject, and those Italians are now very much in doubt whether to send their best raws to this country, or to retain them to send them in a thrown state, as, in the event of a reduction of the import duty, they consider it would be more advantageous to them to send them thrown.

8685. In which case you would be of course entirely dependent upon them?—In which case we should have, to say the best, a very scanty supply of that description of raw silk, which I consider essential to the carrying on my manufacture; I may add, I have no recollection of the market ever being so bare as it is at this moment of the description of silk to which I have referred, the best raw silk.

8686. You have stated, that you give a preference to English thrown silk for the manufacture of the richest goods, do you prefer English thrown Italian organzine to Foreign thrown, independently of the prices of the two kinds?—Certainly; I have said that I use no Foreign thrown silk, except for some certain goods; all the richer goods are made exclusively from English throws.

8687. The object being to supply the English manufacturer with thrown silk, cheap and good, which is the most likely method eventually to obtain that end, by keeping up a considerable duty upon foreign thrown silk, and encouraging the throwing trade in this country, or by lowering the protecting duties, and thus discouraging the throwing of Italian silk in England?—There can be no doubt that if we wish to have cheap and good throwing in this country, I mean cheap in proportion to foreign thrown silks, the only way to secure it is to give full protection to the throwsters. This will give them confidence in their business, which will secure to the manufacturer a regular supply in the market of good English thrown silk. I beg to add, this regular supply of English thrown silk can be obtained only by giving to the English throwster what I call a margin between the duty and his actual cost, to secure him against contingencies. This he had formerly; and the effect was, that in those years the price of English thrown silk was under that of Foreign thrown.

8688. It has been very often said, that Spitalfields suffers from the competition of Manchester, and not from that of France, what is your opinion upon that subject?—The most serious injury that Spitalfields receives is the competition with France and the Continent, that is the first and great injury. The competition with Manchester is incidental and grows out of it, but is altogether of a secondary nature.

8689. It has been stated to this Committee, that the distress of the silk trade has

not

not been so great the last nine months as formerly; are you of that opinion?—I am entirely of a contrary opinion; and I apprehend that the persons who gave that opinion, being dealers only, are not qualified to give any opinion about it.

8690. It has been given in evidence, that there have been no sacrifices of profit this spring in the sales of silk goods, and that generally the manufacturers do not keep any stocks by them, is that the case?—I believe this evidence was given likewise by dealers who know very little of the sacrifices of manufacturers. I know there have been sacrifices, and I have myself made them, and have been compelled to do so; and as to keeping stocks, I may say generally, without offence, the manufacturers are too poor to keep them, they do not do it because they cannot do it.

8691. It appears in evidence, that the importation of plain silk goods from France was greater in 1827, 1828 and 1829, than it has been since, how do you account for that?—I answer this question by directing the attention of the Committee to the account I gave in last Friday from the parish of Bethnal Green; perhaps we have succeeded to some extent in stopping the legal importations of plain silks; but we have done it by reduced wages, that is pauperizing our workmen. As it respects the higher branches of plain goods, and the fancy and figured trade, even by that means we have not succeeded with them.

8692. It has been stated, that upon the work for which 6½d. was paid, a man can earn 13s. per week, how do you reconcile that with your statement of the average earnings of your weavers?—I can reconcile it only by saying, that no man could make the quantity that would realize 13s. per week. If he is paid only 6½d. per yard, he must either work 18 hours out of 24, or he must have assistance; his paying for which would of course reduce the 13s. I consider the calculation of the supposed quantity of work done altogether erroneous.

8693. Do you mean to say that the manufacturer's books are no criterion that the man who is paid 13s. a week has earned it all himself?—Certainly they are not.

8694. It appears in evidence, that in respect of the wages of silk manufactured goods, plain silks, manufactured in England are as cheap as those manufactured in France; is that your opinion?—In all silk goods quality as well as weight is to be considered; and I apprehend that the goods referred to were not made of the same materials; for example, if I make a piece containing 3,000 threads, each weighing 48 deniers, and I make another piece containing 6,000 threads, each weighing 24 deniers, I have the same weight per yard in both cases, but the one is of a low, and the other is of a high standard; and though those goods respectively weigh the same, they will not fetch within 9d. per yard in the market. If the one is worth 3s. the other will not be worth more than 2s. 3d. I therefore submit, that all calculations founded upon mere weight, are utterly fallacious.

8695. It appears that many large dealers in silk goods sell principally British silks, how do you account for this?—It is very obvious that every house has its particular connexion, and if that is mainly with the middling or lower classes, or what is called the country trade, the demand will be principally for low priced silks of English manufacture; but if the house supplies the upper classes of society, whether those classes of society are in London, or in the principal towns of England, there the demand will be principally for continental silks; therefore the comparative sales of any such houses are evidence only as it regards the sales of such houses, but not of the extent of trade as a whole.

8696. What description of silk goods does your house manufacture?—Plain black silks, and at a range of price from 2s. to 7s. per yard.

8697. You have said, that the remission of the import duty on foreign thrown silks, which would reduce the value of manufactured silks about five per cent., would not relieve the manufacturer in respect of smuggling; will you explain this?—I said that it requires a duty of full 30 per cent. to protect the English manufacturer in respect of plain silks, and I said this with reference to the ordinary state of trade at Lyons, excluding jobs. Goods are smuggled in considerable quantities at 15 per cent.; if the protection to the throwster were removed the manufacturer then would require 25 per cent., and it is obvious there would remain between him and the smuggler still the difference of ten per cent., which can be got rid of only by increasing the risk of smuggling. I am aware that it is very easy to get rid of smuggling by reducing the duty to the smuggler's price; but then we deprive the English manufacturer of the protection he requires, and thus get rid both of smuggler and manufacturer at once.

8698.

3 s 2

8698. You

Mr.
John Ballance.

11 June,
1832.

Mr.
John Ballance.

11 June,
1822.

8698. You have alluded to certain checks in the plan of stamps, what are they?—There are two; I alluded to the moveable number, and I alluded to a pattern-book; it is the pattern-book that secures those checks; if a pattern be cut off every piece as it passes the Custom House, and the pattern be entered in the book with a number attached, the piece suspected to be smuggled, which may have a forged stamp, must correspond in colour, in quality, in leizure, and likewise in the actual incision of the cut; these are coincidences that are scarcely ever possible to occur in reference to smuggled goods.

8699. How would this operate to prevent the forging of stamps?—I think in the way I have stated, that the difficulties thus thrown in the way would deter persons from forging those stamps.

8700. Have not watered silks been very fashionable this season?—Yes.

8701. Are they plain silks of very rich quality?—Yes.

8702. Have those silks been made in Spitalfields or imported from France?—They have been imported from France in very large quantities; one house at the West end of the Town told me the other day that very nearly one-fourth of their importations this year was in watered silks.

8703. What difference would it have made in Spitalfields had the demand been supplied from that district?—It would have kept in constant employ several hundreds of looms.

8704. And that upon the rich goods, where the earnings of the weaver would have been much greater?—Those workmen would have received from about 9 *d.* to 11 *d.* a yard making, and instead of which the poor fellows have been making works at 5 *d.* and 5½ *d.* per yard.

8705. In your evidence on Friday last, you exhibited some patterns of figured silks made at Manchester, should you state that the foreign silk manufacture interferes with the silk manufacture at Manchester?—The manufacturers of the Continent and of France work upon a high standard of silk, and such also is the staple manufacture of Spitalfields; but Manchester works uniformly on a coarser texture of silk, and a lower standard, and the manufactures of the Continent no more interfere with the staple manufacture of Manchester than did the manufacture of Spitalfields formerly interfere with that of Manchester; and I apply this even to furniture which is making at Manchester; it is well known that furniture is made of Bengal and China silks.

8706. Do you mean to say that Manchester has not suffered at all from the admission of foreign wrought silks?—She has undoubtedly suffered, but in an indirect way; the competition in low priced goods between Manchester and Spitalfields has been in consequence of the opening of the ports, which has deprived Spitalfields of her rich trade.

8707. Do not you think that Manchester would be benefited as well as Spitalfields by the prohibition of figured silks?—The legitimate trade once restored to Spitalfields, she would give up that competition with Manchester, and things would then revert to their former channels; Manchester would take her trade, and Spitalfields take her's.

8708. You have alluded to the raw silk of France as giving her manufacturers an advantage over us, how would that advantage stand could we obtain this raw material?—I have alluded to this raw material as only one element of advantage, if I may so speak, among many others; but could we obtain the raw material it is very evident there would still remain her low rate of wages; her very large export of manufactured silks, which is three-fourths of her whole production, and her control of fashion, and these conjoined would give that advantage to France as to render successful competition in the higher classes of the silk manufacture utterly impossible, even in the event of our having the raw material.

8709. Did not an Act exist formerly in Spitalfields which regulated the price of labour?—Yes.

8710. Were not the rates of wages higher then in consequence?—No, they were not higher on the plain branch; I conceive that the effect of the Act was to keep the price down in the plain branch; what it had to do with the figured branch I must leave to figured manufacturers to speak to.

8711. Has the price of labour increased since that Act was repealed?—The Act was repealed in 1824, and in 1825 there was an advance of 1 *d.* a yard; but I advert more particularly to that which took place in 1817, 1818 and 1819, when the Act was in force; I know instances in which a penny a yard more was paid in Manchester and Macclesfield for low goods than we paid in London, which is decisive

decisive that the Act rather kept down the price of wages in plain goods than otherwise.

8712. When you stated that 300,000 *l.* are annually paid in wages less now among the poor in Spitalfields than formerly, do you make that calculation on the wages paid under the Act?—No; I take my calculation on the wages paid in 1826; and I beg to add that I made this calculation of 300,000 *l.* paid less in Spitalfields now than in 1826 exclusively with reference to the reduction of wages in the plain branch, without including the figured trade; if I were to add the reduction in the figured branch, I should exhibit a much larger amount than 300,000 *l.* per annum.

8713. When you speak of 30 per cent. upon foreign plain goods as the difference between the cost in England and France, is that founded on the regular cost of production of foreign goods, or taking into consideration the occasional glut of French goods and the consequent jobbing of those in the market?—My calculation is not made on job goods, but it is upon goods that may be ordered from Lyons in the regular way; and the calculation is made by working a certain quantity at their price, and the same quantity at our price, upon our present very low rate of wages.

8714. Do you not then require some greater protection than 30 per cent. against such goods which may be had in France occasionally at a less cost?—There can be no doubt that this is one very important element of the question. France, as I have said, exports in manufactured silks upwards of two millions of pounds weight. I have stated her markets to be in the North and South of Europe and America; should there be any obstruction to her sales in those places, the surplus must be poured into this country, consequently the English manufacturer becomes the victim of contingencies, which he neither can foresee nor control, and this destroys all his confidence. He may be preparing for his own market in the expectation of a good trade in the spring; there may arise contingencies from abroad, of which he knows nothing, and a glut of French silks may come in that will compel him to sell goods at a tremendous sacrifice.

8715. Are not the goods imported from France into this country chiefly of superior kinds?—My opinion is, that those imported of the superior kind, fancy and figured silks, more generally pay the duty, and that the smuggling is in plain goods of a more middling quality; I form this opinion from what I see around me.

8716. Is it not a great protection to our manufacturers that even the smuggling of those jobs must cost 20 per cent.?—No; and I do not think that it does cost 20 per cent., or any thing like it.

8717. State the grounds of that opinion?—From having seen the goods and the prices quoted.

8718. You do not know what the cost of the smuggler is, or the amount of insurance?—I am quite satisfied of one of two things, that either those goods were bought as jobs in the French market, or that if the regular price was paid for them there was not more than 15 per cent. paid to get them into this country. I do not care which it is, and I could not make them within 15 per cent.

8719. There is a difference between the article manufactured by you and the articles imported from France of 15 per cent.?—I mean to say that I have seen goods on which there has been a difference of 15 per cent.; and having stated this opinion to the purchaser, the answer was, though I did not smuggle them, I have very little doubt they were smuggled from the price at which I bought them.

8720. Does not that show that the 15 per cent. is sufficient to put the two manufacturers on a footing of equality?—I have said that it requires full 30 per cent. to protect the silk manufacturer in this country; the protection includes the price of labour to the artisan. If the manufacturer were to have but 15 per cent., the parishes in the silk districts would have to support all the work people.

8721. Are you not to be understood to say, that on comparing certain goods imported from France with goods manufactured in Spitalfields, you find a difference of 15 per cent.?—What I stated, or intended to state, was this, that the goods I saw I could not manufacture within 15 per cent.; the parties, when I objected to it, told me though they had not smuggled them, they suspected that they were smuggled, and at a charge of 15 per cent.

8722. Do you mean, when you state you could not make them within 15 per cent., to say the cost in Lyons or the cost in London?—I mean to say the cost in

Mr.
John Ballance.

11 June,
1832.

Mr.
John Ballance.

11 June,
1832.

London, those goods having already paid the smuggler's charge to the amount of 15 per cent. and other expenses.

[The Witness delivered in the following Comparative Statement, which was read:]

COMPARATIVE STATEMENT of the Cost of manufacturing 500 Yards of Plain GROS DE NAPLES of Medium Quality in London and at Lyons; the former manufactured from English Thrown Italian Silk, and the latter from Thrown Silk of French growth. The Prices given as under for the Organzine and Tram at these Places respectively, are the Averages Prices of the last Three Months.

June 11.

(Errors excepted.)

John Ballance.

I have given above only the cost of production in both places without reference to profit in either case, and have calculated that in London upon English thrown silk, not Foreign thrown silk; the import duty upon which is 1d. per lb. I speak with full confidence to the accuracy of this statement; and I submit that it more than supports the opinion which I have expressed. That in respect of plain silk goods of middling quality it requires a duty of full 30 per cent. to protect the English manufacturer. In respect of the higher description of plain silks, and of fancy and figured silks, the difference will be found to be from 40 to 50 per cent. against him.

Jovis, 14^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esquire, LL.D. called in; and Examined.

John Bowring,
Esq. LL.D.

14 June,
1832.

8723. YOU have been for some time past in France, have you not?—Yes, I have been engaged for the last four or five months as a commercial commissioner at Paris, and it has been my business to examine, in all their bearings, the manufacturing and commercial relations of France, and I wish, with reference to this object, to make one preliminary observation to the Committee, which appears to me of great gravity and importance; it is this, that in investigating the state of exportations into France from England, and importations into England from France, we have discovered, that the amount of manufactured goods imported from France into England (upon the system which exists here), and imported from England into France (under the system which exists there), is about equal, but we have been very much struck by one remarkable fact, which is this; that in the goods

John Bowring,
Esq. LL. D.

14 June,
1832.

goods imported into France from England labour forms a great proportion of the cost of production, and in the goods introduced into England from France labour forms a small proportion of the cost of production; and hence one very obvious consequence will occur to the Committee, that in as far as any measure should prohibit the introduction of French goods into England, a much greater quantity of English labour must inevitably be displaced than the labour which is protected.

8724. Your attention, whilst you were a commercial commissioner in Paris was of course called, was it not, to the whole of the commercial relations between France and England?—Our business, in fact, was to examine the whole character of the commercial communications and relations between the two countries, and the task was of course a very laborious one, as it is well known that commercial intercourse had been minimized by the system which had been adopted by the two countries; but inasmuch as the French Government lent us the most cordial assistance for investigating every point, we were enabled, I think, to substantiate the facts of the case in a very satisfactory way.

8725. Your attention has been lately more immediately directed to the state of the silk trade in consequence of directions you received to inquire particularly into that branch, has it not?—Yes, specially so, inasmuch as, with reference to the relations between England and France, silk and silk goods have become very prominent topics; that is one of the points which necessarily required particular attention.

8726. In consequence of those directions you left Paris, did you not, and proceeded to Lyons and other places, in which the silk manufacture is carried on in France, and examined with the greatest care you could the state of the silk manufacture?—Yes, I left Paris in consequence of instructions received from home, and before I left Paris, having stated to the French Government the purpose of my mission, I received from them such introductions as were most likely to assist me in the object of my inquiries.

8727. Besides the means you received from the Government, did you possess any other means?—I had a large personal acquaintance in the district; I have been very familiar with France, and I will state to the Committee the character of the documents with which I was furnished, and the introductions I received. The President of the Council directed the Prefects to give me every assistance; the Minister of Finance instructed the Custom Houses to furnish me with any official returns I should desire; the Minister of Commerce introduced me to the Chambers of Commerce. I took with me, also, letters from the representatives of the different districts, and had myself a very considerable personal acquaintance among the most intelligent men in the Departments I visited.

8728. Had you sources of information amongst the operatives as well as amongst the other classes?—Very decidedly; my course all through was one of extreme frankness; I first visited the authorities, as I was bound to do, and stated that, as it was my intention to investigate this matter thoroughly, I hoped they would not take it amiss if I visited the workmen at their looms, and completely informed myself of the state of things; they not only approved of that conduct, but assisted me in every conceivable way. I was enabled to compare the official statements with the facts which I gathered from personal observation. I almost dwelt amongst the labourers for some time, and I think became perfectly familiar both with their habits of life and their social position. I am also desirous of putting into the hands of the Committee some evidence of the manner in which I was received in the silk manufacturing districts; some of the newspapers did all they could to frustrate my object; here is a newspaper containing an appeal to the manufacturers and to the workpeople, in order to prevent my obtaining information; the newspapers in general took a completely different course, stating that the period of secrecy had passed away, and that any individual who came to ascertain the facts of the case, and not to pillage their manufacturing secrets, was entitled to a cordial reception; and the workmen came in deputations, offering to communicate any information I might desire.

8729. Have you any reason to believe that this was a change from their former line of conduct, and that difficulties had been thrown in the way of obtaining information?—Undoubtedly the whole feeling in France, not only as connected with this particular topic, but connected with general commercial topics, has changed in a very extraordinary degree; the fact is, there is a strong English interest now spread over the country that is demanding a change, and that demand for the change in their commercial system is very greatly operating upon their

John Bowring,
Esq. LL. D.

14 June,
1832.

future plans of commerce, and more especially, as I am quite sure any examination of the subject will show, that the quantity of distress, the frightful crash and ruin which their prohibitory system has introduced into the whole of their manufacture will be such, that nobody can long resist the evidence of it.

8730. Will you state, in the first instance, what you consider to be the condition of the French silk trade generally?—The French silk trade is at this moment suffering under very considerable disadvantages: a portion of their general prohibitory system falls upon them; there is a tax upon raw silk in order to protect the French grower of silk; there is a heavy tax upon iron, an enormously heavy tax, in order to protect their iron masters; that tax upon iron has led to a great increase in the value of wood, so that as wood and iron enter into their machinery they suffer much from that circumstance, and as in the great towns the local taxation is also very heavy, the consequence has been, that except in cases in which taste and very long experience and aptitude enter largely into their manufacturing productions, their trade is passing away; that is very much the case with respect to plain goods at this moment, the trade is relieving itself a little by the migration of weavers from the towns into the country, that of Lyons has been more relieved by the violent expulsion of a great number of weavers.

8731. Have you any statement of the import of raw and thrown silk into France?—I have here an official statement which has been furnished me by the Minister of Finance from the Custom House of all the importations of raw and thrown silk from 1825 to 1831, a period of seven years, which I will deliver in; it will be seen that the great source of importations are the Milanese Provinces, standing under the head of Austria; the second in importance is Sardinia; the third in importance is Turkey; the fourth Naples and Sicily; in a former year there had been some importations from Egypt, the last two years there was none.

[The same were delivered in, and read.]

8735. Can you state the consumption of foreign silk in France?—That I have obtained from another source, by applying to the Minister of Commerce; the value of these documents consists in their coming from different and independent quarters; this is a document furnished me by the Minister of Commerce, as to the weight of silk imported for the consumption of the kingdom from the year 1820.

[The same was delivered in, and read.]

FRENCH SILK TRADE.

WEIGHT of SILK Imported for the Consumption of the Kingdom, from 1820 to 1831.

I have also an estimate of the Minister of Commerce of the value of the silks imported and employed for home consumption for the same years, by which it appears that from 1820 to 1830, the last period to which it is made up, the total weight in 1820 for foreign silk was 29 millions of francs and in 1830 it was 33 millions of francs.

[The same was delivered in, and read.]

John Bowring,
Esq. LL. D.

14 June,
1832.

FRENCH SILK TRADE.

There is a document I also found possessed by the Minister of Commerce, of some value as connected with the earlier history of French trade, a Statement of the value of raw silks imported from 1800 to 1806, and of the quantities and value from 1815 to 1819. In the year 7, which was 1799, the estimated value was 1,789,500, and in 1819 it was 24 millions of francs; this document comes also from the Minister of Commerce, but from a source independent of the others; the value of this document arises out of the means of comparison which it gives.

[The same was delivered in, and read.]

AVERAGE - -	Lbs. 1,191,609	£. 41,392 Sts.

I have also a document showing the ports of exportation of raw silk to England for a certain number of years; Calais has become the principal port, and Marseilles secondary.

[The same was delivered in, and read.]

FRENCH SILK TRADE.

PORTS of EXPORTATION.	QUANTITIES OF RAW SILKS Exported from France for England, during the Years		
	1828.	1829.	1830.
	Kil.	Kil.	Kil.
Calais - - -	751,947	375,772	570,171
Havre - - -	488	—	—
Marseilles - - -	20,175	11,961	39,326
TOTAL - - -	772,610	387,733	609,497

All the above are Foreign Silks, and principally Italian, the export of French Silks being prohibited.

8737. You have stated what the import and consumption of foreign raw and thrown silk imported in France is, have you any means of ascertaining what the extent of consumption of French silk is?—As far as I could state from a good deal of correspondence and communication, the general estimate in the silk manufacturing district is, that the proportion is about three to one, which is the most current opinion of manufacturers; and I apprehend that that fact will be found very correct from two other data which I have; the report of the amount of the manufacture of France is, according to the best document, estimated at this moment about 140 millions of francs, of which 110 millions are exported, and 30 millions consumed in France, and the general calculation is, that 80 millions of that amount is in raw material; now if 20 francs per lb. be taken as the average of the value of that material, we shall find four millions of pounds as a result; and having ascertained that the importation is about one million, which all the documents prove, there remain three millions for the produce of France; as to that fact also, as it is a very interesting one, I have come to the same result from this estimate; there are in Lyons 30,000 looms, in the St. Etienne district 20,000, at Nismes 8,000, at Avignon 6,000, in other parts of France 6,000, making 70,000 looms in the country; the estimate of annual production is about 60 lbs. per loom, which also comes to the amount of 4,200,000 lbs.; these

John Bowring,
Esq. LL. D.

14 June,
1832.

these facts go to show, that the amount consumed in France is about four millions of lbs., and the amount of French production three millions.

8738. Had you an opportunity of obtaining those communications from persons possessed of sufficient knowledge to be able to give full information upon the subject?—Yes; the almost universal impression at Lyons, and the neighbourhood, amongst intelligent persons is, that that is about the mark; they state that three parts of the silk they use is French, and one part foreign.

8739. Consequently the value of the 60,000,000 were the home produce?—Yes.

8740. What were the observations you were enabled to make on the quality of the French silk?—There can be no doubt there are certain districts which produce silk superior to any other silk produced in the known world; I have brought home for the Committee, some samples of that which may be considered the peculiar silk of France.

[The Witness produced several samples of silk.]

These are samples of the silk of the department of Cevennes, which are the most remarkable; there are three qualities there, they were bought in the open market; I will put in a document showing their cost.

FRENCH SILK TRADE.

COST of SILK of which Samples accompany.

No. 1.

Ganges, 6/7 cocoons, white, being about 16 to 18 deniers:

58f. per kilog. say 100 kilog. - - 5,800f. at 25f. per £. sterling - £.232 - -

Deduct 12½ per cent. discount, at 3 months - - 29 - -

£.203 - -

or 18/5 per lb. English avoirdupois.

No. 2.

S^t Jean, 3/4 cocoons, yellow, say about 9 to 10 deniers:

60f. per kilog. say 100 kilog. - - 6,000f. at 25f. per £. sterling - £.240 - -

Deduct 12½ per cent. discount, at 3 months - - 30 - -

£.210 - -

or 19/1 per English lb.

No. 3.

S^t Jean, 5/6 cocoons, yellow = 14 to 15 deniers:

at 58f. per kilog. = as No. 1, gives 18/5 per lb. English.

These were the prices of 17th May 1832, at Lyons.

8741. You stated that 60 lbs. is the consumption in each loom, do you mean the consumption of silk; or do you mean the weight of the goods when manufactured?—The consumption of raw silk; the English estimate is considerably beyond that; but there are large districts in France, where the labour is not constant. Of this silk, which may be called the peculiar production of France, the quantity which the Cevennes give, is about 400,000 lbs. per annum; and those articles being purchased in the open market on the 17th of May, the price there came out at 18s. 5d., 19s. 1d., and 18s. 5d.; there is also an exceedingly small quantity of silk produced there, which sells as high as 100 francs per kilogram, or 2l. sterling a pound. Some years ago, a peculiar worm was introduced into France, which they call the Sena worm; its produce is principally applied to the manufacture of blonde.

8742. Is the whole of the silk produced in Cevennes of fine quality?—The greater part of the Cevennes silk is of fine quality.

8743. What is the quantity of silk of this superior quality?—Four hundred thousand pounds is the present annual production of that which may be called the silk peculiarly French.

8744. Can you state the value of that silk, as compared with other silk imported?—It has universally the preference; the best way to show the superiority of this, will be to put in a price current, in which the particular qualities are quoted; this is the price current of the 26th of March last.

[The same was delivered in, and read.]

N. B.—Les prix de Lyon s'entendent ; la livre marc et conditionné à l'instar de Turin, sous escompte de 12½ % c'est-à-dire, de 1/8 du prix, terme 40 jours.
100 kilogrammes font lbs. 204½ marc.

N. B.—La quantité de soies étrangères consommées dans nos fabriques varie considérablement d'année à année, puisqu'elle est subordonnée au prix plus ou moins élevé de ces soies comparativement aux nôtres ; c'est à Paris, et non ici, que l'on peut avoir le relevé exact d'entrée des soies en France ; l'administration générale des Douanes à Paris ne fait rien publier à cet égard, mais elle a nécessairement le relevé des entrées des grèges et ouvrées, soit par mer, soit par terre. Le ministère a peut-être des données sur la quantité de production des soies en France, mais je ne vois personne ici qui puisse me la fournir.

8745. Had you any means of ascertaining whether the production of French silk is upon the increase or decrease?—It is very remarkably on the increase ; and I will say, that of all employments of capital at this moment in that country, no one is giving so great a return as the production of the mulberry tree. I have had occasion to examine many plantations, and also some books ; and

I believe

John Bowring,
Esq. LL. D.

14 June,
1832.

I believe the cultivation of silk is giving at this moment from 15 to 25 per cent. to the intelligent agriculturist. Perhaps the Committee will be interested in hearing a short statement I have made out, of the manner in which the silk reaches its reeled state. The price of eggs in France is, at this moment, two francs and a half per ounce; one ounce of eggs will consume 1,500 weight of mulberry leaves, of which the general average cost is about three francs per hundred weight in a good year; an ounce of the eggs will produce one hundred weight of cocoons, and the price of the cocoon is about one franc and a quarter per lb., that is, 125 francs for 100 lbs.; the average I should judge is, that this 100 lbs. will give about 8 lbs. of silk, of which 18 francs may be considered the medium price. The average rate of winding by the women, employed in reeling off the cocoons, is about 25 lbs. of cocoons per day, or on the average two pounds of silk: the wages for winding is from 30 to 40 sous; that is from 15 to 20*d.* per day; of the coarser silks, 100 lbs. will give a tenth, the general average, taking the whole of the silk district. I estimate that the mulberry tree will give one hundred weight of leaves, though there are trees which have been known to produce nearly 30 cwt.; the cost of cultivation is estimated at a franc a hundred weight; so that it is perfectly obvious they reap a very large profit; the leaves are generally sold to the peasants, who "educate," as it is called, the worms. Some among them purchase the eggs, and cultivate themselves the mulberry tree for the food of the worm; the cost of the mulberry tree is from 60 centimes to a franc, they are planted out at four years old: the peasantry will generally contract to plant them out at 80 centimes a tree; at five years, they begin to produce for stripping; they are cultivated now in ten or twelve departments of France; they go on increasing in quantity for about 20 years. The increase of production of silk in France is extraordinary; the mulberry tree interferes very little with other agricultural produce; it is only of late years that the cultivation of the mulberry tree has been a subject of primary attention; nobody had devoted himself to it as the principal means of profit, but solely as a secondary means; but of late there has been a great change, and a great deal of capital is employed in the cultivation of the mulberry tree, with a view to the production of silk; I have no doubt that the production of silk will become an object of constantly increasing attention; the subject is becoming better and better understood.

8746. Do you speak of 18 francs as the average price of a pound of silk of native growth?—Yes; I make that statement on the authority of one of the principal growers; I should scarcely consider myself justified in asserting, as my own opinion, that the estimate is precisely correct; it is, however, that of a large proprietor in the neighbourhood of Nismes; he may have referred to his own district; the great difficulty is, to get at the correct statistical facts connected with production. In the Cevennes district, the cost would be very considerably higher.

8747. He gave you that as the net price, without discount, probably?—Yes, most likely.

8748. Have you any objection to state the name of that person?—M. Maigre.

8749. What do you consider as the tendency of the prices of raw silk in France?—Most undoubtedly to decline; the price of the silk which is obtained from the Cevennes, which is the most interesting district, and whose silks represent the most advanced state of cultivation, has been constantly tending downwards. I have here the price of cocoons and the price of raw silk from 1822: I should remark, that the weights are very various in the silk districts by which silks are sold, and errors become inevitable, unless the local facts are known; the pound by which this silk is sold, is a pound of which 242 make a hundred kilogrammes; there is a difference of 21 per cent. in weight. In 1822, the price of cocoons, immediately after the harvest, was 1*f.* 70*c.* per Alais pound, and the raw silk, the Alais pound, was 31*f.* In 1831, the price of cocoons was 1*f.* 35*c.*, and the price of the Alais pound of silk, 21*f.* 50*c.*; so that in 1822, the price of this silk was nearly 50 per cent. beyond the price in 1831. This document, which I have made official, by obtaining the sanction of the President of the Chamber of Commerce of Lyons to it, states, that in the Cevennes, 13 lbs. of cocoons will give 1 lb. of silk, wound at from four to five cocoons a thread, and the estimate of the expense of winding is about 3*f.* 50*c.*; the silk is invariably sold by the Alais pound, which is the Languedocian, of former times.

[The same was delivered in, and read.]

FRENCH SILK TRADE.

PRICE of COCOONS and RAW SILK of Cevennes, at the period of the Harvest during the last Ten Years.

YEARS	PRICE OF COCOONS, the Alais Pound.	PRICE OF RAW SILK, the Alais Pound.
1822	1 70	31 -
1823	1 50	22 25
1824	1 40	23 -
1825	1 70	28 -
1826	1 70	25 -
1827	1 50	23 -
1828	1 50	23 25
1829	1 45	23 -
1830	1 40	22 50
1831	1 35	21 50

The general estimate of the Cevennes silk is, that 13 lbs. of cocoons will give 1 lb. of silk, wound at from four to five cocoons a thread; and the estimate of the expense of winding is about 3*f.* 50 *c.*

The Alais pound, universally employed in the Cevenne, is the old Languedocian weight, of which 242 lbs. make 100 kilogrammes.

8750. Are there any peculiar means for ascertaining the fineness of silk in France?—Yes; the means by which the fineness of silk is ascertained is by winding off the quantity of 400 ells, that is equal to 475 metres; they are wound off on a cylinder, which is an ell in circumference, the weight is expressed by grammes, 24 grammes are equal to one denier, 24 deniers an ounce, and 15 ounces make a pound, poids de marc, which is the Lyons mode of selling silk; the weight of which is somewhat less than the ordinary pound, or half kilogram; the weight of one thread of 400 ells is about two grammes and a quarter, at five threads, if reeled together, two of those so reeled be employed for the thread, it will give 21 grammes, which are called deniers, inasmuch as the operation takes place on only the twenty-fourth part; if 400 ells give 21 grammes, 9,600 will give 21 deniers; the calculation being made on 80 threads of 120 ells. I will state here, with reference to these weights, that the kilogram is 500 grammes; the pound weight used in the Lyons market is 492 grammes, and that the English avoirdupois pound is 454 grammes.

8751. Are there any particular measures taken in France either by common consent or by the Government for the purpose of ascertaining the quality of silk previous to its being sold?—Yes; the Committee are perhaps aware that silk, when exposed to damp, imbibes a very considerable quantity of humidity, that its weight very much depends upon the atmosphere in which it is allowed to remain; the estimate in France is, that silk will imbibe in certain cases without any apparent change of quality, about 12 per cent. Before sales are effected in France, the silk is submitted to the temperature of from 18 to 22 degrees of Reamur. If during four-and-twenty-hours it lose two pounds and a half per cent. at Lyons and three pounds at Saint Etienne, it is again submitted to the temperature for another four-and-twenty hours, until its loss of weight is less than two pounds and a half per cent. per day; it is on the certificate of weight that this establishment (which is called, La Condition) gives, after exposure to this heated atmosphere, that the invoices are made out; I am not aware that any such experiments take place in this country; but in France they are the object of extreme attention; a committee is at present sitting and has been long sitting, to ascertain what measures can be taken to prevent frauds in the sale.

8752. Great importance is attached to that by way of giving security to the buyer?—Yes; except when the demand for raw silk is exceedingly active, all silk is bought with reference to the returns the Condition furnishes.

John Bowring
Esq. LL. D.

14 June,
1832.

John Bowring,
Esq. LL. D.

14 June,
1832.

8753. You state to the Committee, that there is a prohibition of the export of raw silk in France?—Undoubtedly.

8754. Have you the means of ascertaining the state of public feeling with reference to that?—It is a question which has been agitated in most of their southern Chambers of Commerce, and certainly very violent opposition to the exportation of French silk has been elicited; and it has been very strongly represented to Government that their silk is of a peculiar quality, and that considerable injury might be done to the fabrics of France by consenting to its exportation; the growers of silk, however, have so decided an interest in its exportation, and generally speaking, the friendly feeling towards this country has so much increased, that I have reason to know it is the purpose of the French Government to consent to its exportation.

8755. What do you consider to be the state of the French silk manufacture?—I think the position that production has acquired, has grown mainly out of this circumstance, that it is of all the manufacturing interests of France, the least protected; that in consequence, by natural development, it has obtained for itself a very large foreign demand, it being an article in which that quality in which the French are so remarkably distinguished—taste, forms a very considerable portion in the cost of production; and that inasmuch as they have been constantly acted upon by foreign improvements, as foreign silks are admitted at a moderate duty, they have been enabled to maintain their position, and have undoubtedly a great superiority over their rivals in all matters where, as I said, taste is a considerable component part in the expense of production.

8756. Do you consider that the feeling in favour of French goods is on account of their superior quality, or that it is justified only by some prejudice?—I think the opinion of the superiority of French silk goods, where taste is a part, is no more a prejudice than a feeling in favour of the works of Raphael is a prejudice, and I can speak from the very large experience I have derived in almost every great market of Europe; it is in fact the common testimony to real superiority; as far as my experience goes, wherever a prejudice exists, it exists towards England, for the universal feeling is, that the manufacturing superiority of England is so great that the English manufacture has all the advantage of a strong prepossession in favour of its being much superior to and much cheaper than any other.

8757. You speak of these articles of manufacture of the finer descriptions, into which taste most enters?—Therein consists the great superiority of the French trade; as respects their means of manufacture, as respects the raw produce, as respects machinery, I believe they are in many particulars worse off than their competitors; but wherever taste is an element, there they have a decided advantage; I think no gentleman can have ever travelled in France without perceiving how much of taste is shown in the mere arrangement of a bed or the commonest clothing of the people; taste descends down to the lowest classes of the community, and there is a remarkable contrast between them and those of similar rank in this country in this particular; taste is in fact cheap in France, and is dear in England.

8758. By taste, you mean the taste in the selection of colours as well as in the designs?—Certainly; I take their taste to be that which produces beauty from both the arrangement of form and the disposition of colours. I conceive it to be that which the artist may be said to create, independent of the canvas on which he is working; the canvas will be equal in France and in England, but when wrought upon, it is the mind of the tasteful artist that produces the attractive result; so much of the question turns upon the creation of this taste, that I have made it a particular object of my inquiries to study its birth and follow its history.

8759. You state that the silk trade has less protection in France than almost any other trade; can you not state to what extent it is protected?—I have examined a great many invoices of foreign silks, in which the amount of protection was from 15 to 17 per cent. on the manufactured article; the amount of duty which the tariff gives is 17*f.* 60 *c.* per kilogram; it varies from 14 to 18 per cent. taking in all the silk articles which France imports.

8760. Have you any statement of the import of manufactured silks into France?—Yes, I have a statement which I will beg to give in upon that subject.

[The same was delivered in, and read.]

IMPORTATIONS

IMPORTATIONS into FRANCE of MANUFACTURED SILKS.

John Bowring,
Esq. LL. D.14 June,
1832

From this it will appear that the importation of English silks into France has increased six fold; and I can state from an examination of different parties that that importation is going on increasing considerably.

8761. Do you know what is the description of silks imported into France?—The principal description from England is bandanna handkerchiefs.

8762. Is there any distinction between bandannas which may be the production of Asia, printed in this country, and imported, and British manufactures?—The importation of bandannas from Asia is prohibited in France from whatever country.

8763. Should you conceive that the importation of foreign silks, which according to your account goes on to a considerable extent in France, has been prejudicial to the French silk manufacturers, or the reverse?—On the contrary; there was very naturally a strong feeling in France against this measure; but I have obtained many facts which show that the importation of foreign silks is one of the primary sources of the prosperity of the French silk manufacture; one of the leading men of Lyons mentioned to me, that the result of the introduction of a number of foreign crapes into France, which were sold at a very low rate, was, that the low price carried them into very general consumption, in consequence of which the manufacture of crapes was taken up by the Lyonese manufacturers, and it has become now one of their most important productions.

8764. How did you obtain the amount of importations of British silk goods into France?—That is a Custom House document, and entitled to all respect as an official paper. We have had the best evidence of the authenticity of these statements, as on several occasions we have ourselves (the commissioners) examined the original books and found them always in accordance with the statements made. We did this sometimes for the purpose of avoiding the annoyance which the copying facts in detail would have caused, and we have had such evidence of their veracity as has been perfectly satisfactory to us; the readiness with which documents of so much importance have been given, documents which have been prepared solely at our request is in itself a great proof of the good faith shown by the French Government throughout in these matters.

8765. Is not the importation of British silks into France prohibited?—Certainly not; there is no prohibition in France of British silk manufacture; the silk manufacture is an exception to the general rule in France; it stands quite alone; and I will venture to state, in the broadest terms, that it is the only manufacture in France at this moment which is not in considerable distress, a distress whose hopelessness is far beyond anything we know of in this country. The silk is the only manufacture which has the benefit of competition with the foreigner.

8766. Have you any other facts to state, showing the advantage which has arisen in France, from the introduction of foreign silks?—A great portion of the silk trade in France is owing to foreigners; the great improvements which have been introduced have been almost all in consequence of discoveries which have been made in other countries; there has been the greatest conceivable opposition in France as elsewhere to all innovations; the bar loom, when it was introduced some years ago for the manufacture of ribbons, would have remained excluded but for the pressure of Swiss competition upon the French manufacturers.

8767. Do you know the history of the Jacquard loom?—The introduction and history of the Jacquard mechanism is certainly one of the most interesting and one of the most instructive facts connected with the silk manufacture. I was extremely desirous, having seen the beauty of the machine and the simplicity of its operation,

John Bowring,
Esq., LL. D.

14 June,
1832.

of some conversation with its inventor, and, accompanied by a number of gentlemen, I went to visit Jacquard, and was very much gratified on hearing from him a history of its invention, which is now generally recognized as one of extreme importance and value. He told me he was originally a straw hat manufacturer; his attention had never been turned to mechanical topics till the Peace of Amiens opened the communication of France with England; at that time an extract from an English newspaper fell into his hands, in which it was stated that a society here offered a premium to any man who should weave a net by machinery. He told me that his thoughts were thus turned upon this subject, which, by the way, if there had been any interruption to intercourse would never have taken place: he did produce a net, which he threw aside for some time, and afterwards gave it to a friend as a thing of mere indifference. The net by some means or other got into the hands of the authorities, and was sent to Paris. When some time had passed, and Jacquard had completely forgotten his production, he was sent for by the Prefect, who said, "You have directed your attention to the making of nets by machinery." He did not immediately recollect it, but the net was produced to him, and that called it to his mind. The Prefect said, "I require you to make the machine which led to this result:" he asked three weeks for its completion, and brought it to the Prefect, and desired him to strike with his foot, by which a knot was added to the net. It was sent to Paris, and an order came for his arrest. It was in Buonaparte's time, when things were done in a very rash and arbitrary way. He found himself under the keeping of a gend'arme, and was not allowed even to go home to provide himself with the necessaries for his journey. He was required at Paris, in the Conservatory of Arts, to produce the machine in the presence of inspectors, which he did. He was introduced to Buonaparte and to Carnot, who said to him, with a menace of incredulity, "Are you the man who pretend to do that which God Almighty cannot do, to tie a knot in a stretched string?" He produced the machine, and showed its operation. This was Jacquard's first mechanical experiment. He was afterwards called in to examine a loom on which 20 or 30 thousand francs had been expended, for the production of articles for the use of Buonaparte. He offered to do that by a simple machine which they were attempting to do by a very complicated one, and, improving on a model of Vaucauson, he produced the mechanism which bears his name. He returned to his native town, a pension of 1,000 crowns having been granted to him; but so violent was the opposition made to the introduction of his machine, that he had three times the greatest difficulty in escaping with his life. The Conseil des Prudhommes, who are the conservators, ex officio, of the interests of the Lyonnese trade, broke up his machine in the public place; the iron (to use his own expression) was sold for iron, and the wood for wood, and he, its inventor, was delivered over to universal ignominy. It was only when the French were beginning to feel the effect of foreign competition that they were forced to employ this machine, which led to such great improvement in their manufacture, and, as every body knows, it is now extensively employed through the whole of the manufacturing districts of France.

8768. The bar loom, introduced subsequently to that, met with some difficulty also, did it not?—Yes; that was a Swiss invention, and it was taken into the neighbourhood of St. Etienne by two brothers, who were themselves persecuted and abandoned to extreme misery; the last of them died not long ago in a hospital, in consequence of the obloquy and neglect to which he was subjected. Since then the use of the bar loom has become nearly universal in the immediate neighbourhood of St. Etienne.

8769. You stated that the French manufacture of silk enjoys some peculiar advantages, does it also labour under any disadvantages?—The disadvantages under which it labours are very many; I stated before, that there is a quantity of local taxation; and I would also state, that at this very moment, some of the old regulations introduced by Colbert, are in operation, and I am quite sure must have a very considerable effect in increasing the price of production; the general arrangement by which silk goods are manufactured is this; the manufacturer who receives an order, sends to the man who is called a master, or a chef d'atelier; he may be called a little loom proprietor; he employs a man whom he calls a companion; the wife of the chef d'atelier cooks the food of the companion; and for the use of the loom, and for the services done in the house, takes half the wages, so that in fact it is said, and it is said with considerable truth, as compared with the state of things in Switzerland, that though the actual labouring weaver gets very small wages, in fact, he gets only half the price of the tarif, the manufacturer

facturer pays a high rate, for he invariably pays double that which the weaver himself receives; that organization grew out of Colbert's regulations, which were very well intended in the infancy of the trade, but are now highly injurious; had the manufactures of Lyons not been encumbered by them, I have no doubt they would have been much more improved.

8770. Is not the silk manufacture under great disadvantage in the construction of the machinery in France?—Yes; there again the protective system interferes with the improvement of machinery; machinery pays a duty of from fifteen to thirty-three per cent. on its introduction into France, and the object of this is to protect the French machine maker, who has the same right to protection, inasmuch as he is obliged to pay 150 per cent. more for his iron, and much more for his wood, because the wood grower, and the iron master, are to be protected in their turn.

8771. You stated that trade is also under a disadvantage from local taxation, will you state the nature of that taxation?—Independently of the Government taxes, the towns of France are subject to taxes which are very oppressive, and fall very peculiarly on the labouring poor; taxes on food, and taxes on drink, and taxes on fuel, are imposed on their introduction into the towns, from which the inhabitants of villages, and the inhabitants of cottages on the mountains, are wholly exempt; one of the consequences is, that at this very moment, the trade both at St. Etienne and at Lyons is going into the mountains, for it cannot support the pressure of these local demands.

8772. Have you had any opportunity of ascertaining what is the opinion of well informed and sensible persons, in regard to the effect likely to be produced upon the future condition of the silk trade in France, by those changes of which you have spoken?—The feeling is so strong, that the Chambers of Commerce in the South have been making strong remonstrances to the Government as to the prejudice they are suffering from the present prohibitory system, and asking for relief from the prohibitory laws, which press upon their industry.

8773. Do they anticipate a competition from the manufacture of other countries, which will be fatal to them?—Yes; and many of the intelligent manufacturers at Lyons are under some alarm at the progress the silk manufacture in England is making; one of the highest authorities of the town told me, that if he had had to consult the interests of France, he would most rigidly prohibit the exportation of silk goods to England, such had been the progress made by the English manufacturer since 1825; I have heard that progress again and again the subject of discussion in Lyons; I have seen the articles exhibited by the manufacturers there, and have heard them express the greatest admiration at the advances made; I have had letters from numbers of them, some of them were in England not long ago, and they speak with astonishment of the great improvement they had witnessed here; I know from personal experience, that in old times, the contempt with which the silk manufactures of England were spoken of was boundless, and that the feeling towards it now is altogether changed, and that they are under great apprehension from English competition.

8774. Do you happen to know whether those apprehensions are well founded?—I believe they are.

8775. Do you mean to say that great improvements in the silk trade have taken place since 1825?—My opinion is, that since 1825 great improvements in the trade must have taken place.

8776. What means have you of stating that, not being a manufacturer?—I have said that the manufacturers of Lyons have stated that to be the effect upon their minds; and I have seen the articles produced then and now, and I apprehend and hope the fact cannot be denied.

8777. It has been stated generally by the manufacturers here, that no great improvements have taken place since 1825; do you happen to know that that is the fact, or not the fact?—I should say, if that be the fact I am very sorry for it; for in France very great improvements have taken place since 1825, and their belief is that very considerable improvements have taken place here. The best evidence of the true state of things is, that great quantities of manufactured silk have been lately exported from England, while formerly the export was trifling indeed.

8778. Does not it appear from our entries in the Custom House, that very few goods have been exported for France?—I have presented a document furnished to me by the Minister of Finance, which shows the amount of importation of silk manufacture into France. That document was obtained before this Committee was appointed, and obtained not with a view to be delivered here as evidence, but to

John Bowring,
Esq. LL.D.

14 June,
1832.

John Bowring,
Esq. LL. D.

14 June,
1832.

enable us to ascertain the relative position of the English and French silk manufacture, when discussing our commercial relations generally.

8779. It has been stated to this Committee that very few exportations have taken place of silk goods from this country, and those of coarser goods, in consequence of the allowance of the debenture, and that there is no chance of our carrying on the trade but in the coarser articles and those mixed with cotton; do you know whether that is the fact?—I do not believe that it is the fact; for I find, that not only France, but other countries purchase largely of our silk goods. These purchases increase greatly, as the Custom House reports will show. I have put in a document, demonstrating that the exportation of English silk goods to France goes on at an accumulating rate.

8780. It has been stated by Mr. Hume, of the Custom House, that very few silks have been exported from this country, and those chiefly by reason of the allowance of the debenture and in the coarser silks; and that but for the debenture he apprehended there would be no exportation. In contradiction to that, how do you ascertain the facts you have referred to?—I have presented a document which has been furnished to me by the French Government; I am no further responsible for it than by stating that I have so received it. If they have furnished me with an erroneous statement the fault is with them not with myself; but I am bound to say I have had an opportunity of observing on many occasions the extreme sincerity of the French Government on this subject, and to that I must bear the most decided and undoubted testimony.

8781. You mean to say that your only knowledge is founded on the representation you had from the French Government?—I have made no such statement; I have made many inquiries of the manufacturers in the South, and they repeated again and again that the English manufacturer has made very great progress in the course of the last six years.

8782. You say that there has been a great export of English goods to France, and that they have expressed their astonishment at the improvement?—Yes.

8783. Do you mean to say that they are ribbons and fine fancy goods?—No, I do not believe that England can at all compete with France in ribbons and fine fancy goods. I stated, as a general principle, that where taste and beauty form a considerable part of the cost of production, there is no present and immediate chance of competition; and that it is precisely on account of their superiority that they are wanted here as a source of instruction and improvement.

8784. You say that the French people have found generally a great excellence in articles of our manufactories, and a great improvement in those articles in consequence of the introduction of their goods; are any ribbons and other fine fancy goods exported from this country to France?—A great many Frenchmen come here from the manufacturing districts; and it is not more easy to go from England to France, than to come from England to France.

8785. You are understood to have stated that it was the coarser and not the finer goods which were exported from England to France?—Undoubtedly.

8786. And the debenture operated most upon them?—I have not stated any thing as to the debenture; I have endeavoured to detail the facts which have come to my knowledge in France; I am responsible for my own opinions, but I cannot be answerable for the opinions of others.

8787. You have stated that one evidence of our improvement since the admission of French goods is, that a considerable quantity of our goods have been exported; do you know that otherwise than applying to goods of a low description?—I have again to state, that the export of English goods to France consists principally of low goods; I must repeat, in the strongest terms, my conviction that where competition is to be feared is precisely where taste forms a very considerable component part of the production; that the taste in France is by universal acknowledgement much more advanced than that of England.

8788. Do you mean to say that the preference which French goods would obtain over English depends upon their superiority and their excellence, and that prejudice is no part?—I have stated, that as far as prejudice goes, I think that prejudice through the world is in favour of England; and I may add that any one who denies to the French the superiority, is precisely like a man who says I am right, and all the world is wrong. If there is prejudice in England, no prejudice exists in Russia. I will put in a paper, showing the exports of France to all the countries in the world; it will be then seen whether the superiority of French goods, such

such goods as have been spoken of, where taste forms a considerable portion, is a mere foolish idle prejudice, or the concurring testimony of mankind.

8789. Have you any account that you can give in, of the exports of French manufactured silk to different countries?—I have here, in considerable detail, a Statement of the Exports of France, for the years 1828, 1829 and 1830; the Committee will be aware, that the quantities of matter which it has been necessary to examine, to get at these results, has been so great, that I could not easily get more than three years.

8790. Will you state where you got this?—From the Custom House, under the direction of the Minister of Finance.

[The same was delivered in, and read.]

8791. What is the mode of valuation?—These are the official values; and I think they are not far remote from the real value; there may be a fluctuation of 10 per cent. above or 10 per cent. below, but they agree pretty well with the returns from the Chamber of Commerce; there is a classification of goods like that adopted here, for the classification of duty.

8792. Has that been established for some years, as ours has?—Yes; that is as it was modified a few years ago.

8793. Can you state the exports to England in 1826 and 1827?—In 1825, when the whole of the trade was a smuggling trade, it was six millions of francs; in 1826, it was seven millions and a half. I will call the attention of the Committee to a few facts connected with this Return, of the manufactured silks exported to England. In 1818, the manufactured silks exported to England, which were then wholly smuggled, amounted to 1,700,000 francs; it went on gradually increasing, till in 1825 it had reached 6,000,000 of francs. In 1826, the smuggling almost wholly ceased, the whole amount admitted was 7,500,000 francs. I estimate the amount for 1831 from 17 to 18 millions; this is also an official paper; it will be seen that the increase of smuggling up to 1826 was enormous; that it had advanced from a million and a half to six millions; that then, on the introduction of silk legally, it fell to almost nothing; that it again resumed its activity; and I think I shall be able to satisfy the Committee, that at this moment, the amount of smuggling is very nearly in amount what it was in 1825 before the prohibition.

John Bowring,
Esq. LL. D.

14 June,
1832.

8794. Will you give the Committee information as to the state of trade in particular places, and the mode in which the trade has been carried on. The Committee understand that you have visited Lyons?—I have; I spent about five or six weeks in Lyons and the district.

8795. Do you know any thing of the early history of the Lyonese trade?—I looked a good deal into its early history; it owed, no doubt, a great deal to Colbert, whose regulations were perhaps beneficial in a moment of great ignorance; but they have been, in their consequences exceedingly fatal, having frequently subjected the silk trade at Lyons to great fluctuations and distress; there have been periods when that distress was almost unparalleled, flinging the whole labouring population into an abyss of suffering.

8796. There have been great fluctuations?—There have been; in the year 1700, there were a series of most oppressive regulations that drove the silk trade away from many of the towns in France, and acted most unfortunately on the foreign demand. In 1744 there were other regulations which prevented any persons, except Roman Catholics, engaging in it; and the extraordinary history of those fluctuations may be traced in the vicissitudes in the number of looms. In 1786, according to the best authenticated statement, there were 15,000 looms in Lyons. In 1789 they were reduced to half. In 1800 they were reduced to 3,500, the number of workmen was then only 5,800. In 1812 the number of looms was 10,720. In 1825 the number of looms was 20,101. I have had occasion also to consult a great number of curious documents connected with the town of Lyons, showing how the trade was struggling against the regulations under which it suffered.

8797. What is the number of looms now?—I do not wonder that the evidence given to this Committee should be very various; but the Prefect was so good as to direct a thorough examination upon the subject, and I am enabled to state precisely what it is from the account I will deliver in. I should observe this is the *intra muros* account, the account solely within the walls of the city; the suburban districts touch the town, the returns are as near as possible the same in number. The number of looms within the town is about 17,000, and the number of looms in the vicinity is also about 17,000, deducting the number which are out of employment; the number of looms that Lyons possesses at this moment is about 30,000. This is the document which was delivered to me by the Prefect.

[The same was delivered in, and read:]

FRENCH SILK TRADE.

NUMBER of Looms in the Town of Lyons.					
Plain	-	-	-	10,855	Ribbons - - - - 473
Jacquard	-	-	-	2,911	Not at work - - - - 1,358
Velvet	-	-	-	711	TOTAL - - - - 17,512
Gauze and Crape	-	-	-	359	Deduct the looms not at work - 1,358
Tulles	-	-	-	614	Remains - - - - 16,154

The looms are distributed among 7,000 workshops, in which the masters work 7,000, their children and apprentices 2,300, and the remaining 6,854 are worked by "compagnons."

The suburban Communes immediately adjacent to Lyons, which consist of La Guillotiere, Croix Rousse, Calaire and Vaize, are estimated to contain a number of looms about equal to those "*intra muros*."

8798. The Prefect, you state, had a survey made, and that that you give in is the result?—Yes, that is the case; this account was taken before the cholera had been ravaging Paris, and I have no doubt 3 or 4,000 more looms were thrown out of employ. I apprehend if 25,000 were taken now as the number of looms employed, that would be the full amount. Two circumstances have had a great effect on Lyons, the one the removal of the number of workmen in consequence of the disturbances in Lyons, and the stoppage of American demand has thrown out a great number, so that I should think that the quantity now employed is from 24 to 25,000.

8799. Have you any account of the imports and exports in the bonding warehouses in Lyons?—Yes; I have an account which contains a statement very much in detail of all the silk which is entered into bond there, all silk withdrawn from bond for home consumption, and the silk exported from the bonding warehouse at Lyons.

[The same was delivered in, and read.]

QUANTITIES

John Bowring,
Esq. LL. D.

14 June,
1832.

QUANTITIES of SILKS imported from FOREIGN COUNTRIES, and which have entered the Bonding Warehouses of the Town of Lyons, up to 1st January 1832 ; showing also the Quantities entered for Home Consumption, and exported to other Countries.

John Bowring,
Esq. LL. D.

14 June,
1832.

8800. Can this silk be resold for exportation?—Yes, it can be sold for exportation while in the bonding warehouse, but from the moment it is taken out of the bonding warehouse the hand of the buyer is tied, and he cannot export it, so that he suffers considerably from that restriction; and it is one of the causes of complaint, and a very natural one, if the silk is taken, as it is generally taken, and sent to the Condition in order to be examined, it must be used for the French manufacture; it becomes considered as French silk, and it is not allowed to be exported.

8801. Explain what La Condition is?—It is an establishment annexed to the Chamber of Commerce; it is intended to decide on the merchantable quality of silk, and to protect the buyer from the fraud of the seller, by ascertaining that no humidity or any thing extraneous to the quality of the silk is introduced; the silk is exposed in cases to the temperature of 18 to 22 degrees, which is a guarantee to the buyer; this Condition is also a source of a small revenue to the Chamber of Commerce; three francs per hundred kilogrammes are paid to the Chamber of Commerce; it is weighed on entering, it is weighed on exit, and the invoice is made out to the seller on the weight given by La Condition.

8802. Had you an opportunity of learning whether there have been great fluctuations in the Lyonese market for some years past?—I have obtained from authority the state of the Lyonese market since 1821, with reference to raw silks; and, in order that no difference of opinion might exist with respect to the quality, they have been so good as to furnish me with samples of French and Italian silks, arranged according to fineness by deniers, which, by comparison with the document, shows the comparative qualities of the organzines of Piedmont and Milan, and the trams both of France and Italy.

8803. Can you put in the present prices?—They are contained in this paper, and will show rather a curious fact, that though, upon the whole, the average price of French silk of the same quality is higher than Italian silk of the same quality, that is, with reference to its weight, there are cases in which the Italian is preferred; the general result, however, is a very considerable tendency downwards in price, and it is my opinion that the fall of silk is inevitable, in consequence of the great attention now paid in France to its cultivation.

[The same was delivered in, and read.]

FRENCH SILK TRADE.

STATEMENT of the Fluctuations in SILKS in the Market of Lyons,
from 1821 to the present time.

January 1821:

John Bowring,
Esq. LL. D.

14 June,
1832

1831:—OBSERVATIONS:

In 1831, the demand for silk goods having slackened, there was a fall of from 4 to 6*f.* on organzines, and 3*f.* on trams; at the close of the year a slight advance of 1*f.* to 1*f.* 50*c.* took place.

The lb. marc (which is the weight by which silk is sold at Lyons) is in the proportion of 102 lbs. 2 oz. to 50 kilogrammes.

The price of trams was long far beneath that of organzines, as inferior silks were mostly employed for them; but the demand for better and lighter stuffs has led to a demand for finer trams, and the rate of difference has become much less.

The Piedmontese had long a great advantage over other Italian silk; it was more regular, cleaner, and better prepared; of late however the general character of Italian silk has improved.

May 1832.

8804. Are you able to account for the fall in the number of looms at Lyons, in the year 1789?—The cause of the rise after 1786 was probably the influence of the Commercial Treaty, which began then to be in operation; the decline after 1789 was the revolutionary movement, in which Lyons took a great part, and the siege of Lyons led to many of the manufacturers migrating: I beg to mention, that I have obtained from another source, independently of the Custom House, a statement of the quantity of foreign silk sold in the Lyonese market, and the average of that, for ten years, is 1,200,000. I state that as a commercial fact.

8805. You have stated that the principal export to France from England is bandanna handkerchiefs; are you able to inform the Committee whether they were British manufacture or Oriental manufactures printed in England?—I am not myself sufficiently cognizant of the case; but I have seen the quality of silk handkerchiefs used in France, and which are now extensively employed; they are precisely those I see in England; I am not aware of the fact as to those used in England, but I perceive no difference between the one and the other.

8806. You have stated the great superiority which, in your opinion, exists in the finer articles produced at Lyons over those produced in other places, will you state whether there are any circumstances to which you attribute, in particular, this superiority in taste and design?—I think that is the part of the question on which I may be enabled to throw most light; and I fear that it has not excited so much attention as it deserves. It is to the neglect of this, which may be called the germ of the French superiority, that I suspect the want of our superiority is principally to be traced. Up to the period in which the pattern is produced, I think the French have greatly the advantage over us; they have not a great superiority when the pattern is produced; when, in other words, the machine gets possession of the design; but the fact that struck me most in France was the way in which taste was formed, and I was exceedingly surprised at finding among the weavers themselves and among their children, and amongst every body connected with the production of patterns, an attention devoted to every thing which was in any way connected with beauty, either in arrangement or in colour. I have again and again seen the weavers walking about gathering flowers, arranging them in their most attractive shapes. I found them constantly suggesting to their masters improvements in their designs; and I learnt that in almost every case, where the manufacturer had great success, there was some individual in the fabric who was the creator of beautiful things;

John Bowring,
Esq. LL. D.

14 June,
1832.

things; there is at this moment scarcely any house of any considerable reputation in Lyons, which has not a partner who owes his position to his great success in the study of the arts; this has been treated as an object of so great importance, that they have, in the city of Lyons, a school of arts, to which the town itself gives 20,000 francs a year, and which takes possession of every lad who shows any great aptitude for drawing or for any other subject of study which is likely to be brought to bear on manufactures; all the painters and all the sculptors, and all the botanists at Lyons become manufacturers, and scarcely ever go out of the manufacturing circle. The town gives instruction in every thing which presents itself in the shape of art. I went to the school of St. Peter, which is one of the most remarkable schools of art, and I found there 180 students, and that to every one of those students the town was giving five years' gratuitous instruction in art; a great number of them were engaged in the study of anatomy; they had a surgical professor there, who was teaching them, not only the harmony of the human form, but all the wonderful organization of the human machine, as connected with the machinery of manufactures: I found a botanical professor, who had 30 or 40 boys under him studying flowers, and many flowers exceedingly beautiful: I found others attending to architecture; and, in fact, that all the departments of art, which could in any way be caught hold of for the production of tasteful things, had become objects of attention; and I found also a professor, the object of whose teaching was to show those young men how the machine could avail itself of their productions; that is to say, how by machinery they could produce, on a piece of silk cloth, that which they had drawn on a piece of paper. Those schools are not only the object of local attention, but they come immediately under the protection of Government; and I see by the general budget that the Government (that is the Minister of Commerce) allows 3,100 francs a year, independently of the endowment the town gives to this school. Although the Minister of Commerce makes a special grant for any purpose which is likely to advance those studies, the town is willing to consent to make supernumerary grants. The school supplies the student with every thing but the materials, and their works belong to the students themselves. Of late, which by the way is another evidence of the effect of competition, the school has become an object of very considerable attention, and the French, finding they are thrown more on their production of beautiful patterns, are giving to the schools of art a vast deal of their care and anxiety; the professor of painting of this school is a man of high distinction, very well known in the world of art. It is in this way that this taste, the testimony to which has been frequently called a prejudice, this admiration, this production of beautiful things, leads to the invention of works, which meet with the preferring acceptance of the consumer. I do not mean to say that there is not as much genius in England as in France, but there are not the same means of developing it. The French manufacturer considers that his pattern is the principal element on which he is to depend for his success: the mere art of manufacturing may be easily effected; but here is a taste-producing school which contains from 150 to 180 students; it has gone as high as 200. The manufacturer goes there, and he sees a boy who has passed through all the courses of study, who has in fact the appropriate knowledge, that boy's mind having been getting instruction in every shape, and applying it all to one particular end, namely, of manufacture, which he looks to as the means of future success. The manufacturers can pick out of these 200 boys the boy whose taste is most distinguished; that boy is admitted into his house, probably at a small salary. One manufacturer told me he had three such; to the lowest in rank he gave 1,000 francs, equal to 40*l*. The number of pieces produced, the object of a particular pattern, may be very small at first, but if his success is remarkable, in two years he may get 2,000 francs; after three or four years, if his success is great indeed, and the patterns he produces meet with great acceptance, he can obtain 3,000 francs: from the moment that his reputation is worth 3,000 francs his fame is established, and he has the offer of a partnership; and that is the history of a great many of the most prosperous manufacturers of Lyons.

8807. Is there more than one school?—There is but one principal school, which is the school of St. Peter. I have heard again and again, from manufacturers even of considerable reputation, that they are not in the habit of trusting wholly to themselves for the result of a pattern, it is to them a matter of great anxiety to hear the opinions of young men who are thus instructed; and as an evidence of the attention paid to the matter, I visited, not long ago, the house of a weaver, a man getting 30 or 40 sous a day; he turned over some hundreds of patterns, and

John Bowring,
Esq. LL. D.

14 June,
1832.

said, I will give you my opinion of these; I was much struck with the correctness of his taste, and I found they were able to prophecy pretty correctly what the success of a pattern would be. In this way is the mind of the silk weavers of France devoted to that to which the mind of those of England is not devoted.

8808. Do you then mean to say, that the manufacturers here do not employ artists and give every attention they possibly can to the production of patterns?—I do not think they pay every attention to the production of patterns, because if they did we should see the same sort of schools established, and the same course pursued which has been so successful in France.

8809. Do not you know that there are a great number of individuals employed as pattern drawers, and paid liberally?—All I can say is, that there is a great superiority in France; the amount of payment to their artists is exceedingly various, the number of them is very great, the manufacturer does not depend on one or two or ten; the artist of genius will always find some manufacturer of sagacity who will buy his patterns of him.

8810. Is there a great competition to get into those schools?—No; the provisions are so large and liberal, that the school is constantly tolerably well filled, but the supply and demand regulate themselves there as elsewhere. The average of the school of Saint Peter is about 180 students, and the course of instruction lasts for five years. I do not mean to say there are not young men in this country who may not devote themselves to five years study, but that is the habit there.

8811. And the greatest possible attention is paid in Lyons to young men being educated for that purpose?—Yes; the greatest attention is paid to the production of a pattern, as the recompense of the successful manufacture of a new pattern or a new order of patterns, is full of encouragement. The subject of patterns is a frequent topic of conversation; for instance, the power of introducing patterns from a Kaleidoscope, was, on one occasion, the object of my inquiry; I found that all the intelligent manufacturers agreed that the kaleidoscope produces nothing but incongruities; there have been several attempts made to introduce oriental subjects, and some of the manufacturers endeavoured to blend those with Grecian designs, they failed altogether, the public taste being essentially pure and classical. I know a manufacturer who is at this moment occupied in adapting Persian patterns, and he is very much embarrassed by his attempts to blend the Persian taste with the European. So again, the study of what may be called the Grecian School, is essentially independent; in reference to the botanic part or the study of flowers as patterns, there will not be seen the inconsistencies in the French patterns which are so often found in the English patterns; they draw more correctly and observingly, and it were well if the same spirit existed here. I am satisfied that the instruction that comes from France is of the most valuable sort.

8812. The opinion then of the French manufacturers themselves is, that a great proportion of their superiority is owing to the attention they pay to the design?—Undoubtedly; the fact is, that is their primary feeling, and the true explanation of the whole question; it is the superiority in taste, which has grown out of their connection with all countries, and the study of many ages; no person can contend that the manufacturer here is in so advantageous a position as the Frenchman, who receives the taste of the whole world, since out of 140 millions which he manufactures, only 30 millions are for their own use, and the remaining 110 millions for exportation to other lands. There are collections of silk manufactures in France extending over the period of 4,000 years; I have seen in the Schools of Art in Lyons, the manufacture exhibited of every country, and have found men able to state how every particular pattern was produced from even the silks of the Egyptian mummies, to the most perfect productions of the last year; their history is known, they become the subject of instruction, and I should wish that our manufacturers should get into the same region of intellectual, artistical and historical study.

8813. Is not the manufacture of France essentially employed in the production of articles of taste?—Assuredly; therein consists their great success. I beg to state that the universal conviction in France is, that they are wholly dependent on the superior beauty of their productions for their foreign sale, and that is the great object of anxiety there, that every thing should be done to keep up that spirit; daily knowledge is gathered in from all quarters, and the universal desire among the manufacturers there is to do something which, in the regions of taste, shall be better than that which has been done by their neighbours, for they feel they are much behind hand in many other matters; that they do not possess the same advantages

advantages for the production of their goods, after the taste is created; their looms for instance are frequently in a deteriorated and backward state, and nothing but the superiority they have on these matters of taste enables them to carry on a successful trade.

8814. Has the same spirit operated upon the operatives?—It has; the observations of the operatives are invaluable to the master; I have heard manufacturers again and again say that the masters who stood upon their own sagacity, and had not availed themselves of the hints of their dependants had failed.

8815. Are not very high sums paid to persons sometimes for the exercise of their ingenuity?—Yes.

8816. To what amount?—The highest sum I have ever heard of is 6,000 francs a year; but it is a better remuneration to give a talented young man a partnership than a salary of 4,000 a year, his assistance being so important for the production of a novel thing; in the same spirit is the manufacture carried on when the weaver gets hold of it; there are schools of weaving, as they are called, which are in many particulars the same in character as the schools of art. I have had conversations with the teachers of these schools, who are wholly devoted to the manufacturing branch; they have read its history, and are constantly executing difficult things. I have brought over from France some specimens of works of these teachers of weaving, which I am desirous should be seen as an evidence of the state of silk manufacturing art in that country.

8817. Will you describe the general establishment of these schools?—The schools of weaving are almost wholly individual schools, and consist sometimes of from sixty to eighty scholars; a pattern will be exhibited, and then their invention is put to the rack as to the best means of producing that pattern on a piece of silk goods; the master instructs them and removes the difficulties they find, and enables them to accomplish it. In the same way in which an artist obtains distinction and recompense for his success, a weaver will obtain it; he will of course easily get a little capital to enable him to become a chef d'atelier, and so obtain the benefit of any discovery he had made.

8818. Are the schools of weaving schools of design also?—No; there is a professor in the school of art whose object is the combination of mechanism with art, or the application of machinery to the transfer of a pattern.

8819. Are the schools of weaving under the same encouragement as the others?—No.

8820. Will you state how many professors, and what are the different branches taught in the school of art?—I think there are five or six professors; I will describe the course of things which is followed; there is the anatomical school which gets supplied with subjects with great facility, having the power of drawing on the hospitals as the other surgical schools have; then the school of the living human being; I found a very beautiful child, of three or four years old, with thirty or forty students sitting round it; they were employed in copying its locks, or engaged in the study of its features. I found in a third range the architectural students, they were copying different styles; and the great object of the master is to prevent confusion between different styles, and they find architecture of considerable importance for providing patterns of a stiff and formal character; thus their ornaments are correct and appropriate. Next comes the botanical school, in which the number of students is greater; they were engaged in copying the most beautiful flowers. A botanical garden is attached to the school; there were thirty or forty students, some of whom were engaged in arranging the flowers to show them in their most attractive shape. Then I think came what may be called a general professor, whose object was painting landscapes, and exhibiting art in its wider bearings; and last of all a professor whose object was the application of machinery to art, which takes possession of that which the boy has invented or produced, and teaches him how it is to be transferred to the silk manufacture. I found in that school a large collection of patterns, which had been deposited by the Prud'hommes after a certain number of years, those patterns come into the possession of that school, and are employed as helps for the production of new patterns.

8821. Do the parents pay any thing in this school?—Nothing at all; the instruction is purely gratuitous.

8822. Under what regulation are they admitted?—The Municipality have the power of putting them in, and the expense is defrayed by the Municipality, with the exception of the grant by the Minister of Commerce, which was only 3,000 francs the last year. There is also a department of natural history; I am

John Bowring
Esq. LL. D.

14 June,
1832.

desired to obtain for them specimens of sculpture, for they thought they should probably find them of use; the Mayor requested I would send from hence, at the expense of the town, a copy of the Elgin marbles, for the service of the School of Art.

8823. Do you know what is the expense of the school?—In the year 1831 the city grant was 20,000 francs, the grant of the Minister of Commerce 3,100; the Mayor was so good as to give me the regulations of the school, which are contained in this paper.

[The same was delivered in, and read.]

EXTRAIT du Règlement pour les Etablissements Publics existant dans le
Palais St.-Pierre.

Art. 1^{er}.—EN inscrivant les élèves qui demandent à entrer à l'Ecole, le secrétaire s'assure qu'ils réunissent les conditions prescrites.

Art. 2.—Les actes de naissance des élèves, ainsi que les certificats de vaccine, sont retenus et conservés au secrétariat.

Art. 3.—Les élèves qui, dans le courant de l'année, auraient le désir de passer dans une classe supérieure, devront en faire la demande à leur professeur. Cette demande sera soumise au Conseil, qui la rejettera, s'il ne reconnaît pas l'élève capable de profiter des leçons dans la classe où il aspire à entrer; les mutations ont lieu à Pâques et à la rentrée.

Art. 4.—Les élèves des classes étrangères à l'Ecole, qui voudraient entrer dans une des classes, sans passer par celle des Principes, devront exécuter un ouvrage sous les yeux du professeur de la classe dans laquelle ils désirent être admis.

Si le professeur est satisfait de l'épreuve, il gardera l'élève dans une classe inférieure, le Conseil prononcerait, après avoir examiné l'ouvrage de l'élève.

Art. 5.—Tout élève admis contractera l'obligation de donner à l'étude tout le temps prescrit par l'article 11. Ceux qui s'y refuseraient seront rayés du rôle des titulaires, et leur place sera donnée à de nouveaux élèves.

Il est fait exception :

1°. En faveur des élèves externes du Collège Royal, lesquels pourront entrer à 10 heures et demie du matin, et sortiront à une heure, tant en hiver qu'en été. Ils devront être munis d'une carte du proviseur du Collège;

2°. En faveur des élèves de l'Ecole de Sculpture, qui pourront entrer après neuf heures et jusqu'à midi; mais tous les élèves sortiront toujours à 2 heures.

Art. 6.—Si un élève était forcé de s'absenter de l'Ecole par maladie ou autre cause grave, les parens seront tenus d'en informer de suite le secrétaire, qui en donnera avis au Directeur et au professeur. A défaut par les parens de se conformer à cette disposition, l'élève perdra sa place après dix jours d'absence. Ils devront aussi, en cas de changement de domicile, donner leur nouvelle demeure au secrétariat.

Art. 7.—En cas d'insubordination ou autre faute d'un élève, le Directeur est autorisé à lui interdire l'entrée de l'Ecole; cette exclusion ne doit pas excéder quinze jours; une punition plus grave, et notamment le renvoi définitif, ne peut être ordonné que par le Maire.

Art. 8.—Les élèves doivent respect à leur professeur, être assidus aux leçons, et garder le silence pendant l'étude. Il leur est expressément défendu de salir les murs, et d'y tracer aucune espèce de figure.

Art. 9.—Personne ne peut communiquer, pendant les heures d'étude, avec les élèves.

Les élèves devront aussi être pourvus d'avance de tout ce qui leur est nécessaire, afin de ne pas sortir pendant la durée des classes.

Art. 10.—L'Ecole est ouverte tous les jours excepté les dimanches, les Jeudis et les jours de fêtes consacrées par le Gouvernement.

Art. 11.—Les classes sont ouvertes à 9 heures et finissent à deux, pendant toute la durée de l'année scolaire.

A neuf heures un quart, le portier refusera l'entrée du Palais aux élèves retardataires; le surveillant prendra note des absens, et en fera part au secrétaire avant midi, afin que les parens en soient instruits dans la journée.

Art. 12.—Dans chaque classe de l'Ecole des Beaux-Arts, et plusieurs fois dans l'année, s'il le juge à propos, le professeur fera un rapport au Conseil sur ceux de ses nouveaux élèves qu'il ne juge pas capables de suivre ses cours avec avantage. A l'appui de ce rapport, le dernier ouvrage de cet élève sera présenté au Conseil; et, s'il y avait lieu à un renvoi de l'Ecole, pour cause d'incapacité, la demande en sera faite au Directeur.

Art. 13.—Quand un élève quitte l'Ecole, il doit en faire sa déclaration au secrétariat, et en donner connaissance au Maître sous lequel il travaille. Il devra en même temps retirer tous les objets à lui appartenant; s'il avait négligé de les retirer un mois après sa sortie de l'Ecole, ils seront censés avoir été abandonnés au bénéfice du surveillant.

Art. 14.—Lorsqu'un ou plusieurs élèves auront perdu, dégradé ou détruit quelque objet appartenant au mobilier du Palais, l'auteur ou les auteurs seront renvoyés, et le dommage causé sera immédiatement mis à leur charge ou à celle de leurs parens.

Art. 15.—Le surveillant de l'Ecole est chargé de la police de la salle. Il rappellera au règlement les élèves qui s'en écarteront, et, en cas de récidive, il notera les indisciplinés.

Ces

Ces notes seront toutes les semaines déposées au secrétariat, où les parens des élèves pourront en prendre connaissance.

Art. 16.—Depuis le 1^{er} Novembre jusqu'au 1^{er} Mars, la classe du Modèle nu aura lieu de cinq à sept heures du soir; dans l'été, le Directeur déterminera l'heure des séances.

Art. 17.—Si des personnes étrangères à l'Ecole désirent étudier d'après le Modèle nu, elles peuvent y être admises, en présentant une permission signée du Directeur.

Les élèves titulaires sont seuls portés en tête sur la liste d'ordre d'entrée.

Art. 18.—Tous les élèves sont appelés à concourir: ceux qui ont remporté les premiers prix de la classe dont ils suivent les études, sont seuls exceptés de cette disposition.

Art. 19.—Tous les ans, au 1^{er} Mars, les professeurs déterminent, pour chaque classe, les sujets qui devront être mis au concours; le choix de ces sujets est soumis à l'approbation du Maire.

Art. 20.—Immédiatement après l'approbation du Maire, les professeurs font connaître aux élèves de leur classe respective le programme qui a été arrêté, et ils signent les toiles ou les feuilles de papier sur lesquelles doivent être exécutés les ouvrages donnés au concours.

Art. 21.—Dans la classe des Principes, les élèves n'auront que quinze séances pour exécuter chaque dessin du concours.

Art. 22.—Les élèves ne peuvent travailler aux ouvrages du concours que dans l'intérieur de l'Ecole; il ne leur est permis, sous aucun prétexte, de passer de leur section dans celles où ils ne se sont point fait inscrire comme concurrens.

Art. 23.—Chaque concurrent écrit et scelle son nom derrière ses ouvrages, de manière qu'il soit impossible de lire ce même nom sans déchirer le papier qui couvre la signature: les élèves, dont les noms pourraient être reconnus, seront exclus du concours.

Art. 24.—Les ouvrages des concurrens sont remis, avant le 20 Août, au Directeur qui, en les recevant, s'assure que la formalité prescrite par l'article précédent a été remplie; ils seront fermés dans une salle disposée à cet effet.

Art. 25.—Pendant les trois jours qui suivent la distribution des prix, tous les ouvrages présentés au concours seront exposés publiquement dans la grande salle de l'Ecole.

Les élèves de la classe des Principes pourront ajouter à leur dessin du concours le meilleur de leur ouvrage fait dans le cours de l'année.

Art. 26.—Les ouvrages qui ont valu des médailles à leurs auteurs seront exposés toute l'année dans l'école, et lui demeureront acquis.

Ces ouvrages doivent être respectés par tous les élèves; et, s'il arrivait que quelques-uns d'entr'eux se permissent de les dégrader par quelques moyens que ce fût, ils seront renvoyés de l'Ecole, après avoir payé le dommage causé par eux.

Art. 27.—Les élèves titulaires de toutes les classes peuvent être admis à l'étude de la Perspective.

Art. 28.—Le cours de Perspective commence le 1^{er} Avril, et a lieu de huit à neuf heures du matin.

Art. 29.—Les cours d'Anatomie sont obligatoires pour les élèves de l'école de Figure, et facultatif pour les autres élèves.

Art. 30.—Il y aura deux cours par année: le premier qui aura pour objet l'étude de l'Ostéologie et de la Myologie, sera ouvert pendant deux mois, du 1^{er} Novembre au 1^{er} Janvier; le second, qui traitera de la Physiologie comparée, sera de quatre mois, du 1^{er} Mai au 30 Juillet.

Art. 31.—Les vacances commencent le 1^{er} Septembre, et finissent le 30 Octobre.

This is a letter from the Mayor also, in which he tells me that they are intending to give this school much more development, that they feel the pressure of necessity upon them, and that they have ordered a Report to be made of the Bresca school at Milan, to see whether any thing existing there can be advantageously introduced at Lyons; I mention that as an evidence of the anxiety and attention with which they look at these things. The manner in which the grant is made is precisely this; I hold in my hand the budget of the town of Lyons for 1831; in the year 1830 they granted 22,000 francs from the town, but this year only 20,000; the Mayor proposes the amount; it is then referred to the Municipal Council, to approve of it; it is then referred to the Prefect, and comes under the immediate cognizance of the King, so that the sanction of all the principal authorities is obtained, the town reserving to itself the right of making any super-numerary grant if it should be necessary; of late a very large legacy has been left by a French General of the name of Martin, who has directed that a considerable portion of it shall be applied to the establishment of an institution, whose objects are in many respects similar to those of the School of St. Peter; the amount altogether was not less, I believe, than two millions of francs, and the decision as to its application is as late as April 1831.

8824. The operations of this school are intended with reference to the improvement of the silk manufactory?—Yes; but they do not exact that a boy there shall devote himself exclusively to the manufacture of Lyons; he gets gratuitous instruction as soon as he gives evidence of aptitude for those particular instructions; and it happens that in a town like Lyons, inasmuch as he gets an almost certain existence by applying his talents to the production of patterns, there are very few men who go into the higher walks of art, where there would be great uncertainty. Those men, devoting themselves to those studies for the purpose of improvement, calculate that when once they leave the school they can get a thousand francs, which is the first recompense of their labour. I was surprised to find that this school had not produced a greater number of artists and painters; but the simple fact is, the manufacture swallows them up, and it is on manufacture that their hopes are founded. I have said again and again, how is it you are not at Rome or at Paris, and applying your genius to something better; the answer was invariably, we have a certainty here; and thus it is that the manufacturer of Lyons avails himself of the talent which the neighbourhood produces.

8825. Are the Committee to understand that the students dissect the human body?—The instruction is precisely that given in any other anatomical school.

Lunæ, 18^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esq., LL. D. called in; and further Examined.

John Bowring,
Esq. LL. D.

18 June,
1832.

8826. DO you conceive that there is any thing in the national character of the French which renders them peculiarly apt in acquiring the superiority they testify in design?—It appears to me there is no national superiority, but their national education is undoubtedly much more friendly to the production of works of art than that of England; almost all the genius that exists among our labouring population is buried and barren, while in France it is productive.

8827. In those branches of the arts which we cultivate in this country we excel them, as, for instance, portrait and landscape?—Clearly; but in France there is a large proportion of the field of art dedicated to manufacturing industry.

8828. Did you ever see any thing produced in France equal to the shield of Achilles?—Certainly not in that department; I take it that one of the principal means of instruction which the French have is the accessibleness of all the works of art; there is scarcely any thing to be obtained in this country without paying a fee, more or less, and I am convinced the effect of that abuse on the mass of the population is fatal in the highest degree, and is a cause of indifference which operates very extensively and very banefully.

8829. Has not Lyons a gallery of pictures of very great merit?—There are many paintings there, but the subject does not require the study alone of paintings but of the works of art generally. Every traveller must have observed that the French people, as a people, treat art with great respect; they can be trusted every where, while the English people are mistrusted every where; art is out of their reach, and carelessness to its attractions is the consequence of their exclusion.

8830. Do you think that the superiority of which you have spoken extends to other branches besides silk goods?—Certainly; wherever art forms a part of the manufacture, it is turned to great account in France. I will mention an instance which struck me very much. I was accompanied to Paris by a Sheffield manufacturer of considerable eminence, who told me, that notwithstanding the double price of the raw material in France, if he could obtain the same workmen he had seen in France at any thing like the same wages, he should do wonders, and carry improvement much farther forward than it had been carried in England. He spoke of iron and steel works. The productions of the French in bronze have made their way in the same manner as their silk goods into all the markets of the world, and that is an article in which art forms a great part of the cost of the production.

8831. Is there any thing done by the Government to encourage the national taste?—What the Government has done is to make art universally accessible; all collections

collections of art, whether in painting, statuary or engraving, in fact every thing which is likely to form the national taste, is opened to the people.

8832. All the establishments are open on a Sunday, are they not?—They are not only open on a Sunday, but they are crowded, and the labouring people go there; in France, I may say, there is an atmosphere of art, and into that atmosphere the nation is thrown.

8833. Have you any official returns from the "Condition" as to the silks used at Lyons?—I will put in a paper which has been furnished me, showing the quantities received into La Condition from the year 1806, and which exhibits the quantity of silk experimentalized on to ascertain its humidity.

[The same was delivered in.]

FRENCH SILK TRADE.

Lyons.

WEIGHT of SILK submitted to "The Condition."

Year	kilog.	Year	kilog.
1806	348,448	1821	527,645
1807	362,557	1822	430,989

1818	366,728		
1819	363,198		
1820	534,652		
		TOTAL	11,924,435
		Average on 26 Years, per annum	458,624

8834. Can you state what the proportion of silk which is conditioned is to the whole quantity consumed?—Taking the whole period from that time, I find from three-fourths to four-fifths goes to the Condition; but, inasmuch as there is some delay when the demand for silk is very great, silk is sometimes sold without the necessity of being conditioned.

8835. There is no obligation on the vendor or the purchaser of sending it?—The purchaser has a great interest in sending it to the Condition, and it is generally done, except where it is of great consequence that the time should not be lost.

8836. Is it considered that the test applied by the Condition is a very accurate one?—I think it is not very accurate; and for some time a commission has been sitting nominated by the Chamber of Commerce, and a series of experiments made which will lead to some modifications. They propose hereafter to proceed in the same way in which gold is assayed, and have determined to come to what I may call the point of unity; they will extract from the silk every portion of humidity it contains, and allow a certain per centage for the average humidity, and then estimate the value of the silk by a calculation of the per centage above or below the marketable point of dampness: silk may then be said to be of as many carets fine as gold is. The difficulty now is, that when a great quantity of silk is exposed to the temperature of the Condition, the drier silks imbibe a certain portion of humidity from the silks which are less dry, so that the honest seller is under disadvantage in consequence of the knavery of the dishonest seller, the silk being put in cases that are adjacent. I think the test that they are about to apply is quite perfect. The proposal will minimize the humidity of silk as a standard, and then make a certain allowance for what may be considered the average merchantable humidity of the article.

8837. You stated on your last examination, that the Lyonese manufacturers assured you that they were greatly surprised at the improvement that had taken place in the English manufacture of silk since 1825; have you any facts which corroborate that assertion?—I have received many such assurances from the manufacturers, and from different members of the Chamber of Commerce, some of whom

whom had been in England; one, an eminently intelligent man, had been in England five times since 1825, and he stated that he had never seen, in the history of manufacturing improvement, any thing so rapid as the changes that had taken place in the English manufacture since 1826, and that he was struck with astonishment at the productions of some of our fabrics now, especially as contrasted with the productions of 1825; he thought the taste was improved, and the manufacture was improved. He is a very large manufacturer, and I have his statement in writing.

8838. Is this opinion formed on articles composed entirely of silk or on articles of a mixed quality?—Of silk entirely.

8839. As you are stating the opinion of this gentleman, perhaps you can state to what they attribute in France the increased demand for silks in England?—They attribute it principally to the introduction of their goods and the quantity of instruction thus communicated to the English manufacturer; secondly, to the extended demand which new articles have created in the English market; so that while their goods have been paid for at a high price by the rich, their adoption by the rich has led to a desire on the part of those less rich to wear silk articles: they think the introduction of their articles has mainly contributed to the increased production in England.

8840. Will you describe the operation of l'Ecole de Tissage?—The attendance of the scholars is wholly independent of the Government or the town; there are several instructors, whose business it is to take up students where the school of art has left them, and to show more practically the application of the loom to the designs which have been produced; they teach, in fact, not only the history but the practice of manufacture; they both give instruction, and themselves work at the loom for the instruction of those who desire information.

8841. Do they exercise any considerable influence over the state of the manufacture?—I find that the most intelligent, of whom I brought home some works, have from 60 to 80 students, but that is probably beyond the average number.

8842. Have you brought home any specimens of their work?—Yes, I have; that is a work [*handing it to the Committee*] produced by the Jacquard machine; I believe it is a master-piece in the art of weaving: it is that piece which obtained the weaving prize in France, and its beauty has been an object of great admiration; it is the production of one of the weaving masters, and is the will of Louis XVI. I believe it is one of the most extraordinary results of the loom; the other specimen is also considered a great triumph over complicated difficulties.

8843. Are these prizes annually offered at Lyons for the best work of art?—Yes; there is a yearly examination of students, and prizes are given by the town.

8844. Of what class of students?—The students of the school of which I have spoken, have from time to time prizes offered for their drawings.

8845. What is the nature of the prize?—It is generally a gold or silver medal.

8846. Is that found to excite much competition?—I think it acts principally on the students and the weaving masters as instructors; these works are produced rather as evidence of great aptitude than works likely to have a considerable sale in the market.

8847. The masters naturally feel very proud of their pupils carrying off prizes?—Undoubtedly. I hear some gentlemen, near me, deny that this is an extraordinary production: their opinion is not the opinion at Lyons; for the most intelligent manufacturers at Lyons quote these works as evidence of the very advanced state of manufacturing art. In the weaving of this work, there were 40,000 cartoons employed. I have here the report of the committee which examined the weaver and his works; and they state, that while under the old fabric there was difficulty in arranging 20 leishes, he had been able without any difficulty to arrange 400: he told me, that he did not believe that it was produceable by any other loom than the one which he had so improved.

8848. Do you consider that the emulation caused by giving prizes among the weaving masters, similar to what you have described, is very beneficial to the trade of Lyons?—All emulation is beneficial.

8849. Can you state what means exist in Lyons and in France for preserving to individuals the advantages of their ingenuity, in any discovery that they might make?—There is an establishment, which I will describe by and by, which has charge of the interests of the trade of Lyons: it is called the "Conseil des Prud'hommes." When a manufacturer has invented a pattern, he deposits it, sealed, in the

the archives of the Conseil des Prud'hommes; he pays a sum, varying from two francs to ten francs, which depends on the length of time he wishes to preserve the copyright; the Conseil des Prud'hommes exercises a direct jurisdiction, and has the power of inflicting fine, and even imprisonment for ten days; three invader of a right loses the illicit goods, and the Council has authority to amerce the offender according to the importance of the case.

8850. The process then of securing the copyright of a patent is exceedingly simple?—Exceedingly simple.

8851. The discoverer of a patent delivers a copy of it at the place appointed by the Conseil des Prud'hommes?—It is sealed, and the date of its deposition is recorded on the document; and priority of date decides priority of right.

8852. Is it found that practically there is very little difficulty for a man to assert his right to a patent?—I have been present at the discussion of a great many questions, and I have generally found them very equitably decided. I believe that the respectable manufacturers have strong and honourable feelings with regard to the impropriety of invading a copyright. Sometimes a weaver is employed by three or four houses for producing patterns long before the pieces are manufactured; and I have observed that the manufacturers who visit these looms cautiously avoid examining the patterns of their neighbours. There is a manufacture of patterns independently of the manufacture of goods; patterns are frequently offered to the buyer which do not represent goods actually manufactured; there is scarcely an instance of the invasion of a copyright among the better class of manufacturers, although there are a great many among the poor and surreptitious manufacturers.

8853. Generally speaking, there is no difficulty under this system, in any person who has invented a pattern, and registered it, preventing his right from being invaded?—Practically, I believe there is no difficulty.

8854. You have stated that this right is registered, and the proceedings carried on by what is called, "Conseil des Prud'hommes;" can you state the constitution of the Conseil des Prud'hommes?—The Conseil des Prud'hommes is one of the most popular and best organized institutions that exist in France. It is a tribunal charged with the discussion and settlement of all questions connected with the manufacturing interests of the country; and all the great manufacturing towns have their Conseil des Prud'hommes. They originated in a decree of Buonaparte's in 1806, which was the re-construction of the old manufacturing tribunal called the "Maître Garde." It is composed, as respects the silk trade of Lyons, of nine master manufacturers and eight weavers. The master manufacturers were chosen by the whole body of manufacturers, and the weavers were, till lately, chosen by the weavers who paid the patent duty. But the exclusion of the great body of weavers led to frequent misunderstanding, inasmuch as the number of weavers who paid the patent duty was comparatively small; and after the events at Lyons in November last, this being one of the great grievances of the weavers the institution was re-organized, and since January of the present year the weavers are represented by all the parties who have four looms of their own. The number of parties at Lyons who possess four looms at least, at this moment, is 778. The registration of their names has enabled me to obtain tolerably complete statistics as to the number of weaving operatives. There is only one weaver possessing thirteen looms. It has been supposed by some gentlemen who have given evidence here, that the quantity of capital possessed by the weavers must be very large, and that they hold a great number of looms, yet there is only one individual who has thirteen looms; there are four who have twelve, two who have ten, two who have nine, twelve who have eight, eight who have seven, fifty-three who have six, eighty-two who have five, six hundred and fourteen who have four, making in all 778 workmen possessing 3,000 looms; these are the weavers who are represented in the Conseil des Prud'hommes.

8855. Does the possessing of four looms give them the right of voting?—Yes.

8856. You have spoken of a change being made in the mode of election to the Conseil des Prud'hommes, by whom was that settled?—The points were submitted to the Government by the Prefect, and after an examination before the Minister of Commerce, the royal ordonnance was issued which I hold in my hand.

8857. So that in fact the Conseil des Prud'hommes is an establishment composed of the workmen and masters?—It is.

8858. Did you ever attend any of its sittings?—Yes; and I was much struck with the general good sense of their proceedings. The men who represent the

John Bowring,
Esq. LL. D.

18 June,
1832.

John Bowring,
Esq. LL. D.

18 June,
1832.

weavers, appeared to me men of sound discretion and sober judgment. The tribunal sits in open court, and their discussions were an object of great interest, and their decisions gave general satisfaction; they act as a court of conciliation.

8859. Are all questions between masters and men settled by them?—All questions between masters and men, and masters and apprentices, and any questions that can in any way be brought to bear on the question of silk manufacture, are referred to the Conseil des Prud'hommes. Their business is to conciliate; they always examine the parties themselves; they have the power of summoning witnesses, and compelling their attendance.

8860. Is there any appeal from their decisions?—There is no appeal for any sum less than 100 francs; for any greater sum there is an appeal to the Tribunal of Commerce.

8861. Do they not take cognizance of matters between the manufacturer and the purchaser of goods?—No, their jurisdiction is wholly local; I should think they would take cognizance of questions with respect to quality between the inhabitants of a town, but not between the Lyonese seller and the foreign buyer.

8862. Generally speaking, the establishment gives satisfaction to both parties?—No doubt of it; I was a disinterested observer; I listened to the evidence given, watched the course of proceedings, and thought the Conseil exhibited appropriate knowledge, and applied it with a deal of sagacity.

8863. In questions between the masters and the purchasers of goods where the contract is not fulfilled, do not the Tribunal of Commerce refer to them for their opinion?—I have heard of frequent references to individual members of the Council.

8864. Do you mean that on the re-arrangement of this court, the number of master manufacturers remains the same as before?—Yes, before as now, all the manufacturers had the right of voting, but there were only 60 weavers who had that right; the relative number of manufacturers and weavers in the Council remains the same; the Ordonnance requires that the President should be chosen from among the manufacturers.

8865. Does the Conseil des Prud'hommes find difficulty, as we find in this country, owing to slight variations being made in the patterns?—No legislation would provide for that sort of neutral ground, where the questions of identity and similarity are slightly defined; I should say that, on the whole, it is one of the most popular institutions in France, and as far as I am able to judge of its operation, that few institutions in France have greater claims to regard.

8866. Are there frequent appeals from them?—I have a correspondence with the Mayor on the subject, and he states generally, that the number of appeals are very few indeed.

8867. Have they the power of inflicting fines in cases of violation of copyright?—Yes; and as I mentioned, they can inflict to the extent of three days imprisonment, which is frequently applied to refractory apprentices.

8868. Have they the power of settling disputes about wages?—Certainly, that comes immediately under their cognizance.

8869. With reference to what you state respecting the means of preserving the copyright and patterns, is a specification of the pattern given in, or is the pattern itself given in?—The identical pattern is delivered in; it is sealed; the date is written on the envelope, and it is deposited on the archives of the Conseil des Prud'hommes, where it may be referred to in case of dispute.

8870. Has it been found in practice whether there be any difficulty in discovering whether a pattern be original or not, with some slight variations?—The question would arise less frequently than the Committee would suppose; so rapid and unceasing is the production of novelties, and so slight the value of a pattern, where so many are daily in the course of birth. I am told on good authority that the average production in France of a particular pattern is not more than 25 pieces. There are many patterns which have never an existence in a piece, which in fact do not reach beyond the sample pattern.

8871. Of course, by the same pattern you mean the same colour?—The pattern may be the same with a variety of colours; the variety of colours is not supposed to change the character of a particular pattern. The number of pieces made of a particular pattern is naturally subject to great variations, but from the best information derived from a principal member of the Chamber of Commerce, I learn that there are a great number of patterns made by weavers which never appear in pieces, and a great number are manufactured in only one, two or three pieces, of some

some the number produced is from 15 to 25; you will therefore have to take zero as the minimum, 25 as the medium, and 100 as the maximum of a particular pattern produced.

8872. You do not mean that the Conseil des Prud'hommes arrange the rate of wages?—Only in case of dispute, and this is done by fixing certain averages called Mercuriales.

8873. State to the Committee what are the arrangements under which silk is thrown at Lyons?—There are three modes of contracting for the throwing of silk in France; one where the waste is wholly for the account of the throwster, one where it is for the account of the owner, and third, one in which the owner and the throwster come to an understanding, as to what the probable waste will be. They agree on a value to be given to the silk, and if the throwster returns a greater quantity than agreed to between them, he is paid for it, whereas, if he return a less quantity, he is charged for it at the understood price. That is a plan now generally coming into use; the throwing establishments are generally small, and the quantity of capital employed in them is inconsiderable.

8874. Where are they situated?—Through the whole silk districts; it is not often that the grower of mulberries or the owner of silk worms is himself a throwster; there are a few of the manufacturers who have mills. From the report of the throwster themselves, they estimate the absolute cost of throwing to 3*f.* 50*c.* per pound, of which they calculate 1*f.* 50*c.* in the shape of labour, 1*f.* 50*c.* in the shape of waste, and 50 cents for wear, tear and profit; there are some throwsters who collect silk from the different agricultural producers of it. I could not find, in making inquiries over pretty large districts, that there are many throwing mills producing 1,000 pounds of organzine per annum, and there is perhaps not one throwing mill in which 5,000*l.* of capital is invested. The opinion in France is, that the throwing is in a retarded state and requires great improvements. Specimens of English thrown silk had been seen in France from England, and I was assured by manufacturers, that they were superior to their own thrown silk, of the same quality. It is a very prevalent opinion in France, that the time is not very far distant when thrown silk will be imported from England, inasmuch as our throwsters have very large capitals, and are able to improve their machinery, whereas machinery in France is very little advanced.

8875. Is the importation prohibited?—No; the importation in France is allowed at 2*f.* 40*c.* per kilogram.

8876. Is not the present state of French law as to the importation of iron, very unfavourable to the improvement of machinery?—Certainly.

8877. The expectation of importing thrown silk from England depends on the superiority of our machinery?—Yes; I have taken different statements of the prices paid for thrown silk; for organzines, 11*f.* is the general average; as to the throwing in general, they estimate the loss of from 4 to 6 per cent; but on the inferior silk of the country, and other silk, 6 to 10 per cent.; they have some silks of so exceedingly beautiful a quality, that I was informed by a large manufacturer at Nismes, he knew cases in which there was no loss at all in the shape of waste; this is the pure white silk which I before referred to. From another source I have this return; the average price of throwing organzine, where the throwster does not submit to loss, is 7*f.*, that of tram, 4 to 5*f.* Where the throwster does submit, another account gives me from 10 to 11*f.* and for tram from 6 to 7*f.* There is a considerable difference in the price with respect to throwing, and it is difficult to get at it, inasmuch as the cost wholly depends on the waste and the quality.

8878. And the gain depends on the kind of silk?—Yes; the returns come to this, that generally speaking, the average cost of organzine is from 10 to 11 francs, and for tram from six to eight.

8879. Are you able to state, with regard to the silk which suffered no loss in throwing, at what period it was thrown after it was produced?—I believe very soon after the winding; it was mentioned to me as a most remarkable evidence of the great improvement in the cultivation of silks.

8880. Have you any reason to suppose, that the absence of waste depends on throwing it immediately after it is reeled?—None; I made the inquiry, and it loses nothing of its quality by ordinary delay.

8881. How is the reeling done?—The reeling is generally done by the peasantry, who probably are paid at about 25 sous per day. The cost per kilogram is estimated at four francs; the difference in cost is very considerable. I found from returns for a large period of time, that it has fluctuated from 3½ francs to 5 francs.

John Bowring,
Esq. LL. D.

18 June,
1832.

8882. Is it reeled in skeins or in bobbins?—I believe principally in skeins.

8883. What is the price paid by the throwster to the persons employed in the mill?—I should think the estimate might be from 30 to 40 sous, or from 1s. 3d. to 1s. 8d. per day, that is for men, less for women certainly.

8884. Will you state any facts you are acquainted with relative to dyeing?—The average cost for dyeing is from three to four francs per kilogram; the price paid for white 6½ francs, for cherry 24 francs, for ponceau 42 francs, and for gall black four francs. The dyed silks are calculated to return 11–15ths of their weight for soft silk and light colours, and 14–15ths for supples—heavy colours; gall blacks give 16 to 18 or 25, and heavy blacks 18 to 22; labouring dyers are paid at 2 f. to 2 f. 50 c. per day, but are fed by their masters.

8885. Did you ever hear of any complaints being made as to the dishonesty practised by dyers?—Yes; I think that is one of the circumstances from which the manufacturers suffer very much; the quantity of silk robbed by the dyers is, according to the statements of the manufacturers, immensely great; and there is a contraband production going on of a very curious character. The weaver adds humidity to silk, and pillages a quantity equal to the weight of that humidity. The dyer adds weight by chemical applications, and robs the quantity whose weight he fraudulently introduces. The grievance is a subject of constant discussion, and several dyers at Lyons have made large fortunes by it. They say that the prices are so exceedingly low, that they cannot get themselves the means of subsistence; and the consequence is, they pay themselves by fraud. It is thus that there are always in the Lyons market a class of dishonest manufacturers who sell at prices under cost the goods woven out of the pillaged material.

8886. Did you ever hear their opinion respecting their superiority in dyeing to our's, or the reverse?—In some colours the belief is they are superior; I am informed, however, that some dyers at Lyons are settled in this country; I know that one or two individuals have asserted that there is very great improvement in dyeing in England.

8887. Do you conceive that they have any natural advantages for dyeing?—They have certainly a more beautiful climate and often clearer water.

8888. Is it true that they are at all particular in fixing the colour on a bright day only?—There is more thought of that than it deserves.

8889. Do you not in fact consider it to be a question of science altogether?—Clearly so; and that leads me to make an observation of some importance, that there is in France a class of men little known in England, whose trade it is to give manufacturers information. There are, for example, two or three principal chemists in Paris who receive their fees precisely as a physician does when he is called on to give his opinion as to a disease.

8890. Those are persons who make science a profession?—Yes, as applied to manufacturers; that is the case with a man very well known in the chemical world, Clement Desormes, a man whose business it is to be consulted in solving difficulties connected with his profession.

8891. Was the opinion of the Lyonese manufacturers that we had made great improvement in our colours within the last five or six years?—Yes, great improvement.

8892. Did you hear their opinion as to the comparative quality of their blacks?—I think there is a strong feeling that the English blacks are superior; the French blacks lost great reputation in foreign countries in consequence of fraud in dyeing black; some of them carried the trick so far, that I have understood the weight of silk was nearly doubled by drugs. The manufacture of Nismes was seriously injured by the loss of reputation which the overcharging their blacks brought with it. I know of a case where a quantity of silk caps was sent to Spain, and the dyers had so changed these silks, that when the black caps came to be worn, streams of ink ran over the forehead of the persons wearing them, and the manufacturers suffered serious damage in after life.

8893. The opinion generally is, that in blacks we are superior to them?—I think that opinion has gained ground very much.

8894. Is there any particular colour in which you consider them superior to us?—There is a general feeling that their colours are more varied and more tasteful than ours; they are more apt in seizing shades.

8895. But that depends on taste, not on chemical knowledge?—Certainly.

8896. Can you inform us what is usually paid to a professional chemist?—That wholly depends on the extent of the experiment; I believe the annual returns of
a man

a man of reputation would be as large as those of a professional man; an intelligent chemist would get as much as an intelligent physician.

8897. Do the French enjoy any superiority over us in their drugs?—On the whole the taxation on foreign drugs is higher than in England, and the French suffer more than we suffer from their absurd navigation laws, inasmuch as there are a great number of articles which they cannot import directly from England, but are obliged to do so from other countries; for instance, indigo. The consumption of indigo in France varies from 5,000 to 6,000 chests a year; the importation from the East is about 3,500, so that to the extent of 1,500 or 2,000 they have to supply their average wants; and they have a pernicious law which prevents their importing indigo from England, just as we also have a law preventing our importing indigo from France; but we are in a situation to import it direct, they get a large portion of their supply from England, and are obliged to pay two freights, sending it to Ostend instead of getting it direct; that is the fact with respect to every other drug not of European produce which they get from England, so that when they come into our market they are compelled to pay two freights.

8898. Do they mainly depend on this market for a supply of drugs?—They depend very much on this market.

8899. In fact they are decidedly under a disadvantage in procuring ingredients to work this?—Most assuredly; the only drug of considerable importance that they get from their own colonies is gum senegal, and more than three-fourths of that is made up for English account; France herself is, however, the producer of many dyeing drugs.

8900. Have you any facts to state as to the price of winding?—I have the return of the weavers, and they state it at 1 *d.* per ell.

8901. Will you state what is paid for the winding of the warp previous to its being put into the loom?—The winding the warp is charged 1 *f.* per kilogram, and 2 *f.* for fancy work.

8902. What are the prices of weaving?—I will put in the printed Tarif, and I consider it on the whole the very best evidence accessible; and I beg to state, that I have conversed with as many as 50 or 60 weavers, and not a less number of manufacturers, and I have in their hand-writing a statement that this Tarif may be considered as the average rates paid; there are a few cases in which the rates fluctuate from 10 per cent. above to 10 per cent. below. The Conseil des Prud'hommes have made the Tarif the ground-work of many decisions; I have taken some trouble to look into it, and have found that the Tarif of 26th October 1831 may be considered to a great extent in actual operation.

[The Witness delivered in the following Tarif.)

MAIRIE DE LA VILLE DE LYON.

TARIF AU MINIMUM des PRIX de la FAÇON des ETOFFES de SOIE, librement débattu et consenti entre les Délégués des Fabricans et des Ouvriers, dans la séance de la Chambre consultative des Arts et Manufactures de Lyon, du 25 Octobre 1831, à laquelle assistaient le Maire de Lyon et les Membres du Conseil des Prud'hommes, et qui était présidée par le Préfet du département du Rhône, pour recevoir son exécution à partir du 1^{er} Novembre prochain.

Certifié par le Conseiller d'Etat, Préfet du département du Rhône, et par le Maire de la ville de Lyon.

A Lyon, le 26 Octobre 1831.

Le Préfet, *Du Molart*.

Le Maire, *Boisset*, Adjoint.

8903. The paper you put in there describes what was the actual rate of wages when you were in Lyons?—It does.

8904. And the exact rate of the articles most commonly made?—Clearly so. My course was this: I sent for a number of weavers and conversed with them; I did the same with the masters, and ascertained that the prices which they paid and received were in nine cases out of ten the Tarif prices, and that where there was any distinction, it generally arose out of some peculiar circumstance: I came to this result, that on the whole the Tarif might be received as the most correct evidence of the present rate of wages: there are a few cases to which I have to refer, in respect to one or two other articles by-and-by, in which there is some slight difference.

8905. Is there any thing obligatory in the Tarif?—Not at all.

8906. It varies according to the supply and demand of labour?—Exactly so; the Tarif was the production of an active discussion, in which the masters and weavers took part; the discussion became very quarrelsome at last; the majority of the Conseil des Prud'hommes approved of the Tarif and recognized it; it was also recognized by the authorities as a Tarif, representing the average prices; and it is at this moment the representative (though not obligatory) of the wages paid in the town. After the troubles in November last, the whole of these acts were nullified.

8907. What was the origin of the November riots?—The origin of the November riots was an attempt to give to this Tarif the force of law. The authorities had compromised themselves, for the Tarif will be seen to have the signature of the authorities; there had been a great many discussions, and a number of masters and weavers met together: the Tarif had been the result of a very long deliberation, and the Prefect thought himself in a situation to give to the Tarif a legal character; but many masters refused to recognize his authority to settle the question of wages by any official mandate; the men insisted on what they called their recognized rights, and then the troubles broke out.

John Bowring,
Esq. LL. D.

18 June,
1832.

8908. Although the authorities had been engaged in the discussions?—Not engaged in them; but they had given a certain sanction to their results. The Government, however, dismissed the Prefect, and reprehended the authorities for having gone much beyond their line of duty, and for becoming partisans of the Tarif.

8909. The whole of that arrangement was put an end to after the insurrection in November, and the Tarif now is a table of prices not recognized by the law, but by the common consent of the masters and the operatives, is it not?—It is so to a great extent; not that it could be enforced, but that it would be considered evidence of the average rate of wages. The Tarif having ceased to have the effect of law, it could not be referred to before the Conseil des Prud'hommes as a document to which every body is subjected; that to which the Conseil des Prud'hommes would subject disputants, is called "The Mercuriale."

8910. You have stated, that this Tarif is put in merely to express what is the state of prices in Lyons, and you have alluded also to what you call the Mercuriale; will you describe what the Mercuriale is?—The Mercuriale is the average rate of wages. In such a case as this, for instance; where a master shall have given to a weaver a certain quantity of silk to produce a certain article, and have agreed to pay him the market price, if there is any question or dispute between them, the matter is settled by the Conseil des Prud'hommes; the Conseil des Prud'hommes, for the settlement of such cases from time to time, make what they call a Mercuriale, or a record of the average prices, which, as I said before, do, in nine cases out of ten, represent the Tarif: they examine eight or ten masters and the same number of weavers, and having ascertained what was the price engaged to be paid by the master to the weaver, taking the average of these ten as representing the true state of things, they will, with respect to the particular article, regulate the dispute accordingly.

8911. Do they hold an examination on every occasion, where there is a dispute between the master and the men?—Not unless new facts are to be elicited.

8912. You stated, that the troubles in November last were caused by an endeavour, on the part of the Government, to make this Tarif a legal instrument?—No, the contrary; there was resistance offered on the part of certain manufacturers to the recognition of the Tarif: the weavers referred to the local authorities, who sanctioned the Tarif, and recognized the rights of the weavers to be paid the prices which the Tarif imposed: a great many manufacturers refused to pay these prices; the weavers assembled together in large bodies and applied to the authorities, who took their part, which strengthened their position; the quarrel became more and more violent between them, and the masters and their meetings increased in number and violence; they became an object of great anxiety, and troops were sent to disperse them; many of them said to me,—“We did not choose to be beaten, and we armed ourselves as well as we could.” They armed themselves, beat the troops, and found themselves in possession of the place; not having any intention to rebel, but determined to resist any violence that was used towards them.

8913. That disturbance was quieted, and the Tarif was put an end to?—One of the first acts of the government of Paris, was to abrogate the Tarif, and annul all the proceedings of the Lyonese authorities.

8914. What effect was produced by these measures on the trade of Lyons?—The government were enabled to get rid of a considerable portion of the difficulty, by transporting a great number of workmen, so as to reduce the quantity of labour.

8915. You say they sent away large numbers of workmen?—Yes, both compagnons and chefs d'ateliers; the result was, that there was a rise in the price of labour. The government were easily able to effect that, inasmuch as Lyons being near the frontier, is always the abode of a number of strangers, whose removal the government had no difficulty in accomplishing.

8916. State what is the average production of the weavers in Lyons?—The average production of common satin, is from four to five ells a day; I have got here the estimate of 100 looms, and the average product of 100 looms is 357 ells, that is about three ells and a half a day per loom.

8917. Do you know what the hours of labour of the weavers generally are?—In Lyons from 16 to 18; and I have found many weavers who have laboured 20 hours a day.

8918. There must be some mistake; do you mean that a weaver labours sometimes as much as 20 hours a day?—I have known that, where there has been an extreme

John Bowring,
Esq. LL. D.

18 June,
1832.

extreme demand for an article, and great pressure; in Lyons, almost the whole trade is a trade of order; the stocks are very small. It often happens that there is great precipitation in the demand, and great necessity for supplying that demand rapidly; the stock, except in plain goods, is always exceedingly small at Lyons.

8919. If persons are obliged to work 20 hours a day, there can be no want of labour?—In a late case, where some thousands of men were suddenly removed, when the demand came, the supply of labour was not equal to the demand; there are cases where men have been employed in particular manufactories, I allude to particular cases; I state this as an evidence of the extremely industrious disposition of the labourers.

8920. To what place did they transport these men?—A great number of them were Savoyards, and they returned to Savoy; a great many were inhabitants of the mountains, and they returned to their agricultural labour.

8921. How did they effect their removal?—They were turned out of the town, and they got home as they could.

8922. Do you happen to know how their removal was effected?—By an order of the magistrate; and if any resistance was offered, they would be marched off by the gend'armes.

8923. You stated that in consequence of the system of Lyons being a system of orders, the demand was extremely fluctuating; consequently, is not the demand for labour very fluctuating too?—Certainly.

8924. The operatives, then, are frequently without employment, or very little employment for some length of time, and then they again become employed to a great extent indeed, say 15, 16, or 20 hours during another short period of time?—Certainly; but for the removal of a great quantity of labour from the Lyones market, the distress of late would have been perfectly frightful. When I was at Lyons, the presence of the cholera at Paris produced a cessation in the demand for articles of fashion; the American purchaser was almost wholly out of the market also, and unless there had been a great diminution in the supply of labour, the suffering would have been boundless.

8925. Have you had opportunities of observing the manner of life of the workmen?—I have seen a great deal of the workmen, and it occurred to me, that the most satisfactory way was, to allow them to speak for themselves. I think I explained before, that the general arrangement at Lyons is this; there is the chef d'atelier, who is a sort of superintending weaver, who has generally three looms; three looms are the average possession of a chef d'atelier through the whole of the district; the loom he does not himself employ, will be either used by an apprentice or by a companion; where it is used by an apprentice, the apprentice merely receives his food and clothing from the master weaver; where by the companion, the companion receives half the wages paid by the manufacturer, the consequence is, that the weavers are in a state of considerable isolation and independence; and at Lyons there is only one establishment where there are any large number of labourers under the same roof, belonging to the same establishment. The lien which the master weaver has over the companion, is only that which obliges the companion to complete any piece of work he has begun; and what the superintending weaver does for him, is to cook his food and provide soup. I find the average rental paid by the weavers, is from one hundred to two hundred francs a year; the houses are often vastly large at Lyons, and contain sometimes from 60 to 80, or 100 families; the town is much overbuilt, and rent has fallen considerably; the average wages is from 40 to 45 sous, which is from about 20*d.* to 22½*d.* In the establishment I spoke of, there are from 400 to 500 working people employed. The proprietors told me, that the average of weavers' wages was from 2*f.* 50*c.* to 4*f.* a day; it is principally a manufactory of shawls, and I have seen no labourers in Lyons whose appearance on the whole was so prosperous. They are fed at the establishment, and they pay six sous for a plate of meat, six sous for a bottle of wine, and one sou for a plate of soup.

8926. Does the average which you stated just now include women, or does the charge only apply to men?—That is the average for men.

8927. For how many hours of work?—I think they were working 14 or 16 hours, with two hours for meals.

8928. The average which you stated at 22½*d.*, was that for men only?—With reference to that particular estimate, I think the average was taken on the whole mass employed, including females.

8929. What are the taxes paid by the Lyones weaver?—He is estimated to

John Bowring,
Esq. LL. D.

18 June,
1832.

consume half a litre of wine per day, for which he pays a tax of 16c.; then there is the direct personal tax, which, on a rental of 100f., is 12f. 50c.; altogether, the Lyonese weaver pays 53f. 95c. in the shape of taxes.

8930. When you say that the wages were 2f. 5c. to 4f., do you mean that only in regard to one establishment?—Yes; that was the only establishment where there was a large congregation of weavers, and the only opportunity I had of ascertaining what was the average rate paid in such circumstances. I am now going to read a statement from two very intelligent weavers; the Committee will understand that in all these matters men always make the worst of their own case. These are remarkably intelligent men, and give a very interesting account of the social condition of the workmen of Lyons. M. Falconnet, who was lately chosen by them as one of the Prud'hommes, is a very well-informed man: I gave him a series of questions, and desired his answer.

[The Witness delivered in the following Document:]

TRANSLATION of a LETTER from Falconnet, a Weaver, one of the Prud'hommes of Lyons to Dr. Bowring:

Sir,

Lyons, May 14, 1832.

I HASTEN to reply to the inquiries you did me the honour to address to me, and great is my satisfaction at being so requested to communicate; and I scarcely need begin by stating that from time immemorial Lyons has been the town where the workman has been most devoted to his labours, and where he leads the most sedentary of lives.

The workmen, who labour as companions, have their peculiar habits; their day's labour begins at five or six o'clock, and ends at eight in the evening, when they return to their abodes; they take one hour in the day for dinner; they gain from 2f. to 3f. 50c. for their daily wages, and there are instances of the more able amongst them gaining four francs per day. Their average expenditure at their *auberge*, for breakfast, dinner, supper and a half litre of wine, is 30 sous, and the rest of their superfluous wages they spend in a few additional bottles of wine or beer, on the Sunday. The young men among them dress well, and visit the theatre. They are united in a general bond with the workmen of other towns of France, and when work is scarce they emigrate, and undertake what is called the tour of France. Their societies are organized under the title of the *Devoir*; they are all companions; they admit no masters, and they correspond with the principal towns of the country.

The organization of the weavers of silk goods differs essentially from that of other trades; as the business was imported into France by fugitive Italians, they had no rules of labour; it was their habit to give as much time as possible to their looms, so the weaver labours from 15, 16, 18 and even to 20 hours a day.

There are, it is supposed, 12,000 workshops in Lyons, containing 30,000 looms (this is the nearest estimate, for it is long since a census was taken.) The workshops have from two to six looms; there are few that have only one, and there are not fifty that have more than six. In many cases four looms are worked by the same family, father and children. In some workshops the looms are moved by apprentices; for some time there have been nearly as many apprentices as companions; but the apprentices decrease in number, as it is not worth the masters while to give them instruction. Formerly, when the conscription carried off our young men, we had few companions; their life was one of isolation; they eat, drank and dwelt with their masters, and seldom met in society. At that period the master weavers were forced to call in young women from the country, and the habit has continued; there are almost as many women as men employed; they weave the lighter stuffs, and the consequence has been a rapid decline in value; men have almost wholly abandoned this class of goods.

At the present moment the price of labour is the minimum fixed by the Tarif of October 1831. There are some exceptions, and the cholera has led to a reduction.

Formerly the gains of the masters and companions was more considerable on wrought than on plain silks; the prices are reduced 50 per cent. and the gains are about equal on the two.

When there are three looms the master generally works one of them, and the profits of the other two may give him about 900f. per annum; he pays for rent an average of 150f.; he lodges his workmen, which costs him yearly 80f.; and there remains for himself and family, 670f.; his children (especially the females) are called upon to work at a very early period, so that notwithstanding the efforts of philanthropy they are little instructed; if a father of a family have three looms, and two of his children can weave in them, he may gain from 1,500 to 1,600 francs per annum, and this is a period to him of great prosperity.

When the companion lodges with the master weaver his daily expenses are 1½ lb. bread, cost 30c.; ¼ litre of wine, 12½c.; a portion of meat or vegetables for dinner, 25c.; 10c. for cheese, 10c. for supper; in all, from 80 to 90c. Those who gain more than the average spend somewhat more.

The custom is to pay the companion one-half of the price of weaving. Of a stuff of which the rate is 1f. the companion gets 50c., but the master has the expense of putting up the loom, of winding, quills, &c. If the weaving price be 1f. the master does not clear more than 20c.; the average produce is 3 ells per day. The weaver would thus gain 1f. 50c., and if Sundays and other stoppages are deducted, it will amount from 350f. to 400f. per annum.

But

But there are many exceptions. In new articles, such for instance as the ribbons and belts introduced three years ago, a weaver may gain from 2*f.* 50*c.* to 3*f.* per day, and even now they gain from 2*f.* to 2*f.* 25*c.*; and so they do on articles of difficult workmanship, on velvets (flowered), shawls, borderings, China crapes, &c.

The chef d'atelier may also gain more on these than on current articles, particularly if he need not alter his loom for six to eight months; but if the pattern is frequently changed, he does not get back his outlay, and this has been much the case of late, and concurring with falling prices, was one of the main causes of the riots of November.

Twelve months ago prices mounted, and 2,000 additional looms were put in motion; now those looms are for sale, and 100 workshops are to be disposed of. Three-fourths of the masters and companions are in debt; in case of war, all our youth would be disposed to take up arms, and leave a trade which gives them no hopes for the future.

If you desire other information, it will be a gratification to me to communicate it to you.

I have the honour to be, your very humble servant,

(signed) Falconnet.

John Bowring
Esq. LL. D.

18 June,
1832.

There is a communication from another person, of whom I need only mention, that when the weavers met, after the events of November, to the number of 30,000, they chose two men to represent the state of things to Government, and this letter is from Charnier, one of the representatives, and of course must be taken as an authority.

[It was delivered in, as follows:]

EXTRACTS of a COMMUNICATION from Charnier, a Chef d'Atelier and Prud'homme of Lyons, dated 16th May 1832.

THE principal subject of unpleasant discussion with the manufacturer is the mounting new patterns. The workman suffers from the mania of the manufacturer, who is constantly creating new designs. It is a ruinous abuse, falling wholly on the chef d'atelier.

The chef d'atelier rents his own habitation; the furniture, the looms, the tools, are his; every thing in fact but the *remises* (gathering of the leishes,) and the *peignes* (reeds) which generally belong to the manufacturer.

Formerly, the chef d'atelier frequently undertook the patterns given him by the manufacturer; now the cartoons are delivered to him, he paying the expenses of stitching them together.

Apprentices generally mess in their masters' houses, who provide them with food, fire and light.

The companion is sometimes fed by the master, and pays from 45 to 55*c.* per day for his meals; the general consumption is half a litre of wine, when his work is very laborious, or a quarter when the work is light. The latter quantity is allowed to the apprentice by order of the Council of Prud'hommes. The repasts last half an hour, and the hours of labour are from sixteen to eighteen hours.

An apprentice will be fed, lodged and washed for during three or four years; they are required to produce two-thirds of the worth of an ordinary weaver; for the excess they receive half the weaving price; they are compelled to fetch water, to sweep the apartment, &c.; they come into Lyons principally from the mountains of Savoy, Dauphinais and the High Alps.

In certain articles the companion receives two-thirds of the weaving of common goods, which is very low, so low that not more than 1*f.* 50*c.* per day is obtained for 6 ells produce. One reason for this is, that the winding of the tram is on account of the manufacturer. The consequence of the low wages is, that these goods are woven almost wholly by women and children.

In the thrown article (*lancé*) the weaver pays the wages of a boy of ten to fourteen years, who throws back the shuttle, and gets from 60*c.* to 70*c.* The price paid to the weaver is 40*c.* per 1,000 throws, and about 12,000 can be thrown per day, say 4*f.* 80*c.* of which 2*f.* 40*c.* is for the weaver.

In velvets, a weaver can get a higher price than in other articles.

The daily expenses of the weaver may be thus averaged:

Bread, 2 lbs. at 4 <i>s.</i>	-	-	-	-	-	-	-	-	40 <i>c.</i>
Meat	-	-	-	-	-	-	-	-	50
Wine, $\frac{1}{2}$ litre	-	-	-	-	-	-	-	-	10 $\frac{1}{2}$
Oil, fire, light, &c.	-	-	-	-	-	-	-	-	7 $\frac{1}{2}$
Washing and other charges	-	-	-	-	-	-	-	-	10

f. 1 18

Of late many of our weavers have resumed the agricultural life they had abandoned.

John Bowring,
Esq. LL. D.

18 June,
1832.

8931. Are there any Saving Banks at Lyons?—There are, but they have very little influence there; I have no doubt that the confidence which existed has been much broken by the events which have taken place.

8932. Does any association exist among the labourers for the protection of labour?—These documents refer to a sort of association which exists among them, which is a trade union that has existed in France for many hundred years; the labourers in the different trades have communication with one another, and on the arrival of a stranger he immediately finds assistance from some men of the same trade settled in the town that he visits: that is the principal association existing among them; of late they have shown a very great desire to associate. The first association that adopted a better organization grew out of the expectation of the cholera.

8933. Is there any thing similar to our Trades' Union?—Nothing; if there were, I am convinced that the evils which are constantly occurring there for want of the means of expression of opinion would be got rid of.

8934. Has there been any great reduction of wages at Lyons of late years?—Yes, very considerable; there has been a considerable decline for the last 20 years; in 1810 the gros de Naples was from 90 c. to 1 f. 20 c. and 1 f. 22 c., while in 1832 it was paid from 50 c. to 70 c.; this is a weaver's statement, and I should say, no doubt the prices are represented at the minimum. I have here a memorandum from a weaver, in which, with reference to the trade, he says, that what is most complained of, is the price that is paid for the robe gros de Naples façonné, which is 20 c. for 1,000 shutes.

8935. What was the price paid in 1826?—I have not the return; there has been a constant tendency to depreciation from 1810 to 1832; the depreciation has been a gradual one.

8936. Is the market in Lyons for silks subject to very great fluctuation?—Not very great; the market for silk goods is less subject to it, in consequence of the fact that the stocks are very small.

8937. The fluctuation, of course, must be more in the wages than any thing else?—The fluctuation of wages does not operate so much upon the price of goods in stock as might be expected, in consequence of the stocks being so inconsiderable.

8938. Does not the fact of working to order arise from the working almost exclusively fancy goods and not plain goods?—To a great extent it does; but even to plain goods the question of colour is of considerable importance.

8939. Does not the application apply to new colours?—This is again the question of taste, which taste depends on such an immense number of contingencies, that the over production of goods of a particular colour might create as great an embarrassment as the production of a particular pattern.

8940. Have you any notion of what are the average profits of a manufacturer at Lyons?—My belief is, that the average rate of profit is about seven per cent.; where there is great success the profit is very considerable; where, for instance, a new pattern is introduced that captivates attention, the profit becomes very large; where it fails the loss is very large; it is precisely the region of production where the risks are greatest.

8941. Did the Lyonese manufacturers complain to you of their labouring under considerable disadvantages as regarded the Swiss and German manufacturers?—They consider themselves to be under a disadvantage of $11\frac{1}{2}$ per cent.; that is to say, on the importation of foreign raw silk three per cent.; they estimate a profit to the importer of three per cent., the fact being that the Swiss manufacturers are themselves importers of silk, while at Lyons a middle man almost always is employed; there is a brokerage on the purchase of three-fourths per cent. They estimate a difference on the loss in dyeing of three per cent., and a loss in weight of two per cent., making $11\frac{1}{2}$ in all: it is clear this is an exaggerated statement, though in some points it is true. It is true that they are under a disadvantage as regards the importation of foreign silk, and are under a disadvantage growing out of the want of capital; it is also true that they are subject to loss to a greater extent at Lyons than in Switzerland or Germany on dyeing, inasmuch as, from the extent of trade in Lyons, the quantity that can be gathered up from pillage is so large that a trade may be carried on with it: it would be very difficult in any of the Swiss towns to get so much pillaged silk as to set up business with it.

8942. Are they not subject to considerable heavy local taxation?—Very heavy: there is one other circumstance, the average interest on money in Switzerland and Germany, is nearly one per cent. lower than the average interest of money at Lyons;

Lyons; that is also a disadvantage. With reference to a question I did not answer quite in detail before, I wish to state one fact of some importance. I asked a large manufacturer there, whether he would consent to open to me any one transaction, that I might trace it in the whole of its progress, and be able to report the precise circumstances; I have done that, and I will mention what I know to be the progress of the article. I took 500 ells of satin 7-16ths wide tram supple, at 6 f., value 3,000 f., weighing 60 grams per ell.

C O S T.		f.	c.
500 Ells; i. e. 12 grams of chain, or 12 kilo. organzine, soft and dyed; these 12 kilo. weighed, before dyeing, 17 kilo. 45 grams, at 50 f.		872	50
Throwing the organzine, at 11 f.		191	95
Dyeing the organzine (raw) at 3 f.		51	35
Winding the organzine, 12 kilo. at 4 f.		48	00
Warping, at 1 f. 50 c.		18	00
500 Ells, at 36 grams of trams supple, 18 kilo. raw, at 47 f.		846	00
Throwing the tram, 7 f.		126	00
Dyeing ditto, 3 f.		54	00
Weaving 500 ells, at 95 c.		475	00
Finishing 500 ells, at 10 c.		50	00
		2,732	80
Proportion of expenses on 3,000 f. at 3%		90	00
		2,822	80
Profit		177	20
		f. 3,000	00

In the weaving are included,

Winding tram	20 c.
Cannetage	10 c.
Folding	5 c.

8943. Do you take into the calculation interest on the capital?—Yes; I should think that must be taken in.

8944. Then, practically, the Swiss and German manufacturers do undersell the Lyonesse in many articles?—Certainly, in the plain articles.

8945. Have you any accounts of imports from Zurich?—I have some, but they are not official. The local taxation of Lyons in 1831 was 4,038,098 f. The last census at Lyons gave 145,675 individuals. The Octroi would produce 2,400,000 f., so that there is a local taxation of 16 $\frac{1}{2}$ f. or 13 s. 6 d. per head; that is a mere local tax, a municipal tax paid within the walls and not paid without.

8946. Do you mean each head of a family?—No; I take in the whole population.

8947. So that taking the average calculation of a family to be five persons, it applies to every one of the five?—Exactly so; here is a document of considerable interest, furnished me by the municipality, showing the bearing of the Octroi of the town of Lyons

[The Witness delivered in the following:]

Net Revenue	2,026,967	79

8948. State what is the average expense of changing each pattern in the loom?—An individual who was very thoroughly informed on the subject, told me he was disposed to contract for the change at 25f., it may happen that the modifications may be small in a pattern; there are cases in which they are exceedingly expensive, the topic is constantly agitated, and it is the source of almost all the quarrels that exist at Lyons between the master and the labourer. The question of the mounting is one of a most embarrassing nature; the labourer is constantly stipulating, that before changing his loom he may be allowed to produce a certain quantity of pieces; the master is always interested in the production of novelty; of late they are beginning to understand the matter a little better. The complaint of the weaver is precisely this, he is made the victim of the ignorance of the master, who before he has thoroughly ascertained that what he gives to the weaver is likely to be acceptable to the public, engages the weaver to set up his machinery, if he is disappointed, the weaver is left without redress, not having been consulted as he formerly was (I mean many years ago), with respect to the pattern. The artist has become a much more important person of late years; the fact is, that in France every thing gives way to the creation of taste; the weaver has less to do with that than the inventor, and the consequence of the weaver having nothing to do with the invention of the pattern is, that he is the victim of its unpopularity.

8949. Did I not understand you to say, that the trade of Lyons was an order trade?—It is, to a very great extent.

8950. Then how can that apply; if it be an order trade of course the order must be given for a certain number of pieces?—It constantly happens, though the order is given, that the buyer refuses to take the goods, sometimes on account of delay in production, sometimes on account of change of fashion, sometimes for other causes which the dependence of the manufacturer on the buyer prevents his appealing

appealing against ; there is a vast quantity of uncertainty about the matter ; the manufacturers are in fact much at the mercy of the buyer.

8951. The impression that we had here was, that an order trade was less speculative than one otherwise ?—The quantity of speculation at Lyons is very small ; the Lyonese manufacturers, even in this market, have almost always lost money when they sent goods on their own account ; in two or three cases where experiments have been made on a large scale, the sum lost has been enormous ; but the fancy trade is subject to many risks.

8952. You were stating what were the principal disputes between masters and men ?—The great point of difficulty is this, that the weaver in Lyons is, to a great extent, at the mercy of the success of the master. Of ten quarrels which originate between the masters and the men, that is the primary cause of nine ; the Conseil des Prud'hommes is at this moment endeavouring to legislate for such cases ; that if the weaver be not guaranteed in the production of a given quantity of pieces, a certain consideration shall be allowed him, and the expense of mounting his loom be paid by the master who employs him.

8953. Does not the weaver sometimes pay the expense of the pattern, and sometimes the manufacturer ?—Yes, but cases like this will arise ; a manufacturer receives an order for a certain quantity of goods, and he may bargain with the weaver for mounting the loom for that particular pattern, by an understanding according to the circumstances of the case, that if the expense of mounting be inconsiderable the weaver shall undertake it on his own account, but if it be considerable he shall get something from the manufacturer. The master says, I have an order for 25 or a greater number of pieces ; the weaver undertakes them ; he delivers a part which are not found to answer, the foreign or Parisian buyer says to the manufacturer, I can take no more ; the master is not in a situation to say to his correspondent, you shall take them ; so he turns round on the weaver, who has incurred an expense, and says to him, I can take no more from you, I am already sacrificed.

8954. So that an order trade, although beneficial to the master, inasmuch as it does not involve him in so much risk as a speculative one, may be extremely injurious to the weaver ?—Undoubtedly ; I have put in a document from M. Charnier, and he told me that he would not, under any circumstances, take orders for any but plain goods, for any goods indeed which were liable to the modification of taste and the changes and caprices of the public.

8955. Do you conceive that the average of 25*f.* for each mounting can be depended on ?—The fact was given me by a member of the Chamber of Commerce ; I do not consider my personal knowledge pledged to the amount ; I have endeavoured, from the best sources, to collect facts, and I am merely putting those facts on record.

8956. Have you any account of the positive expense of changing the patterns, the highest and the lowest ?—Yes, I have ; I have known cases in which it has cost as much as 1,000*f.* in regard to shawls of extreme beauty and costliness ; it averages between almost nothing and the expense of 1,000*f.* The case which led to the Jacquard invention was a case in which between twenty and thirty thousand francs had been expended in the mounting of a pattern.

8957. Do you know what the utmost expense is, that has been incurred in the changing a pattern which applies to the silk trade exclusively, independent of shawls ?—I think I have heard of an expense of between 3 and 400*f.* With reference to the stock of goods on hand at Lyons, I perceive before me a document from a member of the Chamber of Commerce, which states, that at no one period could he be able to collect 300 pieces of those classes of goods which may be considered as exposed to the fluctuations of fashion.

8958. What is the arrangement for the cost of mounting where the expense exceeds 100*f.* ?—When the expense exceeds 100*f.* there is generally a special understanding between the master and the weaver, as to the way in which the expense shall be paid ; wherever no specific understanding takes place, and there is a difference of opinion, the Conseil des Prud'hommes is appealed to.

8959. Is there any thing else you wish to state regarding the manufactory at Lyons before you proceed to St. Etienne ?—I wish to state that I have only looked at the matter in its general bearings, and as a part and portion of the system of our commercial relations with France ; but I am very desirous of putting the Committee in possession of one or two points connected with the change of opinion produced in France as respects their relations in general with England. I have some facts furnished me by the Chamber of Commerce, and I should not do justice to them, or to my own feelings, were I not to read them. I am stating the fact generally,

John Bowring,
Esq. LL. D.

18 June,
1832.

generally, that the introduction of French goods into England has produced a most extraordinary change of opinion in France, and there is a disposition becoming stronger every day to enter into something like reciprocal legislation.

8960. Will you state from that document what your opinion is of the views of the Chamber of Commerce at Lyons upon this subject, as addressed by them to the Government?—They represent to the Minister that “it is of the highest importance that some forward steps should be taken, that the prohibitory regulations of the Custom House system of France should be reconsidered, in order to show to England that we are no longer indisposed to come to an understanding with her as to the means of gradually removing the impediments that exist, and of extending the amicable relations of the two countries.” In another part they say, “the moment is arrived in which opinion requires that our restrictive system should be revised, and that which is hostilely prohibitory to the products of Great Britain should be abandoned; of these prohibitions, a great many have been shown us by long experience to have been unfortunate, and they are persisted in without any regard to the changes which have taken place in the political situations of the two countries, whom events daily bring more closely together. The whole system of prohibition we consider as nothing more or less than a representation of the ancient theory of national enmity, and look to a change in the system as the best ground of peace, of union, and of sympathy, which could ally the two nations together.”

8961. On leaving Lyons you proceeded to St. Etienne?—I visited St. Etienne.

8962. You had an opportunity there of observing the state of trade?—Yes.

8963. Did you enjoy the same facilities there which you met with at Lyons?—I did. I had letters from the Government to the Authorities, and many individual letters to manufacturers.

8964. What is the principal silk manufacture of St. Etienne?—The principal manufacture is ribbons.

8965. Has there been a great increase in the ribbon trade of St. Etienne?—Very considerable; in 1812 the number of looms was 9,000, in 1831 it was above 20,000.

8966. Has there been any migration of the trade of Lyons to St. Etienne?—Some years ago there was a considerable migration of the trade from Lyons to St. Etienne, but there has been a migration of a portion of the trade back again to Lyons. One branch of the ribbon manufacture has been transferred there, in consequence of a new discovery, namely, the means of employing the broad loom in the production of ribbon. Taste is more developed at Lyons than at St. Etienne, and the manufacture of more costly ribbon has been removed to Lyons of late.

8967. Is there any establishment at St. Etienne similar to the Condition at Lyons?—It exists with a slight change as to the per centage allowed for humidity.

8968. Are there any schools of design?—There is nothing that can be decidedly called a school of design. There is a great deal of attention paid to the subject of drawing; there are many students not collected in the schools; there are a considerable number of draftsmen at St. Etienne. At this moment there are 58 artists at St. Etienne, employed in the production of ribbon patterns.

8969. You have stated there has been a great increase in the ribbon trade, have you any documents exhibiting that?—I have a document which shows a general result. I shall hereafter put in a return from the Government showing the fluctuations of the ribbon manufacture for some years. The number of looms have gone on increasing, but very irregularly, at the average rate of about 500 a year. Since I was last examined I have received from the French Government further returns of a detailed character as to the state of the silk trade; and they have taken an immense deal of trouble to classify the facts under different heads.

8970. Can you state the number of looms in 1825?—I think generally the progression has increased at about 500 a year. I shall endeavour to show the facts in accurate detail as to the progress of the ribbon manufacture; the precise quantity of looms have, I believe, never been ascertained either at St. Etienne or Lyons until I produced the real statistics to this Committee. The information which has been previously given as to the quantity at Lyons or St. Etienne is not to be depended on. In fact there were till lately very imperfect means of knowledge, and the facts I put in of an official sort, of the number of looms in Lyons, is evidence of the inaccuracy of all the previous statements. There are no positive facts to be gathered as to the quantity of looms in 1825, either in Lyons or St. Etienne. With respect to the statement of 1810, all I can answer for it is, that it is the best information I could get from the most intelligent persons. The facts connected with 1831 are official.

8971. Have

8971. Have you a statement of the prices of silk at St. Etienne?—Yes; the price of yellow organzine, from 20 to 24 deniers, is 60*f.* per kilogram; white organzine, 62; the tram, generally employed for ribbons, 42; these three are French silk. The white Piedmont organzine, 61; the yellow Piedmont, 53; the Italian organzine at 20 deniers, 60*f.*; the foreign tram, 40; there is a difference of from one to two francs per kilogram in favour of the French silks of the same number of deniers.

8972. What proportion of foreign silk is used at St. Etienne?—About one-third.

8973. Is there any marabout silk used at St Etienne?—Yes; the silk twisted in the marabout manner, is used for gauze ribbons.

8974. What is the nature of the marabout silk?—It is twisted much more hardly than other silk, and employed principally for the making of the gauze ribbons; it is only a particular sort of throwing which gives it a greater hardness; the twist is tighter than in ordinary throwing; it is thrown twice.

8975. It has been stated here, that the price of marabout silk is 44 per cent. cheaper at St. Etienne than here; have you any means of verifying that fact?—I have a statement here of the facts given me, from which it appears that marabout silk, such as is used for the finest gauze ribbons, has been from 68 to 72*f.* per kilogram; the cost of the marabout silk of this quality, at this moment in the St. Etienne market, is about 27*s.* English; I take 70*f.* as the average. Throwing is 7*f.* 50*c.* to 9*f.*, take 8*f.* 25*c.* as the average loss on weight, 4% 2*f.* 75*c.* will give 81*f.*; deduct 12½% discount, leaves 71*f.*, to which add 4*f.* for dyeing, gives 75*f.* per kilogram, or 27*s.* per English pound; that is according to the statement of the President of the Chamber of Commerce of St. Chamond.

8976. Is it French or foreign silk that is thrown into marabout?—It is made indifferently of French and foreign. In consequence of a letter I received from a gentleman who attended this Committee, I wrote to inquire whether or not marabout was made wholly from French; great surprise was expressed at the question; Italian silk is used quite indifferently for it.

8977. Have the French any advantage whatever as to marabout, whether they obtain their own silk or not?—Only as respects that peculiar marabout which is used for gauzes; in other French silks the difference in prices at St. Etienne is from 1*f.* to 1½*f.* per kilogram above the Italian.

8978. When was the bar loom introduced at St. Etienne?—About 50 or 60 years ago; that is the period from which the prosperity of the town of St. Etienne may be traced.

8979. What sort of foreign silk is made into marabout?—My notes state only that it is Italian silk; I think it is Italian generally.

8980. You mean indiscriminately Italian and French?—Indiscriminately.

8981. Are we to understand that French silk is not better for marabout than Italian?—I stated that French silk of the same number of deniers, sells for 1*f.* to 1½*f.* higher than Italian; it is of course so much better.

8982. Has there been any great improvements since the bar loom at St. Etienne?—Some slight improvements; the circumstance of the bar loom fixing itself at St. Etienne, is similar to the introduction of the power loom at Ashton. At Lyons, where there is a great congregation of workmen, there has always been the strongest opposition to improvement; thus improvements have always sought some spot where the population was not dense; the population settled in the mountain district about St. Etienne was enough for the purposes of labour, and among them the bar loom was effectually introduced. The prosperity of the whole district may be said, to a great extent, to have grown out of its introduction; it was originally imported from Switzerland, and its importer, like Jacquard, was the subject of a great deal of persecution. Most of the improvements introduced in thinly peopled places have met with much less opposition than those in the more populous districts, or in larger towns.

8983. Will you explain to the Committee what you meant just now by the application of the broad loom to the manufacture of ribbons; this is a recent improvement?—Very recent; it is merely the power of introducing four small shuttles instead of one large one; in that way the broad loom of Lyons has been so applied, which it could not be before; I have a return from Lyons, stating what number of ribbon looms they have employed now; these have invariably four pieces woven from each, and there are now from 800 to 900 looms so employed.

8984. That can be applied to the manufacture of broad goods or ribbons?—Yes, the discovery gives every manufacturer two strings to his bow, and this is considered a matter of very considerable importance; in fact it has brought back a portion of the ribbon trade to Lyons, which had deserted it before this recent improvement.

John Bowring,
Esq. LL. D.

18 June,
1832.

John Bowring,
Esq. LL. D.

18 June,
1832.

8985. Are silks dyed at St. Etienne?—They are.

8986. What is the price of dyeing at St. Etienne?—The price of dyeing, for ordinary colours, is, at the rate of from three to four francs per kilogram.

8987. Is there any difference between the prices of Lyons and the prices of St. Etienne, as to warping and dyeing?—There is a slight advantage in favour of St. Etienne.

8988. On account of St. Etienne not being exposed to the same local taxes?—The local taxes at St. Etienne are less.

8989. You stated, just now, that the marabout silk was silk thrown in a particular way?—Yes; maraboutage only refers to a particular mode of twisting the silk; it is not necessary that the silk should be of a particular quality. The silk used in the finest gauze is the finest white organzine of the country.

8990. How many manufacturers of ribbons are there at St. Etienne?—There are 200 manufacturers of ribbons, who employ 500 clerks, independently of the weavers, and the daily produce is 350,000 ells of ribbon.

8991. Are the looms all of the same sort?—No, they are not; there are three sorts of looms used in the district; there is the low single-handed loom used only in the mountains, in the remoter districts, and limited to the manufacture of a single ribbon. I think I might state a very important fact, preliminary to this; that the weavers in almost the whole of the district are agricultural labourers, that they live for the most part on a small quantity of land, which is their own property; that they are not wholly dependent on their manufacturing labour for their subsistence, but they take to the loom or the mountain according to the demand for labour. So that in the whole district, taking in St. Etienne, St. Chamond, and St. Didier, there are generally a third of the whole quantity of looms not at work. When there are orders in the market the agricultural weavers (if I may call them so) apply to their looms, and when there are no orders they apply themselves to agriculture, constantly pursuing two occupations.

8992. Is that true of the people who reside in St. Etienne?—I speak of the mountainous district, where the inferior looms are. I am speaking of the single-handed looms, which cost only from 12 to 18 francs; in these districts there are 18,000 of these looms, and not more than two-thirds in action; they principally make the satin ribbons, and those called sarsnets.

8993. You spoke of 350,000 ells daily, did you include the whole of the district?—Yes; unless where I make a statement to the contrary, I speak of the whole district. As to the fact I am now stating relative to the ribbon manufactory concentrated in the St. Etienne district, the labourers seek orders from one place to another, as the demand changes. I have brought some samples of ribbons which come from the different machines that are now in work.

Mercurii, 20^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esq. LL. D. again called in; and Examined.

John Bowring,
Esq. LL. D.

20 June,
1832.

8994. HAVE you any further details to furnish to the Committee, respecting the looms at St. Etienne?—At the close of the last day of meeting, I stated that there were three classes of looms used in the ribbon manufacture of St. Etienne; the first was the old unimproved loom, called the basse lisse, which still continues to be much employed in the mountainous districts, of which looms there are about 18,000; they only produce one ribbon, and are principally used for satin and sarsnet plain ribbons. The class of workmen that generally employ these looms, are the class that I called agricultural weavers; they are occupied in the labours of the field when there is no demand for the sort of ribbon they produce, and they go into the towns of St. Etienne and St. Chamond in search of work when there are orders in those places. The second class of looms are also single handed looms, called haute lisse, they are generally applied to the production of large patterns; of these there are 500 at St. Etienne and St. Chamond, and to 100 out of these 500 the Jacquard machinery is applied; of this description there are 473 looms in Lyons, the greater part of which are employed in silk haberdashery (*passementerie*), which I find by another return employs also 85 looms at St. Etienne. It was the improve-

ment

ment which I had occasion to speak of to the Committee, namely, the introduction of the bar loom, which has exercised so great an influence on the prosperity of St. Etienne; of these bar looms there are now about 5,000, 800 of which are employed in sarsnet ribbons, 200 in velvets, 700 for galloons of sarsnet, 800 for stout and light satin, and 2,000 Jacquard employed for any purpose for which that machinery may be required, and 500 for striped gauzes; of these 5,000, the estimate is, that there are habitually but two-thirds employed; that is the Return I obtained in May last. I have also a Return of 1828, if the Committee are interested in seeing the changes which have taken place within the last four years.

8995. Do you speak of St. Etienne only?—I am now speaking of the whole district, including St. Etienne, St. Chamond, St. Didier, and the neighbourhood.

8996. And these 5,000 are to be added to the 18,000 mountain looms?—Yes; the 18,000 are in the remoter parts of the district; the looms of the 2d and 3d classes are principally in the more immediate neighbourhood of the town, and in the town itself.

8997. Have the goodness to state what the ribbon looms employed at Lyons are?—There are from 800 to 900 ribbon looms at this time employed at Lyons, and they are, I believe, almost without exception, the Jacquard looms; and they have almost all grown out of the discovery to which I referred; namely, the application of the broad weaving looms to the production of ribbons. At Lyons, the number of ribbons made in a loom is four pieces, and they are the ribbons which generally lead the fashion, and are of a very superior quality and high price.

8998. Have you any particulars respecting the cause of the introduction of the ribbon trade at Lyons?—There was great difficulty in introducing improvements into Lyons, but at this particular moment, I believe there is more difficulty in introducing improvements into St. Etienne; for the Lyonese are the more intelligent people of the two; when this discovery was made, which enabled the Lyonese manufacturers to employ their broad looms in the production of ribbons, they, having superior draftsmen and superior patterns, were able to produce a ribbon so perfect and beautiful, that its reputation was very soon established, and there were considerable orders for it from Paris and elsewhere; the consequence is, that the trade which for some time before had wholly left Lyons, seems returning to it again. A few years ago, I understood that there was not a single ribbon loom remaining at Lyons; and when I was there in May, there were, as I said, more than 800. There are a very small number of looms, probably fluctuating from 20 to 40 at Lyons, which are single looms, employed only in the production of articles of very high character, and superior price and beauty.

8999. Can you state what are the present prices paid for manufacturing ribbons at St. Etienne?—I will put in a document which has been furnished to me by a man, of whom I may say without hesitation, that he is the best informed individual in the place as to local matters, and has been occupied for some years in statistical observations; he has written the only book of any merit which describes the silk trade of St. Etienne, its growth and progress; his name is Hedde, his writings may be consulted with great benefit by any gentleman interested in the history of that trade; for I beg to remark, it is extraordinary that there is a printed history of the ribbon trade of St. Etienne, though there is none of the greater silk trade of Lyons. In this document I have arranged the French numbers with the English, which will afford the means of comparison with considerable facility. I preferred the statement of Mr. Hedde, inasmuch as he is a witness perfectly disinterested, not being himself a manufacturer, but a man who has been consulted on many occasions, and who may be considered on the whole as the best authority in the neighbourhood; he is also in some respects an official organ, being one of those individuals who have given guarantees to Government for their conduct, and who have been appointed under ministerial auspices.

[The Witness delivered in the following Return.]

John Bowring,
Esq. LL. D.

St. Etienne, 22 April 1832.

20 June,
1832.

TABLE of the WAGES paid to the WORKMEN per 12 Ells, for weaving.

English numbers -	-	-	2	4	6	7	8	10	12	16	20	24	30	40	50
French numbers -	-	-	1 $\frac{1}{4}$	2	3	4	5	6	7	9	12	16	22	30	40
Satins and Tafetas -	-	-	20 ^c	30 ^c	40	50	60	75	90	1.	1.25	1.50	1.75	2.	2.25
Cords (Cordons) -	-	-	-	-	-	-	-	2.50	3.	4.	4.50	5.	5.50	6.	6.50
Striped Gauzes -	-	-	-	-	-	-	-	-	1.	1.25	1.50	1.75	2.	2.50	3.
Figured Gauzes -	-	-	-	-	-	-	-	-	1.25	1.50	2.	2.50	3.	3.50	4.

The Rate paid for clipping, is as follows; 50, .50, .75, 1.0, 1.10, 1.25, 1.30, 1.40, per doz.

The finishing and watering of ribbon is performed in private workshops; the price for finishing is, 0.5, 0.5 $\frac{1}{2}$, 0.6, 0.6 $\frac{1}{2}$, 0.7, 0.7 $\frac{1}{2}$, 0.8, 0.8 $\frac{1}{2}$, 0.9, 0.9 $\frac{1}{2}$, 10, 11, 13, per doz. When the watering is done by the roller, it is paid at the same rate as the finishing (cilindrage), when by the press it is paid 1-3d more than the fixed rate.

I wish also to state, that I have from other sources, returns of the same sort. There is a fluctuation spread over the whole field, ranging from 7 $\frac{1}{2}$ per cent. below to 7 $\frac{1}{2}$ above, on these prices; but these may be fairly represented as the average prices of labour.

9000. Is not this gentleman connected with the silk trade?—By no means; he is wholly independant of that trade; he is not himself a manufacturer, but he is well acquainted with the manufacture, having been some years ago a professor, or lecturer on weaving in the schools of St. Etienne; as I showed to the Committee some specimens of the school of Lyons, I will beg to hand in a specimen of the ribbon produced by Mr. Hedde, of the school of St. Etienne.

[The Witness handed it to the Committee.]

9001. Is this remarkable for having gained a prize, or ever having been exhibited?—It was exhibited.

9002. Do the manufacturers at St. Etienne export for their own account?—I believe now in no instance; I heard of one or two cases, where in consequence of a great accumulation of stock, they sent ribbons to foreign lands; but they complained of serious losses wherever that had been the case; and I found they were more disposed to make sacrifices at home, than to run the risk of greater sacrifices in remoter countries.

9003. Can you form any estimate of the value of 1,000 kilogrammes of silk, when wrought into ribbon?—On that subject I have one or two returns. I have taken from two or three sources, estimates of the progress of the manufacture of 1,000 kilogrammes of silk. The manufacturer on a satin or sarsnet ribbon pays for dyeing 4,000f.; for winding, 3,000; for warping, 1,500; for weaving, 52,000; for finishing, 1,500; in all, 62,000 francs; so that it is estimated that the ribbon, when manufactured, would cost 132,000 francs; that is to say, the value of the silk, when it had passed through the process of manufacturing, would be 132,000, taking 70,000 as the prime cost of the material. I have also some calculations in the case of gauzes; 1,000 kilogrammes of silk are estimated to cost 73,000f.; the dyeing, 4,000; winding, 3,000; warping, 1,500; extra cost for maraboutage, 3,000; the finishing, 1,500; and weaving, 56,000, which makes together 69,000; so that the total cost of striped gauzes would be 142,000. I enquired at St. Etienne what was the case in which the greatest quantity of labour could be applied to a given quantity of silk, and on the richest figured gauze; they stated 1,000 kilogrammes of raw silk, thus manufactured, to be worth 162,000f.; this is an additional value of labour, equal to 20,000 francs, given to the prime cost on the richest figured gauze; that is the manufacturer's statement of labour, added to a given quantity of raw material.

9004. Have you any further details respecting the portion of labour at St. Etienne, on a given amount of money?—I have endeavoured to trace the quantity of raw material, and the quantity of labour on a given value; taking 1,000f. on an article of satin or taffetas, it is estimated that 469 francs would be paid in wages, and 531 for the raw material; in 1,000f. value of striped gauze, 486f. would be paid for

for wages, and 514 for the material; in 1,000*f.* value of rich figured gauze, 550*f.* would be paid for wages, and 450 for the silk; in this very fine gauze one quarter of the silk is lost in clipping, which must be taken into calculation; in this case I speak merely of the richest gauze.

9005. What is the price paid for clipping ribbons?—No. 6 and 7, 50*c.*; No. 9, 75*c.*; No. 12, 1*f.*; No. 16, 1*f.* 10*c.*; No. 22, 1*f.* 25*c.*; No. 30, 1*f.* 30*c.*; No. 40, 1*f.* 40*c.* per 12 ells. Cyndring and watering are paid at from 5 centimes to 13 per dozen; when the watering is done by the press, one-third more is paid. I have a return from St. Chamond, stating that in the very fine gauzes, as much as 5*f.* per piece has been paid for clipping.

9006. As to the dyeing, there is also a loss in the weight of the silk; it will not come out of the loom 1,000 kilogrammes, it will come out only about 700?—That is a fact not peculiar to France, it exists equally in England; on my last examination I gave in a return of the loss on the different colours.

9007. Exclusive of the clipping, what loss would 1,000 kilogrammes suffer from any other cause?—The principal loss is in dyeing, and of that I made a return; it is as 4 to 15 in common colours; as far as respects cost, I have from another source, a statement in another shape; that in striped gauzes the silk may be estimated at from 50 to 55*f.*, the labour from 45 to 50; in other gauzes the silk from 40 to 45*f.*, and the labour, from 55 to 60; and in ordinary matters, the cost of the silk is about 65 per cent., and the labour 35; that comes from another and independent quarter.

9008. Will you state what are the prices paid at Lyons for weaving?—At Lyons the weaving is paid at the tarif price, except some richer articles which are paid from 5 to 10 centimes above; the only two numbers that were then being manufactured were Nos. 16 and 30; 45*c.* was paid for 16, and for 30, 60*c.*

9009. Will you state the quantity of pieces made in a bar loom at one time?—In Nos. 1 to 1½, there are from 28 to 30 pieces; in 2 to 3, from 24 to 26; in 4 to 5, from 20 to 22; in 6 to 7, from 16 to 18; in 9, from 14 to 16; in 12, from 12 to 14; and in 13, from 6 to 8.

9010. Is that an average number?—Yes, it is.

9011. What kind of goods are these?—This only has reference to width.

9012. Does it apply to a particular description of ribbons?—To all ribbons manufactured in the bar loom; the bar loom is used in France for the production of a great number of ribbons in the same looms.

9013. Are the gauze ribbons made in the bar looms?—Yes, I have myself seen them.

9014. And this applies generally?—Yes, generally.

9015. Can you state the quantity made per day?—From 1 to 4, the average is 8 ells per day; from 5 to 9, 6; and from 30, 3 to 4; that is the return of a weaver at St. Etienne's; at Lyons, where there are four ribbons only of a superior order, the quantity is from 1½ to 2 ells of that number.

9016. Can you state what are the daily earnings of a weaver at St. Etienne?—I stated, with reference to the manufactories at Lyons, that there are two classes of weavers, the superintendent weaver, the proprietor of the looms, who receives the whole pay, and who gives half of it to the dependent weaver. At Lyons, they are called the chefs d'atelier and compagnons; there is an organization very like it existing at St. Etienne's, where the proprietor of the looms calls himself the passementier, and the weaver is called the ouvrier. The question I take it refers to the gains of the labouring weaver. I have two documents on the subject; one states, that with respect to common ribbons, the daily gain of the working man will be about, 1, 125*c.*; 1½, 130*c.*; 2, 140*c.*; 3, 150*c.*; 4, 160*c.*; 5, 170*c.*; 6, 190*c.*; 7, 200*c.*; 9, 210*c.*; 12, 225*c.*; 16, 240*c.*; 22, 250*c.*; 30, 275*c.*; 40, 290*c.*; and that on the superior, which begins at 6, he will gain 220*c.*; on 7, 230*c.*; on 9, 240*c.*; on 12, 260*c.*; on 22, 320*c.*; and on 40, 340*c.*; on striped gauzes, the gain of the labour will be, on No. 6, 225*c.*; on 7, 250*c.*; on 9, 275*c.*; on 12, 3*f.*; on 16, 320*c.*; on 22, 340*c.*; on 30, 370*c.*; and on 40, 390*c.*; on the richest gauzes, the gain will be, on 6, 250*c.*; on 7, 290*c.*; on 9, 320*c.*; on 12, 340*c.*; on 16, 370; on 22, 390; on 30, 425*c.*; and on 40, 440*c.*; by which it seems that the minimum daily earning of a ribbon weaver will be 1½*f.* which is just a shilling a day; and the maximum will be 4*f.* 40*c.* This is the return from the town of St. Etienne. It is stated that the gain of the mountain labourer is very much less from the circumstances I have described, of their not being constantly employed; it is a sort of auxiliary labour, the daily returns of which are

John Bowring,

John Bowring,
Esq. LL. D.

20 June,
1832.

wholly uncertain, and must be estimated considerably below the prices paid in the town for these superior articles; it is therefore impossible to state the daily gains of a mountain labourer, inasmuch as he has his farm to attend to, and the business of weaving is much dependant on his other engagements.

9017. Are these mountaineers paid a lower rate than the town people for the same article?—No; but their labour is less productive.

9018. In talking of the number of ells that were made per day, you said it was from one to four, do you mean eight ells from each piece?—The looms produce eight ells of every piece.

9019. Respecting the mountain district, have you any further information to give?—The passementier is in fact the individual who immediately comes in contact with the manufacturer; in many cases they employ dependents; there are a few cases in which the passementier has only his own loom; but in many he is the father of a family, and sometimes, especially in the town, he has five, six or eight looms under his roof; he then gets these looms employed as well as he can, giving to the weavers whom he engages half the weaving price; no man is called a passementier who is not the proprietor of a loom.

9020. Have you any thing further to state as to the companion?—The person who would be called a companion at Lyons is called an ouvrier at St. Etienne's.

9021. Can you state what is the proportion of the different class of ribbons manufactured at St. Etienne's?—It is estimated, taking 100 as the point of unity, that about 35 per cent. are striped gauzes; about 25 clipped gauzes; about 10 gros de Naples; about 4 grosgrains; I do not know the English name for that; it is a very thick pad; 12 per cent. for belts; and 14, including all other pieces of ribbon not in the particular estimate.

9022. Does this include those manufactured at Lyons?—No, at St. Etienne; at Lyons they are all of the higher quality.

9023. Can you state what duties are paid on the introduction of foreign ribbons in France?—The estimate of the duty on the introduction of foreign plain silk into France may be taken to be 15 per cent.

9024. Is there any introduced from any other place than Switzerland?—There is a small importation from Germany.

9025. Has there been any great hostility shown to the importation of it?—There is constantly a great show of hostility, but as far as I have been able to get at the sincere opinion of the ribbon manufacturers they own they are decidedly benefited by the influence of foreign competition; there are many men who do certainly, while among their neighbours, complain of the introduction of foreign goods, and speak of being tributary to strangers; but when you get at their honest conviction as to the general influence of foreign competition, they acknowledge it to have been exceedingly valuable; and though a different language may have been held openly, I believe the most intelligent would be sorry to hear of any legislative measure against foreign competition.

9026. Do you consider this introduction as being prejudicial to the French manufacture?—I think it has been beneficial in the highest degree; in whatever point of view I consider the question, it comes to this result, that the French manufacture owes its success very much to the influence of foreign competition; that it would never have introduced a single improvement but under the extreme pressure of some foreign rivalry.

9027. Do they import any figured goods at all?—Exceedingly few,

9028. Is the rivalry as regards plain or figured goods?—In both; the operation of the prohibitory system is precisely this: It is clear a nation never can go into a foreign market under a prohibitory system; because a prohibitory system, unless it elevates prices does nothing, the demand for prohibition being to elevate prices beyond the average cost of production in other countries. The silk manufacture, notwithstanding all the aptitude of the country for manufacture, notwithstanding the peculiar benefits of their soil and climate, and a very industrious and intelligent population, the silk manufacture, I say, is the only manufacture that has had the benefit of a foreign demand; the demand could never have been created under a prohibitory system. The manufacture, left thus to an unassisted natural developement, and having the constant impulse of foreign rivalry, has reached this extraordinary result, that of 140,000,000*f.* of manufactured silk 110,000,000*f.*, as I then believed, but as by document I have received since we last met, 120,000,000*f.* goes into the foreign market, and it is impossible that one single franc's worth could ever go into the foreign market if there was an efficient prohibitory system, unless the public treasury were drawn on for the difference of price.

9029. Will

John Bowring,
Esq. LL. D.

20 June,
1832.

9029. Will you state what is the social condition of the St. Etienne weavers?—Their situation, on the whole, is one of tolerable comfort, they are not so well off as many portions of the French people; the climate is not a very agreeable one, it is cold and mountainous; the wine is somewhat dearer and worse than in other districts; and the population are not to be compared in intelligence with those of Lyons; the quantity of instruction among them is decidedly less.

9030. You stated that the French consumed 30,000,000*f.*, and you placed the whole produce at 140,000,000*f.*, and said that 110,000,000*f.* were exported; are the 10,000,000*f.* to go to the increase of the manufacture in France, or to the decrease of the consumption?—I think, in the last year, the demand in France may possibly have diminished to the extent of 10,000,000*f.*; the cholera, for many months, stopped all purchases; the great demand in the Parisian market ceased, which is for the grand display at Longchamps, which has not taken place this year; for in consequence of the presence of the cholera there was a Royal Ordonnance directing that the festival should not be held.

9031. You think that 10,000,000*f.* less was consumed in France?—The mere political agitation in France has certainly had much influence on the trade. I cannot be far off the truth in supposing, that the sale in France was at least 5,000,000 less in 1831 than in 1830.

9032. Has the export increased?—Slightly. I estimated the consumption of France at 30,000,000*f.*, if the consumption be considered at 25,000,000*f.*, the increase of the manufacture would be about 5,000,000*f.*, but the calculation cannot be precise.

9033. You have occasionally mentioned St. Chamond, in what way is this connected with St. Etienne?—It is a small town near St. Etienne; there is a slight difference in the price of labour there, the octroi is less, though the price of goods is very near the same; the average profits at St. Chamond must be greater than the average profits at St. Etienne, growing out of local advantages it possesses. I do not know of any manufacturer of St. Etienne having amassed so large a fortune as M. Dugas, of St. Chamond.

9034. Is there a Conseil des Prud'hommes at St. Etienne?—Yes; the Conseil des Prud'hommes is less popularly constituted than that at Lyons, and less efficient in its operation. At St. Etienne, the weavers stand in the old position, those only being represented who pay the patent tax; at Lyons, every weaver possessed of four looms has the right of voting.

The Conseil des Prudhommes at St. Etienne is composed of thirteen Members and two Adjoints, viz.—

- 5 Ribbon Manufacturers.
- 2 Armourers.
- 1 Hardware Manufacturer.
- 1 Dyer.
- 2 Mecaniciens (Machine makers.)
- 3 Passementiers.
- 1 Working Gunsmith.

9035. State the nature of this tax on patents?—The patent tax is a direct tax paid to the Government; it is a source of considerable revenue, and comes under the direct assessed taxes; it may be considered as a species of poll tax on those who exercise certain professions; the towns are arranged according to their population, and there are also different orders of patents; patents by bankers, by merchants and by manufacturers claiming the right to exercise a profession.

9036. The passementier is not considered a profession?—He has the power of rating himself; but it will be seen that at Lyons there were only sixty or eighty weavers rated to the patent; they thought the honour cost them a deal too much.

9037. Have you any document showing the exact width of French ribbons, and the number of reeds employed in the manufacture of each?—I put in a statement which will give a great deal of information on this head.

[The Witness handed in the following Statement:]

DES PEIGNES employés a la Fabrication des RUBANS à ST. ETIENNE.

Pour établir la portée des peignes des rubans, on a pris la ligne pour mesure commune, et le nombre des dents qu'elle renferme indique la portée du peigne.

La largeur du ruban, toujours prise d'une lisière à l'autre, est un peu diminuée, soit par la tirée de la trame, soit par le rétrécissement du tissu dont la chaîne est plus ou moins tendue. On y remédie en ajoutant à la largeur que l'on veut obtenir, un certain nombre de lignes exigées par la nature du tissu.

John Bowring,
Esq. LL. D.

20 June,
1832.

Les peignes employés à la confection des rubans cordons sont ordinairement de quatre dents à la ligne, ceux de taffetas de quatre un quart à la ligne, ceux de satin de quatre et demi, ceux de gaze de six, six et demi à sept dents ; et enfin, ceux des velours, dont la foulée ou hauteur du peigne est proportionnée au travail des doubles pièces, sont de trois à trois dents et demie. Nous donnons ici un tableau destiné à faire connaître les diverses portées de peignes les plus usitées.

TABLEAU des diverses portées de Peignes employés à la Fabrication des RUBANS de tous genres.

9038. What is the population of St. Etienne?—Of St. Etienne, and the immediate district, 60,000.

9039. Of that number, how many are engaged in the ribbon trade?—I could not obtain any very correct estimate of that; there is so much of fluctuation in the immediate neighbouring district, that it is very difficult to come at an estimate other than by the quantity of looms forming some general average; I think that half the population in some way or other are connected with the silk manufacture.

9040. The weavers you stated are frequently proprietors of land?—Yes, the proprietorship of land is so common that in France, out of a population of thirty-four millions, more than six millions are rated to the land tax.

9041. Is the manufacturer obliged to take out the license in order to exercise the right of voting?—He is.

9042. What is the amount of octroi?—It varies according to the population in the different towns; the octroi always has reference to the population; that which is

is a law at Lyons is not a law at St. Etienne. I was about to state to the Committee the different pressure of the octroi at St. Etienne from its pressure at Lyons.

9043. Is the amount of the patent tax the same on all parties?—No; there is a classification of different professions; the banker pays a higher patent than the merchant, and the merchant a higher patent than the manufacturer, who in turn pays a higher than the labourer; the great motive for the weaver to take out a license was the obtaining a right to vote in the Conseil des Prud'hommes, yet that motive operated so little that the number of weavers at Lyons who took it out did not exceed sixty or eighty; they asserted, and with reason, that the organization was a very bad one, and the prefect forwarded their complaints to the Government; on this representation a new ordonnance was issued by the Government and the King, and the Conseil des Prud'hommes at Lyons received a popular constitution, while at St. Etienne it remains in its former state, precisely as it was constituted during the imperial regime under Buonaparte.

9044. Are you aware that no merchant in London can exercise his trade without making himself free of the Weavers' Company?—I am.

9045. State the amount of octroi?—The population of St. Etienne being 60,000 the amount of octroi paid is 340,000*f.* on food and drink for the municipal service, and 180,000*f.* for state service, so that the octroi is 520,000*f.* for the town, making about 9*f.* a head, which is 40 per cent. less than the octroi at Lyons; at St. Etienne, the octroi is 3*f.* 85*c.* per hectolitre of wine, with an additional octroi of about 3*f.* 50*c.*, and there is an octroi of 15*f.* per ox, which is a very heavy tax. It is a subject of great complaint that the octroi presses with peculiar severity on the labourer.

9046. Can you inform us whether other workmen in other parts are subjected to the same tax of octroi as you state the weavers in Lyons and St. Etienne are subject to?—No, there is no general tariff; and the complaint is that the burden of the octroi is always heavy in proportion to the population; the octroi of Paris is much more heavy than the octroi at Lyons, the octroi at Lyons is much more heavy than that at St. Etienne, and the octroi at St. Etienne is more heavy than that at St. Chamond; now as the octroi is always most costly in the large towns, there is throughout France a struggle on the part of the labourers to fix themselves in the country.

9047. My question is, whether in a town, with a population of 10,000, carrying on the cotton trade; 10,000 carrying on the iron trade, and 10,000 the silk trade, they would be all subjected to the same rate?—Certainly.

9048. Then is the conclusion from that, that all mountain labourers who work out of the town are not subject to this tax?—Certainly not, the octroi is a town-collected tax.

9049. In the 60,000 people of St. Etienne do you include the mountain population?—No, I include what is called the *banlieue*; a great many weavers live as much as 30 miles from the town; that class come down when their agricultural work is done, then they visit the town to ask for manufacturer's labour.

9050. They are not included in the 60,000?—Certainly not; some live at a remote distance.

9051. Of the 18,000 looms you spoke of, have you estimated the number included in this 60,000 population?—Of these 18,000 there is very small portion in the town.

9052. Can you estimate the comparative advantages the Swiss ribbon manufacturers possess over the French?—I put in the Lyonese statement of their disadvantages as contrasted with the French. The St. Etienne manufacturers consider the Swiss have an advantage of four to eight per cent. on the raw material; the loss on the silk, in passing through the different hands, the dyer, the spinner, the warper and weaver, is, they state, much less in Switzerland than in France, and they estimate the difference at five per cent.; thus they calculate that they are at an average disadvantage of 11 per cent. in competition with the Swiss, that is the St. Etienne statement; but were I asked my opinion on it, I should say the statement is exaggerated.

9053. On the subject of labour did you obtain any information, how does the 11 per cent. appear to consist?—I said that I believed the St. Etienne statement to be excessive; the real disadvantage they have is in the duty paid on foreign silk, and in the fact that in France the silk almost invariably passes into second hands for sale. The Swiss and German manufacturer is himself the importer of silk;

Joan Bowring,
Esq. LL. D.

20 June,
1832.

he is generally a man possessing greater capital than the French manufacturer, and in the same situation as every other manufacturer, who having a foreign connection may import his own silk, and save the profit of the importer. When they estimate six per cent. as an average difference I think that is an over estimate; perhaps on the whole the Swiss have a benefit of three or four per cent. on the raw material. The Swiss manufacturer has the silk without duty, and himself is the importer of it; the French manufacturer has to pay a duty on the silk, a profit to the importer, and a brokerage to the individual who buys the silk for him. But there are a great many of the operations which in France are carried on apart from the manufacturer, and which in Switzerland and Germany are done at home; the profit which the dyer, the throwster, the winder, or any other individual employed in the manufacture, would receive at St. Etienne, is a profit which goes into the pocket of the Swiss manufacturer who manages these details himself. Eleven, however, I think too high a rate of per centage; but I believe there is a difference of six or seven per cent. in favour of the Swiss manufacturer.

9054. Do you mean that the Swiss manufacturer pays no duty on thrown silk? —Neither on raw nor on thrown; and he has other circumstances in his favour of considerable importance in their bearings; he pays no duty on machinery, while the French pay a duty of from 15 to 33 per cent.; he pays no duty on iron, while the French duty is 150 per cent.; and the price of wood in Switzerland is on the whole not more than one-third of the price of wood in France; the increased cost of which has also grown out of the French prohibitory system; indeed the more the subject is traced the more advantages do you find possessed by the Swiss.

9055. In fact these disadvantages which the French manufacturer labours under, have almost all been created by the Government themselves?—They have almost all grown out of what is called the protecting system.

9056. Then the commercial prohibitory system in France operates generally as a bounty to the encouragement of silk manufacturers in Switzerland?—Certainly.

9057. Have you any estimate, derived from the lips of the weavers themselves, of their expenses?—I have here the result of many conversations I had with them, which will serve to corroborate or to compare with the facts I have mentioned; they estimate the average rate of wages at 40 sous per day, which is 1 s. 8 d. sterling. They state that none of them, even the most successful weavers, are at all as well off as the more successful men in other manufactures; there are instances of individuals employed in iron and coal works, who earn from 8 f. to 11 f. per day; the labouring people in the district eat three meals a day, of which soup forms the whole or a part; those who are employed in working richer ribbons eat animal food, and drink a bottle of wine of the average cost of 6 sous or 3 d. I have here, from a passementier, a statement of his monthly expenses: he says he pays for the preparation of the quills, 8 f. 67 c.; for rent, 5 f.; the cost of keeping the loom in repair, 5 f.; the tying together the cards, 2 f.; (that is one great ground of grievance; the cards are delivered to them separately, and the expense of fastening them together, both at Lyons and at St. Etienne, falls on the weaver); he estimates the interest, on the cost of his Jacquard loom, of 1,500 f. as 7 f. 50 c.; then there is soup twice a day, and lodging for the weaver, 6 f.; next there is 3 f. lodging for the quill-maker, and 33 c. for soap, which makes together an average of 37 f. 60 c.; then for the winter months, he adds, for 5 lb. of candles, 3 f. 75 c., and for fuel, 1 f. 50 c., that makes 42 f. 75 c. I find that the average number of looms possessed by the passementier are from two to five; the rooms which the weavers occupy are let at a rental of so much per croisée, which is the window space that allows the working of a loom, and that is paid from 60 f. to 80 f. per annum. This man himself had four looms, one was employed in making No. 30, which produced 6 pieces at 4 f. which would be 144 f.; 8 pieces, of No. 22, which would be 144 f.; 12 pieces, of No. 12, at 1 f. 75 c. would be 126 f.; 14 pieces, of No. 9, at 1 f. 25 c. would be 105 f. making 519 f.; he stated to me, that the profit of four looms, independent of his own, would be 103 f. 50 c.; of three looms, 99 f.; and of two, 90 f.; so that out of this he got, as he said, 292 f. and 50 c. I asked his return of daily earnings, and he said on the first and second loom he considered the average gain was 48 sous, which is 2 s.; on the third, 42 sous, which is 21 d.; and on the fourth, 35 sous, which is 17½ d.; this is the return of the passementier as to the gain of the particular workmen employed by him on the above looms.

9058. Independent of his half?—Yes; and he gives the average production of the weaver at four ells a day; he says five and six have been produced by weavers, who were extraordinarily diligent and industrious. On a loom of No. 30, making

John Bowring,
Esq. LL. D.

20 June,
1832.

making 2 doz. at 4*f.* a doz. 8*f.* have been gained of which he of course receives half, but this assumes uninterrupted labour. I find here a memorandum, which I made at the end of a days' visit to a district. I had returned from several devidages and questioned the labouring women; a machine for winding costs from 20 to 40 francs, they can wind from half a pound to a pound of day, and they are paid from 20 to 30 sous; the average is from 20 to 24 sous. I visited several ateliers and found that No. 12, the price paid was 30 sous for gauze, and the workmen could produce from four to five ells. If it were four-and-half, he would have to receive 6*f.* 75*c.* of which half went to the weaver and half to the owner of the loom. They say that a piece of ribbon, of 160 ells, No. 3, which is No. 6, English, requires 25 days labour at the rate of about six ells a day, with the common bar loom.

9059. In what part of France is the silk thrown that is used in the district of St. Etienne?—It is thrown through the whole of the silk district on both sides of the Rhone.

9060. What distance is it conveyed after being thrown?—The distance is frequently considerable, but on such an article as silk the cost of carriage cannot be much. The roads in the St. Etienne district are however most execrable; there is nothing worse in Europe than the road from Lyons to St. Etienne.

9061. A rail road would be of use to them?—They have got a rail road there which will soon be opened.

9062. Having stated that the passementier provides them with food, at the cost of 6*f.* a month, do you consider that they are uniformly satisfied with that quantity of diet?—He does not provide them with food, he only provides them with soup; he is bound to furnish them with soup, and to dress their food.

9063. Is it not a very miserable sort of soup?—Yes; it is not such as an Alderman would enjoy.

9064. Is there any meat in the soup?—It is a mere lard soup; boiled lard, in which there is a slight infusion of vegetables; a bason of it is to be had for a penny. I have not represented the soup as the food on which the men live.

9065. In stating the disadvantages which the French manufacturer suffered, as compared with the Swiss manufacturer, you mentioned the charges on raw silk, that would be applicable of course only to a small proportion of the silk used?—I think the price of silk in the French market depends on the importing price of Italian silk, the cost of foreign silk regulates the market price; but the French will always pay so much more than the Swiss, in consequence of the duty which the French impose on foreign importation.

9066. This could only apply to a small portion of the silk purchased?—Yes; inasmuch as the importation of Italian silk, with all its charges, regulates the value of French silk, the mercantile charges will fall on the French silk; and as the Swiss manufacturer is himself the importer he saves the profit of the French importer. In France the manufacturer is not the importer of silk, but pays a profit to the importer.

9067. Do the Swiss throw their own silk or import it thrown?—They import it thrown for the most part.

9068. If they import it thrown, what machinery is used?—The heavy cost of machinery in France might give to the Swiss an advantage in throwing silk. There are also other machines beside throwing machines employed in the manufacture of silk, and it is a great question whether machinery might not be employed much more extensively in the silk manufacture. I have lately heard that while the French are placing difficulties in the way of the importation of machinery, the Swiss Government are giving encouragement to individuals for introducing machinery of different sorts.

9069. Have you visited any other towns in France where silk is manufactured?—I visited Nismes and Avignon.

9070. State what are the number of looms at Nismes?—The number is from 7,000 to 8,000.

9071. What is the principal manufacture there?—The principal manufactures are articles in which silk forms only a portion of the raw material; there is also a manufacture of what may be called silk hosiery, such as caps and silk stockings are made of; there is also a considerable manufacture of articles which are in imitation of the better sort of Lyonesse goods.

9072. Can you state what is the rate of wages paid at Nismes?—The rate of wages at Nismes is from 8 to 10 per cent. less than at Lyons.

9073. Does that arise from a decrease of the octroi?—It arises from two causes; the octroi is considerably lower at Nismes, and the neighbourhood of Nismes is

John Bowring,
Esq. LL. D.

20 June,
1832.

more productive, and the general cost of existence is less. Rental is less expensive, so is food, and so is wine.

9074. Are there any other branches of labour to which the labourer can turn when the silk trade is slack?—None in the town.

9075. Is there any demand in England for that article?—Before 1825 there were a certain quantity of silk goods sent to England from Nismes. I visited the principal manufacturers there, and did not find one among them who now had any direct connection with England.

9076. Have you attended to the sarsnet trade of Avignon?—I visited Avignon, and inasmuch as I found there some interesting facts connected with the operation of our system on their productions, I took some pains to inform myself generally of the state of things.

9077. Have you any patterns that you wish to exhibit?—Those are the patterns (*handing them in*); this is the only produce of the Avignon trade, and its fluctuations may be easily traced.

9078. What is the article?—It is sarsnet.

9079. What is the quantity of raw silk produced in the Vaucluse Department?—The best estimate I could gain as to the present amount of production, is about 12,000,000 of francs. These patterns have been furnished me by a gentleman who has the largest manufactory in the whole of the district; he assured me, that in 1825 his sales were enormous for smuggling into England, both at Calais, Boulogne and Dunkirk; that of late years he had not sold a single piece, and that the trade with England in this article was now completely put an end to; that in 1825 the fraudulent trade had been very extensive, but that the improvements in England had been so great that they were now completely shut out of the English market. He put these specimens into my hand, as showing that notwithstanding the improvements they had introduced they had not been able to compete with England in this article; he attributed these improvements in England solely to the foreign competition, which had given such an energy to the exertions of our manufacturers.

9080. Did he state how many years previous to 1825 the trade had been carried on?—It had been carried on for several years; the trade had gone on increasing until 1825, when it reached its maximum; after 1826 he stated, that the demand considerably diminished, and at this moment it has wholly ceased.

9081. I wish to know the present prices of silk?—Of the twelve millions which the Vaucluse department produces, eight millions are consumed in the manufactures of Avignon, and the remainder goes to the Lyons market, with the exception of a small quantity that is sent to Nismes; for the last 15 years the manufacture of sarsnets has gone on progressively increasing; it received a momentary check by the Revolution of 1830, but it has already regained the vigour and taken up the position which it occupied before that period; a very intelligent friend of mine states, that he attributed the increased consumption of silk goods to the improved condition of society, and the increased appetite for luxuries which has grown out of accumulated wealth; that the desire for French fashions and productions has increased with the increase of connection with the different nations of Europe, and has been the consequence of the superiority of many of the French fabrics, which has created a demand for them, which removes them from the fear of foreign competition. The standard of silk in the Vaucluse department varies from 10 to 25 deniers; they may be reeled three, four and five to the thread, and are now selling in the Avignon market at from 17 to 17½ francs the local pound, which is equal to 41 and 42½ per kilogram. Silk from 18 to 20 deniers, obtains for the kilogram from 39 to 40; from 20 to 25 deniers, 14 to 15 francs, which makes the kilogram from 35 to 36.

9082. Is there any discount?—This statement I believe to be without discount.

9083. Can you supply the Committee with any details respecting the cultivation of silk?—The Vaucluse department is one in which considerable attention has been given to the cultivation of the mulberry tree; the larger proprietors have been making it an object of their peculiar care; some time back there was no individual in that department who looked at the production of silk as any other than accessory to the general rental of his estates; of late years a great change has taken place. In many departments of the district the cultivation of the mulberry tree is become the principal source of agricultural revenue. A few years ago, I learnt that there was no species of property, the return of which was so fluctuating and uncertain as that invested in the growth of the mulberry tree; of late no agricultural produce has given so regular and beneficial a return; they have done a great deal

John Bowring,
Esq. LL. D.

20 June,
1832.

deal to improve the culture of the mulberry tree, to discover the mulberry tree most adapted to a particular soil; and they have done something to improve the caste of the silk worm, and the whole system of what is called the education of the silk worm has changed. It was in the hands of very ignorant peasants, but of late it has been taken up by more intelligent persons; a great number of works have been written on the subject, so that the business is now getting to be well understood, and the progress of improvement is very remarkable.

9084. Do you mean to say that science has been applied to the cultivation of the silk and the management of the worm?—I find, from an account given 20 years ago, so imperfect was the method then pursued for raising the silk worm, that that which was then considered a fair average, namely, six pounds for 80 or 100 pounds of cocoons, would now be considered a very bad return, for that double the quantity is ordinarily obtained at present.

9085. Has the quality improved also?—The quantity has increased and the quality has improved. The period of great improvement was the cessation of Buonaparte's reign. France then made a great start; much attention was devoted to the subject; Dandolo's book got translated, and there was much additional information circulated with reference to the particular aptitude of France for the production of silk. I may employ here an expression used by a local observer. He says, "the importance, certainty, and value of the results obtained, are such as to excite the greatest astonishment in the minds of those who have traced them."

9086. You will now direct your attention to the subject of throwing?—It has not yet become a general custom in the southern departments of France for the growers to throw their silk; the habit of throwing their silk has been pretty generally introduced into the department of Ardeche, of which the present produce is twenty millions of francs; almost all the silk in the Vaucluse department is sold by the peasant or farmer to the throwster.

9087. By spinning is meant the winding from the cocoon?—Yes, it is.

9088. It is usually understood in this country as reeling?—Yes; the price for reeling is 2*f.* per pound of the country, or 5*f.* per kilogram. In the Vaucluse, they pay for throwing, from 3*f.* to 4*f.* for tram, and 7*f.* to 9*f.* for organzine; and they estimate the waste on silk, of their district, at from four to eight per cent.

9089. Can you state what is the labour?—The labourers in the Vaucluse district are engaged in a way rather different from the general usage of France; they are mostly yearly labourers, and receive from 250*f.* to 350*f.* a year, with food and lodging; from the best information I could get, the expense of food and lodging may be about the same amount, that is to say, the whole cost of a farming labourer there will be 8*s.* or 9*s.* a week.

9090. Is the farmer often, or generally, a reeler?—Very seldom in the Vaucluse, he is so in the Ardeche; the labourers, who are paid by the day, receive in money from 1*f.* 25*c.* to 1*f.* 50*c.* during six months of the year, and 1*f.* 75*c.* during the other six months; that is the price in fact of agricultural labour.

9091. You have no particular information regarding the wages paid for throwing silk?—No special information on that subject.

9092. What sized denier do you allude to?—This is the average of the district; the number of deniers is from 15 to 25.

9093. Can you inform the Committee whether women and children are chiefly employed in throwing silk, or men?—Men are, I believe, frequently employed in throwing; women and children are mostly employed in reeling. The habit of the labourers, in this district, is to work from sunrise to sunset; they are allowed two hours in winter for repose, and from three to four in summer; the heat being intense at mid-day.

9094. Are you quite sure that men are employed in throwing?—It was not an object of particular inquiry; I am not aware of the proportions.

9095. Is there anything unhealthy in the employment of the labourer engaged in raising the raw silk?—Not at all; one of the great improvements in what is called the education of the worm, is the discovery of the fact that it thrives best in the ordinary temperature; formerly the room was dark, and the temperature high, and the quantity of worms that perished was very considerable. Now the room in which the silk worms are kept is light and open to the ordinary currents of air, and an average temperature, and the disagreeable smell, which I remember in my boyhood, has very nearly passed away.

9096. Are the persons so employed ordinary peasants?—Ordinary peasants.

9097. Is the 15 to 25 denier the size of a single or double thread?—The single thread

John Bowring,
Esq. LL. D.

20 June,
1832.

thread I believe; I should take it the thread spun from three to five cocoons, but am not sure.

9098. Can you state how silk is sold in that country?—It is sold for ready money invariably, and sold by a local pound, the proportions of which I mentioned.

9099. Is it not also sold for local money?—No; francs are the universal money in France, no accounts are kept otherwise.

9100. In Ardeche and Vaucluse, are not the accounts kept in florins?—No.

9101. Can you state who pays the expense of the transport after the silk is thrown to the manufacturer?—That will always be the subject of specific bargain; the silk when it is thrown is generally taken to one of the great fairs, the fair of Beaucaire is the principal place of resort. I think it is held in the month of July; it is a great congregation of the silk growers, and the buyers receive it on the spot.

9102. After it is thrown?—Sometimes thrown, sometimes only reeled, and sometimes it is sold in cocoons; in all cases for ready money.

9103. The expense of transfer is generally one of specific agreement?—Yes.

9104. Is it purchased at these fairs by merchants or manufacturers?—Generally by manufacturers when thrown; some merchants lately thought of taking to themselves the business of throwing; one of the most distinguished merchants of Lyons, M. Dugas, has I know a project of establishing throwing mills on a larger scale than have yet existed in France.

9105. I thought you mentioned that it was calculated that shortly there would be an export trade from this country of thrown silk?—The opinion in France, certainly, is, that there is a superiority in the thrown silk of England; I have heard that opinion expressed very frequently; I am quite certain, that whatever the opinion be in France, their throwing machinery is in a rude state; I could not learn that there were any throwing mills in which a capital of 5,000*l.* was vested.

9106. Have you any information to give on the subject of the expense of winding and warping in Vaucluse or Nismes?—At Avignon, the manufacturer is the winder and the warper; the price paid for winding depends on the quality of the organzine, and is from 275 cents to 375 cents per kilogram; the warping is paid at so much per piece of 100 to 110 ells, and the price is 1*f.* 50*c.* per piece.

9107. What is the food of the agricultural labourer?—The agricultural labourers in the Vaucluse department very seldom eat animal food; the bread is black bread, inferior to that usually eaten at Lyons and St. Etienne.

9108. Is not that partly owing to the fact that France is deficient in a supply of animal food?—Not deficient, but the quantity used is not considerable; it is a fruit country, which always interferes with the consumption of animal food. The labourers generally drink from half to a whole bottle of wine per day; the wine is excellent; a strong wine, and worth about 2*d.* a bottle. The rate paid for lodging is from 40 to 50 francs per annum. Their clothing has been a good deal improved of late years.

9109. What does the lodging consist of?—The lodging generally consists of a single room, in which a man dwells with his family; in France the number of families under the same roof is very considerable.

9110. Does the information about the sarsnets apply to Avignon?—That is the sole article made at Avignon; it is made in three qualities, and at this moment there are 5,000 looms employed in the manufacture of that article, of which 3,500 are within the walls, and 1,500 in the neighbouring district.

9111. Can you give us any information as to the number of hours the labourers work per day, their earnings, and general condition at Avignon?—The weaver receives from 45 to 60 cents per ell; the exact amount depends on the number of threads he has to throw into a given space: the Florentine of one thread is paid from 40 to 50 cents per ell; two threads, from 45 to 55; the Marsellinets, from 50 to 60; and the Marsellines, from 55 to 65. I have a return here of the number of pieces actually made; there are 60,000 per year, on an average of 55 ells each, which makes a produce of 3,300,000 ells. They take the average estimate of value to be about 2½ francs an ell. In reference to the English demand I mentioned, that one of the largest manufacturers there, stated that they formerly had a very large connection for the purpose of smuggling these goods into England, and that the sales for England had wholly ceased. This is corroborated by a manufacturer, who says, "Not only have we evidence of the cessation of the English demand by the cessation of all orders from the English smugglers, but in documents received from the depôts at Lyons and Paris, to the amount of many millions, we scarcely find the return of a sale to any English importer, either directly or indirectly; from

1810 to 1814 a fourth of the whole manufactory of Avignon was made for the English market; at that time the quantity of looms in existence at Avignon was not more than 2,500." The general demand for the article, therefore, has doubled since the number of looms has become 5,000, yet the English demand has been wholly put an end to.

9112. Do you understand that the manufacture of Avignon is now generally consumed in France?—Yes, very largely, and exported principally to America.

9113. Will you state what information you possess respecting the weavers at Avignon?—Of this manufacture a weaver can produce from four to six ells per day; the effect of the climate and other circumstances is such, and creates such an indisposition to labour, that I find by a return I have before me that one manufacturer, who has from 500 to 600 looms employed, states, that at the end of the year, he had not an average return of more than $1\frac{1}{4}$ ells per day, while the loom constantly employed would produce 6 ells. Inquiry was made as to the proportion of men and women employed in the Avignon manufactory: the quantity of men and women is about equal; the supply of weavers comes very much from the neighbouring districts, and of the whole persons engaged in the Avignon weaving business, there are not more than half who are hereditary weavers. They employ one child generally to three looms; the looms are, as at St. Etienne and Lyons, almost wholly in the houses of the weavers, and an industrious labourer is generally occupied from five in the morning until seven in the evening, and allows himself three hours for meals and rest. I had from the authorities a very honourable return as to the general good conduct of the workpeople there: it might be supposed, that where excellent wine is very cheap there would be a good deal of inebriety; perhaps there is no town in France in which inebriety is so unfrequent as Avignon. I beg to mention here, that the same thing which is occurring at Lyons and St. Etienne is operating at Avignon; there also is an octroi less heavy than that at Lyons, heavier than that at St. Etienne; and its operation on the labouring people is, that they are moving off in different directions from the town. I have a statement of their earnings in another shape; the best workmen earn from 2*f.* 50*c.* to 3*f.* a day; the next class, from 1*f.* 50*c.* to 1*f.* 75*c.*; the inferior, from 1*f.* to $1\frac{1}{4}$ *f.*; so that you may suppose, from 800 to 900 francs is the maximum, and from 300 to 400 the minimum of their average yearly earnings. They state, that they suffer more than any others from the competition with Zurich in other countries, but they think they are sufficiently protected at home by the difference of the 15 per cent. duty, with which the foreign goods are visited.

9114. What do they state as to the competition with foreign markets?—They say, "It appears to us that foreign competition will force improvement upon us; it will lead to some reduction in the price of labour; and if that were accompanied with relief from our local taxes, we should have nothing to fear, and we are strongly impressed with this, inasmuch as we have an opportunity of comparing our relative position in the Dutch market with the position of the Swiss."

9115. Are the people in France desirous that the raw material should be exported?—Not desirous, but not unwilling in their present friendly disposition towards England to consent; the intelligent French manufacturers feel that if encouragement was given to the production of the raw material, they also would be benefited with the rest of the world. I called to their recollection the experiment made in England with respect to the export of long wool; that was looked on with great apprehension in this country, and it was supposed that much immediate calamity and inevitable ultimate destruction of the woollen trade would follow; the export of long wool has now become a very important trade, and with no injury to the woollen manufacturer; no doubt in the result both France and England would be greatly benefited by the export of raw silk from France.

9116. Does there exist a prejudice in France against exportation?—There has been a very strong prejudice.

9117. Do they use any foreign silk at Avignon?—A small quantity; they have made several experiments on foreign silk, and have imported some small quantity from India, some from Italy, and some from the Levant; they are in the habit of importing when there is a deficiency of supply.

9118. It has been stated here that a very great increase in the import of China silk from Singapore has taken place into this country during the last few years; have the Avignon merchants turned their attention to the use of China silk?—I do not think they have; at Lyons, almost all the experiments made with China silks have failed; there have been three or four cases of large importations from

John Bowring,
Esq. LL. D.

20 June,
1832.

from this market, and they have been unsuccessful; and their opinion is, that inas-much as our throwsters are much more accustomed to throwing that particular quality of silk than theirs, they the French had better not meddle with it; to them it is as a new article, and they hardly know how to employ it, they have therefore abandoned its importation; one house told me they had imported 300 bales into Lyons, which were bought on peculiarly advantageous terms, yet they left a great loss to the Lyonesse importer; it was a sort of silk to which they were unaccus-tomed, and they had great difficulty in disposing of it; the bales were imported raw, and imported for the purpose of making an experiment on a large scale.

Veneris, 22^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esq. LL.D. again called in; and Examined.

John Bowring,
Esq. LL. D.

22 June,
1832.

9119. HAVE you any information you can give to the Committee relative to the ribbon trade in Switzerland?—I have obtained from authentic sources the following facts, as to the state of the ribbon trade at Basle: the number of looms is from 3,100 to 3,200; of which from 120 to 130 have the Jacquard machine; the number of persons employed is about 12,000; they are all agriculturists, and only seek manufacturing labour when the cultivation of the land leaves them free. It is estimated in that district they are employed in manufacturing from two-thirds to three-fourths of the year. The ribbons they make are principally plain, and of the numbers from one to thirty, the looms producing from 16 to 28 pieces, accord-ing to the breadth. A good weaver will be occupied from four to five weeks in the completion of a chain of 10 pieces, which consists of 120 ells. There is no stand-ard as to price of labour, every house making its separate bargain with every sepa-rate weaver; and from No. 1 to 8, at a chain of 120 ells, 21 sous are paid; of No. 30, of the first quality, from 19 to 21*f.* for the taffeta; of No. 10, the fine cor-dons, from 32 to 34*f.* The return states, that the principal markets are the United States, Germany, England, Russia, the Havannah, Mexico, Belgium and France; in 1831, the quantity of ribbons exported to the United States and to Eng-land was 454,000 kilogrammes; to France, Switzerland exported 8,709 kilogrammes; and they imported, in 1830, 11,480 kilogrammes: the fact is, that while Swizerland exports to France the ribbons of an inferior order, she pays herself in ribbons of a superior order, which she imports from France: of the quantity of silk consumed I have no means of making a correct estimate; its price is as low as from 16 to 17*f.* which I suppose must be for tram, and is from 30 to 35*f.* for organzine, per pound.

9120. What effect has the introduction of French silk goods into England had on the French manufactures?—It has created considerable improvement, by intro-ducing additional activity, and has operated on that part of their manufactures where their superiority is undoubted; that is, on the production of the greater por-tion of fashionable articles; and I draw from this the conclusion, that its improving effect is precisely on those qualities of silk whose introduction would be most bene-ficial to England; that is, on the silks which represent the greatest quantity of taste knowledge and the greatest advance in the manufacturing article; it seems to me, that at this moment the instruction that England is deriving from France is more and more useful and important.

9121. Were there any kinds of goods largely smuggled into England before 1826, which have ceased to be exported now?—I mentioned that up to 1825 of the Avignon manufactures, consisting of sarsnets and Marseillines, the smuggled importation was very great: there was also a considerable exportation of black goods and many sorts of plain goods, the illicit introduction of which has, at this moment, nearly ceased.

9122. Have you any information respecting exports to England from Lyons and St. Etienne, before 1826?—The general fact that I could deduce from all the in-quiries I have made is, that the English demand has been more and more thrown on the articles of which taste and fashion form the important feature, and more and more abstracted from the grosser and less difficult articles of fabric.

9123. Can

John Bowring,
Esq. LL. D.

22 June,
1832.

9123. Can you give the scale by which the official values of silk goods are calculated in France?—I have obtained from the Custom House their rates of calculation, which are averages by which silks are valued in the official estimates of the French Government: of raw silks, 40*f.* per kilogram; thrown silks, 70*f.* per kilogram; and the waste silk, 20*f.* per kilogram. These are the returns on which the Custom House estimates the official value: the estimates of plain silks are 120*f.* per kilogram; wrought silks, 130*f.*; crapes, 88*f.*; and plain, 120*f.*

9124. What constitutes the plain, and what the wrought?—I shall have an opportunity of explaining that by-and-bye, and putting in a document which will show the whole bearing.

9125. Are these all the heads under which the exports are estimated?—These are the general heads: the French Government has taken the trouble, in consequence of a communication I made to them, to send me a number of documents, analyzing to a great extent their exportation in silk manufactures, which I will put in. I should state, that I applied to the Custom House, not with reference to the proceedings of this Committee, but generally to be able as a commercial commissioner to form a correct value of the trade of France; and to this end it was necessary to ascertain from the French Government the rate of official value they give to their imports and exports.

9126. Have you any official statement, showing the different species of silk goods exported from France?—I am now going to put in a document I have received within these few days, in answer to a communication, desiring the French Government to send me an analysis of their exportations. The analysis does not go into so many ramifications as might possibly be provided for the purpose; it is, however, an eminently valuable document, as it contains the whole history of the silk exportations of France since 1825, and it is brought down to 1831; the subdivisions are under the heads of plain, wrought and embroidered; then the embroidered with silk, or gold and silver, and with tinsel; then comes stuffs, in which there is a mixture of thread, cotton and wool; another head is counterpanes, an article which goes principally to South America and Spain; gauzes, crapes, net laces, hosiery and all the various classes which are known by the name, in France, of *Passementerie*, which are threads, cords, laces and so on. The whole exportation of manufactured silks from France are ranged under these heads; and thus they form curious points of comparison with the statements I put in before, where the arrangements were under the head of Countries, and not under that of Articles. It appears that in 1825, the exportation from France was 92,000,000 of francs; in 1826, 90,000,000*f.*; in 1827, 115,000,000*f.*; in 1828, 115,000,000*f.*; in 1829, 111,000,000*f.*; in 1830, 111,000,000*f.*; and in 1831, 120,000,000*f.*: so it seems, therefore, that the trade has been nearly stationary for the last five years, with the exception of an increase of about 10,000,000*f.* in 1831: it appears also, that the manufacture was not immediately increased, on the contrary, it was rather diminished, by the English demand on the opening of the English markets in 1826. There is this curious fact deducible thus, that notwithstanding the presence of the English as buyers in the French market, the official value of French exported silks had not much increased; the fact being, that the importation of French silk goods into England has been accompanied by the exportation of English silk goods to other countries, to an amount not much inferior to the amount which England takes from France; this will be found to be a fact, and a very instructive one it is.

[The Witness delivered in the following Statement:]

John Bowring,
Esq. LL. D.

22 June,
1832.

9127. Can you give the Committee any analysis of the manner in which the different quantities of French silk goods are distributed in different foreign countries?—This is the Return of the whole exportation from France in plain goods, in the same number of years; I should state, that not finding any better word for the word *uni* than plain, I have used the word plain in a very comprehensive manner; the best way would be to subtract the other articles from it which are particularly classified, and whatever does not come under these heads will be referred to this class of plain goods. By this statement of the exportation of plain goods, it will be seen that there is a considerable increase of demand from the richer countries for the better and more fashionable articles; in 1825, the United States and England took two-fifths of the whole produce of France in these articles; in 1826, they took three-fourths, and in 1831, four-fifths.

[The Witness delivered in the following Statement:]

The next document I have to deliver in comprises the classes which the French call *façonnées*, or figured, in which, of course, there is greater vicissitude, being more subject to the fluctuation of fashion; I observe that in the year 1826, England imported ten times the amount of figured silks which she imported in 1825; while of plain goods she imported nearly the same amount; in the two years, the changes in the United States' demand are also very striking; in 1825, she imported 14,000,000*f.*, the English being then in the market to a small amount; in 1826, she imported only 4,000,000*f.*, while England imported ten times the amount she had taken in the previous year; in 1827, America took 8,000,000*f.*; in 1828 and 1829, 5,000,000*f.*; in 1830, she took 7,000,000*f.* and a half; and in 1831, nearly 9,000,000*f.*; in the year 1825, England began by taking 71,000*f.*; in 1826, she took 740,000*f.*; in 1827, 1,200,000*f.*; in 1828, 860,000*f.*; in 1829, 560,000*f.*; in 1830, 768,000*f.*; and in 1831, 511,000*f.* The most extraordinary fluctuations are in the Mexican demand; in 1825, Mexico took less than 30,000*f.*; in 1826, she took 131,000*f.*; in 1827, 184,000*f.*; in 1828, 214,000*f.*; in 1829, 250,000*f.*; in 1830, 720,000*f.*; and in 1831, 1,300,000*f.* while in plain goods there has been much less fluctuation in the Mexican demand; last year the United States took one-half the amount of all the exports of France in figured silks; Germany, one-fourth; Mexico, one fourth; and Spain took 1-27th.

John Bowring,
Esq. LL. D.

22 June,
1832.

John Bowring,
Esq. LL. D.

22 June,
1832.

9128. Have you any particulars respecting crape?—Yes; here is a document which shows that of the crapes the United States took last year two-thirds of the whole exports, and the article has increased in exports nearly 50 per cent. since 1825; last year, Turkey was the second buyer in importance; England, third; Germany, fourth, and Egypt fifth.

9129. Have you any returns as to ribbons?—I have a return as to ribbons; France produced of ribbons, in 1825, 30,600,000 *f.*; in 1826, it was 22,000,000 *f.*; in 1827, 24,000,000 *f.*; in 1828, 27,500,000 *f.*; in 1829, 26,500,000 *f.*; in 1830, nearly, 23,000,000 *f.*; and in 1831, 24,000,000 *f.*; the great increase in 1825 is solely attributable to the American demand of that year, in which America alone took 18,000,000 *f.* of ribbons, while in the following year she took less than 4,000,000 *f.* It will be seen from this Table that the increased demand exists only in the richer and more prosperous countries, such as England and the United States, and that is growing out of the fact, that the fashion of the French ribbons has been the principal cause of their sale; it is a curious circumstance, that the South American trade, which in 1826 was 3,280,000 *f.* was in 1831 only 1,100,000 *f.* being a gradual diminution to the extent of 2,000,000 *f.*; the Americans took, in 1831, half the exports, or more than 12,000,000 *f.*; the Germans took one-fifth, or nearly 5,000,000 *f.*; the English took one-twelfth, or nearly, 2,000,000 *f.*; the Spanish, took one-twentieth, or 1,200,000 *f.*; the Mexicans took one-fortieth, or 578,000 *f.*; the Sardinians, one-fiftieth, or 465,000 *f.*; and the Swiss, one-sixty-fifth, or 374,000 *f.*; in 1825 and in 1827, there was an exportation of ribbons to China, but since 1827 there has been no exportation to China from France; to British India, in 1829 and 1830, nearly 300,000 *f.* of ribbons were exported from France; but the export almost ceased in 1831.

John Bowring,

John Bowring,
Esq. LL. D.

22 June,
1832.

9130. Do you wish to submit to the Committee any facts growing out of those documents which you have handed in?—I have drawn out the more prominent facts which bear on the other branches of the silk trade, and those facts seem to me to be important as evidence of the great fluctuation of the trade. In the article of silk brocade, of which France exported, in 1826, 3,000,000*f.* and in 1831, less than 200,000*f.*; the United States, in 1825, took more than 1,000,000*f.* and in 1831, less than 5,000*f.*; in 1826, England took more than 140,000*f.*; in 1827, more than 1,300,000*f.*, and in 1831 not a single piece. Of silk gauzes, the English demand has fluctuated as follows: in 1825, England took 230,092; in 1826, 110,544*f.*; in 1827, 229,916*f.*; in 1828, 148,960; in 1829, 918,040*f.*; in 1830, 150,192*f.*, and last year only 9,296*f.*; while, in America, the fluctuation has been in another direction; they took, in 1825, 426,700*f.*; in 1826, 277,200*f.*; in 1827, 385,100*f.*; in 1828, 267,400*f.*; in 1829, 423,600*f.*; in 1830, 638,100*f.*, and in 1831, 761,000*f.*; the whole quantity exported from France scarcely having fluctuated at all, there being almost a cessation of the English demand and a doubling of the American. In tulles there is also a striking falling off in the exports; in 1826, it was 1,200,000*f.*; in 1831, it was less than one-third of that amount. England took, in 1825, 94,000*f.*; in 1826, 279,800*f.*; in 1827, 308,400*f.*; in 1828, 260,800*f.*; in 1829, 177,120*f.*; in 1830, 82,700*f.*; and in 1831, 24,800*f.*; that is about one-third of the exportation to England in 1825. In the United States, the importation last year was less than one-third of what it was in 1825, it was then 342,800*f.*; in 1826, it fell to 88,800*f.*; in 1827, to 99,600*f.*; in 1828, 40,400*f.*; in 1829, 99,100*f.*; in 1830, 90,100*f.*, and in 1831, 10,190*f.* In South America, it was, in 1825, 177,600*f.*; in 1826, 168,300*f.*; in 1827, 70,960*f.*; in 1828, 116,700*f.*; in 1829, 914,000*f.*; in 1830, 67,200*f.* and in 1831, only 37,000*f.* In silk lace, the export, in 1831, was less by half than in 1825; in 1825, the amount was 322,850*f.*, and in 1831 it was only 160,690*f.*; the exportation to England of French haberdashery was as follows; in 1825, 13,900*f.*; in 1826, 104,300*f.*; in 1827, 108,400*f.*; in 1828, 107,500*f.*; in 1829, 84,300*f.*; in 1830, 147,300*f.*; and in 1831, 140,000*f.*

9131. This of course is all legal exportation?—I should state, that in France it is all legal exportation.

9132. It

9132. It includes that which is smuggled into this country?—Yes; these are the whole returns.

9133. The Committee are to understand, that the tulle which you have mentioned here is altogether made of silk?—Certainly, except when the return mentions any other mixture.

9134. Have you been able to analyze the different qualities of goods taken by England at different periods before and since the change of system?—I have taken the three years of 1825, 1828 and 1831, and these are the results which I have obtained. I will put in the document.

[The Witness delivered in the following Statement:]

FRENCH SILK TRADE.

MANUFACTURED SILKS exported from France to England, as far as can be collected under different Heads from Official Reports.

1825.	1828.	1831.	
f.	f.	f.	
4,884,000	13,336,680	12,992,280	- - - Plain Silks.
71,500	860,730	511,940	- - - Wrought Silks (i. e. Figured.)
10,640	8,580	-	- - - Stuffs brocaded with Silk.
—	27,240	17,640	- - - Ditto with Gold and Silver.
—	8,100	10,260	- - - Ditto with Tinsel.
—	98,080	37,600	- - - Ditto with Thread, Cotton, &c.
23,072	148,960	9,296	- - - Silk Gauze.
43,560	349,184	227,656	- - - Silk Crape.
194,080	266,880	24,800	- - - Silk Net.
332,351	192,526	160,692	- - - Silk Lace.
54,800	51,100	14,200	- - - Hosiery (Bonneterie.)
—	23,000	18,090	- - - Silver and Gold Galoons.
—	5,310	270	- - - Tinsel Galoons.
13,900	107,500	49,300	- - - Silk Cords, Tapes, &c.
—	—	900	- - - Ditto with Gold and Silver.
—	7,920	23,400	- - - Ditto with Tinsel.
437,400	1,798,320	1,949,760	- - - Ribbons.
6,071,303	16,990,010	16,048,084	- - - TOTALS.

The result is, that it confirms a fact which I have stated before, that the exportation to England in 1825, before the legal introduction, was 6,000,000*f.*, and that fact corresponds very much with the state of things I have gathered from other sources. In this return the articles are classified, in 1828 the amount was nearly 17,000,000*f.*, and in 1831, 16,000,000*f.*

9135. Have you any information as to the relative position of the English and French manufactures in the market of the United States?—I have some curious information derived from the United States. The English and French merchants are there on an equal footing; and it is certainly, of all countries, the country that affords the best ground for comparison, from the largeness of its imports. The operation of the different systems of legislation may be traced there with considerable accuracy; while French silks were prohibited in England, those of England were in so backward a state that she exported scarcely any manufactured silks to America. I have obtained, from official sources, the American returns of 1830, and I find that the United States imported from England of piece goods 249,860 dollars, of other silk manufactures 119,701 dollars, this is the legitimate importation without any reference to smuggling; in all 369,561 dollars of English silk goods were entered at the Custom House. The United States imported from France 2,256,529 dollars of piece goods, and 1,291,849 dollars of other silk goods, making 3,548,378 dollars. Now this is the state of export of a manufacture which has most of what is called protection in England; (assuming 30 per cent. for that protection, as it is the highest duty paid in England on any sort of stuff,) the same article is that which has the least of that which is called protection, in France, inasmuch as the duties on foreign silk goods in France, are less than half the duties paid in England on foreign silk goods; the protection of silk manufactures in England is thus double that which the silk manufactures have in France, while the exports of the article which has only half the protection are, it will be seen, nearly ten-fold greater than from England, where

John Bowring,
Esq. LL. D.

22 June,
1832.

where the protection is double. I wish that the Committee should have an opportunity of contrasting this with the American imports of those manufactures which in France have most of the so-called "protection," namely, the absolute prohibition of competing foreign goods, which, as I have repeatedly said, is only the protection which enables an inferior article to obtain a superior price; it is the encouragement given to imperfection. Now I would, in the markets of the United States, contrast the state of that French article so protected, with the English article which has only a 10 per cent. protection in England, I mean cotton goods. By the same official document it will be seen, that in 1830 the amount of cotton manufactures imported from England was 5,295,294 dollars, and from France only 619,987 dollars, yet to support this trade the French people are taxed with a premium or bounty to the exporter of cotton goods equal to 40*s.* English per cwt. though the duty paid on the raw material in France is only 8*s.* 11*d.*, so that they receive from the Government on the exportation of cotton manufactures nearly five times the amount the Government have received on the raw material; notwithstanding this, the French manufacturers declare they shall be ruined unless they can obtain an additional bounty of 20 sous for plain, and 30 sous for printed cotton, and they demand that it shall be secured to them until every difficulty is removed; they ask, too, a boon of 3,000,000*f.* in the shape of an additional bounty to enable them to export 5,000,000 kilogrammes. Yet in spite of this protection or encouragement given to the French manufacturer, the exportation of cotton goods from France was in 1830 three-fourths of a million pounds less than in 1827. Thus the Committee will see the influence of "protection," as it is called, on foreign commerce; and I will now state one or two of its effects on production. While according to the best calculation 7,000,000 of spindles are employed in England to manufacture more than 240,000,000 lbs. of cotton; in France, according to the return of the Commission which reported on the cotton trade, 3,200,000 spindles are employed to manufacture 66,000,000 lbs. So that where the protected French manufacturer produces only 66,000,000, the unprotected English manufacturer would, with the same number of spindles, produce nearly 110,000,000; or if the English manufacturer produced at the same rate as the French, instead of 240,000,000 he would only produce 144,000,000. In England it is estimated, according to the Parliamentary Returns, that 700,000 persons are engaged in different branches of the cotton manufacture, and they produce nearly four times the quantity which is rendered in France by 550,000 persons, according to the returns of the French Commission. That protection has thus led to the waste of more than two-thirds of the whole amount of labour employed on the protected articles. The French cotton manufacturers have had the benefit of this prohibitory system ever since the peace, and according to the statement made by their Commission it costs the country 47,000,000*f.* per annum beyond the sum at which the same articles might be imported from England; this is the result of 18 years experience of protection, yet the testimony of the French manufacturers is, that the very existence of their business is rendered doubtful from year to year.

9136. You have given the statement of the amount of importation to America in 1830; have you the import of the corresponding year in 1825?—I have not.

9137. Can you state to the Committee what was the state of the export of of manufactured silk goods to England before 1826?—I have returns from the year 1818.

England took in	<i>f.</i>	England took in	<i>f.</i>
1818 from France	- 1,744,105	1825 from France	- 6,104,103
1819 - - -	- 2,713,583	1826 - - -	- 7,596,421
1820 - - -	- 2,727,748	1827 - - -	- 11,460,119
1821 - - -	- 2,815,178	1828 - - -	- 17,311,810
1822 - - -	- 3,516,828	1829 - - -	- 10,483,777
1823 - - -	- 2,901,670	1830 - - -	- 15,204,388
1824 - - -	- 3,856,465		

and by another return it appears between 16,000,000 and 18,000,000 francs in 1831.

9138. That exclusively relates to the export of silk goods?—Yes; and the returns show that there was a gradual yearly increase of exports from France under the old prohibitory system of from 1,750,000 francs, which it was in 1818 up to 1825 when it was 6,000,000 of francs; that is, the smuggling then was at the rate of 240,000*l.* a year; in 1826 the amount being 7,600,000 francs (equal to 300,000*l.*) the duty received was only 60,000*l.* If the whole had paid duty, supposing 25 per cent., the average would have been 75,000*l.*, so that smuggling in 1826 was only 60,000*l.*

John Bowring,
Esq. LL. D.

22 June,
1832.

60,000*l.* or one-fourth of what it had been in the previous year. The immediate effect of the legitimate admission of French goods was, that three-fourths of smuggling immediately stopped; as the price of goods has declined, so has the duty increased, and smuggling has increased in the same proportion; in 1830, 5,000,000 of francs more of goods were exported from France than in 1829, yet the duty paid in England was 8,530*l.* less; in 1831, 7,000,000 of francs more of goods were exported than in 1829, and the duty paid was 3,500*l.* less; in 1831, the amount exported from France was greater than in 1828, and the duty received in England was 57,670*l.* less; these are facts showing the stupendous increase of smuggling; what I wish to submit is this, that from the earliest period of which we have returns, the smuggling became more and more active up to 1826; it then received a sudden check from the change of legislation. The annual returns may be a little more or less, but on the whole the important fact is, that up to that period smuggling went on increasing from year to year; in 1826 it was much diminished, inasmuch as the importation into England was scarcely greater than the year before, previous to the legitimate introduction, and a large amount of duty was received; from that period smuggling continued increasing; and I shall show the Committee that at this moment the amount of smuggled goods introduced into the country is greater (that is the position I mean to take) than the amount of smuggling in 1826, from which I shall draw an inevitable deduction, inasmuch as it was then changed by a particular legislation, that it will be necessary now to check it by a similar interference. The same state of things which occurred before 1826 has occurred since that period; and we are now very much in the same category, with a nominal duty of 30 per cent., in which we stood in 1825, under the system of prohibitory laws.

9139. Will you state what is the state of the smuggling trade in silks at present?—From the best information we have been able to gather, and which has been derived from a variety of sources, some of them confidential, from inquiries of smugglers, from the Custom House returns, and in fact, from information sought in all directions, I should estimate that at this moment the smuggling into England fluctuates from 250,000*l.* to 350,000*l.* a year; the Committee will see that this result is altogether borne out by the French official statements; they give at this moment an export of about 800,000*l.* a year. It appears that from 450,000*l.* to 500,000*l.* of goods paid duty, which leaves 300,000*l.* of goods for the clandestine trade. Now that result agrees with returns which the French Minister was so good as to communicate confidentially; returns which I beg to say were made not with reference to the inquiries of this Committee, but previously when my colleague and I, as commercial commissioners, were engaged in investigating the general character of the relations between France and England. It was a matter of moment to ascertain in what manner England paid France for the goods which she took from her, and as it is notorious that immense quantities of English prohibited goods are introduced into France, we felt it necessary that the veil should be lifted up, and that we should be initiated into the secrets; this enabled us to see, to a very great extent, the bearing of the whole contraband system; and from a comparison of all the facts, I am convinced that the amount of smuggling is, as I said before, about 300,000*l.* a year.

9140. Do you mean sterling pounds?—Yes.

9141. When you use the term pound, we wish you to state what pound you mean?—It may be desirable to mention to the Committee, that some months ago, when it was found that the French Government was willing to reconsider their commercial system, and to extend their friendly relations with England, a commission was instituted, consisting of two French Councillors of State, both of them men distinguished in France, and of two English Commissioners, of whom I had the honour to be one. The meetings took place at the house of the Minister of Finance, and instructions were given to all the departments, that no facts connected with the commercial relations between the two countries should be concealed. The majority of documents which I have presented to this Committee, are documents not prepared with any reference to this inquiry, but documents we obtained in order to enable us to state what would be the natural course of the commercial relations between these countries, if we could eventually succeed in removing the restrictions upon them.

9142. Were these inquiries made previous to the existence of this Committee?—Undoubtedly, and without any reference to it; when this inquiry was suggested, I had a very strong feeling that the commercial interests of the country were bound together by what I may call a silk thread, inasmuch as of the imports into England

John Bowring,
Esq. LL. D.

22 June,
1832.

from France, the most important import is that of silk goods; and the question becomes one of very prominent importance with reference to the consideration of the whole field of commercial interchange.

9143. Will you state what in your opinion would be the consequence of a prohibition at present?—If a prohibition could be made efficient, which I consider quite a chimera, its temporary effect would be this: it would increase price in England by the increase of demand, and it would reduce price in France by the decrease of demand. Now the immediate consequence of that would be to give fresh motives in the shape of an additional premium to the smuggler; if there be a difference of 30 per cent. now under what is called the protecting system, it is probable that England being no longer a purchaser of the produce of France, the difference would soon become a difference of 60 per cent. thus the recompense to the smuggler would be doubled, and doubled would be his activity; my opinion is, that the progress of manufacturing industry, and manufacturing improvement, is precisely like the progress of any thing else. An inferior sculptor for instance, who had got possession of the English market, would be very sorry to see the works of Canova come into competition with his own; but any body who desired that the art of sculpture should be advanced, would be glad to encourage the introduction of the works of the master. I see no distinction whatever between the measures to be taken for the improvement of sculpture, and the measures to be taken for the improvement of manufacturing industry. What prohibition does is this, it alters the character of the smuggling transaction; under the state of things that exists in England the number of smugglers is small, and in order that it should be a beneficial trade the operation must be carried on on a vast scale. It is very well known that the number of directing individuals, engaged in the smuggling trade, is inconsiderable, and that the demoralization is proportionably small. In France you have no opportunity of seeing what the effect of prohibition is on smuggling in masses; you have not there smugglers by hundreds, but by thousands and tens of thousands; the whole frontier is in a state of frightful demoralization, and as I stated, so remarkable has been the effect of the prohibitory system, in maximizing the motives of smuggling, that the smuggling in France has taken quite another character, and has got a word which perfectly represents that character, for smuggling is now called filtration; the smugglers are engaged along the whole of the frontier in the introduction of illicit commodities of all kinds, and that would be the inevitable effect of prohibition here. The system of lowering duties has diminished the demoralization of smuggling, though it has no doubt improved the art; increasing duties, and prohibition above all will infallibly create a class of people similar to those in France and Spain, who are looked on as public benefactors, inasmuch as they procure for the public a class of enjoyments otherwise absolutely denied to them; you may thus excite the sympathies and friendly feelings of a whole nation towards a class of men whose existence depends on the violation of the laws. If any gentleman had the opportunity of seeing the frightfully contaminating effect that this system of prohibition produces on the national character, I cannot help thinking that the question would be decided with reference to its moral consequences alone.

9144. You say, that you consider the number of persons engaged in smuggling in this country is very small, do you consider it smaller than it was during the existence of the prohibitory system?—Undoubtedly; the effect of the alteration of the duties was, that smuggling became much more a trade than it was before; it is now in the hands of a few houses, whose operations are carried on on a large scale, and who find it their interest to be insurers on a calculation of many chances. In elucidation of that fact I would beg to mention, that in France, where the goods are charged with a high duty, the smuggler carries on his business on account of another, as is the case here; that he is a man who has a certain portion of respectability and capital, who himself deposits the money, and delivers the goods to the importer with whom he makes the contract for delivery. But wherever there are absolutely prohibited articles to be smuggled, or where the duties are inordinately high, as in the case of cotton twist or tobacco, the smugglers are men smuggling on their own account; men who introduce comparatively a small amount of the article, and who carry on the trade for themselves, being recompensed by the large profits. It is worth their while to run the risk of introducing 30*l.* 40*l.* or 50*l.* worth of goods, where the premium on smuggling is maximized, as it is worth the while of the superior smuggler to contend against the duty on a large scale. This wholesale smuggler is only successful where he can carry on his business to a considerable extent

John Bowring
Esq. LL. D.

22 June,
1832.

extent, and run the risk of introducing a large quantity of goods, with the chance of now and then a caption or a forfeiture.

9145. Do you consider that the number of persons engaged in smuggling is smaller than it was during the existence of the prohibition in England, but that they are better combined and organized; so that though a small number of persons be engaged in smuggling, they are enabled to introduce, as in fact they do, a much larger quantity of foreign goods?—Yes, that is my impression.

9146. You consider, therefore, that there is an advantage in this respect, that a smaller number of persons are engaged in an illegal manner?—Yes.

9147. But do you consider that there is any benefit to the manufacturer by this alteration, since, although fewer persons are engaged in the illicit trade by means of the better combination and organization you spoke of, they, in point of fact, introduce a larger quantity of goods which come in competition with the home manufacture?—Certainly, the sinister interest of the manufacturer is, that the least quantity of goods should be introduced; it is indifferent to him how they are smuggled if they come into the market.

9148. As far as regards the interest of the manufacturer he is in a worse condition from the present state of smuggling than he was during the time of the prohibition?—Undoubtedly, but prohibition now would not restore the state of things before 1826.

9149. Now, as comparing the smuggler in England with the smuggler in France, do you not consider that that which in reality occasions the great difference in the number of persons engaged in illicit trade in these countries, is regulated generally by the necessity which exists in this country, of the smuggler being provided with a mode of water-carriage for his goods?—The difficulties in France to the revenue officer are greater than in England, owing to the extensive land frontier; the Custom House regulations in France are much more severe. France has the advantage of a land and water frontier, and all the advantages we have as to water France has; the smuggler has the additional power of introducing goods along the land frontier of France to a great extent.

9150. Not only more easily but more cheaply?—The cost of smuggling into France is greater than the cost of smuggling into England. We have returns from every Custom House along the line, and along the coast; and the average cost of smuggling into France is undoubtedly from seven to ten per cent. greater than the cost in England. I will explain what the character of the French protection is. The French have three lines of Custom Houses, while in England we have only one; each of these lines of course exercises a certain control; when the goods have passed these three lines of Custom Houses they are still subjected to municipal examination; the goods cannot get into any town without being subject to the visits of the officers of octroi, so that in addition to the average cost of smuggling, there is an additional charge of five per cent. beyond the cost of introduction over the frontier, through the three lines into the towns, which is estimated as the value of the fraudulent introduction through the octroi; even though the cost of introducing the article into the country be the same in France as in England there is this additional charge to introduce them to the consumption of the greater towns. It is also known that the despotic power exercised by the French Government on these occasions is such as could never be employed here. In Bonaparte's time people were even visited by death; while it is perfectly notorious that with the heavy visitations of the law, under the most cruel persecution and violent acts of injustice, English goods were to be seen every where constantly introduced, and the prohibition, with all the terrors of legislation, and all the cruelties of despotism, was inefficient.

9151. You have said you consider in France the smuggler is regarded rather as a patriotic character, as one who furnishes to the population articles which otherwise they would not procure?—To a great extent, but I spoke of Spain more particularly.

9152. Do you not consider that the observation applies rather to the smuggling of what may be considered necessities of life, than to smuggling of those articles which will come in competition with the national manufacture of the country?—There is no smuggling except where the article comes some way in competition with the manufacture of the country; the necessities of life may be as much the production of the country into which they are smuggled, as the luxuries of life.

9153. Do you not consider that this feeling is confined to articles which are in fact necessary to the bodily sustenance of the inhabitants, rather than to articles of

John Bowring,
Esq. LL. D.

22 June
1832.

mere ornament or fancy?—To some extent; I have no doubt that the man who smuggled cattle into France would be looked on with greater interest and affection than the man who smuggled cotton twist, yet the man who smuggles cotton twist is considered a benefactor.

9154. Are you aware that during the period of the prohibition, and when the project was advanced for making the alteration made in our laws, it was advanced as one of the main arguments for that alteration, that if a duty was fixed, in lieu of prohibition, the smuggler would then become an odious character; and that the feeling previously existed rather favourable to persons following that illicit trade, would wholly cease, and that they would be considered a sort of enemy to their country?—I think it very likely that extravagant opinions have been expressed on the subject; I am convinced of this, that it will be in proportion to the efficiency of a protecting system, that the smuggler will be regarded as a public benefactor. If I understand a protecting system, it is a system which shuts out some object of desire; it diminishes human happiness in some shape or other.

9155. Do you consider that in point of fact any alteration has taken place in regard to the feelings entertained towards those who are engaged in this illicit trade by the removal of the prohibition, and the substitution of the duties?—My evidence has wholly gone to the state of things in France and Spain.

9156. But as a person of very general information, I put a question to you, whether you do consider that in point of fact that part of the expectation to which I have alluded, and which many persons certainly looked at with a great degree of hope has been realized in this country, namely, that it was thought a degree of odium would attach to the smuggler which would tend very much to the discouragement of his illicit trade after the removal of prohibition?—I think that expectation must have been an exaggerated one.

9157. Is it not a direct contradiction to any opinion that was so entertained, that in point of fact it is now stated, that a higher class of persons are engaged in smuggling, as I understand you to say, that smuggling is confined to fewer persons, but a higher and better organized class, with greater capital, who, by means of their greater capital and higher situation, are enabled to prevent the small smuggler from trading with advantage, which is the reason you give why fewer persons are, in point of fact, at this moment engaged in such illicit trade?—My opinion distinctly is this; that the completer organization of the smuggling system, which system has been growing better from day to day, gaining more activity and more knowledge, must undoubtedly bring with it one of two things; either a reduction of duties so as to diminish the profit of the smuggler, or unless that be remedied, and speedily by the Government, the legitimate trade between the two countries will be destroyed; I will state by-and-bye the effect of the prohibitory system in France on the public revenues; the absorption of capital, and the extremely small produce of the French Custom House; the French being an importing nation of thirty-four millions, it will strike honourable Members with astonishment when they hear from me to what an enormous extent smuggling has interfered with the Custom House revenues.

9158. Am I to infer that you consider the removal of the prohibitory system has not in point of fact thrown that degree of odium on the smuggler which some persons anticipated it would?—I have seen no increased odium falling on the smuggler; formerly the buyer of the article came more in contact with the smuggling adventurer, so that he might have a stronger feeling towards him than he has now, when the smuggling adventurer is a hired servant who is paid at a certain rate for carrying on a trading operation; the smuggler is, at the present moment, rather farther removed from the buyer of the smuggled commodity, inasmuch as the operation is carried on in gross, and in that respect, perhaps, some change of feeling has been created; that may be easily estimated by the change of position of the smuggler in gross and the smuggler in detail; the smuggler in detail in France and yet more so in Spain, I have seen the object of universal welcome; I have seen the peasantry rising to protect him; and have known them murder the Custom House officers who have gone in pursuit of him. Honourable Members can draw a deduction from such a state of things which is produced where the prohibitory system is in full vigour.

9159. Is not the profit of the smuggler greater now than in 1826?—I think it may be in the cases where the organization of the system is most complete; in the returns from the Custom House there are some curious facts; there are certain towns in France which the smuggler uses for the introduction of goods into England,

John Bowring,
Esq. LL.D.

22 June,
1832.

England, where smugglers operating on the old system have completely failed, where for instance they had not capital sufficient to carry on smuggling on a great scale; I remember one town where there were three smuggling companies which have been extirpated, they having been in fact swallowed up by companies having greater capital, more business and knowledge of the way in which illicit goods could be introduced.

9160. Then I understand from you that smuggling is in fact more profitable at this time than during the prohibitory system?—More profitable to the more intelligent smugglers, but less so to the clandestine smugglers; if there are two grades, those who have the perfect machinery and those who have not, of course he who has the monopoly of a better machinery than his neighbour gets a greater profit out of it; the small smuggler is carrying on a bad trade, and the larger smuggler is carrying on a good one.

9161. You consider that smuggling is more profitable to the higher class of smugglers, and that in point of fact a higher class of persons are engaged in smuggling than were engaged during the existence of a prohibition?—Yes, I believe from facts that have come to my knowledge, that if it was desired by any individual to smuggle 50,000*l.* of goods into England, there would be no difficulty in obtaining the deposit in gold before the goods were delivered into the hands of the smugglers, so efficient are their arrangements, and so much capital is employed in the introduction of the goods.

9162. Then I learn from you that persons of very large capital indeed are engaged in smuggling?—Yes, a very large capital in reference to such a profession; I believe that at this moment there would be no difficulty in obtaining a deposit of 50,000*l.* for the introduction of silk goods into England, supposing there was a demand for that quantity of goods; and there can be no doubt the facilities of introduction would be increased, and the motives for introduction be maximized by prohibition; I have a distinct belief, from facts that have come to my knowledge, that if a prohibition at this moment was obtained for silk goods in this country, that smuggling in five years would be doubled or trebled.

9163. I understand, at the present day, that persons of very large capital and high credit are engaged in these transactions?—Yes.

9164. Do you consider then that I am wrong in drawing an inference from the facts you have stated, that no additional degree of odium has attached to this illicit trade in consequence of the removal of the prohibition?—I really feel difficulty in expressing an opinion of that sort as to English minds; one must have had great intercourse with that class of people, and I have not come in contact with them in this though I have in other countries; I have observed that in proportion to the efficiency of the prohibitory system in other countries, the feelings of kindness and affection for the smuggler increase; the smuggler who smuggles against a duty of 30 per cent. has, it may be said, 30 per cent. value in the love and affection of the inhabitants; if against 60, he has so much more; and if against prohibition, he has the greatest portion of friendly regard that can be shown to him. In the course of my life I have more than once, in Spain particularly, travelled hundreds, I may say thousands of miles, in company with large bodies of smugglers, men who had introduced from 1,200 to 1,500 mule loads of English goods. I have gone with them over very large districts from Portugal to Spain, and across the country from Gibraltar. I have seen how they have been received with cordial welcome as the instruments of procuring for a whole people enjoyments, which but for them they would not have possessed. I conceive that human desires and human motives are pretty much the same all over the world; and that if you force the people of England to pay 50 per cent. more for silk goods than they can buy them elsewhere, he who sells them 50 per cent. less will infallibly be looked on with a friendly eye.

9165. Do you think, that when the public can have silk for 30 per cent. duty, the smuggler is considered a public benefactor?—I think he will be so considered. I should be sorry to seem to approve of the conduct of the smuggler, but if I was asked at this moment, if the smuggler be in reality a public benefactor, and whether he leads to the employment of a greater quantity of labour in England than would be employed if the smuggler did not exist, I think I could demonstrate that he does, and that I could put that part of my evidence in a way to bear conviction with it.

9166. You are aware that during the existence of a prohibitory system there was the power of seizure and of search, which in point of fact constituted the main protection, so that when the goods were landed and placed in the warehouse of the importer it was then that the danger in reality began. Now do you consider that

John Bowring,
Esq. LL. D.

22 June,
1832.

persons of large capital and credit, such as you have alluded to, would continue this illicit trade when exposed to the risk of information by some one of the many numerous persons they must employ, and when the risk of their credit would be the consequence of their detection?—Perhaps not; the only consequence would be, you would have 100 small importers instead of one large one.

9167. When the importers are numerous and small a smaller quantity is brought in?—Not necessarily so. In France the power of seizure exists as it existed in England, and may be exercised by domiciliary visits in a harsh manner, so much so that it would not be tolerated here; yet even then it is just as vain to attempt to stop the smuggling into France of English goods, as it would be to stop the smuggling into England of French goods. With respect to spirits, the enormous extent to which French spirits are smuggled into England, in consequence of a duty, which is almost a prohibition, is a remarkable evidence that there is no protection that can guard against it.

9168. You are aware that the seizure of spirits is very frequent?—It forms a small proportion to the quantity introduced.

9169. I presume you will admit, that the circumstance of having to cross the channel, does offer a difficulty to smuggling into England which does not occur to smuggling into Spain or France, from other parts of the Continent?—The smuggling into Spain is very much a coast smuggling. I should say *à priori* that the difficulty of smuggling into England ought to be greater; but you cannot resist the fact that the premium of smuggling into England is less than the premium of smuggling into France, which is evidence that though the natural difficulties are greater in England, yet that the real difficulties are greater in France. The only way one can estimate difficulties is by the cost of vanquishing those difficulties, and the cost of vanquishing them is in France greater than the cost of vanquishing them here; the premium of smuggling goods into France is greater than into England, and I take that as irresistible evidence that the difficulties are greater in France than in England, inasmuch as the same class of smugglers are employed for the same purposes; a great number of men are employed in the trade. If a man asks six or eight per cent. more for introducing goods into France than into England, I take it there must be more of difficulty to surmount; the only test in these cases is of course the cost.

9170. Do you consider that in France there is the class of persons of high credit and capital engaged in smuggling, which you have described?—No doubt; in Paris there are two or three houses at least; the extent of illicit introduction into France is extraordinary; we had an opportunity of seeing precisely on what articles it bears. Honourable Members will feel that, from the very moment you create an import of French goods into England, you create an export of English goods into France; these are events of twin birth, they grow up at the same time; it is impossible you can admit French manufacture without exporting English. I state these facts, with this observation, that the quantity of labour which enters into the production of English goods, is double the quantity of labour which enters into the goods we take from the French; that the raw material of the article of English export forms a small portion of the cost of production, and that the raw material in France forms a great portion of the cost of production, so that the result is (and I speak from examination on a very large scale,) the result is, that in our exports to France nearly double the amount of labour exists which exists in our imports from France; that even the protection of 30 per cent. which is given to the silk manufacturer is the sacrifice of 60 of English labour; and this must not be lost sight of, looking at the question not as a silk question only, but looking at its operation as bearing on the whole country.

9171. I ask not what quantity of labour is engaged, but what quantity of labour is engaged in the articles on which the silk imports are paid?—I may, as a looker on, venture to suggest that the legislature is bound to look very much into the situation of those whose labour may be affected by changes in themselves beneficial to the community. This object appears to me worthy of very serious attention. I omitted to state that among other important facts elicited, we have been able to trace the progress of payment by this country to France for the goods which England takes from France, and that there is an article prohibited in France, the exportation of which from England, and the clandestine introduction of which into France has gone on, I should say, *pari passu*, with the importation into England of silk goods; that article is cotton twist. According to all the returns from the Custom House large quantities are introduced into the countries adjacent to France, where it is left for clandestine introduction into France. In the year 1831 the

John Bowring,
Esq. LL. D.

22 June.
1832.

the illicit importation of cotton twist into France was, I have little doubt, from 15 to 20,000,000 *f.*, and as a curious fact illustrative of the inefficiency of a prohibitory system, though the quantity of cotton twist introduced into France is probably now four or five times the amount which it was ten years ago, because it is the demand which has been produced in France for payment which has created the export from England; though the quantity of cotton twist is four or five times as much as it was ten years ago, the seizures are at this moment not half what they were at that period. Thus smuggling has organized itself, made itself more complete and more compact, and has arrested all the powers of legislation.

9172. Do I understand you to say, that the replies you have given as to smuggling have not been with reference to this as a mere subject of silk inquiry, but with reference generally to the trade and manufacture of the country?—Yes.

9173. And you consider that the question of the labour, which you admit has been displaced, is one that ought to call for attention?—Certainly.

9174. Am I right in understanding you to admit that a quantity of British labour, of a particular class, has been in fact displaced by the alteration of the law?—No doubt of it; every alteration must necessarily displace labour of a particular character, although you may have a great result of good on the whole; if your prohibitory system could have been efficient, and under that system the same desire for wearing silk could have existed, (which I do not believe possible) you might have had the manufacture of the article, which the French article has now supplanted; you might have had a greater quantity of silk weavers, but you would have less hands employed in the whole. My statement is, that you would have perhaps protected 2,000 silk weavers, but you would have sacrificed 4,000 cotton weavers infallibly; so that the loss to the labouring weaver would be, in fact, 50 per cent.

9175. Do I understand you to say, that you consider the smuggler a benefactor to his country, because, for every article of foreign manufacture introduced here, some article of home manufacture must be exported to replace it?—Not necessarily of home manufacture; though in regard to France it does happen that the payment is made in home manufacture. In the particular case of countries situated like France and England, where there is a particular manufacture and an aptitude for the production of certain articles, the probability is, the direct exchange will take place in the manufactured article, but that is not inevitable; it might take place in tobacco: if the markets of England were as advantageous as those of Holland, the probability is, that large quantities of tobacco would be introduced from England into France, though the tobacco must itself have been bought by English labour. In two countries, each having particular manufacturing fitness, where in England long attention has led to great improvement in particular departments, and in France, where a long series of experiments has led to the great development of manufacturing aptitude of another class, the probability is, that the exchange would take place between those articles: for instance, I think that in almost all the articles of taste and fashion the French possess a superiority of between 30 and 40 per cent.: I think the English have a greater superiority than this in those manufactures, such as cotton, where mechanical aptitude is brought to bear. Now as such articles are susceptible of a greater variety of price than colonial produce, which both countries have the power of importing direct from the colony, it is clear the exchange would not take place in colonial produce, not in an article from the third country, but rather in articles the peculiar produce of each country.

9176. Supposing the exchange to take place in articles of manufacture imported into this country, and articles, the production of manual labour, exchanged by the exportation from this country of articles worked by machinery, do you still consider the importer of the foreign article a benefactor to the country?—Clearly. I think machinery represents labour as much as any other manufacture of the country.

9177. Have you any thing more to state as to cotton twist?—I am in a position of some difficulty, as far as respects a good deal of information, which I have as a commissioner. The French Government have certainly opened to our view a great deal of the feebleness and inefficiency of their system; they have shown us the correspondence from the Custom Houses, and enabled us to know what the state of things is: I can therefore only add, that I have had evidence enough to satisfy me, in the peculiar position in which I was placed, that at the present moment the importation of cotton twist is from 15 to 20,000,000 *f.* Honourable Members may

John Bowring,
Esq. LL. D.

22 June,
1832.

satisfy themselves to a great extent, by looking at Parliamentary Returns of the export of cotton twist to the countries adjacent to France; the export to Italy, to Spain, and particularly the immense export of cotton twist to the Netherlands, and to the countries along the Rhine, a great portion of that is for illicit introduction into France. I can also speak from my own personal knowledge of the large clandestine exportation of cotton twist from Switzerland into France. I have facts of another character; and although I feel great difficulty in giving publicity to many papers that I have before me, yet I will, to satisfy any honourable Member, show the documents connected with the French Custom House: these I hold confidentially; and I do not think myself justified, as a commissioner still engaged in an important inquiry, in detailing more than I have done, or putting those documents publicly forward.

9178. What do you conceive, from the inquiries you have made, would be a proper and sufficient protecting duty for the silk trade in this country?—I think 20 per cent. would destroy a very great portion of the smuggling trade; any thing beyond 20 is perfectly illusory; an increase of smuggling would infallibly go on.

9179. What would be necessary to protect the silk manufacturer from foreign competition?—I have only given evidence with respect to France; I think protection wholly illusory.

9180. What would be the effect on the silk manufacturer in this country of removing every sort of protection?—I think the silk manufacture in this country would ultimately increase to an enormous degree. I apply to the manufacture of silk that which applies to every other; as far as my experience goes, wherever ignorance and inferiority have remained unprotected, intelligence and superiority have taken their place.

9181. What would be the effect of entirely removing the protecting duty on cotton twist in France?—Bad; which is already the infallible consequence of prohibition. At this moment, of the capital invested in the production of cotton twist, I think I may state the great proportion is absolutely lost, and the loss of the rest is inevitable; I have had occasion to examine the operation of the system on a very wide scale, and I state as a general result on the details of which I should be able to give evidence to satisfy honourable Members, that their protective experiment has cost the French nation since the peace, 200,000,000 pounds sterling; and their prohibitory experiment has wholly failed in accomplishing any one object for which it was introduced. Wherever there are unfavourable circumstances, such as are now connected with the cotton twist trade in France, they can be no more subdued by protection than a geranium can be made to flourish in Iceland. I am satisfied that no industry can or will succeed that is not of natural growth; that all attempts to force industry have been ruinous and fatal to the nations that have made the attempt; I say thus much from observations growing out of an experience of a great many years, in almost all countries where manufactures are established.

9182. Do you not think there are natural difficulties opposed to the flourishing of the silk trade in this country in almost an equal degree as compared with France?—I think not; I think that France has exceedingly few advantages which England might not possess, and the English have a great many advantages France does not possess; and I believe if, by a gradual diminution of duty, the French goods had admission into this market, that in the course of 20 years, though the quantity of French goods imported might be increased, yet the quantity of English goods produced would be increased three or fourfold. The French would be for a very long time our instructors, and would bring more beautiful goods than we should be able to produce; they would only continue in this market by their superiority, and it is my most decided opinion that their being in this market, so far from being injurious to the English manufacture, would be beneficial in the highest degree; beneficial as a source of instruction—beneficial as introducing a constant variety of new patterns; for, as I mentioned before, the rapidity with which invention is at work in their manufacture is perhaps its great characteristic, and that the consequence of having these beautiful goods produced in France would be an extension of the desire on the part of the people to clothe themselves in silk goods, the demand for which would be greatly increased on the whole.

9183. Do you give that opinion, even supposing there should not be a reciprocal feeling on the part of the French with regard to permitting us to have the raw materials?—I repeat, that I think the English manufacturer has a great grievance in not being able to purchase the raw material in France; it is an evil to be remedied,

and

John Bowring,
Esq. LL. D.

22 June,
1832.

and it has been represented so strongly that I believe it will be removed; in that respect the Frenchman has now the advantage which monopoly gives him. I stated before, however, that the quantity of the superior raw material is very small, with reference to the whole production; the quantity of silk consumed in French manufacture is four millions of pounds; the quantity of superior silk produced in France is about 400,000, of which 400,000 I do not estimate that more than one-half is of that beautiful quality to which reference has been made: this is only one-twentieth of the whole of the silk consumed in France. To the extent in which it operates, it is clearly prejudicial to the English manufacturer.

9184. I put it to you in the higher branches of the silk trade, not as to the general consumption?—No doubt that is a very considerable disadvantage to the English manufacturer.

9185. Am I also to understand, that you conceive that cotton twist in France would be entirely destroyed, supposing it not to be protected?—No, I think what protection has done there for cotton twist is what protection would do here as to any other article; it destroys all motive to improvement. The manufacturer of cotton twist, if he can obtain the security of a certain price, does not improve his machinery; foreign competition might force him to do so.

9186. I want to know what, in your opinion, the effect would be?—It is certain if you did not take from France her silks, she would not take your cotton twist.

9187. Do I understand you to state it as your opinion that the price of French silk is generally governed by the price paid for Italian silk?—Yes, I think it is established by the document I presented, that, taking an average of the year, the French silk, of the same number of deniers as Italian, has an average superiority of from 20 to 30 sous per kilogram; but there are particular circumstances, where there is a demand for particular goods, in which Italian silk of the same number of deniers has sold for higher prices than French.

9188. If our manufacturer was enabled, by a reduction of duty on Italian thrown silks, to import the article at the same price as the manufacturer at Lyons, he would be on a footing of equality with the French manufacturer?—That is quite clear as respects that material.

9189. You were asked as to the displacement of labour by the introduction of French goods; if it should appear that the silk manufacture has increased since 1826, instead of diminished, there can be no displacement?—There may have been of labour employed in the production of a particular class of silk goods.

9190. If manufacture has increased, there can be no actual displacement of labour in that particular trade?—Not in that, certainly.

9191. As to the manner in which the balance of trade is adjusted between the two countries, have you any further information to give?—The trade at this moment fluctuates from three to four millions; I think the manufactures of the two countries very nearly adjust themselves. It would appear from official returns, that England takes a very large quantity of goods from France, and France a very small quantity of goods from England; that is not the fact; the amount of manufactured exports from France for England is about the amount of the imports of goods from England into France; but there is another indirect source of payment growing out of the French navigation laws: they cannot import colonial produce from England; the consequence of which is, that a considerable quantity of the colonial produce imported for French account goes to Antwerp, Ostend and the Italian Ports, inasmuch as they may import it from the Ports of the Netherlands or Italy, but cannot import it directly from England. Through that indirect means is the balance of trade principally adjusted; on the whole the result is, that a balance remains due to England; the proof of that will be found in the constantly rising state of the exchange, which is evidence of the increased demand for paper on England. For a considerable time, the rate of exchange has been from three to four per cent. above par.

9192. Have you any further information to give respecting smuggling into France?—I believe I have stated generally the facts of the case, that the principal article of illicit introduction at this moment is cotton twist; of finer cotton goods there is also a considerable fraudulent importation. There is a large importation of fine cutlery, of worsted goods, and of that waistcoating which is called quilting.

9193. Can you state what is the amount of protection afforded by the present system of French Custom House law?—I stated before what the organization of

John Bowring,
Esq. LL. D.

22 June,
1832.

the French Custom House is ; they have three lines of Custom Houses, they employ 25,000 men in their preventive service, and according to the testimony of the Director in Chief of the Custom House, their power of protection does not go beyond 30 per cent. Against the difference of the price of 30 per cent. on manufactured goods, they have no means whatever of legislation ; beyond that the smuggler comes into the field and they are helpless.

9194. Can you supply the Committee with any information respecting the Custom House revenues of France?—The operation of the restrictive system on revenues has been very remarkable. I stated, that wherever a protective system is entered into, the demand for protection always goes on increasing, when it gets to prohibition of course protection can go no further. It was found that high duties were not sufficient, and a prohibition was looked to and that failed ; a few years ago the manufacturers came to the plan of exacting bounties. In the first year the sum granted was 80,000*f.* ; last year, in consequence of the constantly increasing distress, and the exactions of the manufacturers, no less than 14,000,000*f.* were granted in bounties on the French manufactures. According to the last census France has 34,000,000 of inhabitants ; the whole of the Custom House revenues in consequence of the diminution of trade, and the demand for bounties, was 70,000,000*f.* or less than 3,000,000*l.* sterling, produced by the Custom House returns.

9195. Can you state what are the modes adopted by the smuggler to get goods into France, is his collusion with the officer, one of them, or to any extent?—No doubt ; when you increase the number of revenue officers you only increase the number of chances which the smuggler has ; it is much more easy to find among 1,000 men some man to be corrupted, than among 500 ; the evil increases with the means you provide for its remedy.

9196. Have not the French Government lately had under consideration the increasing the bounty on silk exported?—It was suggested to them, but it has been rejected by the Council of Commerce.

9197. Was it not proposed to give it them in the shape of a drawback?—They made an attempt to get a bounty but they failed ; they have lately seen the bearing of the system on a great number of circumstances, and they are not at all disposed to continue it. The Council of Commerce consists of Peers and Deputies nominated by the Government, to whom questions of commerce and legislation are referred previous to their introduction. Many members may be known to honourable gentlemen present, the Duke de Broglie is one, and Count Mollien is another.

9198. What has been the operation of the protective system in France?—My opinion may be very decidedly gathered from the different answers I have given to the Committee. The manufacturers are in a state of embarrassment and arrear, in proportion as the prohibitory system is brought to bear on them ; generally their state is one of great distress ; their machinery is more imperfect than ours, and the sufferings of the people are very great. A monopoly is created by the prohibition of a foreign article, the effect of it increases the prices, and they rise to an enormous height ; enormous prices give enormous profits, and to that every body rushes ; the effect of home competition is the bringing down the prices, and the capital invested at the time of the high prices is in consequence lost ; there is no outlet, inasmuch as the element of a prohibitory system is, that it shall make the produce of a particular locality higher priced than the general produce of the world, or else it does nothing ; the consequence is there can be no relief. If you manufacture an article above the average price you cannot get rid of it, there is no disposing of an article produced at 60 or 70 per cent. above the average value ; it is soon found that more capital is employed in the production of a particular article than will supply the very narrow sphere to which the prohibition has limited the seller ; then there is no resource in the general market ; sufferings increase among the manufacturers and labourers, till the Government, in order to preserve the labouring classes from starvation, are forced to come forward and pay the extra cost in the shape of a bounty ; this has been the course of things in France, and thus improvement is checked ; the capital already invested is lost, and wherever the unnatural experiment has been made, it has brought ultimate ruin on the adventurers.

9199. Do these observations of your's apply particularly to the silk trade in France?—The silk trade has been suffering to a certain extent from the protective system ; from the cost of iron and wood, from the duty on the import of the raw material, and from the local taxation ; all these are disadvantages pressing on the French manufacturer ; he is much injured by competition with Switzerland, and with

with Southern Germany, and he has been saved simply by the possession of that quality which has enabled him to produce a fashionable and tasteful article.

9200. Do you consider the state of the silk manufacturer in France, as compared with the silk manufacturer in this country, to be better or worse?—I should think, on the whole, better; where the silk manufacturer has not misunderstood his position; I think the French silk manufacturer who is producing works of taste, and employing himself principally with a view to turn to account the advantages of his position, will be labouring successfully; not so in the coarser manufactures. In England, too, the silk manufacturer will be successful in the proportion in which he keeps to the article in which he has a superiority; it is a question of judgment. I conceive a deal of the prosperity in all countries to be owing to the manufacturer getting into a region where he has evident advantage; while on the other hand some men mistake their localities, and set about planting vine trees in temperatures too low to produce grapes.

9201. Is not the higher branch of the silk trade the most profitable?—No doubt of it; if there be any part of the field where the French have a monopoly, it is there; but that is growing out of superior knowledge, out of the habits of ages and circumstances, the ramifications of which I have endeavoured to explain.

9202. Will not your observations as to the vine, apply to the mulberry tree?—I think France will produce silk so much cheaper than England that it would be idle to cultivate the mulberry tree here.

9203. It forms no part of your contemplation that it would be practicable to raise the silk worm profitably in this country?—I think not; I think silk could be imported more cheaply from France than grown in this country; in France if I were asked my opinion with respect to many of their silk manufactures, I would say, you are on a false ground, abandon your looms, cultivate the mulberry tree, and you will get a much better return. Free trade opens to all countries their natural resources, and puts every body in his true position.

9204. Has the protective interest been injurious to the shipping trade of France?—I will mention a fact, showing what the operation of the protective system has been on the shipping trade of France. I have got a return here showing what the state of the shipping was in 1820; I have taken the country which on all occasions I find it convenient to use as a means of comparison, inasmuch as it is the country in which France and England meet on equal terms. In 1820 there were 137 French ships arrived from the United States, and there were 132 American ships. It is known that since 1820 France has increased the duties on iron; and this has doubled the value of wood; the first for the protection of masters of forges, and the other for the proprietors of forests. These two classes have had the benefit of the prohibitory system to its full extent. In 1820 these two nations started with an average number of shipping; in 1830 the last return, the number of French vessels that arrived from France was only 21; while of American vessels there were 325 engaged. Such is the operation of the system of protection on the shipping trade of France.

9205. Can you state what changes have taken place with regard to the importation of iron?—That has almost ceased; formerly there was a very large trade between Bordeaux and Sweden. The French said, we will not have your iron, because we can get iron of our own, though it costs us four times as much as your's. The Swedes say, if you do not take our iron we cannot take your wine; and the consequence is, that the trade, which was a very considerable one, has become comparatively null. The same circumstances have occurred in other countries; it is quite impossible to have an export without an import; and as it is equally impossible to have an import without an export, they are co-adjacent circumstances, born and bred together, and you do as efficiently provide for your exports to other countries, by allowing their importations, as you do by any treaty of commerce.

9206. Can a system of prohibition applied to the silk trade be made efficient against a considerable difference of price?—It is impossible; against a great difference in price and quality there can be no efficient protection.

9207. You have already stated in your evidence that under a system of prohibition, in the year 1818, we imported from France 1,744,000 value in francs, and that under a system allowing importation we have imported in the last year the extent of 17,000,000*f*, more than half of which you say is smuggled?—No; only 300,000*f* worth.

9208. But we do smuggle more goods under a system allowing importation than under a system of prohibition?—No doubt; your trade with France has been constantly increasing.

John Bowring,
Esq. LL. D.

22 June,
1832.

9209. From what you know of the state of manufacture in France and England, do you not believe that, in case we resorted to a prohibition again, the smuggling of silk goods from France would greatly increase?—It would to an incalculable degree; the organization of the smuggling system is every day more and more perfect.

9210. What is the state of the illicit trade in gloves?—I visited Grenoble, where I staid some days, and obtained returns; I found that the whole produce of glove at Grenoble fluctuates from about 250,000 to 300,000 dozen; about one-third of that number is taken by this country. In looking to an official return, I have formed a most distinct opinion, that the smuggling of gloves is not more than 5,000 dozen per annum, if it be so much; I have not made an accurate estimate of the duty levied on gloves; it seems to me that such a duty can be levied and is levied.

9211. What duty do you consider should be collected on gloves?—I imagine 20 per cent. might be collected.

9212. Can you suggest any means for ascertaining the invoice value of goods?—It seems to me that after all the only means of entering on a wise and judicious legislation would be to establish on the real value an *ad valorem* duty; I have no doubt that a vast deal of fraud is practised on the respectable trader; I think the levying of a regular importation duty, though lower than the present, would put the manufacturer in a better situation than he is in now.

9213. Have you any information as to the mode in which the Americans act?—The Americans have in Lyons accredited agents; they order attested certificates of the value to be brought with the invoices; these certificates are received at the Custom House as evidence of the value; they have also the power of taking the goods at the invoice price; they have a consul at Lyons, we have none; when goods are bought in Lyons for the United States, to the invoice a certificate of value from the consul is attached, that is admitted by the American Custom House; the power of taking the goods at the invoice price has been found a sufficient security against fraud.

9214. Have you reason to think that the duty actually paid is considerably above 30 per cent.?—Yes, that is a great ground of complaint; the duties require a new adjustment; and the feeling of discontent on this ground is certainly increasing at Lyons and elsewhere; I have not heard any accusation of want of good faith on the part of the English Government, but I have seen evidence perfectly satisfactory which shows the duties in many cases to be from 50 to 60 per cent.; I have had opportunities of comparing some invoices with the duties levied, and in some the duties levied have been much beyond 30.

9215. Have you made any estimate of the loss to England which the prohibition of French silk would bring with it?—I have been making a calculation with respect to the character of the trade between England and France; I estimate the importation from France at this moment of silk goods, at 800,000 *l.* of which I should take 500,000 *l.* to be material, 250,000 *l.* to be labour, and 50,000 *l.* profit; if 25 per cent. was taken, the revenue would receive of course, from 800,000 *l.*, 200,000 *l.* revenue; if 20 per cent., 160,000 *l.* I estimate a profit to the importer of 6 per cent. on the million, inasmuch as you add the 200,000 *l.* duty to the 800,000 *f.* the capital invested would be a million; this importation from France is paid for in cotton twist; the average numbers are above No. 180, the value, as before, 800,000 *l.*, into which the labour enters for at least 550,000 *l.*, so that if prohibition were to be successful it would destroy 300,000 *l.* value in labour; 200,000 *l.* in revenue, and 60,000 *l.* in profit.

9216. The object of reducing the duty is to lessen the profit of the smuggler, is it not?—The object of diminution of duty is to destroy the smuggling.

9217. Do you think the smuggler will not continue his trade if the duties are low?—I think his trade will be destroyed to a very great extent; smuggling, like every thing else, of course runs a risk; and, like other trades, it is at this moment, not giving more than something beyond the average return for the capital. It is clear that if you diminish the return the smuggler receives, you will be destroying a great deal of his trade; no duties can be long collected which are far beyond the average rates of smuggling; 20 per cent. is collected on the article of gloves, of which there is a importation of nearly 100,000 dozen per annum.

9218. Is smuggling carried on chiefly by the inclination of smugglers, or owing to the encouragement of the receiver of the goods in this country?—They are contemporaneous; the smuggler is willing to carry on a contraband trade, for he finds somebody willing to buy the goods; it is a question of demand and supply.

9219. The

9219. The cost of silk being supposed to be 20 or 30 per cent., are there not articles better worth the attention of the smuggler than silks, such as brandy, that pays 700 or 800?—I mentioned that that was an article smuggled by petty smugglers; manufactured articles are articles which are wholly in the hands of the smugglers in gross; the whole of whose arrangements are left to those who run very little personal risk. The smugglers of such articles as brandy are individual smugglers for their own account, in consequence of the great profit they receive.

9220. If the receiver of the smuggler was checked, would the smuggler carry on his trade on his own account?—How can you change the desire to have a better thing for a lower price? If you destroy all human motives you may interfere with the buyer of the smuggled article; you cannot persuade a man that three is less than two, or that a good article is not preferable to a bad one, or that a cheap article is not preferable to a dear one.

9221. May you not so increase the risk as that no person of character will engage in it?—You may destroy the great smuggler by creating 100 little smugglers, the demoralization will go on in proportion to the risk. The great objection to the prohibitory system is this, that you cannot legislate against universal interests. Universal interests always take care of themselves as far as they can. It is very well known to what an enormous extent bandanna handkerchiefs were smuggled some years ago; it was hardly thought genteel to be without a bandanna.

9222. Are not English goods when within the boundary of the city of Paris protected from seizure?—No; they are obliged to protect cotton twist when it gets to the factory, otherwise the works would be stopped; and that is an exceedingly absurd position; they seize in the barriers, they seize beyond the barriers, they seize in the town, and they do not seize the cotton twist when it gets into the hands of the manufacturer, lest the weavers should turn out.

9223. Then how can you account for their exhibiting with impunity goods of English manufacture in the shop windows in Paris?—That is the greatest evidence that you cannot stop a trade for which there is such a demand.

9224. Is it within your opinion that in this country during the time of the prohibition silk goods were exhibited for sale in many of the shop windows in London; is that fact within your knowledge?—That is a fact of which I am not cognizant.

Luncæ, 25^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

Mr. *William Harter*, called in; and Examined.

9225. YOU are a silk manufacturer in Manchester, are you not?—I am.

9226. You are a mill owner also, are you not?—I have recently built a mill.

9227. You have signed a petition to Parliament, in which you express an opinion that it is "inexpedient to alter the present laws in regard to the silk trade," and desire "that they may continue as they are"?—That is the fact.

9228. Will you state to the Committee why you think it inexpedient to alter the law?—I think frequent changes in the regulations in any trade, are very injurious, and I cannot conceive any alteration in the present silk laws which would be likely to benefit the trade; all interests are as nearly balanced as they can be by any plan which has occurred to my mind.

9229. The present laws have for their object the protection of the English manufacturer; do you think he needs that protection?—Yes, protection in the shape of a moderate duty against the too free admission of foreign silks, but not prohibition.

9230. Will you state to the Committee why you think protection necessary?—Because in many respects the French and English manufacturers do not work on equal terms.

9231. State what you conceive to be the disadvantages of the English manufacturers, as compared with the French?—The disadvantages are many; in the first place, we have not so good a supply of the raw material, and that supply is heavily taxed before it reaches our shores.

678.

4 F 4

9232. Whence

John Bowring,
Esq. LL. D.

22 June,
1832.

Mr.
William Harter.

25 June,
1832.

Mr.
William Harter.

25 June,
1832.

9232. Whence do we derive our supply of raw silk?—From India, and China, and Italy, we have our chief supply; and we have also some from Turkey.

9233. With respect to the supply from India and China, how is that taxed?—By reason of the monopoly of the East India Company, it is taxed to a considerable extent.

9234. Do you conceive their monopoly to affect it?—I conceive it to be the effect of all monopolies to keep up the prices, limit the quantity, and prevent improvement in the quality.

9235. There is no China monopoly?—We cannot import it direct from China.

9236. Are you not aware that a large proportion comes from Singapore direct?—If I leave out the word China, perhaps it may be more strictly correct.

9237. Our ships cannot go direct to Canton?—No; and I consider every impediment as operating as a tax, and that impediment is a consequence of the East India Company's monopoly.

9238. How is the Italian raw silk taxed?—By the Italians themselves; the Lombardy raw is subject to an export duty of about 9*d.* a pound; Piedmont raw is prohibited from export, but is sometimes obtained through Lombardy, being first smuggled into that country at an expense of about 8*d.* per pound, to which expense of smuggling must be added the Lombardy export duty of 9*d.*, making together 1*s.* 5*d.*

9239. Do you mean that the Piedmont raw silk is taxed about 1*s.* 5*d.* a pound, and the other 9*d.* before leaving Italy?—Yes; besides which, there is an import duty of one penny a pound on coming into this country, making 1*s.* 6*d.* per pound in the one case, and 10*d.* per pound in the other.

9240. Do you conceive that the average duty on Italian raw silk, before it reaches our shores, amounts to 1*s.* 2*d.* a pound to the English manufacturer?—Precisely so.

9241. Are there any other circumstances which you think operate to increase the price to the English manufacturer?—Yes, there are the charges of the consignee in London, amounting I believe to about six per cent., which, added to the duty of 1*s.* 2*d.* a pound, will raise the price from 12½ to 15 per cent. above the price in Italy.

9242. That is on the presumption that as much raw comes from Piedmont as from other parts of Italy, if less came from that part it would not be so high?—True, but as the Italian has so much better choice of market, it may be said still, that there is as much as from 12½ to 15 per cent. in his favour.

9243. At what do you estimate what you call the choice of market?—I think no manufacturer would reckon it less than 5 per cent.

9244. You have stated the disadvantage of the English manufacturer in respect of the supply of the raw material, does not the French manufacturer suffer in the same way?—By no means; the French themselves produce a very considerable quantity of raw silk, equal by some, it is said, to four-fifths of their consumption (I apprehend it is equal to that, though some state it to be only three-fourths) and the export is rigidly prohibited; they cannot therefore be taxed on more than one-fifth of their consumption, while we are taxed on all ours.

9245. What effect has this prohibition of export, in your opinion?—It must have the effect of frequently depressing, or at least preventing advance in the price of the raw material to the French manufacturer; and it also prevents the prices of silk being equalized between the French and the English manufacturer, to the manifest disadvantage of the latter.

9246. Are you aware whether the silk produced in France is of as good a quality as that which comes to England?—It is said to be, and I believe it is, superior to any which the English manufacturer can procure.

9247. Are there any other reasons than those you have already stated, for supposing that the French have a better market for their raw material than the English?—Yes, there is another reason, which to my mind is a very convincing one; the East India Company's sales of Bengal and China raw silk, are not frequented by the French or other continental manufacturers: the indigo sales are attended by the continental manufacturers, with the exception of the French, who themselves import largely of that article (indigo) direct from the place of growth; this is a proof, I think, that they have at least as good a market, if not a better than we, for their raw material.

9248. You wish the Committee to understand that it is your opinion, that the English manufacturer has not only a comparatively limited market for his raw silk, but

but that it is heavily taxed, and that the quality is inferior to that possessed by the French manufacturer?—Yes, just so.

9249. Have you any other reason for thinking that the English manufacturer requires protection?—Yes; there is a deeply rooted prejudice in favour of foreign silk manufactures; in many fancy articles, the French have had much more experience than we, and their labour and food I believe is generally lower; Paris too, notoriously sets the fashion of female attire, and not in this country only, but in the United States, which is a great market, and elsewhere.

9250. Perhaps you think that on equal terms the Americans would be disposed to take our manufactures, that is, provided the prices were as low as the French?—It would be some time, I think, before they would do so. In this market I think the circumstance of fashion alone would give to the French a very great advantage; if their goods were admissible at a low duty, they would have what is called the cream of every season, that is the early part of it.

9251-1. Is it your opinion that the present duties on silk goods, are such as the manufacturer requires for his fair protection?—It is at all times difficult to fix the exact point of protection, properly so called, that is, to exact such a duty on foreign goods as will not act as a prohibition, and yet be a fair protection to the home manufacturer; I do not think prohibition at all desirable, but the contrary.

9251-2. Why do you not think protection desirable?—My reason is, that it would at once take away that stimulus to exertion which is necessary to success in all undertakings, and thereby prevent ours so soon being able to compete with the continental manufacturers in the Transatlantic markets.

9252. Would you have any objection to a reduction of the duty on foreign manufactured silks?—I do not ask for any additional duty, nor do I think a reduction necessary; it is abundantly proved, that the present laws are not prohibitory with respect to foreign silks, for sufficient find their way, not only to keep alive our energies, but in the opinion of many, to depress them, and furnish grounds for great complaints.

9253. Is it your opinion that if the duties were taken off foreign thrown silk the import would materially increase?—I understand that the Custom House returns, on the average of three years, do not warrant that inference; but I think nevertheless such would inevitably be the case. That it has not yet been so I think may be attributed to the trade having been so long unsettled, (I may say, indeed, ever since the year 1824, since when there have been many fluctuations,) but the certain ultimate consequence of a reduction of the duty must be to induce larger importations.

9254. What, in your opinion, would be the effect on the price of foreign thrown silk if the duty were repealed?—I do not think the price would immediately fall in this market, or at least very little; therefore the repeal of the duty would for some time operate merely as a bounty to the foreign throwster, and of course stimulate him to greater exertions to supply us.

9255. Supposing on the other hand, as appears to have been the case before from the Custom House Returns on an average of three years, no increase of importation were to follow a diminution or total repeal of duty, what effect would that diminution or repeal have on the price?—It appears to me that it would have no effect at all, unless there were a change either in the amount of consumption, or the amount of production of thrown silk in England; prices are always regulated by supply and demand.

9256. What is the import duty on foreign thrown organzine at present?—The duty is nominally 3*s.* 6*d.* per lb.; but virtually, with reference to the English throwster, only 2*s.* 9*d.* or thereabouts.

9257. How is that?—Both raw and thrown silks pay an export duty from Lombardy, but the raw pays double that which is levied on the thrown; the difference, therefore, between the export duties being so much upon the raw, and of course against the English throwster, must be deducted from the organzine import duty.

9258. Will you explain this more fully?—I have shown before that the average duty on raws may be considered 1*s.* 2*d.* per lb.; if from this we deduct 5*d.* for the export duty on organzine, it leaves a difference of 9*d.*, which, deducted from 3*s.* 6*d.*, leaves the duty 2*s.* 9*d.*, which is consequently the duty on foreign thrown organzine.

9259. If the import duty were removed from thrown silk, the drawback on the export of manufactured silk would of course cease; what effect would that have

Mr.
William Harter.

25 June,
1832.

Mr.
William Harter.

25 June,
1832.

on our export trade?—It would instantly give a serious check to our export trade; the drawback has put the export trade in motion, but it has not yet acquired sufficient strength to continue its career without the assistance of that force; the best proof of our not being able to export without the drawback is, that before it was allowed our export was very trifling, but it has since materially increased; there is yet abroad, as well as at home, a great difficulty to combat in the long-existing prejudice in favour of French goods.

9260. Would it not benefit the manufacturer to take the duty off foreign thrown silk?—It does upon a first view of the question, seem that the manufacturer would be benefited by the repeal of the duty on foreign thrown silk; but as I have before said, the repeal would for some time, if not permanently, operate merely as a bounty to the foreign throwster; for he would still be able to get the same price, or nearly so, for his organzine; but supposing for a moment that the price is reduced to the manufacturer by the amount of the duty repealed, what then becomes of the English throwster? To sell his organzine at the same price as the Italian would leave him nothing for throwing, or very little; the consequences are obvious; the English throwster must give up, the Italian would thus get possession of the market, and of course a better price, and then how would the manufacturer be benefited? I would add, that upon the present system, the English and Foreign throwsters keep each other in check, and by their competition keep down the price of organzine to the weaver.

9261. Have you any other reason for desiring to retain the duty on foreign thrown silk?—Yes, there is another very important reason to which I particularly wish to draw the attention of the Committee; it is the fact that organzine is not a raw material, but a partly manufactured article. This fact seems altogether to have been lost sight of, and it is a very important one to keep in view, when considering the principle on which it ought to be admitted into this country. I repeat that organzine is not a raw material, but to a certain, indeed to a considerable extent, a manufactured article. The French term *ouvrée*, designates the thing correctly.

9262. On that account you think it ought to pay a duty?—Exactly so; if one process be protected, the weaving for instance, I do not see why all should not; throwing is as much a process of manufacture as weaving; and if the Italians or French be permitted to throw for us without duty or restriction, I cannot see why they should not also be allowed to dye, to wind, to warp, and even to weave; the only difference between throwing and weaving is, that one is the first process of manufacture and the other the last.

9263. You mean that all labour is entitled to a certain degree of protection?—My main position is, that in every country there is more or less dormant labour, and that the grand desideratum of all commercial enactments is, or should be, to call that labour into action by every means in our power; and to this end all raw materials of manufacture should be not only admitted without duty, but their importation should be studiously encouraged from every possible source; manufactures at the same time should not be too rigidly excluded; a duty should be imposed on them to prevent their importation in sufficient quantities to depress our own; but that duty should not be so high as to render us indifferent to foreign competition.

9264. Do you not think that a duty on thrown silk is a tax on Spitalfields and Coventry for the benefit of Manchester?—I do not so consider it by any means; because in the first place it is not clear that the price of organzine is raised to the consumer by the amount of the duty, and therefore it is not clear that he is taxed to that amount. It is quite certain that in Spitalfields and Coventry they are not the only consumers of foreign thrown silk; a good deal is used in Manchester occasionally, and elsewhere. It is equally certain that in the two former places they use a large proportion of English thrown from Bengal, China, Italian and Turkey silk.

9265. Suppose in Spitalfields and Coventry their consumption is exclusively in foreign thrown silk, and that the price is raised by the amount of duty, is not the duty in that case a tax upon them for the benefit of others?—That is supposing what is not the fact; but admitting for a moment the two first assumptions to be well founded, it does not follow that the third is so, because if their consumption be limited to organzine thrown in Italy, and they do not choose to export their goods, having a better market at home, I do not see how they can be injured, but the contrary, by the goods of other manufacturers being exported. I conceive that if myself and my neighbour are manufacturers of gros de Naples for instance, and I

export

export my goods, my neighbour is equally profited with myself by having the home market thus cleared of so much; this must be the case so long as prices are regulated by supply and demand.

9266. Is not the duty paid only on the silk used in this country?—The duty is not paid on silks used exclusively in this country; a good deal is now exported in the shape of goods; more will be exported if the trade be not interfered with. Government have said they do not wish to derive a revenue from the silk trade; and I do not see how a duty, which has been previously paid by the trade, can be more profitably employed than in giving encouragement in the way of drawback to the export of every branch of that trade; a trade too, which, on so many accounts, it is extremely desirable to maintain and promote.

9267. If goods manufactured exclusively from silk thrown in this country be exported, would not what is called a drawback in that case be really a bounty?—I do not think it can justly be called a bounty, because the trade has previously paid the same amount in duty. I should rather say it is a drawback of that duty allowed on any portion of the trade for the benefit of the whole.

9268. Of course you think the export branch of the trade a very material portion of it?—It is certainly an important feature in the silk trade, and especially if we regard it as an increasing one.

9269. Do you know what was the value of the silk manufactures exported last year?—The value is computed at about 500,000 *l*.

9270. Can you state what number of persons this export trade would afford employment to if the goods were made from silk thrown in this country?—I think I do not overstate the amount at 10,000 individuals for 12 months.

9271. How do you arrive at that conclusion?—Of the total value exported, I reckon that 4-5ths, or 400,000, consisted of manufactures of silk only; the labour on the raw material of which I calculate at 80 per cent., which would produce 180,000 *l*.; the remaining fifth, or 100,000 *l*., I call mixed goods, on which I reckon the labour at 150 per cent.; this will produce 60,000 *l*.; so that the total labour on the exports of the last year will amount to 240,000 *l*. This sum, at 8*s*. per week, will afford employment to 11,537 individuals for 12 months; or, at 9*s*. per week, to 10,255.

9272. If it found employment for so many, of course it would maintain a considerably greater number?—Certainly; inasmuch as this number comprises the heads of many families as well as children.

9273. Do you know the amount of drawback on the exports of silk manufactures in 1831?—Forty-six thousand six hundred and fifty-eight pounds.

9274. The manufacturing of the goods on which the drawback was allowed, would cause an expenditure in labour of 240,000 *l*.?—That is my calculation.

9275. This drawback had been previously paid by the silk trade itself, in the form of duty?—Yes.

9276. You say that the sum of 240,000 *l*. at the average rate of wages of 9*s*. per week, would furnish employment to 10,255 individuals for 12 months, or at 8*s*. per week, will afford employment to 11,537 individuals, and you think if the drawback were withheld, that employment would be withdrawn from the larger portion of the individuals you have named?—I think there cannot be a doubt of that.

9277. Why do you think that?—Because before the drawback was allowed our goods were considered dear by the shippers, and in consequence, during the five years that the drawback was withheld, our exports were very trifling, but increased on the drawback being allowed.

9278. Do you know what was the amount of export of British manufactured silk from 1821 to 1831?—Yes; the official value shows a considerable increase in the amount of silk goods exported immediately on the drawback being allowed.

9279. What was the increase?—It appears that in 1828, the export of manufactures of silk only, amounted to 81,636 *l*.; in 1829, to 141,686 *l*.; (1829 is the year that the drawback was allowed, it was allowed first in July 1829); in 1830, the amount exported was 348,761 *l*., and in 1831 about 400,000 *l*.

9280. So that in the space of only two years and a half after the drawback was allowed, the export of silk goods increased from 81,636 *l*. to about 400,000 *l*.?—Exactly so; that is an increase of very nearly 400 per cent. in that time.

9281. You have stated that as the amount of exports of the manufacture of silk only in 1828 and 1831, what was the total amount of the exports including goods made of silk mixed with other materials?—The total amount of exports of silk only

Mr.
William Harter.

25 June,
1832.

Mr.
William Harter.

25 June,
1832.

and silk mixed with other materials, was, in 1828, 179,053 *l.*, and in 1831, about 500,000 *l.*, being an increase of about 175 per cent.

9282. Is the silk manufacture a healthy employment?—It is particularly so; I cannot conceive any manufacturing employment more healthful, nor do I know any so much so.

9283. What temperature is necessary, does it require great heat?—A moderate heat is best, such as we like in our own houses.

9284. Is that the case in the mills?—It is so.

9285. Is there any article of silk manufacture we are not now able to export?—There is one which is an article of great consumption both here and abroad, namely, the article of sewing silk, but it is exported in very small quantities indeed.

9286. Whence are the American markets supplied?—The American markets are supplied from India and China, and very largely from Italy.

9287. Is the English sewing silk as good as that made elsewhere?—The best English sewing silk is the best in the world, so far as I have seen.

9288. Why then is it not exported?—Because it cannot be sold at near the same prices as that imported from other countries, nor can English sewing silk of the same quality as the foreign, be sold at the same prices.

9289. Is the drawback allowed on the export of sewing silk?—No.

9290. If it were, perhaps sewing silk could be exported?—It certainly could.

9291. Have you any expectation of being able to export sewing silk without the aid of drawback?—I know not what time may produce, but my only present hope is in the expected extinguishment of the East India Company's monopoly.

9292. You say it is exported very largely from Italy, cannot you get the thrown silk from Italy, and manufacture it as cheaply as the Italians?—I am not prepared to say whether we can manufacture it as cheaply or not, but by the time the silk could arrive in England it would stand in to our manufacturer much more than it does to the Italian manufacturer.

9293. How much more?—As I have stated before, from 12 to 15 per cent.

9294. You stated in the early part of your evidence that the effect of the East India Company's monopoly was to tax the price, limit the quantity, and prevent the improvement of the quality of raw silk; is that opinion formed from what you suppose to be the effect of monopolies in general?—That would be quite sufficient, I think, to justify the opinion I have given; but I have facts which I think will satisfy the Committee of the correctness of at least some of my conclusions; it appears that in 1823, the quantity of raw silk imported into England for home consumption from the East Indies, China, St. Helena, and the Cape of Good Hope, was 1,210,252 pounds, the four subsequent years averaged only 1,430,663 pounds, the next and last four years, namely, 1828 to 1831, averaged 1,637,486 pounds, showing an increase very small, in comparison with the increase from other quarters, whereof the trade is not monopolized by a company. The import from Turkey in 1823, was 195,855 pounds, in the four following years it averaged 319,528 pounds, in the four next and last years, 441,319 pounds. The import from other parts in 1823, was only 645,788 pounds, in 1824 to 1827, a space of four years, it averaged no less than 1,158,896 pounds, the four last years, 1,206,272 pounds, thus the average of the last eight years, shows an increase upon 1823, as follows; from the East Indies, China, &c., about 26 per cent. only; from Turkey, 94 per cent., and from other parts 83 per cent., the gross increase from all parts being in eight years, about 51 per cent.

9295. The East India Company do not now import China raw silk?—No; it is now left entirely to the private trade, and has been so ever since about the year 1824.

9296. Has there been any increase in the import since the relinquishment of the import by the Company?—There has been a considerable increase.

9297. Can you state the amount of that increase?—I am not aware of any official Returns, distinguishing the import of China silk from other silk from the East, but I think I have a document which will be quite satisfactory to the Committee; looking at the account of what has been sold at the East India Company's sales, it appears that on an average of five years, say 1821 to 1825, 2,465 bales have been sold; from that period to 1831, a period of six years, the average sales have been 3,413 bales. I will explain to the Committee the documents from which I have made this calculation. After each sale a price current is published by the brokers, in which is shown, not only the quantity of silk put up for sale, but the quantity refused

Mr.
William Harter.

25 June,
1832.

refused and withdrawn, and the quantity actually sold; from these documents, which I conceive are pretty good authority, it appears that there has been the increase which I have named in the quantity of China silk sold at the East India Company's sales since the Company gave up the silk trade to China.

9298. Since the trade has been carried on by private traders, the import of China silk has increased nearly 50 per cent. ?—I think fully 50 per cent. or more, for large parcels of China silk are frequently sold without passing through the Company's sales at all.

9299. It would appear that the increase of 26 per cent. which you say has taken place from the East Indies, China, &c. since 1823, is chiefly the effect of the Company discontinuing to import China raw silk?—It certainly would appear so.

9300. Have you attended the sales this year?—I have.

9301. What is the relative price of the last sale as compared with the preceding?—The prices at this sale are in some cases rather higher, but in some less, there is not five per cent. difference I should conceive.

9302. How much per pound?—Speaking of Bengal silk, as the selling price varies from 10s. to 17s., the variations in the price per pound are not uniform, though the per centage may be so.

9303. Why do you select the year 1823 as the period of comparison?—Because it was the year before the duty was repealed.

9304. Can you give the Committee an account of the quantites sold at the East India sale this year, and the amount of the quantity sold at the East India sale last year?—I have no documents at hand to enable me to do so. I beg to add with respect to China silk imported, I have not had recourse to any Government official document to ascertain the quantity as distinguished from Bengal; I do not know that such a return exists, but I understand from a gentleman now in this room, who is likely to be well informed on the subject, that the increased import of China silk since the Company discontinued that branch of their trade, is not less than 200 to 300 per cent.

9305. Have you made any calculation of the increase of the last eight years since the duty on raw was repealed, compared with the previous eight years before the duty was repealed?—I have made that calculation, and the result is, that the imports from the East Indies, China, &c. have increased only 50 per cent., whilst during the same period, the imports from Turkey have increased 210 per cent.; and from other parts, meaning chiefly Italy, 172 per cent.

9306. Do you consider the comparatively small increase of raw silk, imported from the East, as the effect of the East India Company's monopoly?—I cannot assign any other reason.

9307. Can you state the gross increase of the last eight years, as compared with the previous eight years?—I make it about 95 per cent.

9308. In those calculations, have you taken into account thrown silk and waste?—Neither the one or the other.

9309. Is the quality of East India silk as good as the raw silk we procure from Italy?—No, certainly not.

9310. Do you think there has been any improvement in the quality of East India silk of late years?—If there has been a change in the quality, it certainly has not been for the better; I think I may say that it has deteriorated.

9311. Can you assign any reason for that deterioration, except that you have given, namely, the monopoly of the East India Company?—None whatever.

9312. You stated that the importation of raw silk from all parts, since 1823, has increased about 51 per cent. on the average of the last eight years; have you made an estimate of the increase of the year 1831, as compared with the year 1823, the year before the duty on raw silk was reduced?—I have made that calculation, and the result is, that the increase of the year 1831, as compared with 1823, is something less than 50 per cent.

9313. Does it appear that the consumption of silk on the Continent has increased in the same ratio as that in England, during the same period?—As far as I am informed, the consumption of silk on the Continent has increased in a much greater ratio than that of England; for instance, in Lyons, as has been lately given in evidence before the Committee, the number of looms in 1825 was about 20,000, now they are 35,000, being an increase in only six years of about 75 per cent., whereas our consumption has increased only 50 per cent. in eight years, I understand that at Elberfeld, the silk manufactures have increased fully one-third

Mr.
William Harter.

25 June,
1832.

since the beginning of 1830. At Zurich I have no actual account; but it is stated that the increase has been most extraordinary.

9314. Are there any duties attaching to the silk trade, which you think ought to be removed?—Yes; there are some to which probably the Committee may not attach much importance, but they make a part of the whole; I should say the penny per lb. import duty upon the raw material, though it is a small duty, yet with a house of only moderate extent, would amount to from 150*l.* to 200*l.* a year; there is also a duty of half per cent. levied on the export of silk manufactures; I think both those duties should be taken off.

9315. Is the silk trade carried on to a considerable extent in Manchester?—It is, to a very considerable extent.

9316. Have you any idea of the quantity of silk consumed there annually?—It is very difficult to ascertain the exact amount; but I have taken some pains, and come to the conclusion, that it is between seven and eight hundred thousand pounds weight per annum.

9317. What proportion is that to the gross annual importation?—It is about one-fifth.

9318. Will you state the proportion of Bengal, China, and Italian silk, composing that fifth?—I could not state that, without applying to the manufacturers for an account of the quantity of each which they use; I have been told of one house consuming not less than 250 lbs. per week of Italian thrown organzine, that is about 50 bales per annum.

9319. How many silk mills are there in Manchester?—There are twelve in Manchester and the immediate neighbourhood; besides which there are three belonging to Manchester houses elsewhere; namely, one at Tring in Hertfordshire, one at Blackburn in Lancashire, and one at Macclesfield, belonging to a Manchester house, making 15 belonging to Manchester houses.

9320. Is not the mill at Tring shut up?—I have been told since I came to town, that it has been shut up till very lately; but is now opened again.

9321. Can you give any reason why a Manchester house should build a mill elsewhere than in the neighbourhood?—I cannot.

9322. Do you know how many mills have been erected since 1823?—I believe there have been erected and converted, seven or eight.

9323. When you speak of mills, do you mean that they are employed entirely in throwing, or are employed in the manufacture of silk?—I do not know any employed exclusively in throwing; they are chiefly employed in throwing and manufacturing; the manufactories are generally partly carried on in the buildings, or attached to them.

9324. State the number of those exclusively employed in throwing?—I cannot at this moment recollect one.

9325. Are not those mills at Manchester more matter of convenience than of profit?—The profits I cannot judge of, for I am not yet a throwster; I have built a mill, and am putting machinery into it; I do not expect to derive much benefit from throwing; I have never known a throwster get rich; I have built my mill more as a convenience for my manufactory, because in brisk times we often sustain great inconvenience from the want of thrown silk; we cannot always obtain the particular description which may be suited to our trade; different manufacturers have different modes of applying the material.

9326. Have you felt a difficulty in the getting silk thrown?—Frequently.

9327. Was that the case in 1830?—Yes, it was.

9328. Did you pay a much higher price at that time for thrown silk?—I paid a much higher price than I do now.

9329. How much more?—I think in some cases there might have been a difference of 50 per cent. more than now.

9330. In some instances, were not the manufacturers obliged to purchase silk from the throwsters not being able to get their own silk thrown?—That must have been the case.

9331. Therefore the throwing trade in 1830 was particularly good?—I conceive it was a good trade in 1830, so far as I can judge, not being a throwster.

9332. Can you distinguish those who have built for profit, and those who have built for convenience?—I cannot say any thing about the profit or loss, not being a throwster; but I judge from the result. I have known the trade ever since I was a boy, but never knew a mere throwster become rich; if a manufacturer has to wait for his organzines or trams, he will sustain material inconvenience; though the

the throwing mills may not be worked at a profit, a manufacturer may have orders or goods which may yield a profit, and he had better throw the silk without profit, than be prevented from making his goods.

9333. If he were to wait, he might sustain a loss?—Certainly.

9334. If it is an inconvenience to have to go to places in England to get silk, that inconvenience would be still greater if you had to go to Italy?—Certainly.

9335. How long did the difficulty of obtaining thrown silk last, in 1830?—I cannot state at this moment from memory.

9336. What had the state of things been for two years prior to 1830?—It had been very variable, but not good.

9337. There was a sudden glut of work following temporary pressure, and silk was not to be obtained?—There was a sudden demand for work, which the throwster was unable to supply.

9338. Not having been previously at work?—It might have been the case in some instances, that he was not previously at work; I believe there were several mills set to work, which had been previously closed.

9339. Is it the case now that you cannot get silk thrown?—No, we can get it thrown now.

9340. Does that arise from there having been new mills erected since 1830?—There have been some built.

9341. Several mills have been shut up in consequence of the badness of the trade, previous to 1830?—Yes.

9342. It was at that critical time, 1830, you felt a pressure; that is, a difficulty in getting your silk thrown?—I have at various times had difficulty in getting my silk thrown.

9343. You, as a manufacturer, wanted a particular sort of thrown silk?—Yes.

9344. Therefore it may have reference to a particular kind of silk more than to thrown silk generally?—Certainly, to both occasionally.

9345. Did not other manufacturers feel the same inconvenience you did?—That is a question I cannot answer; I suppose they may have done so.

9346. Has there not been a great deal of new machinery set at work in throwing, since that time?—I am not aware of any very great increase; my own mill is one; there is another building, I believe, to supply the place of an old one.

9347. Has not Mr. Royle increased his machinery since 1830?—I do not know; I do not think there has been any enlargement of the building since that period.

9348. At former periods you state you have experienced the same difficulty in obtaining thrown silk?—I have.

9349. Has not the trade been subject to these periods of excitement and depression, every three years, during your experience?—They have occurred frequently; I cannot state at what precise periods.

9350. Since 1829, it has been the principal trade at Manchester, has it not, and has prospered more there?—No, not the principal trade, but it may have prospered more at Manchester than elsewhere.

9351. Have there been many failures of manufacturers engaged in the silk trade at Manchester?—I think not many.

9352. Has there not been a greatly increased amount of capital employed in the trade since 1830?—There may be some, but I am not prepared to answer that question fully.

9353. Has not the trade generally increased?—I am not prepared to say whether it has or not since 1830.

9354. It has since 1824?—Yes.

9355. You buy your silk for cash or short credit, and sell entirely for cash or short credit, do you not?—That is my system.

9356. Must not a great additional amount of capital have been employed in the trade since 1824?—Certainly.

9357. You mentioned Mr. Royle's mill, do you know whether it is at full work?—I do not.

9358. Do you know Mr. Benjamin Williams's mill at Broughton?—Yes.

9359. Do you know that that has lately begun to work at short hours?—That may be the case, but I am not acquainted with it.

9360. Do you not think that the most effectual way of getting good thrown silk, is to secure a good and cheap raw silk?—I think the way to get a permanent supply of good thrown silk, is to secure a good supply of good raw silk.

9361. You have stated that you think the penny per lb. import duty on raw silk

Mr.
William Harter.

25 June,
1832.

Mr.
William Harter.

25 June,
1832.

ought to be taken off; are the Committee to understand that you do not think it will be an advantage to have the duty taken off thrown silk?—Yes, because if the duty were repealed, we might become more dependent on the foreign throwster for a supply of organzine, inasmuch as we cannot throw, from the best information I can obtain, on any thing like the same terms as the Italian.

9362. Your opinion is founded on the idea that you pay more for throwing silk in England than they do in Italy?—We cannot throw silk in England so cheaply as they do in Italy, so far as I am informed.

9363. Have you been in the habit of having silk thrown for your manufacture?—Yes.

9364. Have you been in the habit of buying it raw to have it thrown?—Yes.

9365. What have you paid at different periods since 1823?—I am not prepared to answer that question.

9366. You state that in 1830 and 1831 you paid 50 per cent. more than you paid formerly; what did you pay in that year per lb.?—The prices of throwing vary of course according to the size and description of the silk; the price of throwing now may be said to vary from 1 s. 6 d. a lb. to 4 s., but 1 s. 6 d. is not the price for organzine; it is what is commonly called coarse tram or threads, not Italian tram. I think I paid for the same (I am speaking from memory now) in 1830, 2 s. 3 d.

9367. Was that Bengal and China?—Bengal alone.

9368. What did you pay for Italian?—I can scarcely charge my memory. I should think, for Italian organzine, the price in 1830 was from 5 s. to 6 s.; I cannot speak more closely to the price.

9369. You were understood to say that 1 s. 6 d. to 4 s. 6 d. were the extremes?—That was previous to 1830.

9370. What kind of silk did you pay 4 s. for?—That would be Italian, certainly; it might be a little more or a little less; I cannot speak precisely to the prices.

9371. You think in 1830 there was 50 per cent. difference?—Yes, I believe 50 per cent. in Bengals; that I perfectly recollect.

9372. Have you been in the habit of employing one mill or several?—I have employed several.

9373. Are you not able to state what were the prices at which you gave a preference of one over others?—I cannot go back so far, and state the prices more nearly.

9374. What have you been paying since January?—About the same prices I paid before 1830, 1 s. 6 d. where I paid 1 s. 6 d. before, and 4 s. where I paid 4 s. before.

9375. You have been a manufacturer for some years; what kind of goods have you turned out?—I have manufactured chiefly what are called narrow goods, a species of ribbons, not technically called ribbons, but galloons and doubles.

9376. Have you manufactured no other goods than galloons and doubles?—Yes, I have made silk handkerchiefs and sewing silk.

9377. In what goods have you used Italian thrown?—I have used Italian thrown only in the finest narrow goods and handkerchiefs.

9378. What are your finest goods?—They are known under the same denomination as those I have already mentioned, but are of a finer texture, made of a finer material.

9379. Do they make any of those goods in Spitalfields?—They do.

9380. Do they make any of them in Coventry?—None that I have heard of; I do not know of any.

9381. You come principally in competition with Spitalfields?—Yes.

9382. Have you increased in the amount of your manufacture each year?—It has increased; I cannot state the exact ratio of increase.

9383. Have you attended to the machinery you employ, as compared with the machinery in Spitalfields; is it nearly the same?—I believe there is little or no difference; in Spitalfields they are almost entirely discontinuing the manufacture of narrow goods, and are employing looms in the country, some in Devonshire, some in Reading and other parts.

9384. Are you able to state the wages you pay as compared with Spitalfields?—I do not know what they pay in Spitalfields; I can state generally what the earnings of my weavers are.

9385. Can

Mr.
William Harter.

25 June,
1832.

9385. Can you state per piece or per yard?—There is a great variety of classes; there is one class for which we pay 11 *d.* per gross.

9386. What is that?—Narrow galloons; I have not the list of the prices, I must do it from memory.

9387. Have you any rate or table of wages fixed at Manchester?—There is a rate fixed among ourselves, but not by an association of masters; if one master lowers the price, others are inclined to follow him of course.

9388. Is there any price fixed by the workmen; do they agree and print any table?—They do, but it is not always submitted to; there have been several contests with the description of weavers who work for me. I had a contest with my weavers some time ago.

9389. What was the result of that contest?—The result was, that after being out for between three and four months they came to terms; it was in the spring of the year, the looms were full of goods, the weavers thought they could do as they pleased under such circumstances, and they turned out for considerably higher prices.

9390. Are you aware what at that time were the prices for the same kind of goods in London?—No, I am not.

9391. There were none of the same kind of goods made in Coventry?—I believe not.

9392. Since that dispute, have the workmen worked at such prices as you fixed?—They have.

9393. Will you state the price of wages of some other description of goods?—I cannot go through the whole not having documents with me; and these are matters not always retained in the memory. There are others for which we pay 2*s.* 1*d.*, those are a kind of broad galloons.

9394. Do you pay the same prices as are paid in other towns?—So far as I believe our prices are very similar to those paid for the same kind of goods elsewhere; and we come as nearly as we can to the prices paid by other towns if they be not higher than our own.

9395. Are those goods made in Spitalfields?—I believe so, but not to a great extent, and also at Derby.

9396. Do you employ men, women, or children?—Both men and women.

9397. What earnings do they make at those wages?—It depends of course upon the ability and industry of the operative. I may say, speaking of men and women, from 12*s.* to 23*s.* per week.

9398. How many hours do you reckon?—Twelve hours a day, except Saturday, when they do not work so long.

9399. Do you deduct any thing for the use of the loom, or are those the prices net to the weaver?—They are the prices paid to the weaver, we supplying the machinery.

9400. Are those looms power looms?—Yes, they are.

9401. Have you none but power looms?—I have a few, but not many.

9402. How long is it since you established power looms?—The first about two years and a half ago.

9403. Are you adding to them?—Yes.

9404. For what description of goods?—The same description of goods.

9405. You do not mean to make fancy gauze ribbons?—I have no present intention.

9406. What is the difference of the earnings of the weavers in winter?—Not much; of course the weaver has better light in summer, and will in consequence make more work.

9407. Are the weavers constantly employed?—I think in our trade they are.

9408. Do you find that when your trade has increased that you get any hands from the cotton trade?—I did when my hands turned out.

9409. Do you find that when your trade is slack they return to the cotton trade?—I endeavour to keep them on all the year round rather than lose good hands.

9410. How many hands do you employ, men and women?—Am I obliged to answer that question?

9411. How many mills have you got out of the twelve which have been stated to exist?—I have one.

9412. Can you tell how many spindles there are in the mills?—Mine has not at present any machinery; I cannot state the gross number of spindles in Manchester.

Mr.
William Harter.

25 June,
1832.

9413. Do you suppose the wages of the weavers in Manchester generally are of the average of yours?—In my trade they are; but I believe in the broad trade they must be much less.

9414. Why are they less in the broad trade?—It is more easy to state a fact than to give a reason for it.

9415. Do not the same persons work in broad and narrow?—Very rarely.

9416. You have done nothing in the broad way?—I do something in it now, but very little.

9417. Do you find that the earnings are less than those you employ in the narrow trade?—They certainly are.

9418. Is there more art required in the narrow than the broad?—I cannot say that there is.

9419. Is there more competition?—There cannot be more competition than there is in my own trade, except amongst the weavers themselves, because the broad are so much larger a body than the narrow weavers. The narrow weavers combine, and will often remain out a considerable time rather than submit to any infraction of their regulations.

9420. You conceive that may have an influence in keeping up the wages?—No, I am not prepared to say that; I mentioned the thing incidentally; on the contrary I beg to make one remark on the subject of turns out. I have seen a great many, and have invariably found that the result has been the lowering of the wages of the operative; that was the result in my own case.

9421. Have there been any great improvements of late years in the machinery?—We fancy that our machinery is as good or better than that elsewhere. The throwsters of other places deny it; whether they are right or we are right I cannot say, not being yet a throwster.

9422. Has there been any improvement in the weaving?—I am not aware of any peculiar machinery except in the narrow trade.

9423. You stated that a very considerable proportion of the silk worked up in Manchester is Italian; is the Italian thrown employed to make similar goods to those made up in Spitalfields?—Yes, they make similar goods; they make gros de Naples and handkerchiefs; I cannot say much about the qualities, not being a broad manufacturer.

9424. When you speak of the handkerchiefs, do you mean bandanna handkerchiefs?—And black handkerchiefs.

9425. There is no other house using a considerable quantity of foreign thrown silk but one, is there?—I cannot say.

9426. Do you export any of the goods you make?—I do.

9427. Do you obtain the bounty on them?—I do.

9428. You do not use any of the silk that pays the duty?—I do, a small proportion.

9429. Did not the export of goods begin after the duty was taken off; was there any before?—Speaking of my own trade, there was none before.

9430. At what time did you begin to export goods?—I began to export immediately on the drawback being allowed and not before, of particular goods of my manufactory.

9431. In what year did you begin to export?—In the year 1829; in the interval between the present drawback being allowed, and the large drawback which has been referred to, there was no export at all in certain goods of my manufacture, but under the old system there was.

9432. What do you mean by the old system?—By the old system, I mean when the duty of 4s. a lb. was paid on the Bengal silk, and 5s. 6d. on Italian, and 5s. 6d. on Turkey; at that time there was a considerable drawback allowed, I think about 12s. a lb.

9433. What is the drawback now?—Three shillings and sixpence.

9434. If you deduct from the 12s., being the amount of the drawback, the 5s. 6d. a pound, the amount of the import duty, that leaves 6s. 6d., whereas there is now only 3s. 6d., how is it you did not export goods, when the advantages were greater in exporting than they are now?—I have said that I did export under the old system; as to the exact rate of drawback, I beg to correct my answer, so far as to say I was speaking from memory in saying that it was 12s. per pound; I believe that would refer to broad silks alone, but at that time the duty on thrown silks was higher than now.

9435. Are not the principal goods exported now, by you and others, made from the

Mr.
William Harter.

25 June,
1832.

the coarser silks, on which there is no duty paid at all?—I cannot say what others may do, mine makes but a very small proportion of the trade; I do not use as much foreign thrown as I do of English thrown, that I admit.

9436. Do you use one-tenth of Italian thrown, as compared with English thrown?—I should think not.

9437. Then you take a bounty on the Bengal silk which pays no duty; you receive the bounty on that kind of silk?—It may be put in that way.

9438. Do you still retain the opinion you have given, that 3*s.* 6*d.* a pound duty on organzine silk is no impediment to the manufacturer of fine goods, who works up that silk?—Yes, I am still of that opinion.

9439. Do you mean to say, that if the manufacturer gets his silk for 20*s.* instead of 23*s.* 6*d.*, he cannot make his goods cheaper?—No, I say he can make them cheaper.

9440. You think, that taking off the duty, would not lower the price?—Yes, or very little.

9441. Is it your opinion that the price of Italian thrown silk regulates the price of the English thrown here?—I think they regulate each other.

9442. If one was lower, you think the other would be lower too?—There is a point beyond which we cannot go; I have stated that if the price of organzine thrown silk was reduced to the manufacturer by the amount of duty repealed, the English throwster would of course be obliged to sell at the same price, or not to sell at all; and I say he cannot sell at the same price.

9443. To what countries do you export your goods?—They go to different markets.

9444. Do they go to the Continent or to America?—I export them wherever I can; across the Atlantic, or elsewhere.

9445. Do they come in competition with any French goods, or do the French make no goods similar to ours?—They come into competition with French and German goods.

9446. Made from the same silk?—I cannot say what they make their goods from.

9447. Do you export to a country where there is no competition?—I export to a country where there is great competition, but to which I could not export till the drawback was allowed.

9448. Do you not think that our manufacturers of broad goods, if they could manufacture 3*s.* cheaper, could export as well as you?—Yes, if they could manufacture 3*s.* cheaper. I have the drawback, or I could not export.

9449. You do not mean to say that the manufacturer of broad goods making at 3*s.* a pound less, would be able to export against France and Germany?—I had rather not give an opinion more decidedly upon broad goods, not calling myself a manufacturer of such goods.

9450. Do you know by experience, whether you should be able to do so yourself?—We do know that broad goods are exported, and that the export is increasing.

9451. What description of broad goods are exported?—I can speak from what I hear, of our gros de Naples.

9452. Of the best sorts, or otherwise?—I cannot say.

9453. Are they not of inferior kinds?—I conceive that generally for the foreign markets they will be the lower priced goods.

9454. Are they not made from Bengal silk, both warp and shute?—No, I think not; I think they are made of Italian silk, China silk and Bengal.

9455. Have you ever exported any of those you have manufactured?—Yes.

9456. Of what silk were they made?—Both of Italian and Bengal silk.

9457. Did they go to those markets to which you sent those narrow goods?—Yes.

9458. Is it not the case, that those broad goods which are exported, are sent frequently when there is a great depression, and at a sacrifice?—A good deal will depend upon the state of the American markets; if they are very bare of goods, they will of course give a better price for them than when their market is in a different state.

9459. Are the broad goods you manufacture all plain?—Yes, they are.

9460. You are understood to have stated, that a reduction of duty would not lower the price, has that been the case since the duty was lowered from 5*s.* to its present state; if 3*s.* 6*d.* was taken off what would keep it up?—If it were reduced

Mr.
William Harter.

25 June,
1832.

by the amount of the duty, the English throwster could not sell to a profit, and therefore he must give up the trade.

9461. The question relates to the manufacturer who works up the Italian silk; are you deliberately of opinion, that if this 3*s.* 6*d.* was taken off Italian thrown silk, the price would not be reduced?—I am deliberately of opinion, that if 3*s.* 6*d.* was taken off Italian thrown silk, the price would be very little reduced.

9462. What would keep it up?—It would be kept up, I think, in this way; the English throwster could not sell his silk at the same price as the Italian, and he must give up throwing.

9463. Are the Committee to understand that the price of thrown silk is regulated by what the English throwster can sell it for?—It is regulated by the supply and the demand; I mean to say, that if he does not sell to a profit, he must give up the trade; but he would not for some time come down in his price so low as not to leave him a profit; I shall be shortly both a throwster and a manufacturer, if I thought we should have foreign throws considerably lower by the effect of the reduction of duty, I should not think of throwing my own silk, because I believe I could not throw at the same price as the foreign throwster.

9464. You were understood to say, that if the duty was taken off Italian thrown, the price of thrown would not fall, but the English throwster would keep it up; if so, does not the English throwster regulate the price?—I say that the English and Foreign throwster, by their competition, keep down the price of organzine to the weaver.

9465. You were understood to say, that if the duty was taken off, the price of Italian thrown would not decrease?—I say it would not fall immediately.

9466. What then is that which keeps it up?—The present duty may keep it up.

9467. Supposing the present duty of 3*s.* 6*d.* taken off, are you still of the opinion you gave, that the price of thrown silk would not come down, or would come down very little?—I think it would not come down much, and I explain it in this way; if that measure were put in force, the English throwster would see that he had a very poor chance in this market, and he would restrict his operations; I conceive we should have a very great additional supply of foreign thrown organzine, and the English throwster would see it come in at a price at which he could not afford to sell.

9468. You say that the English manufacturer has a disadvantage in paying 1*s.* 2*d.* in the pound more than the French, how do you make that out?—I think the answer was, that Italian raw silk costs so much more in this country than in Italy.

9469. The question referred to the advantage of the French manufacturer over the English; how is it that we in London pay more for silk than the French do at Lyons?—I admit that the French pay a duty on a small portion of their silk, say one-fourth or one-fifth, but we are taxed upon all ours.

9470. Are you able to say whether the duty paid on the importation of silk into France does not raise the price of all the silk consumed in France?—I am not able to answer that question.

9471. Are you aware of the quality of the bulk of silk used in France, as compared with the Italian imported?—It is said that they have a quality very superior to any produced in Italy or elsewhere.

9472. That is understood to be very small in quantity?—Yes; but taking into account its extreme fineness, the quantity cannot be called small.

9473. The question refers to the bulk of that used?—I am led to believe it is better generally, but I have no knowledge of the fact.

9474. You cannot state how the price of silk should be lower in France than in England, except that you believe that the small quantity imported from Italy pays a duty, you do not think that affects the rest?—I think the French have a better market at home, or why do not they go to the East Indies for their silk, or to China, or come to England for it, to our East India sales.

9475. You state, that we in England receive our Italian silk, paying 1*s.* 2*d.* more than the French manufacturers do, will you explain that?—I believe that we pay 1*s.* 2*d.* here more than the price in Italy.

9476. The importation of Italian silk into France is subject, as far as Italy is concerned, to the same duty as it is coming into this country, the only increase we have here is from the increase of charge?—I spoke generally, when I said that they had their silk cheaper than we had.

9477. You

Mr.
William Harter.

25 June,
1832.

9477. You have been asked why you thought that a reduction of duty on the thrown silk would not be followed by a diminution in the price of raw silk, will not every 6*d.* per pound reduction of duty on thrown, add to the price of raw, and thus keep up the price of raw?—It is difficult to say what may be the precise effect of a larger importation of thrown upon the import of raws, possibly it may have the effect the question supposes; I can answer the question only in this general way, if the Italians found a better market here for their thrown silk, of course they would throw more and send us less raw.

9478. What is your opinion with regard to the price of thrown, will not the price they can get for thrown depend upon the price they can get for their silk in other parts of the world?—Certainly, in some measure.

9479. Then must not the London market be on a par with the other markets?—Notwithstanding the organzine is subject to a duty of 3*s.* 6*d.* a pound, it comes in in considerable quantities, and I believe it does not pay that duty in other countries, therefore it comes here in spite of the duty.

9480. If it does not pay duty in other countries, why does not it go to those other countries?—That is a difficulty I cannot solve.

9481. Every diminution of duty will raise the price of the raw in Italy, will it not?—That appears not unlikely to be the effect.

9482. If you did not export your goods, would they not add to the glut at home, and so far does not the drawback relieve the manufacturer for home market?—Undoubtedly.

9483. Did not your predecessors largely export goods before 1824, when there was a drawback or bounty on the export?—I exported myself previous to 1824.

9484. Your predecessors did before you?—I believe they did.

9485. In 1824, when this was discontinued, did not that export trade cease, or nearly so?—It did, certainly.

9486. A great deal has been said about the a-la-bar loom; is that modern, or did you see it at work 20 years ago?—It has been at work 20 years to my knowledge.

9487. Do you not think if the a-la-bar loom was used at Coventry, they would be able to compete with France?—I cannot say.

9488. Have you applied the a-la-bar looms to the fancy ribbons?—I do not make them.

9489. Were not the weavers of broad goods earning very low wages, and were they not in great distress during last winter?—The wages of broad goods weavers are certainly not high, so far as I am acquainted with them, and they have a tendency to sink lower and lower; I believe they were very much distressed last winter.

9490. Do you think forty looms is the extent there has ever been in Spitalfields in galloons?—I think there were many more 10 years ago, but I cannot answer that question with certainty, for I am not informed.

9491. You are quite certain that the manufacture of galloons is carried on in Spitalfields?—It is carried on by Spitalfields' houses; I believe the manufacture is carried on by them now principally in other places, Reading, Devonshire, and so on; there are still some looms in Spitalfields, but I do not know how many.

9492. Do you know when the manufacture was carried on in Spitalfields to any extent?—No, I do not.

9493. You stated 4*s.* as the price for the throwing Italian silk, you probably spoke of 26 to 30 deniers; do you think that 4*s.* would be sufficient for throwing 18 to 22 deniers fine organzine?—I have stated before, that I am not a throwster, and therefore cannot answer those questions so accurately, but I should think 4*s.* would be an exceedingly low price for that size of organzine.

9494. Have you had any from 18 to 22 thrown?—I do not know that I have, but I know pretty well what the thing is.

9495. Are there any 18 to 22 used at Manchester?—Eighteen is a very fine size; I should almost doubt it.

9496. You do not use any yourself?—No.

9497. What is the size you use?—All sizes, from 22 to upwards of 100.

9498. What is the price of throwing your ordinary size?—The trade has been so depressed among the throwsters latterly, that I could have it thrown almost at my own price.

9499. You say that your goods are chiefly manufactured by power-looms, and that you have introduced them about two years and a half, what proportion of

Mr.
William Harter.

25 June,
1832.

persons are thrown out of work in your manufactory by working power-looms instead of hand-looms?—I do not think one; I employ as many hands, but they produce more goods.

9500. What increase of goods are you enabled to make by power-looms with the same number of hands?—It will not make a very great difference if a weaver is determined to work, though as it is much easier to weave by power, much less laborious than by hand, generally they will do more work by power than by hand; a man cannot have his mind and body always on the stretch.

9501. Do you pay the same wages to the man who superintends a power-loom as the man who superintends a hand-loom?—No, not so high wages.

9502. Does it require as good a workman?—Yes, very nearly.

9503. As experienced a man?—Yes, or very nearly.

9504. Do you employ the power-loom for your broad goods?—I do not.

9505. Have you heard of any case?—I have heard of one or two cases.

9506. Have you known it applied to the Jacquard loom?—No, I have not, nor do I think it is.

9507. What is the increase of throwing in Manchester and its neighbourhood?—Of the 12 I have named, one mill is not in work as far as relates to throwing; I cannot state the precise increase, I can state when the mills were erected, or pretty nearly so.

9508. What quantity of silk do you suppose the Manchester mills to turn off?—It has been stated to me that they may turn off about 350,000 lbs. per annum, that I think is pretty near the mark.

9509. How many horses' power is employed in all the silk mills at Manchester?—At almost all those mills they have more power than they use, what they call spare power; I suppose they could apply 300 horse power, but I should doubt whether more than half that is actually employed.

9510. Suppose the situation of 100 of your weavers making galloons and doubles under the old system, and making them in your mill, what would be the increase of quantity of work made in a week?—They would produce, I dare say, about one-fourth more.

9511. Not more than that?—Not more than that on the average, I should think.

9512. What proportion of the 350,000 turned out by mills at Manchester, is Italian?—I am not able to answer that.

9513. Do you think the proportion is large or small?—I think a large proportion.

9514. Have they not turned out a much larger quantity of silk when there was an increased demand?—I think that very likely, by working longer hours; I believe what I have stated is about the quantity they have thrown latterly. I do not know whether they have been in full work or not.

9515. You spoke of 350,000 lbs. thrown at Manchester, that is only one-tenth of the whole 3,500,000 lbs. consumed in this country. Manchester therefore has not absorbed the throwing trade of England?—It does appear to be about one-tenth of the whole quantity, but in the 3,500,000 the throws are included.

Mr. Henry Tootal, called in; and Examined.

Mr.
Henry Tootal.

9516. YOU are a silk manufacturer and throwster at Manchester, are you not?—I am; but I beg to observe that, not expecting to be called upon to-day, I have not brought with me some memorandums which I am anxious to have; however, if the Committee wish it I will go on.

9517. How long have you been engaged in those trades?—I commenced manufacturing in 1816.

9518. Have you a recollection of the general state of the trade in Manchester at that time?—The trade at that time was very limited, both in point of variety and extent.

9519. Do you recollect what description of goods were made at that time?—Silk handkerchiefs principally, as well as goods mixed with other materials.

9520. Were there any gros de Naples manufactured at that time?—None that I ever heard of.

9521. Were there any sarsnets?—Not that I am aware of.

9522. When were the first gros de Naples made at Manchester?—To the best of my recollection it might be in 1822; but it was not until 1824 that any quantity was produced.

9523. Do

Mr.
Henry Tootal.

25 June,
1832.

9523. Do you know what number of silk, and silk and cotton looms, were at work in Manchester in 1823?—On referring to a memorandum made some years ago, I find the looms employed in 1823 in weaving entire silk goods were about 2,500; and in making silk, mixed with other materials, about 3,000.

9524. What description of goods were made at this time?—Principally silk handkerchiefs and figured sarsnets; some gros de Naples were also made.

9525. Those were articles composed of silk only?—Yes; and in mixed goods, poplins, an article composed of silk and worsted, as well as silk and cotton goods, both for shawls and garments, &c.

9526. What do you mean by poplins?—An article made of silk and worsted, the manufacture of which had previously been principally confined to Dublin.

9527. Can you state the number of looms in 1824?—I cannot state the precise number, but it was very much increased over 1823.

9528. To what do you attribute this great increase?—To the reduction of duty on the raw material.

9529. Can you state the number of looms employed in 1828?—I estimate the number of looms in 1828 at about 8,000 for weaving goods composed entirely of silk, and of mixed goods about 4,000.

9530. Do you recollect the description of goods principally made at that time?—The principal article manufactured in the trade at that time was plain gros de Naples and a few figured ones also.

9531. Were not there many plain sarsnets making in Manchester from 1816 to 1823?—None that I am aware of; but for many previous years silk handkerchiefs had been made there.

9532. Was the Jacquard machine in use in 1828?—Partially, a few were in use; I should think the number did not exceed thirty, or thereabout.

9533. Can you state the number of looms in work at the present time?—I believe the number of looms now employed to be about 14,000; that includes mixed as well as entire silk goods.

9534. Can you state the proportions?—From eight to nine thousand entirely silk, and from five to six of mixed goods.

9535. What is the description of goods principally made now?—Principally plain gros de Naples, some figured also.

9536. Is the Jacquard machine much used now in Manchester?—The Jacquard is now getting into pretty general use.

9537. For the manufacture of silk goods or mixed?—Both.

9538. How many do you suppose are used in the manufacture of silk?—I should think not many; probably not more than sixty.

9539. The Jacquard loom is almost entirely used for figured goods, is it not?—Entirely so.

9540. What is the total number of Jacquard looms now employed?—I should say from 6 to 700 employed in Manchester and the neighbourhood.

9541. In what period has that increase taken place?—Since September last year two-thirds of them at least, or probably more than that.

9542. Are you of opinion that sixty are employed on goods all silk?—In giving that number, I must state that it is wholly from memory; I have no memorandum, that is the impression on my mind.

9543. Are the remaining number of 550, or whatever it may be, employed in the manufacture of goods, of which silk is a component part?—Certainly, entirely so.

9544. You say that increase has taken place chiefly since September 1831?—Yes.

9545. That goes to show a great increase of a particular description of articles in the trade?—Yes; the figured silks, and silk and cotton goods; a pattern of the latter I beg leave to show to the Committee.

9546. Taking a piece of that article, what drawback on export would it be entitled to; and supposing it to be made from foreign thrown silk, what duty on import would the silk in that piece pay?—The piece, of 42 yards, would weigh from three to three and a half lbs.; the drawback at 1 s. 2 d. per lb. would be from 3 s. 6 d. to 4 s., and the duty levied on the silk imported (being one lb. eight ounces, at 3 s. 6 d. duty) would be 5 s. 3 d.

9547. Are not those goods an invention of your own house?—I believe they are.

678.

4 H 4

9548. You

Mr.
Henry Tootal.

25 June,
1832.

9548. You do not expect them to interfere with the rich manufactured silks coming from France, do you?—They are calculated for the higher classes.

9549. What is the price per yard?—The lowest price we have ever sold at is 2s.

9550. What is the price of the richest silk of France three double?—I can only say what I suppose it to be, probably 4s. 6d. per yard.

9551. Do you mean the selling or cost price?—I mean the selling price.

9552. What do you suppose to be the cost of the Jacquard machines when ready for work?—The cost will vary considerably, according to the extent of the pattern, from 15l. to 30l. each.

9553. Are there any very rich figured silk manufacturers at Manchester?—There are.

9554. What number of looms do you suppose are employed in that manufacture?—I do not know.

9555. Is there any considerable number employed?—I should think not, though we employ some ourselves; and here, with permission of the Committee, I would beg leave to present for their inspection a pattern of rich figured gros de Naples made by the Jacquard machine, and woven at Manchester, a dress of which the Queen has condescended to accept and wear; and I would also take this opportunity of stating, that though a good deal has been said about Manchester making nothing but inferior goods, yet if rich goods were wanted, her capability of making them is undoubted, as this pattern will prove.

9556. Will you state the rate of wages paid for weaving plain gros de Naples in 1823, 1828, and at the present time?—In the year 1823, for a twenty hundred three single gros de Naples, the price was 9d.; in 1828, 6d.; and now it is 4½d. the same article.

9557. Equally well manufactured in each case?—Certainly.

9558. By the same machinery?—Simply the loom.

9559. No application of power?—None.

9560. How many yards do you conceive a fair workman would weave in a day?—An active workman will weave something more than six yards per day, between six and seven yards per day, which at 4½d. will be from 13s. to 14s. a week.

9561. Do you supply the loom?—No; the weaver finds his own loom, we supply him with the harness and reed; out of that he will have to pay 1s. 6d. a week for winding, and it will occupy him, I calculate, half a day in the week to go to and from the warehouse for his work and to twist in his warp; that will require to deduct 1s. 6d. a week and the loss of half a day's labour, bringing down his weekly earning so much; a child of twelve years of age will wind for three looms.

9562. What number of hours would he work for that?—I consider that he would have to work from twelve to fourteen hours.

9563. Exclusive of stoppages for meals, or inclusive?—Inclusive.

9564. Is there any deduction for hire of the loom?—I am supposing the loom as belonging to the weaver, so that he has that outlay himself.

9565. Do you know at what the hire of a loom is reckoned?—I do not.

9566. What do you consider the loom standing to be worth; do you think he pays 5l. a year more than he would merely for his own accommodation?—I cannot say; I think not so much.

9567. Do you make a deduction for candles?—I do not.

9568. Do the weavers earn as much less now as the fall in the price a yard would indicate?—I think not.

9569. Why not?—Because the weaver works a longer time now than formerly; he is compelled to do so.

9570. Is it not necessary that he should rent a room for his loom, and that he should be cleanly and use soap, and that he should have fuel, candles or oil; and will not all those form a considerable amount in the shape of deduction?—All those things enumerated will be necessary for him in order to do his work; as to room rent I do not know what that will be. In my former answer I supposed it to be the individual's own loom; a room for his loom must of course add to his expenses.

9571. Would there not be an increased consumption of those articles, oil, fire and so on, if he were required to work a greater number of hours per day?—Certainly, in the winter season.

9572. Has there been any diminution in the price of these at all corresponding with

with the reduction of his wages?—If I answer at all, I must answer on general principles; my impression is that most of those articles are lower than they were some years ago.

9573. Have they fallen 50 per cent. as his wages have?—I cannot answer that question.

9574. Can you inform the Committee what quantity of silk is annually consumed in Manchester?—That is a point which it is very difficult to ascertain; I have given myself some trouble to endeavour to do so, and my impression is, that it is between seven and eight hundred thousand lbs. per annum.

9575. What proportion does the quantity thrown in Manchester bear to the quantity of foreign thrown silk imported?—The quantity thrown in Manchester has been stated to be 350,000 lbs., I make it a little more; and the average of the last three years import is, by official documents, stated to be 374,000 lbs.

9576. Is any foreign thrown silk used in Manchester; and can you tell about what proportion, as compared with British?—Foreign thrown silk is frequently used in Manchester, but I cannot state the proportion. I know about the end of 1830, and the beginning of 1831, the quantity used was about 3,000 lbs. per week.

9577. Since that time it must have increased?—During some periods of 1831 the quantity would be larger than that.

9578. Are any goods exported which are made from foreign thrown silk?—Yes, certainly; gros de Naples are made from foreign thrown silk, and a good many of these goods are exported.

9579. Have you any means of stating what proportion of the value of manufactured silk goods you consider to be labour?—I believe that the amount of labour expended will be about 80 per cent. on goods made of silk entirely.

9580. Do you speak with reference to the present low rate of wages?—Yes; I also take the silk as raw, not as organzine.

9581-1. Then in the 80 per cent. is included the throwing?—Yes; in taking that 80 per cent. there must be a good deal of English thrown silk.

9581-2. British?—It must be all British thrown silk.

9582. What do you consider to be the proportion on mixed?—About 150 per cent.

9583. There is some difference when you say in the mixed, between that which is mixed with cotton and that which is mixed with woollen?—Yes, there is now very little mixture of silk with woollen in Manchester.

9584. The manufacture of poplin is given up?—Yes, it is worn out.

9585. Is there not an article called waste silk, worth from 3s. to 3s. 6d. a lb., and which, on exportation, receives a drawback of 3s. 6d. a lb.?—Goods made from waste silk are frequently exported, and do receive a drawback as described, but this requires explanation. Waste, as its name implies, is waste caused partly in the process of throwing, after which it is spun over again, and in which process it loses one half its weight; so that two lbs. of waste will produce only one lb. of silk in the state in which it is applied to the manufacture before being exported; that calculation will show that, exclusive of labour, it is raised to double its original value; and before the goods are exported the labour expended upon them will be about 250 per cent., thereby raising the goods in value to the amount required by Act of Parliament to enable them to claim drawback. I thought it important to mention this point, as the article had been adverted to in former evidence, and not put in its true light.

9586. What description of manufacture does it employ?—Silk handkerchiefs mostly.

9587. Is it not employed in hosiery also?—I believe it is, as well as gloves.

9588. Do you know what number of throwing mills there were in Manchester, and the neighbourhood, in 1823?—The number of silk mills in 1823 was, I believe, only two.

9589. Do you know how many there are now in Manchester, and the neighbourhood?—I believe there are now ten mills at work, and two not yet completed.

9590. Can you state the number of spindles at work in those mills, and the number of hands employed?—I believe the number of spindles to be about 7,000 dozen, and the number of hands employed upon them from 3,500 to 3,700.

9591. Can you state what are the weekly earnings of persons employed in those mills?—The earnings vary materially, according to age and ability. I hold in my

Mr.
Henry Tootal.

25 June,
1832.

hand the particulars of a mill, containing about 700 dozen; the number of persons employed, and the rate of wages given in Manchester:

7.—Sundry Men } Overlookers, &c. average under

8.— „ } 4s. 9d. each.

9592. Are not those earnings considerably less than in a cotton mill?—The average is lower than in a cotton mill, decidedly.

9593. Are you not of opinion the wages at Manchester, in the silk branch of the trade, are as low as they possibly can be reduced to allow of a man's living at all?—I should say that the wages are exceedingly low; I should be very glad to see them higher.

9594. When the people work short time, are their wages reduced?—I conceive so.

9595. What is the present condition of the silk trade in Manchester; is it very much depressed, or is it improving?—There is considerable activity in it just now, particularly in the plain trade; wages are low; but those in the trade are anxious to keep their workmen at work if possible; I should not say that it was otherwise than active.

9596. What are the wages this year, compared with what they were two or three years ago?—In 1828 and 1829, the prices paid would be pretty much alike; 1829 was a year of not so great activity, and workmen might have more waiting for work in consequence.

9597. Were the receipts of the principal workmen more than in the present year, do you think?—I should fancy not.

9598. What were they in 1830; were they more than they are this year — It is purely matter of memory, but I think they would be something more than now; the trade was in a state of great activity.

9599. Was it in 1831 in a state of greater activity than now?—Beginning about March 1831, the silk trade was in a very dull state, and continued so during all that year.

9600. Is it again more active this year?—It is.

9601. When you say they are in a state of great activity, do you allude to the present moment?—Yes.

9602. Were they not in a state of great depression from November up to March?—Probably not so long as that, but there was more activity after the February sale.

9603. Do you expect it to continue in its present state of activity?—I have no reason to think otherwise.

9604. What is the present state of the stocks of manufactured goods at Manchester?—I believe small.

9605. You have spoke of the earnings of these people per week; they were most of them out of work a considerable number of weeks during the last year, were they not?—A great many were out of work during the winter.

9606. Their

9606. Their earnings being so small, they are in a state of great destitution when they are out of work?—Certainly.

9607. Do you export any of the plain goods you make yourself?—I cannot say we have not exported. In 1829, in consequence of the drawback system coming into operation, our house thought it very likely that we might be enabled to compete with the French manufactures; and, in consequence, we made several small adventures to various parts of the world, but more particularly to the Americas. Our object in doing so was, if the result were favourable, to exhibit those accounts to our friends, in order to induce them to ship (that being a business we do not wish to follow.) In some cases the results were favourable; in others not so.

9608. Were you able, as regards the price, to judge from those exports, how near you came to your competitors?—We got orders in consequence of those accounts; and those orders in many instances have been repeated.

9609. Do you mean orders for plain gros de Naples, or richer goods?—In plain gros de Naples, and in other goods also.

9610. Do not the Americans come to you who went formerly to France?—That is the case in a great many instances.

9611. Are those demands from America increasing?—The trade with America is understood not to have been good during the spring of this year; the export last year was very considerable, but in this not so much so.

9612. Have you had any quotation of the prices in America, of the articles sent from France and from this country?—It is very difficult to form an estimate of the two, without patterns; I can only say that the Americans are now taking gros de Naples and other articles, and the orders are repeated.

9613. If the duty was taken off on organzine, what effect do you think that would have upon your trade as a manufacturer?—If I could be quite certain that the taking off the duty would lower the article to the extent of 3s. 6d. a pound, it would be my interest to have it so, and I should wish it.

9614. You doubt whether there would be so much benefit by the taking off the duty, as you derive from the drawback?—I very much doubt whether the price would be lowered to that extent, by taking off the duty.

9615. Do you think the bounty has an effect in increasing the exportation of gros de Naples?—I think it has; I have no doubt of it.

Mercurii, 27^o die Junii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esquire, LL.D. again called in; and Examined.

9616. ARE not the silk goods imported into this country from France chiefly of the finer descriptions?—I should judge they are; but as I have put in Official Tables, I desire to refer, in all matters of fact, to those Tables, which will show the particular qualities as far as they can be ascertained.

9617. Are not the silk goods exported from England to France of a coarse and heavy description, particularly bandannas?—I believe so; but I should state, with reference to the importation of bandannas, that I understand from a French importer the improvements which have been made in England are so striking, that the demand had been continually increasing, and is at this moment greater than ever.

9618. Are you aware that the improvement is principally in the designs, and consequently in the printing?—All my evidence goes to establish the fact, that there has been a great improvement in this very particular since the introduction of French goods; and I stated, in illustration, that there was no importation of English bandannas into France before the period of the legal introduction of French goods into England.

9619. At all events, as far as the inquiry of this Committee is concerned, the proportion of labour in the goods exchanged between the two countries is the reverse of the statement you have made, is it not?—That may be as to one article, but the quantity of silk goods that France takes is, up to this moment, not large; my observation with respect to the importation by France of silk goods from England is, that that importation is going on rapidly increasing. I have not stated that in those particular silk goods there is a greater quantity of labour than in the silk goods England takes from France; my statement is a general statement, and it shows

678.

4 I 2

that

Mr.
Henry Tootal.

25 June.
1832.

John Bowring,
Esq. LL. D.

27 June,
1832.

John Bowring,
Esq. LL. D.

27 June,
1832.

that, taking in the whole amount of exports and the whole amount of imports, the proportion of manufacturing labour sent from England is double the proportion of manufacturing labour received from France.

9620. Are you aware that in the value of the bandannas labour forms a very small proportion of the value of the article exported?—I am not capable of giving an estimate with respect to an article into the manufacture of which I have not inquired.

9621. Are you aware that the value of a piece of bandanna when printed and completed is about 25s.?—I should suppose so.

9622. Are you aware that a piece of bandanna will weigh about eight ounces?—I am not.

9623. Are you aware that the price of making that eight ounces of silk into a piece of bandanna is only 2s.?—I am not cognizant of such facts as imply a knowledge of the details of English silk manufacture; I desire my evidence should be considered as having no other reference to England than as furnishing means of comparison between France and England; I have not at all examined the English silk manufacture, information respecting which can be better gathered from other sources. I give the opinions which I have formed from the investigation of the French silk manufacture. The whole amount of silks exported from England to France is indeed small, but it is an export that is considerably increasing. What I intended to show the Committee was this fact, that in consequence of improvement, demand had grown up in France for a particular English article; and as respects the general subject, I stated that the demand for English products in France was the consequence of a similar demand growing up in England for French articles; that in the English articles labour formed a very large proportion of its value, and that the raw material formed a very small proportion, while, as respected the imports into England from France, the raw material formed a very large proportion of the value, larger than in any other manufactured stuff with which I am acquainted, cashmere only excepted, and that the quantity of labour was relatively small.

9624. You do not mean to adhere to your last answer, with respect to our silk trade?—I have never said that the quantity of labour in English silk goods exported is equal to that in French silk goods imported; my representation as respects the imports into France of English silk goods is just this, that whereas a few years ago the demand was exceedingly small, it is now constantly increasing.

9625. You stated that the value of French silk goods exported to England last year was about 18 millions of francs, that the English silk goods exported to France was about 640,000, so that it appears, as far as respects the silk trade, the quantity exported from each country is 28 to 1 in favour of France, besides the disproportion of labour referred to in the last question?—Certainly; but there is one circumstance which bears upon that question, namely, that while the exportation from England to France is an increasing exportation, that is, compared with 1828, the importation into England was not larger in 1831 than in 1828; there has been a progressive increase of exports of silk goods into France from England, and not a progressive increase of exports into England from France. In 1828 the quantity of goods imported into England from France was about the quantity imported in 1831; whereas during the same period, if the French returns be compared, it will be found there has been a progressive augmentation in the importation of English silk goods into France. The fact is rather to be taken as evidence of the improvement, and an irresistible fact it is, than as proving any thing else; it shows that there has been some improvement introduced in the last five or six years in England, whether it refers to the loom or to the figure, which did not exist before, and which has led to an increased reputation of the English manufacture. I can speak from observation, that the English bandannas are altogether of a different character from the character they had before the importation of foreign silk goods was allowed: no gentleman did then wear an English bandanna; they were so worthless, that to carry them was almost disgraceful, and every body was supplied with a smuggled article. Now this is no longer the case; we buy the English bandannas, believing them to be better than the Oriental. Six or eight years ago we did not think so.

9626. Is it not the case, that in many instances those sold as English bandannas are imported plain, and printed here?—Perhaps that may be, but that very printing is the introduction of a portion of that skill which was wanting to our manufacture, and whose absence is felt in so many other departments; a great many impediments and restrictions have been removed, and a great impulse given to improvement; this

has

has operated beneficially every where, first upon the raw material, and afterwards on the whole course of production from beginning to end.

9627. Are you aware that the increase in the quantity of silk used in the years immediately prior to the prohibition being removed was considerably larger than it has been since?—I should be very much surprised if the official returns show that.

9628. It appears in Mr. Hume's evidence, that in the years 1815, 1816 and 1817, the amount of raw silk imported was 1,095,000 lbs.; in the years 1821, 1822 and 1823, the quantity was 1,970,000 lbs.; in the last three years, 1829, 1830 and 1831, the quantity is 3,075,000 lbs.—It appears to me, that the way to come to a correct estimate is to take the same number of years preceding and subsequent to the introduction of French goods; to form two averages from them, and then compare the results. It will then be seen whether the average amount was greater or not before the period of 1826 than it has been since, and I should anticipate that the facts will show a great increase since that period; the safest way to judge is to take as an average the same number of years before the legal entry which have passed since the removal of the prohibition; the number in each case being seven years, I find that the average before the removal of the prohibition will give somewhat less than two millions of lbs.; that the average importation since the introduction of French manufactured silk is about three millions of lbs.

9629. Are you aware that the previous seven years was burthened with a duty of 5*s.* 6*d.* on the raw silk and 14*s.* 10*d.* on the thrown?—Certainly; that is a circumstance to be taken into the account, and I do not think the old legislation is to be justified, since to oppress the raw material with a fiscal burden is exceedingly injurious to the development of industry; but after all the great result is, that since the admission of French goods, there has been an average increase of importation of more than a million of lbs. of silk per annum.

9630. Is not the waste a much greater quantity in the latter period than the former?—Yes, it was inconsiderable in the first part of the period, and taking in the increased quantity of waste, the argument will be much stronger; for as I had not estimated the waste, if that be added to the calculation, the increased importation will be a million and a half instead of a million.

9631. You have stated that the French silk manufacture has obtained a foreign trade, because it has had less protection than other French manufactures have; do you really think that the acquisition of a foreign trade is to be attributed to this cause rather than to the great advantages you have already described as being possessed by the French manufacturer?—My statement is, that the existence of a foreign trade is impossible, or rather is wholly incompatible with the existence of a protecting system; this argument may be put in a shape that is absolute demonstration; protection implies the necessity of a price beyond the average price; if the price be not beyond the average price, protection is mere waste of words; now I stated with regard to France, that 11-14ths of her silk trade is foreign trade; that the whole consumption of silk manufacture in France being only 3-14ths, the great advantage they have is the demand of the whole world; now a home and protected trade is limited to the home demand; and if any gentleman is able to show, that to sell to 24 million of buyers in Great Britain is better than to be able to sell to all the buyers in the world at large, I shall agree that a limited protected home trade is a better one to the manufacturer than an unbounded but unprotected foreign trade; my opinion, grounded on the facts we possess, is far different.

9632. You stated that France has, owing to the want of protection, been obliged to adopt every foreign improvement, what foreign improvements or inventions do you refer to?—I stated not that she had been obliged to adopt every foreign improvement, but that every foreign improvement that had been adopted had been forced upon her by the unprotected position of her silk trade; the bar loom, which was a most remarkable improvement, was a foreign improvement; I mentioned that even the Jacquard machine was in reality the result of an English suggestion; and I also stated with reference to her schools of art, that most of the professors are travelled professors, who have visited foreign countries to gather information, which they turn to account at home.

9633. When you speak of the French silk trade as having so little protection, do you not think the following are great advantages, and operate to great protection: the possession of the best raw material in the world; the exclusive use of it; the public establishment of schools of design, painting, botany, &c. and the prohibition of the silk manufactures of China and Bengal, and of the mixed silk and cotton,

John Bowring,
Esq. LL. D.

27 June.
1832.

and silk and worsted goods of this country, and a duty upon the silk manufactures of all other countries sufficient to protect her from all injurious competition?—I must answer that seriatim; I should say generally that honourable Members will be aware there can be no trade at all, but a trade which represents some superiority; that unless a nation had an advantage over another nation it would never have any intercourse with another nation; that the result of equality would be the destruction of all barter, so that we should be compelled to do every thing ourselves and reduced to something lower than the primitive state. Unless we could find individuals possessing greater advantages than ourselves, there would be an end to every species of intercourse, whether trading or social; as to these particular points, I have stated that the French have a considerable advantage in the possession of the superior qualities of silk, and the exclusive use of it, and to that extent the privilege of a monopoly; but even this monopoly I conceive to be a benefit of a very temporary and doubtful character, for it is my belief that if restrictions were removed (and I have used that argument with some effect I believe to those who are concerned,) that if the impediments to the exportation of French silk were removed, it would be a boon to the silk growers, and ultimately a boon to the silk manufacturers themselves. The cultivation of their silk, which is even at this moment exceedingly valuable and productive to France, does not receive the developement of which it is capable in consequence of the impossibility of exporting the silk produced; there is thus a check on the growth of that article for whose production France is so singularly apt. With respect to the prohibition of China and Bengal manufactures, I hold it to be an unquestionable principle that any prohibition of a foreign article is in the long run baneful to the manufacture, for in truth that which is called protection is nothing more nor less than the shutting out the means of knowledge, and the throwing a protecting circle round ignorance and retardation; the same argument applies to the prohibition of cotton and worsted manufactures in France; the cotton and worsted manufacture in France is in great distress, a distress which arises mainly from the false direction given to labour by the interference of the Government.

9634. The silk trade of France is also protected by a duty, as against Germany and Switzerland?—Yes, but the duty is small.

9635. And it flourishes in a degree superior to any other country with the advantage of that protection, does it not?—It owes nothing to protection—nothing,—but as to duties, there is another matter involved in the consideration, which is the question of revenue, and it is a question which ought not to be lost sight of; I do not believe that so small a duty would have satisfied manufacturers who demanded protection; it may have been looked to as a source of revenue, and I think foreign manufactures might be reasonably made to pay a duty as an excellent means of providing revenue supplies; but I cannot admit the title of a manufacturer to put that duty into his pocket under the name of a protection, which might have been levied on the imported articles for the public benefit. It is in fact an absorption of the national resources by a private and sinister interest.

9636. You have stated that the number of looms in Lyons, in 1825, was 20,000, can you state what was the number at St. Etienne at that period?—I have no other facts on this subject than those I have given in.

9637. It appears that since the opening of the English ports to French silk, the number of looms at Lyons has increased from 20 to 35,000?—I have stated with respect to the returns previous to 1831, that great uncertainty prevails; I believe the first regular and official statistics were those made lately by the prefect, and which I have presented; previously to that period I am not sure that any official statement exists, and I think any conclusions founded on the former state of things would be liable to many errors.

9638. You conceive that the French manufacture has greatly increased?—I have no doubt it is increased in certain articles.

9639. Have you any doubt of its great increase at St. Etienne?—None at all.

9640. In what has it decreased?—It has decreased in the manufacture of low inferior articles, and even now a great many French manufacturers are making precisely the mistake which is made here, that is, they are endeavouring to retain possession of a species of manufacture where they labour against great disadvantages.

9641. You have given in evidence a return of the looms existing at Lyons, at particular periods, and at St. Etienne?—Always with the reservation that there are no accurate official returns of former periods; and I mention a curious circumstance connected with the silk trade of Lyons, that there is no authentic history of the town, nor any history of its silk trade.

John Bowring,
Esq. LL. D.

27 June,
1832.

9642. Have you at all calculated the quantity of thrown silk it takes, or the number of persons it employs to manufacture the eighteen millions of francs of French silks imported into this country?—I have not.

9643. Which do you think most beneficial to English artisans, the importation of raw silk, to be worked up in England, or the import of eighteen millions of francs of French manufactured goods?—I must first see how the eighteen millions are to be paid for; without all the facts, a question of that sort can lead to no useful result.

9644. With reference to the silk trade alone, would you say it was as beneficial to the operative to have the manufactured commodity brought into this country as to have the silk in the raw state, that he might manufacture it?—I state generally that the present state of things is in every respect better for the English operative; a much greater quantity of labour is employed in the present state of things than would be under a prohibitory state.

9645. You do not mean that with reference only to the silk trade?—No; I have not so examined the bearings of the silk question apart as to be able to give a decided opinion whether silk labour has been superseded, and to what extent; but I do know the exportation of French silks from France, and their importation into England have created a demand for English labour in another direction. If indeed it could be made out, that people would be as well pleased with inferior English silks as with superior French silks, and if a nation could be made to do that which no individual ever did in his own personal case, namely, to prefer an inferior garment to a superior one, it is possible that the protective system might be made operative, and a greater quantity of silk labour be demanded; but inasmuch as every body, in his particular case, prefers that which is good and cheap to that which is bad and dear, sound legislation would be grounded on the common sense and reasonable preference of the public. It is clear with reference to the silk manufacturer, that if there be an increased importation to the extent of a million and a half of raw silk, and that raw silk be employed in manufacture, there must be an increase of demand for labour sufficient to manufacture the million and a half so consumed.

9646. You would not consider that, by an increased import of French manufactured goods, there has been any extent of displacing the English operative labour, while facts prove that there is an increased extent of import of the raw material?—The result proves the contrary.

9647. Does not the finer description of silk require a vast deal more labour than the coarser?—Exactly.

9648. Has not the increase in the importation of silk been greatly in the coarser descriptions?—I suppose there may have been a greater increase in the coarser descriptions.

9649. Do you suppose that the quantity of the finer description of French manufacture, which has been introduced into this country, has not displaced that consumption of fine manufacture in this country?—No, I doubt that very much; I think the introduction of a superior article has increased general demand; it is my belief that if a taste had not been created in this country for silk apparel among the rich, which the beauty of the French manufacture has excited, there would have been a considerably less demand for English among the more numerous consumers.

9650. Are you not aware that the mode in which a certain quantity of silk is worked up, will make a very considerable difference in the quantity of employment to be afforded to the operatives?—Certainly.

9651. You are understood to have stated that the silk imported now is of a much coarser description than before the prohibition?—I think I made no such statement; I have stated, on the contrary, that the natural tendency of competition will always be towards improvement, and that this in fact has been the constant tendency of things; and that as a result the whole of the French manufacture is naturally and necessarily getting into the higher regions.

9652. You are not aware that the great proportion of silk imported now is much coarser than before the removal of the prohibition?—That is against all the facts I have gathered.

9653. The question refers to raw silk?—I beg pardon, I believed you referred to manufactures. In France the quality of raw silk is much improved rather than deteriorated; all the evidence shows the quality of the article has been mended by attention to it, and the same is the case in Italy; so in manufacture, the great

John Bowring,
Esq. LL. D.

27 June,
1832.

struggle is to produce a better article on cheaper terms, that is the manufacturer's triumph.

9654. Do you know what proportion of the six millions of francs of French silk manufactured goods which you state were exported to this country in 1825, were for the purpose of being warehoused in England previous to the opening of the ports in 1826?—The official returns will show.

9655. Are you aware what proportion of those goods were brought in under the privilege possessed by the house of Depouilly & Company?—I should think a very small quantity; the means they possessed were not such as to enable them to command a large capital.

9656. You have stated some disadvantages which you conceive the French manufacture labours under, one of which is local taxation (*octroi*), have you ever compared that taxation with the English *poors* rate, watch rate, lighting rate, church rate, county rate, and other local charges?—The reason of my referring to the *octroi* was, that it was a burthen pressing peculiarly on the labourer; the *octroi* is a special tax on food and drink, and therefore specially a tax on labour; many of those taxes exist in France of which the question speaks, and I did not refer to them because they do not act immediately on the artisan.

9657. You have not thought any thing of the taxation of the food of Englishmen?—Yes; and if I were to be asked my opinion of the corn laws, I should say, the necessity for getting rid of them is most imperative.

9658. Have you ever compared the difference between the English and French labour, as it respects national taxation?—That resolves itself very much into a question of opinion as to the operation of legislation, by indirect taxation, on the price of food; I think there is no part of our legislation so vicious and so oppressive as that which increases the price of bread; but that same vicious legislation exists also, unfortunately, in France, for they have a system of corn laws built on ours, and I think that they cruelly suffer from them.

9659. Therefore you would do away with the corn laws, on the same principle of giving employment to the poor?—Truly.

9660. Suppose an English weaver to earn 25*l.* per annum, how much of that sum goes in direct and indirect taxation?—Those are calculations on which I should hesitate to give a hasty opinion; I have desired, throughout this examination, not to be considered as bearing testimony to the state of things here. On any question relating to English labour, except of a general character, I venture to suggest, that the Committee would be more safely guided by others.

9661. You have given an opinion and statement of facts as to the bearing of these things on the operatives of France, therefore you are asked, have you considered the bearing of those circumstances on the operatives of England?—I am sure the Committee will have the means of getting the information on matters connected with England from so much better sources, that it would be desirable they should look elsewhere. I have been asked my opinion with respect to local and national taxation; I stated why I brought in the local taxation of France, because it was a duty bearing so peculiarly on labour. It is a misfortune that so much indirect taxation should bear on labour as results from the operation of the English corn laws. The corn laws in France are also a great burthen, as the average price of corn there is much greater than the average European price.

9662. You have stated, that a French weaver is also under great disadvantage as to the construction of his machinery on account of the taxes on iron, &c.; are you not aware that in this country, every article of which the building and machinery of a manufactory is composed is much more heavily taxed?—Not more heavily taxed, certainly the duty on the import of foreign iron is small in England, in France it is 150 per cent. on the value.

9663. Iron enters in a very trifling degree into the expense of building in England?—Of course it must stand at its quantum valeat, whatever that may be.

9664. Mr. Royle stated, that he paid nearly 4,000*l.* in taxes on the articles used in the building of his mill?—He would have paid three times as much in France.

9665. You have stated, that Switzerland has greatly the advantage of France, because of the duty of 33 per cent. on machinery, and of 150 per cent. on iron in France; what machinery does Switzerland use in her silk manufacture?—Wherever those grievances pressing on France do not press on Switzerland, Switzerland has a great advantage, and machinery is used at every step of manufacture.

9666. Do the Swiss throw their own silk, or do they import it thrown?—I have delivered

delivered in all the information respecting Switzerland which I possess, in a document. I have never visited that country with a view to this inquiry.

9667. Can you state from what you gathered that document?—It was a document gathered from various sources, the most intelligent sources in the country.

9668. Do they work many Jacquard machines in that country?—I should doubt that; they are applied more particularly to the production of the more complex patterns, and Switzerland is very little advanced in that branch of manufacture.

9669. Is there any thing in the silk manufacture that can fairly be called machinery, if you except the Jacquard, and what is used in the operation of throwing?—If a loom is not a machine I do not know what is.

9670. You have spoken of the cost of iron, are you aware that the cost of the iron in a loom is about 1*s.* 6*d.*?—If it be only 1*s.* 6*d.*, the average cost of the common loom used in France I gave in evidence was less than 1*l.*, that which cost 1*s.* 6*d.* here, would be 4*s.* 6*d.* there, that on 20*s.* would be between 20 and 30 per cent., a very serious consideration.

9671. Do you know how long a period a loom will last?—I should think a very considerable period.

9672. Half a century?—Very likely; but with respect to iron it enters so much into the daily uses of life, even for nailing up a door or a window, that it becomes in France an article of importance. I can safely say, that the iron monopoly occasioned a yearly loss to France of three or four millions sterling.

9673. You stated that France is under a disadvantage in the manufacture of her silk goods as compared with Germany and Switzerland, to the extent of 11 $\frac{1}{4}$ per cent., and that three per cent. profit to the importer of Italian silk into France is a part of this 11 $\frac{1}{4}$ per cent., what facilities have the manufacturers of Switzerland for importing silk from Italy which the French do not also enjoy?—My statement was, that the French represented the difference to be 11 per cent., but that I considered that exaggerated, and as far as I could form an estimate it went to the extent of seven or eight per cent., I then gave in particulars of the different sums of which I conceived the seven or eight to be composed. I stated that which is a fact of some importance, that the Swiss manufacturer will, for the most part, import the silk; there are but few instances of the French manufacturers being importers; the profit of importation would therefore be so much benefit to the Swiss manufacturer, independent of the circumstance of his paying no duty.

9674. If the Swiss manufacturer finds an advantage in importing his own silk from Italy, why does not the French manufacturer do the same?—It must be perfectly obvious, that the organization and habits of society are very different in different countries. I presume the Manchester manufacturer does not import his own silk; the importation of silk implies the possession of capital, foreign correspondence, and perhaps even the knowledge of certain languages not possessed by every body. The question is one which bears upon a peculiar division of labour; it may be desirable there should be that division under some circumstances and not in others.

9675. You state that brokerage is part of the cost, is not brokerage a customary charge in all countries?—There is no broker where a merchant or manufacturer receives his silk direct from the Italian or foreign producer, the brokerage is the cost of a transfer from the seller to the buyer in a particular market; it is the charge of agency, and clearly an additional cost.

9676. Are not brokers' and merchants' commissions paid in England?—Certainly.

9677. You have also spoken of the pillage of silk at Lyons as constituting a material disadvantage to the French, what reason have you to suppose that there is a less pillage in Zurich, with its 12,000 looms, or in Spitalfields with its 16,000 looms, than there is in Lyons?—I put that as the statement of the French manufacturers, of course all those statements must be taken for the value which honourable Members may attach to them. One reason for supposing that the pillage is more extensive in Lyons is, that there is a great deal of illicit manufacturing trade, it is a very large market, and there are a number of individuals who do gain their livelihood by the manufacture of that fraudulently obtained silk; now that trade could not exist in a very small market; there would not be enough of irregularity to enable a man to be fed from those irregular sources.

9678. You know nothing personally of Zurich?—I do not; the document I have put in is from Basle.

9679. You have already stated that the rate of interest is one per cent. higher at
678. 4 K Lyons

John Bowring,
Esq. LL. D.

27 June,
1832.

John Bowring,
Esq. LL. D.

27 June,
1832.

Lyons than at Switzerland, what is the present rate of interest at Lyons?—From five to six per cent.

9680. There are no usury laws in France?—No, six per cent. is the interest which in a court of justice would be given, provided there had been no special agreement.

9681. You have stated, that a member of the Chamber of Commerce at Lyons, who is himself a manufacturer, told you that he saw many articles in England in which the French suffered from competition, please to state what those articles were?—I have put in his evidence in the shape in which it was given; he stated certain facts in corroboration of it, that they had formerly a demand for America at Lyons, which he now found supplied from England.

9682. You speak with regard to the silk trade?—Yes; that certain articles which had been bought at Lyons were now bought in England, and that they have been accustomed to receive certain orders for America which were now supplied from England.

9683. Did he specify the particulars?—He did not.

9684. You have also stated, that he told you that the competition between France and England has produced in England various new articles; what are those articles?—I have not the means of judging precisely what the articles were; it would be very difficult, on a subject of that sort, for an individual not a manufacturer to give evidence in its minute details; I have no doubt at all, from the veracity of the individual, of the fact; but the way in which the evidence could be best substantiated would be to produce patterns of the article, which is not a practicable thing while Lyons is so far away.

9685. You have also stated, that he told you that the introduction of French silk goods into this country has improved the English manufacture, by the instruction which they have given to the English manufacturer; do you speak of fancy silk goods?—Certainly.

9686. You have said that the English manufacture has improved since the opening of the ports; that the improvement is astonishing, equal to 50 years?—Such was the language of that gentleman, who is undoubtedly one of the most intelligent men of the country. It is with unbounded surprise and regret I have heard it stated here, that there has been no improvement in the last seven years in England; sure I am that there has been great improvement in France.

9687. You saw many designs in France, have the goodness to look over that (*a pattern book*), and state whether there is not a great degree of fancy and beauty?—My opinion is of little value in such a matter; I rather prefer to cite the opinions of others, and the grounds of those opinions. In a question of superiority or inferiority reference must be made to universal opinion. If the English silk goods are equal to the French, I cannot account for the infatuation which prefers the French to the English, not only here but in every market of the world; and whence comes the demand for protection, if the French are not superior?

9688. Can you point out any pattern which you would say is French, or which is English?—No, I cannot.

9689. You state that the fact of the English silk trade asking for a protection of 30 per cent. is a proof that our manufactures are inferior to French manufactures; do not the English ask protection against the local advantages of the French?—That does not alter the matter: the evidence of our inferiority is, that the French come into the market and offer their goods 30 per cent. cheaper than the English; hence it is perfectly clear that the goods are to be had at 30 per cent. less.

9690. The cost may be less?—Yes, surely; it is obvious the French have, from some cause or other, something which enters into the production of goods at a cheaper cost than the English; if, for example, taste in France be cheaper than in England, that has its effect.

9691. May we not be able to produce quite as good an article in this country, but not quite so cheap?—Yes; but however the question may be shifted, still there is 30 per cent. less taken from the English public, if you give 30 per cent. less to the French than to the English, and, as a necessary consequence, 30 per cent. more will remain in their pocket; the 30 per cent. duty is at all events so much taxation on the public.

9692. If you increased the poor's rates in consequence 40 per cent. there would be no advantage?—I have demonstrated, I think, that as far as our relations with France are concerned, if you mean infallibly to render the poor's rates double, you should prohibit French silk.

9693. How

John Bowring,
Esq. LL. D.

27 June,
1832.

9693. How do you account for our requiring 30 per cent. which, you say, the public pay if they purchase English silks, with the fact you have stated that the French manufacturers of silk at Lyons complain that we are beating them out of the American markets?—In certain articles it appears that we have made that progress; one branch may be prosperous, and another declining.

9694. Do you not think, after all, you have been greatly misled at Lyons by the French manufacturer, as to the pretended superiority they have, and that the great improvement we have made in this country has resulted from our intercourse with them?—How can I be misled as to their great superiority, when I have the testimony of all mankind that in the foreign markets of all nations the French enter and we do not. That, to my mind, is incontestible evidence of superiority.

9695. Is it not evident that we are labouring under some disadvantage?—Yes; but to remove it, let the manufacturers of England consent to receive instruction from every source; to insist on its exclusion is to demand ruin. The protection they ask may serve a particular manufacturer, but will be most pernicious to the manufacture itself; it will be a barrier to all improvement, and certainly shut the door against all future success.

9696. Are you aware that from 1815 to 1825 the silk manufacture of this country had increased in consumption more than a million of pounds weight of silk, though burthened with 5s. 6d. on the raw silk and 14s. 10d. on the thrown, that in spite of all those difficulties and disadvantages it was flourishing, and that there were no complaints made in Spitalfields till after the introduction of French goods?—I must state the matter in the way in which it presents itself to my mind: the demand for prohibition of French silk goods is, after all, only a demand that England should not export cotton goods to France. If the two facts of export and import were represented contiguously, as they ought honestly to be, the question would be disposed of in the judgment of the least enlightened, who have not a sinister interest. I do not mean to say, if the silk manufacturer has a monopoly that he may not personally turn it to some account, but the true question is the question of loss and profit on the whole.

9697. Supposing your position, or the information you gained in France with regard to the improvement in the silk manufacture in this country is incorrect, the argument you have raised upon it falls to the ground?—No, the argument cannot fall to the ground, while there is evidence that England produces an inferior and France a superior article.

9698. Explain what you mean by inferior and superior; do you mean in quality or in price?—They will come to the same result. If English sellers exact a hundred for that which can be imported from another country for seventy, English buyers will suffer at the rate of 30 per cent. in all such transactions: now, no individual ever became rich by paying 30 per cent. more than he needed, nor did any nation ever so become rich. A judicious system of legislation would be one in which each nation should be thrown upon its natural aptitude for obtaining every thing at the least cost.

9699. You say that in this country, in consequence of the competition, the manufacture has wonderfully improved, from the information you received in France; supposing the manufacture has not improved in that degree, your argument with regard to the effect of competition upon our manufactures falls to the ground?—If the result is that the English manufacture has not improved, undoubtedly the argument founded on the supposition that it has improved has no basis.

9700. If there has been only that naturally progressive advantage which, from the state of the goods previously to that period manufactured in this country, of course the argument which has been raised upon that falls to the ground?—I should have thought that natural progression and non-improvement are not very compatible still less convertible terms.

9701. It has been given in evidence, that there were formerly about 4,000 looms in the district of Spitalfields alone, which were employed in the manufacture of figured silks, and that now there are not 300; do you call this an improvement?—I have no doubt that the silk manufacture, or any manufacture, must be very disadvantageously placed in such a situation as Spitalfields; even in France, the manufacturer, to relieve himself, is getting out even of those towns where the cost of subsistence is much less than in the capital; when such a manufacture establishes itself in a very large city, it establishes itself in a situation from which it will infallibly be driven by the home competition of cheaper places.

9702. It is also in evidence, that in one of the parishes of that district the average

John Bowring,
Esq. LL. D.

27 June,
1832.

number of weavers receiving parochial relief for five years previously to 1826 was 300, while the average number since have been upwards of 3,000?—I have no doubt a great deal of distress exists, and it demands all sympathy, but a great deal of distress does exist from the very fact that two and two make four; but it is not the less true that two and two make four because it causes distress.

9703. You state that the export of silk goods from France to England has improved the French silk manufacture; is not the fair meaning of this alleged mutual improvement this, that the contest between the two manufacturing countries is reducing the operatives in both countries to the lowest point of subsistence?—That is a question which, to answer properly, would require a vast number of details; it is, in fact, the great question of the quantity of labour in the market, which, like every other commodity, must be sold according to its value, that is according to the relative amount of supply and demand. The cheapest labour will always be bought; and the best security against distress is, that the labour of a nation should be applied to natural and most improved production. The relative situations and aptitudes of nations can be best judged of by the emulation which exists between the labourers in the fair unprotected field of competition. But the general and complicated question of wages cannot be settled by reference to a single article; there may be on a single article a particular pressure, reducing wages below the average standard, but, taken upon the whole, there is always in the market a quantity of labour whose excess or deficiency regulates its price. In manufacturing goods for a foreign market, the price of goods, and with it the price of labour must go down, if you remove the foreign demand, which you would do by prohibition of the foreign articles which pay for the goods you export: close any channel to the export of English labour by the prohibition of a foreign article, and a smaller quantity of English labour would be demanded. Thus any new restrictions would increase the evil and increase the distress; that is the result to which you would inevitably come by prohibition. You have a great deal of misdirected labour, and in some departments a great excess of labourers. It appears to me, that nothing can give you relief on a great scale but the removal of the prohibitory system altogether; my confirmed belief is, that the suffering which exists even in this country is the natural consequence of attempts to force labour and capital into a false position, and that every effort to proceed in that direction must aggravate the evil.

9704. Are you aware that there was no distress in Spitalfields, and generally in England, till 1825?—Were it so, can any man say that the labour of Spitalfields, which is dear, can long compete with another labour which is cheap? does not the cheap labour at Glasgow at 5s. as much supplant the labour of Spitalfields at 10s. as the labour of any other place, whether at home or abroad?

9705. They say that the commodity which they made is now supplied from France, and that they desire to be enabled to supply the public with this; would it not be therefore to the advantage of Spitalfields that the French manufactured silks of the description which Spitalfields formerly made should be excluded from our market?—It is possible that a particular place possessing a monopoly might gain by the prohibitory system, but the inevitable result would be, that upon the whole there would be a loss.

9706. The question before this Committee is upon the silk trade?—But the consequences cannot be narrowed or confined to the silk trade.

9707. You state that the introduction of French novelties has increased the consumption of silk goods in England; are you aware of the cause of the increased consumption of silk goods from 1821 to 1825, before those novelties were admitted?—That, again, is a question referring to the state of things in England, and connected with a branch of the subject on which I do feel myself much less competent to give opinions than other gentlemen who may be examined before this Committee.

9708. In 1821, according to Mr. Hume's evidence, the quantity of raw and thrown silk consumed in England was 2,460,898 lbs.; in 1825 it was 3,633,321 lbs. being an increase of above 50 per cent. in five years; or if you take 1824, it was 3,393,984 lbs. which is an increase of 40 per cent. in four years, though the trade was burthened with enormous duties?—It appears to me, that the only way to make a correct estimate is to do that which the honourable Member did some time ago, take a certain number of years, average those years, and when those years are averaged take the result from that: as far as the question of importation is concerned, there has been an increase to the extent of more than a million and half of pounds since the admission of French goods. These returns do, in truth, show from

John Bourring,
Esq. LL. D.

27 June,
1832.

from 1814 to 1819 a considerable diminution; there were a million and a half of raw silk imported in 1814; in the following year there was only a million; in the following year only 870,000; in 1818 there was a less importation than in 1814; so that the increase was, at all events, most uncertain, irregular and capricious.

9709. What was the importation in 1815?—One million; that was 500,000 less than in the previous year.

9710. The years 1814 and 1815 were years both of war and peace; will you refer to 1817?—In that year the importation for home consumption was 200,000 lbs. less than it was in 1814, and in 1819 it was not so much as it was in 1814; in 1820 and 1821 it was a little more than in 1819, so that for eight years it had made no progress at all, the quantity of raw and thrown silk being less in 1821 than in 1814; then there was only three years between that and the period of non-prohibition; in 1822 there was 400,000 more than in 1814; but if the whole of these eight years be compared with the great increase since 1825, the addition to the amount of imports will be very striking.

9711. Is it not the case, taking the Government returns of raw and thrown silk from 1814 to 1824, there has been a great increase in the manufacture of silk?—In 1824 there was an increase, but in the year previous to 1824 that increase was trifling, and there are many years in which the decrease was very remarkable.

9712. You have stated that there have been at Lyons some great improvements, by changing the broad silk loom into a loom weaving several breadths of ribbons; are those looms, when so altered, superior to any other ribbon looms to be met with at St. Etienne, or elsewhere in France, and if so, please to describe in what the difference in them consists?—Those looms which are the latest improvements are principally used for the production of ribbons of the highest price and most beautiful quality.

9713. Are they like the engine loom or the a-la-bar loom?—They are not, I think; the shuttle is thrown in the ordinary way.

9714. Can they produce more work than any other description of ribbon loom?—No, they produce, I believe, less.

9715. How many breadths of this sort of work does an engine loom make?—I have given in a statement of the particular number.

9716. Do you still adhere to the declaration that the price of marabout silk at St. Etienne is 27*s.* a lb.?—I delivered in the price given to me by the President of the Chamber of Commerce at St. Chamond; the evidence I then gave referred to the most beautiful description of silks used for the production of the most beautiful species of ribbons.

9717. Are the Committee to understand you to say that France uses indifferently raw silk of her own growth or Italian raw, for marabout?—Yes.

9718. Please to inform the Committee what kind of Italian raw she appropriates for this purpose?—I believe the Milanese silk, but I am not perfectly sure; I asked information in France, in consequence of an impression that Italian silk could not be used for making marabout; I was told that *maraboutage* represented a particular twist, and that the name was applied to it without any reference to the country where the silk was produced. I got a little laughed at for supposing that *maraboutage* was any thing but a peculiar way of preparing the silk.

9719. You have given in two calculations of the cost of ribbons in France, one of satins and taffetas and another of gauzes; in the former you state the price of the silk to be 70 francs per kilogram, and in the latter, being part of it, marabout, at 76 francs per kilogram; how do you reconcile those prices with the prices that you have before stated as those of silk in France?—Silk is of many qualities; but it is not my business here to reconcile incongruities; I have presented the facts I have received from different sources, and upon comparing the whole some deductions will be drawn; it was not for me to alter or to reconcile them. On the whole, when differences of quality and circumstances are taken into account, the differences will, I believe, be found not very great.

9720. You have stated that Avignon had formerly sent one-fourth of the goods made there to England, and that now she sends none, and you stated that that town is engaged in the manufacture of sarsnets; are you aware that sarsnet is an article which, at the time you speak of, was used very extensively for ladies' dresses, and that gros de Naples is substituted for it?—That is a question which, perhaps, might be more satisfactorily answered by others. I have a document here, which I obtained, after long discussions at Avignon, on the subject of their manufactures, from

John Bowring,
Esq. LL. D.

27 June,
1832.

the leading manufacturer there; he states the fact, and of his veracity I have not the slightest doubt.

9721. Are you aware that when these goods came to this country sarsnet was the prevailing wear, and that it is not worn now?—I am not.

9722. Is the trade at Nismes in a flourishing condition?—I should think not in a flourishing condition; they are tolerably well off.

9723. Are there not many goods made in Nismes of silk mixed with cotton and other materials?—Yes.

9724. Is not the importation of those articles prohibited from foreign countries?—Yes.

9725. Then the trade of Nismes is an exception to that general principle of not prospering under a system of protection?—The trade of Nismes is little; there may be seven or eight thousand looms. Nismes is hardly in the export trade; I do not call it a very prosperous trade, for it cannot go beyond the barriers of the country where it is held, and that would lead me to observe this important circumstance, that Nismes does not export any of her produce, and why? because Nismes comes within the circle of protection; the articles that Nismes produces are articles which have not the benefit of this foreign competition, and one of the results is, that Nismes is without a foreign trade.

9726. Have the goodness to state where a full competition exists in the fine goods?—It exists in every place where the French goods find a market.

9727. Are they ever importing any fine goods from England?—No, clearly not, because they produce them cheaper at home.

9728. Then where is the competition?—It is to be seen in its effects on the production of these articles, which are very decidedly superior to their rivals. Competition must put some individual in a situation better than that of his fellow competitors; the next beneath him is his check against deterioration. All that competition does, when a production is raised to the highest state of perfection, is to keep it there; if there were any deterioration in the quality of French goods, that competition which hitherto has kept the French goods in the elevation they occupy, would begin to act and supplant them.

9729. What has been the effect of competition on coarse goods in France?—To assist them to struggle against the peculiar disadvantage under which France labours in producing them.

9730. Does not France labour under the same disadvantages with regard to fine goods?—No, for in respect of fine goods France has such a superiority, from her more exquisite taste and devotion to all those studies which invigorate and improve it as to neutralize the disadvantages she labours under from such parts of her prohibitory system as bear upon the finer articles.

9731. You think it is wholly in design she has the advantage?—No, I think she has an advantage in the raw silk; but her range of success will be found to be the widest wherever there is a demand for a supply of taste, fashion and novelty.

9732. Why do not the advantages which you say she derives from nature produce an effect upon her plain goods as well?—Because her advantages are counteracted by other disadvantageous circumstances; in the first place she pays a duty on the raw material which enters into a larger proportion of the value on the coarser goods; in the second place I have noted there are many circumstances connected with the social condition of her labouring population which are unfriendly to improvement. In finer goods her peculiar aptitude is greater, her peculiar difficulties less.

9733. Has not France obtained her present superiority in commodities from the advantages she has had in the competition with foreign countries, and has she not done so under a system of protection against the manufacture of other countries, and in the advantages of her own silks and of her designs?—On the contrary the result of my testimony will be to show, that it is not to that protection that France owes any thing but loss; of all the manufacturers of France the silk manufacture is the least protected, and that is the only one which has a tolerable chance for futurity, unless her system is changed.

9734. With what country has she been in competition in the superior manufactures?—The competition nearly acts as efficiently by its influence on the inferior branches, by compelling them to struggle for superiority; if France produces an article of greater beauty than England, the effect of English competition upon her is quite as active; if England comes into the market with an article the next in quality, it is quite as useful as if she came in with an article of the same quality.

9735. Did

John Bowring,
Esq. LL. D.

27 June,
1832.

9735. Did England come into France with any manufactures at all; did she compel her forward by any description of manufacture?—Certainly she did, and there is a remote and indirect, as well as a close and direct operation of competition; every country that produces silk goods is in a state of competition with France and every other country that makes them; competition may act through the coarse article upon the fine as decidedly, though more distantly, than through the fine upon the fine.

9736. Is there any other market into which France enters into competition with England for her finer description of goods besides the English market?—I should think, at this moment, England is not in a state to rival France in the more fashionable articles of French production, and the best evidence of that is, that she is an importer from France.

9737. Will you look at that extract from the *Journal de Commerce*, and translate it?—"Our manufactures, and those of Torquain are in a satisfactory state, because the manufacturers of Roubaix, who employ them, sell their woven goods easily; combed wools and woollen yarn are rather sought for, and their price is augmented 20 per cent.; within the last eight months the manufacturers of woollen yarn cannot supply the demands which are addressed to them; their profits are enormous, also the number of looms has been trebled in two months; woollen goods are in the same favourable state, and some have mounted from 375 cents to 5 francs, since the month of November; all labourers who wish to labour can find labour at 125 to 150 cents per day."

9738. Will you refer to an extract containing information from Nismes?—"Our manufacture continues to work with the activity of which it is susceptible; our silks are asked for, with a tendency to an advance in price; foreign silks are bought, and if demand continues, the old silks will be already exhausted before the new harvest." Is it the pleasure of the Committee to receive from me some information as to the state of manufactures in this Roubaix district?

9739. Is not the *Journal de Commerce* of some authority in France?—No doubt; if I had expected that the general state of manufactures in France would have been gone into, I would have brought some information which would show that the situation of the cotton manufacture is discouraging in the extreme; the expressions of distress which have emanated thence are stronger than have been ever heard even in this country. I have now found among my papers an address to the King, presented in the present year, from Mulhausen, the seat of one of the largest manufacturers in France, the first sentence of which is, "Our looms are wholly abandoned, and our labourers without food." Roubaix is a comparatively inconsiderable place.

9740. Did you, among the papers that had their origin in France, see any returns relating to Roubaix?—In the department of the North, I see Roubaix is the sixth town in manufacturing importance.

9741. When small places are in prosperity does it not follow that large ones, which usually employ those small ones, cannot but be well off?—The whole number of looms in the district du Nord was stated by Chaptal at 10,000; now, as evidence of the prosperity of that district, I will mention that in March last the cotton manufactory of Rouval-les-Doullens, established only four years ago by a well known individual (who came to England and visited our most improved establishments), at a cost of 1,400,000 francs, was sold for 308,000; there was a sacrifice therefore of between 70 and 80 per cent. of the whole invested capital.

9742. Can you state in what town of the northern districts the principal mart for cotton twist is?—The principal mart for English cotton twist is in the south, namely, the town of Tarare, in the department of the Rhone.

9743. Roubaix is not the place where the sale takes place?—No; Rouen is the great market for French cotton twist.

9744. If this trade was so distressed in March last, how do you account for this article in the *Journal de Commerce* so late as the 28th of March last?—It is impossible for me to account for the introduction of a particular article into a foreign newspaper.

9745. Do you think that, a mill having been built upon the most improved principles, and under the best circumstances, within the last five years, and which cost 10,000*l.*, the silk trade can be considered as in a state of prosperity if that mill will not at the present moment sell for 500*l.*?—If it is the fact that a mill which cost 10,000*l.* will not sell for 500*l.*, it is evidence of a great depreciation; it

John Bowring,
Esq. LL. D.

27 June,
1832.

was an ill considered investment, and if there had not been protection that mill never would have been built.

9746. Did the manufacturer you alluded to just now visit our country to examine and carry home our last improvements?—He did, and he is a man of superior capacity.

9747. How do you reconcile this inquiry with your opinion that protection to the French cotton trade paralyzes its efforts towards improvement?—There is a frequent miscalculation of the value and extent of the power of protection. If he had not been protected he would not have vested his capital in this cotton mill; he ought to have seen that all manufactures are likely to fail which do not grow out of natural circumstances, but require for their support the interference of Government and the prop of monopoly: those alone have fair prospects before them which rise from the ordinary flow of capital; those who build factories under the auspices of a protective law are doomed to discover too late the insufficiency of that protection, and must prepare for the consequences. I am intimately acquainted at this moment with the proprietor of one of the largest factories in France for the production of cotton twist, and he has assured me that he considers seven-eighths of capital invested as irretrievably lost.

9748. Is there any duty on the importation of the raw cotton into France?—Yes; the duty is, I think, about seven-eighths of a penny per lb. English; it is a considerable duty, somewhat above the duty paid in England.

9749. Did not the cotton manufacture of this country rise to its eminence under a system of prohibition?—I believe the system of prohibition was never of any use to it at all, for of all the manufactures of England the cotton manufacture was the least protected. In our early legislation there was a penalty imposed on any one who should wear a cotton garment; and it is within the recollection of honourable Members, that it is only within the last few years the duty of $3\frac{1}{2}d.$ per yard on printed cottons has been removed. So far from being considered worthy of protection, it is the manufacture against which our old protectionists made a dead set, and every attempt was encouraged to sacrifice it to the woollen and the linen trades; its great success is owing to its having surmounted those disadvantages in spite of every discouragement, and it is at this moment the least protected of any.

9750. Competition has not been the cause of that?—There has been always competition, even foreign competition, in the trade.

9751. With what countries were we in competition when it was rising?—We were in competition with France.

9752. Do you mean during the war?—Yes, there was great production of cottons there.

9753. Do they find their way into this country now?—Yes, wherever there is peculiar beauty; and notwithstanding the disadvantages under which the French labour, they bring some printed cotton articles of fashion into this market; Koechlin, of Mulhausen, a large manufacturer of cottons, has, I know, been a considerable exporter for this market.

9754. What is the duty on cottons?—Ten per cent.

9755. Is it not the fact, that as soon as any inventions took place in the cotton manufactory in this country they were carried to France, and manufactories established upon the same principle?—Yes, but not immediately.

9756. We did not borrow from them, but they were in a state of borrowing from us?—That is too general an expression; improvements emanate from various sources; we are greatly in advance on the cotton manufacture; but there are many disputes afloat as to priority of invention, and unsettled claims to discovery between Frenchmen and Englishmen.

9757. You have stated that the export of silk goods from France to England has been attended by an export of silk goods from England to other countries of a similar amount, do you mean to say that this export from England has been caused by the export from France to England?—Yes, to a great extent; the introduction of French goods is throwing our silk manufacturers into a more natural and safe position; and wherever they turn their attention to the manufacture of such articles as they can produce on better terms than the French, they have very little to fear from French rivalry; and the proof of this is, there is a considerably increasing export of manufactured goods; in the last year the amount was, I think, according to Mr. Hume's estimate, half a million of English silk manufactures exported.

9758. That

9758. That was to their prejudice of course?—Yes; but they have been benefited in other directions.

9759. You have stated that the manufactured goods exported from France to England balance the manufactured goods exported from England to France; but does not France export very largely of wines, brandies and other produce to England?—Certainly.

9760. Can you enumerate the principal sorts of manufactured goods made in England which France prohibited?—France prohibits the greater quantity of our manufactures.

9761. Then France does not at present act liberally towards England, but confines herself to entertaining liberal sentiments?—France acts very absurdly, both to England and to herself; but the important fact is, that England by consenting to the introduction of French produce, does as effectually force the French to receive English as if the French spontaneously opened their doors; but even in France a great change has taken place in opinion; this prohibitory system has been tried in all its bearings; its consequences are beginning to be felt; the people are gradually setting right their miscalculations, and the Government is beginning to feel its way. Among the circumstances which have created this change of opinion, that sort of English interest which has grown up in France in consequence of her English relations ought not to be forgotten.

9762. Are any silk goods smuggled out of France, either with a view to escape the export duty, or to avoid information being given of the smuggling operations into England?—I should doubt that; the export duty is a mere registration duty; there is no motive for the risk.

9763. Has the general export trade of this country to France increased or fallen off since 1816?—Decidedly increased.

9764. You have stated that the importations of this country to France, and the exportations from thence are about equal; upon what authority do you make this statement?—First, from general knowledge; secondly, from the certainty that no person gives his goods for nothing: can any body be found who transfers his article without receiving its value, and nobody can deny that the whole trade between England and France is but the representation of all those articles together so bartered or exchanged.

9765. It appears by the Parliamentary Return of the 22d of August 1831, that the annual importation from France upon an average of four years, from 1826 to 1831, exceeded two millions and a half, whilst the exports of British and Irish manufactures for the same period amounted to less than half a million per annum; are you prepared to impugn this statement, or how can you reconcile it with your own?—I should think the French are not such wiseacres as to give us two millions and a half for our half a million; if France really consented to transfer to us two millions and a half of her produce for only half a million of ours, it is clear we are carrying on the most beneficial trade that ever existed since the world began; but independent of clandestine importation into France, France cannot receive colonial produce direct from England; the consequence is, that colonial produce, indigo for instance, of which she buys 1,500 chests a year, is returned in the Netherlands' account; thus of the balance, a portion is paid clandestinely, and a portion by a circuitous route.

9766. If the exportation were as large, British goods would be seen at Paris as the French goods are very well displayed here; it has been stated by a witness, a large buyer of English goods, who was in Paris two months for the purpose of settling there, if he could have introduced English goods, that he found it impracticable, and that he saw scarcely any English goods in the shops there; are you prepared to invalidate this statement?—I am not called upon to prove or to reprobate the statement of others, I mention a substantial fact, that the introduction of English goods into France is very great, and that their money value is very great; if a stranger go to Paris, he will be just as much lost as a stranger that comes to London; the sale of goods depends on connection; a man flinging himself into a new world may perhaps not be able in two months to follow all the windings of commercial intercourse.

9767. Did you yourself see many English goods exhibited in the shops in Paris?—Constantly.

9768. It has been stated by witnesses connected with some of the most fashionable houses here, that such is the prejudice in favour of French goods, that if English articles were offered superior, and at a much less price, they would be rejected in

John Bowring,
Esq. LL. D.

27 June,
1832.

favour of French, are you prepared to deny this statement?—I have already stated my conviction that the preference is not matter of prejudice; that the universal testimony of universal opinion must be accepted as evidence of undoubted superiority.

9769. Is the value of English silk goods exported within the last six years, greater or less than of those exported within the six previous years?—I have no other information upon that subject than the official returns. The increase appears to have gone on very rapidly; for the last six years there has been a constant tendency to increase. I will take it from three years to three years. In 1821, 136,000 pounds; in 1824, 159,000 pounds; in 1827, 173,000 pounds; in 1830, 427,000 pounds; and in 1831, 500,000 pounds.

9770. Some questions have been put to you, of which the object was to show that the demand for labour in the silk trade in this country had declined; because, though the coarser manufacture might have increased, the finer had decreased; that is to say, that although there had been an increase in the importation of Bengal silk, there had been a falling off in the importation of French and Italian raw silk. The Committee have before them Returns of the Importations from France and Italy of Raw Silk, from the year 1820 to the year 1831, from which it appears, that previous to the year 1824, in no year did the importation amount to 600,000 pounds, while in no year since that year was it so little as 900,000 pounds; it thus appearing, that there has been an increase not only in the importation of the Bengal silk, but also in that of the French and Italian silk; are you of opinion that there can have been any decline in the demand for labour in the silk manufactures in this country?—Certainly not; those facts afford a decided answer to that question. The same tests must be applied to the two periods.

9771. Have not, in your opinion, the united effects of the increased importation of the finer and richer French manufactured silks, and the increased importation of all raw silks into England, been to add greatly to the employment of the operatives in this country, with other operatives not employed in the cotton or silk manufactures?—That is the deduction I should draw; my opinion upon that subject is so strong, that I believe a protection of 30 per cent. given to the silk manufacture has been the destruction of 60 per cent. of labour elsewhere, so that to the silk manufacturer at this moment a considerable sacrifice of British labour is made, and the sacrifice must be estimated by the amount of duty laid on; not that I am advocating an immediate admission of French silks without a duty; but if they were admitted without a duty, the effect on labour would be to increase the demand for British labour, and that to a very considerable extent.

9772. If the course of manufacture in this country is so changed that the operative is now employed only three days in weaving silk, when he used to be employed six days in a week, can there be any increase of employment when the quantity has increased only 25 per cent.?—The employment may have increased, but the labourers to be employed may have increased more rapidly. My position is, that prohibition would not ultimately benefit them in the smallest degree.

9773. You stated, in answer to a question, that the quantity of raw silk imported here before prohibition had not increased, but had diminished?—No; I stated, that taking the average of years, there was an increase from a million to a million and a half of pounds since the introduction of French goods.

9774. Have you not overlooked the Table of Averages of three years before and after?—I have taken the period of seven years, considering that as the safest data.

9775. The price of silk in France, and the price of silk in Piedmont, is not exactly the same?—The difference will be the profit to the importer.

9776. The price in France is generally less than the price in Piedmont, is it not?—No, or the French would not import a million of pounds in the year, and pay the duty on it. There must be an average profit upon it, or it would not come to be sold in the French market. I have, however, put in the prices for ten years.

9777. Have you compared them with the prices for the Avignon silk?—Yes; the result is, that there is upon the whole a difference of twenty to thirty sous in favour of the French silk per kilogram, except where, for particular purposes, the Italian silk sells for a higher price.

9778. The Italian silk brings down the price of the French?—Yes, or the French growers might create a monopoly.

9779. Are you aware of any monopoly that the French importers possess in Piedmont?—I cannot conceive there can be a monopoly in the Piedmontese market; the general usage is to send the silk to the Lyonesse dépôt; if it can be disposed of there at an average rate of profit, the Italian grower will sell rather in a nearer than in

in a remoter market; but if the buyer releases it from bond, he may sustain a loss, inasmuch as the exportation of silk not in bond for the purpose of exportation is prohibited. The silk merchant at Lyons is thus under a certain disadvantage; because if he take the silk out of the dépôt, and it does not suit the French market, he has no means of getting rid of it, not being able to export it.

9780. It is in evidence before the Committee that the French merchants are in the habit of advancing money to the Piedmont growers, would not that have the effect of giving them a species of monopoly in the Piedmont market?—I should think not; the Lyonese price and British price will be the same, adding to the latter the cost of transport; the importations into England prove there is no such monopoly.

9781. Are the English merchants in the habit of doing the same?—No, I believe not before the silk is produced; the merchants are in the habit of making advances as soon as the silk is sent forward in transit; I suppose they would make advances on silk in bond at Lyons; the advances of the English merchants are decidedly more extensive than the French.

9782. Do you think that the English enter into competition with the French, barring the question of the distance of the two?—Yes; and I should think upon the whole the facilities of disposing of large quantities of silk in London are greater than at Lyons.

9783. You have stated that all trades in France are suffering considerable distress?—I stated that the protected trades are in a state of great suffering.

9784. The silk manufacture you say is suffering distress, but in a less degree, how do you reconcile this distress in the silk trade with the fact, that the growth of raw silk of France now is so remunerative as to pay a profit of 20 or 25 per cent.?—I do not immediately see the bearing of the question; I do not perceive how the latter part of the question is associated with the former.

9785. How does it happen, while the trade is in this distress, that the manufacturer should be disposed to give so high a profit upon the silk to the grower?—I do not state that the silk trade is in a state of great distress; of all raw materials, silk finds the readiest sale, its price being fixed by foreign silk imported; I have stated, too, that there is much less comparative distress in the silk trade; besides the production of France is only three-fourths of her manufacture, so that there will invariably be a sale for her silk as long as France does not produce enough to supply her own demand.

9786. In the Northern Department of France, has not the cotton and woollen manufacture been exceedingly well occupied this year, particularly the woollen manufacture?—I believe there has been a little variation, but upon the whole the situation of French manufactures has been a very distressing one.

9787. The workmen in those trades have not been earning good wages?—I have not returns of their wages at so late a period in the Northern district.

9788. You have stated that within the last three years there has been an export of English silk goods to France, and that the exports consist chiefly of goods of a coarse description; are you aware that for precisely the same period a drawback has been allowed upon the exportation of such goods?—I believe that is the case; the amount has not been a very large one; but the drawback, I take it, has tended to remunerate the exporter for the duty on thrown silk; the less amount of duty paid by the French on thrown silk is a disadvantage under which the English manufacturer labours.

9789. Are the Jacquards in France the property of the master or the workmen?—Of the working weaver generally.

9790. Can you state the cost of Jacquard machines of different sizes?—They are very various; there have been some that have cost from three to four thousand francs; and I believe there are some as low as five or six hundred.

9791. Do you speak of the present value?—Yes.

9792. What is the lowest price of the Jacquard loom you are aware of?—I should think five or six hundred francs, but I speak with hesitation about it.

9793. What is the price in England?—That I cannot say, but the mechanism is very different for different objects; it may be applied to a very simple process or a very complex one, it is like determining the value of a watch, without specifying particulars.

9794. What would be the cost of a Jacquard of 400 cords?—That is a question which must be referred to a manufacturer.

John Bowring,
Esq. LL. D.

27 June,
1832.

John Bowring,
Esq. LL. D.

27 June,
1832.

9795. Do you know whether that would cost five or six hundred francs?—I do not know.

9796. What is the general practice, whether the master or the workmen is at the expense of preparing the patterns?—The pattern is always prepared by the manufacturer.

9797. Is not the pattern produced in the silk by the mere application of the prepared cards to the cylinder of the Jacquard?—Those are details which I am not competent to go into; those are minute particulars of manufacture upon which it is unlikely I should be informed, and I should much mislead the Committee if I did not state that I am unprepared to answer them.

9798. You have stated that the weavers at Lyons suffer great loss from the frequent changes of patterns, and that it is an object of great complaint amongst them; are you aware that one set of cards may be changed for another, so as to change the figure, and the loom is weaving in a few minutes, as the time on a hand organ may be changed at pleasure, by the substitution of one barrel for another?—I have understood both from masters and weavers, that whenever a change of pattern takes place at Lyons, it is a costly affair to both, or either, wherever it may fall; and if there be a discovery in England, so that the change can be made without cost, that is an advantage the English manufacturer has over the French.

9799. Can you state the cost per hundred of the cards used for figured weaving at Lyons?—I cannot.

9800. Are you not aware there is a heavy tax in England on the pasteboard on which the pattern is made?—And a heavy tax in France too.

9801. What is the tax in France?—I think, but am not sure, 50 or 60 per cent. on importation.

9802. Are you aware that the French silk manufacturers, before 1824, paid as much as 1,000*l.* a year for cards?—They must have had a very large trade, then.

9803. You stated that the French Government lately sent away from Lyons a considerable number of weavers into the mountains?—No, I stated that the weavers who were sent away were foreigners, and that they were conveyed to the frontier; those who retired to the mountains were the native inhabitants, whom the Government had no power to send away.

9804. Can you suggest any way in which our Government can reduce the number of weavers in Spitalfields, Coventry and Macclesfield, until they shall not exceed the demand for their labour?—I stated, in reference to those fluctuations which have grown out of our restrictive and prohibitory system, that a great deal of distress must be the infallible consequence; the removal of that distress is an urgent case for the consideration of the legislature, but its discussion is, I fear, a question which would occupy too much time here.

9805. In England, when the weaver is out of work, or his wages are unduly depressed, are you aware of any resource he has except the poors' rates?—He has the poors' rates, and the unfortunate French weaver has no poor rate; in that particular the Englishman has, in all events, a resource denied to his French competitor.

9806. You stated that there is an expectation in France that they shall be able to import thrown silks from England; if that expectation be a well founded one, why, in your opinion, do they not now import them, seeing that throwing has been latterly done in England at so ruinous a rate?—I have only given the testimony of certain individuals, who stated there had been such an improvement in the art of throwing silks in this country, that they thought it very likely they should be in the English market for the purchase of thrown silks; the opinion was founded on what is asserted to be the superiority of the thrown silk of England.

9807. It is a mere opinion, not founded on any transactions?—It is an opinion founded on an examination of the samples of English thrown silk.

9808. Did you visit any of the throwing establishments in France?—The throwing mills are so inconsiderable in extent as to be scarcely entitled to the name of establishment; silk is thrown, in a great majority of instances, by small throwsters.

9809. Did you take opportunities of inspecting their throwing?—I saw their throwing, such as it existed: it appeared to me in a very little advanced state.

9810. Do you believe that a single bale of English thrown silk has found its way into France?—I have no knowledge of any thrown silk imported in quantities, but individuals who have seen specimens of English thrown silk state, that from the superiority

superiority which machinery had obtained in England, they thought it exceedingly likely there would be an importation into France of silk thrown in England.

9811. Do not the French throw three millions of pounds of silk?—They throw the silk they produce. There are some individuals who are producing silk on a large scale; but through the whole of the silk district, almost every peasant cultivates a certain number of mulberry trees, or buys a certain quantity of leaves; but the cultivation is so diffused, that there is great difficulty in collecting all the minute facts.

9812. You are aware that this country does not throw three millions of pounds, or how then can France be an inconsiderable throwing country?—I have not said that they are an inconsiderable throwing country, but that her throwing mills are on a smaller scale than ours. The question of throwing is not a question that occupied my mind, except for the purpose of comparing prices, and those I have handed in.

9813. Have you visited throwing mills in England?—I have, but not with reference to this question. Manufacturing details must be referred to manufacturers. My opinion would be valueless. The point for me to ascertain was the point of price.

9814. You stated that there was no mill which would throw so many as 10,000 pounds?—Yes; it was stated to me that there was no one in which there was 5,000 *l.* invested.

9815. Did you see any one in which so small a quantity as 300 pounds was thrown?—That question is again of detail, and one which I cannot estimate. I have mentioned the price from several sources.

9816. You have stated the burthens of local taxation in France; after all this taxation, are not the prices of provisions there much lower than in England?—That is a question of locality. I have put in the local taxation, because it presses on provisions. If I were asked whether the price of provisions in Lyons were higher or lower than in Devonshire, I should say that the prices of provisions in Devonshire are as low as at Lyons. I cannot compare Lyons with Coventry, and places in a similar situation, as I am not acquainted with the state of their markets.

9817. In London?—The price of provisions in London is considerably higher.

9818. You stated that the number of looms at St. Etienne, in 1810, was 9,000, and in 1831 was 20,000; inform the Committee, as nearly as you can, what increase of the trade of St. Etienne, and of the size of the town, has taken place since 1825?—Those are facts on which I can give no more information than I have already given.

9819. You have stated that the great cause of the prosperity of St. Etienne was the introduction of the bar loom; has not that loom been known in St. Etienne for above 20 years?—Yes, and this is my authority; this is a statement in the handwriting of the individual who is the historian of St. Etienne. He says, "We owe our great superiority to the introduction of the bar loom." The bar loom, which is, as I described before, employed for the superior qualities of ribbons, while those woven in the mountains are made by the common looms.

9820. Have they not been used in St. Etienne for 20 years?—They were introduced from Switzerland as early as 1750. My informant says that there had been successive improvements, and to the introduction of those improvements the town owes its prosperity. That is the statement of a man who knows more about its prosperity than any other man.

9821. Is not the principal cause of the great prosperity and increase of the town of St. Etienne, the great extent of English orders for ribbons since the opening of the Ports?—All the documents showing the proportion of ribbons taken by England I have had the honour of presenting to the Committee, and the Committee is thus in the possession of the means of estimating the extent and importance of the English demand.

9822. Does not the price at which smuggling is performed bear some relation to the legal rate of duties at which goods may be imported?—None at all, at least only temporarily. The price of smuggling is that which gives the smuggler a profit.

9823. Then it will be no encouragement to the smuggler to increase the rate of duty?—If the rate of duty were increased, it would be an additional profit to the smuggler if he succeed in his enterprise; that is to say, his first operation would give the additional profit. The second operation would give less profit; and competition in this, as in every thing else, would bring down the charge for insurance to its average minimum value.

9824. You have stated, that the best way of protecting British manufactures

John Bowring,
Esq. LL. D.

27 June,
1832.

John Bowring,
Esq. LL. D.

27 June,
1832.

would be to reduce the protecting duties to 20 per cent. *ad valorem* ; how do you think that that rate of duty which would not realize above 18 per cent., can protect them better than the present law, under which, according to your own statement, 5-8ths of the goods imported pay a legal duty of from 25 to 50 per cent. and the other 3-8ths are subject to the smuggler's charges, which, according to your statement, averages 20 per cent. ?—I think the English manufacturer would always be much better off when he has to contend with a legitimate than an illegitimate trade ; that is the first reason. The second is, that the lowering of the duty would inevitably give a great impulse to improvement ; that if the quantity of goods now smuggled came legitimately into the market, that legitimate importation could be estimated and calculated upon, so that the fluctuations of the market would be less.

9825. The evidence you have given has resulted from your having been employed by the Board of Trade to make inquiries on the subject, with a view to your examination before this Committee ?—I have stated precisely the character of the evidence I have given ; a great part of it was collected without any reference whatever to this Committee ; but inasmuch as the proceedings of this Committee might possibly have had a bearing upon the general commercial relations of this country with France, and as any step unfriendly to France was likely to have a fatal influence on the discussions of our commission, I did, instructed by the Board of Trade, visit the silk district, to collect on the spot information of a more detailed character than I had before obtained as a commercial commissioner.

9826. Did you not from time to time receive information as to the evidence given before this Committee, and were you not instructed to collect facts to contradict that evidence ?—Certainly not ; I was instructed to collect the facts of the case, whatever their result might be, and I must for my own justification state that I am not here in any respect as a representative of the Board of Trade to advocate any particular system ; my own opinions I have stated openly ; they have grown out of my inquiries in France, and not out of instructions from England, and I cannot consent that my evidence shall be considered as the evidence of a partisan ; I came here with official documents which I leave to produce the impression which their importance and veracity demand.

9827. You were understood on a former day to state, that besides the official documents you have put in, you cannot yourself vouch for the truth of your information that the facts are only those which you have been told by others ?—I do not understand the question so presented ; in some cases my evidence is the result of personal observation, in others it is the result of facts collected from the best sources ; in others it consists of official documents furnished by the Government ; in every case I have endeavoured to collect the best evidence which circumstances allowed, and I must leave the whole in the judgment of the Committee to estimate its value ; on several occasions there has been an anxiety to make me personally responsible for differing statements, but that responsibility I must respectfully disclaim ; the documents and statements which I have presented I believe to be the best procurable by me, since I applied to those who were in my judgment the most able to give me information of a decisive and trust-worthy character ; in fine, it is my desire only to say, that I have endeavoured to get the facts from the best sources, whether official, semi-official or extra-official.

Veneris, 29^o die Junii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. Louis Schwabe, called in ; and Examined.

Mr.
Louis Schwabe.

29 June,
1832.

9828. YOU are a silk manufacturer at Manchester, are you not ?—I am.

9829. What description of goods do you manufacture ?—Various descriptions of goods, as well low priced as costly.

9830. Do you manufacture furniture silks ?—I manufacture furniture silks, figured damask, tabbaretts, waistcoatings, and other fancy goods.

9831. Can you produce any patterns of furniture silks ?—Yes, I produce patterns of my manufacture. [*Producing several patterns, and at the same time producing a written*

a written Statement, which was handed in to the Committee, a copy of which is as follows:—

Mr.
Louis Schwabe.

29 June,
1832.

" I BEG to produce, for the inspection of the honourable Members of the Silk Committee, patterns as specimens of the various fabrics manufactured by me in Manchester; but I beg it may be understood, they are not specimens of artificial weaving prepared for this occasion, but merely samples by which I solicit orders from the general trade; viz.

No. 1, 2, 3, 4, 5, 6, 7 - - - are entirely silk.

No. 8. - - - is silk and worsted.

No. 9. - - - is silk and cotton.

No. 1.—" Is gold-coloured figured silk Damask, manufactured entirely of British, *i.e.* Calcutta silk. The design is composed by myself, in imitation of Gessner's designs of his Idyls. The human figures are my composition, after the designs of Raphael's decoration of the Vatican. These figures are afterwards re-drawn by an artist, at the enormous expense of 1*l.* 11*s.* 6*d.* per day. I allude to this, to show the considerable expense we are at for want of a School of Arts, which would enable us to obtain skilful labour of that description at a material reduction of price.

" The beauty of this pattern, as regards its manufacture, consists in its great variety, with only 600 cords employed; and I do assert, that no piece of workmanship, of the same fabric of cloth, can be exhibited to surpass it, in point of management, as regards the finish and saving of expense.

No. 2.—" Crimson and gold tissue Damask:—This is the same in design as No. 1. The warp is Italian silk, British thrown; the weft Bengal tram. I have, myself, adopted certain improvements to my Jacquard machines, by which I am enabled to complete this description of fabric at a considerable less expense and greater speed than to my belief can be produced, either in France or Spitalfields.

No. 3.—" Pattern of green silk Damask:—This is the copy from an East India design, which I submit to the inspection of the Committee, and beg to draw their attention to the fact, that East India manufactured goods, of the same quality, are of no more cost to the merchant at the East India House than the price which the warp and weft would stand the manufacturer of this country in; say 3½ ounces per yard, averaging 1*s.* 6*d.* per oz. would be equal to 95*s.* per piece of 18 yards. This is a convincing proof that the East India Company must get an enormous profit upon the raw material imported into this country; and at all events aduces a reasonable conclusion, that Manchester suffers equally with Spitalfields by the present system of admitting foreign manufactured goods; so that we are not enabled to sell in competition with that Company, and until their monopoly is restricted, that branch of profitable labour will be lost to the operative of this country.

No. 4.—" Pattern of Tissue Satin, border crimson and gold, and amber:—The design is of an eminent English artist, an ornamental decorator. The warp is foreign thrown, organzine; the weft East India tram. In claiming the attention of the Committee to this specimen of workmanship, I beg to suggest the imperative necessity which exists, of giving protection to the British silk throwster, inasmuch as it often happens that the same implicit dependence cannot be placed in obtaining this article in so perfect a state as from the English throwster, owing to the variety of agents through whose hands it passes.

No. 5.—" Royal purple and gold Tissue Damask:—It has been manufactured to order for a nobleman, and is the copy of foreign manufacture of its best kind; the warp is foreign thrown silk, and is admitted to be as beautiful a specimen of tissue damask as can be produced in France; in short, this pattern has often been doubted whether it was the production of the English or French loom; it combines the firmness of plain weaving with the face of a rich satin, and exemplifies the ability of the English artizan in producing a perfect shade or wood-work, which gives additional effect to the figures.

No. 6.—" Green and white satin Damask:—This is an original design, in imitation of French fabrics; the drawing of the pattern is retained without injuring the surface of the ground-work. This is a specimen of British thrown Italian warp in its natural state, as it leaves the loom without the aid of the fiery process of the Spitalfields silk finisher, the advantage of which is, that it retains its beauty after being a long time in use, and not merely shows to advantage when new.

No. 7.—" Chinese corded Tissue Damask (pale green and cream colour):—This fabric being exceedingly complex can only be produced by using the very best of silk, and employing the most skilful artizan. The warps of this specimen contain both English and Foreign thrown Italian organzine. The boldness of its execution adapts this work to rooms of great height, without losing any of the effect of the design, and is peculiarly suitable, both for day-light and candle-light. This pattern is my own drawing, and the texture is exclusively my own, to the best of my knowledge.

Mr.
Louis Schwabe.

29 June,
1832.

No. 8.—“Berlin Gros (plain dark green:)—I am the only manufacturer of this article; the beauty of this fabric is, that it emulates with velvet in its richness of appearance, and will fall in broader and more graceful folds than any other plain cloth. The warp of the best quality will contain about 9lbs. of British thrown Italian organzine to 100 yards of cloth, and the worsted is of a description peculiar alone to this country.

No. 9.—“Silk Gobelin (crimson ground, imperial wreath:)—This is my own drawing, and is original. Though I do not pretend to exhibit specimens of artificial silk-weaving, it is my firm belief, that this species of workmanship exhibits the excellence of every process connected with the art of weaving, in as great a degree of perfection as any thing which can be produced by British artizans, where the silk weft solely is employed to produce the figure. The peculiar object of this workmanship is to imitate mosaic work; and where expense is of no object, any device which can be produced in mosaic work, can equally be effected by this description of weaving. This specimen is wrought with a draw-boy machine, but the narrower widths are made by the Jacquard loom; the peculiar mode of working the Jacquard loom is an invention of my own, and enables me to sell this fabric at a very moderate charge. I need only add, that the excellence of this article has procured me the distinguished patronage of Their Majesties, and what I have already delivered of it, along with other silk furnitures, has met with Their Majesties’ entire approbation.”

9832. Is the Bengal silk peculiarly adapted to fabric No. 1?—I believe it is well adapted.

9833. Does not the use of Bengal silk produce that roughness on the face which you, of course, as a manufacturer, would like very much to get rid of?—I should certainly prefer the Italian silk, if it was not much more expensive.

9834. Do you happen to know whether an article of that kind is now making in Spitalfields by any manufacturer?—[*Pointing to one of the patterns, No. 3.*—I do not doubt but that they may manufacture a similar article in Spitalfields.

9835. Do not you, in point of fact, know of your own knowledge whether there are any manufactured there of that kind?—There are.

9836. Have you any objection to state to the Committee what you pay for weaving this per yard?—Yes; I have instructed some cotton weavers to weave this article, and having done so, I believe I can deliver the article somewhat cheaper than Spitalfields manufacturers can.

9837. The power loom is not applied to that in any degree?—I believe not.

9838. What prevents you from applying the power loom?—Speed would, in my judgment, interfere with the natural elasticity of the silk, therefore I conceive, by the application of the power loom, what would be gained by speed would be more than counterpoised by the injury done to the article manufactured and to the warp.

9839. Have you been at Lyons?—No, I never was in any manufacturing town abroad; I came to England very young, and what I know I learnt at Manchester.

9840. Are you acquainted with the sort of silk which they use in the manufacture of a similar article at Lyons?—I do not pretend to be in anywise acquainted with foreign manufacture.

9841. Do you not know that the English manufacturer has an advantage over the French, in having possession of the Bengal silk for the manufacture of such things?—No, because Bengal silk may, as I believe, be got as cheaply by the French manufacturer as it can be got by the English manufacturer; but when Bengal silk can be got by the English manufacturer at the rate it will cost when the injury to trade, resulting from the East India monopoly, ceases, my belief is, that the English manufacturer will have a decided advantage over the French.

9842. But when you speak of Bengal, these are China manufacture and not Bengal manufacture?—I believe silks are manufactured in the East Indies as well as in China.

9843. Did you ever see a China silk manufacture of these articles?—Yes, I have seen articles of the sort, said to have been made in China.

9844. Does it answer well for the purpose?—China silk answers exceedingly well.

9845. Do you consider that some of their superior kinds of silk are, for that purpose, equal to the Italian?—Decidedly so; some of them are.

9846. You stated that the persons who had been employed in manufacturing these articles you had taken from the cotton weaving; how long is it since they were weaving cotton?—Some about four years, some three years, and some two years;

years; but I may say very little instruction is necessary to make a clever cotton weaver a silk weaver.

9847. What branch of the cotton trade have you taken them from?—From weaving good cotton warps.

9848. Were they from figured or plain?—Both plain and figured.

9849. Is there any difficulty in a cotton weaver turning his hand to the manufacture of silks?—No, otherwise I believe many weavers now employed would be starving for want of employ.

9850. So that you mean to say the silk trade is absorbing hands heretofore employed in manufacturing single-hand weaving in the cotton trade, that were thrown out of employment by the power-loom?—Yes, I think so.

9851. And in that way the introduction of the silk trade has been a very great benefit?—Yes, at Manchester.

9852. And the persons are content to weave for very low wages?—I believe they are very well satisfied with what we have been giving them; of late there has been no complaint.

9853. How long have you been resident as a manufacturer at Manchester?—I have been residing at Manchester, as a merchant and exporter of manufactured goods, for the last 16 years, but I have not been a manufacturer all that time.

9854. How long have you been a manufacturer there?—About five or six years.

9855. What country are you a native of?—Of Dessau, in the neighbourhood of Leipsic.

9856. How many looms producing this kind of work which you exhibit, do you employ at Manchester?—As many looms as my orders and trade require.

9857. Have you any objection to state how many they are?—I think I am not called upon to do so, but I may state I can execute any order with as much dispatch as any manufacturer in Spitalfields.

9858. Have you more than 100 looms?—It does not depend on the number of looms.

9859. How many looms are there in Manchester, do you suppose, employed in that description of weaving, not of your own alone, but of other persons?—The Committee will please to observe it is not by the number of looms, or rather machines, but it is the quantity of gatings by which it can be judged what a manufacturer can do.

9860. What is the meaning of gatings?—The arrangement of the machinery.

9861. Do you mean the size and capability of the loom, its power to execute a pattern?—I mean the shafts, the comber boards, and the general arrangements of the machinery, to produce a pattern and peculiar fabric of cloth.

9862. The Committee wish to know what is the number of looms that you suppose is employed in manufacturing that description of silk goods at Manchester?—I really cannot say; I have very little personal acquaintance with other Manchester manufacturers, and I know nothing of their business; I find it quite sufficient to attend to my own concerns.

9863. Then you do not know the number of looms at Manchester, you only know your own number, which you decline to tell the Committee?—All that I wish to say is, that I can execute any order in my way of business as quickly and as well as any manufacturer in Spitalfields can.

9864. You state that you furnish employment for the operatives of Manchester; now will you tell the Committee whether you furnish employment for more than 200?—I decline to answer any question relating to my own private affairs; I may say, however, that I have two looms and upwards; that I have employed more than a hundred hands at one time; that I am not as rich as some of the Spitalfields manufacturers may be; but if I were, I may add, I think I could produce better things than what they have hitherto produced.

9865. You have been asked as to the advantages you have in the use of Bengal silk; are there any advantages you possess in the purchase of Bengal silk that the Frenchmen do not possess; cannot the French manufacturer come to the market and buy Bengal silk as well as you can, if it so answers his purpose?—Yes.

9866. Is not the market open to the French manufacturer as well as the English?—Yes.

9867. You stated you have used Bengal silk in this work because it is cheaper?—In this particular specimen (No. 1,) I used it; it was exhibited to the Board of Trade; afterwards it was shown to Mr. Huskisson, to convince him of the capability

Mr.
Louis Schwabe.

29 June,
1832.

of the British manufacture of silk damask, entirely British, wove by British artisans, and of East India silk.

9868. The Committee understood you to say, that you used Bengal silk because it is cheaper than other silk; did you not say so?—It is cheaper than Italian silk.

9869. Can you state what is the price in France or on the Continent of the silk used in similar works there?—I only speak of my own works; I cannot speak positively as to what is paid abroad.

9870. Are you paying at Manchester for the weaving of this work, a lower or a higher price than is paid for the same work on the Continent?—I do not pretend to be acquainted with foreign prices, nor any thing of the kind.

9871. Are not some of the patterns you have shown to the Committee a mixture of silk or some other material?—It is so stated in the statement I have handed in.

9872. Then the patterns you have produced are specimens of a manufacture which is not a manufacture actually carried on at Manchester to any extent?—I only know my own business; I know nothing of the business of my neighbours.

9873. How long is it since those patterns were made?—Some of them have been laid before the Board of Trade three or four years ago; some have been made for a particular order within the last six months, but none of them have been made to be exhibited on this occasion.

9874. Did you not say that some of them were made to show Mr. Huskisson what could be done by British manufactures?—I did.

9875. How many of those patterns have you had orders for?—Almost all.

9876. How many?—There is only one amongst them that I have not had an order for.

9877. Have you any objection to state how many yards you have sold from first to last of that description of article?—[*Pointing to one of the patterns*].—A great deal.

9878. That is not an answer to the question?—I have an objection to the question.

9879. Have you sold any lately?—Yes; there are some amongst the specimens which actually are sold.

9880. Have you sold them as specimens or as articles for use?—As articles for use, and also as articles to be exported; some of my fabrics have been exported by some of the trade in London.

9881. To what country have they been exported?—I have been informed that they have been exported to America.

9882. Is pattern No. 3, Foreign or English manufacture?—It is my own.

9883. That is your own manufacture at Manchester?—Yes.

9884. Do you know what an article similar to that may be purchased for at the East India Company's sales?—I have been informed at times for about 85 s. and at other times, 95 s.

9885. For a piece of what length?—Of eighteen yards.

9886. That is about 5 s. a yard; at what price can you make that to afford to sell it with a profit?—I have mentioned in my statement that the warp and weft cost me as much as about what it costs the merchant when he buys it at the East India House.

9887. Do you supply the London upholsterers with any of these articles of furniture?—Yes, many of them.

9888. Is there any reason why you do not supply them to a greater extent that you can name to the Committee?—Yes, there is.

9889. Will you state that reason?—Because the principle of business, in the trade carried on at Manchester, is totally different from the principle of the business as generally carried on in London. We at Manchester are all as much as possible for cash payments, and do not like to give long and indefinite credit. My terms are frequently objected to by London upholsterers, who require very long and indefinite credit. I have, however, among my customers, some most respectable London upholders, who buy for cash or short credit, and are satisfied with a moderate but reasonable profit.

9890. Do you know what the credit is which the London upholsterers require on the purchase from the Spitalfields manufacturer?—No; I only speak of some who require from six to twelve months; and twelve months credit has been required of me. I think three or four months credit reasonable.

9891. Then you conceive that the long credit required by many of the London upholsterers

Mr.
Louis Schwabe.

29 June,
1832.

upholsterers is the reason why they would not deal with you?—It is so with some of them.

9892. And is a reason also why the consumer here has to pay a very high price for his articles?—Decidedly so; the longer the credit the higher the price.

9893. Do not you consider that these long credits are very injurious to any branch of manufactures?—Decidedly so.

9894. And that the nearer to a cash payment the better for every thing?—Decidedly, I am of that opinion.

9895. Now, do you mean to say that there are not houses in London in the furniture trade (in these articles) that would buy them at a short credit?—I have stated that some of the most respectable dealers and upholders in London pay cash, or are satisfied with my terms.

9896. Are there not a great number of houses in London who deal in articles of this kind, and who even supply the upholsterers in London?—Yes.

9897. Have you applied to those individuals, and have you sold any goods to them?—Yes; and I have sold goods to them.

9898. Can you mention any house in the furniture trade that you have sold these things to?—Yes, if it were necessary.

9899. There is a house of Waithman & Co. in Regent-street, that sells a good many of these things; did you apply to them?—I wish it to be perfectly understood I did not say or mean that the whole of the trade require credit. I only said and meant, that part of the trade require long credit; that is what I said, and one of the reasons I assigned for not doing more business.

9900. Do not you know that there are in London several houses of that description, who deal largely in these articles, and sell them to upholsterers, when buying them at a short credit is no object to them?—Decidedly, I said so.

9901. Have you applied to those individuals, and have you sold them any quantity?—I have applied to individuals for orders, and I have received orders.

9902. Can you mention any particular house that you have received orders from?—I do not wish to name my connexions; but if necessary I could.

9903. Do not you know that East India goods of this description are sold in the sales at cash, and that they must be paid for before they are cleared?—I am perfectly aware of that.

9904. Do you happen to know that there is not a house, even in Bond-street or the West end of the Town, and other places, that has not bought largely of these goods at the India House, and paid cash?—I do not doubt it; I know many of them are very wealthy.

9905. Well, then, can that be a reason; how do you account for your not selling these goods, because you say the length of credit has been the means of preventing you from selling these goods?—Many upholders will not buy without long credit; but that is not the only reason; one other reason is, that Spitalfields manufacturers, and upholders dependent on them, choose to decry Manchester goods.

9906. You stated just now that the reason why you did not sell these things in large quantities was, because the houses in London required a long credit?—I did not apply my observations to these particular patterns, and I only meant that that was one of the reasons.

9907. Without speaking of patterns at all, you were asked upon that whether these long credits were not a great disadvantage, and an extra charge to the consumer?—I did say so.

9908. Well, now you have been asked whether there are not houses that deal largely in these goods at the West end of the Town, the principal houses, that buy them and pay cash in the India House, as well as buying them at short credit in town?—I have not denied that such is the fact.

9909. Then the statement that you cannot sell these goods [*pointing to pattern No. 3.*] to individuals, because they give long credit, cannot be true?—I beg pardon; I did not state it with regard to this pattern; in fact, I stated distinctly that the warp and weft cost me as much money as what the piece would sell for at the East India House: that is what I say.

9910. All the evidence before the Committee goes to show, that the principle of credit in Spitalfields is very short; now how do you know that it is long, because you have stated it is long?—I am informed so by persons who are employed to sell for me.

Mr.
Louis Schwabe.

29 June,
1832.

9911. Then you know nothing of the fact, but as you are told?—I know that such has been the reason assigned to me by my agents.

9912. Then you do not know but as you are told?—I know that some persons have required very long credit of me.

9913. You know nothing of the fact yourself?—Yes, I have offered these very patterns, some of them at least, to certain parties, and it is to such that I allude, who say, "Pray, sir, what are your terms?" I tell them my terms, and then they turn round, and say, "We cannot do business on such terms."

9914. Might not that be a mere excuse, rather than telling you your goods are dearer or worse than other people's?—No, I know otherwise; my goods are neither dearer nor worse than other people's, and if required I can bring evidence of London dealers and upholders who will testify to the contrary.

9915. Now, have you ever offered these goods to large warehousemen in London that are capitalists, and that can afford to pay shortly?—I have.

9916. And have they sold them in considerable quantities?—These goods are not goods that any persons keep a large stock of.

9917. Did you not offer them to an upholsterer who did not like to buy them on your terms?—Yes.

9918. You do not know that the upholsterers hardly ever buy those goods at all, but they are supplied by the warehousemen in London, do you?—I do know respectable upholders who buy their goods from the manufacturer; I will not deny that there are tradespeople in London who know the London business better than myself.

9919. Are not the foreign goods which pass through the upholsterer's hands subject to the same difficulties of credit that your goods would be?—Decidedly so.

9920. In point of fact, the upholsterer does not recommend to his customers to purchase things of this kind, unless he can get a long credit on the article himself?—I believe that a prejudice, inimical to Manchester silk goods, has been industriously circulated in London by Spitalfields manufacturers, and tradespeople dependent on them, which is one reason why I do not sell my goods so easily as the Spitalfields manufacturers can.

9921. You do not happen to know that the Spitalfields people manufacture those particular articles infinitely better than down at Manchester, and infinitely better than those from the East Indies?—I am certainly not aware of that, and would willingly compete with any Spitalfields manufacturer.

9922. Have you any doubt that the people at Manchester can make them quite as well as the people at Spitalfields?—I think they make them better at Manchester.

9923. Do you mean to say that any man at Manchester can manufacture this sort of article equal to the house of Stephens Wilson?—I venture to say Stephens Wilson cannot produce a piece of cloth like this (No. 9.)

9924. Does it advance the respectability of the silk trade by introducing such a pattern as that?—[*Pointing to one of the patterns*]—That it is a very old pattern, and it is a good deal soiled.

9925. They are held probably by your agent, and shown to his customers?—Yes.

9926. And therefore have been in constant use?—Yes.

9927. How old is that pattern?—Let me see, the upholsterers for whom it was made failed in business; I think it is about two years and a half since that pattern was made.

9928. Do you know what credit the house of Stephens Wilson gives?—I have quite enough to do to manage my own business, and know nothing of theirs.

9929. But when you say long credit, you ought to know?—I have stated I only know what other people ask of me.

9930. Do you think they give any body more than six months?—I tell the Committee candidly I only mind my own business, and let other people mind theirs.

9931. When you say the London upholsterers have prejudices against the manufacturers at Manchester, do they refer to the goods or the sellers?—I must leave them to decide that.

9932. Supposing the gentlemen in Spitalfields wished a comparison should take place, and they have no objection to bringing goods here to be placed by the side of yours, should you have any objection?—Why, I am leaving London to-night.

9933. But

9933. But would you have any objection to leaving the goods?—I should not like to explain my particular mode of manufacturing in presence of my opponents.

9934. But what the Committee meant was this; that supposing any of the gentlemen of Spitalfields wished to place Spitalfields goods at one part of the room, and your goods were placed at the other, that the Committee would have an opportunity of comparing the two together at the same moment?—I really do not think that would be quite justice to myself, because I should have nobody to protect my interest as a manufacturer; I would, however, gladly compete with any Spitalfields manufacturer in producing any particular pattern of the articles manufactured by me.

9935. Then you refuse to have it done?—Unless I could be here to protect my own interest.

John Bowring, Esq. LL. D. again called in; and Examined.

9936. HAVE you any additional evidence to give of distinctions conferred by the French government on account of superior skill in the silk manufacture?—These patterns have called to my recollection a fact of some interest connected with that particular fabric. The man who has most advanced the production of furniture of that sort was made a member of the Legion of Honour by Buonaparte. An inquiry was instituted as to the individual who was considered to represent the Lyons manufacture in its state of greatest advancement; that individual's name is Grand, and he, in consequence, had that distinction conferred upon him.

9937. Are you aware in what light the French manufacturers view the present inquiry before this Committee?—With very considerable anxiety.

9938. Have not the French manufacturers at Lyons expressed their fear lest the Committee should recommend the prohibition of their manufactures, from the knowledge that that prohibition would produce great consequences to the commerce at Lyons. Just read that extract?

[Dr. Bowring read the extract, which was as follows:]

"We received from London a letter, dated the 11th of April, stating that, on the pressing solicitation, repeated a thousand times by English manufacturers, Ministers granted to them the formation of a Committee, composed of members of the House of Commons, whose object is to ameliorate the situation of the manufacturer. It is proposed to do nothing less than to prohibit French silks: Mr. Ellis is for prohibition, Mr. Morrison is against it, and they are both Members of Parliament. The Members of the Committee who are of Mr. Ellis's opinion, are for entire prohibition; those of Morrison's part of the Committee, of which Mr. Joseph Hume is at the head, desire, instead of a prohibition, to diminish duties, in order to counterbalance the benefit which the smugglers obtain, and to put an end, if it is possible, to their illicit traffic." The Editor says, "An absolute prohibition of French silks would be injurious to our manufacturers; but every thing induces us to believe, that the English Government will not lightly take so serious a determination."

9939. What is that from?—This is an extract, dated the 17th of April, from a Lyonnese paper.

9940. In fact, they are evidently persuaded that they have received a great benefit?—Clearly so.

9941. You have stated, that the total value of the produce of the silk manufactures of France is about five millions and a half sterling, and you have stated that the total amount of silks consumed in France, in the manufacture by looms, is 4,200,000 pounds weight, and you gather that from the various statements of the number of looms; now it has been stated by other individuals who have been examined before this Committee, that the quantity consumed is very much larger than that; and probably, if you make an allowance for the quantity used in manufacturing sewing silk and stockings...?—I returned the sewing silk and stockings.

9942. Not in your estimate of quantities?—Yes.

9943. You gave 70,000 looms, and you stated, when employed, that each loom consumed annually 60 pounds of silk, which gives 4,200,000 pounds; that excludes the quantity of sewing silk and stockings?—No, I beg to state it does not; a deduction must be made for looms not employed, and for other articles besides silk, which will, I suppose, be sufficient to cover the quantity of silk worked up without the intervention of looms. In the calculations of the whole silk manufactures of France, I mentioned before that all these calculations must be decidedly of an approximative character. The common estimate of the quantity of silk consumed

Mr.
Louis Schwabe.

29 June,
1832.

John Bowring,
Esq. LL. D.

John Bowring,
Esq. LL. D.

29 June,
1832.

sumed in France was four millions; then I corroborated that estimate from various different sources, and it appeared to me, from all these sources of evidence, that estimate could not but be a nearly accurate one.

9944. You stated that it was estimated from the best information you could obtain that each loom consumed sixty pounds weight of silk; then you stated there was 30,000 looms at Lyons; at St. Etienne, 20,000; 8,000 in different parts of France, and 2,000 at some other place, making 60,000; but in going more particularly into the inquiry, you have stated that Lyons and its neighbourhood has 35,000, and in the district round there are from 18,000 to 20,000 more?—My evidence stated, that though the number of looms at Lyons was about 33,000, that it was estimated the number of looms at this moment employed was from 24,000 to 25,000.

9945. You stated the probable quantity at work was 30,000, on account of the declining state, from the existence of the cholera at the present moment?—I stated that there had been 30,000 at work, but from the existence of the cholera that number was reduced 4,000 or 5,000, so that I estimate the number of looms at present in work at Lyons and its neighbourhood may be about 24,000 to 25,000.

9946. But if you mean to diminish the number of looms, and take an estimate of the quantity of pounds of silk consumed by each loom in the course of a year, and then say they shall be employed the whole of that time, that gives you a much larger average than sixty pounds; you state an ordinary weaver makes four ells per day; that in no ell is there less than five ounces, which, multiplied by six, gives thirty ounces per week, which is nearly 100 lbs. weight of silk for every loom?—I mentioned, among other facts, that in the Vaucluse District, the average return on a very large manufacture was only one ell and a half per day, and the Committee will also take into consideration that at Avignon as well as at Lyons, a quantity of other materials enter into the manufacture which I should think would very nearly counterbalance the quantity of silk not manufactured by the loom, but employed for other objects; at Nismes, for instance, there is a very considerable shawl manufacture, where cotton and wool enter into the article.

9947. Well, but take your own statement of 70,000 looms, and each loom consumes 60 pounds weight of silk, that gives 4,200,000 pounds; now, as matter of calculation, you can either reduce the value of these pounds into kilogrammes or take it pounds, just as you like, for the purpose of showing that there is a very great mistake in the estimated value of the manufactures of France; if you take, as you have stated you ascertained it from the manufacturer, that the kilogram of raw silk was at 70*f.*?—Seventy francs!

9948. Yes?—I do not remember to have made any such estimate of general value; with respect to these details, I was not at all aware I should be again called upon to refer to documents, the whole of which I have delivered in, and feel great inconvenience in being thrown on my memory to justify calculations which I have presented in writing; in all these cases I have delivered in statements given me by others, always with a declaration, that I am not in any respect responsible for any incongruity, if incongruity there be. I have been asked for the French returns of the value of silk manufactures, and have delivered them in; if they are not correct, no responsibility falls upon me, nor can I be called to explain any results or any contradictions that may grow out of them; but I feel myself bound to say, and that after long experience, that the veracity and good faith of the French Government have been most exemplary, and I am compelled to bear earnest testimony to their disposition to give the most correct information; I was asked why I believed that four millions of silk were employed in France; I have obtained from numerous manufacturers their estimate, and in that they were nearly all concordant; I endeavoured to test it by other means, and it still appeared to me that the results I drew were correct; but if any individual should show that a Custom House return in this country is an incorrect return, the responsibility would fall on the individual who prepared that return, and not on the individual who presents it, or draws deductions from it.

9949. If you will reduce 4,200,000 pounds of silk into kilogrammes, and if you will then take the official value of the manufactures of France by the value fixed upon them by the Government, you will ascertain that it is nearly double the amount you have given of the value of the manufactures of France; the Committee are only desirous, as you have put this evidence before them, that you yourself should be convinced, that in stating the manufactures of France at five millions and a half, there is a great inaccuracy?—If the Committee will do me the honour

honour of putting into my hand their estimates on paper, and showing that those estimates are irreconcilable with my evidence, I will very cautiously examine them, and explain as far as I am able the incongruity, or at once admit it; but I feel very great difficulty, without any previous notice of the nature and character of this cross-examination, in answering, off hand, objections which are really a complicated subject of figures and arithmetic; of course, if the Committee can impugn the official statement of the French Government, I am not responsible for that in any shape; I have myself no doubt at all, from the way in which on every occasion the French Government have communicated information to us, that they have given documents which they believe to represent the facts; if their veracity is disputed, I shall not object to communicate to the French Government a desire that they may be elucidated.

9950. You have stated that the official value of plain silks in France is 120*f.* per kilogram?—I have given the Custom House return.

9951. You have also stated that they give 130*f.* for wrought?—I believe so; but cannot immediately say from memory; the quantity of facts I have had to give in evidence is so numerous, that though I have no doubt my evidence may be correctly quoted by the honourable Member, I really must be allowed to refer to it before I can be expected to answer such questions as are grounded on quotations of figures, when I have not those figures before me.

9952. You have spoken of the number of looms, as particularly alluded to by Chaptal in his book; when was that published?—I cannot speak positively from recollection, but Chaptal's account does not come down to the present period.

9953. What does he estimate it at?—I am not quite sure, but I recollect I was struck with the smallness of his estimate when I read his book.

9954. The book was printed, when?—I think the first edition of his book was printed in 1819.

9955. And the last?—I am not sure whether there is another edition. I stated, with respect to all previous calculations of the looms of Lyons, that great uncertainty exists as to the numbers before 1831. I do not myself put any considerable confidence in previous statements. The census of the population, and an official estimate of the quantity of looms, were made when I was at Lyons; till then, I believe no official statements had been published.

9956. Do not you believe the looms have increased very much within the last few years?—I should think there has been, most decidedly, an increase of looms.

9957. Therefore what Mr. Chaptal has said cannot apply to the present state of things?—Clearly not.

9958. But it might have been corrected by the present time?—I have given the best information obtainable at the present time. When Chaptal was Minister of the Interior, he instituted certain inquiries as to the cultivation of silk. The increased cultivation is a matter to be estimated, inasmuch as it may be calculated in how many years a mulberry tree will be made productive, and I should think, that out of a reference to all the sources, probably a correct estimate might be formed of the present extent of the French production of raw silk.

9959. Do you consider the French authorities give you your information concerning the silk trade from a desire to serve England, and would therefore be cautious not to mislead the English silk manufacturer?—I do not believe the French Government had any other desire than to state the truth. When they gave me the information, they gave it solely with reference to the commercial commission that was then sitting; it was given as much to the French commissioners as to the English.

9960. Did you receive no information from the French authorities since it was known that you were inquiring into the silk trade?—A great deal. Many of the details that I put in, I stated grew out of the inquiry I had lately made, but the most important facts had all before come under the cognizance of the commission that was sitting at Paris.

[*Dr. Bowring was requested to come prepared, on a future day, to give the Committee an answer to the following :*]

9961. What is your reason for thinking that the value of the silk manufactures of France is only 5,500,000*l.* when you state that the consumption of silk made into goods is 4,200,000 pounds, and when you show from information derived from manufacturers, that the expense of working up these goods is in no case less than 80 per cent. of the cost of the material, and in some instances reaching so high as 120, the great majority of goods being of that description on which the cost of labour is 90 per cent.

Barrett Wadden,
Esq.

29 June,
1832.

Barrett Wadden, Esq. called in; and Examined.

9962. ARE you a silk manufacturer?—I am.

9963. In Spitalfields?—In Spitalfields.

9964. How long have you been a manufacturer in Spitalfields?—Nearly ten years.

9965. Where did you reside before the time you came to settle in Spitalfields?—In Dublin.

9966. What was the cause, and what were the circumstances under which you removed to London?—I fear I shall be under the necessity of trespassing on the Committee, by giving a long answer to that question. At the time of the Union between Great Britain and Ireland, in the year 1800, there were fixed at that period what are called the Union Duties; which duties amounted to 10 per cent. on the importation of British manufactured silks into Ireland. About the year 1819, the Government of this country, desirous to amalgamate the two kingdoms into one and to unite and identify their respective interests, came to a determination to repeal the Union Duty, so called; and as long as I was a silk manufacturer in Dublin (which I believe I was for 14 years, and I have been 10 years here) the payment of 10 per cent. on British manufactured silks was, what in Dublin we silk manufacturers then considered a protection. I found by experience, that our warehousemen, our mercers, and our fashionable milliners in Dublin were constantly in the habit of visiting this Metropolis, three, four and in some instances, I believe, six times a year, in search of British goods and London fashions; and according as those things found their way into Dublin, brought in by the parties that I have already alluded to, we immediately set to work to bring out our imitations; for it was of very little importance how beautiful an article it might be that we could produce; it had no sale in our market unless it was stamped with British origin; unless it came amongst us as sanctioned by London fashion and taste. The result was, that when I was a silk manufacturer in Dublin, in common with all the other manufacturers there, we were constantly a season behind-hand, London taking the lead; and I was obliged to follow the imitations of those beautiful fabrics manufactured by Ames & Atkinson's house in London, and Campbell & Bridges, (they were the manufacturers that used to interfere with me then,) Bell & Winkworth, and another very eminent house that was in Broad-street, Adamson & Bell. We found that all our buyers came to London to those houses, and brought over some splendid specimens of British industry, and thus we required the protection of 10 per cent. to preserve us from the competition we were exposed to in this way. As soon as I discovered that the British Government had determined to repeal the Union Duties, I was appointed to be one of a deputation to wait upon the then Chancellor of the Irish Exchequer, and in company with some very influential persons, men of high character and great experience, we waited upon the Chancellor of the Exchequer, and at that interview he was assisted by Sir Henry Parnell, and by, I think, the late Lord De Vesci. We explained, on that occasion, that in our opinion, as soon as the Union Duties would be repealed, that the silk manufactures in Dublin would be destroyed; and as long as I have the use of reason, and the power of memory, I do not think I shall ever forget the answer that the Chancellor of the Exchequer then made to me: it was in these words, "You are wrong; the repeal of those duties will be to you a source of very considerable employment; for while there is a duty of 10 per cent. on British manufactures coming to Ireland, and a duty of 10 per cent. on your Irish poplins or tabinets going to England, so long you will be shut out from that market; but take away those duties, and for every ten weavers that you now employ in the production of Irish poplins or tabinets, you will in my judgment," says the Chancellor of the Exchequer, "be enabled to give employment a hundred fold." We begged leave to differ from him; however it was no great importance; they had it all their own way; the duties were repealed; and I have lived to see some of my best, my oldest and my most valued friends sent to prison, their families scattered East, West, North and South; the manufacture, as it relates to silk in the city of Dublin, almost annihilated, and the prophecy of the then Chancellor of the Exchequer exhibited, at least in my judgment, I think I am justified in saying, he was a very false prophet. Under these circumstances I came to London, determined that I would not remain there to be destroyed, and I find I was right; for I left men behind me, ten years ago, in the city of Dublin, engaged in manufacture of silk, that, on the day I left it, were worth their 14,000*l.*, their 20,000*l.*; and these men, I am sorry it grieves me to the

Barrett Wadden,
Esq.

29 June,
1832.

the very heart to be compelled to speak it, they are gone; they are destroyed as manufacturers; they have lost their property, and I believe are not worth so many pence. Under these circumstances I came to Spitalfields; and now that I am here, I find a system by the same power is put in operation, that is placing me in a situation now, as it relates to France, somewhat similar to the situation that I was originally in as a Dublin manufacturer in relation to the fashions of London; that brings me till I came to Spitalfields.

9967. What was the condition of the silk manufacture at the time of your removal, the circumstances of which you have just stated, and what was the condition in which that manufacture remained up to the time of the opening of the Ports to foreign silk goods?—When I came to London, I knew, indeed common experience, common sense, pointed it out, that my first object should be to try and get a knowledge of the manners and the customs of the people, and having got that knowledge, to apply it to my own advantage. I was a good deal struck with the marked difference that I observed between the condition of the wretched silk weavers that I left behind me in Dublin, and a corresponding class of persons that I came amongst in Spitalfields. I found the weavers in Spitalfields in the possession of much more comfort than I was led to think I would find them possessed of. I observed that when Sunday came, their families made a respectable appearance, and went into the parish church, and that the men, at least as far as my knowledge went of them, presented a most respectable and orderly appearance; and here I will state a singular fact, that the first weaver I employed in London, when I came here, was a man whose appearance was so far above that class of persons that I was in the habit of seeing in Dublin. I was so much delighted with the appearance of the man, that I said to him, “I am extremely glad to see you so respectable; is it possible that you are enabled to maintain this appearance by your labour?” The answer he gave me was, “I have been for 24 years a hard-working man; I have gathered together 300*l.*, which I have in the funds, and that, with the continued renewal of my labour, enables me to preserve my family, and to appear respectable before you.” I consider the weavers of Spitalfields, as a body, decidedly a very superior class of men to those that I left behind me; and I consider them as enjoying those necessities and those comforts that are the best and perhaps the only guarantee for peaceable and good conduct that a parental Government ever need expect to have from the working part of the community.

9968. Did the alteration of the law, that is to say the opening of the Ports, produce any immediate bad consequences on the silk trade?—I found that it did; goods got amongst us at prices that I have no doubt on my mind left the first importers a very considerable profit, but at prices so far below those which we were in the habit of receiving in this market, that we really looked at each other as if we had got out of our graves. I, for instance (my eyes are never very good), but on that occasion I did open them, and looked at my brother manufacturers with the same amazement as I observed they were looking at me; we were all astonished at the state that the importation of goods was likely to bring us to, the price was so low; we almost immediately (I can speak for myself) turned round to see was there any thing left within my reach that would enable me by grasping it to come on a par with foreign production, and the first class of persons I found it necessary to grapple with were the working people. I proposed a reduction of wages, which they most reluctantly yielded to; but they were obliged, under the circumstances, to yield to a reduction of wages, and the manufacturers were obliged to yield to an alteration of their profits; and this state I believe has altogether grown out of opening the Ports to foreign manufactured goods.

9969. What has been the general condition of the silk manufacturers since the first opening of the Ports up to the present time?—It has been extremely unsettled; there do not appear to me to be any regular balance of preserving us; one time we have the appearance of briskness, another time we have all the horrors of want of employment staring our people in the face, and this producing such distress amongst our people, and such uneasiness among the manufacturers, that it is almost impossible for any man, I assert it as a fact, as it relates to myself, that I find the experience that I have gathered as a manufacturer for twenty-four years is an experience that fails me in the present condition in which I am placed; that I find my former experience no longer available to the pursuits of my business; that I am tossed into a new order of things, and that this new order of things places me in a situation as if I had almost only come into the world yesterday.

9970. You have spoken of a great reduction of wages which you were obliged to resort

Barrett Wadden,
Esq.

29 June,
1832.

resort to, was it immediately after the admission of foreign silk goods that you found it necessary to begin to make that reduction?—I would say not immediately; as well as my memory serves me, the reduction was not an immediate one, for the Government, seeing that there were some difficulties in the way, they, I believe, altered their original design, and rendered it imperative upon the importer of foreign manufactured silks to bring them in at certain lengths. The French manufacturers at that time were not prepared for such an alteration, and consequently many of the productions which they had got ready for this market remained with them in their own; they were not admissible; they were not answering or corresponding to the lengths which the act of permission gave them; therefore, on the other hand, there was an enormous anxiety among the people of this country to get hold of foreign productions. Those foreign productions having been shut out for a great number of years, increased the anxiety of every lady in the land, and I would almost say of our servant maids, to get hold of something foreign. As soon as the Ports were open for the admission of those foreign goods, the public were in a great measure disappointed, for they did not come in in those quantities to satisfy the demand that was remaining for them, and the demand would not give way; it must be satisfied; and it required the continued import of the French goods from France, added to whatever stock we had in Spitalfields, and a continuation of employment, to satisfy the enormous demand that was then standing in expectation of being satisfied with foreign productions.

9971. Has the deterioration in the trade of which you have spoken, both as to wages and as to profits, been progressive up to the present time?—There was, I would say, a progressive decline of wages and of profits from the year 1825 to the latter part of 1826, and a further decline took place in both wages and profits from that period down to 1829, and it has been one series of drooping from 1829 down to the present time; therefore I am safe in saying, that the deterioration as to wages and profits has been progressive up to the present time.

9972. Do you consider that the English manufacturer made every practicable exertion to meet the foreign competition?—I think the English manufacturer has made every exertion which very considerable capital, great experience, and a determined industry on his part would enable him, that he would not be put down by foreign competition; but this capital, this industry, and this experience, so exerted by him, has failed.

9973. Are you in the plain or the fancy department of the trade?—Altogether in the manufacture of plain goods.

9974. Are you at all interested in the throwing of silk?—Directly, I am not; indirectly, I say, that I am; that is, I have an interest in common with every manufacturer of silk goods in this country, to uphold the British throwster; I myself am not connected with a mill, but common foresight points out this to my mind, that if the British throwster ceases to be protected by a fair preference given to him by the British silk manufacturer, that the British silk manufacturer must necessarily arrive at a period of time when he will cease to have the benefit that arises out of the competition carried on between the foreign throwster and the British throwster, and therefore I am most anxious to preserve the British silk throwster, knowing that as long as I do that I render a benefit to myself, and that is the explanation that I give to the term when I say that I am indirectly interested in the throwing mills of this country.

9975. You have spoken of the condition of the working class in Spitalfields at the time when you first came to reside among them; are the Committee to infer from what you say, you consider that they were at that time a highly respectable body of persons?—I considered them so respectable that it made a very strong impression upon my mind, and I put up my two hands and returned thanks to God for the change I saw; I came from a place where I saw a great deal of misery and wretchedness to a place where I found more respectable men, amenable both to the laws of their country and respectful to their masters.

9976. They were, then, at that time both an orderly and respectable body of persons?—I considered very much so.

9977. What has been their general condition since 1826, and what is their condition now?—Their condition is, I regret to say it, altered much for the worse; I consider their condition to be wretched in the extreme, and that wretchedness will appear more apparent when I present to this honourable Committee the papers that I have here. The first paper that I have the honour of submitting to this Committee is, "A Comparative View of the various Expenses of manufacturing

Barrett Wadden,
Esq.29 June,
1832.

turing 232 lbs. of Italian organzine silk and 168 lbs. of Italian tram silk, British thrown, into 5,183 yards of plain gros de Naples, in the years 1824, 1826 and 1831 respectively, in Spitalfields." I must preface this document by this simple remark, that this is an account taken from my own books. In the year 1824 I paid the throwster, for throwing these 400 lbs. weight of silk, 134 *l.* 16 *s.*, dyeing it 64 *l.* 16 *s.*, winding 50 *l.*, warping 13 *l.* 1 *s.*, weaving 226 *l.* 15 *s.* 1 $\frac{1}{2}$ *d.*; total, 489 *l.* 8 *s.* 1 $\frac{1}{2}$ *d.*, making an expense per pound of 24 *s.* 5 $\frac{1}{2}$ *d.* for converting it from the raw state into plain gros de Naples. In the year 1826 the Ports were opened for the admission of foreign manufactured silks, and the throwster fell to 97 *l.* 8 *s.*, the dyer to 49 *l.* 4 *s.*, the winder to 38 *s.* 11 *d.*, the warper to 10 *l.* 3 *s.*, the weaver to 172 *l.* 15 *s.* 4 *d.*; making a total, in the year 1826, of 368 *l.* 1 *s.* 4 *d.*, or 18 *s.* 4 $\frac{1}{2}$ *d.* per pound weight.

1827. That applies to the last half of the year 1826?—Yes. In the year 1831 the throwing further descended to 73 *l.* 4 *s.*, the dyeing to 40 *l.*, winding 32 *l.* 2 *s.*, warping 7 *l.* 19 *s.* 6 *d.*; weaving 151 *l.* 3 *s.* 5 *d.*; total, 304 *l.* 8 *s.* 11 *d.*, or 15 *s.* 2 $\frac{1}{2}$ *d.* on the pound weight of manufactured silk; so that the reduction in throwing since 1824 is 46 per cent., the reduction in dyeing 38 $\frac{1}{2}$ per cent., winding 36 per cent., warping 38 $\frac{1}{2}$ per cent., weaving 33 $\frac{1}{2}$ per cent.; an average reduction presenting itself of 38 $\frac{1}{2}$ per cent. Need the Committee be surprised, is it necessary that I should point out the state of degradation and the horrible misery that is inflicted on the working community, when I see the wages reduced 38 $\frac{1}{2}$ per cent. since the year 1824, and when I accompany that document with one that I shall now read. As soon as I went in pursuit of those documents drawn from my own books, to ascertain what the reduction has been since the year 1824 in every department of our manufacture, my mind immediately went in search to see was there a corresponding reduction in the necessities of life, and I here have an average price of the underwritten articles during the years 1824, 1826 and 1831; the years correspond to the years in my own accounts, and I find that the four pound loaf, in the year 1824, was 9 $\frac{1}{2}$ *d.*; in the year 1826, 8 $\frac{1}{2}$ *d.*; and in the year 1831, 9 *d.*; bread has fallen in that period 2 $\frac{1}{2}$ per cent. Meat has not varied; it was 6 *d.* and an eighth in the year 1824, and was 6 *d.* and an eighth last year. Coals, per chaldron, in the year 1824, were 52 *s.* 9 *d.*; in the year 1826 they were 50 *s.* 6 *d.*; and last year they were 43 *s.*, presenting a decrease of 17 per cent. Soap and candles remained, from the year 1824 to the 31st of December last, the same price, namely 7 *d.*; a reduction has since taken place, by the repeal of duty on candles. Potatoes, per hundred, have fallen from 3 *s.* per cwt. to 2 *s.* 6 *d.*, or 16 $\frac{2}{3}$ per cent. Bacon has not varied. Butter has advanced 9 per cent. Tea has fallen from 5 *s.* 4 *d.* to 4 *s.* 8 *d.* or 12 $\frac{1}{2}$ reduction. Sugar has fallen from 6 $\frac{1}{2}$ *d.* to 6 *d.* or 7 $\frac{1}{2}$ reduction; and porter has fallen 20 per cent.; so that the average reduction of bread, meat, coals, soap, potatoes, bacon, butter, tea, sugar, porter, such articles as our poor must have, let them get them what way they will, the average reduction since 1824 is 7 $\frac{1}{2}$ per cent., while the reduction of their wages is 38 $\frac{1}{2}$ per cent. If I am asked, is the state of the people in Spitalfields worse now than it was before the opening of the Ports, and is their condition wretched, my answer is, take 7 $\frac{1}{2}$ per cent. from 38 $\frac{1}{2}$ per cent., and they are 31 per cent. poorer now than they were then.

COMPARATIVE VIEW of the various EXPENSES of Manufacturing 232 lbs. of ITALIAN ORGANZINE, and 168 lbs. ITALIAN TRAM SILK, British Thrown, into 5,183 Yards plain Gros de Naples, in the Years 1824, 1826, 1831, respectively, in Spitalfields.

Barrett Wadden.

Barrett Wadden,
Esq.

29 June,
1832.

9979. You have stated, that the weavers of Spitalfields are 31 per cent. worse now than they were in the year 1824; do you mean to say that they are not even worse than that sometimes, for want of employment?—The Tables which I have had the honour of handing in, are Tables extracted from my own books. What I am about to state is this; that I believe I may fairly say of myself, that there is not a silk manufacturer, either in Spitalfields or out of Spitalfields, that gives more permanent employment to the people that he employs than I do; that from Christmas to Christmas if they are a day idle, it is their own fault; and then when I say their condition is 31 per cent. worse now than it was then, I mean to say that that is the condition of a man working six days in a week, and every working day in the year.

9980. About what number do you employ?—I think when the Ports were open I had about 300, and now I have only between 60 and 70; I find it a very unprofitable trade.

9981. You employ about a fifth?—Yes.

9982. Are these calculations taken in any particular months of the year?—No; the average of the entire year: I had a good deal of difficulty in obtaining those; and I can assure the Committee, they are framed with a conscientious regard to truth.

9983. Have you had any opportunity of seeing the persons who work for you at their own houses, so as to judge more particularly of their condition?—I have had some opportunities of seeing the weavers at their own houses; and I regret to say, that I have oftentimes considered it almost unsafe to go into their dwellings, their condition was so truly wretched, many of them have their bed gone to the pawnbroker or taken away for the nonpayment of rent, and that their condition is one so truly altered, that it must present itself to the mind of every person in the habit of coming into Spitalfields; the first alteration that takes place in a weaver's family, that has enjoyed comfort, is, that the little article of superfluous dress that his wife may possess or himself, is the first article to find its way to the pawnbroker's shop; the next article that follows is something that the family actually want, but the time is arrived when they must part with it, and thus they go on parting with one article after another till, in very many instances, the midnight lamp has no longer oil in it; not that the wisdom of the weaver has vanished, but he is obliged to take it to the pawn-shop to borrow a few pence on it: the shuttles are gone to pawn; their whole condition is so altered that, absolutely, when persons have come strongly recommended to me for employment, and I now state a case, that occurred no later than last week; some persons came to me strongly recommended as to integrity, and as to ability to weave; I sent my clerk to examine what condition those weavers were in before I would entrust my work into their hands; and he reported to me, that their condition was so forlorn; nothing in their room but a loom and a pallet on the floor; no table, no chair; that as soon as the report was made to me, I said, "I cannot employ them; I run a risk in placing valuable work in the hands of men who have not the means to execute it in that manner

manner that they would execute it had they those means, and were they in the situation of life that they were formerly in."

Barrett Wadden,
Esq.

29 June,
1832.

9984. Was there much smuggling going forward in respect of foreign silk goods, during the existence of the prohibitory laws?—I can only here state an opinion, my opinion is, that there was just that quantity of smuggling carried forward that gave a stimulus to manufacturers and to improvements, that the articles smuggled, I firmly believe, were more generally brought in by persons visiting the Continent than they were by persons in trade, for there were so many difficulties placed in the way of selling contraband goods, that I doubt very much that a man would expect to make it a profitable transaction to pursue it as a trade. But the persons visiting the Continent found means of bringing in occasionally certain fabrics, which, finding their way into the hands of milliners and of friends, we, in many instances, obtained our patterns from those productions so brought in, and received a stimulus that I am almost inclined to think was then of benefit to us; and here I will record a singular fact in Ireland; I was indebted to a most respectable house in Belfast that furnished me with the first piece of French dyed black gros de Naples that was brought into Ireland, and it was brought by a smuggler into Belfast; so that for the fourteen years that I was a manufacturer of silks in Dublin, I never knew of any smuggling taking place among traders, but that one instance; and it is a curious fact, that as soon as my customer in Belfast bought these half dozen pieces of silk upon that occasion brought in, they cut off a pattern, sent it to me, and abused me for the horrible colour which I had been selling to them as a good black. I sent for my silk-dyer; we pulled the pattern asunder, analyzed the colour, and discovered the ingredient used in the dyeing of it; and I am proud to say, I was manufacturing French black silks for about a year and a half before that colour appeared in London.

9985. Has smuggling increased in your opinion since the legal admission of foreign silk goods?—I believe that smuggling has increased, and I hope I am not out of order, to use a phrase made use of some time last January or February by the present Chancellor of the Exchequer, his words were, "smuggling has increased to such an enormous extent, that we can have no conception of it." I beg leave to say, that I believe the noble Lord the Chancellor of the Exchequer on that occasion spoke the truth.

9986. Is it your opinion that smuggling has been progressively increasing, and that it is now more extensive than it was after the time of the opening of the Ports?—I have no doubt but it is more extensive.

9987. To what do you attribute the reason that the fewer goods should be smuggled when there was no other way of obtaining them than now when they can be legally imported?—When the article was prohibited it was accompanied by the right of search, which rendered it extremely difficult and dangerous to sell, even in a clandestine manner, foreign manufactured silks; but now when the Ports are open (and I doubt whether I ought to use the word smuggler, the last Witness that has been before the Committee has given him the name of public benefactor); now that the Ports are open to the public benefactor in the character of smuggler, every man lays claim to that high character; and if business should continue much longer in the same state as it is, I am very much inclined to think I shall become a smuggler or a public benefactor.

9988. Was there not a general reduction of duties in the year 1829?—There was.

9989. What was the object proposed by that reduction?—The then Government assured the Silk Manufacturers' Committee, of which I had the honour of being a member, that they had but one object in view, and that object was to put an end to smuggling.

9990. Was it at that period stated what the smugglers' charge was considered to be?—It was stated by the then President of the Board of Trade that the smugglers' charge was from 25 to 28 per cent.

9991. Do you know in what manner the smugglers' price was at that period supposed to be ascertained?—I understood, and I believe it to be the fact, the price was ascertained by the then President of the Board of Trade corresponding with the public benefactor at Calais, and finding out what he would charge an occasional customer for smuggling goods.

9992. Were not the duties reduced at that period to the level of the smugglers' charge, in the belief, on the part of the Government, that by that means smuggling would be prevented?—It was; and I shall, with the permission of the Committee,

Barrett Wadden,
Esq.

29 June,
1832.

state now what I stated then ; I was one of a few gentlemen that had the honour of waiting upon the Duke of Wellington ; he was then Premier ; and the Duke listened most attentively and most kindly to all the tale of distress that we had to unfold, and every thing that we said, the burthen of the song on the part of the Duke was, " Aye, but the smuggler, what are we to do with him ; we must lower the duties to get rid of him ;" and upon that occasion I took the liberty of taking from the ink-stand that was then on the noble Duke's table two pens, and, holding them as I do now, I said, " My Lord Duke, let those two pens represent two roads, and let my finger and thumb represent Lyons ; here are two roads from Lyons to England or Spitalfields, that on one road there is a toll-bar, which is kept by the smuggler ; and he has got up a board, and he says all goods coming this way shall be charged 25 per cent. ; the Government has got up a toll-bar on the other road, and on their board it is announced that all goods coming this way shall be charged 35 per cent., consequently we were injured by the smuggler bringing his goods into the market ;" and the noble Duke at the head of His Majesty's Government found that he had very little to do at his toll-bar, for the smuggler was getting all the business. We went up and stated the amount of our wretchedness ; the Duke says, " Aye, the smuggler is the cause of it, and to relieve you from all this wretchedness, we will reduce our price to that identical price which the smuggler is charging you." " I beg leave most humbly but most respectfully to state, upon that occasion then we shall have injury inflicted upon us by two persons instead of one ;" that is absolutely the fact : the object which the Government had very properly in view, to put an end to illicit trade, has not done it, while it has brought us into a situation much worse than we were in prior to that change.

9993. Do you mean to say, that instead of the alteration having had the effect proposed, smuggling has not lessened, but on the contrary has increased, since the year 1829 ?—The conviction on my mind is, that the alteration has not produced the effect which the Government had contemplated, and that smuggling has very considerably increased since 1829.

9994. If a further reduction of duties should take place, do you think that the smuggler will still be able to carry on his trade, that is to say, do you consider that the smuggler can still afford to lower his charge ?—Should a further reduction of duty take place, I am quite satisfied that means will be devised for the smuggler to lower his charge, viewing, as I do, the character of that personage, altered from a smuggler into a public benefactor ; he will necessarily look around for some means of conferring the greatest benefit on the public ; and if he finds the public force his 25 per cent. charge down to 20, the probability is, that he will find out or discover means whereby he can descend to 15 per cent. I have heard much of the charge of smuggling ; it is far from me to say how far these accounts are right or wrong ; but I am rather inclined to think that smuggling can be carried on, and profitably conducted for a charge considerably less than 25 per cent. ; and I have only to add this, that the smuggler can afford to lower his price ; that the smuggler in all human probability will not lower his price till he is compelled to do so ; need this honourable Committee consider me wrong in coming to this opinion, when I find that a box two feet long, twenty inches wide, and twenty inches deep, will contain plain gros de Naples to the value of 414*l.*, so that here is a quantity of property compressed into a compass so small that it can easily be got on shore.

9995. Have you had any opportunity of seeing goods which have been smuggled ?—I have seen a great deal.

9996. Of what sorts were those goods ?—They were plain, figured and fancy goods.

9997. Do you consider that the reduction of duties in 1829 was beneficial or injurious in its effect, on the whole, on the silk trade ?—I consider that the reduction of duties in the year 1829 was both beneficial and injurious in its effects, that is, the amount of benefit which it conferred was but a small per centage on the aggregate of injury it produced.

9998. Do you consider that a further reduction of duties will at all tend to relieve the trade from any of the disadvantages under which it now labours ?—Perhaps before I answer that question I may be permitted to explain to the Committee what I mean by the words beneficial and injurious.

9999. Yes, explain to the Committee in what respects you consider the alteration of the law in 1829 to have conferred a benefit, and in what respects it has been injurious ?—The injury that that change of law inflicted was this ; it reduced the duty from 5*s.* a pound down to 3*s.* 6*d.*, and compelled the silk throwster of this

Barrett Wadden,
Esq.

29 June,
1832.

this country to turn round on the people in his employ and reduce their wages in a proportionate degree, so that I believe there are silk mills at work in this country where the wages of the people do not go beyond 2*s.* 11*d.* per week, and that 2*s.* 11*d.* per week was a state of wages forced upon the people by reducing the duties upon foreign thrown silks from 5*s.* to 3*s.* 6*d.*; that reducing the duty from 15*s.* to 11*s.* on the pound weight of manufactured silk compelled the manufacturers in Spitalfields, of whom I am one, to turn round on our throwster, our dyer, winder, warper and weaver, and extract a reduction out of their united earnings to enable us to stand this competition; so far for what I mean by the term injury. Now as to what I mean by beneficial; the alteration which was then made was accompanied with an arrangement that I think I am justified in calling beneficial; that is, the law that changed or lowered the duties from 5*s.* to 3*s.* a pound conferred a benefit upon the persons exporting manufactured goods, by giving the original importer of foreign thrown silks a certificate or a debenture, which was a transferrable article representing 3*s.* 6*d.*, the amount of duty paid, and the man that could export a quantity of goods found those debentures in the market, which entitled him to receive a corresponding drawback; so that while the measure was a measure of injury to every man in the trade, that injury, I must admit, was lessened to what I will call a per centage on the aggregate of injury; it was lessened by encouraging an export trade, which export trade we could not have only for the formation of that thing which we call a certificate or debenture.

10000. Did those debentures give any advantage to the importers of Italian silks beyond the price for which the debentures were sold?—I should think not.

10001. Then that advantage accrued to the manufacturers who manufactured a different description of silk?—I shall come to that.

10002. Do you consider that a further reduction of duties will at all tend to relieve the trade from any of the disadvantages under which it at present labours?—I am satisfied that so far from relieving the trade by a further reduction of duties, I hope I am not wrong in giving an honest expression to my own feelings, but I must in justice to myself say, that I absolutely consider it a symptom of insanity for any man to recommend it.

10003. Are the goods which you manufacture of a low or of a rich quality?—All the goods I manufacture are of the best description, a rich quality.

10004. When you speak of the depreciation and difficulties of the silk trade of Spitalfields, do you mean to say that you find it difficult to sell those goods which you manufacture?—I am in the habit, and ever have been, of manufacturing the very best description of goods, and I find it very difficult indeed to sell my goods at a profit; I can sell any quantity of them, if I will sell them at a loss.

10005. Whence do you consider that difficulty to arise; is it from the Manchester goods that are in the market?—As far as it relates to my business, the difficulty does not arise to me from Manchester, it arises from the import of the better description of gros de Naples, which are the only description of goods I make.

10006. Of the description of goods you make, namely, rich plain goods, has there been a larger quantity made in Spitalfields of late than formerly?—I should say not, decidedly not.

10007. Has the use, on the part of the public, of such goods fallen off?—My opinion is, that the use on the part of the public of those goods has not fallen off.

10008. Then how do you consider that the consumption has been supplied?—A very considerable part of the consumption, I believe, has been supplied by the import of goods from France, through the legal imports and the occasional operation of the public benefactor supplying the public.

10009. Upon what description of goods are the looms of Spitalfields chiefly employed?—Principally upon plain low priced goods made from inferior silks, and those inferior silks rendered cheap by every species of craft and cunning in the introduction of heavy dyes.

10010. Has the trade of Spitalfields removed to Manchester?—I should say not, and I think that that will appear manifest, when a most respectable gentleman has appeared before this honourable Committee, the representative of I believe the first, decidedly the first house in London, if not in Europe; that witness has put it upon record that the sales of their great house have not diminished in Spitalfields, that they remain about the same; that circumstance—(I did not require to be assured of a fact that I know)—but that circumstance led me to believe that I was

Barrett Wadlen,
Esq.

29 June,
1832.

perfectly correct in believing the trade of Spitalfields has not gone to Manchester; I think we remain stationary in Spitalfields.

10011. Do you consider that the English manufacture has improved since the year 1826?—Here I am compelled to say that in my judgment, and that judgment scattered over 24 years experience, we have not improved in Spitalfields since the year 1826.

10012. You have before stated that every exertion has been resorted to by the manufacturer to compete successfully with foreign goods; how do you reconcile that answer with there being no improvement in the workmanship?—I have stated that every exertion which capital and unwearied diligence on the part of the manufacturers, and labour on the part of the working people have been made, but wages have fallen so low as to render it utterly impossible to preserve the condition of the working people; the consequence is, that our working people yield to the low wages, they become careless in the performance of their works, and justify that carelessness by the miserable wages they receive; and I am satisfied that, if reference be made to the magistrates, it will turn out that in some instances, when weavers have been brought before them charged with negligence, the magistrates, from motives of humanity, have refused to inflict punishment, on the ground that the wages of the people were so low that the working man had but his choice of evils, either to get through his work with all possible dispatch, and save his family from starvation, or to use that diligence that he was bound to use in the performance of his duty towards his employer, and become so exhausted as to be unfit to finish that work that he had commenced.

10013. Have you paid any attention to the quantities of the different sorts of silk goods imported?—I have paid some attention to try and find out what was the cause of our distress, and how far that cause could be relieved, and in examining the official imports I found that one article, namely, plain velvet and figured velvet imported into this country from the 5th of January 1830 to the 5th of January 1831 was what in my judgment was considerable; and my attention was called to the import of velvet on this ground, that the importation of velvet into this country from abroad only interferes with Spitalfields, for that velvets are not yet made in Manchester, notwithstanding the enormous improvements that have taken place there in other departments of weaving; those velvets are only made in Spitalfields, and my attention was turned to the official accounts, to ascertain what quantity of labour was supplanted in Spitalfields by the import of 13,475 lbs. weight of plain silk velvet, containing 3,369 pieces, each piece 32 yards long; also 1,372 lbs. weight of figured velvet, containing 240 pieces, each piece 30 yards long, being the quantity imported into this country from the 5th of January 1830 to the 5th of January 1831. I now solicit the attention of this honourable Committee to this important fact, that the plain velvets imported that year, the silk contained in them would cost me 15,662*l.* 2*s.* 6*d.* and the wages would cost me 26,901*l.* 1*s.* 6*d.*, which is 171 $\frac{2}{3}$ per cent. on the cost of the raw silk, or 63 $\frac{1}{4}$ per cent. on the cost of the goods; so far for the plain velvets. The figured velvets—(the injury that is inflicted on the weavers here is enormous)—the figured velvets contained silk that would cost me 1,600*l.* 1*s.* 6*d.*, and the wages on this 1,600*l.* 1*s.* 6*d.* would be 4,683*l.* 8*s.* 6*d.*, so that the wages on those figured velvets imported, if they had been made in Spitalfields, would have amounted to 292 $\frac{2}{3}$ per cent. on the cost of the raw silk, or 74 $\frac{1}{2}$ per cent. on the price of the goods. Curiosity led me to inquire somewhat further, to ascertain what number of persons I should employ, if I were the fortunate manufacturer to receive an order to that extent from any of the highly respectable warehousemen of London, I would require a silk mill employing 600 persons, 22 dyers, 132 winders, 53 warpers, 922 weavers, 150 quillers, or a total of 1,882 people, whose labour during this period of importation has been supplanted, not by their labour going to Manchester, for Manchester has not even made velvets; but by a demand for their labour being transferred to the manufacturer abroad.

AN ACCOUNT showing the COST of RAW SILK, WAGES, and other CHARGES of Manufacturing
 13,475 lbs. of PLAIN SILK VELVET, containing 3,369 Pieces, each Piece 32 yards long. Also,
 1,372 lbs. of FIGURED VELVET, containing 240 Pieces, each Piece 30 yards, being the Quantity
 Imported into this Country from 5th January 1830 to the 5th January 1831.

Barrett Wadden.

10014. Are you enabled to give the Committee any further calculations which you may have formed, as to the employment which some of the articles introduced from abroad would give to the British artisan?—If that question would be adjourned to a future period of my examination, the documents that I have are arranged so that they will come in order.

10015. Have you any knowledge of the rate of wages at Lyons, and of the cost of the various processes of manufacture at that place?—I have some knowledge of the rate of wages payable at Lyons, and that knowledge led me to draw out comparative accounts of the manufacture of plain goods and figured goods in Lyons, and

Barrett Wadden,
Esq.

29 June,
1832.

and in Spitalfields respectively, which accounts I shall now have the honour of submitting to this Committee. The account now before the Committee is a comparative view of the cost and expenses of manufacturing 100 kilogrammes of organzine, and 75 kilogrammes of tram silk into 5,296 yards of plain gros de Naples at Lyons and Spitalfields respectively. I thought it much better to present to this honourable Committee a quantity of silk manufactured, than to fix their attention on either a yard or on a pound weight, for that if we descend to the particulars attendant on either the yard or the pound weight, there are so many fractional parts, either to be laid aside or improperly used, as to prevent this honourable Committee from coming to a fair conclusion of the comparative cost that actually does exist between Lyons and Spitalfields. I will further, before I read this document, observe, that these accounts, or comparative views were framed by me last March, from information which I had from Lyons, on the 13th of the previous October and on the 11th day of the following December, and which accounts I find to stand a comparison with every channel of information that at least I am capable of getting at. I find that last December, for 100 kilogrammes of organzine silk at Lyons the price was 58 francs; that 75 kilogrammes of tram at Lyons could be had for 54*f.*; that these sums, when reduced by a discount of $12\frac{1}{2}$ per cent., subject to one month's credit, is represented by 8,618*f.* 75*c.*; that the dyeing of this silk at Lyons is 72 sous per kilogram: Dr. Bowring, the other day, gave in an account of the manufacture of 500 ells of satin, which I shall come to directly, and he represented the dyeing at 12 sous less than I do. The winding 75 kilogrammes organzine, at 60 sous; the warping is paid by the day, 30 sous; the weaving 4,236 $\frac{1}{3}$ ells, at 55*c.* per ell, gives an aggregate of 11,862*f.* 99*c.*, which, taking the exchange at 25*f.*, is 474*l.* 10*s.* 5*d.*: a similar weight of Piedmont organzine silk manufactured at Spitalfields being equivalent to 220 lbs. 12 oz., and a similar weight of Italian tram, being equivalent to 165 lbs. 9 oz. of our weights: this silk was manufactured by me, and the prices I have here set down, and the prices that I am paying at this moment, the article, when produced by me, would cost me 662*l.* 11*s.* 7 $\frac{1}{2}$ *d.*, or 39 $\frac{3}{4}$ per cent. on the cost price at Lyons. I believe the last Witness was not wrong when he stated the difference between the production of France and England took a range of between 30 and 40 per cent.

10016. The silks used here [*pointing to the Account*] are of the same fineness in both cases?—The same precisely.

December 1831.

Bar^t Wadden.

10017. And

10017. And the wages given in France are the wages paid in October?—The wages stated, are the wages paid on the 11th day of December, and the information which I previously had made the 13th day of October, fixes the price about three per cent. less than the price stated there.

10018. That was, the prices given here as the prices paid by you in Spitalfields, are the net prices?—The prices which I state in this account, I took Piedmont organzine at 24s. and the best description of the Italian tram at 21s. 6d.; and reducing that by a payment of cash in 14 days, and taking off $2\frac{1}{2}$ per cent. discount, reduces it to 431l. 16s. 2d.; and as far as relates to all the other charges they are cash payments, not subject to any deduction whatever.

10019. And the prices which you have placed here as the wages for the different operations in England, are at the prices that you have described as a loss to the operative of 31 per cent., as compared with his former situation?—The prices contained in those comparative views are a loss to the people in my employment of $38\frac{1}{2}$ per cent.; their condition relieved by a fall in provisions to the extent of $7\frac{1}{2}$ per cent.

10020. Has any instance of comparison of silk goods come lately under your observation which confirms the statement you have just given in to the Committee?—The Committee will permit me to follow the papers that I have presented with others, for the papers I have now presented are plain gros de Naples; finding the difference to be so considerable in the manufacture of plain goods, in which there is no fancy, in which there is no skill or science required, in which there is no expensive establishment of designers to be employed, finding the difference so great in the production of plain goods, my mind went in pursuit of what difference may exist in the production of figured goods; and finding the difference to be something more in figured goods than in plain, I was most anxious to do what some of the celebrated painters of antiquity, I believe, have done, when they wanted to draw a monster, they drew him of large dimensions, and I therefore took the liberty of drawing out an estimate of the production of fancy goods on a quantity of silk double the weight of that in plain goods; as it relates to silk dyeing, winding and warping, the price in the figured department is the same, and the difference is to be found in the weaving. “Comparative Estimate of the cost and various expenses of manufacturing 200 kilogrammes of organzine and 150 kilogrammes of tram silk into 9,620 yards of figured gros de Naples, at Lyons and Spitalfields respectively, December 1831;” 7,696 ells of figured silk at Lyons answers to our 9,620 yards in Spitalfields. The silk at Lyons would cost me 17,237f. 50c.; the dyeing, 1,260f.; the winding, 450f.; the warping, 166f. 50c.; weaving at 85c. per ell, 6,541f. 60c., presenting an aggregate of 25,655f. 60c., when reduced to English money at an exchange much lower than it has been for months back; I have taken the exchange all on that cost at 25f., and I would be justified in taking it at 25f. 60c.; but taking the exchange at 25f. it would be 1,026l. 4s. 6d. and it would cost me to produce goods of the same quality and quantity, 1,506l. 2s. 7d. making a difference between the cost of production at Lyons and Spitalfields, of 479l. 18s. 1d., or $46\frac{1}{2}$ per cent. on the cost price at Lyons.

Barrett Wadden,
Esq.

29 June,
1832.

--

Difference between Lyons and Spitalfields, £.479. 18. 1.;
or 46½ p' cent. on the cost price at Lyons.

Bar^r Wadden.Barrett Wadden,
Esq.29 June,
1832.

10021. You have put down weaving at one shilling a yard for figured silk; what was the price paid at Spitalfields seven years ago?—The article that is there represented at one shilling a yard, seven years ago was paid 2s. 3d. for; I have paid 2s. 4d. myself for weaving hundreds of thousands of yards of them.

10022. Can you inform the Committee what is paid for weaving that article at Sudbury?—The article that these accounts refer to is not wove at Sudbury, and I doubt very much whether it is woven in any other part of the kingdom but Spitalfields; perhaps, for the satisfaction of the honourable Member that puts the question, I ought to state, that those goods are goods of the nicest fabric; they are not such goods as are generally made either at Sudbury or Manchester.

10023. You mean they are peculiar to Spitalfields?—Yes.

10024. That they are those goods that enter more peculiarly into competition with Spitalfields, being imported from abroad?—They are.

10025. Have you stated the whole of the advantages of which you are aware the French manufacturer has over the English?—I beg to remark, that I have not yet answered the last question that was asked me, which I understood to be, has any instance of importation of silk goods come lately under my observation that would confirm these statements.

10026. Is the Jacquard loom used in making of figured gros de Naples?—Yes; it would be an increased expense of labour to make it without the Jacquard; I am asked, has any instance of importation of silk goods come under my knowledge that would confirm this statement; a house that I believe does not stand second in point of respectability to any house in the empire, last March did import a case of plain goods precisely the quality that this comparative view is made upon; and the importer of this box of plain goods in last March had the candour to let me examine the contents of that box; to put into my hands the weight of silk contained in the goods in that box, and to show me the amount of money that he paid to the manufacturer at Lyons for those goods; and he had also the kindness to tell me a fact which is of very considerable importance, that the goods were made for him by an order that he had transmitted to Lyons in the previous December, and were not bought under any peculiar circumstances, such as very frequently occurs, and might lessen the real value of the goods, but that they were goods made by order. The case contained 3,302 ells, and their weight was 253 lbs. 2oz., and the money the importer paid to the manufacturer at Lyons, was 423l. 10s. British; I was anxious to

to ascertain how far my comparative accounts would stand the test of a comparison with this importation, and bringing with me the documents which were placed in my hands by a gentleman who, I am proud to say, I feel the kindness he has done me, and shall feel grateful to him for it; I drew out an estimate what those goods answering in quality and quantity would cost me in Spitalfields, and they would cost me 531*l.* 8*s.* 6*d.* the particulars of which I suppose it is not necessary to read; my next object was, to try if I could discover by any process what profit the manufacturer of those goods had at Lyons, and I had only one way, a school-boy method of doing it; supposing my own calculations to be correct, I asked myself this question, if goods worth 662*l.* in Spitalfields can be produced for 474*l.* at Lyons, what would be the cost at Lyons to the manufacturer there of a parcel of goods that could be made in Spitalfields for 531*l.* I find 380*l.* 4*s.* would be the cost; and if I subtract this cost from the 423*l.* 10*s.* which he received for the case of goods imported last March, I find the Lyons manufacturer had a profit of 43*l.* 6*s.* or ten per cent. on his sales.

1832.

Lunæ, 2^o die Julii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

John Bowring, Esquire, LL. D. called in; and further Examined.

10027. ARE you prepared to give an answer to the question which the Committee put to you on Friday last?—The question which the honourable Committee put to me was this: "What is your reason for thinking that the value of the silk manufactures of France is only 5,500,000*l.*, when you state that the consumption of silk made into goods is 4,200,000 pounds, and when you show from information derived from manufacturers that the expense of working up these goods is in no case less than 80 per cent. of the cost of the material, and in some instances reaching so high as 120, the great majority of goods being of that description on which the cost of labour is 90 per cent.?" Now this question involves two very important results; one, the amount of silk consumed in the French manufacture; and the other, the value of the manufactured article. I have gone into considerable details, which I shall have the honour of submitting to the Committee, and which I think will show that my evidence is substantially correct. I must recall to the attention of the Committee, that no question put to me referred to the value added to the raw material with reference to the whole produce of the French manufacture, and I have made no observation hitherto which referred to the labour employed in the silk manufacture as a whole, but merely to the value of labour and other added values, as bearing on particular articles. In looking over my evidence, I find that there were only two articles respecting which any inquiries were put to me as to the added value of labour; the first respecting ribbons, and they were ribbons of a particular quality, the whole of the ribbon trade forming only one-sixth part of the French production; and it is true, as the honourable Member has stated, that I mentioned the additional value added to the raw material on those particular articles of ribbons, to which the question referred, was from 80 to 120 per cent., but in the statement I made as to satin from Lyons, the cost of the material will be found to amount to 2,036 francs 42 centimes out of 2,732 francs 80 centimes, so that less than 35 per cent. has been there added by labour; and it will also be seen by the result of the evidence I have given, that there are a great number of articles in which labour does not add 25 per cent. to the value of the material, such for instance, as the coarser and heavier articles; I stated the average value of common sarsnets, for example, from two francs and a half to three and a half per ell, to which not more than 60 centimes was added by labour, which will be about 20 per cent. Now from the facts given in my evidence, the additional value to the raw material—(I speak only of the facts to which my evidence refers)—the additional value to the raw material ought, on those facts, to be taken at 70 per cent. and not at 90, as the question proposes; but if all the silk manufactures are placed in view, the additional value will be very far less than that. In a calculation I have in my possession, made lately at Lyons, as to the value of 22 millions of francs, the proportions are regulated as follows; and I should state, that this is in answer to a question I proposed to a Member of the Chamber of Commerce, estimating particularly

John Bowring,
Esq. LL. D.

2 July,
1832.

John Bowring,
Esq. LL. D.

2 July,
1832.

particularly that species of articles which come into the English market, and taking any sum you please for a given amount. He has taken 22 millions. What will be the quantity of material, what of labour, and what of profit?—The return is this: material, 16 millions of francs; labour, five millions; profit to the manufacturer, one million; result, 22 millions, which, in fact, brings down the added value by labour to about 30 per cent.

10028. Is this a calculation of goods made at Lyons?—Yes.

10029. And therefore includes none made at St. Etienne?—No; from another Lyons document I learn that in the average of ribbons manufactured there, the proportion of raw material on 100*f.* is from 65*f.* to 68*f.*, labour, profit and added value being 32*f.* to 35*f.* or an average of 50 per cent. on the whole; that in the richer articles of ribbons at Lyons, the proportions are 45*f.* to 50*f.* for silk, and 50*f.* to 55*f.* labour, &c. or 100 per cent. for added value; I think, therefore, taking into account the articles where 20 to 35 per cent. is added by labour and other circumstances, the average cannot be fairly estimated at more than 60 to 70 per cent. for added value; but if the calculation of waste is made, it will not be forgotten that in the process of dyeing, silk loses from 30 to 35 per cent., which of course must be deducted from the quantity of pounds of silk remaining to be manufactured, if any reference be made to the weight of silk; now taking the estimate of added value at 70 per cent. and supposing the amount of thrown silk to be four millions of pounds, and that 18*s.* be taken as its average value, the amount will be 3,600,000*l.*, to which add 70 per cent. which I think may be thus divided: 30 per cent. for dyeing, interest, profit and expenses of all sorts, and there will remain 40 per cent. for labour specially; this is the whole cost: add to 3,600,000*l.* 2,520,000*l.*, the 70 per cent. making 6,120,000*l.*, the value of the whole silk manufacture of France; I supposed about 18*s.* was a fair average for the value of silk; but on looking into the matter more closely, I find it is too high; I had taken as an average, on the gross silks at Lyons, 35 deniers as the average for trams, and the lowest price at Lyons for those trams was about 26*f.* 50*c.*; I have taken 26 deniers as the average for organzine, and I find the value of that organzine 31*f.*, that makes 57*f.* 50*c.* of which the average will be 28*f.* 75*c.* per pound marc.; I have deducted from that amount 12½ per cent. for discount, and 9½ for the difference between French and English weight, between the pound marc. and the English pound, which makes 6*f.* 32*c.* leaving the average value 22*f.* 43*c.* the English pound, which at the exchange of to-day, or 25*f.* 60*c.* gives 17*s.* 6¼*d.* per pound at a close calculation. Now four millions of pounds of silk at 17*s.* 6¼*d.* will give about 3,500,000*l.* sterling; add 70 per cent. for profit, expenses, labour, &c., that makes 2,450,000*l.* sterling, and you come again at the result, being 5,950,000*l.* sterling, the whole value of the silk manufactures of France. The last official return of exports is about 120 millions of francs; I estimated the home consumption at about 30 millions of francs, which is 150 millions of francs altogether, and that amount comes up to the same result of six millions sterling; I would state as my own conviction, that that is rather an over estimate of the value of the silk manufactures of France; that I have consulted every author to whom I have had access since I had the honour of meeting the Committee, and there is not one authority that averages it so high; I have collected, bearing on this question, such official facts as I have been able at different periods; in the most brilliant period before the Revolution, when Lyons was supposed to have from 15,000 to 20,000 looms, M. Verninac made a return to the Government of the value of the silk manufactures; he estimated the raw material at 70 millions of francs, 2,800,000*l.* sterling; and he says at that period labour added for the additional value of a third, making 933,000*l.*; the then value, according to his estimate of the silk manufacture of France was 3,733,000*l.* Since that period, the price of silk has fallen, and the quantity of labour applied, as well as the value of labour, has somewhat increased; there have been a great number of fashionable goods produced, and there has been a slight increase in the value of labour, as comparing the present time with the period preceding the Revolution; but I do not imagine that the increase and manufactured value can in any case be taken at more than 60 per cent. on the whole; and if it be taken at 60 per cent. that again will bring us to the same result of six millions at present. I find, too, that in 1805, when Fourcroy was Minister of the Interior, the calculation of the amount of the whole of the French manufacture of silk goods, in a return made to him, was this: Silk stuffs, 35 millions; ribbons, gauzes, blonds, &c. 20 millions; and all that class of hosiery, &c. which the French call bonnetry, 20 millions; making

making 75 millions in the whole, which is three millions sterling: and I find this is a calculation adopted by Peuchet in his book on French Statistics; the population of Lyons, since 1805, has increased 50 per cent. and I do not think the productions can, under any reasonable calculation, have more than doubled in France since 1805. In 1819, there is another return, made under Chaptal's auspices; it is a return of French grown silk, and the grown silk in France, according to this, at this period, was less than a million of pounds; it was, in fact, 908,026 pounds. Now I cannot conceive it possible that the production in France of raw silks can have more than trebled itself in fifteen years, considering that four or five years are required to bring a mulberry tree into bearing. The general opinion in France is, as I stated, that the annual amount produced by the silk manufacture does not exceed 140 millions. Of this amount, eighty millions represents the silk, and sixty millions the added value, by labour, profit, &c. which also corroborates my estimate.

In 1788, the whole number of looms in France was estimated at about 50,000, the consumption of silk being two and a half millions of pounds; one author, Peuchet, estimates it at three millions: the number of looms employed and not employed at the present moment, may be fairly taken at from 70 to 80,000, somewhat above a third more, which again will bring the annual consumption to be about four millions of pounds. Calculate the export then as I have stated, and divide that by four millions of pounds, you have then 37 *f.* 50 *c.* as the average value of the manufactured article: now the average cost of silk appears to be 22 *f.* 43 *c.* per lb.; this result again gives 70 per cent. for added value, in labour, profit, &c.

I have submitted that calculation to another process, and I get at the same result; estimating the consumption of raw silk in France at four millions of pounds, and considering the various deductions to be made in the process of manufacture, I would take six per cent. for loss in throwing, 20 per cent. for loss on dyeing, nine per cent. for loss by weaving, clipping, (which is a large loss in some articles), and other waste, which leaves 35 per cent. in all to be deducted from the weight of raw silk; 35 per cent. on four millions of pounds gives 1,400,000; so that there will be 2,600,000 lbs. of silk to be represented in the manufactured state. Now, since I had the honour of seeing the Committee, I have examined the weight of silk manufacture exported from France, according to the Custom House Returns, and they were in 1829, 998,885 kilogrammes; in 1830, 1,025,385 kilogrammes, making together 2,024,270 kilogrammes, which give an annual average export in weight of 1,012,135 kilogrammes, which, reduced to English pounds, make 2,226,697 lbs.: Now if, according to my data, one-fifth be added for home consumption of silk goods, that will be 445,340; the result will be 2,672,037 lbs., which almost exactly coincides with the previous estimate, and the result is got at by a process altogether distinct.

On another question, as to the proportion of labour which enters into the official calculations of France, (and I may here be allowed to say, that these inquiries have led me to a conclusion that these official values are more correct than I had before believed,) the French Custom House has taken as its standard, as I mentioned, 130, 120 and 88 *f.* per kilogram, the average being 113 *f.* per kilogram to the manufactured article. Now estimating the nett value of silk at 50 *f.* per kilogram, and adding 17 *f.* 50 *c.* for the loss of 35 per cent. in dyeing, weaving, clipping and other waste, you get 67 *f.* 50 *c.*; if you add four francs per kilogram for dyeing, three for interest, seven francs for profit, on 113 *f.*, (which is about six per cent.) the expenses of establishment five per cent., those 19 *f.* more will give 86 *f.* 50 *c.* per kilogram, and there will be left for labour 26 *f.* 50 *c.*, which is somewhat above 30 per cent. on the whole: that I would submit is another test by which the same result is got at.

From these calculations, derived from different independent sources and presented in different forms, it would appear that the estimate of four millions of pounds of silk employed to produce an average of from five and a half to six millions pounds sterling in manufactured value, is not far from the truth. Two other documents I desire to put in, as additional evidence of the veracity of the official returns. I should not have done so, but for an observation that the probability was, that those returns had been prepared for the occasion: I therefore will deliver to the Committee, taken from the receipts of the Minister of Finance, the account given, and for which he has reckoned to the nation for duties paid on imported manufactured silk: that will be considered quite independent evidence. In 1828, there were duties paid on piece goods, perhaps I had better put in the documents, merely stating, that in 1828

John Bowring,
Esq. LL. D.

2 July,
1832.

226,727 *f.* were paid in France, and accounted for in the Budget of receipts for foreign manufactured silks. In 1829, 259,409 *f.*, and in 1830, 324,373 *f.* As an evidence too, that the exports of French silk manufactures are controlled, and appear in the Custom House books, I have copied from the same financial accounts, the receipts of the French Government on the export of French manufactured goods, merely to show that they have a motive in accurately estimating the exports of manufactured goods from France. In 1828, the Government received 26,339 *f.*; in 1829, 24,802 *f.*, and in 1830, 24,444 *f.* These documents I had better submit to the Committee, because they are of an official character.

[The same were handed in.]

DUTIES paid in France on FOREIGN MANUFACTURED SILKS
entered for Home Consumption.

1830 - - - - -	24,444

There is one thing, which probably as it bears on some questions put to me, as to the state of reeling and throwing in France, I may be allowed to mention; I have found, with reference to that matter, a representation made by the town of Lyons, of which I have here a copy, which describes the extreme backwardness of that portion of the silk manufacture. They state in general result, that so much in arrear are the reeling and throwing establishments, and so very imperfect is the management of both reeling and throwing, that it is necessary the Government should interfere, in order to force improvement by penal legislature; and they give, at the same time the facts of the situation of things in Italy, as evidence that that species of penal legislation has been beneficial. Perhaps the Committee will not consider it as matter of intrusion, as several questions were asked me, as to the opinion respecting the prohibitory system in Lyons, if I state, that in going into this examination, I have found this sentence in the report made by Monsieur Dugas, who is the delegate of the town of Lyons, as to the operation of the system under which their manufactures have grown up. He says, "Upon premiums and prohibitions industry slumbers, superiority is lost, and protection, instead of a source of security, becomes the primary cause of ruin."

Barrett Wadden, Esq. called in; and further Examined.

Barrett Wadden,
Esq.

10030. YOU are perhaps aware that the first witness who was examined before this Committee on the part of the Coventry trade, gave it in evidence, that in 100*l.* worth of gros de Naples, the amount of wages was 30*l.*, are you able to state to the Committee the proportion of labour in plain gros de Naples and in figured gros de Naples?—I am; I shall present to this Committee an account, showing the cost of silk and wages paid for manufacturing the same into 5,296 yards of plain gros de Naples in Spitalfields; the cost of the silk in the first instance (silk of this quality), this is silk in the raw state, the value of the silk was 361*l.* 10*s.* 3*d.*, about 18*s.* a pound weight; when I speak of raw silk, I mean silk that has undergone no process of manufacture, that I call raw silk; I do not call thrown silk raw silk, for it has undergone a very material process of manufacture.

The

The silk cost me 361*l.* 10*s.* 3*d.*; I paid for throwing the warp for organzine, 49*l.* 13*s.* 4½*d.*, for throwing 220½ lbs. of organzine silk; cash paid for throwing 165½ lbs. of tram, 20*l.* 12*s.* 6*d.*; for dyeing the silk, 38*l.* 12*s.* 6*d.*; winding it, 31*l.* 0*s.* 10½*d.*; warping it, 6*l.* 12*s.* 9*d.*, and weaving it at 7*d.* a yard, 154*l.* 9*s.* 4½*d.*; so that the whole of amount of money expended in converting the silk from its raw condition into manufactured goods, is 301*l.* 1*s.* 4½*d.* which is 45½ per cent. on the first cost of the goods, or 83⅔ per cent. on the value of the raw silk. In that calculation no incidental charge is made whatever, such as those charges arising out of the expenses of the necessary establishment. I find that the value of silk contained in the yard of goods so made, is 1*s.* 4½*d.* and the fraction of a farthing, and that the value of wages of each yard is 1*s.* 1½*d.* I called the attention of the Committee to an account somewhat similar, but applicable to figured gros de Naples; the cost of the raw silk in this figured gros de Naples, I find to be 723*l.* 0*s.* 4*d.*, and putting that silk through the various processes of throwing, dyeing, winding, warping and weaving, I find the net amount of wages upon 723*l.* worth of raw silk, is 783*l.* 2*s.* 3*d.*; so that the wages on that figured gros de Naples, is 52 per cent. on the first cost of the goods, or 108¼ per cent. on the value of the raw silk; so that in each yard of those goods, when made, the silk is worth 1*s.* 6*d.* 1,456 out of 9,620 parts of a farthing, the value of the wages per yard, is 1*s.* 7½*d.* 1,428 out of 9,620, the first cost 3*s.* 1½*d.* with some fraction.

Barrett Wadden,
Esq.

2 July,
1832.

Barrett Wadden.

Perhaps I may be permitted to accompany the document which I have now presented, with another, to which I attach considerable importance, and I think the importance of my next document will appear visible when I state that it is one founded upon a calculation put in by Dr. Bowring, and those calculations, as put in by him, were furnished to him by a silk manufacturer at Lyons, who, with great candour, and I have no doubt great simplicity, opened his books and let the learned Doctor take from those books, an extract of the various costs and prices of manufacture, through which a certain quantity of silk was put before it arrived in the shape of 500 ells of satin. I hope I am not out of order in soliciting the attention of the Committee to the document that I am now about placing on record; it is a document arranged by me on the same plan of those comparative accounts, showing the cost of production at Lyons and in Spitalfields respectively, and which I have had already the honour of presenting to the Committee. Dr. Bowring has also, if his evidence be examined, put upon record the cost of certain raw silks purchased by this manufacturer for the purpose of being worked by him

Barrett Wadden,
Esq.

2 July,
1832.

into 500 ells of satin, he has given in the various costs of the raw silk, and all the processes of throwing, dyeing, winding, warping and weaving, and the only alteration that I have undertaken to make in the account as tendered by the learned Doctor, is to correct some of his figures, where I have found them to be arithmetically wrong. I hope in doing that, I have done justice to his account, which if not corrected by me, would stand a record, that even the learned Doctor himself had put upon the Minutes of your Evidence some most erroneous calculations. He states that the manufacturer gives 50*f.* per kilogram, for 17½ kilogrammes of silk, and the item set down as amounting to 872*f.*; I find that according to school boy arithmetic it is 875*f.*; he goes on to put it through the process of throwing, which he states cost the manufacturer 11*f.*, I do not dispute it, for throwing the tram 7*f.*, for dyeing, 3*f.* per kilogram; for winding, 4*f.* per kilogram; for warping the whole 500 ells of satin, 18*f.*, and for weaving the 500 ells of satin, 475*f.*, altogether amounting to 2,471*f.* 88*c.*, which taken at the exchange of 25*f.* turns out to be worth 98*l.* 17*s.* 6*d.* I find that in Spitalfields, goods manufactured of equal weight and of equal length and similar in quality, would cost me 139*l.* 9*s.* 3*d.*, or the cost of working the silk through its various processes, agreeable to those calculations which I made last March, and which I have already had the honour of submitting to this Committee; so that the cost of production between Lyons and Spitalfields in the manufacture of those 500 ells of satin, as given in evidence by the learned Doctor, the difference between Lyons and Spitalfields is 40*l.* 11*s.* 9*d.* or 41 per cent. above the cost price at Lyons; and I now am about placing before the mind of this honourable Committee a point that its attention has not yet I believe been called to. I am anxious to ascertain if the whole of the duty at present payable upon thrown silks coming into this country were abolished; if the authorities that be, have made up their minds to render the silk mills of this country of no value, by letting into this country foreign thrown silk free of duty, how much then would this 40*l.* 11*s.* 9*d.* which is now the difference between Lyons and Spitalfields on the production of 500 ells of satin, how much less would that difference be. I find that I have paid duty upon 38 lbs. 9 oz. of organzine silk, and duty on 39 lbs. 11 oz. of tram, the united amount of these duties is 10*l.* 14*s.* 3*d.*, so that if I had my material without the payment of one farthing duty, the balance between Lyons and Spitalfields in the manufacture of these 500 ells of satin, would be 29*l.* 17*s.* 6*d.* or 30½ per cent. above the cost price at Lyons, and yet with this fact, half of this fact, I may say, as relates to Lyons, put on record by the learned Doctor; and another important fact put on record also by him, namely, that he found that there was a difference between the cost of production in France and in Spitalfields, amounting to between 30 and 40 per cent., I say in the midst of these glaring facts, he has informed your honourable Committee that 20 per cent. would be a protection against foreign manufacturers; when I have thus shown from his own figures on one side, and my own on the other, that if I could be relieved altogether from the entire payment of duty on the article I consume, the difference then will be between Lyons and Spitalfields, 30½ per cent. I have now to make one other observation upon this document, and upon the half of this evidence, as furnished me by the learned Doctor, that this satin so manufactured at Lyons, is made by a party who acknowledged to the learned Doctor, that he had his 10 per cent. profit; for his evidence is, that the satins would sell for 3,000*f.*, that is, yielding the French manufacturer 10 per cent. profit, and the material was furnished to that manufacturer by a grower getting from 15 to 25 per cent. profit on the production of the raw material; is it necessary for me to add another word to what I have stated, to show that there is a power between the grower and the producer of silk in France, where the manufacturer has on the manufactured goods 10 per cent. and the grower 20 per cent., here then is 30 per cent. possessed between the grower and the manufacturer out of profits so large, they may well afford to lower their price whenever pressed upon by any further reduction of the protection, such as it is, which we now have, or further lowering the wages of our working people, and if our people are to be forced down to a state of existence more degrading than their present position, and if our property is to be annihilated, upon the Government then be the responsibility; I am told I am to stand a competition against two parties, whose united profits are 30 per cent.; I admit the price of their labour is not very high, but it is sufficiently high and large to keep them in the production of their raw material, and in the perfection of their works. I beg pardon of the Committee for not accompanying the Statement with the counter parts.

[The Witness then handed in the Account.]

COMPARATIVE

COMPARATIVE VIEW of the COST and WAGES paid for Manufacturing $17\frac{1}{2}$ Kilogrammes of ORGANZINE, and 18 Kilogrammes of TRAM SILK, into 500 Ells of Satin at Lyons and Spitalfields respectively.—As given in Evidence by Dr. Bowring.

Barrett Wadden.

10031. At the close of your last examination you were engaged in stating those advantages which you considered the French manufacturer to possess over the English; have you any thing to add to that statement?—I have only to add that I consider the French manufacturer has a most important advantage over me; and that is, that in the first place he is furnished with a raw material that is acknowledged to be the best silk in the world, that the possession of that material is preserved to him by the Government under which he lives, not permitting a pound weight of that material to leave the country; and consequently, the grower of French silk not having any other market for the sale of his commodity, he must take whatever price that market yields. And here is an extraordinary fact, that at the time we are told that the silk manufacture of France is depressed, the grower that furnishes that depressed market with the material, is pocketing a profit on an average of 20 per cent. That is one important advantage. The other is, that the Frenchmen work with positive orders, we do not. It is one continued series of speculation with us from one end of the year to the other. The Frenchmen also has got an ability to export, which I should be extremely glad to see that we possessed; and I have little doubt upon my mind, before I shall take my leave of this honourable Committee, that I will be able to put some mode before the honourable Committee, by which an export trade of this country may be increased to a very considerable extent.

10032. Do you consider that these advantages on the part of the French manufacturer, are in any degree counteracted by the protection which the English manufacturer at present possesses?—They are counteracted as far as the duties collected go. I consider that they are counteracted to that extent; but that even with the collection of duties he has the advantages which I have already alluded to, and which we do not and cannot possess.

10033. What, in your opinion, would counteract those advantages which the French manufacturer possesses?—Having the evidence and the experience of fourteen years residence in the city of Dublin as a manufacturer, working against the influx of British manufactured fabrics coming in there, I come to this opinion,

Barrett Wadden,
Esq.

2 July,
1832.

Barrett Wadden,
Esq.

2 July,
1832.

and I can come to none other, that as far as the fancy or figured trade of France is concerned, nothing short of positive prohibition will save us from the effects of the competition to which we are now exposed. It is unnecessary for me to go into the particulars of what I am inclined to think I could produce to show the truth of my position, but it is quite enough for me to say, that the ability on the part of the people of France to weave and to produce fabrics, seems to partake of a kind of playfulness, that they actually as it were play with the threads over which they operate, and form it into those beautiful designs which in a great measure the national character of France partakes of; and that taste, aided and assisted by science, and that science lending itself to the silk weaver to imitate even the operations of nature. I need scarcely say that it is impossible for any gentleman to have visited the tapestry manufactory in the suburbs of Paris, without seeing the enormous benefit that is conferred on the manufacturers of the country, by the Government of that country upholding an art that would be destructive to an individual, but which, when supported by a Government, opens a school of knowledge to every silk weaver in the country, that either he may get the means of hearing it, or seeing it, or of reading it. When I see the persons in that manufactory at work upon productions that were lent them for the occasion; the most splendid pictures taken from the Louvre, and brought down to be imitated in tapestry; when I see the Government protecting a trade, I say this trade so protected must decidedly be a prosperous trade, and be urged on to a state of perfection that it is almost needless to suppose that persons can expect to arrive at; for when I was in France every thing was open to me without my hand in any one instance going into my pocket; whereas here I live in such a state of things that I can see nothing without paying for it; no, I cannot even see the royal lions in the Tower without giving my 5s. or 6s.; nothing is to be seen in this country without payment; whereas in Paris every school of knowledge that Paris possesses, is thrown open to every man that is in pursuit of that knowledge. I have only to add, that as far as the prohibition of fancy goods goes, I am quite satisfied that nothing else will protect us. It is a question of fashion united to a question of price. As far as the introduction of plain goods goes I am not prepared to say so; because in plain goods there is no skill of design wanted, there is no taste required, it is the production of the plain article. And then I should say that I think we could be fairly protected if means were devised of putting an end to smuggling; for I am quite satisfied that if the duties were properly levied, and those duties added to the various other expenses of transit, that it would amount to something in the shape of protection to us from the being inundated by foreign productions. But the question then solves itself into this difficulty; can any means be devised of securing a revenue to the country, and at the same time procuring protection to me as a manufacturer? I would say, yes. If the Government be anxious to secure employment to our people, I then say to the Government, punish the smuggler beyond any thing that the law now imposes, but make a law that would punish the smuggler when detected in importing foreign goods. I have always considered, and perhaps the honourable Committee will bear with me when I say it, that I do consider that the law of man ought to approach as near as man can approach to the law of God; and when I know this fact, that the law of God is no respecter of persons, neither ought the law of man; but as the law now stands, the urchin that filches from my pocket a handkerchief worth 2s. 6d. is transported, while the man dealing in thousands may filch from the public pocket and he escapes now, by putting his hand into a pocket already too heavy to carry the quantity of property it possesses, and dealing out some few paltry thousand pounds, which does not diminish his comfort or his luxury to the value of a hair of his head. I would then say to this honourable Committee, and I entreat this honourable Committee to solve this matter seriously, and see, could not something in the shape of imprisonment; could not something in the shape of the tread mill be applied to the great smuggler; for here I would not call him the public benefactor; I will say he is a man doing so much mischief, that the law ought to take hold of him, be he who he may, and punish him, as a man that is scattering ruin on the community, while he is pocketing his thousands.

10034. Are you aware that the several points relative to the advantages enjoyed by the foreign manufacturer, and the possibility of protecting the English manufacturer, were the subjects of negotiation by the Board of Trade during the past winter?—They were.

10035. How long did that negotiation last?—Full three months; the negotiation lasted, I think, something better than three months; and at all the interviews that

Barrett Wadden,
Esq.

2 July,
1832.

that we had with the President, assisted by the Vice-President of the Board of Trade, we urged upon that honourable Board the positive necessity of giving us a protection such as would arise out of the stamping of goods; we urged upon that honourable Board to provide for us a protection such as would arise by making smuggling a penal offence, and after a lapse of three months we were decidedly led to believe that we would be successful in both those points, for the first point, that of stamping goods, came urged on the mind of that honourable Board with as strong a recommendation as respectability, great experience, and enormous wealth could give. There was a memorial presented to that honourable Board, which has been already alluded to by a former witness, and the first signature to that memorial was the house of James Morrison & Company, followed by the most influential houses in this metropolis; and what did that memorial pray for, or what did it recommend? The stamping of goods. We were therefore led to believe, that a recommendation coming from such a quarter would be attended to, and that if attended to would be decidedly most efficient as far as it went in protecting us. We were also led to believe that His Majesty's Government would turn its attention to see how the smuggling transactions could be put an end to, and we asserted then, what to-day's experience proves to be a fact, that unless you visit the smuggler with some penal punishment, if he is to be only punished by the payment of fines, you will let a system be pursued that will not be checked, and that until it is checked the evils that press upon us must continue. The honourable Board of Trade at length gave us to understand that they could do nothing for us (a very polite way of getting rid of us), for that, upon consulting the Customs they found—that is the Board of Trade found, that if our recommendation was urged into practice it would be troublesome to the officers, and it would be inconvenient to the importers. We stated that, as far as the trouble that it gave to the officers went, that it was absurd to talk of it; if there was not a sufficient number of officers to discharge an increased duty, it would be very easy to add some few to their number, whereas it must be recollected that, according to the Government itself, admitting that there were smuggling transactions carried on to the extent of about 300,000*l.* a year, if, by the exercise of a judicious arrangement in the Customs, 200,000*l.* a year of these smuggling transactions could be secured through a legal channel, about 70,000*l.* a year would be then received in the shape of duties added to the revenue of the country, and 100,000*l.* a year would then be the whole amount of the smuggling transactions. But, no! no! such was the spirit of our Government, they were so disposed to economy, that they would not employ a few additional officers, even at the chance of receiving an increased annual revenue of 70,000*l.* As to the inconvenience it would be to the importers, the Committee will be surprised when I tell them, that the whole importers of French goods into this country does not exceed 60 persons, and these persons only importing at the distance perhaps of once a fortnight; so that, for the convenience of 60 individuals importing goods once a fortnight, sooner than give trouble to some half dozen officers very well paid in the Customs, the whole trade is to be left exposed to this injurious system of contraband dealing; hence, we were told by the Committee they could not do any thing for us; we were told we should have a decided answer on the following Monday, nay, some of our Members were requested by the President of the Board of Trade to receive their answer at two o'clock on the following Monday, and after a lapse of ten weeks we were told, that the thing was surrounded with such difficulty, that it imposed too much trouble on the officers and too great an inconvenience on the importers, and we were left to have no other alternative than to go in the attitude of petitioners to your honourable House, and request your interference in our behalf. Thus I have stated the transactions, as far as I know of them, with the Board of Trade, and in so doing I believe I have strictly regarded truth. I will state to the Committee as to the statement that was then made by the Board of Trade, that I have written down on a slip of paper before me, the exact words as uttered by my Lord Auckland, the President of that honourable Board, in answer to a question that was put to him by one of our members that had the honour of forming a deputation to wait upon him; the question was put, "My Lord, we hope that His Majesty's Government have not any intention of reducing the duties now payable upon foreign manufactured silks, or upon the materials that we work;" and my Lord Auckland's words were these: "It is not the intention of Government to proceed upon the principle of the reduction of duties." I hold myself personally responsible for those words, for I had them

Barrett Wadden,
Esq.

2 July,
1832.

them written before me, and an assurance to that effect was given to us by the Board of Trade.

10036. Do you conceive that an increase of the amount of duty would be the means of preventing smuggling or decreasing it, in your opinion?—I have this fact staring me in the face, that the amount of smuggling since 1829 is greater than it was before 1829; and then with that fact before me, I ask myself this question, What was the amount of duty payable upon the material we work and the goods that we have to compete with prior to the year 1829? and I find that thrown silks, which we have to work, were then subject to a duty of 5s. per pound weight, tram subject to a duty of 3s. per pound weight, and the pound weight of plain manufactured foreign silks subject to a duty of 15s. per pound weight, and the pound weight of figured manufactured foreign silks subject to a duty of 20s. per pound weight; and therefore I am of opinion, that if we could regain the position as to the amount of duties we have lost, there would be less smuggling; if we could regain that position, that in all human probability would find smuggling decrease, provided strict regulations were enforced, to whatever extent it was in prior to the year 1829; and I am quite satisfied that every calm and reflecting mind will, indeed the Government have acknowledged that smuggling since that period has gone on to an extent that could not have been anticipated.

10037. Then you would consider smuggling as likely to be in proportion to an increased amount of duties, would not you?—I consider that if the duty on the pound weight of manufactured silk was raised from 11s. to 15s. that we would be then placed in the situation that we occupied between the years 1826 and 1829; and that there was less smuggling between the years 1826 and 1829, than there has been between the years 1829 and 1832.

10038. Do you know the rate of smuggling now?—No, personally I do not; I am informed by a house whose confidence I am in, and they in mine, that the ribbons which they import are brought through the Customs of London at ten per cent.; and the article of tulle, which they import through the Customs of London, is smuggled at eight per cent.

10039. Is there more than one partner in that house that you just alluded to?—There are several partners.

10040. Do you consider that the quantity of smuggling depends upon the competition of the London houses, which are endeavouring to undersell each other in French goods, more than it does on the higher or lower rate of duties?—The house that has already given me the information which I have now alluded to has assured me, that on their arrival at Lyons or in Paris they are surrounded by a class of persons, all smugglers, competing with each other for the custom of the persons that have just arrived in their market; and there is such competition among these persons as reduces the charge of smuggling to the London houses; but that there is a very considerable competition, and I would say an enormous competition, amongst the great London houses; as relates to our manufacture, the competition is prodigious, and I have no doubt whatever, as relates to foreign manufacture, there is a similar competition; they have discovered a mode by which they screen themselves, and that is, by not smuggling the things themselves directly, but buying it upon condition that it is to be delivered to them at a certain place, or at a certain time, in London, the smuggler no doubt undertaking the risk, and thus conscience becomes reconciled.

10041. You have spoken of the great distress that is existing in that particular branch of the trade in which you are concerned, do you consider that that distress is confined to that branch of the trade as to Spitalfields?—When we were petitioners to your honourable House, I believe that distress then existed in the silk trade, such as the silk trade never before experienced, and I am satisfied that Coventry partook more of the extreme wretchedness of the silk trade than any other part of the country where the silk trade is carried on; that the great bulk of the distress, I would say the overwhelming distress of the silk trade chiefly was exhibited in Spitalfields and in Coventry; there was distress in Macclesfield, in Manchester, in Middleton, and in Sudbury; and the reason that I state so is, that I am almost in weekly communication with those places, and I think I have in my possession a letter which to my mind is conclusive of the state of distress in the neighbourhood of Manchester.

10042. What is the nature of the information which the letter you have referred to contains?—The letter which I now hold, and which I shall have the honour of handing in, is a letter from the Overseer of the Poor of Middleton; Middleton, I believe,

I believe, is within two or three miles of Manchester, and is that immediate suburb of Manchester that is employed in weaving the better description of gros de Naples, or the description of work that stands between the general manufacture of Manchester and the general manufacture of Spitalfields; so that if a traveller wants to get an article between those two extremes, he is likely to find it at the town of Middleton; the letter which I hold in my hand is a letter from the Overseer of the Poor of Middleton, dated Middleton, 17th March 1832; this letter was written in reply to a letter sent down by our Committee to the town of Middleton, to ascertain in what condition their silk trade was; were they as bad as we were, and if they were, to let us know the amount of their distress.

Barrett Wadden,
Esq.

2 July,
1832.

[The same was delivered in and read, as follows:]

Sir,

Middleton, 17 March 1832.

IN answer to your inquiries, I must say it is true that distress for want of employment among the silk weavers of this town has been such, during six months up to February, as was never before experienced; the extreme privations, and I may add the unexampled patience of the poor sufferers, excited the compassion of the more wealthier portion of the inhabitants of this town and neighbourhood, and a most munificent subscription was raised for the relief of those, who, notwithstanding their sufferings, would not apply for parochial relief; and here I may observe by the way, that the increase of poors' rates or the number of applicants for relief, will not go far to prove the extent of the distresses of the labouring class in a parish or the kingdom, for these very obvious reasons; in the first place, nearly one-half of the rates collected, go for other purposes than the relief of the poor, (our church expenses included;) I suppose it is nearly the same throughout the kingdom; again, let the trade be ever so good, there are many poor who cannot, and others who will not help themselves: on the other hand, when distress prevails, there are very many who would almost perish with hunger before they would ask for parochial relief; during the late distress I have witnessed numerous instances of this, in cases where I have been informed of families who were suffering in silence extreme distress; when I have asked them why they did not apply for relief, I have been answered with a magnanimity that deserves to be recorded, 'No, I would sooner die for want;' others more mildly, but more forcibly, would reply, 'We will try to do without a little longer.' From the above named subscription we were enabled to relieve 600 families per week, for five weeks successively, with from 6lbs. to 18lbs. of meal, and from 15lbs. to 30lbs. of potatoes, each. It appears by the different statements brought in by the parties who then inspected the township, that out of 1,454 silk weavers, 929 were out of employ. I have had some difficulty in obtaining the necessary information, otherwise I should have answered your letter sooner.

I am, Sir, your's obediently,

To Mr. Phipps.

Sam^l Pilkington,

Overseer of the Poor, Middleton.

10043. Did you ever hear of rich silk goods of any sort, such as are used by the wealthier classes, being made at Manchester?—I believe that they are not made; when I say not made, I have no doubt there are some few exceptions; I have seen an odd piece of silk now and then that I have been told was bought at Manchester, and that I would say was as well made as we could attempt to make it in Spitalfields.

10044. Has it been the habit of Manchester silk manufacturers to imitate any sort of fancy silk goods that may have been made in Spitalfields?—I believe it has been their habit.

10045. You have said that you confine yourself to the plain branch of trade?—I do.

10046. Do you know what state the rich figured and fancy trade of Spitalfields is now in?—As to the rich figured and fancy trade of Spitalfields, I consider it is almost extinct; there are some rich figured silks making in Spitalfields, but the amount of labour employed in those productions is not as one loom to every thousand. If I say that there are 15,000 looms employed in Spitalfields, I am about exhibiting productions upon which there are not 15 employed. [The Witness produced three or four splendid specimens of the production of Spitalfields.] These are works wove in Spitalfields, by our oldest manufacturer, Mr. Harn; I am just told his house is about 150 years established; and so high is the character of the man, that if he were here, and the question was asked him, "How many looms have you at work on those goods?" he would immediately answer it.

10047. Do you say not more than 15 looms are at work upon this particular work?—I should think not; and I doubt very much if there is half that number at work at Manchester in those particular goods.

Barrett Wadden,
Esq.

2 July,
1832.

10048. What do you call this?—[*Pointing to one of the specimens.*—I call that a satin damask with velvet flowers.

10049. Is it a recent production?—It is a recent production, weaving at present in Spitalfields.

10050. For any particular order?—For a particular order.

10051. What order is it for?—It is weaving for His Majesty's use at Windsor Palace.

10052. In what colour?—In a full rose colour.

10053. Were there many figured and fancy silks made in Spitalfields before the opening of the Ports?—I have every reason to believe that there were, for I am personally acquainted with three houses that, prior to the opening of the Ports, had between them 900 looms at work on figured goods, and those three houses now have not between them 80 looms. The falling off in our fancy and figure trade in Spitalfields is prodigious; and while it is so, I deeply regret to find that the foreign manufacturer has taken it from us.

10054. Is that description of commodity still in use to as large an extent as it was formerly?—By commodity I am to understand figured silks?

10055. Yes?—I think there is no diminution on the part of the public consumption in figured silks, and that there is as great a demand for it now as there has been within my memory.

10056. Then what, in your opinion, is the reason that those articles, of which you say there is as great a consumption, are not now made in Spitalfields?—The Ports of this country being open to foreign productions, and those foreign productions having arrived to a state of excellency that I must, as a manufacturer, say they are very superior to ours, they have got hold of this market, and indeed they must get hold of every market into which those productions go, for if science is regarded, and perfection admired, French productions are sure to find a sale go where they will; they are so perfect in their designs, and so beautiful in their execution, and therefore they have got hold of this market; the fashions are introduced; we are obliged to follow those fashions, and some of us, I fear, somewhat like Saint Peter, we follow afar off, at least it is my opinion, and we are likely to continue in that fallen attitude, at a loss to every man that pursues it; however, I am determined I shall not be one of those, and therefore I shall keep to the plain branch of weaving.

10057. Do you think sufficient efforts are made by the British manufacturer to provide fancy goods for the higher ranks of the community of London?—I believe sufficient effort has been made, at least an effort sufficient to prove the ruin that must follow it if it be continued. As I before stated, the fact is, France leads the fashion; our milliners, our first-rate dress makers, our warehousemen, import it, and we follow it; as long as this is the case, I regard it as hopeless to enter into a successful competition against foreign productions in the fancy trade.

10058. Do you, in the generality of your manufactures, use English or foreign thrown orgazine?—I use both; but the great bulk of the goods which I manufacture are made from British thrown silks.

10059. Do you find the English answer your purpose as well as the foreign?—I find it does in a great range of works. If I am asked in what cases I prefer it, or why I prefer it, I say, that in the article of satin, for instance; I consider our British thrown silks, generally speaking, are superior to foreign thrown silks, and I am now about stating a fact that perhaps will be valuable to the gentlemen by whom I am surrounded: It is in evidence by Dr. Bowring, and a most valuable piece of information it is, that the manufacturer of France, amongst the difficulties that he describes himself as having to contend with, classes a difficulty which he says arises from the stealth that takes place in the article that he introduces to the dyer's care. The honourable Committee, no doubt, will immediately recollect to what part of Dr. Bowring's evidence I refer. I am now about stating a fact, which I think will be beneficial, not only to the gentlemen manufacturers in whose presence I speak, but beneficial to every manufacturer in the kingdom; that will have the means of getting at a knowledge of the fact that I am now going to put on record. Amongst the advantages which I find to arise to me as a manufacturer from using British thrown silk is this very important one; I beg leave most distinctly to state, that what I am now about uttering is not to be considered or regarded as a charge made by me against that class of persons called dyers, than whom I am not acquainted with a more upright or a honourable class of men; but from the nature of the employment they give, and the number of persons in their respective dye-houses, the article

Barrett Wadden,
Esq.2 July,
1832.

article passing through their hands is very subject to be either wasted by negligence, design or by fraud; and I think that the man that points out a method to put an effectual lock upon his property while in the hands of the dyer, confers upon society a lasting benefit: that lock I am this day going to describe. I will point out a method to my brother manufacturers, whether they live in Spitalfields, in Coventry or in Manchester, that if they follow it, all the property that they send to their dyer they are sure to receive back; for out of the thousands of pounds weight of silk that I have dyed since I came into this country, I am safe in saying I have not lost a single ounce; and that declaration I would not be able to make, if, through the vigilance of my mind, looking round to see how I could be secured against any species of low cunning, or fraud or trick, that I had not discovered an effectual mode of preserving my property. Amongst the reasons why I give a decided preference to British thrown silk is this one: I have stated that the skein of raw silk is silk that has gone through no process of manufacture; this skein of silk that I am now exhibiting is produced from that raw, and I have that silk (I had a good deal of difficulty in getting the check brought to perfection when I came into this country,) but I have that silk thrown for me by one of the first throwsters in the country, and the plan that I strike out, to put an effectual security or bond upon my property, while out of my hands and in the possession of the dyer, is simply this: to have all the slips that each knot (I call this a knot or hank); to have the respective skeins that are contained in each hank about the same length or size, and to have then a certain number of those skeins put into each hank, I find that I am enabled to send, for instance, I sent the other day 186lbs. weight of silk in this state to my dyer, containing 1,807 knots or hanks, each knot containing four skeins; the skein as here exhibited is as it comes off the throwster's mill, and round this original skein is a strong thread of silk tied, and round every four there is a coarse cotton band tied; so that all I have to do is to reckon how many of those knots or hanks I give to my dyer, and when I get them back, ascertain, does every knot, (for he has my positive instructions never to break or violate one of those knots)—and therefore all I have to do, is to take a skein of dyed silk and ascertain, are there in that skein the same number of original skeins or slips that he received when they were given by me to dye: so that if manufacturers were to adopt this system, I go so far as to say, they need scarcely use a scale or weights; that it would be a better system, and a more complete one, to give to the original skein of silk taken off the throwster's mill, have a given quantity of those original skeins put into a knot, and to reckon those to the dyer. I have done it for years, and to that extent, which is perhaps a very considerable one, I have been successful in, and that is one great reason that I give a preference to British thrown silks, for I cannot get foreign thrown silks banded in a similar manner. Whenever I buy a bale of foreign Piedmont for instance, I am under the necessity of going back to the original slips, bind them all, and get them up into the state which I have represented.

10060. Do you think the English throwster capable of producing as good an organzine as the throwster of Piedmont?—I think he is, when receiving a price that will compensate him for his care and trouble, and the outlay of capital.

10061. Do you consider that he has as good raw silk as is to be found in Italy?—Indeed I think, generally speaking, he has not; there is one class of silk which I believe the throwster of this country has the whole throwing of; that class of silk is called Fossembrone; but the reason why I think that in the other description of silks he is not in the habit of getting the better description of them is, that it must appear self-evident to any reflecting mind, that the foreign throwster having the pick and cull of his own market before the English throwster can get to those silks, that he has a decided preference in making that selection out of a very large stock, and thus the English throwster or manufacturer is obliged to take into his work the refuse of a stock, or the remainder of a stock that has been already picked and culled by the foreign throwster. That is my opinion, as far as it relates to the general run of Italian silk, making two distinctions; one distinction is the Fossembrone, which comes to this country, and the other distinction is, that the article of Piedmont raw does not come here at all; that it is a prohibited article.

10062. Does the Fossembrone silk come to England in a thrown state?—I believe it comes to England in a raw state; unthrown, I believe, the whole of it.

10063. You have said, that you believe nearly the whole of the Fossembrone silk comes to this country?—I believe it does.

10064. Is Fossembrone chiefly thrown into organzine in this country?—I should say that the great bulk of it is thrown into organzine, such as the skein that I

Barrett Wadden,
Esq.

2 July,
1832.

have exhibited ; this is the organzine silk ; and the honourable Members will bear with me, if I just request their attention, if they will take that skein of silk, and hold it between them and the light, they will see what constitutes organzine ; it is the thread ; here is the thread of raw silk ; this thread of raw silk is first twisted, this thread also is twisted, and those two threads when twisted receive another twist together, which is organzine. Now this skein of silk is what we call tram, and the process of making tram is simply this : that the original single thread is not twisted at all ; but that the two threads are simply and softly twisted together, so that in organzine there is a double twist, that silk being used in warp ; it receives a strength that fits it to undergo the process of working, whereas it is only necessary to twist this thread in a sufficient manner to bear the process of throwing it across the work, which work is performed by the weaver's shuttle ; there are then sixteen twists on the single thread, and from twelve to fourteen on the double thread ; I am not a throwster, but as far as I am capable of examining those things with the assistance of a magnifying glass, I believe that to be the truth ; this is tram, and if the Committee will just hold this between them and the light, they will see it does not contain the same labour in it that the other does.

10065. Is that the same species of silk ?—Yes ; that not twisted is the best description of Italian raw silk ; the article I am now showing is the Fossebrone ; they are both British thrown. While I am in possession of the attention of the Committee, perhaps this is a proper time to give some information relative to the silk called Marabout, to which the attention of the Committee has been called to ; the skein of silk which I now hold is a skein of white Novi raw, from which marabout is made ; it is a silk coming from the worm in the colour that it now exhibits, whereas this is also the natural colour of the silk coming from the worm, and the value that this silk bears in the market is a value put upon it because it is suited for receiving the dye without discharging the gum, and receiving a colour more clear and pure, which this silk can never attain ; for here is a silk originally yellow, here is a silk originally white, and to put a pure and delicate shade of colour upon this yellow gum silk, it is unfitted for the purpose ; whereas this silk is peculiarly fitted for that purpose, that is Novi raw : now for the purpose of describing the process of marabout, which I shall do in a few words ; I should state to the Committee that article is first thrown into tram, and when thrown into tram it goes to the dyer, and here is some of it in a dyed state [*handing it to the Committee.*] After it is dyed, the throwster gets its back, and has to re-wind it, and to re-throw it, into the process that I now exhibit here, it is marabout ; and if the honourable Committee will examine that, and hold it between them and the light, they will see it is like the hardest twist of whipcord. I shall now beg leave to add, that that article of white Novi is this day worth 19s. 6d. cash ; that the price for throwing it into tram is 2s. 6d. ; the price for dyeing it is 2s. ; and the price for re-winding and re-marabouting it after it is dyed is 5s. ; to that add 10 per cent. waste, or 2s. and you have the present value of a pound weight of silk marabouted, 31s. per lb.

10066. The 19s. 6d. then is exclusive of all these operations ?—Yes, that is the cost of the raw silk ; and 31s. the value of that silk marabouted.

10067. You say that the Fossebrones make a very excellent organzine ?—A very excellent one.

10068. And for many purposes will stand in the place of Piedmont organzine ?—For a great many purposes I think it superior, and for other purposes I think it inferior ; here is an article which I beg leave to exhibit ; it is one of my own manufacture, and this is altogether made of Fossebrone silk ; every bit of that is Fossebrone [*handing it up to the Committee.*] I was determined to try an experiment ; I heard some of my friends say they were beaten to pieces in this market by French productions, and I determined to try ; the Jacquard that wove that cost me 21l. ; I made about a thousand yards of it, and I sold it at a loss, after offering it to some houses with which I was in the habits of the most intimate friendship ; men that would give me a decided preference ; and they said, “ Wadden, we are extremely sorry to see you wasting your property in this manner, but the French are beating you hollow, taking price into consideration.”

10069. What price can you produce that at ?—I can produce the thing, if I can get a sale for it ; allow me to say, I think the general run of French manufactured silks coming into this country are, I must acknowledge, superior to ours ; but that if I am encouraged, and that a profit is insured to me that will enable me to buy the best description of materials, and to pay fairly every man that I employ to manufacture that material into goods, I will let my head be severed from my body if

Barrett Wadden,
Esq.

2 July,
1832.

if I will not undertake to manufacture goods as perfect in Spitalfields as they can be produced elsewhere.

10070. Was this beautiful fabric which you have produced an experiment on your part?—It was a mere experiment on my part, for the avowed purpose of ascertaining was the fact correct as stated to me by some of my brother manufacturers, that they were cut out in this market by the introduction of foreign productions; I determined to try the experiment; I paid 21*l.* for the Jacquard, and when I produced the work, I have actually sold it at a loss, and I was the entire of the 21*l.* out of pocket besides.

10071. You did not throw the cost of the Jacquard on the commodity?—Not one farthing.

10072. Was there any other difficulty in selling it beyond the price of it?—None whatever; it was an imitation of one of those silks that we had the honour of manufacturing and presenting as a present to the Queen of Great Britain from Spitalfields.

10073. Were similar articles selling at the time?—Yes, in large quantities.

10074. When was it that you made this?—I had a man employed weaving that work, I think, from July last up to the month of April.

10075. Do you consider the style of this equal to any thing you have seen from France?—The pattern, as there exhibited, is altogether of Spitalfields production; the design is Spitalfields, the execution is Spitalfields, and the materials of which it is made is of British thrown silk.

10076. Have you seen any thing of this description in French superior in appearance to this?—I think that I have seen some French silks that I would consider as more beautiful than that; I am here covered with a modest feeling; I do not like to extol my own productions, which I would if I were to say they were superior to others.

10077. What is the difficulty that you complain of in this instance, as that which prevented you obtaining a profit when you sold this commodity?—The French maker is able to give an ell, or 1½ yard, for the same price that I should get for one yard, and that yard leaving a loss to me.

10078. Is not a great quantity of French silk of that description, but of an inferior quality, sold in this country?—I believe a great deal of silk, inferior in quality to this, and a great deal very superior to it in quality, is imported into this country and sold.

10079. If the duty should be taken off foreign thrown silk, do you think that Fossembrone silk in the raw state will be continued to be imported into this country?—My opinion is, the British silk mills would have no other employment but that arising from the throwing of such silks as the East India Company import, and that they would not have any supply of the finer silks of Italy. In other words, the finer silks would be retained in Italy to be thrown by the silk mills of Italy, and be sent into this country in a thrown condition.

10080. You consider that the manufacturer, as well as the throwster, would sustain injury by such a change?—I cannot for a moment separate the interest that binds the manufacturer to the throwster, and the throwster to the manufacturer; in fact they are dependent upon each other, and therefore, as I cannot separate them, I am inclined to think that should the duty be taken off, or even reduced, that the throwster will be sacrificed, and that if sacrificed, the manufacturer in course of time will fall in for a portion of that sacrifice.

10081. Do you think that throwing has improved in England of late?—I think it has not. I think that neither throwing nor weaving has improved in England of late.

10082. In what respect do you consider the throwing has rather deteriorated as you intimate?—I attribute the deterioration to the low price that is paid to the throwster; the same cause (low wages) which converts a good weaver into a careless one, the same cause is at work with the silk throwster; and hence the silk throwster, undertaking to work the silk at a certain price, sooner than see his mill and machinery all idle, which price, in most instances, includes the waste, he is compelled to leave in the original skein of silk what we call nibs or gouts; that to prevent an increased loss to him, such as would arise from a deficiency of weight occasioned by waste, he is obliged to leave the nibs or gouts in the silk to return as much weight to his employer as the silk is capable of producing; and thus, whenever that is the case, the grossest act of injustice is then done to the weaver, for the article cannot be wove by the weaver till all those original nibs or

Barrett Wadden,
Esq.

2 July,
1832.

gouts are taken out of it; and therefore we apply the term cleaning (not that the silk ever was dirty), but the term cleaning applies to the removing of those things which we call nibs or gouts, which if not removed by the throwster must be by the weaver. If it is removed by the throwster it makes the price of weaving to the weaver more easy; if it is not removed by the throwster it increases the already difficult situation in which the weavers are placed; and owing to the low wages that the throwster receives, I think that the silks generally thrown now are not as well cleaned nor as well thrown as they were when the throwster had a much better price for his operation.

10083. How do you account for the low wages and consequent distress in the trade of the throwster, at a time when there is so large an importation of raw silks, and so general a consumption of silk goods in this country?—I think the distress arises out of what I would denominate an unnatural competition, according as we force down wages, as it relates to forcing down the price of labour on those persons under us, and according as our profits are forced down by the buyers who are above us. This forcing down of wages and profit has a natural tendency to increase our productions; for if a man finds that his wages and his profits are reduced, he immediately tries to increase his business by an increase, just in about the same proportion as that property that he finds himself losing; and hence, in a great number of instances, we are compelled to go on with our productions till those productions absolutely outrun the demand, and produce such a stagnation in trade, such distress amongst ourselves and amongst our people, that we are all unfortunate monuments of the condition that we are placed in.

10084. You have stated in an early part of your evidence, that the condition of the silk weavers of Spitalfields is at this time very wretched; can you give any statement as to the number of them who may be at this time out of employment?—When this honourable Committee was appointed, I have reason to believe that there were about 5,000 looms in Spitalfields out of employment, and I should think that owing to the time of year, which always brings round employment to a certain extent, that of the 5,000 weavers that were out of employment when this honourable Committee was appointed, in all probability from 1,000 to 1,500 of them have fallen in to employment; and I should in round numbers suppose that there are 3,000 or thereabouts still out of employment; and while I am on this part of my evidence I would say, and I say it with feelings of extreme sorrow, that since the opening of the Ports to foreign productions, a new species of crime has sprung up in Spitalfields. I would wish here to be considered as bearing my testimony to the character of the weavers of Spitalfields, taken as a body, that, taking into consideration the enormous quantity of property which is continually in their hands, (I estimate the property at all times in the hands of the weavers of Spitalfields at about 160,000*l.*) and considering that this property is placed in the hands of some 12 or 15,000 people, there is not on the habitable earth, and it must be a proud consolation to the Government of this country to know, that the weavers of Spitalfields have ever been remarkable for their honesty; that if I look, as I sometimes do, at the violation of trust that takes place, it is a violation of trust only to the extent of some isolated cases; and I am now about stating an important fact, that will show that the alteration of the law has given birth to a species of crime in Spitalfields unknown in Spitalfields prior to the alteration of the law. Those documents which I have now to show, will show the crime to which I already allude; here are published documents, offering various rewards for the apprehension of weavers who have violated their trust, that have run away with their master's property. I am sorry to find, that among the sufferers are some gentlemen present; and no later than within the two last months here are two weavers who have absconded with property to the extent of between, I believe, eight and nine hundred yards of manufactured goods. Why have they absconded? I find there is a prevailing opinion amongst the people of Spitalfields, and that opinion is, that the Government of this country has abandoned the silk trade, and given it up to destruction; that if the weavers can only get out of this country, and plant their feet upon American ground, they are sure to find valuable employment; and hence it comes, that some of those persons who have absconded with their employer's property have, on their arrival in the United States of America, written home letters requesting their families to follow them out, for that they were at length on a soil in which labour and industry had its reward. I exhibit those as proofs that a species of crime has sprung up that is in operation upon some few unfortunate men,

Barrett Wadden,
Esq.

2 July,
1832.

and among the few I find my own countrymen, (for the seven or eight hundred yards of property that was made away with within the two last months is by two Irishmen, one in my own employment;) that therefore this arises out of a state of distress, the working people imagining there is no spot for them to anchor their hopes upon, they look round, and while in possession of their employer's property, they finish it, sell it, and with the produce they get themselves transported to foreign land, there to live superior to any thing they can enjoy through the medium of their own labour at home.

10085. In what manner are those weavers who are out of employment in Spitalfields supported?—The great bulk of them, I believe, are thrown on their respective parishes; others of them, in my rambles through Spitalfields, I have seen, several of them standing at the corners of streets selling matches; some sell fruit when in season, others hawk fish, and more of them are attended by their wretched families, with their hearts almost ready to break within them, trying to catch a penny from the passenger by imitating the song of joy. I have seen such a state of suffering, that I am afraid to trust my feelings to describe it; they are at all times alive to the distresses of the people, and when I see those distresses produced, not by the people themselves, but produced by circumstances over which they have no control, that is the only excuse that I can offer to the Committee if I exhibit any degree of warmth of mind or feeling.

10086. You stated a new species of crime had sprung up since the prohibition, which was the weavers making goods and then selling them, and running away; do you mean that that never happened before the prohibition was taken off?—I have made it my particular business to inquire most anxiously into their condition, and I cannot find a single record in which a violation of faith took place when the people's labour was protected.

10087. Have you any knowledge of the goods which were some time since seized belonging to Messrs. Leaf & Company?—I have some knowledge of them.

10088. Can you state what proportion of those goods was broad silks and what ribbons?—I think I can; I received a letter from the Commissioners of Customs some time last November, requesting my attendance down at the Custom House, to examine some goods which were then under seizure, and which were reported to be the property of Messrs. Leaf & Company. In examining those goods, I found that they contained 7,919 pieces of ribbon, measuring 218,869 yards, and that there were amongst those goods 369 pieces of broad silks, measuring 25,541 yards.

10089. You are aware that those goods have been restored, in pursuance of some arrangement between Messrs. Leaf & Company and the Government?—I am.

10090. Now do you know whether those goods have been since sold for home consumption?—I have reason to believe that all the goods that were so restored have been since sold for home consumption, in common with the goods which that house is in the habit of selling.

10091. Is that in accordance with the law?—I am placed in such a situation now as I never was placed in before in all my life. I am asked a question of law; however I shall give my opinion. I believe that the goods ought not to have found their way into our home market; for I find by a reference to the Act of George the Fourth, c. 23, there is this Clause:—"And whereas it is expedient that greater rewards than heretofore should be granted to officers upon the seizure of foreign silk goods; Be it Enacted, That upon the seizure and condemnation of any such goods, for the breach of any law now made or hereafter to be made, relating to the revenue of Customs, or for the prevention of smuggling, there shall be paid to the officer seizing the same, in lieu of the rewards granted by any former Act, the whole value of such goods, exclusive of the duty thereon: Provided always, That such goods shall be sold for exportation only."

10092. Do you know that they have been sold?—I have no doubt whatever, the goods were returned to Messrs. Leaf, and they got them into their stock and sold them.

10093. Do you know whether, in the compromise that took place, they saved the duty or paid the duty; were the goods restored to them on their paying the duty, or without paying the duty?—The goods, I understood, were restored to them, on their paying 20,000 *l.*; and that compromise, I must add, took place at about ten o'clock on the night previous to the question being brought into His Majesty's Court of Exchequer: that that compromise took place although a pledge, as solemn as a pledge could be made, was given by the Vice President of the Board of Trade to the country, that justice should not be compromised with the parties.

Barrett Wadden,
Esq.

2 July,
1832.

10094. Do you know when these goods were returned whether they entered into any bond, and whether the Government entered into any arrangement with them, by which they, on their own parts, made a compromise that they would not prosecute for any previous offence committed before that?—I am not able to give any information whatever on that subject; I know nothing of it.

10095. Did you hear this pledge that you speak of, made by the Vice President of the Board of Trade?—The pledge, as made by the Vice President of the Board of Trade, and to which I have now referred, is a pledge that I have read in the various publications of the day, as uttered by the Vice President in a certain place, that it would be a violation of my duty to be more explicit upon; I read it as matter of history.

10096. Did the trade generally understand it as a pledge?—The trade, I believe, to a man, understood it as a pledge.

10097. Did the trade, from the publicity that was given to the statement, consider themselves able to reckon upon it with certainty?—They considered the declaration that was reported to have been made by the Vice President of the Board of Trade, as a certain guarantee that ample justice should be done to the trade by punishing the parties, as far as the law would permit.

10098. Did the trade consider that the very large sum of money exacted from Messrs. Leaf in this compromise, was in any way adequate to the benefit which the trade imagined they would have derived by the pursuance of the prosecution?—The trade, generally speaking, considered that the payment of money, no matter how large, ought not to have been accepted; but that a more ample scope of justice would have been afforded to the general manufactures of the country and the trading interests of the country by punishing to the utmost extent of the law, and getting recorded, on the roll of the court, the fact that the parties had been convicted; for I believe the result would be, that if detected in any circumstance somewhat similar, that the second offence would place them in a situation, subject to such an infliction of penalty, as would leave them beggars, be their property to what extent it might; and that by avoiding the conviction which might have taken place, they have avoided that situation which they would have been placed in if a conviction had been recorded; and that they, the second time, had the misfortune to commit the same offence.

10099. Do you not consider that a public conviction would have been a very great and a very beneficial circumstance to the manufacturers generally?—Most assuredly.

10100. Do you not believe, that if it had not been for that pledge to which you allude, the trade would have taken some steps to obtain a distinct pledge to that effect?—I think they would.

10101. You do not happen to know yourself, do you, the circumstances of the compromise?—No; but I have good authority for saying, the sum paid was 20,000 *l*.

10102. You have stated, that you have reason to know that these goods, so returned to Messrs. Leaf, did, in point of fact, come into the English market?—They did.

10103. Are you aware whether the Government, in the arrangement which they made with Messrs. Leaf, have made it a part of the stipulation that those goods should not be sold in this market?—That I know nothing whatever about; I am not able to answer the question.

10104. Do you not consider that the circumstance of those goods being sold in the home market, independently of the quantity of British manufacture which may have been displaced by their being so sold, has also had the ill effect of operating very much to the discouragement of the manufacturer, by depriving him of that protection which he thinks he has a right to rely upon?—That is my opinion.

10105. Do you know whether the exportation of silk goods from this country has of late increased?—I believe the export of silk goods from this country has very considerably increased.

10106. To what do you consider that this circumstance is to be attributed?—The increase of our export trade can be traced to a drawback or bounty that is now given to the men that can find out an export market for our goods; that is, here is a sample of one of the most beautiful foreign thrown silks of Piedmont that I ever saw in my life; that article coming into this market pays 3*s*. 6*d*. duty; the Government, or an Act of Parliament rather, gives to the exporter of a pound weight of manufactured goods, a drawback equivalent to the import duty which the Government

Barrett Wadden,
Esq.

2 July,
1832.

Government has received on the pound weight of thrown silk, and that consequently we are indebted to that debenture or drawback for our export trade; take away that debenture, your export trade ceases; increase it if you can devise a means for increasing it, and you stand the best possible chance of increasing the employment of the people, by giving them an increased export trade.

10107. You have stated that the present drawback on the exportation of silk goods has been the principal cause of increase in the export of such goods within the last two or three years, how then do you account for their not having a large export formerly, when the drawback was a much larger one than at present?—When the drawback was much larger than it now is; I suppose that the honourable Member refers to that period of time when thrown silk paid a duty of 14*s.* 8*d.*; if that be the case, when foreign thrown silk paid a duty of 14*s.* 8*d.* per lb. the silks of Bengal paid a duty of 4*s.* per pound, and every other description of raw silk paid a duty of 5*s.* 6*d.* per pound; so that if I wanted to manufacture this article or that article, I could manufacture no article, no not even the bit of silk that lines this hat, but from silk that had paid a duty, and that silk worked up subject to the payment of wages which were then high, prevented us from having an export trade at all like that which we now have, for we are now manufacturing goods out of silks that have only paid a penny a pound duty. Our principal exports arise from the manufacture of the silks of Bengal and China, with a mixture of Italian raw silk; so that our export trade altogether is carried on from the manufacture of silks that have only paid one penny a pound duty, and getting a drawback or bounty derivable from a fund created by an impost on foreign thrown silks coming into this country that have paid 3*s.* 6*d.* a pound duty; here perhaps I may be permitted to state, that in a conversation which I had with the late President of the Board of Trade, who assured me that the duty payable upon foreign thrown silks was not a question of revenue at all; that the arrangement was to protect the silk mills of this country, and to give back to the silk trade whatever amount of duty they received on thrown silks; we will give it back to you if you find out a foreign market for your productions, caring not one straw whether the goods you manufacture are made of silks that have paid a duty, or made of silks of your own production from raw, that we give you subject to a penny a pound duty.

10108. Are you of opinion, that without the debenture the export of silk goods would continue?—I have already stated, and I state again, that take away the debenture and your export trade will immediately cease; that it is a trade that cannot exist otherwise.

10109. Does the export tend to the relief of the trade in general?—I should think very much; for if through the medium of low wages and wretched profits, profits that are sometimes called shades, and as long as I have lived in the world I never could ascertain how many shadows make a substance, or profits that are called shades, have a natural tendency to increase production; this production when increased outruns demand, and therefore it is of the utmost importance that we should have an export trade to take away the overplus whenever we can find a vent for it, and that vent I do fearlessly assert never can be obtained if you take away the drawback which the exporter of silk goods now has, and which constitutes his profits; for I do not hesitate to say, that English manufactured silks are to be found in the shops of New York at as low a price as they are to be found in any draper's window in the city of London; that the cost of transit and the charges, and the profit, is one arising out of the drawback.

10110. Assuming that the duty on the foreign thrown silk was taken off, and no debenture allowed, do you think it would be practicable to export silk goods from this country?—I think it would not be practicable.

10111. Are you able to state the amount of duty received in any one year on the import of thrown silk in this country, and the amount of drawback in the same year returned on the exportation of silk manufactured goods?—I hold in my hand an account published by order of the House of Commons of the 21st of September 1831, and it is headed "Raw, waste, thrown and manufactured Silk for Home Consumption in the United Kingdom, from the 5th of January 1830 to the 5th of January 1831." The duty received upon thrown silks for that year amounted to 73,551*l.* 0*s.* 8*d.*; and upon a reference to the same document, exhibiting an amount of drawback paid in the United Kingdom on British silk manufactured goods exported in the year ending the 5th January 1831, I find the total amount of drawback on stuffs or silks, or ribbons of silk, is 24,973*l.* 4*s.*, and the drawback paid on stuffs, or ribbons of silk and cotton mixed, 9,296*l.* 10*s.* 11½*d.*; stuff, or
678. 4 Q 4 ribbons

2 July,
1832.

ribbons of silk and worsted mixed, 2,420 *l.* 13 *s.* 6 $\frac{1}{2}$ *d.*; so that the total of the drawback paid that year was 36,690 *l.* 8 *s.* 7 *d.* The honourable Committee will pardon me if I call their attention to a circumstance which I am not capable or able to satisfy my own mind upon, but I think it is worth the attention of some more acute mind than I possess; we are set down here as receiving a drawback amounting to 24,973 *l.* 4 *s.*, which, at 3 *s.* 6 *d.* a pound, would represent exports to the amount of 142,704 lbs. weight of manufactured silk, and upon a reference to the quantity of silks that we are in another part of the account exhibited as exporting, the weight is 182,994 lbs. I state this extraordinary circumstance, hoping that the gentleman whose signature is to this, namely, William Irving, Inspector General of Imports and Exports, will be able to account for this extraordinary circumstance, namely, that if you try to ascertain the quantity of goods that you have exported by the amount of drawback you have received, you can scarcely imagine a case where a man would be idiot enough to export goods and not ask for the drawback, and therefore if the amount of goods exported be measured by the amount of drawback received, it is actually 142,704, and we are represented by another part of this document as exporting 182,994, a difference of upwards of 40,000 lbs. weight of silk.

10112. You would not get the drawback on the unmanufactured silk, would you?—Decidedly not; every 3 *s.* 6 *d.* which is received on a pound weight of foreign thrown silk is put by to form a fund for the encouragement of an export trade, and thus we are here represented as having exported manufactures of silk only to the extent of 182,994 lbs., and when I come to ascertain the quantity we exported by the amount of drawback received, I find a difference of above 40,000 lbs. in weight. But again, when I come to examine the drawback received on the export of silk mixed with cotton, and the drawback received upon the export of silk mixed with worsted, I find that here the difference is monstrous; the whole of the amount of drawback, amounting to 36,690 *l.* 8 *s.* 7 *d.*, represents goods exported to the extent of 377,925 the weight; whereas, in the official document, we are held up to the public as exporting goods to the amount of 472,340 lbs. weight, or nearly 100,000 lbs. weight of goods exported beyond what is represented by the drawback paid.

10113. Are you able to suggest to this Committee any means by which the export trade in silk goods might probably be extended?—This is a question which I consider of extreme difficulty and of extreme importance. After giving the subject as much attention as I had either time or wish to do, I came to two conclusions, that there are two ways by which the export trade may be increased to a very great extent. The first of those ways would be to increase the drawback; and I think there are two ways by which that might be done: the first might be to raise the duty from 3 *s.* 6 *d.* to 5 *s.*, giving an increased protection to the silk mills of this country; but that protection referred back again to the silk trade of the country, encouraging them to export their manufactures. For if I find, according to this document, that there is 89,544 *l.* in money received as duty on the import of silks, every guinea of which it is the wish of the Government we should draw out of their hands. They have told us so over and over again, that they do not regard it as a question of revenue, but as a question of protection; and that they, in other words, open a kind of account for the silk trade. They say, we will give you credit for all the money we receive for the payment of duties on foreign thrown silk, and we will debit you with all the money that you call upon us to pay for the export trade until, or at least to the extent, so as to balance the accounts; and I find that the amount of money paid in this year on the import of silk was 89,544 *l.* 0 *s.* 5 *d.*; and the whole amount of drawback they were called upon to pay only reaches, as I before stated, 36,690 *l.* Now I come to this conclusion, and I defy the mind of any rational man to come to any other, that 3 *s.* 6 *d.* is not a drawback sufficient to take away out of this market goods equal to the weight of foreign organzine silk imported. For the duty on the foreign organzine silk is only 3 *s.* 6 *d.*, the drawback is only 3 *s.* 6 *d.*; and while the Government receive, as I before stated, 89,544 *l.* they are only paying out of that 36,690 *l.* It is self-evident that the drawback, as it now stands, is not sufficiently large to give us an export trade equivalent to the import duty we pay, which is decidedly the object of the Government. And then if I am asked how is that to be done, I would say at once, if by any process that you can raise the amount of drawback to a price above 3 *s.* 6 *d.*, in whatever proportion you ascend with that price in an equal ratio you send our manufactured silks abroad, and you get a beneficial export trade. Now there

there is another way of doing that, which I would suggest to the Committee. I admit that it is a question of great difficulty; for if I am to be left exposed to stand a competition with foreign productions, the cheaper I can get my material the better for me; but, as I now stand, I am in an attitude to get my material as cheap as I can ever expect to get it; for the only duty that it pays is 1*d.* per lb., that is upon all raw silks; but when I come to work up foreign thrown silks they are burthened with 3*s.* 6*d.* I do not believe that they are burthened sufficiently to protect the mill property of this country; and I am satisfied that if that duty was raised to what it was prior to the alteration of 1829, namely, 5*s.*, and that 5*s.* given back to us upon the export of our manufactured goods, that we would have a larger export trade, and a much greater one than we have now. If I am asked to what extent, I would say decidedly treble, or fourfold the extent; because if we are enabled to export a given quantity of goods with a 3*s.* 6*d.* debenture, we would be enabled decidedly to export a much greater quantity of goods with a 5*s.* debenture; but the question in my judgment is this, how is the 5*s.* debenture to be obtained. Is it to be obtained by raising the present rate of duty on foreign silk up to 5*s.*, or can any other means be devised? I think that I could furnish some other means, that I could devise a method. According as the matter now stands, the debenture or certificate continues in existence but for two years from its date; that is, that if I import a bale of silk, pay the duty, get an acknowledgment in the shape of a certificate from the Government that I have paid the duty, I can transfer that, I can sell it for any period within two years; but if I do not sell it within two years it becomes of no value to me. I would suggest that a great benefit could be conferred on the export trade of the country if the debentures were to continue in existence, and to have no limitation as to time; I may then be told that if that plan were adopted it would place the Government in a difficulty of keeping open the accounts, and they tell me over and over that the money received is not a question of revenue. I would suggest in a few words, let the money which the Government receives in payment of duties on foreign thrown silks be paid into the Bank of England to the credit of an account to be opened, to be called the British Silk Export Trade of the country, and let the person presenting a certificate or debenture then receive a drawback to be monthly declared by any competent board that might examine into the state of our imports and exports for the debenture, to be raised from 3*s.* 6*d.* up to 5*s.*, and to stop whenever the amount of drawback would come up to the amount of duty received. In my humble judgment the export trade of the country could be greatly enlarged in this kind of manner; and by how much it is enlarged will give valuable employment to that portion of the community that are so anxious to have it.

10114. Then you think that the duties of 1829 on thrown silk, given in the form of debentures, tended to increase the export trade of the country, and that if the duties on thrown silk were raised and the debenture raised also, that would give an additional impulse to the export trade?—It is my opinion that it would; it is my opinion, after many many hours very serious consideration and close examination.

10115. Do not you consider that the reduction of duty on thrown silk would augment the price of raw silk in Italy, or that it would keep up the price of thrown silk to the English manufacturer?—I should think that it would: if you increase employment for the throwing mills of Italy, you increase competition among the throwsters of Italy for the raw material.

10116. Whereas if you augment the duty on thrown silk you would diminish the price in Italy, and keep up the price of thrown silk to the English manufacturer?—My sincere and candid opinion is this; that it would be a preservation to the silk mills of this country, and that it would afford increased employment to the people; and that if the system be managed so as to give us back, in the shape of drawback, all the money we pay in the shape of import duties, that while we are benefiting by it the revenue will remain as the Government wish it to remain, not deriving any benefit from our trade.

10117. The Committee understand you to say, that, according to your belief, there is one branch of the smuggling which is carried on from the Customs at a very low rate, so low as eight and ten per cent.; are you enabled to give any explanation to the Committee upon that subject?—When goods are brought through the Custom House, paying only 10 per cent. that should have paid 30, it is as I understand, and I am told so by the parties that are engaged in the transaction, that it is done by using I cannot say false weights, but announcing that certain packages of

Barrett Wadden,
Esq.

Barrett Walden,
Esq.

2 July,
1832.

goods weigh much less than they do actually weigh; as for instance, if a package of goods that weighs three hundred weight be represented as a package only weighing one hundred weight, although that one hundred weight is charged with 30 per cent. according to the law, yet the three hundred weight find their way into the warehouse at 10 per cent.; that is the way.

10118. It ought to be charged 90 per cent.?—Yes.

10119. Do you consider then, that the existing regulations of the Custom House are not adequate to the prevention of frauds of the nature to which you allude?—Sometime last September, an officer in the Custom House in London, a gentleman I believe holding a very important situation, assured me, that the arrangements of that establishment were so conducted that it would be possible for a vessel to arrive in the Thames in mid-day laden with silks, and to begin unloading them without the payment of the duty; I asked him to describe it to me, for I could not understand the thing; and he said, "My dear friend, I am in a hurry; but if I had time, I could put you in possession of the way of doing the thing."

10120. The answer that you have given refers to a different species of smuggling; the question related more particularly to that which is carried on by means of the false weights?—My opinion is, that such a system is in operation in the Custom House.

10121. Do you think that the arrangements in the Custom House are such as cannot prevent what you consider a use of false weights?—I think it is the negligence of arrangement.

10122. The Committee understand it then to be the impression of your mind, that according to the present system, it is practicable for a person both to defraud the revenue in the way of weight, and also by landing goods without the payment of any duty at all at the present time?—My decided opinion is, that it has been practised, but how far it is practised now I am not prepared to say.

10123. Have you any reason to suppose that the large smuggling transaction, in which Leaf & Company were engaged, was carried on with any connivance on the part of persons employed in the Customs?—Indeed I should think not.

10124. Is it your opinion that the smuggling transaction, in which Leaf & Company were engaged, is to be considered as a mere isolated case?—I should think it is not an isolated case; but that they found it necessary to embark largely in those kind of transactions, and no doubt reconciled the matter to their own mind, on the ground that they were entering into competition with houses that were similarly circumstanced.

10125. You said that 20,000*l.* was paid to compromise the matter; do you know at all what was done with the 20,000*l.*, or if the officers received any part of it, which they ought to have received?—I can only state what I have heard, and what I believe to be the fact, that the 20,000*l.* so paid has never been divided amongst the officers; that they have got, in some few instances, 50*l.* 40*l.* 30*l.* and 100*l.*; but that the great bulk of the money is in the hands of the parties who received it: however, I am bound to state this fact, that the house that owns the goods, namely, Leaf & Company, did memorial the Lords of the Treasury to refund them back their 20,000*l.*, on the ground that the goods so seized were not smuggled at all, and that consequently the Lords of the Treasury or His Majesty's Commissioners of Customs may hold back this 20,000*l.* until the subject-matter of that memorial is ultimately settled. Therefore when I understand that the officers have not got the reward to which the law entitles them, the reason may arise out of the circumstance I have stated, that the parties are claiming back the 20,000*l.*; not that I believe they will ever get a penny of it.

10126. You have stated, that the smuggling transaction in which Leaf is said to have been engaged and others, have arisen from neglect or from bad arrangements at the Custom House, do those bad arrangements still continue, or have they been altered or improved in any respect?—The arrangements are so shockingly loose there, that I know one gentleman, and he has told me, that by giving the man at the scales a sack of flour and a flitch of bacon, he will let him go through.

10127. Then you think the arrangements are still very loose?—I should think so.

10128. Would you not consider the mode of taking the goods altogether very defective, if such a system is allowed; would not you think some other mode of arranging the duties would be better?—I am not prepared to submit to the honourable Committee a mode of arranging duties, but when I know this important fact, that persons in high authority will not make most valuable changes for the benefit

benefit of the community, on the ground that those changes if made would be troublesome to the officers, I can find an excuse for the officers being negligent; my opinion is, that the officer or the man who receives the public money ought to work with a degree of fidelity and integrity suitable to the rank of life that he holds.

10129. You would not palliate his dishonesty by any opinions of a Government?—Most assuredly not.

10130. Then this system of passing a large package of goods through the Customs rated at only a small quantity, may account for the immense quantity of foreign goods which inundates this market?—I think there is no other way of accounting for it.

10131. Then taking the annual official or declared value of the goods passing into this country through the Custom House at 600,000*l.*, adding to this the indirect smuggling through the Customs, as well as direct smuggling, the import would be treble the sum, or about two millions?—I am extremely fearful to hazard any opinion that my mind has not been dwelling upon, and through the medium of calculations I may get myself involved upon; but it is quite enough for me to say, and to quote the words of my Lord Althorp, he stated in my presence, that we had not a remote idea to what extent the smuggling of foreign manufactured silk goods was carried on; and if the noble Lord, the Chancellor of the Exchequer, has not a remote idea of the quantity of smuggling that is done, it follows as a matter of course, that I cannot possess that knowledge of it.

10132. It has been stated by Dr. Bowring, that the average value of raw silk of France, of the finest growth, is about eighteen francs per pound, which at the present rate of exchange is equal to about 14*s.* a pound English; do you know the price of good Italian raw silk in this country?—The present price, I take it, ranges from 17*s.* 6*d.* to 18*s.*

10133. There appears then to be full 3*s.* a pound difference in favour of French manufacture, notwithstanding the grower of the silk himself gets a profit of 25 per cent.?—Above 3*s.* a pound difference on the price that Dr. Bowring has been referring to.

10134. It has been stated by Dr. Bowring, that the number of looms at Lyons has increased 10,000 since 1825, and that at St. Etienne and St. Chamond there are now 23,000, do you know the number of looms at these places in 1825?—I have seen a letter written in the year 1825, and bearing that date, in which the number of looms at St. Etienne the writer puts down as 12,000 in the year 1825.

10135. Was that letter from a competent authority, do you think?—An authority that I place an unlimited reliance upon, in the hands of a man of as honourable a mind and as upright heart as any human being I believe can possess.

10136. Then it appears that since opening the Ports to the French silks in 1826, there has been an increase at Lyons of 10,000 looms, and in the district of St. Etienne 11,000 looms, with what district in England does their manufacture most interfere?—The looms at Lyons interfere with Spitalfields; the looms at St. Etienne interfere with Coventry, and I believe those are the two districts that the foreign manufactories interfere with.

10137. It has appeared in evidence, that both in Spitalfields and Coventry, there has been distress to an extent utterly unknown in former years, do you think that the prodigious increase of the looms at St. Etienne, St. Chamond and at Lyons, has had any thing to do with that distress?—I should think that as the British public have not fallen off in the demand and consumption of articles of silk dress, and that as employment has awfully diminished in Spitalfields, and more awfully again diminished in Coventry, that by how much the people of those two places have lost employment, the people at Lyons and St. Etienne have increased employment, and that the British public are thus supplied while our own artisans are wandering about like mendicants.

10138. Do not the Swiss and German manufacturers also send goods to this country, and thereby increase the distress?—They send goods; but not to any considerable extent; the official return of goods imported from those towns do not exceed 15,000 or 18,000 pounds weight.

10139. If, with all the advantages possessed by France in respect of her raw material and low rate of wages, she considers it necessary for the due protection of her manufacture, to levy a duty of 15 per cent. on silk goods of Switzerland and Germany, do you think that the English manufacturer has great cause to complain at being forced into competition with the Continent as well as with France at a duty

Barrett Wadden,
Esq.

2 July,
1832.

Barrett Wadden,
Esq.

2 July,
1832.

of 30 per cent. ?—I think it is self evident that if France finds it necessary to protect her manufacture by imposing a duty of 15 per cent. on Swiss and German silks, and that England finds it necessary to levy a duty of 30 per cent. on French manufacture to preserve the English weaver, it must appear evident to any reflecting mind that the duty on Swiss and German goods in this market ought to be 45 per cent.

10140. You have directed your attention to the loss of labour occasioned by the introduction of certain silk goods of foreign manufacture; it has been stated by Dr. Bowring that the proportion of French silks for three years was about 18 millions of francs, which he has estimated at 800,000*l.*; can you inform the Committee the amount of labour which has been displaced in our silk districts by this importation?—I really cannot; I am at present engaged in wading through a mass of calculations which I have no doubt will enable me before long to arrive with some degree of certainty, so as to answer the question that is asked me, and I should not like to hazard an opinion at a time that I am getting through those calculations that will give value to that opinion, if expressed by me founded on those calculations.

10141. We have been told by Dr. Bowring that a fourth of the produce of the looms of Avignon used to be sent to England, and now none of these goods are sent here; the article made at this place were sarsnets; is that article called sarsnets still fashionable here, or is some other article substituted for it?—The article called sarsnets is gone out of use among us, and those that are now manufactured are principally used as the linings for muffs and cloaks, and therefore sarsnet has, in fact, gone out, and the article called gros de Naples has come in. Formerly we manufactured our sarsnets with silk of a much lighter fabric; the fashion is now, that a lady's sleeve is not fashionable unless it forms a ponderous balloon about her shoulder, and that cannot be produced without using a stronger fabric—a thing that when it gets the puff will retain it, whereas sarsnets, if they get the puff, would exhibit, I will not say the shape of a lady's arm, but would exhibit her, perhaps under a very ponderous dress, as having a very slight arm.

10142. It has been stated to the Committee, that the silk trade is suffering under competition between Spitalfields and Manchester; do you think that the introduction of foreign silk goods, by rendering labour abundant, has produced this unnatural competition?—It must be evident, that if there is a great competition carried on amongst ourselves, and that a foreigner gets in amongst us, that he must add to that competition; if two coaches are running between the Bank and Paddington, and they are carrying on a competition, and then a third and a fourth coach comes in, it necessarily increases their embarrassment.

10143. Does it not, then, appear to you as a proof of great inconsistency, not to say of cruelty, to attribute the distress of the throwster and of the manufacturer to home competition, rather than to the lowering of import duties, whereby a larger quantity of thrown and manufactured silks may be brought into the English market to increase the home competition?—I really think that the public are best served when a successful and an honourable competition is encouraged amongst ourselves; by the word honourable, as applied here, I would mean a competition with my Manchester neighbour, determined to outrival him if I can, expecting that he is making a corresponding exertion to outrival me, and the public standing by ready to receive the benefit; by the term successful competition I mean that operation that will afford a fair profit to the manufacturer for his works when produced, and that I would designate as a competition fully efficient for all the public service; and to add to that competition, or to throw us into a situation whereby we have more difficulties to struggle and encounter, is, in my opinion, neither very fair nor just.

10144. It appears by the evidence of Dr. Bowring, that he admitted that there was a difference in the cost of French and English silk goods of from 30 to 40 per cent., and yet he recommended an *ad valorem* duty of 20 per cent. on the admission of silk goods of foreign manufacture; what is your opinion of this recommendation, coupled with this admission?—I fear that the Doctor's recommendation there is something like the recommendation which a great many quacks occasionally give, that if followed produce not only disease, but in very many instances death; and I am quite satisfied, that if the fact be as recorded by Dr. Bowring, that there is a difference between the productions of the two countries, and that difference amounting to from 30 to 40 per cent., and that the duties by any stratagem or device be reduced to 20 per cent., I then turn to those men, poor and miserable

as they are, I say they are rich, when compared to the situation which they will be compelled to descend to.

10145. You have alluded to a promise given to the deputation of the silk trade respecting the import duty, and that you told the President of the Board of Trade you would then consider any proposal to lower the import duties not only as increasing the miseries of the silk trade, but as in violation of an express promise?—Having written down the words of that promise, any lowering of duties, or any deviation below the present amount of duty, I would regard, most assuredly, as a violation of the promise that has been made to us.

10146. Can you afford the Committee any evidence why an increased quantity of silk, speaking of its weight, is not always an increased quantity of employment afforded to the operative?—I exhibit two canes, as our weavers call them; I call them warps; each warp is the same length, 100 yards. This warp contains 6,600 threads of silk, and it weighs 3 lbs. 2 oz. 8 drs.; the price for weaving it is seven-pence. This warp is 100 yards long; it contains 4,400 threads; it weighs 4 lbs. 8 oz. 8 drs.; the price for weaving it is seven-pence; so that while the man is weaving this, his employment is not increased, nor the value of his labour increased one farthing, although he is working up nearly as much more silk.

10147. Has his employment within the last three or four years been universally of the heavier silks?—The great bulk of the employment of the people in Spitalfields and at Manchester is on those coarse silks which are no index of increased employment, but are an index of increased work to the labourer, giving him a material that is very inferior to this.

10148. Is the proportion of those heavy warps on the whole much greater than heretofore?—Decidedly much greater.

10149. Is it the finer or the coarser that is manufactured at Lyons?—The finer.

10150. What is the general term of credit in Spitalfields?—It can scarcely be said there is credit in Spitalfields; we are in the habit of selling our goods at one month's running account and two month's credit, but I would say that 7-8ths of the goods manufactured in Spitalfields are sold for money payable in the following month. I will state a fact, that when I sell goods, and I would most anxiously give credit to the parties buying them, that in very many instances the parties send requesting me to call on them to receive the money, allowing them simple interest at the rate of five per cent. per annum for the number of days my account has to run: there is abundant capital in the trade among our warehousemen.

10151. What is the credit that you understand is taken by the large warehousemen?—They have the name of taking two months' credit; but I believe that in most cases they pay their accounts the following month, deducting two months' interest.

Mercurii, 4^o die Julii, 1832.

LORD DUDLEY COUTTS STUART, IN THE CHAIR.

Mr. *Francois Felix Bouillon*, called in; and Examined.

10152. OF what country are you a native?—France.

10153. In what house of business are you engaged at present in London?—No. 12, Princes-street, Hanover-square; the firm of the house is Maradan, Carson & Company, in which I am a partner.

10154. Does that house deal largely in silk goods of foreign manufacture?—Not very largely; the amount of our sales is generally between forty and fifty thousand pounds a year.

10155. Does your house deal both in fancy silk goods and also in plain silk goods of foreign manufacture?—At present, during the last two or three years, we deal more in the fancy goods than in the plain.

10156. Do you not also sell a large quantity of foreign ribbons?—Yes.

10157. In point of fact, is not the whole or a very large proportion of the silk sold by your house, foreign silk?—It is.

10158. Can you inform the Committee about what proportion the fancy goods you have sold this year bear to the plain goods sold by you within the same period?—We have sold very little plain goods this year; we have sold far more of fancy goods, and of plain goods a very small quantity indeed this year.

678.

4 R 3

10159. Fancy

Barrett Wadden,
Esq.

2 July,
1832.

Mr.
F. F. Bouillon.

4 July,
1832.

Mr.
F. F. Bouillon.

4 July,
1832.

10159. Fancy goods are very much the fashion now?—Yes.

10160. Fashionable ladies will wear fancy goods?—Yes; those generally used are the plain goods, but not those sold by our house; we have sold a great many more fancy goods than of plain.

10161. You sell many more of fancy goods than of plain, because the genteel and opulent females who come to your house generally use them?—Yes.

10162. You sell no British fancy goods?—No, our house does not sell any.

10163. If you saw any British fancy goods you would feel no inclination to deal in them?—Yes I would, with pleasure; but as a house, for several years, we have been obliged to come into competition with the English manufacturer; we import a great many French goods; we were obliged to have our own patterns made, paying very dear, to have less competition; for that cause we are trying to do every thing we can to push the sale of our own goods, or those fancy goods, which are very high in price.

10164. Could you sell British goods if they were equally good, in your house, as well as French?—Certainly.

10165. Is not the fashion uniformly set by the designs that come from France?—Yes; but a good many designs have been copied in England; they come out almost as soon as the French.

10166. Would not your customers prefer the French goods to the British?—For several years the ladies have not thought so much of asking me whether the goods are Foreign or English, they choose the goods, and do not ask whether they are French or English.

10167. They come to your house as a house of fashion, and expect to find goods of French fashion and French fancy; they take that as a matter of course?—Certainly.

10168. If you import fancy silks to the amount of 100*l.*, how much plain silk do you import in those?—Not an eighth part; we cannot sell foreign plain goods in this country in competition with the English; some English goods come a good deal cheaper than the French plain goods; it is only the design and the beautiful quality of these which enables us to make a profit.

10169. Do not you import a good many watered silks?—Yes.

10170. Do you consider them as plain goods?—Yes; it is done in this country as well as in France, now.

10171. The ribbons sold by you are French?—Yes; the gauze ribbons I am bound to say are a great deal superior to the English.

10172. Would you have any objection to state about what is the annual value of foreign silk goods which you sell; you state the whole to be about 40,000*l.* or 50,000*l.*, a part of those goods are English?—Yes, and there is the profit included; we have about eighty people at work at our house, and the labour is to be paid for.

10173. Out of that sum how much is expended on French goods?—Fourteen or fifteen thousand pounds a year; we are obliged always to have a large stock; our goods from France, silks and ribbons, amount to about fourteen or fifteen thousand pounds a year.

10174. Do your house import the goods you sell, or do you purchase them in this market after they have been imported by others?—We import almost every thing ourselves.

10175. Are there not other houses having a similar business to yours in London?—Yes, English houses.

10176. Do you believe that they have been lately carrying on their business very much in the same classes of goods?—Yes; but every year for the last two or three years, most houses have reduced their purchases in France a great deal.

10177. How do you know that?—I hear that in the market.

10178. It is a matter of opinion?—I speak from what I hear from others in the French market.

10179. Do you speak of the decline in purchases of plain goods?—Yes.

10180. You find when you purchase plain goods from France the cost of duty is 35 per cent. do you not?—Yes; from 25 to 30 per cent. expenses included.

10181. If you could get them in at 15 per cent. you would find it worth your while?—Yes, that is the thing to be prevented.

10182. Is the stock you have on hand consigned to you for sale, or do you import it on your own account?—On our own account.

10183. Should you find any great inconvenience in having your goods stamped by

by the Customs in London when they were imported?—I think that will perhaps prevent some part of the smuggling, but I think it will be very difficult for the officer who comes to visit the goods to ascertain whether the stamps have been put on after the pieces are cut; if I have cut up the half of my piece, he could not ascertain whether what remained came from such a piece; and I think it would give trouble to the officers and fail in accomplishing the object.

10184. Do you think it would be a material injury to the goods if they were stamped or printed in about four or five or six places in the side?—It will certainly alter the width of the piece, and occasion a certain loss on the piece.

10185. Supposing it to be about every twelve yards, do you think that would be a serious injury?—I think it would.

10186. Do you think the amount of duty now imposed on foreign silk is sufficient to protect the English manufacture?—On some it is sufficient, on some other it is not, in my opinion.

10187. Have the goodness to mention those articles in which you think it is not sufficient?—I think the duty on gauze ribbons and on gauzes in general is not high enough; the reason is, that I think the Coventry manufacturers are very far behind our own, as the gauze ribbons cannot be conveniently pressed; it would be difficult to smuggle them; if they are pressed, they are entirely spoiled; and I think if the duty were raised upon the gauze ribbons, that would protect the manufacturer here; it would perhaps prevent the job goods coming over, which I will explain; the ribbons of France are made in very great quantity; each manufacturer brings out his patterns, and executes a large quantity of ribbons, but in a month after those goods have been brought into the market in Paris, they do not sell; then the rest must be sold, for when they become stale things, they are of no use in France; they renew so often the pattern of their things, that when the things have been seen they must be sold; the consequence is, that they are sent into this country, and sold at a very low rate indeed.

10188. Do you speak of fancy silks and gauze ribbons, when you speak of things that must be sold?—Yes; in ribbons particularly.

10189. Do you think they call a pattern old, after it has been seen in Paris six weeks?—Yes, six weeks or two months certainly.

10190. What do you think of the duty on figured satin ribbons?—It is very heavy; it is heavy enough for the satin ribbons and the sarsnet ribbons; they make them in this country a good deal better than the gauze ribbons.

10191. You speak of the extent of manufacture of ribbons in France, have you any idea what the value of manufactured ribbons in France is?—No, I cannot say; but I know one house, Dugas, frères, before the competition came against them; that house took stock five years back, and they made 26,000*l.* profit in that year. Warehousemen were obliged almost to beg goods from them, and they were obliged to give orders six or seven months before-hand.

10192. There are a good many large houses in St. Etienne and St. Chamond, manufacturers, are there not?—Yes; that is the reason the quantity of looms is larger in those places.

10193. Have you an idea what was the value of the business transacted by Messrs. Dugas, frères, in the course of any one year?—I am told that Messrs. Dugas, frères, had at least 20 per cent. profit altogether, but now it is quite different. Warehousemen are no longer compelled to entreat them to supply them; but, on the contrary, they must be very careful themselves to execute the orders, for now there is a great deal of competition against them.

10194. You were asked what you thought of the duty on satin ribbons; you say it is very heavy; what is your opinion on the duty of figured satin ribbons?—The plain satin ribbons are not much used in England; the quantity is very small; but it must be the brocade ribbon; that is the only one you have from France in a large way; they charge very high in France for it.

10195. Is the duty heavy upon it?—It is 30 per cent. on the cheap ones.

10196. Have you any idea of the extent of smuggling?—No but I am sorry to say I believe it is very largely carried on.

10197. Do you believe that there are as many goods smuggled as are entered in the regular way?—I cannot say; but it is a thing that spoils the market, certainly.

10198. Do you find your goods, when you have imported them, occasionally interfered with by others who have been smuggling them?—Yes.

10199. You think it is carried on to a great extent?—I think so.

678.

4 R 4

10200. Do

Mr.
F. F. Bouillon.

4 July,
1832.

Mr.
F. F. Bouillon.

4 July,
1832.

10200. Do you know a house at the West end of the Town who smuggle a hundred and fifty or two hundred thousand pounds worth a year?—I cannot say, indeed.

10201. Have you an opinion upon that fact?—I cannot say; I think that certainly the smuggling is going on very largely; but when once the smugglers get the goods over, in the present state of the law, the affair is quite settled; I mean the goods cannot be detected.

10202. Suppose that French goods were prohibited again, do not you think there would be very great danger of not keeping them out?—There would be great danger for some time to come, having had great quantities of goods over for several years, and having paid the duty on them, every house would have accommodation for receiving others.

10203. The novelties would be detected at once, would they not?—If there was a difficulty in getting French goods over, the wish to purchase would become dilatory, I am afraid.

10204. In what year did you come over?—In 1821.

10205. Were you acquainted with Mr. Pelican?—Merely to meet him in company.

10206. Did you never sell goods through his agency?—No.

10207. Do you think that if total prohibition was enacted, that would not go a great way to prevent smuggling?—I think it would be a long while before they could be prepared to prevent smuggling; if there was a fine for it, and that fine only money, I do not think that it would prevent smuggling.

10208. You would recommend, perhaps, that a man should be sent to the tread mill for it?—Something of that kind might prevent it; but the loss of 200 £., or any sum of that kind, would never do.

10209. Smuggling is now carried on by some very large houses, is it not?—I think so.

10210. Formerly, before the prohibition, was not the smuggling principally carried on in small quantities, and by private individuals?—No; I think it was in a great quantity and not a small one; there were a great many goods in London, but the people were so afraid to have them in their possession, that the ladies paid a good deal more for them.

10211. No person would dare to keep a large stock of goods at that time, would he?—Yes; they would keep them concealed.

10212. They were not offered to the public in all the shops as they are now?—No; but the ladies were not so difficult as they are now; if a pattern-book was taken to them, that would be sufficient.

10213. You do not think there was any thing like the quantity of French goods sold then which there is now, do you?—I think there was.

10214. Do you mean to say, that looking at the ladies in the Metropolis, you saw as many French goods in wear as there are now?—I am certain that every where less French goods come from France now. The house of Carez Vacossin & Company, who used to come twice a year, do not feel it worth their while to come over any more.

10215. Do you not know that they are connected with the house of Robert & Thomas Clay, and therefore having an agency house in London, there is no necessity for their coming to sell their goods in London now?—I do not think the arrangement with Mr. Robert Clay is what is supposed; they are not prevented selling goods for their own account.

10216. Do you not know that Carez Vacossin & Company have lately visited Paris to meet Mr. Clay there?—Yes; that is on other business; the Merino business.

10217. Do you not think a prohibition, if enforced, would be beneficial to the silk trade?—If it could be; but to enforce the prohibition, you must find a way to prevent smuggling, and I do not think that could be done.

10218. You say your house deals largely in French fancy silks; if they could be prohibited, there would be an end of the trade of your establishment?—I would not say so; for if there was no way to get French goods by any means, I would certainly try and go to Lyons, have the patterns very early, and give them to English manufacturers, and beg them to make such a thing and such a thing for me under my direction, and I am certain they could do it.

10219. That would be very beneficial to the English manufacturer, would it not?—Certainly.

10220. You

10220. You have said that plain broad goods were made in this country better and cheaper than in France?—I did not say better, but cheaper; this [*producing a sample*] came to me at 3*s.* a yard, duty paid; in Manchester, they make it at 2*s.* 5*d.* and 2*s.* 6*d.* a yard, the same quality as I am told; I am told I could not get (now that the pattern is known) from any body more than 2*s.* 2*d.* a yard, if I go offer it to the English merchant.

10221. The price you speak of, 3*s.* 5*d.* is the price of the new fashioned article?—Yes.

10222. It is copied in Manchester in a cheaper article?—Yes.

10223. The article is therefore decidedly interfered with by the copy made here?—Yes.

10224. That produced in this country cheaper, is inferior to that article, is it not?—Yes.

10225. Have you seen as good as this made for 2*s.* 6*d.* a yard?—I have not; but I have been told that it is done.

10226. If you take it at 3*s.* 1½*d.* per yard, you take off 11 per cent. which is 4*d.*, reducing it to 2*s.* 9½*d.* the ell, reducing that ell into yards, by taking off one-fifth, that reduces it to 2*s.* 3*d.*; then there is the rate of exchange, 6¼ in favour of this country, so that it could be bought in Lyons at 2*s.* 1*d.* per yard?—Then there are the expenses and the duty; but I call these fancy goods; I speak upon the plain goods, which never give any loss; these goods will always give a loss, for they are fancy goods.

10227. You have stated the price of that article as at the beginning of the season, can you state the price of such articles at the close of the season?—That is what I call fancy goods; they may be got as a job 25 per cent. cheaper after the first month is over. The price I have stated is the price I have paid to have it early in the season before any body else.

10228. Have you not reason to think, that while it is fashion the manufacturer who sent it to you would of course insist upon having a good profit?—Certainly.

10229. Are any broad silk goods imported from this country into France?—No; I think they are prohibited there; but at all events the duty is such as to prevent the importation.

10230. Are any smuggled into France?—The smuggling into France is very difficult; our coast is so well guarded.

10231. No smuggling of these articles takes place in consequence of the excellent regulations of the Custom House which exist in your country?—I will not say none, but very few.

10232. It follows that it would be possible to establish in this country such efficient Custom House regulations as would prevent any smuggling from France?—I think a great many alterations may be made in this country.

10233. What is accomplished in one country may be also in another?—Yes, I suppose so.

10234. You have stated the amount of annual sales in your house to be forty or fifty thousand pounds, have the goodness to state the proportion of English?—As a French house, we sell very few English goods; we sell only sarsnets and plain gros de Naples, and several things which we can procure in this country cheaper than we can in France.

10235. Do your sales of English goods amount to 2,000*l.* a year?—Yes, thereabouts, perhaps.

Mr. John Dubois, called in; and Examined.

10236. ARE you a broad silk manufacturer?—I am.

10237. Are your goods made in Spitalfields?—They are.

10238. How many years have you been in the trade?—About thirty.

10239. Has not your family been many years engaged in the silk manufacture of Spitalfields?—Above a century.

10240. What description of goods have you been accustomed to make, fancy or plain?—Both fancy and plain.

10241. Have you made chiefly the rich or the lower description of goods?—Of middling and rich quality.

10242. How many looms did you formerly employ?—From 120 to 150.

10243. To what class of persons were your goods chiefly sold?—The higher classes.

678.

4 s

10244. Have

Mr.
F. F. Bouillon.

4 July,
1832.

Mr.
John Dubois.

Mr.
John Dubois.

4 July,
1832.

10244. Have you supplied the mercers at the West end of the Town?—Principally the mercers.

10245. What proportion of your trade was fancy and what plain?—About one-fourth fancy and three-fourths plain.

10246. Were your fancy goods generally made to order?—They were.

10247. Were you able then to employ your hands better through dull seasons of the year, and with greater regularity, than it is possible for the manufacturer to do who does not work to order?—Yes: we generally received our orders in the month of January for the spring trade, and in the month of July for the winter trade.

10248. Was the branch of trade in which you were employed, that of rich fancy goods, in a state of prosperity up to the time of the opening of the Ports for French goods in the year 1826?—It was.

10249. Had the opening of the Ports to foreign silk goods in 1826 any effect upon your trade?—It prevented my getting my orders in the usual way.

10250. Was the effect immediate or has it been gradual?—It has been gradual.

10251. You have stated that formerly you were enabled to employ your hands with great regularity from the orders you received to prepare goods for the seasons, are you still in the habit of receiving such orders, or have they been discontinued?—They have been discontinued.

10252. Why do they not now give you orders as formerly?—Because they get the goods from the foreign market; some of the most fashionable houses go over to Paris regularly every two months; others buy their goods of the travellers that come over here, and others buy them again of houses that are established here; and I have been informed by some of them that are very respectable men, that they can buy them at least 10 per cent. cheaper than they can import them.

10253. You have, in fact, ceased to supply those parties with goods?—I have.

10254. Speaking still of rich plain and fancy goods, you consider that it is from that market your former customers supply themselves?—They get supplied from the foreign markets.

10255. Do they supply themselves from Manchester with any of those English goods?—I believe not.

10256. What effect have all those circumstances had upon your trade?—To do it away entirely.

10257. What is at present the general condition of the fancy trade at Spitalfields?—It is very flat, I believe, except in the waistcoat line.

10258. Can you give the Committee an idea of the proportion of looms which Spitalfields formerly employed in the fancy branch?—I believe from one-fourth to one-fifth, 40 or 50 years ago.

10259. Were there many fancy silks made in Spitalfields of a very splendid description and requiring immense skill both in design and execution?—There were; here are some patterns of silk which were made 60 or 70 years ago [*producing some patterns*]; these are Spitalfields manufacture.

10260. Dr. Bowring has stated in his evidence, that there is an opinion in France that the improvement in English figured silks since the opening of the Ports is prodigious, equal to fifty years, as you have shown the Committee specimens of English manufacture, and such as were made for many years prior to the opening of the Ports, and you had been engaged in the rich fancy trade; will you say whether the opinion of Dr. Bowring is correct or not?—I think it is not correct.

10261. You have stated that you have formerly been a fancy manufacturer as well as a manufacturer of plain goods, do you mean to say you have entirely given up the fancy trade?—Entirely.

10262. And that from want of orders from those customers who used formerly to give you those orders?—Yes.

10263. Do you think Spitalfields was formerly equal to France in the fancy branches of the silk manufacture?—I do.

10264. Do you know whether the productions of Spitalfields in those days were imitations of foreign patterns or from original designs?—They were, I believe, from original designs.

10265. Were there then regular designers in Spitalfields?—There were; each house kept a pattern drawer, and they paid him from 300 *l.* to 500 *l.* a year for the patterns that were drawn.

10266. Are designers employed now in a similar manner?—They are not.

10267. To what do you attribute that change?—There is not sufficient employment for them; I do not think that any manufacturers in London could afford to pay

pay the expense of 500 *l.* a year for a pattern drawer or designer, now several houses pay according to the figure which they have done, and according to the work it is for.

10268. Have you any thing to add?—I consider that as the manufacturers of this country can afford an abundant supply, every importation we have from the foreigner is throwing so much British capital and British labour out of employment, and will in the end, I have very little doubt, tend to ruin our manufactures altogether.

10269. Are you of opinion that if we were to return to a prohibitory system there would be any difficulty in detecting French goods?—I think not.

10270. Though there might be some inconsiderable quantity of smuggling before the opening of the Ports to the admission of French silks, was it not so inconsiderable as to be altogether unworthy of notice?—Yes; and I think the stamping of them would be of service, because, though a piece might be cut at both ends, I think it might be identified, though the stamp at the end might be cut off.

10271. You refer to their continuing to pay the duty on admission, as now?—Yes, just so.

10272. You have shown some very splendid patterns; do you think it is possible for the fancy silk trade to continue in this country without a prohibition of importation from France?—I do not think it is; as Mr. Wadden said the other day with respect to Ireland, so we are with respect to France; it is impossible for an English manufacturer to know what is going on in France, or what will come over; there are some houses here who have some rich silks going, and Mr. Cooper told me they were obliged to stop their figures, because the French watered silks were introduced by the French milliners and French dress makers; and Madame Carson and Madame d'Arvie are doing nearly all the trade in millinery and dress making at the West end of the Town, while our own people are walking about unemployed.

10273. You spoke of Mr. Cooper; he is a highly respectable mercer, living in Waterloo-place?—Yes, he is.

10274. He is engaged in the trade which supplies the higher classes with goods?—Yes.

10275. He was obliged to stop his orders for figured silks because watered silks were introduced from France?—Yes.

10276. Must it not also effectually prevent persons from giving orders, under the expectation of the foreign fashions interfering?—Yes.

10277. It has the effect of preventing the sale, and depreciating the price of the goods?—It has.

Mr. Joseph Grout, called in; and Examined.

10278. WHERE do you reside?—At Stamford Hill, in the county of Middlesex.

10279. Are you engaged in the manufacture of silk goods?—I am.

10280. How long have you been engaged in this manufacture?—Twenty-six years.

10281. What articles do you make?—Every sort of crape, namely, China, Italian and French.

10282. What description of silk do you use in your manufacture?—We purchase three kinds of raw silk in about equal proportions, one-third Bengal, one-third China, and one-third Italian.

10283. Do you use either foreign or English thrown tram or organzine in your manufacture?—We never use either foreign or English thrown tram or organzine.

10284. In what places have you carried on your manufacture within the last 10 or 12 years?—We have had establishments in the following places within that period, *viz.* one at Norwich, one at North Walsham, one at Great Yarmouth in Norfolk, one at Bungay, one at Mildenhall in Suffolk, one at Saffron Walden, one at Bocking and Braintree, one at Sible Hedingham in Essex, one at Glasgow and Paisley in Scotland, and one at Ponder's End in Middlesex; also a selling warehouse in London. We also had, within this period, a filature or reeling establishment in Bengal.

10285. What number of persons do you usually employ in your various establishments, and what rate of wages do you pay them?—We have made out an average statement for the last ten years, commencing with the year 1822 and closing with the year 1831, to the last day of December in each year. I wish it to be understood decidedly by the Committee, that in this statement of the number of persons, they are all directly employed by us; the name of every person appears upon our books,

Mr.
John Dubois.

4 July,
1832.

Mr.
Joseph Grout.

Mr.
Joseph Grout.

4 July,
1832.

except carpenters, bricklayers, millwrights, stone masons, and those we employed in Bengal, who are not included; this is the average number of persons employed, and the average rate of wages paid for each person.

[The Witness delivered in the same, which was read as follows:]

YEARS	Average Number of Persons employed.	Average Rate of Wages paid each Person per Week.	
		s.	d.
1822	2,747	7	6
1823	2,974	8	—
1824	3,594	8	1 ½
1825	3,908	8	8 ½
1826	3,516	6	—
1827	3,164	5	7
1828	2,818	4	—
1829	1,540	3	11 ½
1830	1,624	4	—
1831	1,871	3	8 ½

Persons employed in the above establishments are from ten to sixty years of age, and their weekly average rate of wages is from 1s. 6d. to 20s.

10286. You state that the persons you employ are of the ages of from 10 to 60 years; do you not employ, in some of your factories, a considerable number of young women of from 16 to 24 years of age?—Yes.

10287. What was their general character and conduct before the change in the law, and before the great reduction in wages which has taken place?—Very different from what they are; they were very respectable in their apparel: observations have been made in the public papers on the people we employed, when at church, that they were dressed very respectably; since that, I am sorry to say, that many of them have sunk into a degraded and dissipated state.

10288. The question refers to the morals and conduct of those young people; was not it a matter of observation that their conduct was consistent with their appearance?—Most certainly.

10289. That it was quite respectable, and such as you would desire to see in young people?—Yes.

10290. Has there been any change in regard to their morals and character since this great reduction of wages?—Very great; it is not only the reduction of wages, but we have discharged a great number; some of the men have emigrated, others have gone to the poor house, and many of the females have gone, I fear, to a state of prostitution; and every time I go into my manufacturing districts, it is attended with a considerable expense, from my meeting those people whom I have been in the habit of employing, and their asking some little relief.

10291. Their condition is most abject, and much to be pitied?—It is.

10292. You probably are of opinion, that though some part of the community may purchase commodities to deck themselves somewhat cheaper, when you take into consideration the demoralizing effects and consequences to the poorer classes of the community, that is a matter not altogether to be lost sight of in a question of this kind?—Certainly not.

10293. Is the proportion of persons you now employ, as to men, women, and children, similar to what it was formerly?—Yes, they bear the same proportions.

10294. Where are your mills situate for winding and throwing your silk?—We have mills at Norwich, Great Yarmouth, Bungay and Mildenhall.

10295. Do you work your mills by steam or water power?—We work them by both; we have 15 horses power by water, and 116 horses power by steam, making a total of 131 horses power.

10296. What number of spindles have you at work in your establishments, and have you any objection to state the speed at which you drive them?—Not the least; we had four distinct throwing mills in 1822, and since; I will give in an account of the number of spindles, and the hours they worked.

[The Account was delivered in, and read:]

NUMBER

NUMBER of SPINDLES going in all our Mills at *Norwich* and *Yarmouth*,
in the following Years.

Mr.
Joseph Grout.

4 July,
1832.

YEARS	Number of Spindles.	
1822 - -	59,754	Working 22½ hours per diem.
1823 - -	59,754	Working 22½ hours per diem.
1824 - -	63,756	Working 22½ hours per diem.
1825 - -	86,664	Working 22½ hours per diem.
Mem.—Night Work discontinued from this time.		
1826 - -	77,384	Working 12½ hours per diem.
1827 - -	78,522	Working 12½ hours per diem.
1828 - -	83,352	Working 12½ hours per diem.
1829 - -	60,024	Working 12½ hours per diem.
1830 - -	59,616	Working 12½ hours per diem.
1831 - -	59,616	Working 12½ hours per diem.

Mem.— 31,326 - - Spindles going at fast speed of 2,476
revolutions per minute;
and 28,290 - - Spindles going at slow speed of 1,584
revolutions per minute.

TOTAL - 59,616 - - Going.
27,048 - - Standing.

GROSS NUMBER - 86,664 or 7,222 Dozens.

DETAILED STATEMENT.

Norwich Water Mill contains - - 15,456 Spindles.
Norwich Steam Mill contains - - 20,976 ditto.
Yarmouth South Steam Mill contains - 28,704 ditto.
Yarmouth North Steam Mill contains - 21,528 ditto.
86,664 or 7,222 Dozens.

10297. Have you had any spindles standing still within the last few years?—
Yes, we had in the year 1826, none previous, 9,280; in 1827, we had 8,142; in
1828, 3,312; in 1829, 26,640; in 1830, 27,048; and in 1831, 27,048.

10298. Previously to the year 1826 all your spindles were at work?—Every one,
and every one working night and day with a double set of hands.

10299. Has not your machinery been erected within the last few years, and is it
not upon the most improved principles?—We think it is.

10300. Have you any objection to state the amount of the capital your concern
has invested for ground to build upon, buildings, steam engines, and machinery, in
your various establishments?—No, not the least: before I proceed with this,
I ought to explain, we keep our cash perhaps rather differently from most persons;
in our concern, in our cash ledger, we have only two accounts, one of our permanent
expenses, such as wages, for silk purchased, for repairs; even if we replace old
machinery with new, now that goes into what we call the permanent expense
account. We have another account, we call the non-permanent expense account;
whenever we purchase ground and build a mill, and fill it with machinery, we ascer-
tain the cost price of that, and carry it to that account, therefore that shows exactly
what is the amount of our non-permanent account. The total outlay of capital
invested in ground for building on, buildings, steam engines, and machinery, in the
various establishments in our concern, and charged to non-permanent account, is
143,546*l.*; we also had an establishment in Bengal (since given up), where the
outlay for a silk filature was 3,300*l.*; we also rent a mill at Norwich, and the late
barracks at Yarmouth, for which we pay between 600*l.* and 700*l.* a year.

10301. Does your concern employ any power looms?—Yes, we have put up at
various times 462.

10302. Have you any objection to state the cost of those power looms?—No,
the cost of the power looms, with reeds, harness, and driving gear prepared fit for
678. 4 s 3 working,

Mr.
Joseph Grout.

4 July,
1832.

working, with room to contain it, exclusive of the steam engines to drive it, is 34*l.* 10*s.*; I multiply 462 by 34*l.* 10*s.* and that brings the amount to 15,939*l.*

10303. Have you any hand looms at work?—Yes, we have 420.

10304. Have you any hand looms standing still?—Yes; I have a letter here from one of my partners, stating the number; I wrote him a few weeks ago, requesting he would send me the particulars of all that were standing still. This letter is signed William Martin, and dated Norwich, 27th June 1832: “Dear Sir, Agreeably with your wishes, I have looked over our books, and think the following statement is as nearly correct as possible: hand looms out of use in the years 1829 1830 and 1831; 243 formerly used at North Walsham, 140 ditto at Sible Hedingham, 700 at Saffron Walden, 402 at Bocking and Braintree; making 1,485; and 102 power looms standing still at Yarmouth; making the total number of 1,587 looms unemployed.”

10305. You state that there are 1,587 out of employ; does not this arise from other crape looms having been put up in other parts of the kingdom, which have had the effect of displacing some of yours?—No, I have taken some pains (with the assistance of several gentlemen in the crape trade) to make myself acquainted with this fact; and I find, that so far from any increase in the number of crape looms at work in this country, that there is a decrease of 265, exclusive of our own, since the year 1825; for in that year there were 1,450 looms at work, exclusive of ours, and in 1831 only 1,185, working in the following places; *viz.* Taunton, Shepton Mallet and Dassell, Devises, Reading, Haslemere and Hammerpond, Macclesfield, Kettering, Bullock Smithy and Leigh; by which the Committee will see at once that our unemployed looms have not been displaced by any others having been put up in this country; and I beg to state, most distinctly and decidedly, that the lessened demand for our manufactures is occasioned solely by the introduction of the product of foreign looms.

10306. Do you get your weaving done at lower prices by power than by hand looms?—We do not pay quite so much for the piece woven by power as by hand.

10307. Then you appear to have an advantage by employing power looms?—I do not think there is any advantage, at the present price of hand weaving, in using the power loom, for inasmuch as we save in the price of weaving done by power, we lose by interest of capital on the first cost of the power looms, the additional waste of silk, and heavy expense of wear and tear, and wages of mechanics employed to keep them in order.

10308. Suppose you were about to increase your number of looms, would you put up power in preference to hand looms?—Certainly not, at the present price of hand weaving.

10309. Do you know whether there are any power looms used on the Continent for weaving the article you manufacture?—Yes; I received a letter in April 1829 from a gentleman, a silk throwster in the neighbourhood of Lyons, upon that subject; some extracts from which I will read by permission of the Committee:—“For nearly twelve months we have supplied an establishment with crape silk (four leagues from us) provided with power looms, which are worked by means of a waterfall; it is the only one of the kind in France; there are an hundred looms in activity which perform perfectly well, and they are about to increase the number to 300.” “If you are inclined to entertain my proposals, and your occupations will allow you to visit the establishment I have completed, and which I now superintend and direct, I dare to hope you will discover some new ideas; the neighbouring establishment by water power may likewise be interesting to you.”

10310. How does it happen that your trade has so fallen off, that in the year 1831 you did not employ half so many persons as in the year 1825?—I have shown, that in 1826 we began to feel the depression, as in July in that year, our ports were opened for the reception of foreign manufactures, and we, at once, lost a great part of our white and coloured trade. Every succeeding year it became worse, and last year we had not a single loom going, with either white or coloured crape; whereas previous to the year 1826, we had in the spring as many looms employed on whites and colours as on blacks; so that full one half of our trade is lost.

10311. How has your trade in black goods been effected by the admission of foreign manufactures?—I do not think there is any great quantity of black crapes brought into this country, in consequence of the ruinous prices at which English crapes are selling.

10312. Is it your opinion, that you can compete with the foreigner, as far as regards your black trade?—I think as long as we can purchase Bengal raw silk a little

Mr.
Joseph Grout.

4 July,
1832.

little below the cost price of raising it, and our operatives are willing to work at starvation prices, and we, the manufacturers (when the goods are finished) sell them at a loss, we shall be able to compete with the foreigner, but no longer, even in black crapes.

10313. Will any manufacturer continue to carry on a losing trade?—Not generally, I should think; but as we have above 100,000*l.* invested in buildings and machinery, which capital will be lost, unless we continue to work, the Committee will see that we have no alternative, we must go on.

10314. How do you account for the silk manufactures of this country being in so depressed a state, while there continues to be an increased importation of raw silk?—I think I can explain to the Committee, that in the weaving of our article of crape the weaver works up a greater number of ounces of silk for but little more than half the wages he earned for a lesser number of ounces previous to the admission of foreign manufactured goods; for instance, in the year 1822, we paid 12*s.* for weaving a piece weighing 20 oz.; whereas we now pay but 7*s.* for a piece of the same length and breadth, weighing 24 oz.

10315. How would it affect your trade if the duty were to be taken off from foreign thrown silks imported into this country?—It would not affect us directly, as we never, by any chance, use foreign thrown silks; although such a measure would be indirectly very prejudicial in this way: I have stated to the Committee, that we use in the proportion of one-third Italian silk in our manufacture, and we purchase the best quality we can get. Supposing the duty to be taken off the thrown, it would most likely induce the Italians to select their best silks to throw for this country, and we must content ourselves with paying a high price for the inferior raw silk, even supposing we obtain it, which would be very injurious to our trade.

10316. Is it your opinion, that if this country were to return to the prohibitory system, smuggling would be encouraged by such a measure?—I wish to call the attention of this honourable Committee most distinctly to that point; I think I may positively assert that for the last ten years, during the prohibitory laws, there was not in amount 20*l.* worth of crape smuggled into this country.

10317. And your crape trade was not injured at that time by the importation of smuggled goods?—We did not suffer from the smugglers certainly.

10318. Have you reason to think that the facilities for getting in goods were not so great as have been represented?—Certainly not.

10319. Do you speak of the Chinese crape?—No; the Italian and French.

10320. What has been the effect, since the admission of foreign-wrought silks, with respect to smuggling; is it your opinion that there is a less or greater quantity run in?—I think there has been an immense quantity run in during the last five or six years.

10321. What measures would you recommend, with a view to restore the silk trade of this country to its former state of activity?—I am of a decided opinion that nothing short of entire prohibition would have that desirable effect, and I think it is putting the industry of the operatives of this country to a severely cruel test, to oblige them to compete, not only with the foreign nations of Europe but with China also, where all the necessaries of life may be purchased at one-twelfth the price paid in England, besides the local advantages they possess in raising the silk on their own soil.

10322. You have stated, that you had a silk filature, or reeling establishment in Bengal; will you inform the Committee the cost price of raising raw silk in India, of the best quality?—That to which I am about to refer is the only document I saved from my fire, of all my Bengal papers. In the year 1818, we had it in contemplation to establish a silk filature or reeling establishment in India, with a view to the raising of raw silk of the best quality, to supply our home manufactures; and in 1819, one of my partners went to France, to make himself perfectly acquainted with the best mode of reeling in that country; he stopped a considerable time at Avignon and Vacluse, and had access to all the reeling establishments in the neighbourhood; in the same year he left England for India, taking with him drawings and plans of the French reeling-houses, and also black and white mulberry trees, which he intended to plant in Bengal; also about 80 tons of machinery, such as boilers, steam apparatus, and pans for the purpose of reeling. As soon as he arrived in Bengal he had an interview with our agents, Messrs. Alexander & Company, who recommended him premises suitable for our purpose, situate at Bhartiparra, on the banks of the Ganges, between Nattore and Moorshedabad, about

Mr.
Joseph Grout.

4 July,
1832.

about 140 miles up the country, from Calcutta, very near the Company's filatures at Santipore, Bauleah, Cossimbuzar and Jungypore, which are the principal silk districts of Bengal, where he commenced building a filature or reeling establishment, with cocoonery, on the French principle, and made the first shipment of thirty-nine bales of raw silk of the best quality, per Mellish and Susan, some on the French, and some on the Bengal principle of reeling, on 2d April 1822; and he afterwards made ten other shipments of raw silk of the best quality, the cost of raising which is shown by the following Statements; which calculations are made by taking the sicca rupee at the exchange of 2s. 6d.; although the Company, I believe, took it at 2s. 2d. or 2s. 3d. at that time. I will give statements of eleven shipments; viz.

No. 1.—Shipment of 39 bales of Raw Silk, part reeled on the French and part on the Bengal principle, per *Mellish* and *Susan*.

	s.	d.	
Cost at Bhartiparra	16	—	per lb.
Government Duty and Commission on the River Hooghley to Calcutta,			
Charges, Commission, Freight, and Insurance to London, say			
15 per Cent.	2	5	—

Mr.
Joseph Grout.

4 July,
1832.

These eleven shipments average 18 s. 4 d. per pound. In this calculation of the cost, as we intended these silks for our own consumption, we made no charge for interest from the time of their leaving Calcutta, nor on their arrival in London any allowance for the East India Company's charges of one per cent., rent, fees, &c.; nor broker's charges, or loss in the weight of silk, all of which may be reckoned at rather more than 6 per cent. on the cost price; nor are the expenses of the resident partner at Bhartiparra included in this calculation of cost.

10323. Is it your opinion, that if great care and attention were bestowed on the raising of raw silk in India, it could be produced of equal quality and as cheap as the French or Italian?—No, certainly not; I do not think it possible for all the skill, experience, ingenuity and industry that human agency could bestow, to raise silk on the soil and with the climate of Bengal to within from 18 to 23 per cent. in quality as silk produced in France and Italy, owing to the great advantages which the latter countries possess in their beautiful climate, and fitness of the soil for the production of the cocoon; our object in the establishment of a filature in India was not only with a view to improve the quality of raw silk raised in that country, but had also reference to cheapness, and I am sorry to say that, with all the practical knowledge my partner possessed of Bengal saw silk, which he had been working in our own concern for nine years previous to his going to India, and the further advantage of his having made himself acquainted with the French mode of reeling, added to his indefatigable exertions in India, with a view to forward these two objects, we failed entirely in both of them.

10324. You have said that you formerly had an establishment in India for the purpose of raising raw silk, did the East India Company throw any difficulties or obstructions in your way?—Not the least; so far from it, we had the benefit of the professional services of one of the Company's architects without any charge being made to us.

10325. Is it your opinion that the monopoly enjoyed by the East India Company is injurious to the silk trade, and that it would be benefited if the India trade were entirely thrown open?—I do not know that it is a monopoly; but if so, it must be a losing one to the Company; and I should be exceedingly sorry, as a large consumer of Bengal silk, to see the Company decline the raising of it, for I am sure that if it gets into the hands of individuals, we shall have very little raw silk imported into this country from India in future; human life is so uncertain in that climate, that out of three persons sent out by our establishment two died in less than three years, and in all probability my partner would have died also had he staid but a few weeks longer in India.

10326. In point of fact, you are able to purchase Bengal silk at the Company's sales for less than you can raise it for yourself in India?—Certainly.

10327. Therefore you conclude, that not being successful in your own speculations, having all the advantages of capital and experience, others would be as unsuccessful as yourself in raising it at a price which would answer your purpose?—I do not think it would answer the purpose of any person, whatever might be his capital, however talented and however plodding, for without the latter and a great deal of attention it would be impossible to carry on a silk filature in India, for human life is so uncertain, that if you send out an establishment of eight or ten individuals they may probably be all dead in a few years.

10328. Did your partner attempt to introduce the silk worm from Europe?—He had both mulberry trees and eggs; the origin of the worm came from the Eastern part of the globe; the worm improves in Italy and France; but take it back again into the Eastern part of this globe, such as Persia and India, and it degenerates; in Europe, the cocoon is globular, and the thread runs about 630 yards, tapered

Mr.
Joseph Grout.

4 July,
1832.

from one end to the other; whereas the Bengalee cocoon is oblong, and the thread runs only 580 yards, of a very much finer and more delicate and less valuable texture.

10329. It is weak and wants fibre?—Yes.

10330. You are understood to state that you have obtained your silks more advantageously through the Company's sales than you could otherwise have done?—Most certainly; I have the average of what I have paid for the last five years, 17s. 6d., and my own cost me, exclusive of six per cent., 18s. 4d., and I have the pick of the Company's sales.

10331. You spoke of the knowledge of your partner, have the goodness to state how he obtained this knowledge of the proper mode of raising and reeling silk?—He served seven years apprenticeship to it in working at our mills and arranging the silk for the mills at Norwich; then he stopped two years longer, taking the management of the concern at Norwich, and from thence he went to France to make himself acquainted with the French mode of reeling.

10332. To what part of France?—Avignon and Vaucluse.

10333. Did he become well acquainted with the silk of the district of Vaucluse?—Perfectly.

10334. What is the character of that silk?—Excellent.

10335. Did he at any time inform you the price for which that silk was selling?—Yes; he wrote me from Avignon, stating the price that silk was worth at Avignon in July 1819; the price of the very best silks at that time was 13s. per pound English.

10336. What difference is there, in your opinion, between that silk and that you have spoken of as purchased from the East India Company's sales at 16s. 6d.?—I take the highest quality of French silk, to make the comparison, and the highest quality of Bengal, and there is a difference in favour of France of from 18 to 23 per cent. in quality.

10337. The silk similar to that selling in Vaucluse at 13s. per pound could be purchased, at what price here?—I do not know that there is a price for it; the exportation from France of that silk is prohibited; but silk of that size and quality would sell for 20s. here in the raw state.

10338. It has appeared in evidence that there are 7,000 dozen of spindles at Manchester, do you mean to say that you have 222 dozen of spindles more than there are in all the town of Manchester?—The statement I have given shows that fact.

10339. Then Manchester has not drawn to itself your branch of the silk trade?—Most certainly not; I do not think there is a single crape loom going at Manchester.

10340. Is there as large a consumption of white and coloured crapes in this country as at the time you are speaking of?—The official returns state, crape white and coloured, in 1826, 5,496 lbs. 13 oz.; in the year 1827, 16,381 lbs.; in the year 1828, 24,951 lbs. 13 oz.; in the year 1829, 22,786 lbs. 11½ oz.; in the year 1830, 28,880 lbs. 4 oz.; in the year 1831, 19,669 lbs. 5 oz.: therefore it appears there was a very considerable consumption of crape, and unfortunately it fell on the French and other foreign productions.

10341. Do you know whether there has been a great reduction in the price at which the Frenchman offers his crape, as compared with three or four years ago?—I cannot say.

10342. Had the silk trade any interviews with Government previous to the appointment of this Committee, and were you present at such interviews?—The silk trade had several interviews with Lord Auckland, and I attended as one of the deputation.

10343. Were any promises made to the silk trade at any of these interviews respecting the import duties?—Yes; Lord Auckland distinctly told us that it was not the intention of His Majesty's Government to proceed upon the principle of reduction of the import duties, and we immediately communicated this to the silk trade on our return.

10344. Have there not been a large number of crape looms at Manchester abandoned within the last two or three years, the manufacturers finding it impossible to continue the manufacture to a profit?—I believe there have.

10345. Do you not consider that the Company's periodical sales of silk are a great object to the British manufacturer in giving him due notice of what he shall offer for sale?—Certainly; I consider them very beneficial to the silk trade of this country.

10346. Do

Mr.
Joseph Grout,

4 July,
1832.

10346. Do not they generally put up their silk at a low taxed price, leaving it to fair competition to give the market value for their silk?—I think the Company put up their silk below the cost price, in some instances considerably so.

10347. They put it up at a taxed price?—Yes, which is a very fair price.

10348. They do not use any reserve upon it, but if it goes at one penny per pound more than the taxed price it is sold?—Yes, nothing can be more fair than the Company's sales.

10349. You have been asked some questions as to the form in which the East India Company put up their silk, is there not a distinction in respect to that put up on account of private dealers; that they can withdraw, and do withdraw, their silk, whenever it does not reach such a price as meets their views, is not that the case?—I think the East India Company are nothing more than servants of the public; suppose I have a shipment of silk comes into the St. Katharine's Docks, I try to make a sale, and if I cannot effect a sale a few days before the Company's sale comes on, I desire this silk to be removed from St. Katharine's Dock to the Company's warehouses; they are bound to take it in and to print it in the catalogue with that of the Company; then the day before the declared sale comes on, they may say to the Company, I withdraw that, though it is printed in your catalogue, and send it back from the Company's warehouses to St. Katherine's Dock; when the Company put up the sale it is put up at a certain price, and it is sold if it sells for a penny above that price.

10350. When the laws affecting the silk trade, in 1826, passed, you were led by representations made by Government to expect considerable advantages, were you not?—We were led to expect that, but unfortunately we have never seen it.

10351. If you could have foreseen all the changes you have described which have affected the trade, would you have laid out the property you have in the erection of mills and machinery?—I do not think we have made any outlay since that time, except building some large sheds to stow away our unemployed looms; we stopped then; I saw the necessity of stopping; I was certain the silk trade could never be carried on otherwise than at a loss in this country under those laws.

10352. If you could have seen, before the passing of those laws, the changes which have been made, would you have laid out this money in machinery?—Certainly not.

10353. If you could have foreseen the consequences which have occurred, would that have deterred you from embarking so large a capital in the erection of machinery?—Most certainly it would.

10354. Would not the consequences have been, that that would have thrown a great many of your hands out of employ, and caused great distress?—Yes; and that I have been obliged to do since from necessity.

10355. It appears by calculation, from the statements you have put in, that you employed in the year 1823 not by any means of the largest number of persons in every year; but 3,000 persons, at the average of 8s. per week each, which will give a total of 60,000*l.* earned in the year by those persons; it appears in the year 1830, you employed somewhere about 1,600, the average earnings 4*s.* giving as a total of earnings 16,000*l.* for those persons; is that correct?—It is.

10356. Can you inform the Committee in what way the deficiency of earnings has been made up to those people, or whether those who have been wholly unemployed since, have been seeking in vain for other employment?—Those people who continued the employment at a reduced rate of wages are of course suffering great privations; a great number of them have got more employment; some have obtained it, others could not do it; a great number of them were females; and, as I said before, some of them, perhaps, have gone to the workhouse, and others have gone into prostitution from necessity, and some were formerly as worthy people as ever lived.

10357. They did not find any employment in making any goods which France has received in exchange for commodities we have taken from her?—Certainly not.

10358. So far as your experience goes, it has been decidedly injurious to all the towns where your manufactories were erected?—Most decidedly.

10359. Did you build your mills on the faith of protecting duties?—Most decidedly we did.

10360. Have you ever applied to Government for compensation, for the losses

Mr.
Joseph Grout.

4 July,
1832.

you have sustained?—I have had it in contemplation very frequently, but never yet have made a direct application; I think the justice of our case demands it.

10361. Have you an idea of the value of the mill property of yourself and other persons, and what sort of claim you should make on the Government for compensation, if the present system be continued?—I could not state the amount exactly; it has been variously stated.

10362. Do you think it is less than two millions?—Certainly not; I think it is very much more.

10363. If the duties were further reduced, and the free importation of foreign manufactured silks be allowed, are you of opinion that property will be entirely destroyed and valueless?—There can be no doubt of it.

10364. Have you ever been disappointed at the East India sales, at seeing a quantity of private trade silk suddenly withdrawn, because the price offered has not been sufficient to remunerate the importers?—Very frequently.

10365. Have you ever found the Company withdraw their silk from sale, though they might sell for low prices?—Certainly not for the last 26 years; I can speak to that positively.

10366. You spoke of your partner taking over mulberry trees to India; had he an opportunity of making the experiment whether they would flourish?—He took them first to the Botanical Gardens of Calcutta; they were taken care of there, and taken up the country; he planted them there; and I think I have heard him say, that in a very few weeks they were seven feet high; the mulberry plant in Bengal is very different from that of France and Italy; in France and Italy it is a mulberry-tree, but in Bengal it is brushwood; it is let out to the ryots (the little farmers) five or six acres each; they sell this brushwood to the peasantry, for the purpose of feeding their worms from the leaves: there is no such thing as a mulberry-tree in Bengal; the climate will not admit of it; a ryot may go to-day and mow down his brush-wood and sell it to worm-feeders, and the day after to-morrow he will go and mow it again; so that a very small space of mulberry ground is sufficient in Bengal, as compared with other countries; but the leaf from the brush wood is very inferior to that from the tree in Europe.

10367. Do you think that arises from the nature of the soil or the climate?—The soil and climate both.

10368. It has been stated, that the value of silk mills and machinery in Manchester is about 200,000*l.*; does not the capital you have invested in mills and machinery amount to three quarters of that sum?—It would appear so. I will beg to state one fact, with the permission of the Committee, to show, that in our concern we have not lost sight of the improvement of silk in our own colonies. Here are nine bales of silk raised in Bengal: six bales reared on the French principle by way of experiment, and three reared on the Bengal principle; when they came to London, I took my broker and one or two other persons to examine them, and report on the quality; I also examined them and reported upon them, and these are my private marks upon those nine bales; and I made the Bengal reeled silk precisely the same quality as the French reeled silk; a great deal of pains was taken with this experiment, with a view to satisfy ourselves.

10369. You are understood to say, that the thread from the Bengal cocoon is very considerably smaller in substance than the thread of the Italian cocoon; can you state the number of threads of the Bengal silk which you consider would be equal to another given number of threads of the Italian silk, so as to form the same substance?—Yes; I would say four cocoons of French and Italian silk would make a thread quite as round as six and a half or nearly seven threads of Bengal cocoons.

Veneris, 6^o die Julii, 1832.

JAMES A. STEWART MACKENZIE, ESQUIRE, IN THE CHAIR.

Mr. William Bridges, called in; and Examined.

Mr.
William Bridges.

6 July,
1832.

10370. HOW long have you been engaged in the silk trade?—Twenty-five years.

10371. What is the name of your house?—Bridges, Campbell & Co.

10372. Have you been manufacturers principally of plain or fancy goods?—The greater part fancy goods.

10373. Where

Mr.
William Bridges.

6 July,
1832.

10373. Where is your manufacture?—In Spitalfields.
10374. Are you well acquainted with the silk trade?—I am, having been engaged in it from my youth up to the present time.
10375. Was the trade in a flourishing state up to the time of the opening of the Ports to foreign silk in 1826?—In a very flourishing state.
10376. Were the silk goods which you made of the best quality?—Of the best quality.
10377. You furnished silk goods to the principal retail houses at the West end of the Town?—I did so.
10378. Did you make at that time many rich plain goods for the same class of customers?—All the plain goods that we made were of a rich quality; some seasons we made more plain than others; but most of our goods were figured.
10379. About what number of looms were you in the habit at that time of employing?—Three hundred or three hundred and fifty.
10380. What proportion of those were employed on figured and what on plain?—There were two-thirds figured, and the remainder plain.
10381. What periods are you speaking of?—Prior to 1826.
10382. Have you any personal knowledge whether goods the produce of your manufacture, were worn by ladies of high rank in this country?—Most certainly; they were worn by the Royal Family, and by the nobility in general.
10383. Were the silks made from designs by English artists, or did you copy French patterns?—By English artists, drawn expressly to our instructions.
10384. Do you think there was any want of taste and skill on the part of the English manufacturer at that time, as compared with the French?—Certainly not; and I beg leave to show a few patterns of what we made in 1822 and 1823 [*delivering them in*]; the two first in the corner are the first production of the Jacquard in this country.
10385. How many Jacquard looms did you at any one time employ; what was the greatest number?—About 140.
10386. At what period was that?—That was in 1824 and 1825.
10387. Immediately on the introduction of the Jacquard into this country, you availed yourself of it?—Yes, and made large purchases.
10388. If you had been encouraged to continue a manufacture of figured silks, would you have used your Jacquard looms most extensively?—Most certainly.
10389. Did it make any alteration in the wages, the introduction of the Jacquard looms?—I paid for the work 3*s.* previous to the introduction of the Jacquard, and after that 2*s.* 4*d.*
10390. What do you pay now?—Thirteen pence, that is 1*d.* more than is generally paid; the prices have been coming down since 1822.
10391. Have you a specimen of the article you are now making at 1*s.* 1*d.*?—Yes; I beg to exhibit this shawl, which is very costly; the getting of it up cost me 80*l.*, that is the machinery, before I could get any thing made from it; the person was three months in getting it ready, and the labour on this cost three-fourths of the value.
10392. When did you make this shawl?—In 1822 and 1823.
10393. Have you made any of these lately?—No.
10394. Nothing so costly as to the labour?—Nothing; the whole of the gauze trade has left this country; I had fifty looms, and now I have not one.
10395. Do you happen to know the number at Paisley?—I have no knowledge of Paisley whatever.
10396. Is not the fabric made at Paisley of a different nature and character?—Yes.
10397. Are you acquainted with Mr. Fulton's goods?—Yes.
10398. Does he not make many beautiful goods?—Yes.
10399. Are they of a description similar to this?—I believe not.
10400. Have you any doubt of their capacity to make them?—I question if they would go to the expense.
10401. You feel reluctant to say, that they would not be able to do what you yourself have done?—I should not wish to say so; but I mean to say there was no want of taste at that time.
10402. But the nature and character of his manufacture is totally different from that which you now exhibit?—Certainly.
10403. What you are now making is different to what you made in 1823?—Yes.
- 678.

Mr.
William Bridges.

6 July,
1832.

10404. Do you know whether there has been any rich gauze goods introduced from France?—I have never seen any thing so costly as far as that goes; the outlay was 80*l.* and I think very few would have gone to that expense.

10405. Is that article now imported from France?—I believe it is.

10406. Are not the articles imported from France, crapes rather than gauzes?—I believe there are some of each; I have seen some of each.

10407. Recently?—Yes.

10408. Are the figured goods made in Scotland of a character different to some which you have probably seen introduced from France?—Yes.

10409. Then rich gauze goods do still come from France?—I believe they do.

10410. Do you find that they have such an advantage and superiority over you in the manufacture and the price at which they render this commodity, as to exclude you from all chance of success in any attempt to compete with them?—I do find it so; and I for one shall never try to make such a costly thing again till I have the command of my own market.

10411. Is it then the French or the Scottish manufacturer which has interfered with your trade, in the article now before us?—The French.

10412. What quantity might have been imported of that during the last year, in value?—I do not know.

10413. I now show you four patterns of gauzes which you made in 1823 and 1824?—Those patterns were manufactured by me in the two years you named.

10414. Do you now make such articles?—No.

10415. Is it because they are made in Scotland, or that you found your trade interfered with by the goods that come from France?—By the goods that come from France.

10416. Do such goods come into the market from France?—They do.

10417. Are such goods as these made in Scotland?—Certainly not.

10418. The patterns exhibited here are of figured gauzes suited for dresses; was there any considerable quantity of these articles imported in the last year?—I should think there was; no doubt about it; I have seen some; I have some in that I made last year, and I shall be glad to sell them at two-thirds of the price.

10419. Do you mean to say that they are still fashionable?—I believe they are, for evening dresses.

10420. But not greatly in demand?—There is no great consumption.

10421. When you speak of them as an article of manufacture, you mean an article made quite for the superior classes?—Yes; for evening parties.

10422. Have you referred to the French tariff of prices now paid for work at Lyons?—I have not.

10423. You are not able to state what is paid at Lyons, for the article which you now state you are paying 13*d.* for in Spitalfields?—Not exactly; I believe it has been given in.

10424. Did you, at the time that you made the patterns that you have exhibited, make your goods chiefly from private orders, or for general sale?—Chiefly from orders; I used to exhibit patterns from which orders were given, that employed my looms for the ensuing season.

10425. At what time of the year were these orders given?—About November, for the following spring, and about the present time for the autumn.

10426. Had you large accounts with the first houses at the West end of the Town?—Yes; I think three of the principal houses together used to order of me to the amount of 20,000*l.* a-year in fancy silk, and a large City house at that time used to take generally 10,000*l.*

10427. In the manufacture of these silk goods what description of silk did you use?—Silk thrown at the mill of Mr. John Ward, of Bruton.

10428. Is that a silk of a superior quality?—Very superior.

10429. Did it answer your purpose as well as Piedmontese organzine?—Decidedly better.

10430. You purchased raw silk and had it thrown for your own use?—I did.

10431. Was it thrown as well as the Piedmontese silk?—I consider Mr. Ward's throwing quite equal to the Piedmontese.

10432. Do you generally buy your silk in the raw, and employ a throwster to throw it for you?—Always.

10433. Can you state the extent of employment that you give to the throwing mills?—Not exactly; but I can state that I have paid Mr. Ward as much as 3,000*l.* in a year for throwing.

10434. Is

Mr.
William Bridges.

6 July,
1832.

10434. Is not the English thrown silk better than the Italian thrown silk?—It is used by many; some gentlemen think the Piedmontese organzine to be far superior; I do not use it; I consider English thrown silk to be quite equal to it; and I can make all my works of it.

10435. It has been stated here by a witness, that English thrown silk is worth 1 s. more than Italian thrown silk; do you agree in that opinion?—Whichever was cheapest I should avail myself of, as a manufacturer, the quality being taken into consideration; in rich satins, I should not use Piedmontese organzine.

10436. Do you apprehend that two bales of equal quality, purchased in Lombardy and thrown, the one there and the other in England, that the English would be worth more than the Italian?—I should prefer it; there is more confidence to be placed in the English throwster.

10437. Is it not essential that the raw silk should be of a very good quality?—Most assuredly; we generally select those silks of the best quality.

10438. In your judgment, is it not essential that you should do every thing in your power to encourage the importation of good raw silk?—Certainly.

10439. Did you at that time make velvets?—Yes.

10440. Did you generally use Piedmontese?—No; I generally used organzine, made of Fossembrone raw silk.

10441. You stated, that up to the time of the opening of the Ports, in 1826, your trade was in a flourishing state, be pleased to inform the Committee what is the state of your manufacture at the present moment?—It is greatly altered; the fancy part of the trade is nearly destroyed.

10442. What quantity of fancy looms do you employ?—Only from sixty to seventy.

10443. Has this decrease in your fancy trade been gradually coming on ever since the opening of the Ports?—It has.

10444. Besides the experience of your own house, do you know what is the state of the fancy trade generally in Spitalfields?—There is scarcely any of it left.

10445. To what do you attribute this gradual decline in the fancy branch of British silk manufacture?—From the great quantity of French goods that are brought into the market.

10446. In what way does the foreign fancy silk interfere with you?—Instead of my receiving orders as I used to do, I find that the principal buyers of fancy goods are in the habit of going to Lyons for French fashions, so that notwithstanding the excellency of the goods which we make here there is no chance of my selling them against the French.

10447. You think it a matter of fashion, not of price?—French will sell while English goods will lay by; if the market is thin, then mine will come in.

10448. Do you mean that if yours were introduced and offered as French, they would sell though they do not sell as English?—That may be done in some houses, but respectable houses will not do that.

10449. You think that might be done if they were so introduced, but you do not think the French cheaper than yours?—Yes, I do; they come into the market and displace ours.

10450. Do they sell these in preference to yours because they are cheaper?—They are cheaper, and that will be the cause in some instances.

10451. To what do you attribute their being cheaper?—They have advantages that we have not.

10452. Will you state what these advantages are, in your opinion?—I am not aware of them; but I am convinced they must have them.

10453. Is it not a great advantage that they should obtain silk at a less duty?—I do not consider that is much advantage.

10454. Do you think it an advantage to the manufacturer to obtain silks 2 s. 6 d. cheaper?—Certainly, I should like to get my silks cheaper.

10455. Would it not be a great advantage to you as a manufacturer, and your labourers as journeymen, if you could obtain your Foreign thrown silk 2 s. 6 d. cheaper than you now do?—I would like it; but it is a question if you remove the duty whether we should have it.

10456. Supposing the duty removed, would not the price paid by the French manufacturer and the price paid by you be the same?—I question if the duty was taken off whether it would not go into the Italian's pocket.

10457. He would not charge the French less than you?—I am not anxious to try that.

Mr.
William Bridges.

6 July,
1832.

10458. You do not want the advantage of obtaining silks on the same terms as the French do?—I will not say that.

10459. Perhaps you will like to pay for your raw silks at the same price as the French do?—I have heard some say so.

10460. Have you not heard it stated by a gentleman sent out by Government to obtain information, did he not afford you that sort of information that leads you to suppose that their silk is from 2*s.* to 3*s.* a pound cheaper than your raw?—I understood so.

10461. The Italian having the markets of Lyons and London both open to him, might he not obtain the same price for his articles in both?—I question it; it has been given in by some gentleman more conversant with that part of it than I am.

10462. Do you believe, if the Italian could get a higher price in London for his silk, that he would sell it at Lyons for a less price?—Perhaps by coming to this market he would avail himself of a higher price if he could; but our throwster will keep him from getting too high a price.

10463. You have spoken of some large buyers who formerly gave you orders, are they the same description of persons that formerly gave you large orders who have now ceased to give you these orders?—Yes; the French fashion is in the way of their giving me any orders.

10464. You spoke of one house in the city with whom you transacted business to the extent of 10,000*l.* a year in fancy silks, do you in point of fact take an order for any goods from that house at present?—I have not a single order from that house.

10465. Are your accounts closed, or nearly so, with that house?—Nearly so; there is one house that I formerly, in fancy silks, had an account of 12,000*l.* a year with, and last year I had an account of only 153*l.*; and I beg further to state, that this house, up to 1825, averaged at 12,000*l.* a year.

10466. Are there a large quantity of fancy goods still used?—Yes; greater than ever.

10467. How do you know that?—From my own observations, and from what has been told me by large buyers.

10468. How do you account for the French manufacturers having got such entire possession of the market for fancy goods?—The feeling here for French fashions is so strong, that notwithstanding the excellence of British goods the French will sell in preference to them.

10469. Is that not through want of taste or exertion on the part of the English manufacturer?—There has been every exertion made without avail. Last year in consequence of the announcement that the Queen would hold eight drawing rooms I made a considerable proportion of fancy silk goods for the purpose, but the French silks were almost entirely used, some of our goods we got off at a loss and others remain on our hands unsaleable; I beg to produce some of these silks which I made for the drawing-rooms, one of them was made for the Queen's coronation dress.

[The Witness exhibited them to the Committee.]

10470. What was the price of this coronation dress?—Twenty-three shillings per yard.

10471. What proportion of that was labour?—About 4*s.*

10472. What difference in cost would it have made to you if the duty was repealed on foreign thrown silk?—Not 2*d.* a yard.

10473. How did this speculation answer your purpose?—I have the greater part of them left on my hands; the first drawing-room I was rather successful, and sold thirty dresses; on the second, not five, and afterwards not any; as soon as the French found it out they came into the market, and we had no chance with them.

10474. At what price do the French import articles of a similar pattern and quality?—After the drawing-rooms continued, they supplied them at a much lower rate than I could.

10475. Is the price at which they now supply them equal to one-third of the price at which you can supply them at?—Nearly so.

10476. You say that you made a considerable quantity of these; are they all silk?—Not one half; these are what we are now making. *[Exhibiting some others.]*

10477. The rich figured silks which I now hold in my hand are some which you have made within the last two or three years?—Yes.

10478. Do

Mr.
William Bridges.

6 July,
1832.

10478. Do you find a ready sale for them?—No.

10479. Do you, as a manufacturer and as a judge of these articles, consider them quite equal to the French in style, in taste and in manufacture?—I do in every point.

10480. These large patterns are some which you do now make?—Yes.

10481. And a few of them perhaps to order?—Some few to order; I sold three lots of goods last year, on which I lost 20 per cent.

10482. If a manufacturer, on speculation, was to employ 100 looms in the making of plain silk goods, and there was not a very good sale, could he at a trifling loss, at 1*d.* or 2*d.* per yard, dispose of them at once?—That is the case.

10483. If he was to manufacture fancy goods to a smaller extent, and did not find a ready sale, would not his loss be more considerable?—Yes, from 20 to 30 per cent. on many articles of fancy goods.

10484. When there is a scarcity of rich French silks, is there ever a momentary demand?—Yes; a friend of mine who went over to France could not see any thing to his mind. I received a large order from him in consequence; that was late in the spring; my looms had been standing from November till the end of February before they were employed; had I had my orders in the usual time, there would have been no complaint in Spitalfields.

10485. Under the circumstances, your labourers had some trifling employment?—Yes; living near the seat of fashion.

10486. You being near the seat of fashion had some orders, while other houses in Spitalfields had nothing to do?—I believe I have the greater part of the trade now, bad as it is.

10487. Are you of opinion, that any thing short of exclusion would restore the silk trade to its former state?—I am decidedly of opinion, that nothing short of total exclusion will ever restore the trade to its former state.

10488. At such a state as would employ your people?—At such a state as would employ my working people, that I might lay my goods by, knowing that the approaching spring would clear me out.

10489. You think there is no desire, on the part of the operatives, to go back to the 2*s.* 4*d.* a yard?—I think they would be satisfied with considerably less than that.

10490. Do you consider the present wages at Spitalfields not sufficient to remunerate the operative?—I think they are below the starving point.

10491. Do you think such an advance in wages as I have spoken of, would interfere at all with the consumption of goods in this country?—It would, no doubt, interfere in some measure; a less advance would satisfy the operatives.

10492. You do not think that 2*d.* or 3*d.* per yard is any bar to the sale of rich figured goods to persons, in a price of something like 4*s.* 5*s.* or 6*s.*?—It cannot be.

10493. Do you think it would be a material relief if the duty was taken off foreign thrown silk?—No; I do not use foreign thrown silk; and besides, I believe if the duty was taken off, it would go into the pocket of the Italian.

10494. Are the Committee to understand, that the improvements that have taken place in the manufacture of foreign silk is chiefly to be attributed to the introduction of the Jacquard looms, some years before the opening of the Ports for foreign silks?—Most certainly.

10495. In the patterns which you have exhibited, some of which were made before 1826, and others about that time, you show us evidence that the improvement in the figured branches of the silk trade were much greater before the opening of the Ports than they have been since?—That is my decided opinion.

10496. This being your experience as a manufacturer, extensively engaged for a series of years in the rich figured trade, what do you think of an opinion stated by Dr. Bowring to exist in France, that the improvements in English figured silks since 1825, has been equal to 50 years?—I consider this opinion to be entirely fallacious.

10497. You have stated, that your house has scarcely one-third of its former number of figured and fancy works going; and it has been given in evidence, that in all Manchester there are not more than 60 Jacquard looms, and that these are chiefly making low-priced silks; therefore your house alone, although reduced to its present number, has as many rich figured silks still going, as are making in all Manchester, of every description?—Certainly.

10498. Then Manchester has not taken away the figured silk trade which Spitalfields has lost?—Undoubtedly not.

Mr.
William Bridges.

6 July,
1832.

10499. Do you conceive that England is on a fair ground with France, while the latter country produces three millions of her raw silk, grown at from 15 to 25 per cent. cheaper than the Italian, if the information, which has been received, has been correct on that point?—Certainly she is not on a fair footing with France; but with that I am not acquainted.

10500. You stated, that you had only 60 or 70 looms employed in fancy goods?—Yes.

10501. Are they employed to order?—Part of them; the greater part.

10502. Are these on the table specimens of the goods you have now in your looms?—They are.

10503. Although the French has interfered with you, they have not actually annihilated your trade?—They have interfered as much as this, that instead of paying 16,000*l.* a year for labour, it is now something like 6 or 7,000*l.*

10504. Did you, in executing the order received in February of which you have spoken, sustain a loss, or did you make a profit?—The profit was very small, but the order has been doubled since; I thought it would have been a loss, but these 30 pieces have been made something like 90.

10505. You made them so well, and so much to the satisfaction of the person who ordered them, that he repeated his order?—Yes.

10506. The first cost of the outlay of the money was reimbursed by being thrown over the greater number of yards?—That is the case.

10507. Do you also manufacture plain goods?—I do.

10508. Do you find that the French interfere in the plain gros de Naples?—In making plain goods; I do it chiefly to keep my hands employed that I am desirous of retaining, and I believe that in so doing I interfere with a good many gentlemen.

10509. You have not found the same difficulty in competing with the French in plain as you do in figured?—If any gentleman will give me the cost price for the plain, I take it.

10510. Are you a member of the Trade Committee?—I am.

10511. How many gentlemen compose that committee?—I think it does not exceed 15.

10512. What number have generally attended their meetings?—About 10.

10513. Of these how many of them are unconnected with throwing or throwing mills?—I should think from 10 to 12 or 15 are unconnected with throwing.

10514. Do you know when the committee last assembled?—I do not think it has met since the end of January or February.

10515. You have not assembled since this Committee was appointed by the House?—Certainly not.

10516. Do you believe that the committee of manufacturers, as such, have had any thing to do with the evidence brought before this Committee?—Not the least, in any shape or way whatever.

10517. The committee has not met as a committee at their usual place of meeting, Weavers' Hall?—They have not.

10518. Have not certain members of the committee been the persons chiefly engaged in getting up evidence before this Committee?—No, but inquiries have been constantly made as to the proceedings of this Committee.

10519. Is not Mr. Brocklehurst a member of the committee?—He is.

10520. And Mr. Moore?—Yes.

10521. And Mr. Grout?—Yes.

10522. Have you been in the habit of meeting these gentlemen, since the Committee met, on the subject of the proceedings that have taken place here?—I have met Mr. Grout, but not in an official manner; I have inquired of him to know what would be the result of this Committee, but we have never had a meeting.

10523. You have inquired of him, knowing that he generally attended the meetings of this Committee?—Yes.

10524. Have you ever met Mr. Brocklehurst more than once since January?—I have never met Mr. Brocklehurst in a single instance.

10525. Nobody has attempted to influence you as to any opinion you may give?—Not the least.

10526. Do you believe they have influenced other persons?—No.

10527. You are not a throwster yourself?—No.

10528. Would you undertake to say that a majority of the committee are not interested in throwing?—I think that a majority are not interested in throwing in any shape or way.

10529. Do

10529. Do you think that nine-tenths of the silk manufacturers in London agree with you in your opinion, whether they are throwsters or not, as to the operation of the introduction of French silk goods on your manufactures in Spitalfields?—No doubt full nine-tenths are of the same way of thinking as myself.

10530. Out of the 60 manufacturers in Spitalfields, perhaps five or six take a different view?—That may be so.

10531. You think that there are certain manufacturers in Spitalfields who are anxious that the duty should be taken off thrown silks?—I believe there are five or six, perhaps 10, but not more.

10532. Are they not the largest manufacturers?—I think not.

10533. Are not the large manufacturers in Spitalfields engaged in throwing, or interested in the throwing mills?—I am not aware of that.

10534. You have exhibited some patterns, did you yourself make any of these goods on speculation?—A few of them.

10535. What is your reason for not making many of them on speculation?—Because I have not the command of my own market; if I had, I should have no opposition at all in preparing them for the spring trade.

10536. Do you apprehend that if you made goods on speculation, you would be interfered with by any other market, and sustain a loss rather than get a profit?—If I had the command of my own market, I should have no fear of any one infringing on me, so as to injure my own sale.

10537. Do you mean by that, to say that you want the exclusive control of the fancy silk trade in Spitalfields?—I have no objection to fancy silks being made in Manchester, or any where else, only keep the foreigner out of the market.

10538. Do you know whether any persons now in Spitalfields makes that description of commodity which you have exhibited to the Committee, on speculation?—I do not think there are six looms of the sort going in Spitalfields.

10539. Will you tell the Committee why you do not set such looms to work?—Unless I do it on a broad scale, it is of no use at all; what is left of the better trade, I believe I have; and at present it is not worth the while of any house to take it up.

10540. Is there hardly any other house than yours which is now making rich silk figured goods in Spitalfields, or in fact in England?—I really do not think there is.

Mr. George Stephens, called in; and further Examined.

10541. HAVE you been examined on a former day?—Yes.

10542. Can you give some additional information to the Committee?—Yes; on a previous examination I alluded to ribbons; I will now speak of broad silks.

10543. Do you live with Halling, Pearce & Stone?—Yes.

10544. Are you a buyer of Spitalfields and Manchester silks?—Yes.

10545. And were you before the admission of French silks?—I was.

10546. What kind of goods did you buy of Spitalfields manufacture before French silk goods were admitted?—A variety of kinds of goods; I have a list, if I may be permitted to read it.

10547. Those you now speak of were manufactured in Spitalfields?—Yes, they were in 1825; there were gros de Naples, twill sarsnets, satins, figured satins, velvets, figured velvets, cut figured gauzes, gold and silver tissues, figured gauze handkerchiefs, scarfs, plushes, Italian nets, figured plushes, poplins, figured poplins, and lustres.

10548. What kind of goods do you now buy of Spitalfields manufacture?—We buy at present very few, not half the number we used to buy; they are gros de Naples, low satins, and low black velvets.

10549. You have named ten or twelve articles which you were in the habit of receiving from Spitalfields before the admission of foreign goods, and you now receive only three or four; do you receive most of the others from other parts of England?—No, we receive nearly the whole of them from France.

10550. What silks do you buy of Manchester manufacture?—Low gros de Naples and sarsnets; of mixed goods we buy palmyrines, shawls, crape handkerchiefs, &c.

10551. The latter articles are a mixture of cotton and silk, or silk and worsted?—They are.

10552. Are many of these goods made in Jacquard looms?—I believe some of them are; the mixed goods are.

678.

4 U 2

10553. Are

Mr.
William Bridges.

6 July,
1832.

Mr.
George Stephens.

Mr.
George Stephens.

6 July,
1832.

10553. Are there not some kinds of goods made at Manchester, that were made in Spitalfields, previous to the admission of foreign goods?—No.

10554. Does not Manchester produce very beautiful articles for ladies dresses?—Not any very beautiful, many very cheap. I have before me two or three patterns of the best things ever had from Manchester.

10555. Has not Manchester produced many kinds of goods since the opening of the Ports which have prevented the sale of French fancy silk goods?—No, it has not; Manchester has produced different sorts of goods, but none good enough in any case to prevent the sale of rich French goods.

10556. Do you come into immediate contact with Manchester manufacturers?—Yes, they frequent our house for French patterns almost every month in the year.

10557. Do they not often copy French articles and sell the articles made in imitation as French goods?—They sell them as fancy goods; they copy from them sometimes at a very great loss; there was an instance this spring in which a considerable sum of money was lost; it was in the article of shawls, which we imported about the end of February, and the Manchester manufacturers took them down to copy; they cost us 28*f.* in Paris, and we thought they might be produced in England for 10*s.* 6*d.*, and in three weeks from that time we had them from Manchester at 12*s.* 6*d.*; immediately after that there was a large lot sent over from Paris, which we bought at 10*s.*

10558. So after the French had supplied you with a considerable quantity at 28*f.* you found there was a large influx suddenly at 10*s.*?—Yes, they send them all over Europe at the first price, and then send the jobs to London.

10559. Does not the convenience of sending goods from Paris to London induce them generally to send their jobs to this market?—I think most of the Parisian jobs come to this country.

10560. Is it not a great interference with the general manufacture of London?—It is impossible to guard against so great an evil as that; at the present time I can buy in London 2,000 garnitures of a particular kind of ribbon (*decoupé gauze*) at about 30*s.* for which we paid from 50*f.* to 60*f.* in Paris, in April last.

10561. And equally good?—Equally good.

10562. Do you consider these goods to be smuggled?—I think some are smuggled; some are sold at a sacrifice.

10563. Can you name the fancy goods that have been made in Manchester since 1826?—There are a variety of kinds; those I have handed in are some of them; there are very few rich goods; they are almost all different kinds of mixed goods.

10564. In nearly all descriptions of mixed goods which come from Manchester there is a consumption more or less of silk?—Yes; but within these last four months a figured silk has been sent up which had a very limited sale indeed.

10565. In all these goods where there is a considerable quantity of silk mixed with cotton or worsted, are they called silk goods generally?—They are.

10566. Are they made by houses principally in the silk trade?—Yes; they are called silk manufacturers.

10567. Do you believe that any of the goods that are made at Manchester interfere with the superior French goods which are introduced into this country?—Not in silk goods, or what are called the superior articles of silk goods; this is an article [*exhibiting it*] for which we pay a large sum every year to France; it has never been produced in Manchester; it is cut figured gauze.

10568. What is this selling at now?—From 4*s.* to 6*s.* a yard, eighteen inches wide.

10569. Do you call this a fashionable thing now?—Yes, some of the patterns are not a month from Paris.

10570. In what respect do they differ from the goods made by Messrs. Fulton?—They are very different; Messrs. Fulton's sell from 4*s.* to 6*s.* a yard, thirty-six inches wide; these are from 4*s.* to 6*s.* a yard, eighteen inches wide; and we sell these to our first-rate customers; Messrs. Fulton's we do not.

10571. Messrs. Fulton's goods are wider?—Yes, they are; but not so costly; they have not the rich appearance these have.

10572. Do you import these goods at the present moment?—Yes.

10573. You have seen a rich gauze shawl exhibited this morning to the Committee?—I have.

10574. Are gauzes of that sort made in Scotland?—Not such gauze as that.

10575. Are

Mr.
George Stephens.

6 July,
1832.

10575. Are gauzes of that sort made in France?—Yes.

10576. Are any gauzes now worn in England of that fabric, not confining the enquiry to shawls?—Yes, for dresses, handkerchiefs and shawls; but not so large as that.

10577. Are the rich gauzes imported from France?—Yes; they come from Lyons.

10578. Has it been the French or the Scottish gauzes that have interfered with the gauze trade of Spitalfields?—The French decidedly; ladies who will buy these things will not buy the Scottish because they are too cheap.

10579. Are not a considerable quantity of Scottish gauzes sold?—A considerable quantity.

10580. Are they made any where else but at Paisley?—Not any where else to my knowledge.

10581. Do you sell any of the English crape handkerchiefs?—Yes, we do.

10582. In what respect do they differ from the French?—They are softer.

10583. Are they better or inferior?—By some people their softness is thought a quality in their favour.

10584. How long have they been made to any extent in England?—I think about three years.

10585. In 1825 there were very few or none made in this country?—I think none exactly like them.

10586. It is now a branch of trade, in imitation of the French?—Yes.

10587. Are they cheaper or dearer than the French?—There are different qualities of each kind; the lower priced English ones are not so high as the high priced French, and we have some English that are higher than the French.

10588. Do they sell in your warehouse and shop along with the French?—Yes.

10589. What proportion do you sell of each; as many English as French?—I cannot say in the particular article of the zephyr handkerchief what the proportion is.

10590. Do you not know that this handkerchief is a new article as regards France?—I do not.

10591. Did you ever see an article of this kind worn in this country before 1826?—I have no recollection of it.

10592. Is it not a recent invention, copied here as soon as it was procured?—It is possible it might be.

10593. Do you think the manufacturers would have made as many fancy goods if no French silk had come into the market?—Yes; from our coming into immediate contact with them, I have observed that they would have embarked more money in fancy goods if it had not been for the French goods coming here.

10594. Do you not think it likely, that a deal of the speculation at Manchester was owing to the reduced price of silk as compared with the years 1822 and 1823?—I believe that at Manchester they made silk goods in consequence of silk being lowered, with a view of selling goods that had displaced certain mixed articles that were once sold; for seven years, before 1826, poplins, figured and plain, were sold greatly; then the manufacturers made a low priced gros de Naples, from 1s. 6d. to 2s. 6d., which caused this article to go out.

10595. That was the substitution of plain silk instead of silk and worsted?—Yes, it is an inferior class of the community that consumes the Manchester silks.

10596. Have the manufacturers now a chance of getting a good price for a novelty?—No; we do not think of giving the Manchester manufacturers a good price for a novelty; we know pretty nearly what it will cost them, and we never think of giving a great price.

10597. You have little confidence in giving an order to a Manchester manufacturer, for a considerable quantity of an article when he has first produced it?—We do not do so.

10598. Do you act in the same manner with regard to French goods?—No; we are obliged to give for new French goods any price that the person who offers them asks; we give in many instances three times the cost of the material and labour; we pay for fashion besides the cost of the labour on the raw material. I have some patterns of Manchester manufactures and French mixed, the Manchester we are buying under 2s. a yard; for this French article, I hold in my hand, we paid 5f., and I do not think it worth 2s. 6d.

10599. I put into your hand a pattern of an article (figured palmyrine) made at Manchester, and another made in France, will you inform the Committee the price

Mr.
George Stephens.

6 July,
1832.

at which the two articles sell in this country, whether you believe the cost of one is greater than the other, or why one sells for more than another?—This article from Manchester I know may be bought under 2 s. a yard; and when I look on the other, and see that there is not any greater labour, I do not think it would cost more; but it is a French article, and we know that French fashion will sell at any price; that therefore is the reason we give a great price for it.

10600. What is the cost of that French article?—Five francs. We are not able to sell it under 5 s.; I believe that is the exact retail price.

10601. Do you believe that if a lady were to purchase a dress of either sort, that one would last any longer in wear than the other?—Not at all longer.

10602. Do you find that there is a wish to purchase French commodities?—Yes.

10603. Is not the French article, which you now hold in your hand, in better taste than the English?—It is in better taste.

10604. What you mean is, that the French manufacturer has a much better taste than the Manchester manufacturer?—I have seen more tasty goods from France than I have from Manchester.

10605. An article which costs the same money would, if it be made in France, for that reason, sell at a higher price in your shop?—Yes.

10606. Have you seen French goods and Manchester goods more tasty than Spitalfields?—Of late years I have seen more tasty articles from France; but I have seen some very good from Spitalfields.

10607. Why do you not give your orders to Spitalfields?—We are obliged to have French fashions; we are governed by the fashions there, and we are obliged to have new patterns.

10608. You have spoken of your giving orders for French silk goods, and of your not giving orders for goods from Manchester, what is the reason you do not act with Manchester as you do with France?—Because we can always sell those we order from France; we are not so certain that we shall sell those we order from Manchester.

10609. Do you think that would have been the case if the Manchester manufacturer had made better goods?—The Manchester manufacturers have always been afraid to embark their capital, conceiving they would do it at a loss.

10610. Has not the admission of French silk goods caused a great deal of improvement in English silk goods?—No; I think they improved as much from 1821 to 1825, as from 1826 to 1831.

10611. Can you name any articles of the kind?—I would mention an article which we used to call ducape; the ducape of 1825 was better than the Spitalfields gros de Naples of 1831; the Spitalfields manufacturers have followed the French in the make, and their silk has lost the richness which it once had; the majority of the Spitalfields silks now have a harsh feel about them.

10612. Have any of the Spitalfields manufacturers made such gauzes, since 1826, as you spoke of?—We have known several in Spitalfields, who have tried since 1826 to make fancy goods, such as cut gauzes, scarfs and shawls, but they have never sold at a profit.

10613. Do you now buy any figured silk goods from Spitalfields?—We now only buy black and white, no coloured figured silk except they be a job.

10614. Is there a peculiarity about the colour of both black and white, in the English manufacture and the French manufacture, which prevents your purchasing the French?—Yes, it is a peculiar shade of black and of white which we buy.

10615. Do you not buy any rich plain silks from Spitalfields?—No; all from France.

10616. Why do you buy them in France in preference to England?—We are led by the colours; we can get them in France immediately the fashion is adopted.

10617. Whereas if you ordered them in England, you would have to wait for them?—Yes.

10618. Do you think there is an extensive sale of such goods?—I do.

10619. Can you inform the Committee what proportion your French stock bears to your English?—Dividing it into 100 parts, it is about 40 to 60.

10620. Do you mean silk goods and ribbons?—Ribbons are excluded.

10621. The English are 60, and the French 40?—Yes.

10622. Does the French part consist of more expensive goods than the English?—Much more expensive.

10623. Does the sale of French fancy goods increase?—It does.

10624. What

Mr.
George Stephens.

6 July,
1832.

10624. What proportion do the French sales bear to the English in silk goods?
—I think it is nearly half.

10625. Does that include ribbons?—It does.

10626. Did not your house furnish the Board of Trade with a paper, showing the proportion of French and English goods sold by your house?—Yes, it did.

10627. What period did this Return refer to?—To the year 1830.

10628. What were the proportions stated in that Return?—They vary a little; generally about 16 and four, divided into 20 parts.

10629. For what period?—The six months ending the 30th June 1830.

10630. How do you reconcile this Return with the proportion of half and half which you have just now stated?—The Return to the Board of Trade was made up from the invoices; we purchased low gros de Naples for country concerns, and they are not sold to first class customers in London.

10631. Your town trade is about half and half of French and English silk goods?—It is.

10632. And that in the country is principally Manchester silks?—In the country there are more Manchester silks sold.

10633. And Spitalfields also?—Yes.

10634. Do you not sell some French goods in the country?—Yes.

10635. Will you name the kind of French silk goods you now buy?—Plain gros de Naples, watered ditto, figured ditto, clouded ditto, gros des Indies, plain satins, figured ditto, rich velvets, figured ditto, plushes, cut gauzes, plain ditto, tissue on crape dresses, tissue on gros de Naples, ditto ditto on satins, ditto cut gauze handkerchiefs and scarfs, zephyr shawls, handkerchiefs and scarfs, crape shawls, handkerchiefs and scarfs, embroidered silk dresses, ditto handkerchiefs, shawls and scarfs, ditto crape shawls, scarfs and handkerchiefs, tissue handkerchiefs, scarfs, grenadine scarfs, shawls and handkerchiefs, mousline de Soie, shawls, scarfs and handkerchiefs, ditto for dresses, Aerophane crêpe crepè, silk shawls.

10636. These you now buy?—Yes.

10637. Do you know the duty that these things pay?—They should pay 30 per cent. and upwards.

10638. Do they pay such duty?—They do not always.

10639. Do you mean, that such goods go through the Custom House, paying less than the legal rate of duty?—Since I was last examined here, I have seen goods which it is plain must have come through the Custom House at less than the legal rate; one article in particular, which must have come through the Custom House at a less rate than ours did, I will name, it is called Petersham. I bought the same sort of article in the city one morning, at 54s., and on the same day I received some which came from Paris direct to us, and they cost us 63s., they are got generally in Paris; the very article which I bought in the city from the importer the same day that ours came, was 15 per cent. lower.

10640. Do you know whether the manufacturer sold them at the same price to the buyer?—I know he sold them at the same price, we have ascertained that since; we know the channel they came through, they left the manufactory the same day, and arrived in London the same morning; we bought ours in Paris, the city buyer bought his at Lyons.

10641. Might not the London house have bought cheaper than the Paris house?
—Not at all; he is not a large buyer; he has given us the information, that he bought at the same price.

10642. You have ascertained that fact?—Yes, we have gone through every part of it; it cannot be otherwise.

10643. You are perfectly satisfied that the French manufacturer who purchased these goods did pay the same price for them?—I believe it as firmly as I believe that I exist.

10644. Do you know if these goods had been rendered into this country without an intermediate profit at Paris, if he could not have sold them to you within 15 per cent. of what you did purchase them at the London market?—He could not.

10645. Do you believe that the person you bought them of in London, is a responsible man?—I know he is a responsible man.

10646. You know that he did not sell them at a loss?—I know that he did not; I have his word for it.

10647. Can you account for the difference arising in these two purchases, both having passed through the Custom House?—I have the word of the importer for it,

Mr.
George Stephens.

6 July,
1832.

it, that the goods left the manufactory on the same morning, and arrived in London on the same morning, and came direct through the Custom House.

10648. Did the English importer say to you that they came through the Custom House?—Yes, he did.

10649. Did he lead you to suppose that he passed them at a less duty than he ought?—Yes, he does not mind admitting that he did pass them at less; I believe he gave a nominal value for the goods he was passing, and they passed at a less rate.

10650. Is the Table of Duties upon weight or value?—It can be taken by weight or value.

10651. You have no doubt these goods were not smuggled, but that, in point of fact, they passed through the Custom House?—I have no doubt of it.

10652. The article which you allude to was a Petersham, which is very heavy?—It is very heavy.

10653. Do you know that goods are ever passed through the Custom House *ad valorem*?—They pass *ad valorem* often.

10654. At whose discretion is it?—I believe the officer who stands at the desk.

10655. Is it within your knowledge that the same kind of silk goods that are passed one time by weight, are passed another time *ad valorem*?—I believe such to be the case.

10656. You were told by the importer that he passed his goods at a less rate of duty than he ought to have paid?—Yes, he admitted that to me.

10657. How long since is this transaction?—It was about the beginning of May.

10658. Was it by weight or value?—I do not know.

10659. Do you mean that the party from whom you purchased those goods, admitted that a fraud had been committed on the Custom House?—Yes, he admitted that to me.

10660. Can you state on what day the transaction took place?—I cannot state the day.

10661. Could you not, by reference to your books, give the date?—It would be possible to confirm the fact, that goods do pass through the Custom House on one day at one rate and another day at another; I could give another instance.

10662. In addition to this instance, have you any confirmed opinion as to the practice of goods passing through the Custom House without paying the legal rate of duty; do you believe that it is a common occurrence?—I believe it is a common occurrence.

10663. To what particular description of goods do you refer in the opinion you give, that they do not always pay the legal rate of duty?—I have instanced the plain Petersham, and I know others; plain silk goods come in without paying any duty whatever; I have the best possible proof that plain silk goods are smuggled.

10664. You do not mean smuggled through the Custom House?—No.

10665. What proof have you of goods being smuggled, not through the Custom House?—I have a general opportunity of knowing that goods are smuggled.

10666. Have you reason to suppose it is profitable to smuggle gloves at present?—I do not think it is profitable.

10667. Then the rate of duty paid on gloves is a rate that is actually collected?—I think even a greater could be collected; I think 1*s.* a dozen more could be easily collected on gloves without creating smuggling.

10668. Do you know what the rate is upon the value?—Habits, 4*s.*; men's, 5*s.*; long, 7*s.*

10669. Do you happen to know what it would average per cent. on the value?—In one instance it is 20 per cent.

10670. Would it not be more than 20 on the cost?—It would; the average cost of habits is 20*f.*

10671. Can you explain why it is that silks can be smuggled at a less expense than gloves?—I think gloves are liable to injury from damp.

10672. Are there not many colours in silks that are equally liable to injury from damp?—Yes, there are.

10673. If it appears that 22½ can be collected on gloves, why should not 22½ be collected on silk also?—I cannot say why; I think that gloves could be smuggled if persons were disposed to smuggle them, but where they can get things more profitable they will not smuggle them.

10674. If a case of gloves of a given size should be worth 100*l.* and a case of silks of the same size be worth 200*l.* does it not follow that one might be smuggled for

Mr.
George Stephens.

6 July,
1832.

for half the cost of the other?—Yes, I think the bulk of the article regulates the price of smuggling.

10675. Do you think that the house you alluded to smuggles other kinds of goods besides silk goods?—I think a great many of other descriptions.

10676. What description of goods besides silk?—I know that they smuggle some gloves, and I have the best possible information that they smuggled tea, spirits and tobacco.

10677. In fact, they are regular smugglers?—Regular smugglers.

10678. Do you know of other houses who carry on that system?—I know that others do.

10679. Do you believe it is carried on to any extent?—I believe to a great extent.

10680. Is it not possible for the Custom House officers to prevent it?—Not to prevent the smuggling in silks; they have not the means of knowing the state of the stocks of silk goods in London.

10681. Could not regulations be adopted, or laws enacted, which would very much check smuggling?—I think it might be entirely stopped.

10682. Do you think that giving larger rewards to informers would enable the Government to collect larger duties than are now collected?—Yes; on gloves and other articles.

10683. Are you in the habit of going to Spitalfields several times in the course of the week?—Yes.

10684. Therefore you are pretty well acquainted with the state of things in Spitalfields?—Yes.

10685. Do you happen to know the general condition of the stocks in Spitalfields; are they heavy or light?—We do not buy of many houses in Spitalfields; I cannot speak as to the general stocks.

10686. You do not know the state of employment, or of the stocks either?—I do not.

10687. Have you been in the habit of going to Manchester often?—We do not go to Manchester; Manchester manufacturers come to our house.

10688. Do you know whether, in Spitalfields, there are more or less of rich plain gros de Naples made now than was made a year or two ago?—I do not think there is more made than there was three years since.

10689. Do you think that 1s. more per dozen might be collected on French gloves, and would that be a great advantage to the workmen, or would it not?—I think it would gradually diminish the quantity of French gloves sold; it would have a great effect on the quantity sold.

10690. Would it induce the retail dealer to introduce English manufactured goods rather than French, with a view to his own profit?—It would.

10691. If the smuggler was required to smuggle on his own account, would it be in gloves and silk, or spirits, tobacco and tea?—I believe it would all continue.

10692. Are not some houses driven into the system of smuggling in self defence, because other persons do it?—Entirely so. I knew a lace importer about two years since; he came to a gentleman who was speaking to me, and said he was going to the Board of Trade, to ask for some alteration in the duty on blond; the gentleman laughed at him, and said, he might just as well stay at home; he did not go; and he has been as great a smuggler as others since.

10693. He overcame his scruples from necessity?—Yes.

10694. Do you think it would give some check to smuggling if it were made penal against the receivers and encouragers?—If 1,000*l.* was offered to persons who could inform the Government where smuggled goods were to be found, (and a great many could give such information now,) it would have a great effect in checking smuggling.

10695. You mean, not confining it to the Custom House officer?—Yes.

10696. If the goods found were given to the informer, do you not think it would be very unsafe for any shopkeeper to deal in smuggled goods, when the young men in his employment might give information?—The value of the goods would not be enough; it would not be sufficient to pay for the loss of the situation, which would be the consequence; the value of the goods would not be enough.

10697. Would not the objection raised by the honourable Member, as to the liability of the master of the establishment, be got rid of by having the goods stamped?—Yes; that would prevent such importations; we once kept printed cotton stamped.

Mr.
George Stephens.

6 July,
1832.

10698. In point of fact, if prints were found on you unstamped, you were subject to a penalty?—Yes.

10699. You always dealt in those goods?—Yes.

10700. And yet never had an instance of that kind?—No.

10701. In your house you have not less than 70 or 80 young persons?—We have as many as that.

10702. Would not the temptation be greater in silk than in cotton?—I think it would.

10703. Do you not think that the most effectual way of putting down smuggling is to lower the duties to the cost of smuggling?—That would be the most preventive means to stop smuggling.

10704. Would not the English manufacturer be better able to compete with the French, if the duties upon thrown silk were reduced?—It would be about 2*d.* a yard in his favour; it would not touch fancy goods.

10705. On plain gros de Naples?—It would reduce the price 2*d.* a yard on that article; a great many French goods are governed by colour; we sell the French gros de Naples at 5*s.*, the Spitalfields, at not more than 3*s.* 6*d.*; 2*d.* or 3*d.* would not be felt on the sale of French goods.

10706. Is not 2*d.* or 3*d.* a yard a pretty good profit?—It is on a silk of 3*s.*

10707. You do not believe that 2*d.* reduction on the price of English goods would induce a sale of them against French?—Reducing the price of English from 3*s.* to 2*s.* 9*d.* would not prevent the sale of the French goods at 4*s.* or 5*s.*

10708. Is it only the difference of the colour, or are not the French, after paying the duty, much dearer than the English?—If they pay the duty they are.

10709. Independent of the duty, taking the articles made at Spitalfields and at Lyons, how do they stand?—We do not pay Spitalfields more than 3*s.*, except for blacks; I therefore cannot speak of the rich coloured silks of Spitalfields.

10710. In the present state of trade, when profits are reduced to the lowest amount, is not 2*d.* an important consideration?—To the buyer and seller it is.

10711. Or to the manufacturer, is it not?—I cannot answer that question.

10712. Would it not make a little difference in the sale to the consumer?—If we reduced our silks at 3*s.* to 2*s.* 9*d.* it would not affect the sale at all.

Mr. Richard Bennett, called in; and Examined.

Mr.
Richard Bennett.

10713. ARE you a silk manufacturer?—I am.

10714. Where do you carry on your manufacture?—The goods are manufactured at Spitalfields; the silk is thrown at Macclesfield.

10715. How long have you been engaged in the silk manufacture?—Twenty-one years.

10716. Is yours the plain or the fancy branch of the trade?—The plain branch exclusively.

10717. What was the condition of the manufacture previous to the opening of the Ports in 1826?—Previous to that time we were generally in an improving condition; we could give fair wages to the weavers, and the manufacturers also had a remunerating profit; the returns of the imports of silk up to 1826 would prove its progressive increase.

10718. What has been the state of the trade since that time?—It has been very unstable, attended with frequent fluctuations, and a gradual change for the worse.

10719. Did the admission of foreign silk produce any immediate bad consequence to the silk trade?—It caused an almost immediate reduction of wages and profits in every department of the trade; this reduction commenced in the following autumn.

10720. Has the reduction of wages and profit been gradual since 1826 up to the present period?—It has.

10721. What was the condition of the operatives previous to 1826?—Quite the reverse to what it is now as regards their comfort; for so numerous a class, they were considered the most respectable body of artizans.

10722. What has been their condition since that period?—Miserably altered for the worse; their low wages, combined with their more frequent want of employment, has subjected them to great privations and distress.

10723. Has this change produced ill effects on their morals and general demeanour?—Decidedly; their morals are much altered for the worse, and our own men are often obliged to work on a Sunday, which was not formerly the case.

Pilfering

Pilfering is going on to a great extent. Formerly there used to be but little pilfering; now there are many instances where persons embezzle a whole piece, or two or three pieces, to the value of 40*l.* or 50*l.*

10724. Are they driven to that?—Yes; from their low wages and general distress.

10725. Do you attribute that distress to foreign competition?—I am decidedly of opinion that that is the chief cause.

10726. From the circumstance of trade being so unsteady, you are not able to give that constant employment you formerly did?—Most undoubtedly not; in former times we were in the habit of employing hands, for many years, on the same description of goods; trade was more steady, and the hands then produced their work in a better style than they do now.

10727. What description of goods are chiefly made in Spitalfields?—Principally the rich plain and fancy figured silks.

10728. Are there as many goods now made in Spitalfields as there were formerly?—Most certainly not.

10729. Has this decline in the manufacture arisen from a decline in the consumption?—Quite the reverse; of late years the consumption of silk goods has materially increased.

10730. Are you acquainted with the description of goods made in Manchester?—Yes; from every opportunity I have had of seeing the Manchester goods, they consist chiefly of a low class of goods, and also of mixed goods of silk and worsted, and silk and cotton.

10731. Does not Manchester supply goods suitable for the wear of the higher ranks of society?—I think not; there are few goods sold above 2*s.* 6*d.*; the greater portion are from 1*s.* 9*d.* to 2*s.* 3*d.*

10732. How do you account for the distress in Spitalfields at a time when the consumption of silk goods has greatly increased, and the public are not supplied with silk goods from Manchester?—The dealers in the higher classes of goods get supplied chiefly from abroad.

10733. Is there no competition between Spitalfields and Manchester?—There is a competition; for since the manufacturers of Spitalfields have been deprived of the manufacturing the better class of goods, they have turned their attention to the manufacturing of the lower description of goods, similar to those which are made in Manchester.

10734. Are you of opinion that the competition with Lyons, and not with Manchester, has caused the distress in Spitalfields?—Most decidedly.

10735. Do you think that every exertion has been made on the part of the trade to meet that foreign competition?—I think that every exertion has been made; from a calculation I made, it appears that silk goods are reduced in value full 25 per cent. by the reduction in wages, profits, dyeing, throwing, and in every other department of the trade, in order to meet the foreign competitor.

10736. This is without reference to the fall in the price of raw silk?—Yes.

10737. Is it possible to make any further reduction?—I think not.

10738. Are you of opinion that goods are as well woven now as formerly?—I should say there is no want of capability on the part of the weavers; but I think, from the low rate of wages which they receive, they do not do their work so well as they did formerly; their low rate of wages compels them to work so many hours, that in weaving a great length of work it is rarely made so perfect.

10739. At what do you estimate the average weekly earnings of a weaver?—I think their nett earnings do not exceed 8*s.* or 9*s.* a week; it used to be on plain goods, from 14*s.* to 17*s.*

10740. What effect did the alteration of the duties, in 1829, produce on the silk trade?—It caused a still further reduction to take place in the price of labour and profits, and also reductions in every other department of the trade.

10741. What was the object proposed?—The prevention of smuggling.

10742. Has that object been realized?—It has not.

10743. What ground have you for thinking that smuggling has increased in the country?—The fact of the large seizure that took place some time back is a convincing proof that smuggling is going on to a great extent. There are several parties in London who are avowed importers of foreign goods, whose names are never seen in the entries at the Custom House.

10744. What would be the effect of a further reduction on foreign thrown silk?

678.

Mr.
Richard Bennett.

6 July,
1832.

Mr.
Richard Bennett.

6 July,
1832.

—It would produce very little benefit to the manufacturer, and almost a total ruin to the throwster.

10745. Do you think that smuggling was carried on to an extent during prohibition, so as to be injurious to trade?—I never heard of smuggling being carried on to an extent that was injurious to trade.

10746. Yet at that time there was a very great difference in the price between the French and English manufactured goods?—Much greater than now.

10747. Has the increase of smuggling been progressive?—I think it has.

10748. Do you think there are houses in the habit of smuggling now, who, during the existence of the prohibitory laws, would not have incurred the risk or the disgrace of smuggling?—I decidedly think so.

10749. Would you deem it prudent to embark any capital in the manufacture of figured silks in the present state of the trade?—I should deem it very imprudent in the present state of the law.

10750. In what manner does the importation of fancy and figured silks interfere with your branch of the trade, so as to induce you to come to that conclusion?—In the first place the taste of the public is entirely regulated by foreign fashion; it is impossible for the manufacturer here to have his new goods in the market at the same time that the French have theirs, so that the French take the lead.

10751. In the event of a reduction of duty, you cannot be protected from the market being visited with those goods technically called jobs?—Decidedly not.

10752. Has the manufacture of figured silks much declined since 1826 in Spitalfields?—I think there is not a tenth of the number of looms on figured silks there were a few years back; there used to be about 3,000 or 4,000 looms in figured and fancy goods; I think the utmost number now is from 300 to 500.

10753. From your knowledge of Spitalfields for 21 years, do you think that your statement of from 3,000 to 4,000 looms before the admission of foreign goods, is correct or not?—I think it is; that opinion is founded on a census taken of the number of looms employed at former periods.

10754. Would you think it prudent in a manufacturer to provide a stock of fancy silks for the spring or autumn trade?—Decidedly not; he would have to incur the same expense to produce a pattern as a whole piece; if he did not get any orders he would be all the expense out of pocket.

10755. Do you think the fancy branch is likely to become extinct by the continuance of the present system?—I think it would in time; if the manufacture dwindles away to the extent of the last six or seven years, people possessing knowledge and talent will back out of the trade, and turn their attention to something else; in a few years the fancy trade will be extinguished.

10756. Are you of opinion that in the event of prohibition there would be a sufficient home consumption to protect the public against extravagant prices for their silks?—I am of that opinion; there was sufficient competition before the introduction of foreign goods to answer that purpose.

10757. Is the home competition less now than it was then?—I think it has rather increased, and in addition to that we have also the competition with the foreigner; when the profits were reduced the trade endeavoured to make it up a little by increasing the quantity.

10758. You have no objection to any competition with English manufacture?—Decidedly not; that is all fair; we are all on the same footing.

10759. If your trade had the protection of the exclusion of foreign silks, do you think it would stimulate the manufacturer to make any exertion to produce goods possessing taste and skilful design, and be the means of extending the trade?—I am quite satisfied it would tend to improve the manufacture of fancy and figured silks, because the manufacturers would then possess greater encouragement; as it is now, he has no security for the capital he may expend in new and skilful designs, as he cannot obtain orders from the buyers.

10760. If the fancy branch could be extended, would that produce any beneficial effect on the plain branch of the trade?—Undoubtedly; it would relieve the plain branch by a number of persons who were formerly in the fancy trade, turning their attention to their legitimate trade of figured silks, and there would be less pressure on the plain branch than there is now.

10761. Would it not also relieve the operatives in Spitalfields, by taking the excessive supply of labour, which is now wholly confined, to the plain trade?—Decidedly.

10762. What

Mr.
Richard Bennett.

6 July,
1832.

10762. What advantage do the French possess over the English?—The advantage of growing about 3,000,000 lbs. of silk.

10763. Is the French manufacturer supplied with the silk so grown, at a lower price than you can purchase the raw material?—I am not in possession of any evidence as to price, but we infer so from the fact, that when our goods come into competition with theirs, they undersell us even with paying the duty.

10764. Might not that depend on less wages for labour?—France being a cheaper country, that has its influence on every department of trade.

10765. What in your opinion would be the best means of extending the Spitalfields manufacture?—The best plan would be an entire exclusion of foreign goods; a duty of 5s. on foreign organzine, and 3s. on tram, and some further protection against smuggling. Why should not the person who employs the smuggler, be subject to the same law himself?

10766. Would it not be a good penalty, that the person who wore smuggled goods should be placed in the pillory?—That depends on whether he has a knowledge of their being smuggled or not.

10767. Do you think it possible for a person to buy goods, without knowing whether they are smuggled?—The public know nothing of the matter.

10768. Yet you say they prefer French silks?—Decidedly, because they are cheaper.

10769. And how do they prefer French silks if they do not know them?—They are sent to them as French silks; there is a difference in the mode of getting them up; all French goods are folded in flat pieces like linen, while ours are generally on blocks.

10770. If a lady was sold a particular commodity, being French, selling at a less price, would she not be wholly blameless?—Yes.

10771. Is it the practice to tell the public that goods are smuggled, or to say nothing about it?—To say nothing about it.

10772. When you speak of prohibition, do you mean entire prohibition, or only a fancy and figured article?—Entire prohibition would be most beneficial, but if there were proper Custom House regulations entered into, with an anxious desire on the part of the Government to protect the trade against smuggling, the exclusion of figured goods, and the admission of plain goods, at a rate of duty, might serve us materially.

10773. Do you know the rate at which smuggling is now conducted?—I do not.

10774. Do you consider that it depends on the scale of duties paid for imported articles?—No doubt that has some influence.

10775. Short of a prohibition, you do not conceive the trade would be protected?—That is my firm opinion.

10776. What will improve the trade of this country; would you increase the price of the article, or in what way would improvement take place?—We should have the manufacture of those goods which are imported.

10777. In what way would prohibition operate?—It would be beneficial in one respect, by acting as a stimulus to trade, which would afford a little advance to the operative and a little profit to the manufacturer.

10778. Would it also increase the price to the consumer?—Undoubtedly it would tend to increase the price of the article; it would be at the expense of the rich instead of the poor.

10779. Would not that lessen the quantity to be used?—It would have little or no effect on the consumption.

10780. Lowering ribbons from 10d. to 8d., or from 1s. to 10d., would have no effect on the consumption?—Very trifling.

10781. Would it have an effect if it was 20 per cent.?—Decidedly.

10782. It is a matter of degree with you?—Where a person goes to a shop to buy three or four yards of ribbon, whether it comes to 3s. 4d. or 4s. is of little importance.

10783. Do not the public indulge themselves in silk articles of greater cost than are made in England?—Decidedly.

10784. Whether they pay five per cent. more or less is no consideration with them, and would not deter them from the purchase of it?—Certainly not.

10785. Do not persons indulge themselves in this way without reference to the absolute value of the thing they purchase?—No doubt of it.

10786. Is it not the case sometimes, that an article which will afford little practical advantage is sold at a higher price than a commodity which, if the wear

678.

Mr.
Richard Bennett.

6 July,
1832.

and durability was looked at, would afford twice the quantity?—There is no question of it.

10787. People coming to buy a fancy article look to fancy more than quality?—Most undoubtedly.

10788. Are you concerned in a throwing mill?—I am.

10789. What circumstance induced you to become a throwster?—Formerly our trade was to that extent that we sent to our throwsters 5 or 6,000 *l.* worth of raw silk, in order to secure a sufficient supply when thrown; but finding that our profits were gradually diminishing, we were induced to combine the profits of a throwster by investing that capital in a silk mill, which would require a much less stock of raw silk than by employing several throwsters.

10790. Is it your opinion that English thrown organzine is equal to foreign?—I think it is better.

10791. Is the consumption of Piedmontese organzine very great?—No, I think the consumption is somewhere from 60,000 to 80,000 *lbs.* per annum.

10792. What description of Italian raw silk do you consider the best?—The Fossembrone.

10793. Is that applicable to every description of figured silk?—There is hardly an article of the rich plain or figured silks in which it may not be used to advantage, equally as well as Piedmontese silk.

10794. If the duties of foreign thrown silk were further reduced, would they send a greater quantity of raw here?—If you give further encouragement to the Italian throwster, it will be an inducement to him to establish mills and export the Fossembrone in a thrown state, some portion of which would go to other markets.

10795. Do you think the Italian would continue to send as large a quantity of good raw as he now does, if the duties were further reduced?—Decidedly not; it would be an inducement to him to throw more silk; there are many throwsters in Italy who are also growers of silk.

10796. Would not the Italian send his silk to the place where he could get the highest price?—If he had a mill he would keep his own mill employed and take the chance of the market.

10797. Have the Italians mills, who grow the silks?—Most of them have. I am in the habit of buying thrown and raw, and I know that both thrown and raw come from the same party.

10798. Does the party throw it himself or buy it thrown?—There are very few exceptions, where the exporter of thrown silk is not a throwster.

10799. Do you mean that the persons who send the silk here are throwsters?—Decidedly so.

10800. To what part of Italy do you allude?—Bergamo. I wish to correct what I said before in reference to the growing of silk; the cocoons are taken to the markets there, the persons who purchase the cocoons are reelers and throwsters and they export it here in a thrown state.

10801. Is silk thrown in Italy at a less price than in England?—Considerably less, from the difference of the rate of wages between the two countries, and also from the circumstance that Italian thrown silk is imported here at a much less price than I can work for.

10802. Can you state what the wages are there?—From the best information, I believe it can be thrown at Bergamo for from 2 *s.* 6 *d.* to 3 *s.* per pound, while I cannot do it for 5 *s.* to afford me any profit as a throwster.

10803. If the Italian can send the silk to this country at 16 *s.* in the raw state, and at 18 *s.* 6 *d.* thrown, if the duty is repealed, will you be able to get the raw at 16 *s.* when he can introduce his thrown at 18 *s.* 6 *d.*?—Decidedly not.

10804. What did you pay per pound before you built your own mill?—It varied from 7 *s.* to 8 *s.* 6 *d.*

10805. Cannot you have it thrown now for 4 *s.*?—I could not do it for 4 *s.*; I know that Italian organzine is thrown for 4 *s.* and even under that, but when a man is ground down in his price he attempts to do it without performing the whole of the process; some is done that is not even cleaned.

10806. Is it not also the case that you are obliged to depress the wages of the people you employ?—Of course.

10807. Are those who throw organzine at 4 *s.* getting a profit, or is it only to keep their machinery going?—I believe to keep their machinery going.

10808. Do you think the silk is thrown so well now as it used to be?—I think the

the bulk of the silk is not thrown so well as it used to be; when men are ill paid they cannot afford to do it so well as when they were better paid.

10809. If the throwster had a large protecting duty would he make it better than he does now?—Certainly.

10810. Is the throwing of silk materially altered since the duty was lowered?—It has had the effect of compelling the throwster to do his work at that price which will not allow him to do it so well as he would were he better paid.

10811. Was it better under a protecting duty?—I think it was.

10812. In point of fact, do you think that the throwing in this country has gone back?—I think generally it has, from a want of a remunerating price.

Mr.
Richard Bennett.

6 July,
1832.

Lunæ, 9^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. William Wallis, called in; and Examined.

10813. ARE you a silk weaver?—I am; I have been in the trade about 28 years.

10814. In what branch of the silk trade?—I was some years ago in the fancy branch; but of later years I have been more engaged in the plain branch; since 1824, particularly so.

10815. Where do you reside?—In the parish of St. Matthew Bethnal Green. I have lived in my present abode more than 21 years.

10816. Are you acquainted with the situation of the working classes in Spitalfields?—With the working classes of Bethnal Green more particularly; living more immediately among them. The situation of the silk weavers of the district called Spitalfields, is pretty much the same with those of Bethnal Green. The parish of Spitalfields itself contains a very small number of weavers comparatively.

10817. Do you live in Bethnal Green or Spitalfields?—In Bethnal Green.

10818. What is the condition of the Spitalfields population at present, taking in all the district?—Distressed in the extreme. The condition of the weavers, generally speaking, at the present moment, is below any thing I ever saw. I have seen distress in those districts certainly, many years ago; but never any thing like what it is at present. I have had, from time to time, the honour of having interviews with the Board of Trade; and I confess here, as I have done there, that the distress has progressively increased since the introduction of the new laws, to a greater extent than it has ever done before. The people, from the time of the alteration of the system of importation, have been continually reduced; from a reduction in wages, and a consequent reduction in their situation to meet that reduction in wages, they are wretched in the extreme. The last winter was such a one as I have never yet seen, and if the trade has to undergo such another winter, in point of employment, as the last, hundreds of thousands will feel the effect of it, and thousands will die of want. The parish is in that state of distress that they can no longer support the people. Within the last six years the parish have incurred a debt of 13,000*l.*; previous to 1824 they had no debt. Now, as I have stated, they have one of 13,000*l.*, with no means of discharging any of it. I beg leave to put in a Statement of the Number of Out-door and In-door Poor receiving relief.

10819. From whence did you obtain this document?—It is obtained from the Vestry Clerk of St. Matthew Bethnal Green. An Account of the number of Poor in the Workhouse of this parish, and likewise the number of Casual Poor, or those receiving out door relief, from the year 1821 to the present period, averaging the allowance per head 1*s.* 6*d.* weekly. In 1821, the casual out door poor were 157; in the house, 498: 1822, out door, 196; in the house, 498; 1823, out-door, 223; in the house, 526: 1824, out-door, 289; in the house, 633: 1825, out-door, 326; in the house, 721: 1826, out-door, 984; in the house, 588: 1827, out-door, 638; in the house, 842: 1828, out-door, 1,319; in the house, 956: 1829, out-door, 2,487; in the house 796: 1830, out-door, 4,693; in the house, 1,092: 1831, out-door, 4,958; in the house, 1,380: 1832, out-door, 6,218; in the house, 1,160. The next paper I beg to put in is from the same authority; namely, the Vestry Clerk, and the

Mr.
William Wallis

9 July,
1832.

Mr.
William Wallis.

9 July,
1832.

reference to 1822 from a document in my possession obtained at the time in 1822. It is an Account of the Number of Pensioners on the four divisional books; I mean those who receive regular weekly pay, independent of the casual out-door poor. In 1822, the number in the division called the Green Division was 61; the Church Division, 107; the Town Division, 103; the Hackney Road Division, 99: total, 371. In 1832, up to the present time, the Green Division was 274; the Church Division, 125; the Town Division, 147; the Hackney Road Division, 125: making a total of 621. They average each family as consisting of four persons; some have families of six or seven children; some of two or three, and some are single persons; but they average each family at four, making the total number of persons who receive this relief, 2,684.

10820. To what date is this paper made up?—It is made up to last January. I have a paper here, differing a little from the last; I obtained it from the master of the workhouse, stating the number of persons in the poor-house on the 26th March 1822, which was 469; on the 21st of May, 463: on the 25th of March 1823, 548; 20th May, 517: on the 23d of March 1824, 639; on the 18th of May 593: in 1825, March 22d, 521; 17th May, 465: in 1826, March 21st, 745; 16th May, 699: in 1827, March 20th, 687; 15th May, 644: in 1828, March 18th, 659; 13th May 637: in 1824, March 24th, 1,015; 19th May, 1,014: in 1830, March 23d, 1,215; 18th May, 912: in 1831, March 22d, 906; 17th May, 908: in 1832, January 3d, 940; 28th February, 843; 27th March, 725; on the 24th of April, 650; May 29th, 625; June 24th, 620; July 4th, 675. There is an explanation required here; in the early part of the year, owing to the sickness breaking out in the Metropolis, which showed its appearance in the workhouse of St. Matthew Bethnal Green, there was a direct order from the Secretary of State to clear the house; at that time there were from 12 to 1,300 people in the house; and it is not calculated, with comfort, to hold more than 600 or 700. A large room in the house, that had been a workshop, was fitted up and applied to the purpose of a sort of infirmary; and in addition to which, they were compelled to turn out all the able-bodied young men, with a sort of pension, to keep them out of the house, and prevent an extension of the disorder; that accounts for the difference in the paper in the present year, as compared with former years.

10821. The first paper you put in contains a period of 12 years; taking the first six, am I correct in finding that the number of in-door poor was 3,807, and for the last six years 6,397?—I have no hesitation in saying that it is correct, from my own opinion as to the appearance of the district; but I take it for granted that the vestry clerk has made the return from the official books.

10822. It also appears by this paper, that the out-door or casual poor were, on an average for the first six years, 2,175, and for the last six years 20,313?—That I am sorry to say, I can very fairly corroborate from appearances which came under my own observations; the Board day is twice a week; and I am sure I often go out of my way to avoid passing the house and witnessing the scenes of misery which are to be seen on that spot of ground, of persons trying to get this relief; they are relieved on Tuesdays and Thursdays, and there is a double Board sitting for eight or nine or ten hours, with scarcely time to take any refreshment. I have no hesitation in saying, that this return is quite correct.

10823. To what cause do you ascribe the increased distress?—I attribute it to no other cause than the introduction of foreign wrought silk; because the distress has been progressive from that time up to the present period; I have no hesitation in saying, that from 1826 up to the present period, however persons may appear out of doors, if you saw them in their own dwellings they are not the same people compared with those of 1824, 1825 and 1826; their furniture, in hundreds of instances is entirely gone, and their homes made desolate, and without the common necessities for use.

10824. Was the distress in Spitalfields, at any former period within your recollection, so great as it was last winter?—I have known distress in Spitalfields at very distant periods; there was distress 22 years ago, but it arose from a different cause and was transient; the people had the means within themselves to fall back upon resources that they had been able to obtain during their employment at reasonable wages.

10825. State the periods at which you have known distress?—About 1812 I think there was a period of very great distress; about 1816 there was a great deal of distress, but that distress was not felt by the silk trade generally; wherever it fell among the silk weavers it arose from the circumstances of there being a number of

Mr.
William Wallis.

9 July,
1832.

of persons discharged from the army and navy, but the trade generally was pretty good, as I see by looking back to returns and accounts which I have in my possession; the persons in employment were in good circumstances, and the parish of Bethnal Green was not in the state that it is now; in fact they were not more than ordinarily distressed at that time. There has been considerable distress from time to time in consequence of the change of fashion, but nothing to equal the present in its intensity.

10826. Was the other period subsequent to 1816?—I do not recollect any other period in particular; I know we have had slight distress for a few months, but I cannot recollect the exact period.

10827. From 1812 to 1816 are the subsequent periods, which was the greatest distressed?—The subsequent period is not to be compared to either of the others. At the former periods people recovered from their distress when they got into full employment, since the repeal of the prohibitory laws that has not been the case; in proportion as employment has fell off they have not been able to recover their lost circumstances, and if they got into arrears of rent and lost their goods they had no opportunity when they got into work to purchase fresh ones, and they remained in the same state of destitution; for the last six years the state of distress has been progressive and alarming, and if we are to undergo a similar winter to that which we endured last, the scenes in Bethnal Green and Spitalfields will be truly horrible.

10828. In point of fact you never knew any period in which the distress was so great as it was last year?—Never.

10829. When was the book abolished?—In 1824.

10830. In the previous periods of distress wages could not have been lowered before the book rates?—In the previous periods of distress, although wages never were high, most people had the means to recover themselves, and had not this been followed by a repeal of the prohibitory laws, and trade remained under that fostering protection which it had before received, the people would have recovered their lost ground; as a proof of that, in consequence of the arrangement of Government in 1824 to meet the difficulties in 1826 by allowing the trade two years to prepare for the introduction of foreign goods, the consequence was, that the trade revived from the transient distress occasioned by the discussion of the question in 1824; that was accompanied by a slight advance in the wages then paid, but as soon as the introduction of foreign goods began, then the reduction of wages commenced, and from that period they have never been able to recover from the distressed state of things which they were thrown into, and which has progressively increased from time to time up to the present. I do not attribute that distress to the book of prices, which I think was always misunderstood, but to the repeal of the prohibitory laws. Whatever necessity there was for an alteration in the rate of wages between master and man, on any given kind of work, the regulations were always made by a mutual agreement, and, under the influence of the Act of Parliament, made binding on all persons in the district by an order of Sessions, and the Act had no influence on raising or lowering the rate of wages, it had only the influence of protecting the trade, both masters and men, from that cutting competition that exists by one man receiving $4\frac{1}{2}d.$ while another man was receiving $6d.$ or $7d.$ for the same description of work, and thus destroying one another.

10831. From 1824 to 1826 the prices given to the weavers were the book prices?—They were.

10832. Was that the case during a considerable part of 1826?—I think not; they began to reduce either early in 1826 or at the latter end of 1825.

10833. The effect of the book was only to ratify and legalize an agreement between the master and the workmen?—Unless there was a dispute between the parties as to the settlement, and then the question was decided at quarter sessions after an inquiry, in the usual way.

10834. Were not all the weavers employed at one time in 1830?—It is possible they might be; I believe there was rather a brisk trade.

10835. Has the trade for the last six years increased in Spitalfields?—I think it has not much altered; the number of looms, from the best means I have of ascertaining them, is rather more; I think the number was greater in 1824 and 1825, in consequence of the stimulus given by the Government delaying the importation from 1824 to 1826, and allowing the drawback on goods on hand; it has been nearly stationary since; my own opinion is, there is nearly 17,000 in the district.

10836. Were there as many as that six years ago?—No doubt, full as many as that.

Mr.
William Wallis.

9 July,
1832.

10837. You speak of the whole district?—Yes.

10838. How many are there in the parish of Bethnal Green?—From the best evidence I can obtain, about 12,000.

10839. What was the number six years ago?—Not quite as many; Bethnal Green has been progressively increasing in buildings, owing to its being a more airy situation than the parish of Spitalfields.

10840. Do you apprehend that the quantity of looms has not increased for the last six years in the whole district?—I think there is not likely to be the means within the district of Spitalfields of enlarging the number of looms, for the trade is so ill protected; Spitalfields always had an ambition to make the first class of work.

10841. What are the rate of wages now paid?—I hold in my hand a statement of the rates of wages paid at different periods; it is for one given quality of work all through, not taking the lowest or the highest, but steering a middle course. In 1769, for a 1,000 single sarsnet, 20 inches, it was $5\frac{1}{2}d.$; in 1795, $6d.$; in 1806, $6d.$; in 1825, $6\frac{1}{2}d.$; and in 1832, $4d.$ I have ascertained the rate of prices of the present year from the best of all possible authorities, from the actual existence of wages we are now paying.

10842. Do you mean to say, that in 1769, it was $5\frac{1}{2}d.$, and that in 1832, it is reduced to $4d.$?—That is the fact.

* This work was not known in 1769 or 1795, or in 1806, to any extent.

10843. What would be the average earnings of a fair workman?—For a double sarsnet, of the same description two double threads, in 1769, it was $6\frac{1}{2}d.$; in 1795, $7\frac{1}{2}d.$; in 1806, $8d.$; in 1825, $8d.$; and in 1832, $4\frac{1}{2}d.$: 1100 three threads, in 1769, $7d.$; in 1795, $8d.$; in 1806, $9d.$; in 1825, $10d.$; and in 1832, $5d.$: for a three double the gros de Naples,* in 1825, $12d.$; and in 1832, $6\frac{1}{2}d.$: the 1000 four thread mantua, in 1769, $7d.$; in 1795, $8d.$; in 1806, $9d.$; in 1825, $10d.$; and in 1832, $6d.$: the four double ducape, in 1769, $9d.$; in 1795, $10d.$; in 1806, $12d.$; in 1825, $12d.$; and in 1832, $9d.$: the 1500 four thread mantua, for umbrellas, 24 inches in width, in 1769, $10d.$; in 1795, $12d.$; in 1806, $13d.$; in 1825, $14d.$; and in 1832, $8d.$: satins, the 1000, five thread, in 1769, $8d.$; in 1795, $9d.$; in 1806, $10\frac{1}{2}d.$; in 1825, $10\frac{1}{2}d.$; and in 1832, $6d.$: the 1000 six thread, in 1769, $8d.$; in 1795, $9d.$; in 1806, $10\frac{1}{2}d.$; in 1825, $10\frac{1}{2}d.$; and in 1832, $6d.$: 1000 eight thread, in 1769, $10d.$; in 1795, $12d.$; in 1806, $14\frac{1}{2}d.$; in 1825, $14\frac{1}{2}d.$; and in 1832, $10d.$: 1000 ten thread, in 1769, $14d.$; in 1795, $15d.$; in 1806, $17d.$; in 1825, $17d.$; and in 1832, $12d.$: the 1000 twelve thread, in 1769, $16d.$; in 1795, $18d.$; in 1806, $21d.$; in 1825, $21d.$; and in 1832, $16d.$: velvets, that is in 1825, $4s.$; and in 1832, $2s. 6d.$: 1200 velvets, two threads, in 1825, $4s. 6d.$; and in 1832, $3s. 3d.$; that requires a great deal of skill and ingenuity, as will be seen by the pattern which I exhibit, it was made by one of the best workmen in the trade, and after working 16 hours, he could not make more than three quarters of a yard, and he had to employ a person to attend him at the rate of $18d.$ a week to keep him on.

10844. Are the prices paid for weaving velvets now the same as you have now given?—Yes.

10845. Are the velvet weavers, at this moment, all employed or not?—There is rather an early trade in velvet weaving; they are beginning to put them up.

10846. Has there been any advance in the wages of weaving velvets?—I have not heard of greater prices than were given last year. I believe the last year may be a criterion for the prices of this year; the statement which I hold in my hand, shows a progressive decline in the price of weaving since 1825; that takes in figured goods, 1100 three single, in 1827, $8d.$; in 1828, $7d.$; in 1829, $6d.$ and $5d.$; in 1830, $6d.$ and $6\frac{1}{2}d.$; in 1831, $5d.$; and in 1832, $5d.$: 1100 three double, in 1827, $9d.$; in 1828, $8d.$; in 1829, $6d.$ and $7d.$; in 1830, $7d.$; in 1831, $6d.$; and in 1832, $6\frac{1}{2}d.$: 1000 four single, in 1827, $9d.$; in 1828, $8d.$; in 1829, $7d.$ and $8d.$; in 1830, $7d.$; in 1831, $6d.$; and in 1832, $6d.$: 1200 velvets, in 1827, $4s. 6d.$; in 1828, $4s. 3d.$; in 1829, $3s. 9d.$; in 1830, $3s. 6d.$; in 1831, $3s.$ and $3s. 3d.$; and in 1832, $3s. 3d.$: 400 cords Jacquard, in 1824, was paid $2s. 2d.$; in 1825, $2s.$; in 1826, $1s. 10d.$; in 1827, $1s. 10d.$; in 1828, $1s. 8d.$; in 1829, $1s. 6d.$; in 1830, $1s. 4d.$; in 1831, $1s. 3d.$; and in 1832, $1s. 1d.$ and $1s.$

10847. Generally speaking, has there been an advance on wages?—No advance; rather a depression than an advance, to my knowledge, at the present time.

10848. But the weavers are employed?—They are getting into work in the velvet branches; this is rather an early date for velvets, they are worked up for winter consumption.

10849. Are

Mr.
William Wallis.

9 July,
1832.

10849. Are the weavers, generally, at Spitalfields, pretty well employed?—I am afraid not as well as a month ago; I have heard a great many accounts lately of persons going out of work, and several houses will not take in more hands. I was told on Saturday, of one house in Spital-square, turning out all their hands.

10850. Is it not the part of the year at which there is generally the greatest demand for labour?—The period just passed, including the last two months, is certainly so; but just at present there is generally a change of fashion.

10851. In the paper which you have put in, giving the statement of prices, I suppose it is the three doubles which are the articles of the greatest consumption?—No, the three singles; the three singles and the three doubles are the same article, but one is of a richer texture than the other.

10852. These are the greater articles of manufacture in that district?—They comprise three-fourths of the looms of Spitalfields at the present time.

10853. Am I correct in understanding from this paper that the price of the three singles was, in 1825, 1826 and 1832, 5*d.*, and that the price of the double was, in 1825, 12*d.* and in 1832, 6½*d.*?—These are prices taken from books in my own possession.

10854. Am I to understand that in the great articles of manufacture in Spitalfields, the prices have fallen since 1825?—They have.

10855. When was the Jacquard loom introduced into Spitalfields?—In 1822; the prices paid under the Jacquard, show the progressive decline better. In 1824, the four-double made under a Jacquard was 2*s.* 2*d.*; in 1825 it fell to 2*s.*; in 1826, to 1*s.* 9*d.*

10856. That is what would be called a richer article?—Yes, it is; this is the article I allude to [*exhibiting it.*] Here are the prices paid to one man for one kind of velvet, in 1827, 1828 and 1829, he was paid the same all through; 1830 and 1831, the velvet was a richer one. He was a very excellent workman; in 1827 he received for the work 4*s.* 6*d.*, and so in 1828; in 1829, 3*s.* 9*d.*; in 1830, 3*s.* 6*d.*; in 1831, 3*s.* 3*d.* and 3*s.*, and he does the same work now at 3*s.*

10857. There were several articles made in Spitalfields prior to 1824, the whole of which has been transferred to the country?—The article of Italian nets has been entirely taken away; I had a deal to do in that some years ago, and earned a good livelihood by it. I worked 13 years for one house, that was famous for that and lustres.

10858. Was not that transferred to the country?—Not till it went out of fashion in London.

10859. Has not the article of figured lustres been transferred to the country?—Not till it was out of fashion; perhaps the Committee will allow me to show a progressive rate of patterns from the earliest period up to the present time, to show that there was always a progressive inclination to improvement throughout the silk trade, before the opening of the Ports; since the opening of the Ports, we have not gone on faster in improvement than we did before. We made as good works previous to the commencement of 1821, 1822 and 1823, without the Jacquard as were imported from France through illicit trading, with the Jacquard.

10860. Has not the article of figured handkerchiefs been lost to Spitalfields since 1824?—It was never made to any extent in Spitalfields in my remembrance, it was made a great many years ago, but it has gone to Macclesfield, and made way for the more substantial article of gros de Naples.

10861. Do you remember bombazines being made in Spitalfields?—Yes, I do.

10862. That article has left Spitalfields a great many years?—Yes; not from want of being able to accomplish the work, but owing to the change of colour; I do not think the difference between the prices in Spitalfields and in Norwich was the cause, but a change of fashion to French instead of the original English black. A dyer in London, knowing the particular means of dyeing in a peculiar manner, the colour desired, but the alteration in fashion gave the Norwich manufacturer the means of dyeing them at home instead of sending them to London, and thereby save the expense; this with other facilities in the manufacture of bombazines peculiar to Norwich, finally drew the trade from London.

10863. Do you remember gauzes and crapes being manufactured in Spitalfields?—Yes.

10864. Have not they left Spitalfields for a great many years?—Yes; for the same reason that the other articles have.

10865. It was prior to 1824 that there was any change?—Whenever change of fashion took place in any particular article, and when the first sale of it was over,

Mr.
William Wallis.

9 July,
1832.

a larger quantity at a cheaper price was manufactured, generally by Macclesfield, Manchester or other places.

10866. You would not call Italian crapes or bombazines fashionable articles?—Not now; they were at one time much in demand, as fashionable articles for mourning; there was a peculiar feature in the bombazines. It was quite common at that time that the goods made at Norwich should be carried up to London to be dyed and dressed, and that was in a great measure the cause of the trade being carried on to a certain extent, for they saved the expense of a great portion of the work; when a change of colour took place, then the bombazines went to Norwich, the silk weaver never thought fit to look after it, for it was an article very little manufactured among us.

10867. Gros de Naples are not subject to such fluctuations of prices in Spitalfields?—I believe not.

10868. Has not that rendered it more easy to transfer the trade to the country?—It might have been in some respects, but I do not see the effect of that; the rich gros de Naples would not answer the Manchester manufacturers; the three-single they manufacture in the greatest abundance, the articles of a richer description are those in which we are interfered with by France.

10869. Do they not manufacture goods equal to those manufactured at Spitalfields?—I have seen goods equal in quality, but no manufactures are equal to this; I have never seen any thing so rich as this [*exhibiting it*] from Manchester.

10870. Are not some of the weavers removing from Spitalfields to Manchester?—I am not aware of any to any extent.

10871. Are you aware that some masters have removed?—I know of no one, and one only; and the last time I heard of him in 1828, was, that he was doing scarcely any thing.

10872. Do you know that satins are now making at Manchester?—I wrote to Manchester to ascertain that fact, and I could not get any one to say they were.

10873. Have you heard that velvets are now making there?—I have been told that they are not making there; it is the Manchester plain goods that come in competition with us.

10874. In the alteration in the trade in Spitalfields, have the lower classes of goods increased in quantity, as the superior classes diminished?—The lower classes have increased, and the high or richer fabrics diminished in consequence of the importation of foreign goods.

10875. Have the quantity of goods which formerly were manufactured, of a superior description in Spitalfields, given place to the manufacture of an inferior description of goods in Spitalfields?—It certainly has; more inferior goods are made in Spitalfields now than were formerly.

10876. Does a weaver earn more in manufacturing superior goods, than he does in manufacturing the inferior class?—Considerably so; but the wages for weaving figured goods have been reduced in a larger proportion than the wages for weaving plain.

10877. In the instances in which there has been a change, in which an article formerly made in Spitalfields has been removed to the country, has it ever occurred that the cause of that was, that it had gone entirely out of fashion, and ceased to be an article of consumption, and that it was revived in distant country places?—It might have been so; I am inclined to think, from all the observations I can make on that subject, that no articles have left Spitalfields while in full protection and demand. The Manchester manufacturers have taken up an article in gros de Naples, and are now commencing a manufacture, some samples of which I have from a house in the city; they do not interfere with the gros de Naples made in Spitalfields; the quality of them would not sell to a great extent in London; these are the best goods which I could get at Manchester, and it will be easily seen that they do not interfere with us at all.

10878. Will the best goods that are obtained at Manchester, compete with the French goods?—No, for the same reason that they will not compete with Spitalfields; the class of persons that purchase French goods, purchase them for the excellence of their fabric and texture.

10879. What is the proportion of three doubles in Spitalfields, to three singles?—Somewhere about one-third.

10880. Has the trade been more liable to fluctuation since the alteration than it was before?—Very considerably so; the fluctuation was nothing, compared to the present moment; there is scarcely a question about the excellence of the workmanship

Mr.
William Wallis.

9 July,
1832.

manship as there used to be; I mean he who was a good workman, was sure to be retained in his employment; that is not the case now, if there is any slack, every one is turned out of employment indiscriminately, without reference to length of service, or good workmanship.

10881. What was the character of the silk weaver before the alteration?—Generally his character was industrious and sober; the best way I can describe, is by appealing to their conduct on former questions, when the repeal of the prohibitory laws was agitated; when they made their appearance in this neighbourhood in such large numbers, their conduct was such as became them as a large body of men to a great extent.

10882. Does it appear that any material alteration has taken place since 1824 and 1825?—I see no resemblance in hundreds, to what there was at that time.

10883. Do you think the reduction of wages and distress has had an evil effect on their morals and habits?—No doubt of it; a discontented mind, arising from want of means to keep up their appearance, and the constant weight of petty demands on them without the means of discharging them; that very circumstance and not being able to send their children to a place of worship or a Sunday school, are all of them circumstances that have not only affected their morals, but their particular character; they begin to lend an ear to any thing that may be said against the Government, and are subject to make use of disrespectful expressions, when I am sure that a few years ago nothing of the kind would have occurred; distress makes a man say what he would never think of under easier circumstances; from the want of means to put themselves in possession of the right cause, they ascribe the whole cause of the distress to the Government, as well as the taxes, and a repeal of the prohibitory laws, and feel an enmity where they ought to feel a confidence.

10884. You have stated that there are about 12,000 looms in the parish of Bethnal Green, how many of these were out of employ at the commencement of this year?—Unfortunately we have no regular statement, not having the means to obtain it without considerable expense and trouble; from the best information I can gain, there were from 5,000 to 6,000 in Bethnal Green alone; in 1826, there were 7,721 looms out of employ; in 1832, from the best estimate I could form, and from a comparative calculation made from 1,500 looms taken in three separate districts, one a good one, one an inferior one, and one rather a bad one, there were about 7,000 in the whole out of work; that is rather over than under the mark.

10885. Has the competition with Manchester, or the competition with France been most detrimental to the trade of Spitalfields?—Competition with France, for the reasons before stated, I do not consider Manchester in competition with us; I consider we are in competition with Manchester, being obliged to take up those articles which we ought to be able to lay down.

10886. What proportion of looms do you consider are engaged in the fancy trade in Spitalfields, at the present time, and what in the plain?—I take it, throughout the whole of the trade, not more than 250 are engaged in the figured and fancy branches; another portion are engaged in the rich kind of plain works, that is an article which would come under the class of superior articles; there is a branch of the trade which for some time has been very prosperous, that is the figured waistcoat branch; that has maintained its station better than most branches in the trade, owing to the little interference with foreign competition; the average earnings on that kind of work during the last twelve months have been from 16s. to 18s. or 20s., working from sixteen to eighteen hours, and sometimes on a Sunday, at a price of 2s. 4d. which they are now reducing to 2s.; that is a branch of trade which requires a great deal of strength as well as skilful workmanship to accomplish.

10887. Are there only 150 looms employed on figured silks?—Not more than from 150 to 200.

10888. What was the proportion formerly?—Full a third; and I have known, when the fancy branch of the trade was in full demand, nearly half the looms to be employed on figured silks.

10889. What is the proportion now?—I think about one-eighth; there has been an impression made on this Committee that we owed our excellence to the circumstance of the importation of French goods; I am desirous to show that we made figured silks for many years before French goods were thought of.

10890. Is it true that you have derived considerable advantage in the trade from the patterns you received from France?—I think not; we were progressively improving quite as fast or faster before French goods were introduced, and it is true

Mr.
William Wallis.

9 July,
1832.

that we have under very depressed circumstances followed them and kept pace with them.

10891. Do you think that you were progressively increasing as much before the alteration as you have in the subsequent period?—I think more so; I beg to exhibit a pattern of brocade made about the year 1750; these patterns that I exhibit have the date written on them when they were made and by whom, and they show a change of pattern and improvement of figure; here are others of the same man's production, which are marked on the edge; these were made for ladies' scarfs, and were very fashionable at that time.

10892. Is this not composed of Bengal silk?—Yes it is; and it is more applicable to that work than a better kind of silk; I have a pattern here of a silk which was made sixteen years ago for a house in Bow-lane, Cheapside, for oriental turbans, and I beg to hand in some velvet patterns from sixty to seventy years old; I have also some patterns of gauze made from twenty-five to forty years ago; that is a branch of trade which is entirely lost to Spitalfields.

10893. Are you aware that a large quantity is made at Paisley?—I am.

10894. Do you think that a higher rate of wages can be continued to be paid to the weavers in Spitalfields than is paid at Manchester?—I have no doubt of it at all, if we were protected against French goods; I think we pay a higher rate of wages now than Manchester.

10895. Do you think that in the event of a prohibition there would be a greater difference than there is now between the wages at Spitalfields and Manchester?—About the same difference as there always has been.

10896. Do you not conceive, that if the same sort of work was made in Spitalfields as at Manchester, the same price would be paid for it?—I think not.

10897. Suppose you removed your loom to Manchester, and that you were working with superior kinds of goods, would you not pay the same wages which you now pay in Spitalfields?—I think not, there might be a shade difference.

10898. Where do you receive the most?—In Spitalfields.

10899. Why do you conceive that will be the case?—An article in full demand as a fashionable article would be started at Spitalfields, and Manchester would be placed in the exact relative condition that we are placed as regards France; the first introduction of a fancy article always commands a higher price.

10900. If it was merely a plain article, in which fancy had nothing to do, then of course it would be just the same in Spitalfields as at Manchester?—The colour would make a slight difference; this which I now hold in my hand has been made in Spitalfields, and succeeds there; if Manchester interferes with Spitalfields at all, it is for the country trade, and not in rich goods.

10901. Is it not true, that in every branch of manufacture a town-made article fetches a higher price than a country-made article?—I do not know that, that applies to Spitalfields in particular.

10902. Do you think there is any difficulty in a man's turning from weaving a piece of fine muslin to the manufacture of gros de Naples?—Not a great deal of difficulty.

10903. Do you think that the rate of wages paid in Manchester would be the same as those obtained by a person employed on a muslin?—Very like it might, that would depend entirely on circumstances; if there was a demand for silk, the muslin weaver would get better wages for silk, and he would go to it. In Spitalfields there are two or three who were originally muslin weavers, that are now in the silk trade: unless a man can earn more by silk than muslin, he will not go to it.

10904. You think that a man might earn a trifle more in weaving silk than cotton?—I should think so.

10905. If the wages for cotton were to fall, would not the wages for weaving silk also fall?—That is possible.

10906. Do you imagine that the number employed in the silk trade in Lancashire is one-tenth of what is employed in the cotton trade?—I have no idea of that.

10907. Do you not believe that it is a very inconsiderable number compared with those employed in the cotton trade?—I should think so.

10908. Do you not therefore think, that the wages for weaving silk depends on the state of the labouring classes employed in the manufacture of cotton goods?—It depends on the same circumstances as it does in Spitalfields; if there is a great depression in trade, people are glad to take what work they can get; the Manchester people themselves are best able to answer that question.

10909. Can a cotton weaver manufacture fancy goods?—I should think not.

10910. Will

Mr.
William Wallis.

9 July,
1832.

10910. Will your observation apply to the plain trade?—It goes to that description.

10911. Are you acquainted with the article called the Cambra?—Yes, there are figured and plain.

10912. Have there not always been a quantity of mixed figured goods made at Manchester?—Yes, it is the link between the two trades; the cambra forms a portion of the cotton trade, being part cotton and part silk.

10913. Could not a person accustomed to weave silk and cotton, easily make an article of pure silk?—Very likely.

10914. That being the case, do you think that in the event of a prohibition, the wages at Spitalfields for working the common article would advance?—I think they would a little; they are lower now than ever they were.

10915. Do you not think that Spitalfields, being connected with, as it is at Manchester, the condition of the weavers, must improve or deteriorate, according as the condition of the weavers in the country improves or otherwise?—I think if that had been the case, they would have been better off than now, for I have known the cotton trade to be in worse circumstances than it is now.

10916. Did not the book prevent that on former occasions?—I do not think the book ever interfered with it; the book kept the prices in Spitalfields at a regulated rate, but never had that effect in Manchester; if it had been a barometer of price paid for weaving silk, that would have driven the silk trade in Manchester much below what it was; that is one proof Spitalfields and Manchester will never rival one another to their ruin in this particular branch of trade. Ten years ago there were facilities to the cotton weavers at Manchester to encourage the silk trade to the ruin of Spitalfields.

10917. Did they not in fact, make large quantities of figured lustres at Manchester?—They did, after they were done with in London, but of a very inferior quality.

10918. Was not the effect of their being made largely in Manchester the reason of their being given up in Spitalfields?—No, it was from their ceasing to be an article of fashion.

10919. Was not this article made at Sudbury?—There was a house or two in Spitalfields that had houses at Sudbury.

10920. What was the price paid?—The price for the blue article was 1 s. 3 d.

10921. You do not remember what was paid at Sudbury?—From 1 s. to 1 s. 3 d.

10922. Do you remember the year?—In 1816.

10923. Were they made in 1821?—I think there were none made in 1821 at Sudbury.

10924. Were not immense quantities used about 1821 and 1822?—Of the lower class there might be.

10925. Do you believe that a considerable quantity of plain goods are now imported from France?—I think there are of the finer quality.

10926. The price for weaving gros de Naples is 6 ½ d.?—Yes.

10927. Do you know what is the cost per yard of smuggling French goods?—I never made any calculation of that.

10928. What is the value of a gros de Naples per yard?—I am not conversant with the selling price of goods, but they are very low.

10929. If it costs 6 d. to smuggle the article, how would that interfere with the wages of that of Spitalfields?—It would only interfere by its being so much below Spitalfields, in some way or other as to the material.

10930. Is there a prejudice in favour of plain or figured silk?—If it is French, people will give so much the more for it.

10931. Do you not think the prejudice would be stronger if there was a prohibition?—I think not.

10932. Do you think there is less feeling of that kind than there was formerly?—I think not, even if the same prejudice existed, we should meet the prejudice as before; I know that in 1821, 1822 and 1823, the man who made these patterns had worked for four or five years on goods that were sold in all the houses in London for French made goods, they were made on French patterns and on French principles, and sold to the public at a high rate of price, in many under the rose, as foreign goods actually smuggled.

10933. Were not smuggled goods hawked along the coast, and sold as French goods?—We reaped the benefit of it; the great mass of goods thrown on us now by

Mr.
William Wallis.

9 July,
1832.

the fair and the foul trader prevents us from getting our goods off, and causes that distress we complain of.

10934. Do you not think that many goods manufactured in Spitalfields were offered at the West end of the Town as French?—I rather doubt that; a house might not have sufficient integrity to avoid it; when a lady fancied a pattern, and they believed because it was English she would not have it, where had it been French she would have taken it, they might probably pass it off that way as French.

10935. Are there many rich velvets imported from the Continent?—I do not think there are; at one period there were.

10936. Are not the velvets imported, chiefly the low German velvets?—They interfere more than the higher ones.

10937. Do you think this is owing to competition with France?—Yes; for this reason, that persons employed in these works, while there was no competition in the richer articles of plain works, are compelled of necessity to get the best wages they can; perhaps there are three times the number of weavers that never find employment in velvet; there was a period, within my remembrance, when it was divided into distinct branches; when some made lustres, plain and figured; some made fine silks, and some made velvets. A man is compelled to take any thing, and he must be master of every branch to enable him to obtain any work.

10938. Do you believe that the fall in the price of figured gros de Naples, has a tendency to lower the price of velvets?—I believe it has.

10939. If the competition with the cotton weavers at Lancashire has the effect of lowering the price of low gros de Naples, must it not lower the price of all weaving in Spitalfields?—I think they never would interfere with us to any great extent.

10940. You fear the competition with France more than with Manchester?—Decidedly so. If I was convinced with the fact, that the manufacturers of Manchester or any other part of England were making these kind of goods, to the full extent they are made in Spitalfields, I should never have stood forward to trouble the Government or the Parliament with this question. My countrymen being better in that quarter, I should have the liberty to go there, and having the experience both of a figured and plain weaver in Spitalfields, I should command that respect from a master that would obtain me employment, and I could live there cheaper than in Spitalfields.

10941. Do you not think that of late years, in consequence of the increase of the manufacture in a particular sort of goods, Spitalfields is more interfering with Manchester than Manchester is interfering with Spitalfields?—I think that is so.

10942. Do you think that the goods manufactured in Spitalfields now, are inferior in quality to what were made some years ago?—I think they are very much so; not in point of workmanship but in the article made use of, for the sake of obtaining them cheaper.

10943. Are there not, at this moment, a larger quantity of rich gros de Naples making than were made two years ago?—There has been a demand for richer goods, and we have endeavoured to meet that.

10944. Has not the quantity of rich goods increased?—It has in quantity a little, but not in price, for weaving.

10945. Are you acquainted with the sort of goods imported from France?—To a certain extent.

10946. Are you acquainted with the article called French Crapes?—I am; it is a small handkerchief.

10947. Have they been made in Spitalfields?—Not in any quantity.

10948. The importation of that does not affect Spitalfields?—I do not think it does; if the article had been in demand and been a profitable one, we should have had our share in it.

10949. You do not think the people of Paisley, Norwich, Yarmouth or Brintree have underworked you in that article?—I do not.

10950. What is the article imported from France, that you think injurious to the weaver of Spitalfields?—The rich figured gros de Naples and other fancy silk goods.

10951. It has been stated, that few plain goods are imported?—I believe there are a great many rich plain goods, and from inquiry on Saturday last, I am confirmed in that opinion.

10952. If it should appear there are few plain gros de Naples imported from France, the evil would be confined to the figured goods?—Yes, it would.

10953. Do

Mr.
William Wallis.

9 July,
1832.

10953. Do you not think that the duty on thrown silk is injurious to the weaver of silk?—I think not.

10954. Will you explain why?—Having been 28 years in the trade, I remember a period when foreign thrown silk was almost the only kind made use of in fine goods, and I worked for a house in Cheapside, not now in the trade, where they used scarce any thing else than Piedmont silk for the finer kinds of gauzes and figured fancy goods; the effect of the Milan Decree of Buonaparte on that house was dreadful; they reduced their hands from 250 or 300 down to about 15; and I was one of the 15 who had the honour of being allowed to remain; they were compelled to give up the whole of their manufacture for several months, in every branch of trade except velvet.

10955. Was that occasioned by the impossibility of getting a supply from Italy?—It was occasioned by the Milan Decrees; after some time, an improvement took place in the Bengal silk, and there came up a species of goods of the description I hold in my hand, that allowed the Bengal silk to be used with greater effect; Bengal silk was then in demand, and there has been a progressive improvement in the throwing of Bengal silk from that time; within a few years there was a considerable improvement in throwing of that silk; I do not believe, that since the reduction of duty, there has been any thing like such good English thrown silk as there was eight or nine years ago.

10956. The Milan Decrees rendered it as difficult to get raw as thrown silk?—Of course; I was going to observe, that since the alteration of the duties, and the distress among the people engaged in throwing, I have noticed a very great alteration in the quality of the silks I have had to work up; there has been a great deal more pickings or roughness, which is obliged to be cleared away, and this arises from the circumstance, in my opinion, that under the excessive low rate of pay, they are not able to pay sufficient attention to the work.

10957. What was the nature of the difficulty the manufacturers experienced after the Milan Decrees, was it as to the quality of the silk?—The difficulties were two-fold; first, in the want of material to a very great extent, and next in the quality of that which they did obtain.

10958. There was no difficulty in getting the silks thrown that we could obtain here?—I think not, there was so few, that of course the throwsters were very slack of work.

10959. Can you state how much the duty on thrown adds to the cost of a yard of gros de Naples?—I am not conversant with that question; I always consider, that when any thing is well paid for, it is more likely to be well done than when it is badly paid for.

10960. If it should amount to 2*d.* a yard, would not the manufacturer be in the same situation as he now is with regard to the competition with France?—No, I think not.

10961. Will you state how?—I should think that the manufacturers calculate their business by the cost of the material they have to work up; I do not think the present duty on thrown, amounts to 2*d.*; but whatever the amount may be, he could not, I think, raise his wages to that amount; it is possible he might.

10962. Is the same sort of loom used in Manchester as is used in Spitalfields?—I think so, certainly.

10963. Do you use the fly shuttle there?—Yes.

10964. Can you make the same description of silk with the fly shuttle as you do with the hand?—I do not think the work would be so good; from the appearance that I have observed in the Manchester and country goods generally, there seems to me to be something of a dress on their goods that is not applied to the goods in Spitalfields.

10965. Does it require more experience to use a hand loom than a fly shuttle?—Not at all; the fly is used for the sake of facility; it is applicable to all wide works, to which it is of great advantage; when a man gets used a little to the fly, he can make as good work as any other man in that way; the hand loom throws the shute more correctly, and makes the work more true, giving it a better face than the fly shuttle.

10966. To what do you attribute the increase of trade in 1824 and 1826?—To the stimulus given to the trade by reduction of duty, and the drawback allowed, and to the knowledge, that in 1826, there would be an importation of French goods.

10967. Has there been any great increase of the number of looms in Spitalfields since 1826?—I do not think there has.

678.

4 Z

10968. You

Mr.
William Wallis.

9 July,
1832.

10968. You say there are about 17,000, are they all employed?—Certainly not.

10969. How many are out of employ?—From 2,000 to 4,000.

10970. Do you know how many were out of employ in 1825?—There were more generally employed then, than there are now.

10971. What is the average rate of wages now earned per week by a weaver?—About 7*s.*, not more, rather less than more; but that is the general average of single and double.

10972. How many hours must he work a day for that?—The average hours in Spitalfields are about 16.

10973. Are there any deductions to be made from that 7*s.*?—The common deductions for attendance, which it is very difficult now to get at; people are obliged to employ their own families, because they cannot afford to pay for assistance; a man who has two looms takes a third person to keep them going; these two looms on a three single, earn about 13*s.* per week; with the three single and double together, it would amount throughout the year to perhaps 14*s.* or 15*s.* per week.

10974. What was the average rate of wages in 1825 for the same description of work?—The average earnings in 1825, upon the same kind of work, amounted to from 16*s.* to 17*s.*, subject to the same deductions.

Mr. *John Poyton*, called in; and Examined.

Mr.
John Poyton.

10975. ARE you engaged in the silk trade?—Yes.

10976. In what particular department?—I am at present in the plain line; I was formerly in the figured.

10977. How long have you been in the silk trade?—Upwards of forty years.

10978. Have you known the trade for forty years in Spitalfields?—Yes, I have been in Spitalfields the whole of that time.

10979. Did you ever know a period in those forty years in which the distress was so great as during the last winter?—I have known distress at different times in the course of that period, but none like the distress that has existed since 1826; the trade prior to that time was always more steady; the figured and fancy branches, which were the most profitable part of the trade, are now of little value, and the plain branch is subject to many more fluctuations than formerly; there are frequently thousands of weavers out of employ, and at all times their wages are so low that while in employ they cannot obtain the common necessities of life; formerly it there was distress it arose from want of work, not price; but since 1826 there has been much more distress for want of work than prior to that time, and a perpetual distress for want of price.

10980. Has there been a deduction in the price of labour since 1826?—The reduction in the price of labour since 1826 has been upon the average nearly one-half in the plain branches, and considerably more than one-half in the figured branch, on some articles as much as two-thirds; for instance, what we term hat shags, that used to be a very profitable part of the trade, and employed a good many hands; it would take two feet to make a hat, for which 4*s.* 10*d.* used to be paid per yard; 1*s.* 6*d.* is now paid for it; and there are many other works in proportion.

10981. Was the trade in Spitalfields on the decline prior to 1826?—A statement of a few facts I should consider quite sufficient to prove that it was very rapidly on the increase prior to 1826; in the early part of my connexion with the trade the men and their sons were generally engaged in weaving, and their wives and daughters used to employ their time principally in the winding of silk, and there never was any complaint of there not being sufficient to supply the demand; but in process of time, at the early period of the present century, there was a very great complaint, because the trade had so increased that the supply was completely insufficient for the demand; the manufacturers to remedy that evil introduced the present winding machines, and being of a very expensive description, the journeymen had not sufficient capital to purchase them; the manufacturers then generally purchased them, and factories were established for the winding of silk; there was a prejudice in the minds of the winders against working in factories, and the consequence was that the trade of silk winding has gone into a new channel, or a new set of hands; these winders being thrown out of work, they transferred their labour from the winding to the weaving of silk; notwithstanding this great influx of hands, there

there never was any complaint of a superabundance. About the years 1817 and 1818, and from that to 1823, there was a continual and perpetual influx of people from Ireland, who had been engaged in silk weaving and other branches, and notwithstanding that increase there was no complaint of a superabundance of hands; again, there was a great increase of hands through the regular increase in the general way of population; it was the custom up to that time for a man who had a family to have the whole of them employed in weaving; I know two instances of men who were married about sixty years ago, who have now upwards of fifty of their offspring in the trade; and notwithstanding the influx from these circumstances, there was never any complaint from the superabundance of hands prior to 1826.

10982. To what cause do you ascribe the present distress?—I ascribe the present distress to the repeal of those protecting laws that existed prior to 1824; I know that up to that time it was on the increase, and in a flourishing and profitable state; and when a proposition was made to repeal those laws, the journeymen generally felt alarmed, and anticipated the evils which would be the natural result, and all the evils that we did anticipate have come to pass; it is a very natural conclusion for us to ascribe the evil to the cause from which we anticipated such result.

10983. Was there any hope of benefit to the working classes held out at the time of the alteration?—At the time the alteration was made, feeling alarmed at the evils likely to come upon us, we applied to the Board of Trade, and had several interviews with Mr. Huskisson and several Members of Parliament, who told us that our fears were ill grounded; that when the new laws were brought into operation, we should feel the reverse effects result from the measure from what we anticipated; the principal design they said was to extend our export trade, by extending our export trade we should not be the slave of fashion, as we were up to that time; and it was being so completely the slave of fashion that produced the fluctuations in our trade prior to that time, which we should not be exposed to after the new law came into operation; there might be some little alteration, they said, in the rate of wages, but still it would produce that constancy of employment that would secure us a better return for our labour at the year's end than what we experienced before; so far from any of these benefits being realized, we find the measure has operated quite the reverse; I had an interview with Mr. Ricardo on the subject, when the measure was first introduced; he said your fears are altogether groundless; so far from it producing the evil you expect, universal prosperity will be its natural result, and I shall be happy to see you in a twelvemonth after it has been in operation, and so far from your thinking me an enemy, you will consider me one of your best friends, and thank me for the part I have taken.

10984. His Majesty's Ministers told you, that prosperity and constant employment, and benefits of all sorts would be the result, you told His Majesty's Ministers that ruin and diminution of labour and wages would be the result, is that the fact?—We had several interviews with the Board of Trade on the subject; distress was our constant theme, and prosperity they ever predicted.

10985. Which, as it turns out, by experience, knew your business best, you or His Majesty's Ministers?—If we judge from the result we must be considered to be the truest prophets.

10986. What were your reasons, as a body, for opposing the repeal of the laws?—First, because we knew we could make enough silk to supply the utmost demand without recourse to the foreigner for a supply; secondly, because we knew that an over supply would necessarily be destructive to the value of our labour, which over supply we naturally expected would be the result; thirdly, we knew the contest would be unfair, the foreigner having advantages over us, both natural and political, which we never expected to possess; fourthly, we knew that foreign competition would be much more destructive to our interests than home competition; fifthly, we knew that every time when the system had been tried, even when the country was in a much better condition to compete with a foreigner than at present, yet notwithstanding the same destructive effects were its results; sixthly, the conviction on our mind was, that under any rate of duty, when the sale of foreign manufactured silks were legalized, smuggling would greatly increase, by which means our difficulty to compete would become greater; seventhly, we did expect, when the value of labour was reduced in this country, that would produce a reduction in the price of weaving on the Continent; yet we had no idea the reduction would have been carried to the extent it has been carried on the Continent, a proof this that our fears have been more than realized.

Mr.
John Poyton.

9 July,
1832.

Mr.
John Poyton.

9 July,
1832.

10987. Has there not been an increased exportation of silk goods of late?—There has been an increase in the export in quantity, but there has been no increase in value; in fact there has been less exported in value, under the present system, than there was in the same given time under the former system. The value of goods exported in the five years previous to the repeal of the laws, was 1,919,964*l.*; in the last five years, since 1826, the total export was only 1,448,536*l.* being a decline in the value exported of nearly 500,000*l.* The quantity of goods have been nearly doubled; the benefits to be derived from an export trade regards the value not the quantity; 100*l.* on the official value, under the former system, was worth 273*l.*; but under the new system, for the last five years, it only amounts to 128*l.*, so that there has actually been a decline of 150*l.* on every 100*l.* of official value exported.

10988. Has not the country derived some benefit from the exportation in point of revenue?—If you look at the thing as it is presented by the official documents, you will find it quite the reverse; for in the seven years prior to the alteration of the law, the amount of duty that was received by this country, upon raw and thrown silk, amounted to 4,516,000*l.* Since the alteration of the law, the whole duty that has been collected, on the raw and thrown silk, amounts to 931,000*l.*; the duty collected on manufactured silks, to 865,000*l.*; making a total of 1,796,000*l.* that the Government has received in the shape of duty; whereas, in the former period, before the alteration of the law, it was 4,516,000*l.* so that there has actually been a decline in the amount of revenue, received by Government, of 2,720,000*l.*

10989. Supposing the present system to continue, do you think the silk trade can continue to live in this country?—If it lives in the country it cannot live profitably; it must continue its existence by starvation prices for the operative, and ruinous profits to the masters. I consider the prices which the operatives are now receiving, are in thousands of instances altogether inadequate to support them; thousands are compelled to apply to the parochial authorities for support, and numbers have received it even when in full employ; some of the best of our artisans have emigrated to foreign nations. I know several that have gone to America with the determination to establish the silk trade there; I know one family, that lived close by me, who were so reduced by poverty and disease, brought on them by incessant labour, that they threw themselves on the parish for support; they belonged to one of the city parishes, and the parish finding they were likely to be saddled with a very heavy burthen, for there was a man and his wife and seven children, agreed to advance the money to send them to America, and they went about three weeks ago. That is a system not likely to be beneficial to the silk trade when you drive away its artisans, for it amounts to nothing short of commercial persecution. When a man cannot live by his labour, it is productive of precisely the same effects as religious persecution; the only difference between the one and the other is, that the one leaves his country because he cannot bear the grumbling of his belly, the other because it cannot bear the grumbling of his conscience; the effect is the same in both cases.

10990. Has there not been an increase of consumption of raw and thrown silk?—There has been increased consumption since 1824, but no increased consumption if you take the average of 25 and 26; it is admitted that there must have been an increase in the importation of raw and thrown silks, but it is consumed in articles that require little labour; formerly all the silk we used to work up, even in plain work, was worked in this way, say a plain common sarsnet, that has given way to what we call a three-single, and in a three-single a man can work up nearly double the weight to what he could in the sarsnet. There are other works in which we used to consume a small quantity of silk, that have gone entirely out of use, such as the gauzes; they were made on a principle that consumed so little, that one pound of silk would make about 70 yards, which would give a man employment for at least 16 or 17 days; it would take him that time to work up one pound of silk, whereas in the works that are generally now made, a man can work up very near four ounces a day, in some cases more. I am convinced, when you take into account the transfer of labour from the light and fancy branches to the plain and heavy, so far from there being an increase of labour in the silk consumed in this country, there has been an actual decrease of labour.

10991. You do not think that the consumption of the weight of silk is a fair criterion of the prosperity of the trade?—By no means; a pound of silk that was worked up in the way I have just alluded to, the value of the labour when it was made in the district of Spitalfields was upwards of 3*l.*, whereas the working up a pound

pound of silk at present would be only about 6*s.* 8*d.*; the two articles I have just alluded to, were extreme cases; if you look at the difference between a figured gros de Naples and the plain one, there is double the labour consumed in the one to what there is in the other, and yet there is the same quantity of yards to a pound weight.

10992. Has not the repeal of the duties benefited Lyons as much as it has injured Spitalfields?—I should consider if I took a review of the history of Lyons, and I can only get information historically on the subject, that so far from Lyons being benefited by the alteration in our laws, it has been actually injured, and that for the following reason; when this measure was introduced, the French manufacturer expected, I believe, to have realized a very considerable benefit by being allowed to come into our market, and they prepared accordingly for that measure, and the reason why they prized our market so much was, that England, it is well known, is a country that consumes a great deal of silk of all manufacturers; the French manufacture a great deal and consume very little; they depend principally on the export trade for the existence of the trade of France; and when they found there was a duty of 30 per cent. laid on silk imported into this country, they considered it necessary to turn their attention towards the meeting of the difficulties they had to encounter, and the first expedient they had recourse to was the reduction of the value of labour; the French artisans not being very much pleased with the idea of having the value of their labour reduced, they protested against it, and the consequence was, that the manufacturers established the trade in districts where it had never existed before; and according to Doctor Lardner's statement in 1829, there were two-thirds of the looms then in Lyons out of employ, in consequence of the trade emigrating to adjacent places for the sake of getting their labour done cheaper than in Lyons; the reduction was kept on up till 1831, and it was under the control of these circumstances; as the value of labour decreased in this country, they were under the necessity of depressing the value of labour in France. It appears that in 1831, the cry of the French people was, give us a tariff to secure a reward for our labour, or give us a bayonet in our vitals, for our lives are now become a burden to us. I do not think the system has been more beneficial to the artisans of Lyons than to those of Spitalfields.

10993. Do you think it possible, by any contrivance, to prevent smuggling?—I know of no plan that is likely to succeed; when we waited on the Board of Trade, Mr. Huskisson avowed it was his intention to press this law, for the purpose of doing away with smuggling; he said, smuggling had increased to a very great extent; that it was not only a growing evil but a grievous burthen on the silk trade, and some steps ought to be taken to put an end to it. The Chancellor of the Exchequer and Mr. Charles Grant were present; and he stated, that if such rules and regulations were introduced, he would pledge his existence that it would prevent smuggling altogether: we told him, we much doubted it; and a regulation introduced was for the avowed purpose of remedying the evil altogether. In 1829 it was admitted, that the same evil existed, and an alteration in the rates of duty was proposed and carried, and that was said by the then President of the Board of Trade to be quite sufficient to cover the evil; but we see, notwithstanding all the remedy that has been applied to the disease, that the evil still exists; and so far from it being diminished, we have every reason in the world to believe that it increases, to a most enormous extent: I ground that opinion upon the returns that have been made to Parliament, and from the Custom House of France; one statement was published by the House of Commons, the other was brought before the Committee by Doctor Bowring. Doctor Bowring's statement is, that the Custom House returns show, that in 1828 the French exported from France to this country, silks to the amount of nine million francs in value. In 1830, there was an increase of six millions of francs; by comparing this statement with the returns laid before Parliament, in the first year referred to, there was imported from France into this country, through the Custom House, 150,000 lbs. weight of silk, and an equal proportion in value; but in 1830 the quantity of silk diminished, and there was only imported, through the Custom House, from France, 115,000 lbs; whereas, according to Doctor Bowring's statement, the importation had increased six millions of francs; so that if both statements are correct, it is quite clear one half of the silk imported is brought here by the smuggler.

10994. Can you state the number of persons who are receiving relief in the Spitalfields districts, who are in full work?—No, the information I can collect on

Mr.
John Poyton.

9 July,
1832.

Mr.
John Poyten.

9 July,
1832.

that subject is only from individuals; all the parochial authorities in those districts set their faces against it.

10995. Have you reason to suppose that there are a great number of persons who receive relief, being in full work?—I have no reason to suppose the number is very great, because I know that there is a dislike on the part of most people to receive parochial relief; that was a general principle at one time; but I am sorry to say that the morals of the people are very materially degenerated, under the influence of the present laws.

10996. You heard the questions that were put to the other witness as to the rate of wages; does your opinion coincide with the one which he gave on that subject?—Yes; I am perfectly satisfied with his statements on the subject, and I believe they are perfectly correct.

Mr. Robert Bolter, called in; and Examined.

Mr.
Robert Bolter.

10997. WITH what part of the silk trade are you connected?—Chiefly with the plain branch.

10998. Did you serve your apprenticeship in Spitalfields?—I did.

10999. How many years is it since it concluded?—Twelve years.

11000. Having served an apprenticeship of seven years, and been in the trade twelve, can you now earn a fair subsistence by your trade?—I cannot; it is impossible under the present rate of wages for any man in Spitalfields to earn any thing like a livelihood, and we only drag on a very miserable existence indeed.

11001. What do you take to be the average rate of wages?—From the best information I can collect, it is from 6s. 8d. to 7s. a week, not more.

11002. I suppose you were apprenticed to the trade at a time when the rate of wages was not so low as it is now?—When I was bound apprentice, the rate of wages was higher, and the work more constant than it is at present; it was considered at that time that a man might be able to earn a comfortable livelihood when he had the work to do; far different is it at the present time; when I was bound apprentice, the Government of the country had protected the trade, and I considered were bound to protect it; I thought I had done the same as purchased an annuity for life, as something by which I should be enabled to get a living for a family; I consider that the Government ought to have protected the same, as every other species of property; but I am sorry to my cost, and the cost of those in Spitalfields, that they have not kept good faith.

11003. Have the workmen in Spitalfields derived any benefit at all from the alteration of the law?—No, quite the reverse; the district of Spitalfields has been very much injured by a repeal of the prohibitory laws; it is an injury to the whole district, for there are a great number of shop-keepers who now cannot do any thing; instead of its being a benefit, it has been a very serious injury.

11004. What do you consider would be the best mode of relief?—The best mode of relief would be to prohibit the importation of foreign silk goods into this country, and to punish the smuggler most severely. When I went to the Board of Trade, before Mr. Poulett Thomson and Lord Auckland, a question was asked, how we would prevent smuggling; I stated, by fine and imprisonment; and if they continued the duties, putting it under the Excise; let the excisemen take the stock now and then, the same as at a tobacconist or tea warehouse; but they considered that to be too much trouble.

11005. Are the wages in Spitalfields lower now than they were seventy years ago?—They are lower, generally, from 1½d. to 2d.

11006. Do you know the price paid in 1769 for plain goods?—I do.

11007. What is the difference between the price paid at that time and the price now paid?—For a four thread mantua, 1769, was 7d. per yard; 1832, 6d. ditto: ducape, 1769, 9d. per yard; 1832, 8d. ditto: gros de Naples, 9d. and 10d. in 1823, and 5d. and 6d. in 1832. This is the general average rate of wages that are paid in Spitalfields; some manufacturers pay more than others.

11008. If the silk trade is so extremely depressed as you and the other witnesses describe it, why do you not remove from that into some other branch of trade?—That is a question that has been often asked by honourable Members, why you cannot find employment in some other branch of industry; it may be very well with men of capital to remove their capital and enter into some other branch of manufacture; but it is not so easy for a workman after he has learned his trade to
remove

remove and find other means of employ; other trades must be learned, and it is very hard for a man after he has served seven years that he should not be able to get a living, but be thrown on the wide world to seek that employment he can hardly find. I consider that a working man cannot find employment after he has once served his time to a particular trade in any other; if we went to labouring work, we should never be able to return to weaving, for our hands would be in that state that we should not be able to handle the silk.

Mr.
Robert Bolter.

9 July,
1832.

Mercurii, 11^o die Julii, 1832.

GEORGE BANKES, ESQUIRE, IN THE CHAIR.

John Ballance, Esquire, called in; and further Examined.

11009. YOU wish to make some addition to the evidence you gave on a former occasion; you gave it as your opinion on a former occasion, that smuggling, under the prohibitory laws, was very trifling as compared with what it had been since those laws were repealed; are you still of the same opinion?—The opinion which I then gave was founded upon the information which from time to time was furnished to the Committee of the Silk Trade, of which I was a member; I have since seen Dr. Bowring's statement of the exports of silk goods from France from 1818 to 1825, and so far as any dependence is to be placed upon those accounts, I find that they confirm the opinion which I then gave. From these accounts it appears that smuggling remained almost stationary till 1824, and that the apparent great increase in smuggling took place in 1824, and chiefly in 1825; it was in March 1824 that the laws relative to the silk trade were repealed, and the Committee will observe the coincidence between the change of the laws and the increase of smuggling; for besides the facilities for smuggling referrible to the Warehousing Act, by which foreign silks were allowed to come into this country under bond for exportation, it is well known that the immediate effect of the alteration of the law in 1824 was to give encouragement to smuggling. In expectation of the Ports being shortly opened to foreign silk goods, there was a relaxation of the laws; little or no vigilance was exercised on the part of the officers of the Crown, and smuggling went on without control, as the transactions of Depouilly's house fully prove. I submit, therefore, to this honourable Committee, that to form a correct estimate of the extent of smuggling under the prohibitory laws, 1824 and 1825 must either be left out of the calculation, or be taken at the average of the six years preceding, for it is most unjust to adopt measures of which smugglers may instantly take the advantage, and then use the rapid increase of smuggling in those years as an argument for the continuance of the present system; and I will just add, that if the six preceding years be taken, that is from 1818 to 1824, according to this statement the average rate of smuggling for those six years is about 106,000*l.*, that is before the change in the law took place.

John Ballance,
Esq.

11 July,
1832.

11010. Does that include the year 1824?—It excludes 1824; it is from 1818 to 1824; the change of the law took place in March 1824.

11011. Have you made a calculation of what would be the average, taking the six years preceding, and taking the years 1824 and 1825 both inclusive?—I have not made that average, but I can very easily make it.

Average Value, per annum, of the Exports of Silk goods from France		£.
to England, from 1818 to 1823 inclusive, according to Dr. Bowring's		
statement, 16,300,000 francs, for six years, equal per annum	- - -	106,000
Ditto - - - ditto - - - ditto, from 1818 to 1825 inclusive,		
26,100,000 francs, for eight years, equal per annum	- - -	128,000

11012. You say also, that the admission of French silk for the purpose of warehousing afforded great facilities to the smuggler; perhaps you can tell the Committee why it afforded great facilities?—This measure was introduced by Mr. Huskisson; the committee of the silk trade very strongly opposed it, upon the opinion that, under the cloak of bringing in foreign silks under bond for exportation, the

John Ballance,
Esq.

11 July,
1832.

smugglers would avail themselves of the opportunity to carry on with greater facility the contraband trade.

11013. They might either warehouse them or land them, as best suited their purpose?—Just so; that was the ground of an opposition to it, and we resisted it very strongly, but without effect; and it is to be observed that immediately after that, according to Dr. Bowring's statement, smuggling increased considerably.

11014. Have you any information to make with reference to the extent of smuggling since 1826?—If I were to gather the extent of smuggling from the Statement which has been given to this Committee, of exports from France since 1825, I must conclude that it has been carried on to a very limited extent, indeed that it scarcely exists. This appears by comparing these Accounts with our own Custom House Returns of duty paid on silks imported from Europe; the comparative view which I have drawn out is as follows [*handing in an Account.*]

DR. BOWRING'S Statement of EXPORTS from France
to England, of SILK GOODS, in Francs.

			Valued in sterling.
1826	- -	francs 7,596,000	- Answer, £. 301,000
1827	- -	11,460,000	- - - 453,000
1828	- -	17,311,000	- - - 685,000
1829	- -	10,483,000	- - - 414,000
1830	- -	15,204,000	- - - 602,000
1831	- -	18,000,000	- - - 712,000

DUTY paid upon IMPORTS of SILKS, from Europe,
for the Years as under:

	Duty paid.	Computation of cost Abroad.	Difference supposed smuggled.
1826	- £. 55,259, at 30 p' ct.	- £. 184,197	116,813
* 1827	- 138,125 - - -	- 460,417	-
1828	- 198,404 - - -	- 661,347	23,653

1831	- 140,414 - - -	- 561,656	150,344

* This year no smuggling!

† This year about £. 100,000 more paid Duty than Dr. Bowring states was exported from France.

The Committee will observe, that according to this Account, there had been smuggled in 1826, 1827 and 1828, only about 140,000 pounds; that in 1827 there was no smuggling; in 1829 there was not only no smuggling, but an excess of imports beyond the amount of exports from France, stated by Dr. Bowring, of about 100,000*l.*; and the two last years, 1830 and 1831, according to the same Accounts, show an average amount of smuggling of only 104,000*l.* I am aware that these Custom House Returns include the duty on all silks coming from the Continent, but as the duty paid upon those which pass the Customs from other parts of Europe besides France, is of trifling amount, the principle of this calculation is not disturbed by it. I believe, however, that Switzerland and Germany do send considerable quantities of silk goods to this country; what I mean is, that the proportion of those which pay duty is too inconsiderable to affect the Statement which I have delivered in. The Custom House Returns have generally given the duty paid upon silks from Europe, so that we have not been able in every instance to separate those which come from France only; but as a guide to ascertain what the proportions may be, I have before me two years, that of 1828 and that of 1830, where the Accounts are kept separate, and I find that the value of goods that passed through the Customs from other parts of Europe in 1828, besides France, was about 30,000*l.*, and in 1830, about 13,000*l.* It is evident, therefore, that the question under consideration cannot be affected by these fractional entries. I therefore submit that these Accounts of Exports, when stated to exhibit the total exports of silk goods from France to England, carry with them their own refutation, for all this is directly contrary to the fact. It is notorious that smuggling did increase in 1827 and 1828, that it was made the subject of complaint to Government, and that they reduced the duties in 1829 in consequence; and it is equally well known that since that reduction, smuggling has been carried on to a greater extent than ever; the conclusion therefore is irresistible, that either there is an error in these Accounts, or what I imagine will prove to be the case, that large quantities of silk goods now find their way into this country without being cleared out at the French Customs, and therefore these Returns of Exports neither do nor can show the extent of smuggling.

11015. You mean in fact, that they are smuggled out of France?—Yes, smuggled out of France. I consider that is shown by these Accounts.

11016. Then you would think it not an impossible thing that they might be sent out of France as a case of eggs, in order to prevent the possibility of its being known whether

whether it was a case of eggs or really was silk?—Certainly; I have heard of such instances.

11017. There might be an understanding, might there not, between the officers of the Customs at Calais and London, to inform them of any cases of silks exported from Calais, and if there was an object to conceal on the part of the smuggler on this side of the water, that this case should not be known really to contain silks, it would be desirable to keep it equally secret at Calais, and therefore he would have a motive besides for inducing the officer of the Custom House here also to pass those commodities as if they really were eggs?—I think that certain letters that have passed from Calais, will quite establish the view the honourable Member has taken of it.

11018. It has been given in evidence that the total value of the silk trade of France is about six millions sterling, is this your opinion?—Am I to understand this question as referring to a calculation which has been given in evidence before this Committee? the witness to which I refer stated as follows: “Now taking the estimate of added value for labour at 70 per cent., and supposing the amount of thrown silk to be 4,000,000 of pounds, and that 18s. be taken as its average value, the amount will be 3,600,000*l.*, to which add the 70 per cent. as above, which I think may be divided thus, 30 per cent. for dyeing, interest, profit and expenses of all sorts, and there will remain 40 per cent. for labour specially; this is the whole cost; add to 3,600,000*l.* 2,520,000*l.* the 70 per cent. making 6,120,000*l.* the value of the whole silk manufactory of France.” The same witness has made it even less than this, by giving 17*s.* 6*d.* as the average price of thrown silks; that is, 16*s.* for tram and 19*s.* for organzine.

I differ essentially from this calculation, in respect both of the quantity and price of the thrown silk and the amount of labour, stated to be 40 per cent. for manufacturing it; the Committee will allow me to advert to those items; it is in evidence by the same witness that there are 70,000 looms in France, which consume on an average 60 pounds of silk per annum; and from the same evidence we have been told the number of ells per diem made in these looms when at work. Now speaking as a manufacturer, and making every allowance for the occasional stoppage of these looms, I am satisfied that they will consume more than 60 pounds of undyed silk; and I apprehend the error lies in substituting the weight of undyed silk consumed by these looms for the weight of the goods produced by them; this would give 4,200,000 pounds in manufactured goods, and will correspond with 4,800,000 pounds of thrown undyed silk; and I am the more confirmed in this opinion as it harmonizes with the declaration of the same witness in another part of his evidence, where he states it to be a prevailing opinion in France that three-fourths of her silk manufacture is of silk of native growth, and one-fourth of silk imported; this importation is said to average about 1,200,000 pounds, which makes the total quantity consumed in the manufacture to be as before stated, 4,800,000 pounds. It will also appear that 18*s.* a pound for organzine and tram, which the witness assigns to the four million pounds of thrown silk, as the average value, is not the average value, but approaches nearer to the minimum value; in proof of this I adduce the evidence of the same witness, who stated that a manufacturer at St. Etienne gave 70,000*f.* for 1,000 kilogrammes of thrown silk, which is equal to 25*s.* per pound, and this for the manufacture not of gauze but of satin ribbons, an ordinary article. Again, the value of 18*s.* is assigned to the whole quantity of four millions of pounds weight, whereas one-fourth of this quantity is silk imported, of which about 700,000 pounds weight is Piedmont organzine, the nett cash price of which at this moment at Lyons is 20*s.* 5*d.*; and it is here worthy of remark, that 18*s.* for thrown silk at Lyons is less than the price of Italian raw silk of good quality in London. I apprehend the witness was not aware of this circumstance, as it places in a striking view one of the advantages of France, and shows up the folly of the expectation of our sending thrown silks to that country; with respect to the 40 per cent. on the 18*s.* which is assigned in the above statement as the cost of labour specially, I have the same remark to make upon it, that it is not the average cost; this 40 per cent. upon 18*s.* represents 7*s.*, which is about the cost upon plain gros de Naples of from 2*s.* 3*d.* to 2*s.* 5*d.* a yard; the cost on figured silks is nearer 9*s.*, and upon gauze ribbons considerably more; and as the fancy and figured trade form a large proportion of the French manufacture, the average per centage of the whole labour and cost in this department cannot, I apprehend, be reckoned safely at less than 50 per cent.; putting then these quantities together and their values together, it must be evident that the silk manufacture of France is very considerably above 6,120,000*l.* But there is another

John Ballance,
Esq.

11 July,
1832.

John Ballance,
Esq.

11 July,
1832.

test to which I submit this inquiry, and it is as easy and simple as it is conclusive: if 18s. be really the average price of thrown silk, and 70 per cent. be really the average cost, including profit and interest, and expenses of all sorts, 30s. will be the total value of the pound; from which deduct about three ounces for loss of weight in dyeing and waste, this will give 33s. 6d. or thereabouts, as the average value of manufactured silks exported from France. Now I ask, is this the fact? is this the average value per pound weight of silk goods imported from France? or do they gain as they cross the channel? The following statement which I have received from an importer, and which he is ready at any time to confirm, will answer this question:—

Plain silks, purchased at Lyons, free of duty	-	-	35s. to 37s. per lb.
Figured silks	-	- ditto - - ditto	- - - 45s. to 47s. per lb.
Gauze ribbons, purchased at St. Etienne	-	ditto	- 52s. to 54s. per lb.
Cut gauzes	-	- ditto - - ditto	- - - 65s. per lb.

So that even plain silks are from 2s. to 3s. above the average assigned by this witness to the whole manufacture of France.

Now if we divide the silk manufacture of France into ten parts, and give only one-tenth to gauzes, which is a small proportion, and take the plain goods as five-tenths, and the figured as four-tenths, this will give an average not of 33s. 6d. but of 42s. 6d.; and this average, spread over the French manufacture, will give a very different result from 6,120,000*l.* I must also observe, that the witness is mistaken in stating, that from 30 to 35 per cent. is the loss in dyeing. The average loss (excepting in the article of sarsnets) is about 14 per cent., and he himself has shown this from the instance he has given of the manufacture of 500 ells of satin at Lyons.

Bearing also upon the question of the value of the French silk trade, is the evidence given by this witness of the number of ells produced by the looms when at work. At Lyons it is said they make from four to five ells per day, and a similar length I believe is assigned to the engine looms at St. Etienne; now, I apprehend, that if this calculation is pursued, it will appear either that this quantity is not made, or that the looms of France consume much more than 60 pounds of thrown silk per annum. The ell of silk will average, and I am giving a low average, about an ounce and a quarter; take it at four ells per day, that will give one pound 14 ounces per week, or 97 pounds per annum of manufactured silk, so that without assigning any silk at all to the gauze ribbon looms, and taking the sarsnet looms at Avignon, at the quantity specified, the other silk looms of France to consume only of thrown silk, 60 pounds per annum, must not work more than eight months in the year. I here offer one general remark, upon the evidence to which I have alluded, that where particular instances of the French silk manufacture are given, the value is taken at a high rate; but when the question refers to the entire manufacture of France, the value is reckoned in the reverse proportion; and to this I attribute many of the discrepancies which appear in the evidence of this witness.

11019. Do you consider this inquiry into the value of the silk trade of France, of any importance?—Yes; I consider it intimately connected with the great interests of the silk trade of this country. It has been stated, that France exports four-fifths of her silk manufacture: it follows then, that in proportion to the extent and value of that manufacture, will be its pressure on the silk trade of Great Britain. On a former occasion, I considered there might be imported, legally and illegally, silk goods from the Continent to the amount of 900,000*l.* sterling. The witness to whom I have referred, admits that 800,000*l.* comes from France alone. Taking, therefore, into account his low estimate of the value of the French manufacture, the Committee, I apprehend, will fully concur with me, that the 900,000*l.* attributed as exports from the Continent, must now be considered as much underrated; indeed as the very minimum amount of silk goods exported from the Continent to England, and that the maximum amount of importation extends far beyond this, and is not capable of being reduced to accurate calculation; but here I submit to the consideration of this honourable Committee a very important question. What is the amount of labour displaced in our silk districts, even by this minimum importation? It is in evidence, that the Continent manufactures 40 per cent. cheaper than England; this, of course, must be added to the 900,000*l.* to give the value of these goods if manufactured in England; 40 per cent. on 900,000*l.*

900,000*l.* will give a total value of 1,260,000*l.*,* and the labour required for the production of this amount of silk goods will be from 800,000*l.* to 850,000*l.*: this sum, I observe, is directly displaced; but the honourable Committee will observe, that the effect of this displacing of labour will be to render it very abundant. The indirect effect, therefore, will be, to reduce the price of labour in the manufacture of all other silk goods; and this, in the district of Spitalfields alone, has withdrawn from the work-people at least 300,000*l.* per annum. If then I add a similar effect upon Coventry and Macclesfield, and upon the throwing of Italian silk in different parts of the kingdom, the total loss in wages will much exceed 1,500,000*l.* Indeed I am satisfied that I do not over-state this total loss to all our silk districts in wages, especially from these destructive measures, in assigning two millions annual loss sustained by them; and may I ask, what compensation has there been for this frightful loss of wages to our artisans? the witness to whom I have referred has said, that cotton twist is smuggled into France, and that upon examining smugglers he conjectures, that the quantity thus introduced amounts to 800,000*l.*, and considers that 550,000*l.* of this is labour; in which, in another part of his evidence, he reckons machinery; and this he traces to the importation of French silks. The argument, then, of such a theory is this; that it is wise and just for a paternal government to suffer the continuance of a positive and extensive injury, inflicted upon one class of persons, that a mere contingent benefit might accrue to another class; even though the positive injury should be threefold that of the conjectured good. I speak not thus strongly on my own account; I plead not for myself, for I am beyond the reach of these destructive measures; but I do plead for many a distressed throwster and manufacturer, and especially for their more distressed work-people; and I ask permission to quote the opinion of one of the highest authorities of our country; it is an opinion which I have always held, which every year's experience strengthens, and which I imagine I shall never abandon. It is found in the Report of the Lords Committee on Foreign Trade, in 1821, and is as follows: Their Lordships observe, "It appears certain, that without some artificial support, this (silk) manufacture could not, in former times, have been introduced or maintained with any success in this country; and as long as our principal supply was derived from a part of Europe, so much nearer to France as Italy, all competition in its own favourite branch of manufacture with the former country, (which produces at the same time so large a portion of the raw silk which it consumes,) must have appeared entirely hopeless." The evidence before this Committee has shown, that the silks of Bengal and China cannot be applied to the manufacture of fine silk goods; that the British manufacture is as dependent as ever on the silks of Italy; and therefore, that the conclusion which their Lordships drew in 1821, remains as strong as ever.

11020. Are the Committee to understand that you dispute the statement given in by Dr. Bowring, which shows that the labouring class of England gained by the importation of French silks, and by the exportation of a greater quantity in labour in cotton goods; do you dispute that statement?—I have said that the importations of silk from the Continent, take them at the lowest calculation, have displaced directly and indirectly in the silk districts of this kingdom, a far larger proportion of labour than has been assigned by the Doctor to that amount of cotton twist, which upon the examination of smugglers, he suspects has been imported into France; but I may go farther than this, and return a direct affirmative to the question of the honourable Member. Dr. Bowring, in the answer to which I referred, has given 800,000*l.* as the value of the exports of silk goods from France to England; 500,000*l.* he calls material, and 300,000*l.* he considers labour and profit; that is 60 per cent. upon the material; and his hypothesis with respect to the export of cotton twist, is built upon this proportion; but 60 per cent., which is here assigned as the cost of production, is at variance with the former evidence of this witness. Ribbons, it is well known, form a considerable part of this importation; and his statement of the sort of manufacturing ribbons at St. Etienne, exhibits 90 and 100 per cent. upon the value of thrown silk; besides, his estimate of the average cost in the respect of the whole silk trade of France, is 70 per cent. upon thrown silk, to which must be added from his own evidence, about 20 per cent. more, as the expense of throwing. There is therefore a discrepancy at the least of

30 per

* In my former statement of 900,000*l.* I added 34 per cent., but then I was speaking of duty and charges; now I am referring to cost, and the duty does not cover the cost.

John Ballance,
Esq.

11 July,
1832.

John Ballance,
Esq.

11 July,
1832.

30 per cent. between those statements, which to my mind throws a doubt over the whole calculation about cotton twist; and it will also strike this honourable Committee, that the comparison of imports and exports, to have been a fair one, should have been drawn not between cotton twist, but manufactured cotton goods and French silks; cotton twist corresponding with thrown, and not with manufactured silks.

11021. Have you examined his statements and calculations?—The Doctor assigns 550,000*l.* to have been expended in labour upon the cotton twist; I take it merely as his declaration, and then show that the silk districts have been injured to three times the extent, even upon the lowest estimate of importation.

11022. Five hundred and fifty thousand pounds upon what; the silk goods imported, or the cotton exported?—The cotton exported.

11023. Is not silk of all materials the most valuable used in manufacture?—As compared with cotton.

11024. Or linen?—Yes.

11025. Or woollen?—It is considered so.

11026. Does it not therefore follow that 100*l.* worth of silk goods will contain 100*l.* worth less of labour, than 100*l.* worth of either of the other articles?—In the production of cotton twist, there is a very large portion of machinery, which I do not call labour; besides, I am speaking of labour displaced in England, not labour expended in France.

11027. What will the amount of labour be in 100*l.* worth of gros de Naples?—I have answered that question before; it depends on the weight.

11028. What do you consider the usual exports of this country in manufactured goods?—I offer no opinion upon the general exports of the country.

11029. Do they not consist largely of earthenware and iron, and hardware?—I wished my evidence to be restricted to the question of the labour displaced in our silk districts, by the importation of foreign manufactured silks; and I never should have alluded to cotton, had the subject not been introduced by the Doctor himself; but as he has thought proper to make the comparison, I think it is of immense importance to the silk trade to show, which is very easily done, that far more labour has been destroyed in our silk districts, than even according to the Doctor's statement, which is after all conjectural, has been taken up in cotton.

11030. Supposing that in return for 100*l.* worth of manufactured goods we export earthenware, should we not in that case export a much larger quantity of labour?—I do not touch the subject of political economy; it is quite enough for my argument, that I see misery and wretchedness around me in all the silk districts, and that that misery did not exist six years ago.

11031. But you consider it the fairest method, to take into account the labourers who may be thrown out of employment in one part of the country, and not to take into account the labourers that may not be brought into employment in another?—I have taken both into account in the comparison which I have exhibited; but further, I am quite satisfied that the thousands of persons who have been thrown out of employ in Coventry and in Spitalfields, could not become cotton spinners; and I am equally certain that there would be no room for them there if they could.

11032. Then are the Committee to understand that you consider there are fewer labourers employed now in the silk trade, than there were before 1826?—Taking the average of the last six years, not only fewer labourers, but at a less rate of wages.

11033. Did not Mr. Wallis, at the last meeting of the Committee, state that there were a greater number of looms in Spitalfields now than formerly?—No, I think his evidence was about the same.

11034. Do you doubt the fact, that there are a greater number employed out of London than there were before 1826?—I have reason to know that the difference, which ever way it is, is very trifling.

11035. You believe that there are no more employed at Manchester than were employed before 1826?—I think the Committee will have evidence to prove that in a day or two.

11036. You are not aware that weavers, who were formerly employed in weaving calicoes, are now employed in weaving silks?—That was the case in 1806, 1807, 1808, and up to 1824; it is no new feature of the silk trade of Manchester.

11037. Are you aware when the great body of cotton weavers went from that trade into the silk trade?—They did not go in a body, they went gradually; and I believe a more considerable number before 1826 than since.

11038. Do you believe that before 1826 there were many looms employed in the

the manufacture of gros de Naples at Manchester?—Many looms, yes! if they were not employed in gros de Naples, they were employed in silks of other descriptions.

11039. Will you state what description?—It is well known, that from the time the silk trade began in Manchester, which I think was about 1803 or 1804, that Manchester manufactured those articles that were then in demand. Sarsnets had a very considerable run from that time until about 1818 or 1819, and then gros de Naples gradually took their place.

11040. Do you believe there were a great number of looms employed in manufacturing sarsnets at Manchester formerly?—Whatever was in demand in low priced silks, Manchester had a portion of that then, as well as now.

11041. The articles of manufacture in Spitalfields are now nearly all of pure silk, are they not?—Yes, they are.

11042. Do you mean that there were many looms manufacturing pure silk before 1824?—Yes.

11043. It has been stated by Mr. Tootal, that there are now 9,000 looms employed on gros de Naples at Manchester, do you believe there were 1,000 before 1824?—I believe it will be found that there are now not 9,000, and that before 1824, there were many more than a thousand.

11044. Do you believe there were 2,000?—Yes; it is not difficult, I apprehend, to know the number pretty nearly. I think the Committee will soon be in possession of it.

11045. What number would you state, as your opinion, were engaged before 1824?—I decline answering the question as to the exact number; I never wish to answer questions of opinion only, except generally.

11046. You have no opinion whether one half or one quarter of the quantity were employed before 1824?—The silk trade of Manchester increased up to 1826, but it has made, I believe, little or no progress since in quantity, and it has greatly declined in wages.

11047. Are you of opinion that the Manchester looms are now making low gros de Naples, as a substitute for the silk and cotton chambras, that were in fashion before 1823, the period when gros de Naples came out?—Yes, it accords with the declaration I have just made that they change with the fashions.

11048. You think that the altered value of silks has placed the commodity of gros de Naples within the range of a lower class of the community than before could enjoy that commodity?—Yes.

11049. Do you think Manchester might safely be employed in manufacturing that commodity for that particular class of the community, without any injury to Spitalfields, provided that Spitalfields had not been interfered with by France?—The whole nature of my former evidence supports that view; the trade of Manchester, take it as a whole, is a low trade with which the silks of France do not directly interfere; they interfere with it indirectly, inasmuch as they increase the competition between Spitalfields and Manchester in that article.

11050. So that there would have been all that consumption of silk by the particular class of the community alluded to, and which silk might have been so manufactured at Manchester without any injury to Spitalfields, which would not have been desirous of having to receive any of that particular description of commodity, provided she had not had that superior commodity which she formerly manufactured interfered with by the manufacturers of France?—As the low silks of Manchester find a ready sale throughout the country, notwithstanding the large importation of French silks, I think it is conclusive that if Spitalfields had supplied these silks instead of France, they would have found as ready a sale notwithstanding the Manchester low goods.

11051. Are you aware that there is a considerable quantity of crapes imported from France?—Yes.

11052. Are those articles manufactured in Spitalfields?—There has been a crape manufacturer here who has stated that his trade is essentially injured, and his people reduced to a state of pauperism and wretchedness by that importation, and therefore all that it proves is this, that other silk districts besides Spitalfields have been greatly injured by the importations of the Continent, and of course that distress is in proportion to the pressure of those fabrics upon the places in England, where similar fabrics are manufactured.

11053. Did not that same witness state, that so far from his manufacture having been interfered with by Manchester, that there were at the present time 243 looms

John Ballance,
Esq.

11 July,
1832.

John Ballance,
Esq.

11 July,
1832.

less employed in the manufacture of crapes than there were before the year 1826?
—Yes.

11054. Are you acquainted with the article that is imported from France under the name of crape?—I have never seen it.

11055. Do you know whether the article imported from France is an article that was imported into this country before 1820, or an article made altogether since?—I beg to say, I can give no evidence on the subject of crape.

11056. But whatever quantity of crape is imported from the Continent does in fact interfere with Spitalfields?—I am not aware that crape is manufactured at Spitalfields any more than ribbons are.

11057. Was there a manufacture of crape in Spitalfields in the year 1824?—I am not aware that crape has formed part of the silk manufacture of Spitalfields for this 20 years.

11058. Then the articles that interfere with Spitalfields are gros de Naples, plain and figured, imported from France?—What interferes with Spitalfields of imported silk goods, are those silk goods which used to be made in Spitalfields, and always have been considered the staple article of Spitalfields whatever they are.

11059. Do you believe there is any other article now imported from France, the importation of which has annihilated any branch of the trade of Spitalfields?—It has been given in evidence, that before the opening of the Ports, taking a series of years, there were 4,000 looms on figured silks in Spitalfields; another witness has stated, that in some parts of that period half the trade was in fancy silks, according as fashion led to fancy or plain. It is now in evidence, that of the 300 looms the greatest number that can be found in Spitalfields on such silks, not 120 of that 300 are upon rich figured silks, and that the remaining number are making singles in imitation of Manchester.

11060. Then the Committee are to understand, that formerly one-half of the looms manufacturing in this country of pure silk were employed on fancy goods?—I have not said so; I have said it has been given in evidence (I did not give that evidence,) that at certain periods, according as the fashion led to fancy or plain silks, there was one-half of the manufacture of Spitalfields employed in those silks.

11061. Of the whole consumption of silk goods in this country, what proportion do you think are figured gros de Naples; the consumption of foreign and English?—It is not possible for me to answer this question. With respect to foreign silks, I suspect it will be found that the great bulk of silk goods imported from the Continent are of a rich description, and that a larger proportion of fancy silks than of plain came in.

11062. How many looms do you think the figured silks imported from France would employ in Spitalfields?—I must first of all know the quantity imported.

11063. Is it your opinion that about one-fourth of the looms formerly at work in Spitalfields were employed in making figured silks?—Yes, taking the average of years.

11064. Is that your opinion?—That is my opinion.

11065. Do you believe that there are less fancy silks consumed in this country than there were at the period alluded to?—I am quite satisfied that the consumption is much greater.

11066. Can you then inform the Committee where they were made in England if they were not made in Spitalfields?—They were made no where in England; there is not a place to which I can assign the manufacture of those silk goods, nor do I believe any place can be found; I speak of rich silks.

11067. Then it is understood that it is your opinion that there are now consumed in this country as many figured gros de Naples as would employ more than 4,000 looms?—I think so; I beg to observe that the trade in those rich goods was steadily advancing from 1822 to 1825, and in all probability, taking the experience of past years, would as steadily have increased had not foreign silk goods been admitted. This trade receded in 1826, and has been drooping ever since.

11068. Do you think there are as many figured gros de Naples consumed in this country as would employ 5,000 looms in Spitalfields?—I think it highly probable.

11069. Do you think there are as many silks consumed in this country as would employ the same number of looms that before were employed in that particular manufacture, looking at the quantity which is now consumed by the public?—I am quite satisfied, that taking the calculation upon the minimum amount of importation which I have stated, were it stopped, instant and active employment would be given to all the looms that were before employed on a similar fabric.

11070. But

John Ballance,
Esq.

11 July,
1832.

11070. But do you believe as many are now used in this country as would employ 5,000 looms in Spitalfields?—I should think there were; it is impossible to speak except to round numbers.

11071. How many yards of rich figured gros de Naples would a loom produce per week?—That varies altogether according to the figure and description of work.

11072. What would be the average of the Jacquard loom?—I cannot give the average, for I am not a fancy weaver.

11073. A witness having stated that each loom would produce eighteen yards per week, will you have the goodness to say what you think those eighteen yards would be worth?—No, I cannot speak to the value of figured silks, for I am not a figured weaver.

11074. Do you think that 650,000*l.* was the value of figured silks formerly consumed in this country, or that at the present moment are consumed in this country; do you think that that is an excessive quantity, and a quantity not likely to be consumed in this country?—I have no doubt that there is a much larger quantity consumed in this country.

11075. When you spoke of 4,000 looms having been engaged on figured and fancy silks, you did not mean to say that these were all engaged in figured gros de Naples, but on all sorts of figured and fancy goods?—I spoke of the fancy trade, whatever be the specific article manufactured.

11076. You mean to include figured gros de Naples, satins, gauzes, velvets, sarsnets, furnitures, crapes and brocades?—Certainly, the entire fancy trade.

11077. There were 4,000 looms employed formerly?—That supposes the manufacture took a series of years.

11078. And you think at the present time there is more consumed in that article than formerly?—Yes, but not produced in Spitalfields.

11079. Therefore it follows, does it not, that if there was no importation from foreign parts there would be a larger number of looms employed than formerly?—Yes; if there was no importation of these fancy and figured silks from France, a greater number of the looms in Spitalfields than formerly would very shortly be employed in the production of them, and, as I before said in respect of style and fashion, would produce them equally well.

11080. You are of opinion that there is now a larger quantity of figured and fancy goods consumed in the United Kingdom than there was at the time when 4,000 looms were employed in the production of Spitalfields, is that so?—My impression is, that the quantity has rather increased than diminished.

11081. What proportion has it increased, do you apprehend?—It is very difficult for me to determine the proportion.

11082. What is your impression that it has increased?—As these goods are imported from the Continent, together with plain silks, &c. both legally and illegally, to an extent which, as I have before said, cannot be reduced to accurate calculation, I should only mislead in the attempt to give exact proportions.

11083. Do you think that five pounds for the production of each loom per week would be a high estimate of the value of goods manufactured in fancy goods?—That would depend upon the value of the article, which varies very much.

11084. If each loom produces 18 yards a week, have you any doubt each yard would be worth 5*s.*?—I believe the average worth of fancy silks is now from 4*s.* 6*d.* to 4*s.* 9*d.*; but I speak under correction, for I am no fancy weaver.

11085. Do not you know that at the present moment the description of goods which we are now talking of, (rich figured silks,) are to be bought at Lyons at rather less than 3*s.* a yard?—Yes, I have seen the patterns and prices annexed; they are four doubles, and manufacturers will know what I mean by four doubles. They can be bought at this time in Lyons (figured silks) from 3*s.* to 3*s.* 1*d.* a yard.

11086. Taking the weeks at fifty in the year, and taking twenty yards as the production of each loom, that will give you one thousand yards for the production, as the quantity produced by each loom in a year; multiply that by four thousand, and you will find it will produce four millions of yards, which at 3*s.* a yard will give 600,000*l.* as the value in France?—Yes.

11087. Now from your knowledge of the silk trade, the quantity of this description of commodity produced, and from the opinion that you have given this day before the Committee, as to the total value of the silk manufacture of France, do you think that 600,000*l.* is at all too much to place as the value of figured silks imported from France, on the principle upon which you have just made this calculation?—I consider it much under the amount imported.

11088. Then do you believe that more than 600,000*l.* worth of figured silks are
678. 5 A 4 annually

John Ballance,
Esq.

11 July,
1832.

annually imported from Lyons?—I have very little doubt of it; I have very little doubt that more is imported now than was manufactured in Spitalfields before the opening of the Ports, and my reason is this; the increase of population must occasion an increase of consumption, and the looms would have increased in Spitalfields as the demand increased, had we not been supplied from a foreign market.

11089. Do you think there are 800,000 *l.* worth of goods imported?—I have said that I cannot give any thing like an accurate calculation.

11090. You have no doubt that it is more than 600,000 *l.*?—I have very little doubt that that is the minimum amount.

11091. Can you give any opinion as to the probable value of gros de Naples, imported from Lyons?—I have stated that the value is from 36*s.* to 38*s.* per pound manufactured, and the richer ones will run from 40*s.* to 42*s.*

11092. Do you think of all sorts of broad silk goods imported from France, the value will equal the value of the figured articles?—No; I apprehend the value of the figured is greater than the value of the plain silks imported.

11093. Perhaps you do not think any plain goods come from France worth the notice of the trade at the present moment?—So far from this being the case, a considerable number of plain silks do come from France, and this spring especially, there has been a very large proportion of plain watered silks.

11094. If more than 600,000 *l.* worth of figured silks be imported from Lyons, must not the total import of broad silk approach nearer a million in value; a million sterling, that is?—I have said that the total amount of the importation of foreign silk goods cannot be accurately calculated. It is quite sufficient if we can ascertain the minimum value of this importation, and prove that even this importation is displacing labour directly and indirectly to the amount of 1,500,000 *l.*; and if this be the effect of the lowest calculation of our importations, I leave any honourable Member of the Committee to make his own calculation of the effect produced in our silk districts by the maximum importation.

11095. But must it not, in your opinion, exceed a million sterling, if the quantity of figured is 600,000 *l.*? My opinion is, that the importations from the Continent do exceed a million sterling, reckoning the cost abroad.

11096. Have you any doubt, from the evidence you have heard in this room, of the total imports, one half at least must be in ribbons?—I have not attended to the evidence sufficiently to form an opinion. The ribbon question did not attract my attention; I was not then so frequently in attendance, as during the broad silk question; and I wish to restrict myself more particularly to my own department, of which I can speak with more certainty.

Ambrose Moore, Esquire, called in; and Examined.

Ambrose Moore,
Esq.

11097. YOU are a silk manufacturer, I believe, in the firm of Wilson, Moore & Company?—I am.

11098. How long have you been in the trade?—I have been in business on my own account above 20 years; I have known the trade above 30 years.

11099. Has there not latterly been great distress in the silk trade?—There has; I should state that the principal part of our business is carried on at Spitalfields, but we have a mill at Derby, and we also employ some looms in that town.

11100. Has there not been formerly also great distress in the silk trade?—There has occasionally been great distress for short periods.

11101. Has there been more distress in the silk trade, and has it been of a more permanent nature since 1826 than before that period?—Yes, that is the character of the distress that has existed in the silk trade since 1826, and the distress that has existed since that period may, by its permanency and continuance, be contrasted with that of former times.

11102. It is now of greater extent, and more permanent in its character?—It is so; it formerly generally continued only for a few months, and was occasioned by some changes of fashion or scarcity of silk that affected the trade.

11103. Can you show that there is any connexion between the existing distress and the change of system which took place at the period adverted to, 1826?—Yes, I apprehend that it is solely to be traced to the change of system; the great quantity of foreign manufactured silk goods which now come into this country causes a great want of employment amongst all classes of people in the silk trade, and the effect of that change of system has been to turn the manufacture of England more upon the coarser and lower description of goods, which afford less employment, and to take them from the finer, more difficult and more complicated works; and to these must

must be added, the enormous increase in the smuggling of foreign silks, which, whatever may be said to the contrary, is an undoubted fact.

11104. Is there any thing in the present condition of the trade which has not occurred over and over again at different periods, and which is not perhaps inherent in the nature of the trade?—I apprehend that distress is not at all inherent in the nature of the silk trade; I think the consumption of silk in this country has become now so regular, and is so much worn by all classes, that it is almost an article of necessity as much as cotton is, and that therefore there is nothing in the nature of the trade that should cause distress to arise. Formerly the trade was much more confined to the supply of the upper classes, and was consequently subject to interruptions from changes of fashion, which caused great distress possibly for a few months, but the character of the trade I think now is changed, and silk is an article of such regular consumption that constant employment might be expected in the silk trade, if our Government would give it proper protection against foreign goods; indeed, I do not know any trade more likely to afford regular and steady employment to the work-people engaged in it, nor one more likely to increase, than the silk manufacture of England would do under those circumstances.

11105. Silk has now become a permanent and steady consumption?—Yes, it has; it is worn by all classes.

11106. Has the distress in the silk trade latterly been confined to Spitalfields or Coventry, or has it extended to other places where the silk trade is carried on?—It has been co-extensive with the trade itself; some towns have felt it more than others; Spitalfields and Coventry, I believe, have not been more distressed than Macclesfield and Manchester; the persons engaged in the trade at Manchester have felt great distress. The manufacturers of Manchester will be best able to tell their own story, but if they would tell of their losses during the last year, the Committee would see that they have felt distress, whatever may have been asserted to the contrary; and if the Committee will inquire of the Manchester operatives, which they probably will do, they will find that they also have been in great distress.

11107. You have gone into the subject generally and accurately, no doubt; are you quite convinced the distress has extended to Manchester as well as other places?—I have not the shadow of a doubt of it; I happen to have a copy of a memorial which was presented to the Lords of Trade; it has been mentioned to the Committee before, but I will quote a part of it, that the Committee may perceive I speak correctly. The memorial stated—"It having been represented at your Board, that the throwing trade of Macclesfield and elsewhere has come from those places to Manchester, we the undersigned principal mill-owners of Manchester, beg to remove this erroneous impression; our throwing mills have been unprofitable, and we have, ever since the reduction of duty in 1829, considered their cost as a total loss of the capital used in their erection; and beg to add, that the silk trade at Manchester and its vicinity is in a very depressed and ruinous state."

11108. Is that document signed by the manufacturers of Manchester generally or individually?—It is signed by eight or ten of the principal ones.

11109. Has the distress been in the manufacturing department only, or in other branches of the silk trade also?—It has been in the throwing department quite as much as the manufacturing; there is not a department of the trade that has escaped.

11110. Can you see, as respects the throwing trade, any connexion between the existing distress and the change of system?—I apprehend the mere circumstance of lowering the duties on foreign thrown silk, with such rapidity, is sufficient to connect the distress with the alteration of system; that the Government should expect that no ill effects upon the throwing trade should follow from so rapidly reducing the protection of 9s. 2d. per lb. down to 3s. 6d. on one sort of silk, and 2s. on another, seems to me quite unreasonable, and this cause alone is sufficient to connect the distress with the change of system. The throwing trade has also, as I have already stated with respect to the manufacturing branches of the trade, been in some measure diverted by the treatment of this trade by Government, from the working of the finer sorts of silk, to the coarser and inferior sorts which afford much less employment.

11111. Was there not a great extension of the throwing trade in 1824, and subsequently?—I know it is alleged against the throwing trade, that they very imprudently increased their throwing operations in the face of the law, for admitting foreign silk goods; but if they did do so, the Government of that day, and other

Ambrose Moore,
Esq.

11 July,
1832.

public men who now censure the trade for so doing, by their speeches, urged on the very steps they now condemn. They told the trade that "the cords were now cut which had kept it bound to the earth," and that there was nothing to prevent the silk trade being extended in a manner similar to that of cotton. It can be no matter of wonder that some effects should have been produced by such exhortations. There was not, however, subsequently to the alteration of the law in 1824, any thing like such an extension of the trade as the Government represent, and such extension as did take place has long since been contracted again, so that for a long time past there has been less machinery at work upon silk; and if the fineness of the silk then used is taken into consideration, there is now less throwing done, by a considerable quantity, than was done before the Ports were opened to foreign silks, or even than was done in 1824. The Committee will allow me to instance the town of Macclesfield. There are in that town fewer factories, fewer spindles, and fewer people employed in throwing than there were in 1824; and the machinery at work in that year, it should be borne in mind, could not have been erected after the alteration of system as is often pretended. Factories and machinery are not built and put to work in a short time, but require a long time to prepare, and therefore those at work in 1824 must have been built in 1823, or before. I believe that the same will be found to be the case in other districts, in the West of England, and at Congleton. At Macclesfield it is very striking.

11112. But did not the Macclesfield throwsters, in 1824, or some subsequent year, advertise for 5,000 hands; at least it was so stated in Parliament by Mr. Huskisson?—It was so stated in Parliament certainly, and one house did advertise; their hands were rather unruly at the time, and it was with a view to keep them in order, but it produced no effect in bringing hands into the town, for not a single hand came in consequence of it, nor was it in fact ever intended to produce such effect. All these circumstances, relative to that advertisement, were stated before Mr. Huskisson even mentioned it in Parliament, and it has been more than once mentioned against the whole throwing trade of England as a specimen of their folly, when in point of fact it was the act of an individual house, and merely to accomplish the purpose I have stated of frightening their hands on the moment, because they were acting unreasonably.

11113. You mean it was a local transient act, and not at all characteristic of the state of the trade generally?—Certainly, it was not the act of Macclesfield, but only of an individual.

11114. There has been, however, since 1823, a great increase in the quantity of raw silk imported into this country?—Yes, undoubtedly there has, since 1823, been an increase in the import of raw silk. The silk trade had been regularly increasing, and was in a very prosperous state before 1824, although it was then burthened with duties, which yielded I believe about three quarters of a million to Government. It is worthy of remark, that that increase was always in the raw and not in the thrown silk; and that circumstance shows, that the effect of the duty on the thrown was to produce an importation of raw silk; and it also accounts for the regular and gradual increase of throwing mills in England previous to that time. This tendency to increase had been for years checked by the very high prices of silk, as well as the heavy duty on the raw silk; but as soon as the circumstances of the times had brought silk down to a moderate price, an increased consumption of it began to be apparent. This was the state of the case in 1824 when the Government first announced its intention to reduce the duties on raw silk, and that reduction undoubtedly assisted in the extension of the trade. The excitement which the Government itself created in the trade had some effect, but it is not in my opinion consistent with the fact to attribute in any but the slightest degree, the increased consumption of silk in 1824 and 1825 to any thing else than that increasing desire for silk goods which had long manifested itself, and which had then become much stronger than at any former period. It should also be remarked, that before foreign goods were admitted, the increase in the importations of silk was chiefly in Italian, a proof that the trade was extending principally in the manufacture of the better sorts of goods; but that since that period the use of Italian silks has very much fallen off, and there has been an increase in the use of those of the East Indies and Turkey. The total average quantity, however, of all sorts imported since 1825, falls short of the average of 1824 and 1825, and so large a proportion of it being coarse, it does not afford near so much employment for the mills, as the finer sort imported from Italy, besides that a considerable quantity is used for purposes

purposes with which neither weavers nor throwsters have any thing to do, such as sewings, trimmings, fringes, &c. &c. The hosiery trade has also increased, and uses a larger proportion of the silk imported than it used to do.

11115. Was not there a larger proportion of knubs and waste than formerly?—I have not taken that into account.

11116. Do you believe that the quantity of sewing silk manufactured in this country has increased?—I apprehend it has.

11117. Are you aware that Mr. Harter, who is a manufacturer, stated that there were considerable exports before 1824, and that there had been none since?—I was not aware of that; I have not looked at it with reference to exports, but as to the quantity made now. I have understood, and I believe it, that more sewing silk is made in this country than used to be.

11118. Do you mean that the home consumption is increased to an extent greater than the previous export?—I know nothing of the export, and therefore I do not wish to give an opinion about it; but I believe the manufacture of throwing silk has increased, from what inquiries I have made. I understand sewing silk very much more used in this country than it used to be, the low price causes it to be applied to a vast many purposes which it was not used to be applied to.

11119. You have stated, that there has been a great increase of the importation of coarser kinds of silk which you have accounted for, has there not also been a great increase in the importation of Italian silk since the year 1824?—I am talking of the importation of Italian silk since then.

11120. Of raw silk?—Taking raw and thrown together.

11121. What has been the importation of Italian raw silk since the year 1824, as compared with the time previous to that year?—It is larger, undoubtedly.

11122. And putting the years 1824 and 1825 entirely out of the question, has not the importation subsequent to the year 1825, been very much larger than the year previous to 1824?—Of course it is my duty to answer the question; but I do not think in an examination of this question, the Committee ought to leave the years 1824 and 1825 out of the calculation. I always must protest against that view of it, because it is unjust and injurious to the silk trade. The general importation of raw silk since 1826, is greater than it was previous to 1824, but there is one year, 1826, in which the importation is less than it was before 1824. The silk trade unquestionably, speaking generally, has been on the increase for many years, but that increase has not continued since the opening of the Ports to foreign goods, on the contrary, since then it has gone back both in quantity and also in the quality of its productions. The importation of Italian raw silk had been gradually increasing for many years previous to 1823, and in that year the quantity of raw imported from Italy, was nearly double what it had been ten years previously, indeed if you take the average of 1814, 1815 and 1816, the importation of raw silk in 1823 had trebled, and this increase was before there was any idea of taking off the duties, or of making any alteration of the system; I think that all this shows there was a great tendency to increase, quite independent of the plans of Government.

11123. The raw silk had been previously burthened with a considerable duty, and it was expected on the removal of that duty, the trade would increase?—I perfectly recollect the period, and I am satisfied from all the appearances at that time, that if the duty had not been taken off the silk trade would still have very much increased; but I consider that taking off the duty on raw silk of 5s. 6d. a pound, very much assisted in the extension of the manufacture, as the prohibition continued for two years longer. I think the fairest way of looking at the effect that foreign competition has on our manufacture, is to compare the present condition of the trade with what it was in 1824 and 1825, after the burthen of duty was removed, and before foreign goods were let in, for I cannot consider it at all fair to compare its present state, that is, as to its extent, with the period when it was burthened with enormous duties and when the price of the material was from other causes so high. The comparison I propose, will show distinctly and separately the effect of taking off the duty on the raw material, and also the taking off the prohibition against foreign goods, which I think ought not to be mixed up together.

11124. But if on the other hand you take the prohibition united with the reduction of the duty on raw silk, it appears that the effect of the two united, has been rather to increase the consumption of Italian silk than diminish it?—I think not; but that the circumstance of taking off the duty, or the burthen under which the silk trade lay, showed what the silk manufacture of this country was capable of.

678.

5 B 2

11125. Are

Ambrose Moore,
Esq.

11 July,
1832.

Ambrose Moore,
Esq.

11 July,
1832.

11125. Are the Committee to understand this as your opinion, that the silk trade has been a progressively increasing manufacture in this country, that you felt yourself entitled to infer it would continue to increase, and that when the duty was removed on the raw material, that it would increase with a still greater rapidity than it had done before; and that in fact it has not increased in proportion, so rapidly since as it had done before the duty was removed?—Certainly the taking off the duty, and letting the prohibition remain, gave the silk trade of this country an opportunity of showing that it was capable of expanding in a great degree; and this is to be seen by the importation and consumption of silk in 1824 and 1825.

11126. If the price of silk had been the same that it has been since 1824, and there had been no importation of manufactured goods from France, do you think that the consumption of silk would have been greater than it is now, by all that difference which the weight of manufactured goods imported from France would give?—I am quite satisfied it would.

11127. Did the increase from 1821 to 1826 depend on the material, or a growing taste on the part of the public?—I believe there was a growing inclination to wear silk, and it arose partly from the reduction in the price of silk, which had been at a very high price during the war, and particularly while the intercourse with the Continent was very much interrupted. It was, at one time, as high as 120s. a pound; it had been more valuable than silver; and it was not likely, whatever might be the taste of the public for silks, they could be very extensively worn while that was the price of the material: but as soon as the interruption, occasioned by the war, had ceased, and the price became low, there was then a tendency to increase, quite independent of the French manufacture, and of all the goods she was making or could send here. I should be glad to put before the Committee what was the consumption of the years 1824 and 1825, and to compare those two years with the six years that have elapsed since then; I know it is always contended by the Government, that we should leave out of view 1824 and 1825; but it is my duty to contend, that 1824 and 1825 ought to be taken into the account; and I wish respectfully to call the attention of the Committee to this point.

11128. Do not you think that the great increase of manufacture that took place in the years 1824 and 1825, after the reduction of the price of silk, is an evidence of the great increase of consumption and the great prosperity that would have taken place had it not been for the interruption, and the admission of French silk goods?—Certainly all the goods were sold as fast as they could be made.

11129. Are you aware that the years 1824 and 1825 were years of great speculation and excitement?—They were in mining companies, foreign loans, and many most absurd schemes; there was no silk company; no speculation in silk; silk was bought and wove, and sold and worn; there was no speculation in silk.

11130. Then you do not believe there was an increased manufacture of silk goods at that time, in consequence of the great excitement that prevailed among the trading and commercial world generally?—I believe not. The great increase had commenced before the Government plan was known, and was in full operation before any of the speculations and excitement in the commercial world took place.

11131. I think you stated the goods were sold as fast as they were made; and therefore it was not a speculative manufacture?—They were sold as fast as they could be made; and those who bought them of the manufacturer sold them as fast to the public. I myself very well recollect that that was the case.

11132. In point of fact there was no speculation, and in consequence there was no loss?—Certainly.

11133. Was that the time that the Hibernian Silk Colonial Company took place?—There was a company of that sort; but it had no immediate effect on the silk trade, nor had the silk trade any thing to do with it. I believe Mr. Huskisson was one of the promoters of it; what his ideas were of conferring advantages upon the silk trade by it I do not know.

11134. Did not the price of the material advance very much in 1825?—Yes; because there was an increased demand for it.

11135. And was not the spring of 1826 a time of extraordinary bad trade at Macclesfield?—I do not know whether it was at Macclesfield particularly, I believe it was; it was in London.

11136. Did not that arise from the anticipated admission of French goods, which were to be allowed to come in in July?—Entirely, in my judgment; there was no buyer of goods that I ever addressed myself to in that half year, wanting him to buy

buy goods, who did not give this answer "the French goods will be in in July, and we will not buy till we see the effect their coming in will produce;" that was the invariable answer.

Ambrose Moore,
Esq.

11 July,
1832.

11137. At what period was that?—The latter end of 1825, and the first half of 1826.

11138. Did not the distress prevail at Macclesfield at the end of 1825, and at the early part of 1826?—I do not know, I think it is probable; but it was the latter end of 1825, and the early part of 1826, that distress existed in London.

11139. Was not the cotton trade bad at that time in your recollection?—No, I do not know that it was.

11140. Do you remember a discussion in the House of Commons, in 1826, on the state of Macclesfield?—On the state of the silk trade, there was a discussion.

11141. Then it is your opinion, that the general excitement that preceded the panic, had no influence on the silk trade?—I believe none; I believe every body was rather in better spirits that year in all their transactions, certainly in much better spirits than they are now; but that it had any material effect on the silk trade, I entirely deny; and the best proof I can give is, that the goods were regularly disposed of to the public as they were made.

11142. From the circumstance of the manufacture having been worked up for consumption and not for speculation, you think the manufacture could not be embarrassed?—Certainly.

11143. Do not you think the small importations of silks in 1826, was occasioned by the state of things which then existed in England?—I think it was occasioned by the state the silk trade was in at that time.

11144. Do you remember the state of the silk trade immediately after the French goods were admitted?—Yes, I remember the whole of that year was a very bad one.

11145. Was not the trade very brisk after those goods were admitted?—Not in 1826.

11146. Not in the winter of 1826?—Taking 1826 generally, it was what I call a bad year; it was found by experience, a bad year by the silk manufacturers.

11147. Was not the fact, that so large an importation of French goods as had been anticipated, did not take place, because the description of commodity prepared by the French manufacturers was not precisely that which the English had been accustomed to?—The anticipated evil was mitigated partly from the circumstance the honourable Member has referred to in his question, and partly by an arrangement made by the Board of Trade, to admit goods only of certain lengths; which arrangement was intended expressly to prevent the coming in of any large quantity of goods which the French might have ready to pour into this market upon the opening of the Ports, and which by coming in suddenly might very greatly aggravate the distress then existing in the silk trade.

11148. The Government by that Act, seemed to be afraid of their own measure, did they not?—I apprehend they were.

11149. At any rate they did not wish to bring it into operation with too great rapidity?—No, it was a good scheme to prevent too great a quantity of French goods coming in at first.

11150. Do not you think that the French manufacturer was sufficiently acquainted through the smuggler, with the demand in England for proper articles suited to the English market?—No, I do not think he had any thing like the knowledge of the English market that he now has; I think from the underhand way in which the silk trade between England and France was carried on at that time, by means of smuggling, it was not at all likely that the French manufacturer should acquire the same knowledge of the demand by the English public, as he has now the opportunity of doing.

11151. Were persons of as large capital at that time concerned in smuggling as it is stated are now?—I believe not, I should say certainly not.

11152. Do you not consider it to be the business of this Committee to inquire into the joint effects of the two changes that have taken place in the silk laws; namely, the removal of prohibition and the reduction of duty on raw silks?—I consider the Committee should inquire into both, but I do not think they should join them together; they are not necessarily connected, and to understand the subject perfectly, they should inquire into the effect of each separately.

11153. Then do you consider it a fair mode of inquiring into the joint effect of the two, to take the two years, when one of these changes had been effected, and

Ambrose Moore,
Esq.

11 July,
1832.

the other had not, rather than take a series of years previous to the two, and a series of years subsequent to the two?—I think they ought to be separated, and for this reason, unless you do so you will not see which of the two measures has had a good and which a bad effect upon the English silk manufacture. I have already shown that the goods made in 1824 and 1825 were made for actual consumption, and were sold and used as fast as they were made, and this proves what was the demand of the English public for silk goods; a very greatly increased demand as soon as the duty was taken off raw silk; which demand would have been continued to be supplied by the English silk manufacturer had not French goods been allowed to be imported; as I have shown that there was no speculation as to the silk used in 1824 and 1825, I think I am entitled to ask the Committee to look at the two questions separately.

11154. How does the average of the years 1824 and 1825 compare with the last six years?—The total average consumption of the years 1824 and 1825, of thrown and raw silk, was 3,642,969 lbs. and the total average consumption of the six following years was 3,612,522 lbs., showing a falling off of 30,000 lbs. per annum, instead of there having been any increase.

11155. And comparing Italian with the other sorts of silk?—Comparing Italian with the other, the coarser sorts of silk, it will be found that the consumption of Italian silk has been decreasing, and the consumption of the coarse description of silk, that is the East India and Turkey silks, has been increasing; the average of the consumption of Italian silk for the years 1824 and 1825, is 1,937,094 lbs., and the average consumption of the six subsequent years in Italian silk is 1,626,816 lbs., showing a falling off in the use of Italian silks, which are applied to the making of the finer description of works, of above 300,000 lbs. per annum. Then the average consumption of 1824 and 1825, in coarse silks, is 1,705,875 lbs., and of the six subsequent years 1,985,706 lbs.; so that the effect of the alteration in the laws has been to deteriorate the silk manufacture of Great Britain in this respect that it has turned it from the manufacture of the richer sort of goods, such as are calculated to uphold a manufacture in the estimation of the public, to the manufacture of coarse and inferior goods; besides the consideration of the smaller quantity of employment which these coarse silks give to all persons engaged in the trade.

11156. You have stated that there are several branches of manufacture in which silk is used to a greater extent now than heretofore, and which has nothing to do with throwing or weaving?—Yes.

11157. Then it follows that, if the finer kinds of silk manufacture had continued as prosperous as heretofore, taking into account the increase of the population, the cheapness of the article and the taste of the public for silk goods, there ought in your opinion to have been a greater increase than now appears?—If after the duties had been taken off raw silk, the prohibition had been continued for some years longer against foreign goods, I do not doubt that the manufacture of Great Britain would have very much increased, and particularly in that class of goods which would have been made from the finer and better sorts of silks, and that the importation of Italian raw silk would have very much increased instead of falling off as it has done; the falling off in the importation of Italian raw silk is as much as the whole of the silk mills of Manchester can throw; I may here be allowed to remark that these Manchester mills, which it is said have ruined all the rest of the throwing trade in England, cannot throw more than 300,000 or 350,000 lbs. per annum, and that partly of coarse and partly of fine silk.

11158. Did the throwsters generally extend their operations in the face of the new system adopted in 1824, which they said they were so alarmed at?—No; I believe that there has been no great increase in the throwing establishments of England since, but that the great increase took place before 1824, and was occasioned by the gradual increase of the trade. The Committee can have better evidence from Macclesfield upon that subject than I can give them; but I will just advert for a moment to what is the state of that town: in 1824, there were fifty-eight mills at work, and there are now forty-one at work, that is the state of the town of Macclesfield; therefore no mills that have been erected there since, nor any thing they can have done there since, can possibly account for their having fewer mills at work than they had in 1824.

11159. Has there been such an importation of raw silk into England, as would satisfy the mills of England which were in existence before the change of system in 1824?—I believe not; I believe if every mill was destroyed that has been erected since, or if the mills in England were put into the condition they were at that moment,

Ambrose Moore,
Esq.

11 July,
1832.

moment, that they would not have now full employment, the kind of silk that we have chiefly to throw being so much coarser, and some of it not being thrown at all.

11160. Still you must admit that the quantity of raw silk now imported is much larger than it was before the alteration of the system in 1824; how then is it that the mills are not so well employed as they were at that period?—I think the answer to the last sufficiently answers this question; but if, instead of looking at the weight of silk imported, the Committee would for a moment consider it as a matter of length, if we look at it as a thread, to be measured by yards, instead of looking at it as so many pounds weight, it will be quite clear that from the coarseness of the great part of the raw silk now imported, there is very diminished employment for the silk mills of England. Those who wish to make out that it is not foreign competition, and not the change of system in the silk trade, that has destroyed the English throwster, are constantly referring to the weight of silk imported; but it is not fair to look at the question in that way, and it is still more unfair to do so after this explanation of the apparent inconsistency between the weight of silk and the quantity of employment it gives, has again and again been made.

11161. You have stated there is a great quantity of silk now imported not thrown at all, or only partially thrown, and that there is a larger quantity of it thrown coarser than before?—Yes; the thread of silk is much coarser than it was, and a considerable quantity is used for purposes that require little or no throwing.

11162. It has been said that the real mistake was the levying any duty at all on the thrown silk; that the whole of it should have been taken off, and that if it had the importation would have been just the same as now, neither more nor less; is that your opinion?—No; I have no doubt at all that the importation of thrown silk depends on the duty on thrown silk. It has been repeatedly and confidently stated that we are never to expect more than about the same quantity; it is said to be “a curious fact,” that we have always had the same quantity of foreign thrown silk in under all circumstances; but it will be found that the quantity of foreign thrown silk that comes into this country will depend on the degree of duty that there is on it; and that as you lower the duty on thrown and encourage its importation, you will discourage and will lessen the importation of raw; and if it were not so, there would be no way of accounting for our having been standing still for sixty or seventy years in the import of thrown silk, while the silk manufacture of Great Britain has so extended itself, and the imports of raw have kept pace with that extension. It was the duty on thrown silk that encouraged the original building and the gradual increase of silk mills in England, and made it the interest of the Italians to raise silk to send to this market in a raw state; but as the duty has been gradually lowered, the Committee will perceive that the importation of Italian thrown silk has been increasing, and that of raw has been diminishing; and if the present system should be followed up, we shall in the end have all our silk from Italy in a thrown, and none of it in a raw state.

11163. From the amount of the average quantity of silk consumed in the last six years, does it not appear that while France has been increasing in her silk manufacture during the same period 50 per cent, this country has not increased?—Certainly that is the case.

11164. It has also been said, that the introduction of thrown silk into this country arises not from its superior cheapness, but from the necessity of having a certain quality of that silk from Italy which cannot be thrown in this country; are you of that opinion?—No, I am not at all of that opinion; the assertion has often been made at the Board of Trade and other places, that it is necessary to have a given quantity of foreign thrown silk, and that that quantity and no other quantity will come, but there is not the slightest foundation in fact for the assertion.

11165. Has it been explained why it was necessary to have a certain quantity of that silk, by those who held that opinion?—No, I have never heard it explained. It is stated sometimes that foreign thrown silk is necessary to make velvets, at another time that it is necessary to make satins; but the fact is not so. It is a matter of price; if at any time foreign thrown silk can be had in the market cheaper than English thrown silk, it will be bought, but not from any preference because it is foreign; that is the general course; a few persons may be prejudiced in favour of one or the other; but that is the general feeling. As to foreign thrown silks being necessary for any branches of the English silk manufacture, it is entirely a mistake; the richest and best works are made with English thrown.

11166. Is the distress in the throwing trade local or general, arising from the transfer from one town to another; for instance, from Macclesfield to Manchester?

—I believe

Ambrose Moore,
Esq.

11 July,
1832.

—I believe it is general; it certainly does not arise from the transfer of it from one place to another. It has been attempted to account for the distress of Macclesfield by saying the trade has gone to Manchester; when during the last winter, we complained of distress in the throwing trade, the Government replied to us, that the distress of Macclesfield was easily to be accounted for from its transfer to Manchester, and that Manchester had upwards of 300 horse-power applied to silk throwing; while the fact is, that there are not above 150 horse-power applied to it in that town, and that the falling off, in the throwing trade of Macclesfield alone, is greater than the whole throwing trade of Manchester. I do not know any part of England where the throwing trade is carried on, to which the depression in that trade has not extended.

11167. At this moment can you buy the foreign thrown silk cheaper than you can buy the raw of an equal quality, and throw it yourself?—At this moment I can buy the foreign thrown silk cheaper than I can buy the raw, and throw it.

11168. Are you aware that any improvement has taken place in silk machinery, either in throwing or weaving, since 1826?—I believe there were quite as good throwing machinery put up before 1826 as has been put up since; and as to weaving machinery, there is only the Jacquard worth speaking of; and that was introduced and was at work in England before 1824, and there has been no improvement in it since.

11169. Has the skill of our artisans improved since?—No; I think their workmanship has fallen off; such, at least, is the case in Spitalfields.

11170. What do you attribute that to?—I attribute it the low prices that are paid in Spitalfields, which have induced great slovenliness of workmanship. The Committee need not, I think, travel further than their own minds to know that that must inevitably be the case; whenever you pay a low price, you generally get an inferior article; and it will be the case with workmanship as with every thing else; in short, my experience is that workmanship is worse than it was.

11171. In both departments do you mean, or only in the weaving?—I was then referring to the weaving; but I think that silk, generally speaking, is not thrown so well in England as it was when the prices were higher.

11172. As to capital; is the capital of manufacturers and throwsters greater or less now than it was?—There is decidedly less capital employed in both branches of the silk trade than there used to be before the alteration of the system; very far less. Most of the throwsters are ruined, and a great many manufacturers also, and some of them are men of capital; but a great many of them are men of no capital.

11173. Then it follows that the three points, on which Mr. Huskisson is supposed mainly to have relied, namely, the superiority of our machinery, the skill of our artisans, and the extent of our capital, have entirely failed?—I consider it an entire failure, as far as those three principles are concerned.

11174. Had not you in 1824, when the alteration of the law was under consideration, some intercourse, personally, with some of the members of Government, on the subject of that alteration?—Yes; I had several interviews with some of the members of Government.

11175. What, in your opinion, led the Government of that day to a change of system in the silk trade?—I believe they were led to the consideration of the question of the silk trade chiefly from the Committee appointed by the House of Lords in 1821, on the Foreign Trade of the Country. They wished to extend the silk manufacture of this country, and there was some expectation on their part, that they could give us an export trade. They also wished to prevent smuggling, though I believe that was not by any means their principal motive.

11176. Were the operations of Government founded, do you apprehend, on the abstract principle of free trade, or on the less sound though more practical principle of putting an end to the contraband trade?—I have already stated what I believe were the views of Government, the advocates of the present system now always pretend, that there was such a dreadful degree of smuggling that the object of Government was to put a stop to it, and that that was the sole object; but I apprehend their views were of a more general nature, and that putting a stop to smuggling was not their principal motive.

11177. Did the proposal for altering the system excite much alarm at that time in the trade?—Yes; there was generally, with the exception of a very few individuals, great alarm in the silk trade at the proposed alterations.

11178. What was the ground of alarm?—There was in the trade, an opinion that the French silk manufacture was a very powerful and extensive one, and in that respect their alarm was a well grounded one, they seemed to have a correct notion of

of the extent and importance of the French manufacture; another ground was, that our trade had, up to that period, been burthened with heavy duties which had kept silk dear in this market, and our labour in the principle weaving districts of Spitalfields had been regulated and restricted by the magistrates of the districts, so as to keep down improvements in the richer branches of the trade. They considered the advantages which the French were in possession of from the growth of their own raw material, their low wages, the perfection they had attained to, while we had been kept under burthens and restrictions, and from their already enjoying the markets of all the civilized world, and that consequently there was a probability that this market would be overwhelmed with French goods; these were the general impressions of the trade, and their grounds of alarm.

11179. But was not time asked for persons engaged in the trade to withdraw their capital and to save themselves from the extraordinary and unequal competition that was expected?—It was certainly asked that time should be given; the object of some individuals was undoubtedly to retire from the trade, but the general motive in asking for time, was the better to enable the trade to meet the competition that was coming on.

11180. What time did the trade require from Government to get out of that sort of artificial burthensome state which the trade appeared up to that time to have been kept in?—The trade was very much pressed for a period of seven years between the time of being disburthened from the duties, and having to enter into competition with a trade which had never been burthened at all.

11181. What time was granted?—Two years and a quarter; *viz.* from March 1824 to July 1826.

11182. From your subsequent experience, do you think that time was sufficient for the purpose?—No; I am of opinion that it was by no means sufficient, it was quite impossible for the trade to get out of such a state as the silk trade then was in, into that state which should make it safe and reasonable for them to compete with the French. I know there are persons who do not enter into the subject considerately and who do not understand the subject, but pursue a theory regardless whom it may injure, who say that no time ought to have been granted; these persons have no mercy on those who have property embarked in the trade, who have capital invested which cannot be turned to any other purpose, they have no consideration for such things at all, but contend that a Government may tax and burthen, and restrict a manufacture as long as they please, and encourage persons under such a system to invest large sums in manufactories, protected to a given extent by law, and that as soon as ever it is the pleasure of Government to remove these burthens and restrictions, they may also at the same moment remove all protections, and require you to jump out of this artificial into a natural state all at once, and be prepared to compete with all the world. The proposal must strike every person as unreasonable and unjust, to say nothing of its being unwise. To extricate the silk manufacture of England from the effects of the high duties, the restrictions on its labour and all its old habits, and to prepare it safely for competition with such a manufacture as that of France, a long period should have been given, and if it had, I do not doubt that a very much more successful result would have been attained; as it was, the two years' interval I have mentioned was absorbed almost entirely by the efforts of excitement made by the Government of the day, and afterwards, as the time approached for the letting in of French goods, by the greatest alarm and panic. If I might venture to say what I think has been the great mistake of Government in this question, I would say, that it has been the great impatience always shown to hurry the silk trade on to a state of freedom from protection faster than the matter was capable of, and this only ultimately retards the very object aimed at.

11183. The Government, of course, at that period removed all the existing restrictions on the labour and the mode of working?—Not at all, it was no part of their plan; the Spitalfields Act was left in force, and the Government proposed we should actually go into this contest with our hands tied up as to labour, and without the possibility of making any improvements in our manufacture. It has been stated before the Committee, that a "higher order of intellect is applied to the silk trade in France than is so applied in England." I do not think the remark a very civil or a very judicious one towards a large manufacture in which there are a number of most intelligent persons, and mechanics of great talent, but I think it is rather applicable to the respective Governments than to the persons engaged in the manufacture. There was, in my opinion, very little intellect displayed by our

Ambrose Moore,
Esq.

11 July,
1822.

Ambrose Moore,
Esq.

11 July,
1832.

Government in the way in which they should set up and have carried on this competition. That the Government should first begrudge us any time to prepare, then give us two years for the purpose, and then, by continuing in force a law such as the Spitalfields Act, attempt to prevent our improvement, would seem almost impossible; but such was the fact. The regulations under the Spitalfields Act, among other things ordained, that if any thing was woven by machinery, it should be paid as if done by manual labour, restricted the number of threads to the inch, said that if an article were made partly with cotton it should be paid as if made wholly with silk, forbid you to ornament any but certain sorts of velvet with a bias edge, and directed that works should be made this way or that, according to the judgment of the magistrates at quarter sessions; and these regulations were all enforced under a penalty of 50*l.* for every violation. The forcing of us into competition with France with these restrictions upon us, might justify the remark I have alluded to as applied, not to the trade, but the Government; I think it presents, at all events, a contrast very strikingly in favour of the Government of France, which always seems to take pleasure in listening to the wants and wishes of the silk trade of that country, and in promoting every improvement in it, while in England the silk trade is on all occasions treated with the greatest distrust and suspicion, and every preference shown to the French.

11184. Was not the Spitalfields Act repealed soon after?—Yes, it was repealed, but it was by the exertions of about half a dozen persons in the trade, and it was at an expense to these persons, of about 1,500*l.* Is not that a proof of what I stated, that the trade owes no gratitude to the Government? This 1,500*l.* was expended in obtaining the repeal of a law, which if left in force, would have prevented the least chance of successful competition with France, and it was paid out of our pockets, and part of it given in fees to the Lord Chancellor and other officers of the two Houses of Parliament. This surely was not the way to treat the silk trade of this country, and at the same time lay claim to credit for enlarged and enlightened views respecting it; and as we are now petitioners before Parliament, and have an opportunity of stating our grievances, I hope it will not be taken amiss if I state that the silk trade is never looked upon or treated with that consideration and favour which I think we are entitled to from our own Government.

11185. Your statement is, that the repeal of the Spitalfields Act formed no part of the plan of Government in the alteration of the law?—The complaint I mean to lay before the Committee on the part of the silk trade is, that we are charged with having had time to prepare for entering into this competition, and that we made none but a bad use of the time, whereas in point of fact, the Government proposed we should go into it with our hands tied up as to labour, from which restriction they refused to release us, that we effected our release ourselves at a great expense, and we did it not only with Government not assisting us, but actually with the Cabinet Ministers opposing us and canvassing against us.

11186. In the various statutes that passed connected with the alteration of the law, the repeal of the Spitalfields Act was not one of them?—Certainly.

11187. But it was an Act that passed in consequence of the private solicitation of the manufacturers of Spitalfields and London, who thought themselves interested in the repeal of the Spitalfields Act?—Yes.

11188. And in its repeal, you were not assisted but opposed by the Cabinet Ministers?—I know that three Cabinet Ministers canvassed against us to get votes against us in the House of Lords.

11189. Did that Act pass as a private Act?—It did.

11190. With all the expense incident to a private Act?—Yes, with the usual fees paid on private Bills to the officers of the two Houses, and great expense in hiring counsel.

11191. It had been attempted before had it not?—Yes.

11192. And was thrown out after a Committee had sat on the silk trade in the House of Lords, and approved of the repeal?—Yes; it was introduced at first, with the assistance of Mr. Huskisson, who was then President of the Board of Trade, into the House of Commons, and it passed the House of Commons, and it went up to the Lords; and in consequence of the opposition of the Cabinet Ministers, it was referred in the House of Lords to a Select Committee, that Select Committee heard counsel and witnesses, and reported in favour of the Bill; but notwithstanding that report in favour of the Bill, the parties to whom I have referred, opposed it in the House; and it was altered on the third reading in such a way as to render it perfectly nugatory, and therefore it dropped that session. The next session

session it was introduced, and carried in opposition to the canvass of three Cabinet Ministers, who got all the peers they could to vote against the Bill.

11193. There is no doubt of the propriety of the repeal of that Act?—None at all.

11194. And you complain that there was not that paternal solicitude on the part of the promoters of the great change, as there ought to have been, or they would have proposed to repeal the Spitalfields Act as part of the measure?—I complain of it in two respects; I say it shows our Government neither took a kind nor an enlightened view of this question as respects the trade, and it shows that they are not entitled to complain that we have not done all we could to meet the competition with France, since they not only not put us in the way, but they actually opposed our getting freed from this restriction; that although the weavers of Spitalfields were much prejudiced in favour of the Act, I do not think they had generally taken any unreasonable advantages of it in respect of the wages they obtained. If the Act had not been in existence, I think the greater part of the time they would have obtained higher wages. The greatest objections to it were, its interference with the manner in which the works were to be made; and the prices also that were fixed by it were much higher than could possibly be given now.

11195. It was injurious to you, as fettering your arrangements with regard to particular articles?—It was incompatible with the state of the trade, as it was in future to be carried on. A competition with a foreign manufacture, while that law existed, was out of the question.

11196. Did not the Government express to the trade their intention and confident expectation that the regulations should be such, that no greater quantity of French goods should come in after the removal of the prohibition than had previously been smuggled into this country?—They did; Lord Liverpool stated that it was not the wish or intention of Government, that the quantity of French silk goods coming into this country should be increased, but only that they should come in in a legal instead of an illegal manner.

11197. And in point of fact it has resulted, has it not, that the quantity introduced, by illicit means alone, now greatly exceeds what was introduced by illicit means prior to the prohibition?—Yes, undoubtedly the quantity smuggled has greatly increased; and as to the whole importation, those who state it at the lowest, and who think the alteration of the system a favourable one, admit that four times the amount is sent from France to England than was sent before the alteration of the system; and I have no doubt that it is double that, that is, that eight or ten times as many French goods now come as were smuggled in before the alteration.

11198. In your negociation with Government, was that a matter of most anxious solicitude on your part, and that of the other persons engaged in the silk trade?—It was.

11199. And did the Government at that time express themselves most confident and decidedly on that point, that there would not be any greater quantity imported than was then smuggled?—Certainly, it was stated over and over again.

11200. Were you convinced that such would be the case at the time?—My own impression was different from that of others in the trade; I was rather sanguine in my expectation of benefit from the change.

11201. You supposed Government had means of information not possessed by the trade in general, and therefore you were disposed to place confidence in their repeated assertions?—I placed confidence in this, that they could and would collect 30 per cent.; an engagement which they have never fulfilled.

11202. But you believed they had the power?—I believe then and still believe that they have the power; I do not mean to say, that the Government at that day had any idea of encouraging a smuggling trade; but I do say this, that it is the duty of the Government to prevent it, that they have the power of doing so in great measure if they please, and that they have never tried in good earnest to do it.

11203. When you say they have not carried into effect their intention of collecting 30 per cent., what do you mean?—I mean that there are so many goods coming into this country, smuggled in at a much lower rate, perhaps 15 per cent.

11204. But does not the rate in some cases much exceed that?—I am not speaking of the legal rate. What I complain of is, that they do not collect the duties, that there is no sufficient endeavour used to prevent smuggling.

11205. So that in point of fact so much as 30 per cent. is not collected?—Certainly not, on an average. The goods that pay the duty may average that, but a

Ambrose Moore,
Esq.

11 July,
1832.

Ambrose Moore,
Esq.

11 July,
1832.

very large proportion of the silk goods imported are smuggled, so that the law is in great measure a dead letter.

11206. Do you consider that when the Government undertook to reduce the duties, they had taken means to provide against smuggling?—Smuggling has increased ever since the alteration of the system, and therefore I am inclined to think Government never did take any means to stop it.

11207. That is what you mean when you state Government have not fulfilled their engagement?—Yes, as far as protecting the silk trade goes, by collecting a duty of 30 per cent. I remember Mr. Huskisson's words were, that Government "both could and would collect 30 per cent." That was a distinct pledge to the silk trade, and it was also a part of the plan of Government; and I think I may fairly say that it was part of the engagement which they entered into with the trade, that the throwsters should be adequately protected; they started with a duty of 7s. 6d. a pound on thrown silk, and they kept to that engagement but a very short time; and I consider that a distinct breach, I will not say of a written treaty, because I cannot put my finger on an actual written engagement, and say here is a breach of it; but the fair understanding was, that they would make such regulations that there should be no greater importation of goods into this country than there had been already smuggled in, and that they would protect the English throwster, in short that they would protect both classes of the trade.

11208. You believed that some extraordinary regulation would be adopted in order to ensure the collection of 30 per cent.?—Certainly that was what Government undertook to do.

11209. You knew you had the good faith of Government pledged, and you thought they would have the power, if they chose to exercise it, of carrying it into effect?—Certainly, it was the expectation of the trade, and I consider the Government fairly bound to do that which they undertook, and which they at the time declared their ability to perform.

11210. You have stated you were concerned in the alteration of the law in 1824, did you concur in the reduction to 5s. in the pound in 1825?—No, it came by surprise on the trade; it was done by a Treasury Order, sent to the Customs, to reduce the duty from 7s. 6d. to 5s. It was, I believe, a great injury to some individuals, as it affected their stocks on hand, and I consider it a departure from the engagement that Government had entered into to protect the throwster; at all events I considered it was the very lowest point the Government could reduce the duty to, if they meant to have any regard to their engagement.

11211. Then did you, in 1829, concur in the reduction of that duty from 5s. to 3s. 6d. a pound in organzine, and from 3s. to 2s. on foreign tram?—Certainly not; I had nothing to do with it either on one side or the other; but I certainly disapproved of it, and thought it would be, as it has proved, most ruinous to the trade.

11212. Was the trade, to your knowledge, consulted on the reduction of the duty in 1829?—There was a great many representations made to the trade and to Government against the reduction of the duties; I believe a few individuals, not interested in throwing mills, and who thought they should individually benefit by getting thrown silk cheaper, represented to Government that it would be a desirable thing to take off the duty.

11213. When you say representations were made, do you mean they were made before the reduction or afterwards?—Before it had taken place.

11214. Were you consulted at all at that time, having been consulted before, and what is your opinion of the effect of the change in the duties which took place in 1829?—I was not at all consulted.

11215. But you were consulted in 1824?—In 1824 I was, by Mr. Huskisson; but in 1829 I was not consulted at all.

11216. What is your opinion of the effect of the change which took place in the duties in 1829?—The whole alteration that took place in 1829, both the lowering the duties on foreign goods and lowering the duties on foreign thrown silk, has been most injurious to the silk trade, and accounts, in a great measure, for the distress that has existed in the trade the greater part of the period that has since elapsed.

11217. Can you explain to the Committee the nature of the understanding that was ultimately had between Government and the trade in 1824, as to terms upon which the Ports should be open to foreign silk goods?—The terms settled eventually by the Government, and which the Government are in fairness bound to keep were, that there should be a duty of 7s. 6d. a pound on foreign thrown silks, and that foreign goods should pay a duty of at least 30 per cent. with an assurance from

from Government that they both could and would collect that duty of 30 per cent., and would secure the trade against smuggling.

11218. That you speak of as the understanding that was actually come to between Government and the trade at that time?—Yes, that was the ultimate understanding.

11219. How long was this engagement kept on the part of Government?—I consider it was quite an infringement of that engagement that the duty on thrown silk should be reduced to 5s. in the very next year, without any consultation with the trade, and without any circumstances to justify the alteration; this was a violation of it as far as the stipulated protection for the throwster is concerned. As to the quantity of foreign goods brought in, I will, with the permission of the Committee, state what appears from the official accounts from France (which I have reason to believe the Committee have seen), to have been the quantities of French silk goods sent into this country from France before and since the opening of the Ports, so that the Committee may see how far the understanding we had with Government, that no more goods should come in under the new system than came in under the old, has been kept. It appears by the French official accounts of the exports of silk goods from France to England, from the year 1821 to 1825, both inclusive, that the average annual amount was 3,838,749*f.* in value, and that the average of the next five years, that is the five years after the Ports were open, was 12,411,303*f.* in value, showing that the quantity had been more than trebled. And in the former average, that is I have included that year (1825) in which there was a great increase in the importation from France, arising, as I believe, entirely from the laxity that had arisen in the execution of the laws for the prevention of smuggling, occasioned by the near approach of the period when the goods would be legally admitted; and but for the admission of this year into the calculation, the quantity of silk goods smuggled in from France before the opening of the Ports would appear considerably less. The exportation from France to England in the last year (1831) which is not included in that statement, is very much larger still, amounting to, I believe, 20,000,000 of francs, so that it has increased six or seven fold.

11220. What was your individual opinion at the time of the arrangement respecting the prospects of the silk trade of this country under the alteration?—I was anxious individually to see the silk trade relieved from the duties with which it had been burthened, and which I had always thought were a great impediment to its increase.

11221. You speak of duty on the raw material?—Yes; on raw silk. I thought that taking off that duty was calculated to extend the trade very much; and the Government would not take off the duty, without coupling with it a measure for admitting foreign silk goods. I was therefore willing to take the two together as better than continuing the duties upon raw silk; I was certainly at that time very ignorant of the advantages which the French possess in the silk manufacture. The growth of her own raw silk is an immense advantage, and that circumstance I neither fully considered, nor if I had, should I then have been aware of the great advantage it is of to France; and further, which is the most striking feature of the inquiry before the Committee, I had no idea of the effect that mere fashion produces on this trade; the rage for French fashion is quite independent of all price, and all perfection.

11222. What is your opinion now of the further reduction which took place in 1829?—I have already stated it generally. It has been very injurious to every branch of the silk trade; and I consider it was a very unnecessary measure; it has been quite ruinous to the throwster, and I think it has retarded the general prosperity of the trade; I consider it has thrown back the trade at least twenty years, or more, in the course of improvement. It has increased the importation of thrown silks, and has diminished the importation of Italian raw silks. It was always likely that the reduction of duty from 5s. to 3s. 6*d.* should produce that effect, and if the duty were reduced still lower, that effect would be still more apparent; so that we should import all thrown silk and no raw silk from Italy: and as to its effects on the manufacturing department of the trade, it has discouraged the making of the better class of goods, and obliged the manufacturer to turn his attention to the lower and coarser description of goods; and as to producing the effect proposed from it, that of checking smuggling, smuggling has been carried on more extensively since than ever.

11223. Do you suppose that the duties of 5s. on organzine and 3s. on tram, as they existed in 1829, would have kept up the supplies of Italian raw silk?—Yes;

Ambrose Moore,
Esq.

11 July,
1832.

I do not doubt that the importation of Italian raw silks would have been greater than they have been since, had that duty continued, provided also that Government had not reduced the duties on goods, and that they had taken some better means to prevent smuggling, for if they reduced the duty on foreign goods, as they did in 1829, and allowed so many foreign goods to be smuggled, I do not mean to say raw silk to a larger extent would have come in, for the more foreign goods we have the less silk we want.

11224. Do you find as good Italian raw silk now as formerly, when the duties on thrown silk were higher than they are now?—I think the quality of Italian raw silk has not been so good the last year or two; I find more difficulty in getting good raw silk; no doubt there is good Italian raw silk imported, but not so much good in proportion as there used to be.

11225. Do you believe Italy produces less good raw silk now than she did formerly?—The view I take of it is, that she has been inclined to send more thrown silk; I think the circumstance of the duties being lowered in this country has led her to send rather more of thrown silk and rather less of raw silk.

11226. Do you consider the Italian has any local advantages as a throwster which you have not in England?—Yes, I do; I think that the being on the spot where the raw silk is to be had, where it is first reeled, gives him some great advantages; many of the Italian throwsters also reel their own silk.

Veneris, 13^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Ambrose Moore, Esq. called in; and further Examined.

Ambrose Moore,
Esq.

13 July,
1832.

11227. WHAT has been the state of the trade during the last two or three years, that is to say, since the alteration in 1829?—As far as the effect of the alteration in 1829 on the throwster is concerned, I may say, that it has been most mischievous, and consequently has been very injurious to the trade at large; it obliged the throwster immediately to reduce the wages of his hands as one of the elements of the economy which he was obliged to observe, and this produced great distress among the working hands in that department of trade, and in those parts of the country where throwing is carried on, it has had the effect of driving the poor who work in the mills, upon the poor's rate. In 1830 (the following year), there was what may be called a re-action in the throwing trade, arising in my opinion, altogether out of the previous depression, brought about by the reduction of duties, the effect of the reduction of those duties had been so to discourage throwing, and to ruin so many persons engaged in it, and so to contract the operations of others, that in the course of the year 1830, it was found that the supply of thrown silk was not adequate to the consumption of it by the looms, and the consequence was, that for a few months in 1830, there was a great demand for thrown silk, particularly tram, and the price of throwing rose, and was for a few months in a pretty good state, and if it had but continued, it would have been all that the throwsters could have wished; but as this temporary scarcity was undoubtedly occasioned merely by the injudicious manner in which the Government reduced the duties, so it was rectified in a few months by the great influx of foreign thrown silks, occasioned by the advance of price and the low duties, and these two concurrent operations very speedily again reduced the throwster to the same distress as he had been in before the advance of price took place. In the weaving department also the same distressing reduction of wages was the consequence.

11228. The wages are now miserably low in most of the throwing establishments, are they not?—Yes.

11229. Has it become the practice to make up the wages of the hands employed in mills from the poor's rates?—In many parts of the kingdom that is the case, when the price at which throwing can be done in England is stated, and a comparison is instituted with the price of throwing in Italy, with a view to show that we approach the Italians in price very nearly, and want but little protection, two circumstances are left out of sight, one is, that at the prices that have been quoted before this Committee as the market prices of throwing in England, the English throwster

throwster looses, although the parish assists him to pay the wages of his hands; and the other is, that the prices quoted as those of Italy, afford a profit to the throwster of that country. When the question is, what is sufficient protection, it appears to me important to consider these circumstances; one thing is quite clear, that when the parish pays half the wages, the cost of throwing is not to be taken at what it may appear to cost the throwster. Then as to the effect of this alteration of duties in 1829, on the manufacturing branch of the trade, it has let in foreign goods at lower rates than before; I speak of those which have come through the Custom House, and so far from effecting the object which it was stated the Government had of preventing smuggling, I believe the fact to be, that there has been more smuggling since then than there was before.

11230. What was the state of trade, particularly during the year 1831?—It was in a declining state the whole year, and towards the close of it there were thousands of persons thrown out of employment, from the inability of the manufacturers to dispose of their goods; great sacrifices on manufactured goods were made, and more distress existed in Spitalfields at the close of that year, than I ever recollect to have heard of there before; and although there was less public display made about the distress of Spitalfields, upon this occasion, (no public subscription was entered into for its relief, and it was not brought before the public in that form which upon some former occasions it had been,) yet it must not be inferred that it was not equal to the distress on former occasions; it was in fact much greater, but it seemed to be of that permanent nature, arising out of a system deliberately adopted by the Government, that it was treated as a hopeless case, for which there was no cure, unless Government would alter the system applicable to the silk trade.

11231. Was this state of the trade occasioned by any change of fashion or decline in the consumption of silk goods?—Not at all; the distinction between the distress I am now speaking of, and that of all former periods is, that it used formerly to arise from some falling off in the consumption of silk goods; but in this case I believe the consumption was as large as ever, and the supply of all the better sort of goods came from France. According to the French official accounts, the exports of silk goods from France to England last year, was greater than in any former year; I am not at all disposed to believe those accounts are correct, and have not a doubt that a much larger quantity of silk goods than they exhibit, find their way to England; but taking those accounts as they are, you will see that there was last year sent to England a much larger quantity than had ever been sent before, and at least seven times the amount that was sent on an average of five years previous to the opening the Ports.

11232. From the observation you have now made, you are supposing that there was a great quantity of goods imported into this country which were smuggled out of France?—I believe so; I do not doubt it.

11233. Have you any means of being able to prove that?—I have nothing that could be called positive proof of it, but I am quite satisfied that it is so; in the first place, the accounts of the French Government of the export of silk goods from that country to this, do not account for the obvious quantity of French goods that are constantly in this market, and secondly, I think it is so unlikely to be the course of business for a smuggler, whose transactions require concealment, and whose operations might often be detected if they were known, to pass all his goods regularly through the Custom House of France, when they are intended to be smuggled into this country, in the middle of boxes of eggs, and large packages of Dutch baskets, and all kinds of ways; and therefore whatever may be said by Calais houses, and parties having an interest in concealing the real state of this branch of the inquiry, I do not believe that the French official accounts of exports of silk goods to this country give us the true amount, nor any thing near it.

11234. Is the nonpayment of the export duty a sufficient temptation to them to smuggle their goods out of France?—I am not aware what is the exact amount of that export duty, I should think it is but small, and perhaps it might not be worth their while, for the mere object of avoiding that payment; but at the same time, if it be so small, it will make it in another point of view more likely that they would pass their goods otherwise than through the Custom House, because it is not worth the vigilance of the French Government to prevent them.

11235. Do you believe that in any year since 1826, any thing like so small a quantity in value as 400,000*l.* worth of French manufactured silks have been imported into this country, do not you believe the quantity must have been very much larger

Ambrose Moore,
Esq.

13 July,
1832.

Ambrose Moore,
Esq.

13 July,
1832.

larger than that?—I have no doubt it has been very much larger in every year since then; in several of the last years, I am quite sure that such a quantity of goods as I have seen about, could not be comprised within such a sum as 400,000*l.*

11236. In point of fact, do you believe it is perfectly notorious, that there are some two or three houses in London, whose transactions in French silks would alone make more than that?—I have no doubt of that at all; if you look to the number of French houses that there are, and look to the very large quantities of business they are doing, it is quite clear they could make no returns at all if it were to be comprised within such an amount.

11237. Did you in consequence of the state of trade, which you have spoken of as occurring in 1831, make any representations to the Government about it?—Yes; the trade became so much distressed towards the latter part of last year, that about October a committee was formed, which had various communications with Government until the month of February.

11238. What was the nature of the representations made to Government?—The general nature of the representations was, that the trade was in great distress, and that it was attributed to the very inadequate protection that it received against foreign competition; and that without better protection it was quite in vain to expect that the employment of persons engaged in the manufacture could continue. We also represented particularly the difficulties that existed in the fancy department of the silk trade. We represented as one of the modes of mitigating the evil, that foreign silk goods, upon their importation into this country, should be stamped, and that some more efficient means should be taken to put a stop to smuggling; that it had been quite clear, that pecuniary penalties were not sufficient to prevent smuggling, for that men of large capital had engaged in it as a regular trade, and who were of a class that would not engage in it if the offence itself was made a disgraceful one; and I think we were justified in taking that view of the necessity of fixing some stigma upon the offence of smuggling, from what I have heard has been given in evidence before this Committee, viz. that in France, and it is not quite clear whether it was not meant also in England, that a smuggler is looked upon as a public benefactor, and if so it is quite time that that character of the smuggler should be changed, and that he should be held up by the law as a criminal. We represented particularly, as the opinion of the committee of the silk trade, that in dealing with the question, on this occasion, that they would not attempt a cure which would be worse than the disease, by pursuing a similar course to that adopted in 1829, when the protecting duties were reduced; that on the contrary, both as it respects thrown silks and manufactured goods, we would not consent to proceed on any such principle. We did not mean to dispute that some goods might not be in the Schedule too high and others too low, but the principle should not be of curing smuggling by a reduction of duties. We recommended, in order the more effectually to prevent smuggling, that the importation of foreign goods should be limited to one Port, and that there should be one warehouse, or one department of the Customs at that Port, for the housing and examination of those goods, and that with a view still further to prevent frauds and secure the collection of the duties, some person should be appointed as an inspector by the Government, who should either be recommended by the trade, or be a person in whom the trade had confidence. On one of these occasions we quite understood the President of the Board of Trade to state that they were prepared to go with us on the principle of not reducing the duties.

11239. Why do you think it is important that criminal punishment should be inflicted on persons engaged in smuggling transactions?—Because it will prevent men of capital and character from engaging in the smuggling trade. The necessity for such a law is apparent from a transaction which came to light in the course of last autumn, from which it appeared that a house of large capital had been engaged in that trade. When men of large capital engage in this trade it tends to reduce the rate of smuggling. When men with 200,000*l.* or 300,000*l.* capital engage in any trade they can afford to carry it on, and always do carry it on, at a small percentage profit; and therefore it is of the greatest possible importance, in my opinion, to make it a trade which it is disgraceful to be concerned in, that it may fall into the hands of small dealers, and so the rate of smuggling may be raised. The payment of such a sum as 20,000*l.* as a compromise by that house, may seem a large sum and a sufficient punishment, but they had probably made a profit of 40,000*l.* by their smuggling transactions; and therefore looking at the matter as

one

one of mere profit and loss, there is no security whatever from pecuniary penalties that they will not go on with it.

11240. Would not the only effect of inflicting criminal punishment be, that men of capital would nominally withdraw from the silk trade, at the same time as they employed others to conduct it for them?—I think it would, unless the plan of stamping was also a part of the regulation; but if a man of capital should set up another establishment, nominally distinct from his own, but in reality to carry on his smuggling operations for him; if the goods were stamped at the Custom House, you would be able to trace those goods, and detect them if they had not paid the duty; and I apprehend that the two measures are necessary; the one for the other. I do not think stamping altogether effectual although useful, without criminal punishment, and criminal punishment would not be effectual without stamping, because a man of straw, who would run the risk of imprisonment and hard labour, might be the nominal smuggler; but if the goods, by means of stamping, could be traced to the real smuggler, I think the remedy would be complete.

11241. Do you think a system of stamping might be adopted, to effect the purpose you propose?—I have no doubt at all of that. I believe you have had in evidence, the particulars of stamping, which were recommended by the trade to Government; but I have no doubt, from having considered that plan, that it would be perfectly efficient. You will recollect it does not proceed on any notion that a stamp may be made so perfect that it cannot be forged; that idea is quite abandoned; and it proceeds on a perfectly different principle; which is, that a fresh stamp shall be adopted every day; that it shall have certain changeable letters and figures in it, which shall make it quite unknown to all the world what stamp is going to be put on the goods: the stamp shall have on it the date of the day on which it was put on the goods, and it shall be accompanied (and this is quite a necessary part of the plan) by a pattern-book, to be kept at the Custom House, and that a pattern shall be cut from each piece of goods imported and stuck into that book; and there shall be a progressive number separate from the stamp, on each piece; for instance, one shall be 300, another 301, another 302, another 303, and so on; and those numbers shall be placed against the pattern in the pattern-book; so that if a person should have imported ten pieces of a particular pattern on a particular day, and then having ascertained the stamp put on them, should go over to Calais, and should smuggle in 100 more of the same description exactly, and should copy the stamp, it would then be seen there would have been 110 pieces marked, and the Custom House pattern-book would show only ten pieces had passed; and that I apprehend would be a means of detection, and the very fear of it would deter persons from attempting to copy the stamp.

11242. It would throw great difficulties in the way?—Yes, it would throw great difficulties in the way, and would very much check smuggling, if it did not entirely stop it.

11243. Why do you think stamping of so much importance?—Without goods are stamped it is impossible, in 99 cases in 100, to prove they have not paid the duty. Nothing is more common than for an importer to pass one case of goods through the Custom House, and smuggle in twenty others; and to make the one which has paid duty father all those which have not. If goods were stamped, and patterns kept at the Custom House, this could not be done.

11244. Is it your opinion, that foreign goods may be stamped without much trouble or difficulty?—There is no doubt that they may; if the duty was 30 per cent. on goods, it is quite clear, as a matter merely of profit, it must be very well worth the while of the Government to have them stamped, in order to secure the collection of the revenue. We submitted some plan of stamping to the Custom House, which was a very difficult and tedious one; and although it was so, yet the inventor of it said he would contract for the stamping of each piece with this stamp at a farthing a piece; I mention this, to show that the expense of so difficult a stamp as we never should have thought of recommending, was so small a per centage on the goods; then it is said it causes great delay and inconvenience; I believe there is no pretence for such an allegation: it would be necessary to employ a few more persons, but if the Government were to have an apartment in the Custom House, a large room, such as the King's Warehouse, for the purpose of examining and passing and stamping silk goods, there would be no reason at all why they should not employ a sufficient number of persons to stamp all the goods that came, without putting the importer to any delay or inconvenience at all; and the duty they

Ambrase Moore,
Esq.

13 July,
1832.

Ambrose Moore,
Esq.

13 July,
1832.

would get on the goods would much more than cover any expense occasioned by employing extra hands.

11245. But whatever delay there would be, the whole trade would feel it alike, one man would not have an advantage or preference over another, and therefore you think it is not a thing which importers ought to complain of?—Certainly; if there were some inconvenience to importers, when it is considered how many thousands of men are thrown out of work in consequence of smuggling, I think that inconvenience should be borne for the sake of the greater good accomplished by the plan; but I submit there will be no inconvenience in it but what is capable of being avoided by good arrangement.

11246. Do you think the main objection against stamping goods, because stamps are easily forged, does not apply to the plan you recommend?—I am satisfied that the plan is a perfectly secure one, admitting that it is most easily forged; indeed, the stamp submitted to Government was of a very simple nature in its form, and it would appear, when stamped on paper, that it could be easily forged, but the forgery would not, I apprehend, facilitate smuggling at all.

11247. How were these representations received by the Board of Trade?—We had a great many interviews, and there was every appearance of giving consideration to our representations. I have already stated, that the President of the Board of Trade was understood by every one of us on one occasion to say, that Government did not intend to proceed on any principle of reducing the duties either on thrown silk or on goods; this I wish distinctly to state to the Committee, because the trade generally do deprecate extremely any reduction of duties, as it would be inflicting a most unnecessary and grievous evil. We understood Lord Auckland also to assent to the necessity of inflicting some punishment on smugglers that should withdraw men of capital from the trade.

11248. Do you remember the period at which that interview took place?—I do not recollect exactly, but I believe it to have been the latter end of December last. With respect to our representation as to stamping, there was in our opinion an evident objection to its adoption; the objection stated was chiefly that the best experience had always proved that stamps could be forged; we again and again stated that we proceeded on a different principle, but still we were met with the objection that stamps could be forged; I believe that was, as far as principle was concerned, all the objection that was made. The question of stamping was so far under consideration, that a communication was addressed to me from the Custom House by the Surveyors General, to desire a few of the trade to attend there to discuss with the officers the plan of stamping, and which we submitted to them. What report they made to the Board of Trade upon it we do not know, but the result was, that the plan of stamping, criminal punishments, and all the other suggestions made on the part of the trade were rejected, without any reasons whatever being assigned.

11249. Do you conceive that there is that difference between French manufactured silk and English manufactured silk that would enable you to discover the difference between them?—If a quantity of French goods are looked at together, and a quantity of English, there would be no difficulty whatever in saying which are French and which are English. If you look at a dress or a small piece of silk, I do not think in many cases you would be able to tell, but certainly taking the French goods in the bulk, the texture, appearance and style of the work, and there is no difficulty whatever in distinguishing them from English. I went to the Custom House to see those goods which were seized from Leaf & Company: no man in the trade could have any hesitation in saying those were a lot of French goods. In like manner Manchester goods may be known from Spitalfields goods, and yet I should not like to say I could always tell whether the dress a lady has got on is of Manchester or Spitalfields manufacture; but if I saw goods in a quantity, or done up in pieces, I should have no difficulty in distinguishing them.

11250. You do not think that there would be any difficulty in making the discovery, supposing there was an understanding between the manufacturer in this country and the smuggler?—No, I think there would not be any difficulty at all.

11251. You understand the drift of the question?—Yes.

11252. If a smuggler in France or a manufacturer in this country chose to connect himself with a smuggler in France, and worked the same pattern in England as he knew was working in France, then the person who would have to sell it would say, "This was manufactured in Spitalfields or Manchester," or wherever it might be,

be, "and I can bring you the man who worked it to prove that he had work in his loom of this pattern;" you think that the manufacture would be so different as to enable you to judge of the two?—If evidence was brought in a court of justice of the sort alluded to, and if a man was produced to swear he made those goods in Manchester or Spitalfields, the decision would be probably, that they were made at Manchester or Spitalfields, however persons in the trade might differ in opinion from that evidence. I believe an instance of that sort has already occurred in the case of Depouilly & Company; I do not doubt in the least that the goods seized were smuggled goods, and yet evidence of the sort now referred to was obtained, and a charge was made against the silk trade that they had acted with jealousy and illiberality towards that house.

11253. In point of fact it would turn out, in a state of prohibition, the French manufacturer might copy a pattern for its novelty, when it came into the market, then you might immediately detect it; the novelty would detect the manufacture, would it not?—Certainly; I addressed my remarks to the present state of the intercourse; a state of prohibition would have the effect of producing dissimilarity between the two manufactures, in many of those particulars that would enable us to know French goods from English.

11254. What settlement of the question between the Government and the trade were you led to expect would take place?—I have already stated that the trade objected to any arrangement founded upon the principle of a reduction of duties. This we understood was conceded to us. We wanted more protection than we had, and not that the existing protection should be reduced. We particularly urged the necessity of taking better measures than had ever up to that been adopted to put a stop to smuggling, and the stamping of goods, and the punishment by imprisonment and hard labour of all persons engaged in smuggling transactions, were the suggestions we made to effect the object; and we had considerable hope, from the urgency with which we pressed these points, as well as from what fell from the President of the Board, that they would have been adopted.

11255. At what time did this negociation finally terminate?—It was in the month of February that one of our committee was sent for, and was told that nothing could be done; that a Committee of the House of Commons would probably be appointed to consider the question of smuggling, and that nothing further could be said to us.

11256. Were there no reasons against stamping founded on the objection to the retail trade?—A deputation of the retail dealers waited on the Board of Trade, and made some objections to stamping; the committee of the silk trade took pains to ascertain, both from the Board of Trade and also from the gentlemen who were deputed by the retail trade, what the nature of those objections were, and they never could learn more than these two; supposing a piece of silk to have the stamp at one end, a lady would sometimes have a fancy to have a dress cut from that end, which would cut off the stamp, and so leave the rest of the piece liable to seizure; and this fancy must be complied with, or the lady would leave the shop without purchasing what she intended. The other objection was, that it would be in the power of any shopman who wished to do an injury to his master, to cut off the stamps from foreign goods, and so render them liable to seizure; the objections amounted to no more than these. To set off against these objections, we had a declaration in favour of the plan, presented to the Board of Trade, signed by the largest dealers in foreign silks, both wholesale and retail, and which we could have got much more numerous signed if we had thought it necessary; but we thought it quite sufficient proof of the plan being unobjectionable if it was signed by a few of the most eminent houses. I am therefore led to conclude that the objections stated by the retail dealers were not the objections which operated on the minds of those who have the direction of these matters, they never could have come to the conclusion, that for the sake of such trifling objections as these thousands of the English weavers were to be kept in a state of starvation; and therefore I again am obliged to come to the conclusion, that there were other more powerful reasons operating in the minds of those who have the direction of these affairs.

11257. Do you think the removal or the lowering of the duties on foreign thrown silks would relieve the manufacturer from his present difficulties, and enable him the better to compete with the manufacturer on the Continent?—If all the duty were to come off, and then if the silk were to sell just so much lower than it did before the duty was taken off, I submit that even then there would be no cure at all for

1832.

Ambrose Moore,
Esq.

13 July,
1832.

the evil that is felt in the silk trade. I think you may take the case of Coventry, and apply this reduction to the silk consumed there, and you will find it will not make a difference of two per cent. on all the ribbons there produced; and if you look at its application to that branch of the Coventry trade which suffers most from competition with France, that is the gauze and fancy branches, it would be quite a drop in the bucket as to any kind of relief, and perfectly inadequate to the end proposed; and if our Government would condescend to look at it really with a view to ascertain whether it would be a remedy or not, it would be seen to be no remedy at all; that it may answer the purpose of making manufacturers who are not throwsters believe, that they might, at the expense of the throwsters, get some personal advantages to themselves, and so divide the trade into parties, and set one party against another party, I do not doubt; and it has on former occasions produced that effect, but the expected advantage has by experience been found no advantage at all; as duties have been lowered, the manufacturers have been further from successful competition than ever. I have been speaking upon the supposition, that if the duty were to come off, it would make all the difference in the price; but in point of fact, it would make a very little difference in the price of the thrown silk; I believe the greater part of the duty that would be taken off, would be just so much in the pocket of the Italian. I do not deny that foreign thrown silk would for a time sell for something less in this market, just so much less as would serve to destroy the English throwster; and when the English throwsters were a sufficient number of them destroyed, the price would then rise again, and the Italian would take so much more of the throwing trade to himself. It would also prevent Italian raw silk from coming to the English market; that silk would come in a thrown state. The effect of a reduction of duty would be very trifling upon rich goods. I would take this silver tissue as an instance of what I mean; the reduction of a shilling or two in the pound on the price of silk, makes so trifling an affair in the whole cost of this article when finished, that it would produce no effect in relieving the English manufacturer from the disadvantages under which he is, as compared with France.

11258. But would not the lowering of the duties on foreign thrown silk be a benefit to the silk manufacturer in this country, by placing more within his reach the excellent thrown silks of Piedmont and Lombardy?—No, I do not think it would; I do not consider that Piedmont organzine, as is so often represented, or that any foreign thrown organzine, is at all essential to any branch of silk manufacture in this country; I believe you could find no branch of the silk manufacture, whether velvet or satin, or any other, but that in the manufacture of it some persons would prefer foreign thrown silk and some English thrown silk; it is an entire mistake, not to call it a misrepresentation, to say that a certain quantity of foreign thrown silk is essential to the English manufacture, and that the English manufacturer will take no more than that quantity. The fact is, that foreign thrown silk is not at all essential; that if you can get good raw silk in this country, you can get as good or better organzine thrown from it in this country than the majority of the thrown silk of Italy; and that the true policy of the country is to take that course that should bring good raw silk here; it is equally a mistake to say that there is something curious that nobody can describe in the fact that a certain uniform quantity of foreign thrown silk always comes into this country let the duty be what it may. This curious thing, which has been so often referred to, and which seems to me to be no subject of wonder whatever, is, that for the last 60 or 70 years there has annually been from about 350,000 to about 500,000 pounds weight of foreign thrown silk imported, and that the quantity should not have varied more, considering that the silk manufacture of this country has so much increased during that period. The fact is that the duty on foreign thrown silk encouraged the building of throwing mills in England, and made it the interest of the Italians to send their silk in a raw state, because they could get more by sending it raw than by sending it thrown; and although that duty was reduced, first to 7 s. 6 d. and then to 5 s., the quantity of thrown silk imported was not increased; because the English throwster strove to keep it out by working for a price which was a great loss to himself, and by inflicting great misery and wretchedness upon those persons who worked for him, but still he did it; the English throwster succeeded in keeping down the importation of foreign thrown silk as long as there was a duty of 5 s. remaining; but the Committee will perceive, the moment the duty was reduced from 5 s. to 3 s. 6 d. the fact, which is better than a thousand theories, is seen, that foreign thrown silk came in in great

great quantities. Foreign tram came in for the first time when the duty was made 2s.; as long as the duty on foreign tram was kept the same as on foreign organzine we did entirely without foreign tram. A bale of foreign tram, I dare say, did not come into this country once in twenty years; but now foreign tram comes in, and I appeal to that fact to prove that the importation of thrown silk is a question of duty; it is a question whether so much labour shall be performed in this country, or whether it shall be performed in foreign countries.

11259. Then you infer that by a total repeal, if such a thing could be enacted, of the duty on foreign thrown silk, the Italians would cease to send their raw, and would supply you with thrown silk?—My belief is, that by degrees they would send it thrown, instead of sending it raw.

11260. And there would be that consequent want of employment for the people, and that destruction of property that is vested in the mills of this country?—It appears to me, without any benefit to the manufacturer arising from it, that it would be the transfer of so much employment from the labour of this country to the north of Italy.

11261. You were speaking of the encouragement of throwing in England, do you consider the present duty sufficient for the encouragement of throwing of Italian silk?—No, I have just this moment stated that ever since the reduction of the duties from 5s. to 3s. 6d., the throwing trade of this country has been discouraged, and that more Italian thrown silk has been sent in than was before; and I believe if the duty continues at 3s. 6d. that this effect will be progressively increased; that more thrown silk will come in and less raw; it will be seen that while Italian thrown silk has been increasing, Italian raw has been diminishing. And the official accounts show, taking raw and thrown together, that the whole quantity of Italian silk annually consumed has been on the decline since foreign goods were admitted.

11262. Do you think that the reduction of the import duties on foreign thrown silk, would, on the whole, be prejudicial or injurious to the silk manufacture of Great Britain?—I think it would be decidedly injurious to the silk manufacture of Great Britain, taken as a whole; not separating one branch from the other, but taking this country as a silk manufacturing country, I apprehend it would be a fatal blow to it to discourage the throwing of silk in this country. There was a time, a century ago, when the silk manufacture was not a very important one, but still the Government of that day thought it would be advantageous if they could introduce throwing into this country, and throwing was protected and encouraged for a series of years until it has become a very large trade; I am not an advocate for the continuance to that amount of duty that was once upon it; I do not want 7s. 6d. or 9s. but I am satisfied it is the true policy of this country to protect throwing, so as to encourage the extension and protection of it, for I am satisfied without it, the silk manufacture of this country, as a whole, will decline in its extent, its perfection, and in the character of the goods; and in fact I do not believe, on the whole, it will be near so extensive, it will be a dwindling one. I look upon the large supply of good raw silk as being at the very foundation of the prosperity of the silk trade of this country; I do not think that any country will successfully carry on a silk trade unless that country throws her own silk; look at the large silk manufacturing countries in the world, and you will perceive they all throw the greatest part of their own silk. Take France, which is at the head of the silk manufactures of the world, it has been stated by those who do not wish to magnify the advantages of France, that that country raises, in her own territory, at least three-fourths of the silks she uses, she of course herself throws that which she raises. The next silk manufacture in extent is that of England, at present we throw seven-eighths of the silk we use. Then if we take Vienna and Italy together, because they are under the same Government, the thrown silk used in the silk trade of that country is derived from the Austrian States of Italy; if you take away those three instances there will remain no extensive silk manufacturing country in Europe.

11263. You spoke of the dwindling state of the silk trade of this country, do you consider a well adjusted scale of duties would be the most effectual means of increasing the silk manufacture?—Yes, I do. Deprive England of her throwing trade, and of a good supply of Italian raw silk, and instead of enabling us the better to compete with France, you send us to a much greater distance from her, we shall then be less on an equality with France than we are now; we shall then be hardly able to say that we have a great silk manufacture, in the proper sense of the word, in this country; we shall not have the whole operation in our hands, we shall be

Ambrose Moore,
Esq.

13 July,
1832.

merely weavers. In order to exemplify more fully what I mean, I will take the liberty of exhibiting the different stages of the silk manufacture to the Committee; I will first show a skein of raw Fossembrone silk as imported from Italy; that is the state in which it is imported (*exhibiting it.*) Secondly, a skein of Fossembrone organzine, which has been thrown in this country; that is the next stage of the manufacture (*exhibiting it.*) The third is a skein of Fossembrone organzine, in a dyed state (*exhibiting it.*) Then the fourth stage is this, having the silk wound on a bobbin (*exhibiting it.*) And the fifth stage (*exhibiting it.*) is what is called a cane, or in other words a warp. This has been prepared to make satin. Those are the several processes of the manufacture previous to the work going into the loom, and there remains only the last process, which is the weaving. Now what I contend for is, that there is no more reason why our Government should draw a line here, having on the one hand the skein of raw and the skein of organzine, and on the other hand the skein of dyed, the silk on the bobbin, and the silk in a cane or warp prepared for the loom, and say that all on the one hand shall be done out of the kingdom, and all on the other hand done in the kingdom, than that they should draw the line between any other two of the processes. If the Government insist that for the benefit of the weaver all silk shall be thrown out of the kingdom, the next stage will be that all shall be dyed out of the kingdom, and then wound and warped out of the kingdom; and I should like then to know what reason there can be why silk should not be wove out of the kingdom any more than that it should not be warped, wound, dyed and thrown there. I cannot see why the weaving more than the other processes should be protected. There are some great advantages in the detail of the manufacture from throwing silk in this country. The wants of a manufacturer as to the kind of thrown silk are constantly varying, and if we have the silk in a raw state we can throw it in this country to supply those varying demands; we can throw it into organzine or into tram; we can throw it into two threads or three threads; we can give it a slack or a hard throw; and then as to one of the grand advantages also of throwing in this country, it makes us so much more independent of a foreign country. If we drew the whole of our supply of thrown silk from abroad, we might in case of a war have our manufacture almost totally and quite suddenly suspended, and this is not a mere case of supposition, but it is that which has already happened. I remember very well the Berlin and Milan decrees, at which time it was exceedingly difficult to get thrown silk, or silk in short at all.

11264. It was equally difficult at that time to get raw, was it not?—Undoubtedly it was; but if it is wished to secure the trade of this country against contingencies of that sort, it will be found that there will be practically less difficulty in getting raw than thrown silk. On the occasion to which I have referred, there was really great difficulty indeed in supplying the English looms with silk; it was smuggled in very small and irregular packages through Holland, when any silk arrived it was a subject of rejoicing, and I remember on one occasion some talk of an illumination in Spitalfields; whether that was really in contemplation or not, it will show the Committee there was great difficulty in getting silk for the supply of the manufacture. I think it is clearly our interest to encourage the importation of Italian silk in a raw state rather than a thrown, as it would be less probable that there would be an interruption in case of war, to our obtaining raw silk. It is very likely the cultivation of silk both in France and in Italy will increase; now if we go on encouraging the Italians to send us their silk in a raw state, it is probable the cultivation of raw silk in Italy will outstrip their capability of throwing; I know at present they can throw more silk than they do, but if at a future time the cultivation of raw silk should have very much increased, they probably would not be able to throw it, if we had been in the habit of taking it from them in a raw state; but if we take the opposite course and discourage the import of Italian raw silk into this country, and encourage the Italians to throw it in Italy, if war should arise and interrupt the intercourse, it will find us dependent upon them; and as the markets of France, Russia and Vienna will be all open to them, their Governments will be less unwilling to close the English market to them, but if they had been in the habit of sending only raw silk to England, they would not have mills enough in Italy to throw it, and their Governments would be the more likely to afford facilities for sending it to this country, as there would be no other market to which it could be sent, and therefore I infer it is very much the interest of the silk manufacture of this country, that we should be constantly in the habit of throwing as much as possible of our own silk.

11265. Do

Ambrose Moore,
Esq.

13 July,
1832.

11265. Do you think that the present low prices paid for throwing in England are favourable or unfavourable to the protection of silk?—My opinion is, that throwing generally is not so perfectly done as when the price was higher. There are some persons throw it now very well, probably as well as ever, but speaking generally, I believe silk is thrown in a more negligent manner than when the price paid for it was such as would enable them to bestow more care upon it. The object now is to get it done at as little cost as possible.

11266. Are you aware that a notion prevails that the speed may be increased without injury; do you think the speed of throwing silk may be increased without the probability of injury to the material?—I think silk is thrown better as the speed is slower, but I do not believe that speed can be usefully applied to silk so as to cheapen the throwing of it materially; speed is only applicable to two of the processes of throwing, it is applicable only to what is called the spinning or twisting part, and what is called the throwing part, and the wages in those two departments do not (I am speaking now merely from recollection,) amount to above one-third or one-fourth of the whole cost of throwing, so that if you quicken the speed you only quicken one-fourth of the actual cost of it.

11267. Do you think the present duties sufficient to give due encouragement to the British throwster?—I think there has been quite a retrograde movement in the throwing trade in this country; I believe it is not in the efficient state it was before those duties were reduced.

11268. Have the low duties on foreign thrown silks depressed the wages of our people in silk mills or caused them to work an additional number of hours?—It has depressed the wages very much. The regulations that are introduced into the Cotton Factories Bill are quite needless at present for silk mills, but I cannot conceive anything more likely than the forcing down the rate of throwing, to induce people to resort to the employment of children who are too young, that they may work at less wages than the older ones can, and to make them work an additional number of hours, and thus to make it necessary for the legislature to interpose for the protection of these children, though at present there is no necessity whatever for applying such regulation to the silk mills, yet nothing is more likely to bring us into that state to want it than the course our Government has pursued respecting the throwing trade.

11269. When was your throwing mill at Derby built?—It was completed and began to work in July 1823.

11270. What was the duty on thrown silk at the time your mill was built?—The duty on raw silk was 5*s.* 6*d.* and on thrown silk, 14*s.* 8*d.*, leaving a difference in favour of the English throwster of 9*s.* 2*d.*

11271. What was your inducement for embarking in the throwing trade?—It appeared to me, that at that period there was a great tendency to increase in the silk trade of this country; I had no knowledge of the means that Government were going to resort to then, to alter the system, for that was not announced until the following year; but the silk trade showed indications of increase. After the termination of the war silk had fallen in price, and silk goods had been getting more and more into consumption, and I thought that there was a fair prospect of the silk trade of this country extending. Our house had also been one of those, having no mill, that had suffered great inconvenience from the irregular supply of thrown silk during the war. Sometimes it was at an enormous price, and those who had mills of their own could throw it with great advantage; I was also desirous of making our manufacture as perfect as I could by throwing silk to my own mind, and adapting it to the various purposes I wanted to apply it to in goods; these were my principal reasons; but if I could have thought it possible, when I was investing that property under the then protection of 9*s.* 2*d.* in the pound, that the Government, in a way that I think is really unjust to those persons who acted on the faith of the existing law, could possibly have so very hastily and greatly, and with so little regard for the interest of those whose capital was invested in silk mills, have reduced that protection, I am quite sure I never should have embarked in it.

11272. Then you mean to claim protection for the throwster, on the ground that he has large capital invested in buildings and machinery, which you say would be useless for any purpose than for throwing mills?—I feel very strongly that the English throwster has a great claim on the Government to a reasonable degree of protection; and as a throwster, I do wish that the case of the throwster should be

Ambrose Moore,
Esq.

13 July,
1832.

considered by Parliament in that light. I think it is but a matter of common justice that property invested in a manner that cannot be available to any other purpose, should not be sacrificed by an alteration in the law in a way that nobody, when they invested their capital in that way, could have foreseen. I hold it would be quite unjust for the Government to hold out a temptation to people to build mills, and then turn round and say, "Now we think it for the good of the weaver that your mills should be destroyed:" I confess I do not think that is just; and I have endeavoured to show, by exhibiting the different processes of manufacture, that there is no correctness in that view of it. I feel that the throwster and the capitalist, who have employed money in the throwing trade, are as much entitled to protection as the weaver. A great many have been ruined undoubtedly, and their invested capital very much deteriorated or destroyed from this change in the law, and that it should be carried further merely to benefit, as they say, the weaver, whom I believe it would not benefit, is I think most unjust.

11273. Can you inform the Committee what would be the effect upon the price of the manufactured article in this country, were so much of the duty on thrown silk removed as would make the export duty of the thrown silk from Italy equivalent to the export duty of the raw silk from Italy?—Upon the supposition that it should make the whole difference in the price of the silk when the duty was taken off, which I do not believe would be the effect of taking off the duty, it would make a difference of from five to six per cent. in the cost of some goods, but considerably less upon others; I believe upon none more than from five to six per cent., I speak on the supposition that they are made of foreign thrown silk. It would make the greatest difference on the lower description of those goods; the lowest description of goods made in this country are composed, the greater part of East India silk with a mixture of Italian; but the lowest sort of goods made of foreign thrown silk is what I speak of as that class of goods in which it would make the greatest difference. Upon the higher description of goods, velvets for instance, nearly one half of the cost is the price of weaving; it would make a very small reduction indeed on those goods, not above three per cent.; in the gauze fabrics, it would not make a difference of more than one per cent.

11274. Do you think every exertion has been made on the part of the manufacturer of this country, in the first instance, to prepare for, and afterwards to meet the competition with France?—It has been very difficult for the silk trade to know what course it ought to pursue, so as to escape from the reproach of having done wrong. There was time given it to prepare, and there were great inducements held out to the trade, to believe that the measures of Government were calculated to promote its extension and prosperity, and that it would do very wisely if it availed itself of the new state of things, to increase the trade; and captivated by such enticing recommendations, a great number of persons did rather extend their operations; they were justified certainly by the public inclination for silk, in so doing, and went on prosperously enough in that course, and amidst the commendations of, I believe, all the influential men in Government and in Parliament, until the French goods came in; then the interference of the French with our trade caused great distress, and ungenerously enough I must say, we were reproached with having made those exertions to which we had been before urged on, and were told "time was given you to withdraw your capital, and yet has any body ever heard that you availed yourselves of the opportunity, on the contrary you have extended your operations, and have only yourselves to blame;" and therefore as a very sensible operative observed to me one day, it is not possible to pursue a blameless course, whether the manufacturers make exertions to increase the quantity of goods they produce, or whether they lie on their oars and let the French have the possession of the market, they never can satisfy the Government. In the first case the Government say "you have overdone it," and in the other case "you let the French occupy the ground." I speak with all seriousness of the difficulty the trade has been in, to know exactly what course to take. However, they have made, I think, every exertion that could be made; they have exerted themselves with quite activity enough in one direction; they have reduced the wages of the people that worked for them as much as any body could desire; I do not think they will be charged with having been at all negligent in that particular. You have had it proved, that the rate of wages has been reduced by 40 per cent.; I am not sure whether that evidence given before you, applied to the country as well as to London; but I know that that reduction has taken place all over the kingdom in the silk trade, and in every

every branch of the silk trade. The manufacturers of silk have not been inattentive to every improvement that they could make; I think dyeing has improved considerably, but I will state that that has been no consequence of the introduction of French goods, for the dyeing was in a course of improvement, and had very much improved before the French goods did come in; and I believe that every thing in the way of economy, of which the silk trade was susceptible, I believe by all their arrangements of all sorts, the manufacturers generally, and the throwsters, have endeavoured to improve their manufacture; I do not wish it to be inferred from that that there has been any greater skill in the manufacture now than formerly; I do not think there is so much skill, if you except the intelligent manufacturer, Mr. Bridges, who has exhibited some patterns, and one or two others, you will find that there is hardly any person who knows how to make the higher description of articles now. I beg to show a specimen of Spitalfields manufacture, which fell within my reach a few days since (*exhibiting it*;) it shows that a good many years ago, they were able to make what was difficult to execute; it was made in Spitalfield 70 years ago; it was intended as the hangings for a room that the then Prince of Wales was fitting up, though the intention of fitting it up with that description of silk was afterwards given up; it is every bit of it wove, not embroidered at all. The "School for Design" happens to have been in China, and had not the benefit of the taste of Lyons; but I exhibit it to you for its execution; it was the fancy, in short, of the Prince of Wales at the time; he chose the style.

Ambrose Moore,
Esq.

13 July,
1832.

11275. This of course was manufactured by a simple hand loom?—Yes, it was before the Jacquard loom was invented; in fact, in those days the Spitalfields manufacturer quite outran the Lyons manufacturers in the employment of artists; it was not at all an unusual thing for an artist to be retained for a particular house, at a salary of 200*l.* or 300*l.* a year; I have heard, I think, of instances in which pattern drawers lived quite like gentlemen; it was a flourishing trade, and they were well paid, because they were good designers.

11276. In point of fact, was not the silk trade induced, from the representations which had been made in certain speeches delivered in Parliament, to enter into speculations, erect mills and machinery for the purpose of improving and extending their manufacture, and for which they were afterwards reproached by the very same parties in Parliament?—Undoubtedly, that has been the case; some persons of better judgment than others, or at least who fancied they had better judgment than others, availed themselves of the interval to withdraw; and others led on by the public speeches referred to, built mills, and extended their operations in silk manufacturing; and it is certainly true that they were then reproached for so doing; but it should be borne in mind, that the machinery of all sorts, whether looms or any thing else in operation now, is not so great as it was before the admission of foreign silks; therefore it is not true that we are depressed from having such a great power of machinery at present brought to bear on the silk trade, for the production of the English looms is not so great, nor do the silk mills of this country perform so much work as they did before the admission of foreign silks; and what we are now suffering, does not arise from the continued operation of those new mills and new factories, because there are fewer mills at work than there were in 1824; I believe there is not above one half the number of spindles at work in Macclesfield that there were in 1824. And here is another point whereon we are unfairly dealt by, that is as to what machinery was at work in 1824; when we speak of what was at work in 1824, we are told, oh! it was the excitement and the speculative feeling that were abroad generally, and the excitement in the silk trade particularly, forgetting that a mill cannot be built and brought into operation without a considerable length of time being allowed; and therefore the machinery actually in operation in 1824, I think it fair to conclude, must have been erected previously to 1824.

11277. You have spoken of the reduction of wages being 40 per cent.; that calculation was made on plain goods, was it not?—Yes.

11278. And had no reference to figured; therefore, if you take into consideration a general average reduction of wages, the reduction of wages would be much greater than 40 per cent., would it not?—Yes, certainly, if you take the amount paid for wages, the amount is much greater than 40 per cent.

11279. How has the reduction in wages been effected?—It has been effected to the extent I have already stated, and the effect on the operatives has been that of

Ambrose Moore,
Esq.

13 July,
1832.

reducing them to the greatest state of destitution; they, in fact, possess nothing, if I may so speak, really beyond the extent of their own skins; they do not seem to possess a shadow of property in the world; I believe many of the operatives in Spitalfields are without any thing approaching to the character of furniture—without a bed: nothing is more common than to hear that such a man cannot leave his home and come to the warehouse of his employer, because he has nothing to come out in; he sends his child or his wife. I met with an instance during the last winter, in the case of one man whom I had been obliged to turn off, but whom I was afterwards induced to give some work to again. I asked him how he had been living?—Why, he had 2s. or half-a-crown a week, and some friend or other had occasionally given him a shilling—some friend in his own trade—a poor man like himself, and he had several children; he got from the workhouse 1s. on a Tuesday, and 1s. 6d. on a Friday or Saturday, and that was the way he had been carrying on his existence for several months, and this was at the time when we were making these representations to the Board of Trade, urging on them to do something that should relieve the silk trade from the great pressure that was then on the working part of the people, to say nothing of the ruin that was among the manufacturers themselves.

11280. Has not the general effect been to produce great demoralization, and a total recklessness as to the consequences, among the operatives in Spitalfields?—Yes, there is a great alteration in that respect; they are not the respectable body, in any sense, that they once were. As far as I can learn, they take very little interest in any thing that goes on between the trade and the Government; they say they see no chance of obtaining any relief, and they feel no interest in supporting their committee, or in doing any thing that shall be calculated to bring redress. They are not the people in appearance that they once were; looking at a number of them together, as I sometimes do on my own hands, and recollecting what kind of appearance they presented 25 years ago, I am struck with the contrast. They appeared then no better than poor working men, but they were decently clad, and had an appearance about them of living as working men should do, but not better than they should do; but now, if you look at them, at the first glance you will see a most wretched squalid race of people, badly clad and fed, and almost, I might say, diminished in size. Allow me to state, with respect to this effect upon them, that there is a degree of dishonesty that there did not used to be. It is a matter of frequent occurrence now, that a man decamps with the work he has got to do; several instances have occurred lately, in which men have got work in the loom from one or two different masters, and when they have finished their piece they run away. There are several instances of people having gone to America; that seems to be the place they like to go to. I am told, and I believe it to be the fact, that in America there is rather a different view of the silk trade to what there is in England; that they are encouraging people to come to America. I met with a publication a short time back, in which there was a recommendation to different classes of artisans as to what point they should make for in America, and there was a direction to silk weavers where they should go; and so a little manufactory is there nursed, and they intend to form a silk manufactory, which the policy of our Government is assisting all they can, by driving our weavers away from England. Two or three of my hands have gone, and taken property I had entrusted to them with them.

11281. Did they take their looms with them?—I do not know that; I should think not; the loom was not worth taking, excepting they had a Jacquard machine, and that would be too heavy to take; but the loom itself is as simple as can be.

11282. Do the weavers make their own looms in any case?—They provide the looms; in most cases they hire them of what are called loom brokers.

11283. Is this a new species of dishonesty, or have you not experienced the same thing occurring before, before the reduction of the duty?—No; 20 or 25 years ago such a thing was never heard of; there was a little pilfering in small quantities, but weavers absconding with their work was scarcely ever heard of.

11284. When was the first instance of it that came to your knowledge?—I cannot recollect exactly, but the crime has very much increased within the last 12 months.

11285. Did it not occur before the duties were reduced, before the change in the duties?—I do not recollect any instance; I should not be very willing to say no such case occurred; it was a very rare occurrence before, and there have been a great many cases since: it is quite a frequent occurrence now. Some manufacturers

turers are obliged to resort to the plan of having general contributions of their hands, to pay for the defalcations of others; we take them on that condition, so that they guarantee each other's honesty.

11286. It has been stated to the Committee by former witnesses that the fancy branch of the trade had suffered most, and in Spitalfields that there are but few looms of that description remaining, to what do you attribute the loss of the figure trade?—I consider the supply of fancy goods from abroad to be the cause; there is a consumption of fancy goods, but they are not made in Spitalfields; they come in almost universally from France.

11287. Do you know from your own observation that fancy silks are very extensively worn?—Very extensively, from my own observation of the shops and warehouses where I happen to go on business; I see such large quantities that I am assured both that there is a large quantity smuggled and a large quantity worn in this country.

11288. Do you know of any fancy silk goods being made to any extent in any place in England not in Spitalfields?—None, except quite a low description; there are a few Jacquards at work in different parts of the kingdom; a few at Manchester and Sudbury, and one or two other places, but they are not making rich goods, such as you had shown you by Mr. Bridges; such as used to be made in Spitalfields, and such as are now made at Lyons, and imported into this country.

11289. With very few exceptions they are what you call four singles, rather than three or four doubles?—The great bulk are three singles, made of coarse East India warps, so that the silk may be heavy; but the most inexperienced persons in such matters would at once discover the great difference between the rich goods of Spitalfields and Lyons and these goods that are made in Jacquards at Manchester and Sudbury, and one or two other places.

11290. Do you think that there is a prospect of reviving the fancy branch of the silk trade under the present system?—It certainly is a point of difficulty; I feel it so, and I dare say it is generally so considered; but I confess I see very little chance for this branch of the trade while the present system is continued. I confess also, that I once thought differently; in the year 1824, when the alteration was first proposed, I was a very great advocate for that alteration, because I thought that taking off the duties on raw silk would assist in extending the trade very much; but I had no idea, I confess, at that time, that the fancy trade of this country would have been so cut up by the change. I could not have believed that there would be so little ground for the English fancy silk manufacturer to stand upon, and that the whole ground would be so occupied by the French; that the whole current of fancy and of caprice, if I may say so, for French goods would have been carried to the extent that it is. I wish to state distinctly to the Committee, I do not at all agree that there is this high order of intellect in the French manufacturer, and none of it in the English manufacturer; but if the present system be continued, I do not doubt but that there will very soon be very little skill left in the English silk trade, that is, in the higher departments of it; that there is at present no want of skill I am sure; but that there is a determination on the part of those who set the fashions, to have French goods; ladies of rank have French milliners, they recommend French fashions, and they will not have to do with any goods but such as are French, either figured or plain. Then the large dealers who supply them would tell you if they were asked, that it is no use their giving orders for English goods, and they would not in my judgment, be men of business if they did; they would say I am quite sure "we can sell French goods; there is a taste for them, and therefore as a matter of safe speculation, we go to France and order our goods; we have no motive for ordering Spitalfields, and therefore we must take that course, as tradesmen, which is most likely to be successful." Now that is the state of the fancy trade; and without some better protection than we now have, I do not see how the ground we have lost can be recovered in that branch of the trade; I am quite satisfied, if a committee of taste were appointed, and they were without any knowledge as to which were French and which English, upon the respective productions of Lyons and Spitalfields, and were to decide in favour of the English, that still the English would not sell, and the French would.

11291. You give the latter part of that answer without reference to price?—Quite so; I put it entirely as matter of fashion and as matter of colour; I wish I had brought a pattern of the colour that prevailed last winter; it is the most in-

Ambrose Moore,
Esq.

13 July,
1832.

consistent with good taste that it is possible to be; if it had been produced in Spitalfields, I am quite sure we should have been told greater stupidity was never discovered by any manufacturer than to suppose that ladies could wear such a colour, and yet it was quite the fashion, because it came from France.

11292. Have you considered the subject of the very unequal competition between France and England, with reference to the raw silks of France, independent of the price of labour between the two countries?—I do not profess to have very correct information on that subject; I know generally, that France possesses a great advantage in having her own raw silk, and that the exportation of it being prohibited, produces this effect, that silk is lower in France than in England; I do not speak of thrown silks, nor of any thing at all connected with the duty on thrown silk in this country. Quite independent of that, France has always her raw silk at an average very considerably lower than we have, the greater part of it being of her own growth; added to which she has the monopoly of it, and although it is told to you that that is impossible to be the case, while she draws part of her supply from Italy, I believe if you look into the fact as it exists, you will find that the statement I make, is true. The price of French and Italian silk is the same sometimes, no doubt. Silk will at times get up in France to the price of Italian silk. The Italian silk France uses is not precisely of the same kind as her own silk. At the time when a fresh, and perhaps a very abundant crop of silk comes into the market in France, the French manufacturers will not resort to Italian silk, the monopoly they have of French silk enabling them to get that silk lower than they can get silk in the Italian market. That fact is not at all irreconcilable even with theory; and that in the greater number of instances, the French manufacturers get French raw silk cheaper than we can get Italian raw silk, is a fact that is undeniable.

11293. How many years, to your knowledge, has the assaying machine for the trial of silk been known in this country?—I have known it for thirty years; we have one of Swiss make, with the date of 1759 upon it, which was in my uncle's possession before my own, at least forty years ago.

11294. Then a witness was in error, when he supposed it was an advantage that the French possessed that we did not possess?—Every person in the trade, except the witness, knew that such things were quite ancient.

11295. Are there any other local advantages besides those you mentioned, supposed to be enjoyed by France, which England has not?—The most striking advantages are the growth of her own silk, cheapness of labour, and the possession of the markets of all the civilized world.

11296. With reference to France producing so large a quantity of raw silk, do you not consider that, preceding any rates of duty, a law should go forth to the effect, that silk manufactured goods should not be imported into England from any country or countries producing and not exporting raw silk?—I think it but equal justice to the English manufacture, that such should be the arrangement, and that we should not be called upon to take her silk goods unless she will let us have her raw silk; I should have thought Government would, as a matter of national fairness, independent of all regard to the interest of the silk manufacture, have long since taken the same view of it; but besides that, it places the silk manufacture under a positive disadvantage, as compared with the price of silk goods manufactured in the two countries, because giving France the monopoly of her own silk, it enables her manufacturers to get it at a cheaper rate; and it should be a subject for the consideration of this Committee, whether French silks ought to continue to be imported into England, unless France allow us her raw silk, and that free of all charge upon it; if she should refuse to accede to this proposal, then she would in fact prohibit the exportation of her own goods in this country.

11297. And in the other view of the question, if she admitted it?—Then that argument against the competition would be taken away from us, but it would leave in full force all the other disadvantages under which we labour, and for which we should still require very high protection; but I hold it to be unanswerable, that while she will not let us have her raw silk, and that free of duty, we ought to take none of her goods.

11298. But supposing her to allow the exportation of raw material, what rate of duties would you recommend on the manufactured article?—I do not see any reason, even in that case, that we should take less than the Government promised

as when the Ports were first opened ; nor do I, considering all the other advantages which France would still possess, think that we could do with less.

11299. That was *bond fide* 30 per cent. ?—Yes ; independent of the question of fashion, which is so powerful, that unless the Government of this country should feel itself at liberty to deal with it by way of prohibition, I can suggest no other than that it must be dealt with in the way of still higher duties ; so that if people will have French fashions they must be made to pay something higher for them, and as to the Government being unable to collect higher duties, I am perfectly incredulous about that.

11300. When you say 30 per cent. you mean 30 per cent. on plain goods ?—Yes.

11301. And what would you recommend on figured goods, or would you recommend a higher duty ?—Without pledging myself to any duty I think a higher duty might be collected ; and that either a higher duty or prohibition must be resorted to.

11302. By placing a higher duty, how would you propose to counteract the advantages, which to a certain degree that would give the smuggler ?—By stamping ; by punishing people in their persons who are engaged in smuggling ; and by some other regulations which cannot well be gone into before the Committee. That smuggling, even at a duty of 40 per cent., might be kept within such a small compass as to be a matter of no importance I have no doubt.

11303. And if France should impose a duty on the export of her raw silk, would you add that to the amount of duty on the manufactured article ?—I should say that while she will not allow her raw silk to come quite free I would not have any of her goods, such would be no violation of the public policy of this country. It has been felt as a great injustice by all classes, from the operative to the most intelligent person in the silk trade, for several years past, that instead of France and England being placed on a fair footing of dealing equally with each other, the silk trade of this country should be kept in a starving state for the benefit of the silk trade of France, while no trade of an advantageous nature to England is allowed by France between England and that country.

11304. Perhaps you could hardly expect France to allow the exportation of her raw material without duty when other countries impose a trifling duty, and if she were to impose a small duty, would you not recommend that that should be imposed on the manufacture too ?—I know no reason why she should not do it without any duty at all. If perhaps it were a very small duty it would be a matter of very little importance.

11305. Then you would add that to the goods ?—If it were a very small one, it might be comprized within any duty that you put upon it, or you might put a higher duty on French goods than you do on goods coming from any other part of the world.

11306. Might not the additional tax on the raw material, supposing the French Government were to allow its export to this country, might not the additional tax be more in amount than any duty which the Government could collect on the manufactured goods of France when entering this country ?—When I speak of its being admissible that there should be any duty, I am supposing some small duty that would be very trifling in its effects, but if it were a large one it would probably be as bad as the prohibition of the exportation of the silk.

11307. Can China and Bengal silk be substituted for the raws of Italy, or do they best work up together ?—To work them up together advantageously, you must have a portion of Italian silk which is imported raw and thrown in this country.

11308. But can China and Bengal silks be substituted for the raws of Italy ?—Very few goods can be made wholly of either China or Bengal, all goods almost require that part of the silk used in them should be Italian.

11309. You have then found from considerable experience as a silk manufacturer, that there is no substitute for Italian silk, and having given your opinion, the present duties on thrown silks are placed too low to draw from Italy a large and regular supply of their best silk ; do you recommend a return to the duty of 5 s. a pound on organzine and 3 s. on tram, as the best means of making England a more important market for the raw material ?—Yes, that is distinctly my opinion ; it was very bad policy to lower the duties on organzine below 5 s. and 3 s. on tram, and the true policy would be, to return to that amount of duty ; I believe that is the most likely way to bring a large supply of raw silk, and eventually, if people are not in too great a hurry for the accomplishment of a good object, eventually to produce cheap thrown silks for the use of the English looms.

Ambrose Moore,
Esq.

13 July,
1832.

11310. Are you of opinion that the Italian having sent a less quantity of raw during the present low duties on thrown silk, and a larger quantity of thrown to this country, is a proof that he has gained more by the raws than by the throws?—No, I cannot take it as a proof of any such thing; I take it he has considered it most for his interest to send it in a thrown state.

11311. Can such a conclusion be drawn?—There are persons in the world that seek to convince people that such is to be the inference; I think that the lower you make the duties on thrown silk, the probable effect on the Italian's mind would be, that he should say "now is the time to send my silks thrown," and if you raise the duty to 5s. I think he will find it his interest to send it in a raw state.

11312. With respect to gauzes, do you consider any duty sufficient to protect the manufacture of Coventry, or that the manufacture of gauzes can go on in this country without prohibition?—I am not personally much acquainted with the Coventry trade, but I have a general knowledge of it, and that leads me to the conclusion that they cannot go on with their manufacture of fancy gauze ribbons in the present state of the law.

11313. Do you think they can go on without prohibition?—I have an impression that prohibition is essential to the fancy gauze ribbon trade.

11314. Do you think that the additional amount placed upon the thrown silk when imported, would be injurious to the home manufacture?—I think it would not be injurious; if I were a manufacturer and had no throwing mill, I feel convinced I should be of that opinion; I feel confident that the silk manufacture of this country would be benefited by it. It is the best way to provide cheap thrown silk if we could get the Italians in the constant habit of sending plenty of good raw silk, and by keeping the duty not less than 5s., they would be induced to send us large supplies of good raw silk; this would be the way really to benefit the English silk manufacture, and I cannot think that that is an enlightened view of the question that would destroy the throwster under a pretence of making thrown silk cheap.

11315. On a trade affecting the employment of people in this country, whether would you consider the throwing branch or the manufacturing branch as of the greater importance?—In respect of their extent?

11316. In respect of their existence as employment for people in this country; whether, if it were a question of the annihilation of one of the two, or not even to that extent, if it were a question of benefiting one at the expense of the other, which should you consider most important to preserve?—It is quite clear that if one only is to be preserved it must be the weaver, because a throwster is of no use without he has somebody afterwards to weave up the silk he throws; but this is no necessary view of the question, as the interests of the two are quite consistent with each other. If the numbers engaged in each branch were the only consideration, the balance would preponderate in favour of the weavers; but then, if you take into account the amount of invested capital of the throwster, he has by far the stronger claim. The Government has no moral right to destroy the capital which they encouraged us to invest in throwing mills; it would be an act of cruelty, without a very much stronger case than our Government can make out, to sacrifice that property. The great distinction between the throwster and the weaving manufacturer is this, that a weaving manufacturer has no capital at all invested in his business, at least I reckon that for every thousand pounds a throwster has invested a manufacturer would not have fifty, so that although even if it were injurious to the manufacturer's trade it would not involve any sacrifice of his property, as his capital is invested merely in goods and debts, and therefore if, from the trade being an unprofitable one, he was induced or indeed obliged to give it up, he would have nothing to do but to collect his debts and sell his stock of goods, and he would be safely landed; but how would the throwster be off, with many, perhaps 20, 30 or 40,000*l.* invested in buildings and machinery? his trade would not only be destroyed, but himself entirely ruined.

11317. They would both be in the same situation, with the addition of the throwster having lost the whole of his capital?—Yes; and supposing his capital to have been partly borrowed, which would be the case in many instances, he would not only be ruined, but would be under the disgraceful necessity of compounding with his creditors.

11318. Is the Committee to understand it as your opinion, that the prosperity of the silk trade of England depends on the rate of duties fixed on the importation of foreign

foreign thrown silk?—I think it does, in a very much greater degree than credit is generally given for.

11319. And that the silk trade never can be prosperous with the present low duties on silks imported into England?—Never so prosperous as it might have been and would have been if the duties had not been lowered from what they stood at previously to the reduction of them in 1829.

Ambrose Moore,
Esq.

13 July,
1832.

Lunæ, 16^o die Julii, 1832.

LORD DUDLEY COUTTS STUART, IN THE CHAIR.

John Brocklehurst, jun. Esquire, called in ; and Examined.

11320. YOU are a partner of the firm of John & Thomas Brocklehurst, of Macclesfield?—I am. *J. Brocklehurst, jun. Esq.*

11321. What is your line of business?—We are general silk manufacturers, that is, manufacturing the raw silk through all its processes of throwing, dyeing and weaving into goods. *16 July, 1832.*

11322. Are you acquainted with these respective branches in your own neighbourhood?—So far as I have had an opportunity of acquiring the experience of 24 years as a manufacturer, and 15 of them as a banker.

11323. What may have been the state of the throwing interest before November 1826?—The throwsters were carrying on a very moderately remunerative, but steadily increasing, branch of manufacture.

11324. What was the condition of the population employed in the throwing mills up to that period?—They were employed at reasonable wages ; they were diligent, sober, well conducted, and they were then very contented.

11325. What may have been the state of the throwing interests since 1826?—Involved in ruin ; the value of their property (invested on the faith of protecting duties) totally annihilated ; and many families once in a very respectable condition of life reduced to poverty, and dependent on that rate to which they were once cheerful contributors.

11326. Can you state what might be the number of persons employed in the throwing mills of Macclesfield in 1824?—Ten thousand two hundred and twenty-nine.

11327. In 1828?—Five thousand two hundred and fifty-four.

11328. In 1831?—Three thousand seven hundred and sixty-two ; and the commencement of this year only 3,622.

11329. In 1824 how many spindles might there be at work at Macclesfield?—Two hundred and seventy-six thousand.

11330. In 1828?—One hundred and fifty-nine thousand seven hundred and sixty-two.

11331. In 1831?—One hundred and twenty-two thousand one hundred and ninety-six.

11332. In January 1832?—Only 117,192. I must here remark, the remaining spindles are standing still, and the people are unemployed.

11333. What may be the usual hours of work in the silk mills?—They commence at six and work till twelve, taking twenty minutes at eight for breakfast ; the mill closes at twelve for dinner, it resumes at one ; the people have a quarter of an hour or twenty minutes for tea at five, and work till six ; then they are allowed to work two hours extra if they wish it, and this is done every day in the week but Saturday ; then they work only ten hours and forty minutes.

11334. What were the average earnings of the mill people in 1824?—Eleven shillings per week for the full hours of work, or 1½*d.* an hour.

11335. In 1828?—Five shillings and five-pence per week for sixty hours, or 1*d.* an hour.

11336. In 1831?—Two shillings and ten-pence halfpenny for forty-four hours, or three farthings an hour ; thus showing that the wages of the mill people were 75 per cent. higher in 1824 than in 1828, and 125 per cent. higher than at present, and that their actual earnings (the true index of their condition) are now 75 per cent. lower than in 1824, or only one-fourth part of what they earned at that period,

J. Brocklehurst, jun. Esq. the protecting duty on foreign thrown organzine in 1824 being 9s. 2d. now 3s. 6d.; on tram, 9s. 2d., now 2s. I have a table in which those things are comprised in a small compass, which I will beg to deliver in.

16 July,
1832.

[The same was delivered in, and read, as follows:]

STATEMENT of Number of SPINDLES and MILL PEOPLE, WAGES and EARNINGS at these Periods.

In 1824	- - -	Spindles	- - - -	276,000
		Mill People	- - - -	10,229
1828-9	- -	Spindles	- - - -	159,792
		Mill People	- - - -	5,254
Dec. 1831	- - -	Spindles	- - - -	122,196
		Mill People	- - - -	3,762
Jan. 1832	- - -	Spindles	- - - -	117,192
		Mill People	- - - -	3,622

WAGES for 76 Hours, (in fact actual Earnings,) in 1824.

	MEN.	Young Men, of 15 to 20 Years.	Young Women, of 15 to 20 Years.	Children, 10 to 15 Years.	Children, 7 to 10 Years.
	s. d.	s. d.	s. d.	s. d.	s. d.
1824 - - -	18 -	14 -	12 -	7 6	3 6
1828 - - - Average employment only 66 hours, or 11 hours a day.	8 6	7 3	6 -	3 6	1 9
1831 - - - Employed only 44 hours per week.	4 7	4 -	3 1	2 -	1 -

As regards the Spindles, as well as the people, they are here ready to be employed if work could be had, and have fluctuated in the amount employed in the intervals.

11337. How do the hands out of employment subsist?—Chiefly on the poor-rates of the town and adjacent townships; some receive their pittance from a distance; and I am sorry to observe the general tendency towards cheapening our goods to be by a levy on the land.

11338. What improvements have been made in throwing machinery since 1824?—I know of no improvements since 1824; increased speed and the great improvements in and extension of machinery took place from 1819 to 1823, for it appears that the progress in these respects was such, that in the year 1824 the mills and machinery worked up 6,263,026 lbs. of raw silk, showing that at that period the silk trade had reached its highest point of perfection; for by a Table I will put in, I find that before the change took place in 1826, the annual average of the two preceding years appears to be 3,131,613 lbs. of raw silk worked up by the mills, made into goods, and consumed; and I find that after the change, during the last six years, we have annually consumed only 3,235,606 lbs. of raw silk; but there has been a great decline, both in the style of goods and the quality of the work, which may be seen by the great diminution in the quantities of fine silks worked up subsequently to that period; for, in 1824 and 1825, we worked up, of fine, raw and thrown Italian silk, 3,874,188 lbs. the annual average of those two years being 1,937,094 lbs. taken into home consumption; and for the last six years, that is, since the change of system, the raw and thrown Italian silk altogether taken into consumption amounts to 9,760,896 lbs., the annual average consumption being 1,626,816 lbs.; showing a decreased consumption of fine silk, on the average for the last six years, of 310,278 lbs. a year. By this it is evident that the silk trade are justified in the complaints they have made, and it is equally evident that the whole character of the silk trade of this country is changed, from fine goods giving great employment to the mills, and to the weavers, to a coarse description of goods giving less

less employment to the mills and to the weavers, and withal the consumption of material only equalled the consumption of preceding years, when we were working on fine goods and with fine silk.

J. Brocklehurst, jun.
Esq.

16 July,
1832.

[The Witness delivered in the Table referred to by him.]

TOTAL SILK imported and taken into Home Consumption.

In the Year 1824	-	-	-	-	-	-	-	-	Lbs.	3,414,520
— - 1825	-	-	-	-	-	-	-	-		2,848,506
										<u>6,263,026</u>

Before the change, the annual average of Silk consumed	-	-	-	Lbs.	3,131,613
Total taken into Home Consumption during the last six years, under the new system	-	-	-	-	19,413,639
Since the change, the annual average of Silk consumed	-	-	-		<u>3,235,606</u>

But the following Table will show the change that has taken place in the Silk Manufacture having gone from the finer branches to a coarser trade.

Italian Raw and Thrown Silk taken into consumption in 1824 and 1825	Lbs.	3,874,188
Or before the change the annual average of Italian Raw and Thrown Silk consumed	-	1,937,094
Total Italian Raw and Thrown, taken into consumption, during the last six years	-	9,760,896
Or since the change, the annual average consumption of Raw and Thrown Italian Silk	-	1,626,816
Or a total annual decrease since the change	-	<u>310,278</u>

11339. You have given the average consumption of silk for two years, 1824 and 1825; is it your opinion that the silk trade of this country would have consumed that quantity of silk or a greater quantity, had it not been interfered with by the manufactures of France?—I am of opinion that the consumption of silk goods in this country has increased at least 30 or 40 per cent. since that period, and if we had had the making of those goods, our trade would have been 30 or 40 per cent. more.

11340. Do you think the sudden increase previous to the year 1824, and subsequent to that period, arises from the alteration in the duty, and the consequent lowering of the price of the commodity?—There was no actual lowering in the price of silk goods after the repeal of the duties; for I find immediately after the duties were repealed, that raw silk advanced the amount of the duty repealed; so that the argument, which was advanced, that the consequent prosperity of the silk trade was occasioned by the repeal of the duties, was totally fallacious. I have here a price current of the Bengal silk, sold at the East India Company's October sale in 1824; the repeal of the duties took place in March, but the measure was not completed till about midsummer; at the midsummer sale, Bengal silks were selling at 17s. a pound, taking for instance the first silk on the list; and at the October sale it sold for 21s. 2d. the duty repealed, being 4s. a pound, which is just the difference of the duty.

11341. Though there was a great increased consumption of silk in 1824 and 1825, the price of that silk had not fallen?—It had not.

11342. Was the consequence of that, large stocks of manufactured goods remained on hand, or were they taken up by consumption?—There was no speculation at all in silk, the goods came into the market and were consumed as fast as they were made; they were taken into consumption, which was the case up to 1826, when the shopkeepers diminished their stocks, and prepared for the reception of foreign goods.

J. Brocklehurst, jun.
Esq.

16 July,
1832.

11343. So that in anticipation of the introduction of manufactured goods from France, in the spring of 1826, the shopkeepers became cautious in their purchases, and there was a flatness experienced for the first time in the silk trade?—The flatness generally commenced about October or November in 1825, and more remarkably so in Bengal silk, in consequence of a large accumulation of Indian bandannas and other oriental silk goods, in the India warehouses, waiting the period when they would be admitted to home consumption.

11344. You believe, up to the period of which you speak, all the goods manufactured from that increased quantity of silk, had been taken up by shopkeepers, and disposed of to the consumers?—I am fully convinced there were no stocks of English silks in the market when the French were admitted; there is another fact shows that circumstance perhaps in a clearer light, for at the latter end of 1825 we took less silk into consumption, which makes the quantity taken into consumption that year, less than in the year 1824.

11345. You did not take silk into a course of manufacture, because you apprehended injury from the goods to be received from France, and also from the large quantity which you knew to be in the India warehouses?—We had notice in 1824, our customers were buying India goods, and storing them in the India warehouses; but the demand for British goods was such in England that we went on without fear, and consumption took off the goods as fast as we made them; but in the latter end of 1825, knowing that the time was approaching, our customers said we will sell off to the last yard, to be prepared for the foreign goods which are in bond.

11346. Then from that period your trade received a great check, wages began to decline, and they have continued in a declining state since that period?—The silk trade has been in a drooping state from that period; there has been several reactions, but the tendency of the whole has been to decline year by year.

11347. Have you known the silk trade, for a great many years, from the earliest period you have known it till 1824, to have been a gradually progressive trade?—I have known it to be a progressive trade from 1808, when I first became acquainted with it; we have had occasional changes in consequence of the scarcity of silk and advances in prices, but the general tendency was, upon the whole, an improvement on the preceding year.

11348. Has it been a progressively increasing trade, from the first period of your knowing it till 1824?—Yes, it has.

11349. From 1824 to 1826, in consequence of the favourable state of the silk trade, from the remission of duty, and the taste for silk gradually increasing, did it make a still more rapid advance?—On the one hand there was a taste for silk in the country progressively increasing, and on the other hand there was a great improvement in the manufacture of silk; the taste on the one hand had encouraged the manufacturer, and the manufacturer on the other hand encouraged the taste.

11350. You were led to expect there would be a very large increase by the alteration of the law?—The Minister told us we should go on and make the silk equal to the cotton trade; he only considered the silk trade to be the younger sister, and that he should soon place the silk trade on a par with her sister; that was one expression of Mr. Huskisson's.

11351. In the year 1826 the new measure came into operation?—Yes.

11352. Has the silk trade continued progressively to increase in the same proportion from 1826 to the present time, that it had done in the eight or nine years preceding?—The consumption of raw silk has continued only the same in quantity as it was previously, but certainly attended by a great deterioration in the species of manufacture and the quality of goods made since that period; and though I have seen some very good things made since, still they are merely exceptions.

11353. The quality of the goods, generally speaking, which have been manufactured since, have been rather of an inferior character than otherwise, as compared with what they were before; there has been a larger proportion of coarser and heavier articles, and of course they consume more silk?—They do, and the goods have been of a lower and inferior character.

11354. Even making allowance for this, has there been a proportionate increase even in the quantity of silk used, as compared with what it was the eight or nine years before?—The annual average for the last six years does not surpass the average of the two years preceding the change.

11355. So that there has not been a progressive increase?—The silk trade of
England

England has stood still, while the silk trade of the Continent has made an advance in some instances of 60 and 70 per cent. *J. Brocklehurst, jun. Esq.*

11356. If the consumption of silk has been in coarser and heavier silks, must not the quantity of employment for the operatives have been diminished since 1825?—The increase has taken place in the strength of the goods, and not in the length or breadth, it has been more silk and less wages; I can show to the Committee the difference when we make it heavier and lighter. When silk is low, we put in double the quantity; one piece of these goods [*producing a piece of silk goods*] is made of the same length and breadth, and has only consumed eight ounces of silk; the other piece I present to the Committee takes 24 ounces to make the same length and breadth, and as silk becomes cheaper we put more of the material into the goods, which explains to the Committee the increased consumption of Bengal silk while our general manufacture has been sinking in regard to Italian silk.

16 July,
1832.

11357. Does it not resolve itself into this, that, if over a certain space you consume a greater quantity of silk, and that the total quantity of silk so consumed is not more than it was in the year 1824 or 1825, the quantity of employment to the operative must be diminished?—The quantity of employment of the operative is, to a very great extent, diminished. I will, on my next examination, produce a Table which will show the increased quantity of silk worked up for a diminished amount of wages; but before I leave this question entirely I wish to call the attention of the Committee to this; the fine raw Italian silk used in the years 1824 and 1825, amounted to 2,851,275 lbs., and for the last two years, 1830 and 1831, the quantity of fine Italian raw silk amounted to only 2,255,018 lbs., showing a decrease in the finer branch of Italian consumed in this country of 25 per cent.; and I may here add, at the same period, that whilst a decrease has been taking place in England, France has increased her looms at Lyons from 25,000 in 1825 or 1826 to 35,000 in 1832, and the rest of the silk trade of France has increased in the same proportion.

11358. That increase is in the finer fabrics, which afford most labour?—Certainly; that increase in France has been entirely in the fine silks.

11359. What number of throwing mills may there be at Macclesfield?—Seventy-one.

11360. When were they erected?—Up to 1814 there had been erected 32; from 1814 to 1823, 26 were erected; from 1824 to 1826, the alleged period of our great increase, 12 mills were erected, but only four of those were filled with machinery; and since 1826, only one solitary mill, in the year 1829.

11361. How many mills were at work in 1824?—I have a statement to hand in, showing, in the first nine years, from 1814 to 1823, the annual average increase amounted to three mills, and in the three following years the increase, that is, from 1824 to 1826, was little more than one mill and a quarter a year.

11362. Were those mills built since the year 1824 larger than they had been accustomed to build previously to that period?—No, the parties built mills to suit their own convenience; men with a larger capital build a proportionate mill, and men of less means build a smaller mill; but this statement shows, that notwithstanding all the assertions of Mr. Huskisson, that the over-trading, over-building and wild speculations of these years were the causes of the distress that overtook the trade in 1826, this Right honourable Gentleman never admitted the true cause, namely, the precipitate competition into which his measures had forced the silk trade; he was impatient, and unwilling to wait till the trade should evince some symptom of its capability to compete with a rival of whose powers it knew no more than he did. However, the Government having confidence in its own arrangements, and contemning the ignorance of the manufacturer and the representations of practical men, they rejected the petitions of the trade in 1826 for inquiry, taunting the trade with its superfluous fears, predicting in glowing colours the unbounded progress this emancipated silk trade would make, and what has it all ended in, but the sacrifice of a valuable source of revenue derived from a luxury, the ruin of many hundred manufacturers, dyers and throwsters, and other contingent trades, overwhelming with distress and misery many thousands of work people, and, in fact, disorganizing the whole trade, and suspending all progress during the last six years.

11363. How many mills were at work in 1824?—Fifty-eight.

11364. How many now?—Forty-one mills; I beg to deliver in a Statement showing the proportionate increase each year of factory building in Macclesfield, from 1814 to 1824, from 1824 to 1826, and also during the last six years; there are

J. Brocklehurst, jun.
Esq.

16 July,
1832.

now only 41 at work, the remaining 30 standing still, or 17 less at work than in 1823, and only nine more than in 1814.

[The same was delivered in, and read.]

Number of Factories built in Macclesfield and the neighbourhood up to 1814, and occupied as Silk Factories	32	Average annual increase, from 1814 to 1823.
		3 mills.
Ditto - - up to the year 1823	58	
		From 1823 to 1826,
Ditto - - up to the year 1826	70	1 1/4 mills.
(Only four of these increased twelve have been filled with machinery.)		From 1826 to 1832,
		1 mill in six years.

		17 mills.
Number of Silk Factories occupied in Macclesfield and the neighbourhood, in 1832	41	
		Decrease, since 1826, of
Ditto - - unoccupied	30	29 mills.

11365. What may be the horse power of the mills at Macclesfield?—About 550; several of the mills being partly turned by water, it is difficult to be precise.

11366. Do you know the probable cost of those mills?—About 400,000*l.* or 500,000*l.*, computing the mills now standing, and those not put to work.

11367. Are those mills and machinery convertible to any other kind of manufacturing?—They are not. Silk machinery being adapted to its peculiar purpose; the buildings also are not of proportions suited for cottons; the engines are too small, and the gearing of too slight a construction.

11368. Do you consider the throwing of silk to be confined to Manchester, Macclesfield, Congleton, and the West of England?—Far from it, it is spread over the whole kingdom; silk mills are established in twenty counties, and about fifty towns; and to remove any doubts of this, I have taken the pains to obtain the names of mill proprietors in all the number of towns I have mentioned. It has been so much the practice lately to treat this important and useful property as of no consequence; but when one of the most severe afflictions of the country, is its present mass of unemployed people, I would ask, is this interest to be further trifled with by political economists, whose extent of knowledge has been obtained in a class of M'Culloch's, unconfirmed by practical knowledge of the state and condition of a body of work people, whose bread would be swept away by a stroke of their pen.

11369. How many horse power do you understand to be employed in the throwing of silk now, at Manchester?—I have heard from various sources; one of the principal mill owners at Manchester (Mr. Williams) informed me, that he computed the horse power of Manchester to be 138.

11370. Have you reason to believe, from other inquiries that you made, that that is correct?—I believe that is quite the extent of it, and I believe 138 horse power at Manchester does not throw more silk than 138 horse power would do at Macclesfield.

11371. Macclesfield alone, according to your statement, has about four times as much power applied to silk as Manchester?—Yes, the Manchester mills have been estimated at from 10 to 12, and the mills at Macclesfield are from 60 and 70.

11372. Do you know of any advantage there is possessed by the silk throwsters at Manchester, above those of Macclesfield and Congleton, and the neighbourhood?—The reverse, I believe; that silk is not thrown so cheap at Manchester as in other towns, but that it is a convenience to have a mill attached to their manufactory; in proof of this, they have stated in their memorial to the Board of Trade, that they consider their mill property a total sacrifice to the change which took place in 1829, when the duties were reduced from 5*s.* to 3*s.* 6*d.* on thrown silk.

11373. From the reduction of the protecting duty, and the severe competition in the trade, have those mills that were placed in inferior situations, where they could not procure water power or coals cheap, been generally thrown out of use?—I think that the mills alluded to have not been thrown out of work in consequence of the dearness of coals or scarcity of water, but because Italy has taken away their employment.

11374. If

11374. If Italy sending her thrown silk here, induces a competition that lowers the price of silk throwing, will it not necessarily fall more severely on those mills where the labour or moving power is the dearest?—I think they have been thrown out of employ in consequence of their being less to be thrown, and that we have lost the throwing of that silk.

*J. Brocklehurst, jun.
Esq.*

16 July,
1832.

11375. If in consequence of the increased importation of thrown silk from Italy, there be less work for our own silk mills, must not those that throw that silk at a dearer rate, be of course the first of those thrown out of employ?—It probably may have that effect to a limited extent.

11376. All other things being the same, is not that the effect?—An increased quantity of thrown silk from Italy must have a general tendency to injure all the mills in England.

11377. Supposing a mill, in which the expense of working be 5,000 *l.* a year, and another in which the expense of working was 4,000 *l.* a year, doing the same quantity of work; and supposing the profit of one expending 5,000 *l.* a year to be 1,000 *l.*, and the profit of the other would be 2,000 *l.* would it not?—Precisely.

11378. If the profit of throwing silk was increased to give to that mill which expended 4,000 *l.* a profit of only 1,000 *l.* that would leave the other without any profit?—Yes.

11379. Would not the necessary consequence be, that that would discontinue working?—Yes; but that is not the cause of their being thrown out of employment; whatever rate the work may be proposed to be done at, the throwster would do it, it being in fact paid out of the poor rate; whenever wages will not do it, it is taken from the poor rate.

11380. You think there are some mills kept at work by the deficiency being paid out of the poor rate?—I consider that the present basis of our throwing to be the poor rate; I do not consider that any mills are in a bad situation where they have labour free, as the water and the coals form a very small proportion of the expense; it depends upon the quantity of work to be done, and that, having diminished since 1824, peculiarly in the fine silks, we can trace at once the cause of their not being in work. There is not the work to be done, and even those which are at work are in such a desperate state of competition, that whichever gets most from the poor rate is best off.

11381. It is not the quantity of silk which is to be taken into consideration only, but the fineness of the silk?—Yes, up to 1824, the throwsters had generally fine silk in hand, which they worked according to their convenience; but there is now a scarcity of that kind of fine silk for throwing.

11382. What has been the annual amount of poor rates expended at Macclesfield from the 25th of March 1821 to the latest period you know of?—In the year commencing March 25th, 1821 and ending March 25th, 1822, the expenditure was 4,208 *l.* and it was about the same up to 1826. In 1827, it was 7,810 *l.* and in 1832, 8,467 *l.* 10 *s.* 5 *d.*, and if the allowance to the poor were now what it was in 1821, the expenditure on the poor's rate would amount to nearly 12,000 *l.*

11383. Is the practice of giving a smaller pecuniary amount to the poor almost universal now?—No; it is not the case in an adjoining township, in which there is a large extent of land, and whilst the land can bear to pay any thing, there is not that disposition to grind down the poor to the smallest mite on which they can subsist.

11384. Can you state the number of families in Macclesfield receiving relief for the last ten years?—From about 1821 up to 1826, the average number of families was 56. In 1826, soon after the change took place, the families receiving relief amounted to 332, and in 1829, 320; but another change occurred in 1829; and in 1831, I find the families receiving relief amounted to 511; now the great increase of 56 families to 511 shows the diminution of allowance; for the year preceding 1826, the whole amount of poor's rate was but 4,200 *l.*, and in 1832, 8,000 *l.*, the amount is not doubled though the families increased to about nine times the number.

11385. So that the relief given to each family has been greatly reduced?—Yes; I find before 1826, the allowance to the poor was calculated at 2 *s.* per head per week, but that they have latterly reduced them to 10 *d.*, and in general they require the able part of the family to break stones, sweep the streets, draw coals, and any almost superfluous work they can contrive for them. In the adjoining township of Hurdsfield containing about 3,500 inhabitants, the money expended upon the poor for the five years preceding the 25th of March 1826, amounted to 1,190 *l.* 15 *s.* 11 *d.*, and for the last five years, the expenditure has been 3,300 *l.*; this Table will contain

J. Brocklehurst, jun.
Esq.

16 July,
1832.

the whole of the information upon the subject, the number of poor receiving relief and the proportionate amount of poor's rates collected.

[The same was delivered in, and read.]

GROSS EXPENDITURE of the POOR RATES.

	£.	s.	d.
From the 25th March 1821 to 25th March 1822 - - - - -	4,208	3	- $\frac{1}{2}$
That is to say, for the year 1822-1823 - - - - -	4,165	16	5
Ditto - - - 1823-1824 - - - - -	3,827	10	6
Ditto - - - 1824-1825 - - - - -	4,201	18	-
Ditto - - - 1825-1826 - - - - -	4,478	19	-
Ditto - - - 1826-1827 - - - - -	7,810	11	4
Ditto - - - 1827-1828 - - - - -	6,067	18	8
Ditto - - - 1828-1829 - - - - -	6,458	16	6
Ditto - - - 1829-1830 - - - - -	8,670	17	5 $\frac{1}{2}$
Ditto - - - 1830-1831 - - - - -	6,673	8	2
Ditto - - - 1831-1832 - - - - -	8,467	10	5 $\frac{1}{2}$

THE allowance is now reduced from 1s. 6d. to about 1s., and some instances only 10d.; and the able part of the family required to sweep the streets, to break stones and wheel coals; otherwise the last year would have been about 12,000*l.* or three times the amount before the absurd change took place.

NUMBER of FAMILIES receiving RELIEF.

At Christmas - - 1821 - - - - -	73 families.
1822 - - - - -	47 -
The reduced Allowance per head will account for the fact of the number relieved and the amount expended, not preserving the former proportions.	1823 - - - - - 51 -
	1824 - - - - - 50 -
	1825 - - - - - 56 -
	1826 - - - - - 332 -
	1827 - - - - - 174 -
	1828 - - - - - 199 -
	1829 - - - - - 320 -
	1830 - - - - - 216 -
	1831 - - - - - 511 -

THE Township of Macclesfield only is comprised in these statements, exclusive of Sutton and Hurdsfield, containing about 10,000 inhabitants, and which separately support their own poor.

The Overseers of Hurdsfield (containing about 3,500 inhabitants) state the money expended on the Poor, for the five years ending the 25th March }
1826 - - - - - as } £. 1,190 15 11

And for the Five years ending the 25th March 1831, as - £. 3,303 10 9 $\frac{1}{2}$

11386. Have you any Comparative Table of the Weekly Expenditure before and since the alterations of the laws respecting the silk trade?—During the beginning of 1823, the weekly expenditure for the casual poor amounted to 7*l.* 1*s.* 8 $\frac{1}{2}$ *d.* In 1832, it amounts to 88*l.* 15*s.* 9*d.*, showing an increase in nine years of 1,150*l.* per cent., producing a state of distress to which I know no parallel. I have here an authentic document signed by the Chief Magistrate of Macclesfield and by the Overseers, showing a progressive increase of the amount paid to those poor.

[The same was delivered in, and read.]

Macclesfield, 9th May 1832.

J. Brocklehurst, jun.
Esq.

THE WEEKLY PAYMENTS to the CASUAL and regular OUT-POOR of the Township of Macclesfield, in the year 1832, have been as follow :

Weekly Average in 1823			Average in 1823 -		
7 1 8 1/2			16 5 - 1/2		

THE Population of the Township of Macclesfield, between 1823 and 1832, has increased one-fourth, as near as can be ascertained: then since 1823, the Population has increased about 25 per cent., whilst the payments to Casual Poor have increased about 1,150 per cent.; or, including the Out-Poor, about 335 per cent. The payments to the Casual Poor in 1823 were at the average of 2s. per head per week: those in 1832 do not exceed 1s. 3d. per head per week. These payments are independent of payments to Out-Poor residing in other Townships, of coal, clothing, bedding, and the expense of the House.

The Out-Poor consist principally of the aged, infirm, cripples, and those unable to work. The Casual Poor consist of those unable to procure work, but who, for the most part, are not considered permanently on the books.

Since 1823 the Overseers have, as far as possible, transferred cases from the Out to the Casual Poor Statement. This will account for the payments to the regular Out-Poor being less in 1832 than 1823.

The number of persons in the workhouse, in the year 1821 and 1822 was 69; in 1824 and 1825 was 59. The number in the House in 1832 is about 135 or 140.

The account of Poor in the House, for 1822, 1823 and 1824 have been mislaid, and cannot at present be found.

I have examined the books, and believe this statement to be as correct as it well can be.

George Ainsworth.
Lazarus Hurdorn.

Jos^b Fawkner,
Assistant Overseer.

Signed in the presence of W^m Hopes, Mayor.

J. Brocklehurst, jun.
Esq.

16 July,
1832.

11387. Can you state the weekly relief afforded to the casual poor paid the first week in each year during the last ten years?—In 1821, 7*l.* 5*s.* 6*d.* a week was expended; in 1827, the year after the change, 45*l.* 17*s.*, and at the commencement of this year 85*l.* and increased by the 1st of February this year to 96*l.*

11388. In these statements do you comprehend the adjoining townships?—No; Hurdsfield and Sutton contain about 10,000 inhabitants, and maintain their own poor. I have however reason to know that the poor in those townships press heavily upon the people.

11389. Are there many empty houses in Macclesfield?—The last return by the collectors of poor rates state them to be 484.

11390. Are there many houses, the occupiers of which do not contribute to the poor's rate?—For the year 1831, the occupiers of 1,646 houses paid no poor's rates.

11391. You have been charged at Macclesfield with over trading previous to 1826, was it the fact?—I should say not; as a proof of it, our house as bankers, lost nothing up to the period of foreign goods being admitted to home consumption. In 1826, the panic produced no inconvenience to the banks at Macclesfield, they were both run upon like the rest of the bankers, they took up their notes and one of them burned the whole of his issue, indignant at the charge of overtrading; I should think 100*l.* covered our loss in obtaining gold and conveying it to the country, also the whole of our losses in 1826; if there had been so much overtrading at Macclesfield, the bankers would have lost by it. Government wishing to rid themselves of the odium of their currency follies, very unjustly charged them to the account of the bankers over issues.

11392. Did not the manufacturers and throwsters at Macclesfield advertise for 5,000 hands?—It was so stated by the late Mr. Huskisson, he had procured a printed copy of the advertisement, and being delighted with such an opportunity of defending his own views by charging them on the silk trade, he could not forbear telling his secret before hand, and though I along with others undeceived him as to the object of the advertisement being to induce an individual manufacturer's hands to return to work, still to our surprise the subject was alluded to in a way, and in an assembly where we had no opportunity of explaining the circumstance.

11393. That was a matter of a local and temporary nature, and not at all indicative of the state of the trade?—The advertisement came from an individual who employed only 100 hands, he would not give them the terms they asked, and he put forth that advertisement.

11394. Did not the manufacturers build a great many houses at that time?—No, certainly not; in 1822 several building societies among the work people were formed, and during that and the two following years, an increase of houses, keeping pace with the increase of the trade, took place, all that was done was warranted by the circumstances of the trade, and had nothing to do with speculation.

11395. Were the empty houses you have mentioned ever occupied?—Yes, before 1826, by people engaged in the silk trade; and Macclesfield being particularly a silk district, the desertion of these houses has the same cause as the closing of the factories; besides, the 1,646 houses paying no poor's rates, but too faithfully exhibit the state of the silk trade.

11396. You have mentioned a very great reduction in the wages which has taken place at Macclesfield; bread, and the general necessities of life remain pretty stationary, do they not?—The average price of corn at that time was from 60*s.* to 65*s.*, and it is the same now.

11397. What has been the condition since 1826 of the people employed in the mills?—In 1826, when they were overtaken by the change, they were living in comfortably furnished houses, and they were amply provided with clothing, and when distress first assailed them, their only want was food, they fell back upon their little properties around them, which have since been gradually disposed of. They are now reduced to a state of destitution, hundreds of them without a change of clothes, and in many instances without any thing like a bed left in their cottage, sleeping on straw, covered with the clothes worn during the day, huddled together for the sake of warmth (this was the case last winter, when I left Macclesfield). Demoralization of every kind has been the result, and the once respectable and well-conducted artisan is now broken-hearted and reduced to pauperism; two-thirds of the people were found to be in want of the common conveniences and necessities of life.

11398. Have you observed whether that has had an injurious effect upon their morals?—To the greatest extent; I know one individual instance where a mother and

and two daughters of 18 or 20, have 3s. a week for the three to subsist on; they paid 1s. for rent, 6d. for coals, and had 6d. per head to subsist on. *J. Brocklehurst, jun., Esq.*

11399. Is that case within your own personal knowledge?—Yes, it is; it was found out by the committee inquiring into the state of the town.

16 July,
1832.

11400. Were the people employed in the silk trade orderly and decent people?—I do not know any class of working people in the country so orderly as the people in the silk mills generally; it is a neat trade; it is what I should call the drawing-room trade of the country.

11401. They have undergone a remarkably injurious change?—Yes, they are a poor ragged and miserable people.

11402. Were the mother and two daughters you speak of well-conducted previously?—They were very respectable, well-conducted people, in their rank of life, indeed; it was one of the teachers of the Sunday school described to me this scene of distress, among many others he had witnessed on the day appointed to visit the houses of the poor; he said he should not recover the shock it had given to his feelings for a long time; the girls had for some years attended the school, and he had known their conduct up to the time he discovered their situation.

11403. In what state have these circumstances placed the town of Macclesfield?—In 1826, in addition to various acts of Royal munificence and liberal subscriptions raised throughout the kingdom, the shopkeepers and innkeepers came forward and contributed very cheerfully towards the relief of the distressed portion of the town, not only of those belonging to the town, but of those who had settlements elsewhere; since that time great numbers of these contributors have also fallen into ruin, and the remainder find themselves so overwhelmed with poor rates, that they feel it difficult to raise the means of going on. Money has been borrowed on the poor rates, and the overseers, both in Macclesfield and the adjoining townships, have lately been obliged to borrow money on their own personal security. A memorial from the overseers, describing these circumstances, has been presented at the Board of Trade, and a petition for relief, from the shopkeepers, was presented to the House of Commons by my Lord Grosvenor, I believe, in the month of March last.

11404. Can you state how many failures occurred between 1814 and 1826, of silk throwsters and manufacturers?—They were of so rare occurrence, I can only recollect one or two; and though a banker the last nine years of the time, I should think 9l. would cover our losses.

11405. Since 1826, how many have failed?—Somewhere about 40, as nearly as my recollection serves me, besides a great many in minor trades.

11406. How large a proportion is that of the whole?—Two-thirds at that time.

11407. How many establishments may there be at the present time?—There are now about as many left as have failed; I have a list of the parties who failed, but I think it is not desirable to go into those particulars.

11408. To what do you attribute so many failures?—Some few might probably have been from unsuccessful competition, but I am confident the bulk of these have been ruined by the reduction of duties on foreign thrown silks, and the general bad effects of the measures that came into operation in the year 1826.

11409. They were in it, and could not get out of it?—Men cannot get out of a trade they are embarked in so rapidly as some political economists imagine.

11410. If you had 20,000l. invested in a silk mill, do you know any mode of realizing your property when the throwing of silk is unprofitable?—At the time when individuals wish to get out of a trade, they find that the moment, of all others, no one wishes to get into it.

11411. Does not that observation peculiarly apply to manufacturing establishments, where there are large buildings, a plant and machinery, peculiarly adapted to that trade?—Yes, but political economists conceive that we can turn from the manufacture of cotton or silk, or any thing else, with the rapidity they proceed to conclusions.

11412. Can the machinery be applied to any purpose?—To no purpose but fire wood; I have seen property sold (if in fact it may be so called) that cost 60s. for 3s.

11413. Do you know any instance of mill property being offered for sale?—I know an instance of a mill originally costing 6,000l. or 7,000l. that was purchased in 1827 for 1,700l., and I stated the fact to the Board of Trade in 1828 or 1829; a few weeks ago I met the late proprietor in London, and asked him what that mill actually cost him; he said 7,000l. independently of machinery, and that

J. Brocklehurst, jun.
Esq.

16 July,
1832.

the machinery cost him above 4,000*l.* more; altogether that property, which cost 11,000*l.* was knocked down for 1,700*l.* and about 200*l.* for the machinery.

11414. When was that mill erected?—In 1822, I believe.

11415. It was not old or worn out?—No, it was and is still as good and as perfect a mill as any in the kingdom.

11416. Was that man ruined?—He was, and has since been reduced to the necessity of trying to maintain himself and his family by keeping a petty shop in London.

11417. Supposing that mill to be erected in 1827, as it was in 1822, what would it have cost to have built that mill and stored it with machinery?—Perhaps 10 per cent. less.

11418. It would have cost about 10,000*l.* in the year 1827?—Yes, and it would now.

11419. What may be the prices of throwing silk at Macclesfield?—There are no fixed prices; throwsters who engage work are too often obliged to take the prices offered without reference in any way to cost, and then find themselves compelled to turn round on their wages and expenses, to see whether they can make their contract pay.

11420. Can wages be reduced any lower?—Most assuredly not; for at this time they do not afford subsistence or common household necessities, much less clothing, putting aside rent.

11421. Can you state the cost of throwing a pound of Italian organzine?—There are two modes in England of estimating the cost of throwing: the one, if part of the wages be paid by the poor rate, making no allowance for wear and tear; but if a man must pay his way, and give fair wages to the work people, the cost would be about 5*s.* exclusive of waste; this does not include the finer sorts, some of which would cost 7*s.*

11422. Is it not thrown at a less price?—I believe it is; and for some time past I have observed a number of throwsters who have attempted these low prices either timely finding out their error and suspending their throwing, or falling into ruin. Various opinions have prevailed with regard to the prices of throwing silks in this country and in Italy, and various rates of protection have been proposed; but I am convinced of this, that the protection to the throwster should be 5*s.* and upwards on organzine, for although it may be supposed from some statements that have been made of the price of throwing silk in Italy, a less degree of protection would be sufficient, from what I know of the silk market and the prices at present, I am convinced a less price than that would not protect the English throwster. It is evident the Italian has gained such a footing in this market now that it will require the degree of protection I have named to reinstate the British throwster in his own market, for the Italian in his process has these peculiar advantages, he sends raw and thrown in the first instance with the prices attached to them, say 17*s.* for the raw, and 1*l.* 3*s.* for the thrown; upon arrival, the market prices are 18*s.* for the raw, and only 1*l.* 2*s.* for the thrown, in consequence of the larger supply of thrown and the smaller supply of raw; the supplies of thrown increasing, and raws still diminishing, the raws rise to 18*s.* 6*d.* and the throws fall to 1*l.* 1*s.* 6*d.*; the merchant determines to sell for account of the Italian at these prices, which results the same thing to the Italian as 17*s.* for the raw, and 1*l.* 3*s.* for the thrown; whereas the English throwster, buying the raw at 18*s.* 6*d.* and expending the work upon it of 5*s.* 6*d.* for throwing and waste, makes his organzine cost him 24*s.* which is 2*s.* 6*d.* above the price the Italian is selling at in this market; so that in effect, at this time, 21*s.* 6*d.* having paid the duty of 3*s.* 6*d.* in order to protect the English throwster, the duty at this moment should be 6*s.* per pound.

11423. What is the cost of throwing Italian tram?—A throwster, to keep his factory and machinery in repair, and pay his way, should have 4*s.* and upwards, exclusive of waste.

11424. Do your house throw silk by commission?—We do not; up to the beginning of 1831 we sold Italian tram and organzine of our own throwing.

11425. Why did you abandon this branch?—The Italian throwster began to undersell us in 1830, and we deemed it prudent to give up a losing competition; circumstances soon justified the step, as we witnessed the ruin of several throwsters, and much sacrifice on throwsters' stocks.

11426. Is the throwing of Italian silk of importance to England?—Of the first consequence, as it affords so much employment on account of its being of a fine size, and consequently considerable wages. Independent of this, Italian raw silk

is

is absolutely requisite to ensure the consumption of the raw silk imported from China and Bengal; and I may here state with regard to a trade I know something of, where 100,000 lbs. of Bengal and China silk is consumed, 50,000 lbs. of Italian silk is requisite to work it up into manufactured goods.

*J. Brocklehurst, jun.
Esq.*

16 July,
1832.

11427. Do you consider the throwing in this country advantageous to the silk manufacture generally?—I am satisfied the silk trade of the country depends upon the extent of our throwing operations, for where the throwing shall be conducted, the natural tendency is a concentration of the stock of raw material.

11428. Would it not be equally advantageous to the manufacturer to be supplied with foreign throws?—Judging merely as a manufacturer, I should say decidedly not, for we find it of the first importance that we should be enabled to regulate the throw of our material according to its purpose; not only the perfection but the very power of our making any peculiar article, depends upon our having the raw material at hand for selection; throwing being in effect the first stage of manufacturing.

11429. In what other view do you consider it important to retain the throwing of Italian silk in England?—It would tend to insure a larger stock of material at steady prices, the manufacturer would have as it were three stocks of Italian silk to trust to; stock of raw in the merchants' hands, stock in the mills, and the customary stock of foreign throws as heretofore.

11430. Would not the stock of foreign throws be increased?—At times it might; but the Italian throwster having other customers for his throws would merely feed this market, and should any sudden demands arise abroad we should be deprived of a supply until we had outbid them, thus losing a season, and suspending our consumption of Bengal and China silk. It is of peculiar advantage that the British manufacturer should have two markets at home for raw and thrown Italian silk, having only one market consisting of throws, his own purchases would raise the market against himself, besides being more subject to the interference of speculation when the supply should be temptingly small.

11431. Have not the throwsters of Italy the control of your supply of raws already?—Since 1829, it appears to me, that their influence has, in this respect been extended; but there are districts in Italy which produce raw silk, and have no throwing mills. Now as the rest of the Continent are not buyers of Italian raws, these districts are very beneficial to this country; though during the last two years, I have an impression that part of their supplies have fallen off, and may be going into the Italian throwsters' hands; but I must add these districts furnish a very small supply towards the quantity required in this country to work up other silks.

11432. Do you attribute this to the reduction of duties on throws in 1829?—I do; and there is a very important and in my mind an alarming diminution taking place in the supplies of raws from the direct throwing districts of Italy. To place this point more clearly before the Committee, I have made an extract from an intelligent Broker's Books of Account, (Messrs. Brockwell & De Lannoy,) showing the amounts of raws and throws annually sent by every merchant reeler and throwster in Italy, each of these parties send their bales of silk under peculiar marks. The selection I have made consists of between 20 and 30 of the general senders of raws and throws from the throwing districts, which will show the change which has taken place in their operations since the alteration of duties in 1829. I put in the Table, which shows the three last annual imports of raws and throws, of these respective marks, demonstrating that when the duties on throws were reduced in 1829, the raws have progressively decreased, and the throws have increased in the importation from Italy. The total number of raws, arising from 26 Italians, who trade regularly with England in raws and throws, are, in 1829, 691 bales of raws, 127 bales of throws; in 1830, 660 bales of raws, 336 bales of throws; in 1831, 558 bales of raws, 589 bales of throws; and to the 25th May, this year, 45 bales of raws, 46 bales of throws; showing, that in 1829, there were 444 per cent. more raws than throws; in 1830, 96 per cent. more raws than throws; in 1831, five per cent. more throws than raws.

11433. Do most of the Italians, who consign silk to this market, consign both thrown and raws?—No; there are several who send only raws, but the largest number send both.

*J. Brocklehurst, jun.
Esq.*

11434. Are the trade accustomed to reason upon such facts as these?—I fear not, for if they were the throwing question would be better understood; it would then be guided by solid reasoning instead of vague and inconsistent opinions.

16 July,
1832.

11435. Have these facts been useful to you so as to enable you to regulate your own transactions?—I have found them eminently useful, inasmuch as they early indicated what were the effects of the change of duty in 1829. The broker who usually selects for me the samples of raw and Italian silk, and proposes them for purchase, up to that period was in the habit of supporting his proposals, by saying he could sell such and such proportions when manufactured into organzine and tram; but in 1830 he ceased to suggest his prospects of sale, his advice changed; these tables and his experience showed him the coming collision of Italian and British throwsters; his observations now were, if you can use up so and so in your manufacture all very well, but do not buy with a view to sell this silk in a thrown state; the Italian throwster, with his peculiar advantages, can undersell you. We followed his advice, and contracted our throwing; it saved us from a severe loss by the competition that came on in 1831, though we would have followed up the operation of throwing for sale for the sake of our work people, giving them the use of the steam-engines, mills and machinery, if the returns would have paid their wages. To this day we are ready to resume the trade when bare cost can be obtained.

11436. Have you any information as to the capability of throwing silk in this country?—This country is already prepared to throw, I believe, to a very great extent, with its present mills and machinery, and a large unemployed population, well acquainted with the throwing of silk.

11437. Do you consider the present low duties, on thrown silks, a disadvantage to the silk manufacturer generally of this country?—Certainly they are, because they are placed too low, as I have previously shown, to draw a large and regular supply of the best raw silks from the throwing districts of Italy, and which are evidently every day becoming more essential to the silk manufacture of this country.

11438. Do you consider the silk manufacture of this country capable of great increase, provided the duty on thrown silks were well adjusted?—I consider the silk trade of this country to be comparatively in its infancy; if well managed by our Government, every thing depending upon its obtaining increased protection, to enable the throwster and manufacturer to regain the ground they have lost since 1826; the first point requiring protection is the securing the throwing mills of England ample supplies of raws, and trusting to competition, among themselves, to supply the manufacturer with a large and excellent choice of throws at moderate prices; the next important point is to secure to the manufacturer a profitable and secure market at home, and the certain consequence will be an increasing export of the surplus, if without profit, or at a loss for a time it would be of little consequence, so long as he has profits at home to counterpoise the losses on his export.

11439. Are not the present duties upon thrown silks adjusted in a manner to enlarge the silk trade in England?—No, they are not; for most assuredly they check instead of promote an ample supply of the raw silks of Italy.

11440. By what mode would you obtain an increased supply of the better kinds of raw silk from Italy?—By restoring the duties on thrown silks to what they were in 1829, coupled with the principle that thrown silk should only be admissible from those countries exporting their raw silk.

11441. To what do you attribute the diminished supply of the better raw silks of Italy?—To the Italians retaining more for the purposes of throwing at home, confirmed by the Table I have just referred to, and to the increased trade of the various continental manufactures.

11442. Do you consider there are sufficient mills and machinery in England to carry on a more extensive trade in the throwing of Italian silk, than at present?—In 1824 the mills of England threw 50 per cent. more Italian raw silk than in 1831; in addition to this, it is well known that there are thousands of people who understand the throwing of silk, who are in a state of starvation for want of employment.

11443. What was the proportion of raw and thrown imported from Italy during the years 1827 and 1828, while the 5*s.* duty prevailed?—The average proportions were 180 per cent. more raws than throws.

11444. If the duty on throws had not been reduced, would these proportions

J. Brocklehurst, jun. Esq. of raws and throws been continued to be imported?—I can see no reason to the contrary.

16 July,
1832.

11445. What was the proportion of raws and throws imported from Italy during the years 1830 and 1831?—The average for those two years ending December 1831, was 84 per cent. more raws than throws.

11446. It having been stated in evidence, that other causes were given for the large importation of thrown silk during the years 1830 and 1831, than the reduction of duty to 3*s.* 6*d.* per lb., can you state the proportions of imports of raws and throws for the first six months of the present year?—For the six months just terminated, that is from 1st January to the 30th June, the proportions are only 68 per cent. more raws than throws; thus showing the conspicuous diminution from 180 per cent. since the last reduction of duties.

11447. Is there, in your opinion, any other cause than the low rates of duty, to have induced the Italian to be still sending these increased proportions of throws to England?—I attribute it entirely to the present inadequate duty.

11448. If the duties on throws were restored to 5*s.*, do you calculate on excluding the foreign throws?—Certainly not, it would not be requisite to do so; past experience proves that we had a certain convenient supply when the duty was 14*s.* 6*d.*, or in reality 9*s.* 2*d.*; and when it was 5*s.* there was a supply; and I have no doubt there would, with that duty, still be the usual supply; my object would be to keep that supply in reasonable check, the great and good effects of which would be the maintaining, and eventually increasing a supply of good Italian raws to this market; our silk trade would then rest on a secure foundation, it would be an entire manufacture in all its processes; for to me it is very evident, that to where the throwing can be successfully carried on, all subsequent processes have a natural tendency.

11449. Do you consider the present low prices for throwing as tending to improve or deteriorate the manufacture of silk in this country?—The present low price compels the throwster to do his work in the cheapest readiest way, without paying due attention to the clearing of the silk of its imperfect places; this is a great injury to the weaver, enhancing the cost of weaving, by impeding his progress, and increasing the faults and imperfections on the surface of the silk when woven; I consider the silk manufacture generally of the country to be degenerating.

11450. What might be the condition of the weavers before 1826?—From 1808, when I first became acquainted with the trade, it was steadily increasing to 1816, from which time it made rapid progress up to 1826, and gave occupation to a large influx of cotton weavers. It is a singular fact, that from about 1817 to 1824, there were few, and no material fluctuations of prices of weaving or quantity of employment, and by this time the greater part of the cotton weavers had been absorbed by the silk trade, and I should say it was a steady progressive trade both in figured and plain silk weaving through the whole period up to 1826.

11451. What has been the condition of the weavers since 1826?—Since 1826 their condition has undergone such a transition from comfort and regular employment to so great a degree of distress as hardly to be known to be the same trade as it was before interfered with.

11452. Have you any statement of wages that will show the alteration you describe?—I have a Table of some of the principal articles made at Macclesfield, and the prices from 1821 to 1831, which I will deliver in; the average earnings of the weavers in 1821 to 1826 amounted to 16*s.* 6*d.*, but as soon as the change took place, their earnings decreased to 7*s.* 9*d.*, and they are now reduced to 6*s.* per week. These statements of wages of weavers include the weaving of the richer kinds of handkerchiefs not made by all manufacturers, and therefore rather exceed the actual average of earnings of the weavers.

[The same was delivered in, and read.]

16 July,
1832.

* The falling off in earnings in 1826, and subsequently, is accounted for by the scarcity of work, and the frequent changes of it the weaver has been subjected to, as well as by the reduced rate of wages.

For several months past, both here and at Manchester, &c. the weavers have not been allowed to bring in more than a given quantity of work, besides being kept waiting for warps and shute.

The 7th column condenses the weekly earnings on the average of *all the* different descriptions of work in the other columns.

11453. Does the Table you have handed in contain a list of all the articles made at Macclesfield?—In addition to the handkerchiefs, sarsnets, gros and Persians already enumerated, crapes are made, also figured gros, velvets and satins have been at different times and subsequently relinquished.

11454. Do the manufacturers of the Continent interfere with you?—It is to this interference I attribute the abandonment of these articles, checking the progress of this most valuable part of the silk manufacture, placing the whole trade of Macclesfield and the country around in competition, as it were, on only a few articles of a lower grade.

11455. Do you think that if your trade had been better protected it would have been more extensive and in a more advanced state?—Seeing around me a great increase of consumption of foreign manufactured silk goods, it is evident that if these goods had been manufactured in England, the silk trade would have been so much the larger; but our Government have never seemed to understand the interests of the silk trade, and I may observe the importation of the silk manufacturers from France last year, was to an extent that the fine raw material would have distributed an enormous amount of wages among the English artisans.

11456. What description of goods did you make before 1826?—Before 1826, besides handkerchiefs, we made rich gros de Naples for the West end retail houses; the goods were of net bright silk, both warp and shute, these houses merely buy linings of us latterly, but unwilling to be driven out, we are making low goods, substituting in competition with others dye stuff for silk, and the dyer who can load the silk most is in the highest repute.

11457. Do these houses buy goods from you now?—Since 1826, our trade with these houses has gradually declined; we have often had the mortification to see them use our capital in payment for foreign silk goods, knowing the validity of the parties, it was the preferable evil to locking up our capital without interest, to give them the use of it at a certain rate, but I must do the parties the justice to say, that they have stated (and I believe it), that it is with regret that they are obliged in self defence to encourage foreign manufactures, that to this day they wish the admission of them was under more restrictions, these are the wishes of some of the most respectable houses in the trade at the West end of the Town.

11458. Do weavers lose more time than formerly?—Much more, I am sorry to say; I know but too many instances where weavers with families wait several weeks at a time for work, they are nominally employed by being allowed to retain their reeds and harnesses in the hope of something arising in their favour, hence manufacturers often find themselves with 1,200 weavers on their list of workmen, and in reality only a portion (700 or 800) at work.

11459. When weavers and artisans are thrown out of work do they take to other employment?

J. Brocklehurst, jun.
Esq.

16 July,
1832.

employment?—No, there seems no opening; a weaver or millman in general knows nothing of agriculture; in and round Manchester and Macclesfield the land being chiefly grass land, but little labour is required to keep it in order. From 1816 to 1826, the cotton weavers whom the power loom had displaced, found employment in silk, and on that account I think it most important to retain the silk manufacture to this country as affording an asylum for people thrown out of other employments. On reading the evidence of a gentleman on the 17th February 1831, before the Select Committee of the House of Commons, on the affairs of the East India Company, as to the extent of interference of the great export of cotton fabrics to India from Great Britain with the native manufacturers, he there stated that the interference had been very considerable, and that it had destroyed the cotton manufacture in many places in India. The next question he was asked was, “Has the export produced distress among the weavers and artisans of India?” his reply is a remarkable one, “Not to the extent that might have been supposed, for the weavers in that country are also cultivators of land, and turn their labour from one employment to another without that shock which might be felt in other countries.” But in regard to Macclesfield and that neighbourhood, I have known instances where the people thrown out of employment have been unable to obtain any thing to do for 18 months or two years at a time.

11460. Do you employ many Irish?—We do, indiscriminately with other weavers; steady characters and having skill in their avocations, are a sufficient recommendation.

11461. Are the Irish weavers subject to more distress than other weavers?—Most unfortunately they are; not having even the wretched resource of a parish.

11462. Do you know what may be the state of silk weaving in Dublin?—I am led to believe it is very bad, for I saw the poor Irish in Macclesfield pass the last winter in great distress, but I never heard of any of them attempting to return to their own country; and I am confirmed in this belief by a letter I received a month ago from a gentleman, a member of a relief committee in Dublin, which with the permission of the Committee I will refer to: his letter is dated Dublin, the 8th of June 1832. “Sir,—As a member of a committee sitting now in Dublin, of which the Lord Mayor is chairman, for the assistance of the poor, and as I find several silk weavers are now out of employment here, I take the liberty of requesting to know from you whether there be an opening for such persons to get work in Macclesfield; if so, endeavours would be made to assist in providing the means for such persons to get over. In the year 1830, I was a member of a committee then in existence, and we sent several silk people to Macclesfield and other manufacturing towns in England, where employment offered itself, and who were generally successful; there are persons here who are in want of employment in both broad and narrow branches. It is to be hoped that a reformed Parliament will see into the necessity of altering a system which is giving employment to France while Great Britain and Ireland are the sufferers, France being a country which will give no reciprocity in return. I have to apologize for this trouble, and shall at all times be happy to render your firm any service in Dublin.” I wrote him a reply in these words,—“London, June 16th, 1832. Sir,—Your favour has been forwarded to me, and in reply I regret my inability to hold out any prospect of Dublin weavers obtaining employment in Macclesfield for the present; certainly, in 1830, owing to a miserable state of the silk trade in 1829 and previously, a momentary re-action on the demand for labour occurred, yet I well remember a portion of the weavers who came over at the time (bringing with them their scanty all, consisting of an old loom) who never succeeded in obtaining any direct employment; but they raised a few shillings on this moveable, perhaps the value of it as old timber, and since that time they have occasionally obtained a short job as journeymen; in too many sad instances living huddled six or eight together in a small room or cellar, without furniture or a bed, their wives and children obliged to subsist on charity.”

11463. What would be the effects of opening the trade to India, as to increasing or improving your supply of Bengal raw silk?—I believe it is already open for all the purposes of individual enterprize as to growing, buying and exporting raw silk to England.

11464. What would be the effect of the East India Company's relinquishing their trade to private individuals?—The silk trade derive incalculable advantages from the large and steady supply periodically put up for sale (thrice a year) by the Company at low tax prices; their long previous notice of sale, quantity, quality, &c.

checks

checks speculation, and should they abandon their trade, for years to come, in my opinion, the culture of silk in India would decline both as to quantity and quality.

11465. Do you consider it desirable that the East India Company should continue their growth of silk?—If, as it is understood, that the revenue of the Company must come here in some medium, there cannot be a better than in raw material, the growth of India.

11466. Are the importations of silk goods from India injurious to any party?—Up to 1829, the duties on India goods were rated per yard, per piece or per pound, and under those rated duties the British trade was protected, and public wishes for India bandannas fully satisfied; all the evidence the Committee have received, and my own experience confirms the fact, that there had been no smuggling under the previous regulations of 1826; I have here the official returns of seizures of smuggled goods, and there are scarcely fifty pieces of bandannas enumerated from the year 1826 to the year 1829; but the change to an *ad valorem* duty in 1829 has already had the effect of increasing the sale of Indian bandannas for home consumption, which is attributable to the encouragement the present *ad valorem* duty affords to the importer; for when the British manufacturer requires most protection, he obtains the least; the present price the piece of India bandanna sells for at the East India Company's sale being 20s., the *ad valorem* duty of 20 per cent., would be 4s.; but when the price falls, and the piece sells but for 15s., the protecting duty falls to 3s.

11467. Under what further disadvantage does this system place the trade?—At Liverpool, these bandannas are cleared by valuation; and last February when the prices at the East India Company's sale was 19s. to 20s. a piece, the Custom-house at Liverpool allowed this description of goods to pass at the valuation of 15s.; thus the duty in Liverpool was but 3s. at the time it was near 4s. in London.

11468. Do you know whether the *ad valorem* duties are inconvenient to the importers of goods from India?—A bill to regulate the collection of duties is about to pass into a law, and a memorial has, I believe, been presented by some London merchants to the Board of Trade, desiring to be put on the footing of Liverpool, that is, to have the power to clear by valuation, as they feel an inconvenience in the delay of their goods being obliged to pass the East India Company's sales, to ascertain their value.

11469. Do you see any objection to this being granted?—None, provided all these goods were placed under a rated duty sufficient to protect the British manufacturer against India and China.

11470. Are they not protected by the present regulations?—Up to 1829 they were, but by the official returns of India bandannas taken into home consumption, there appears a progressive increase, showing that the protection is not sufficient. In 1829, Indian bandannas taken into home consumption were 67,465 pieces; in 1830, 77,953 pieces; in 1831, 101,023 pieces, being an increase of 47 per cent. in two years; and I must here remark, these India goods are brought home as a return and sold without any reference to cost, and when they come into the market British goods are always laid aside, Indian goods having the preference, and the lower they fall the worse the situation of the British manufacturer. I have seen a time when a piece sold for 13s., and the *ad valorem* duty upon that would be very small indeed.

11471. What remedy would you recommend?—A rated duty of 8d. per yard; until 1829 the duty on bandanna handkerchiefs was 1s. per yard, but to favour India it was reduced from 30 to 20 per cent., the exact proportion 8d. bears to 1s. Under a rated duty, the importers might be allowed to clear their goods at their own convenience.

11472. Are the India Company's imports of silk goods materially injurious?—Certainly both to the manufacturer and to themselves; the manufacturer is obliged to watch the amount of imports, consequently dares not make and hold any stock; he continually hears that the Company and private traders are enlarging their orders for goods in India; and as regards the India Company's profit and loss by their double proceeding of importing both goods and the raw material to make a similar article, sooner or later they will discover that their goods and raw material are in competition in this market to their mutual disadvantage. I have here a statement of the Company's profit and loss upon their silk transactions from the year 1816 to the year 1830; it is a certain fact, that up to 1825, with the exception of one year, the Company were making a liberal profit upon their silk transactions, and since

J. Brocklehurst, jun.
Esq.

16 July,
1832.

that time they have had a loss every year but one year; except the last year, they gained 3,000*l.* out of all their silk from India.

11473. How do you arrive at the facts?—This is from a copy of the Papers (Appendix, fol. 656.) laid before Parliament, and ordered to be printed, on the 11th October 1831; it is headed, "Account of Profit and Loss upon the Sales of Bengal Raw Silk sold by the East India Company in the following Years."

[The same was delivered in.]

[See No. 22 of the Papers, (Appendix, folio 656) laid before Parliament, (Commons,) and ordered to be Printed, 11th October 1831.]

(Extract.)

ACCOUNT of PROFIT and Loss upon the Sales of *Bengal RAW SILK*, sold by the *East India Company*, in the following Years :

		PROFIT.	LOSS.
		£.	£.
1816-17	-	255,755	—
1817-18	-	244,547	—
1818-19	-	80,431	—
1819-20	-	—	53,967
1820-21	-	43,223	—
1821-22	-	63,861	—
1822-23	-	73,830	—
1823-24	-	101,138	—
1824-25	-	—	75,109
1825-26	-	—	32,105
1826-27	-	45,123	—
1827-28	-	—	40,634
1828-29	-	—	22,165
1829-30	-	3,152	—

Account for 1831 not made up.

INDIA BANDANNAS taken into Home Consumption, from an
Official Statement, &c. &c.

In 1829 - - - 67,465 pieces.
1830 - - - 77,953 -
1831 - - - 101,023 - being an increase of about 47 per cent.
in two years.

11474. Do you believe that their manufactured goods, coming into this country, come in competition with the raw silk they import?—Yes, certainly.

11475. What may be the accumulation of Bengal raw silk in the Company's warehouses?—There has latterly been a great accumulation.

STOCK of RAW SILK in the East India Company's Warehouses :

1829: January 1st,	7,043 bales, about 150lbs. per bale	-	lbs. 1,056,450
1830: January 1st,	8,541 - - -	-	1,281,150
1831: January 1st,	9,795 - - -	-	1,469,250
1832: January 1st,	10,233 - - -	-	1,534,950

This account shows an accumulation of 50 per cent. in the East India Company's warehouses since 1829.

11476. Was any of their silk refused at the sales in 1831?—In 1831 the Company offered for sale 8,000 bales, of which 2,726 were refused by the trade.

11477. Was any refused at their sale in February last?—Owing to the large quantity refused at previous sales, the Company diminished the usual quantity offered for sale by 200; still 472 were refused, making in reality 672 as not being taken by the trade.

11478. To what do you attribute this decreasing consumption of Bengals?—Partly to the Company importing manufactured goods, tending to displace so much material which otherwise would be manufactured into the same description of goods in England.

11479. If

11479. If the object in view were the benefit of India, are you of opinion that object would be best promoted by increasing the importation of raw silk or of manufactured silk goods?—That is a question to be decided by political economists, who advocate cheap buying and selling, though our artisans accustomed to make these goods be starving; but as labour is so superabundant in this country, I think there can be no doubt the duty of our Government would be to promote the importation of raw material and not manufactured goods, even from our own colonies.

11480. Have not the imports of manufactured goods of that sort had the effect, greater or less, to depress the price of their raw silk?—It has had that effect; they (the East India Company) are sustaining a loss upon their imports of raw silk.

11481. Then would it not be more for the advantage of the East India Company, not to import manufactured goods?—I had a conversation a short time ago with a gentleman, high in the management of the India Company's trade; I observed to him, "so I understand you have ordered 20,000 pieces of India goods to be sent home, where you ordered 5,000 before; why do you do this, you will only reduce the price of your silk, and it is only displacing a certain quantity of manufacture in this country;" his answer was, "if we do not import them, the private trader will;" I replied in answer, "is there any difficulty in there being a duty to regulate that?" he said he thought that it would be very desirable, that is, to have a rated duty, not an *ad valorem* duty; now we do not wish to displace the goods from India entirely, but to keep them at their present quantity; it being rather alarming to have an increase of imported bandannas, of nearly 50 per cent. within two years.

11482. At the time that bandannas and other manufactured silks of India were not admitted to home consumption in this country, they were not sold at a much higher price than they are now, were they?—They were sold at about a guinea a piece, as at present.

11483. At the time that they were sold for exportation, and not allowed to be consumed in this country, the raw silk of India did fetch a much higher price per pound than it does at present?—Frequently double the present price.

11484. Does it not appear, that since the manufactured silk goods of India have been admitted into this market for general consumption, the raw silk sent from India to this market has been sold at a loss by the Company?—Ever since 1824, as will be seen by the Return of the Company's profit and loss on silk, already before the Committee, it is shown they have been losers in every year but one.

11485. Are you aware what the exports to France may consist of?—It has been stated by various parties, and I believe correctly so, that the export in value consists of 26,000*l.* a year to France; and I know one house who have made and sold 15,000*l.* of the 26,000*l.*; it has been stated by a gentleman, sent by the Board of Trade to make inquiry into the silk trade of France, that he scarcely saw a shop in that country, wherein he did not see English manufactured silks exhibited, but he never stated what kind of silks; now it is well known, that it is customary for all shops to exhibit handkerchiefs in their windows, and I dare say he would, from want of minuter scrutiny, come away with the conclusion, that we had a large trade to France; but we have no silk trade to France, except in a few bandanna handkerchiefs, amounting to 26,000*l.* a year; and it is equally certain that this gentleman may be mistaken in saying that only 800,000*l.* worth of silks come from France; it is not to be supposed that he has a clearer account of the extent of imported French silk goods; my belief is, that double the quantity comes from France; it has also been stated, that the trade of this country requires foreign goods to stimulate it to improvements; now I have here some patterns of bandannas which have never had any well printed foreign goods to compete with; I can exhibit a pattern of these goods of one house in this city, which I believe to be unequalled by any manufacturer in the world [*producing some patterns of bandannas*]; this house has no foreign competitor to propel it forward in improvements; on the same ground, it may be justly observed, that England only wants protection to improve her silk manufactures generally, and obtain a large silk trade.

11486. When were these printed?—Some of these designs were made in 1823, 1824, and from that time up to the present period; I have one piece of handkerchiefs here, the designing of the patterns upon this piece cost 800*l.*

11487. If you had an importation of that commodity from France, do you believe that any person would have undertaken to incur an expense of 800*l.* to perfect these patterns?—Certainly not; improvement and extension of any branch of trade must grow out of profits. There exists too great a desire in this country to advance; we do not require the aid of foreign competition in our own market,

J. Brocklehurst, jun.
Esq.

16 July,
1832.

it is too evident that this competition has only paralyzed British exertion during the last six years. Every country abroad seem disposed to protect and promote the interests of their manufacturers. I know in Belgium, there has been a proposition under the consideration of their Government, to give their printers the entire monopoly of their own market against England. [*The Witness exhibited another piece of handkerchiefs,*] I do not wonder, if a gentleman going to France, should frequently see this Paul Pry figure in all the shops, and thus be led to suppose that we have a large export to France. I exhibit this piece to show the perfection to which printing has arrived; this is acknowledged, by competent judges, to be the best work ever produced by block printing.

11488. Do you believe, that if the other fancy branches of the silk trade were protected, a similar outlay of capital would take place for the purpose of producing whatever can be required as matter of taste, and with as great skill in the execution of that taste?—It being done in this instance, there can be no doubt, that with our immense capital and population, means would be found to produce articles of taste equal to those of other countries, if we had but adequate protection.

11489. Do you believe that the reason these things are not undertaken in the other branches of the trade, is, that they have not this protection?—Yes, it is simply for want of protection that the trade languishes at present; I am satisfied, if it possessed the home market, we might soon have an extended export trade.

11490. That would then permit an improvement in the superior branches of your manufacture, and the inferior might be sold, either with a profit on the goods or at a trifling loss, which the profit on the better branches of that trade would enable you to sustain?—Yes, I am decidedly of that opinion; for if we were making the better articles I have no doubt we should occasionally export a portion of these better articles, and having made a profit in the beginning of the season, the surplus stock we should export, and thus eventually we should cultivate the taste for our articles in other countries.

11491. You do not think it is from that want of taste we do not succeed in foreign countries?—I think if our trade were protected our taste would soon be found equal to that of other countries. I have heard a great deal of Schools of Art in France, and I must own, with some regret, that the want of protection disables us from forming similar establishments, particularly as regards the silk trade.

11492. How is the trade now carried on by France with this country?—I believe that she monopolizes all the valuable branches, and that without a general return to a better system we shall lose the silk trade.

11493. Have you considered the applicability of the power loom to the weaving of broad silk?—I have for several years past attentively watched the various efforts to apply the power loom to the weaving of broad silk made by enterprising individuals, and I may add, that I have seen the attempts in more instances than one accelerate the ruin of the parties, this was a favourite crotchet of the late Mr. Huskisson. I remember in 1824 he was present at one of our interviews with the Board of Trade, and predicted the successful application of power looms, and that we should beat all the world; he knew nothing about the matter, and in fact he and his successors have, as regards the silk trade, gone on from mistake to mistake, till they have at last dragged it down to its present ruined condition.

11494. Is the power loom applicable to silk weaving at all?—It has been successfully applied to weaving common narrow ribbons down to a shoe-string, for several years; in the a-la-bar, of which we have heard such absurd tales of its utility as an invention, I saw weaving tapes and ferrets 20 years ago, we had them at work ourselves. It is useful in weaving these narrow things, 24 pieces in a row, because one or two shuttles being suspended, the moving power is still beneficially going on, but in weaving broader goods so much depends upon the handling and trimming of the silk, a great waste of power must necessarily occur.

11495. Is not the power loom applied to the weaving of crape gauze?—In this article also it is valuable; the crape thread being hard twisted and capable of bearing the friction of this mode of weaving.

11496. Why is it not equally applicable to broad goods?—It is not applicable to broad goods, the thrown silk goes through the process of dyeing preparatory to weaving, and according to colour is subject to more or less injury; for instance, in all grain and fast colour stronger acids or alkalies are applied, these less or more deeply penetrate the fibre of the silk and render it tender or brittle, and sometimes the process chafes or ruffles the surface of the thread, so that the next process of winding it from the skein and in warping it, that is preparing it for the weavers's use,

are

are very tedious, the silk having many broken places repaired by knots, this renders the weaving proportionally more difficult; hitherto no certain process has been discovered to ensure silk from injury in the course of dyeing; this silk consequently requires great care and attention on the part of the weaver to produce a faceable article when woven; now in weaving cotton the yarn of the warp is dressed with a preparation of paste, to make the thread firm, and able to resist the friction of the reed and harness through which it passes, and the calico or cloth is afterwards cleansed by boiling, washing and bleaching, or in dyeing or printing; but broad silk goods are required to come from the loom perfect in colour, texture, brilliancy and fit for use, and any defect in these respects is destructive of its value, dressing the silk in any way totally spoils it.

*J. Brocklehurst, jun.
Esq.*

16 July,
1832.

11497. What other obstacles are there to the introduction of the power loom?—

Power loom weaving does not admit of the introduction of a variety of colours or stripes in the shute requisite to make a piece either of fancy ribbon or broad silks, what is usually described as plaided or checked; and in weaving figured goods, should any imperfection in the pattern arise by threads out of their place, the power loom still proceeds, and would often waste a far greater proportion of valuable material than the power is worth.

11498. Are there any more obstacles?—The economy of power loom weaving is, one person to attend to two or more looms, and in cotton weaving, he can do so as his warp undergoes a preparation not applicable to silk, and which obviates all tediousness of working; his principle employment is to feed the looms with shute or weft, and of course the looms are constantly in action, but in silk weaving, the chief process is, in neatly trimming the warp, and were tedious trimming occupies a much greater portion of time than is taken up by merely the weaving or making of the piece, and here the saving of the moving power is lost.

11499. Are there any other difficulties?—The quantity of threads contained in the warp require the greatest nicety on the part of the weaver to produce a faceable surface, these threads are so crowded, that the weaver makes but two or three to four yards a day, but the advantage derived in weaving cotton by power is, that each loom turns out 60 yards a day, and a person attends two looms. Calico weaving may be pursued through the year, calico being always a convertible article, but in silk goods, the frequent changes of fabric silk, &c., would often throw the looms totally out of use, thus incurring a great loss on capital expended. I mention these facts with a view to remove some of the notions entertained at the Board of Trade in 1824, and subsequently, that we must apply power looms, and then we should be on right principles. I despair of ever applying power looms. This spring one of the most intelligent and most ingenious mechanics in Lancashire, set up a power loom and commenced weaving silk with it, about a month ago he removed the loom and gave out the silk to be woven by a hand loom weaver, saying it could not be accomplished; if a man in Europe could have accomplished it, that gentleman would have succeeded.

11500. You have shown some very beautiful specimens of printing in the silk handkerchief trade, and have mentioned that as much as 800*l.* was expended in the preparation of the patterns, have the goodness to state whether in your opinion, the same taste of skill and exertion would be applied to other fancy branches of the silk trade, provided the protection given to those branches were adequate to secure a suitable remuneration?—I have no doubt as high a degree of perfection in the manufacture of the finest and most tasty silk goods would be attained in this country as could be produced in any part of the world, provided we were protected, and some security afforded by the Government as to a fair remunerative return on the application of skill and capital requisite to the production of figured and fancy silks. I feel fully confirmed in this opinion, by reference to the beautiful styles the English, and silk and cotton printers have attained, both in designs and engraving, we are not behind the rest of the world in many other articles of taste I could enumerate. I am satisfied, therefore, that Spitalfields and Coventry would, under wise protective laws, very soon show their ability to rival foreign productions.

11501. You mean that they would rival them in taste as well as in execution?—Yes; if our Government, like their neighbours, would but display the same disposition to encourage rather than disparage her own manufacturers.

11502. Do you consider smuggling to be injurious to you?—Smuggling is injurious to the manufacturer, by displacing his productions at a lower price than what the law may recognize as the necessary protection in the shape of duty; it

J. Brocklehurst, jun.
Esq.

16 July,
1832.

enables the dealer in smuggled goods to undersell the fair trader, and smuggled goods come into competition with our own goods at ruinously low prices.

11503. Who are the promoters of smuggling of silk goods?—I do not think the regular smugglers, for the risk of getting 30 or 40 per cent., would enter into the traffic in silk goods on their own account, whilst spirits and tobacco offer profits of six to 1,200 per cent. The channels for the disposal of silk are inconvenient, and the article not understood by the smuggler, he must have a receiver to take the goods in proper season; the delay as to delivery of spirits is no injury to the quality, rather the reverse; the promoters are to be found among the dealers, who are in reality the smugglers, through mere servants, and when one house smuggles it compels many others to do so in self defence.

11504. What would be the remedy, in your opinion?—Imprisonment and hard labour. All respectable houses wish for such a law for their mutual protection; it would be effectual if merely suspended over the parties, and I believe would seldom, if ever, require to be put in force.

11505. Would stamping foreign goods be beneficial?—Highly so, first in aid of detection of fraud, and it would enable the public, when disposed to encourage their own manufacturers, to discriminate the goods of other countries.

11506. Are you aware of the advantage that would result to this country by transferring the silk trade to France, in exchange for their taking cotton yarn from us?—I see no advantage, for they take the yarn as absolutely necessary to their manufacture of lace, not out of any reciprocal feelings, for I understand that they cannot spin these fine sizes for want of the peculiar damp climate of Manchester; now I do not see any such necessity existing for our taking silk goods from France, surrounded as we are by a great body of unemployed artisans who are able to make these silk goods if adequately protected.

11507. Have you ever been invited to establish a silk manufacture on any part of the Continent where a silk manufacture had formerly flourished, and been destroyed?—Many inducements were held out to me in 1829, after the harsh treatment we had experienced at the hands of our own Government.

11508. By what country were you invited?—In that year I visited Bruges, Ghent, Brussels, Mecklin, Antwerp, and the cities and towns on the Rhine, &c. I had an introduction to a gentleman at Brussels, at that time connected with the Government; he informed me of the anxiety of the Netherlands Government to see the silk trade re-established in the country, from whence it had gone to England.

11509. Had you an opportunity of judging of what progress they had made towards its re-establishment?—At Antwerp I saw a manufacture of silk carried on, but the proprietors could not extend or vary their productions, owing to their want of choice of material, and the want of the means of adapting their silk to the varying purposes, by throwing it accordingly. The manufactured silk I saw was denominated Antwerp black silk; it was a fabric they had made for several years; they made the same quantity, I believe, ten years ago as they are making now.

11510. Did you hear of the cost of the manufacture?—I saw a weaver, who told me he earned what I estimated to be 7*d.* a day, weaving this heavy stout black silk, and I should say a man in England would be very ill paid at half-a-crown a day for the same work, and would not be able to support his strength and pay his way with less wages.

11511. All the necessities of life in that country are unprotected; there is a free export and import of them?—In Belgium I believe that to be the case.

11512. Are there any corn laws?—Not to my knowledge; they may have some trivial duty.

11513. As the Government of the Netherlands were desirous to recover this trade, had you any proposal made you?—The gentleman I allude to offered to introduce me without delay to Prince William, and promised to ensure me his personal patronage; that the Prince would take a direct interest in the establishment; that his proportion of advance should be 2,000*l.* to my 1,000*l.*, to any extent I pleased to lay out money, but if I was inclined to embark capital sufficient for the undertaking, he would insure to me, for a long period of years, the exclusive right of the population capable of working silk at Ghent or Bruges, but particularly Bruges, the population being between 30 and 40,000, and any legislative enactments that I might require, to give me protection against foreign competition.

11514. Is the establishment of silk throwing and manufacturing very practicable at these places?—During my stay at Bruges I had the means of ascertaining the condition and temper of the population; I had also pointed out to me the very great

great advantages that could be derived from a stream of water that was evidently capable of turning a throwing mill to any reasonable extent; I perceived also that the population in general were very short of employment, and were very scantily paid; I have therefore no doubt that it would be very beneficial to any party competent to undertake it.

*J. Brocklehurst, jun.
Esq.*

16 July,
1832.

11515. Do you know any thing of the disposition of the present Government?—I believe they are as much disposed to encourage an extension of trade as the former one; they have lately had under consideration certain regulations in favour of their own silk printers, with a view to enable them to buy on favourable terms the silk handkerchiefs in a grey or unfinished state, and to print them in the vicinity of Brussels.

11516. Then we should have the making and selling the grey silk cloth to them in an unprinted state?—It is usual for a trade, to use a common expression, “to creep, and then go;” and so soon as they have secured a printing trade, they can more safely proceed to make the cloth for themselves.

11517. What progress have they made?—Hitherto they have copied the English patterns, and succeeded, for we find their orders for unprinted silk cloth on the increase.

11518. Is it not possible that some of those goods which were seen in the shops in France were printed in the Netherlands?—It is possible, certainly, that a few may have been sent from the Netherlands, being printed there.

11519. Do you know what may be the extent of the British export trade in silk goods?—I understand it amounted to about 500,000 *l.* in value last year.

11520. Do you consider the export trade to be of advantage to the silk trade?—I think the export trade very beneficial, inasmuch as it carries off the surplus productions; it is always understood to be serviceable to any branch of trade, as it relieves the home market of what would otherwise embarrass the manufacturer and depress the prices at times below their proper level; for though the surplus goods be exported at an apparent loss, yet this may in reality be counterbalanced by a profit on that portion of the goods that may have been sold at home; thus, to a manufacturer possessing the home market, an export trade would be of considerable advantage; it is the remedy for gluts, and the French have found the utility of this market to clear off their job goods, in addition to their large regular trade to this country.

11521. To extend the export trade, you are of opinion the manufacturer should possess the home market?—When the duties were taken off the raw material in 1824, we were expressly told it was with a view to enable us to extend the export trade, and if the repeal of duties had not been followed by the fatal measure of letting in foreign goods, I have no doubt we should have had by this period a prosperous trade at home, and a growing demand from abroad; instead of this being the case, when foreign goods were admitted in 1826, though the effect was to diminish the value of material and to force down wages 50 per cent., yet our export trade diminished; for, in 1825, the export of silk goods, according to the official value, was 150,886 *l.* and in 1826 only 106,931 *l.*, showing a falling off of about 30 per cent.: so much for Mr. Huskisson’s plan of forcing the export trade by foreign competition in the home market; and though half the trade had been ruined by 1828, the export had increased the difference only betwixt 159,670 *l.* in 1824, and 179,053 *l.* in 1828, an increase not worth consideration in comparison with the immense sacrifices the Government and the trade had been called to make, and which I calculate to be four millions of revenue, and as much of private property or more.

11522. When did the export trade begin to increase?—In July 1829 the debenture was first granted; it had not time to effect a material change in the export during that year; but in the year 1830 it increased beyond 1829 about cent. per cent., and in the year 1830 another 50 per cent.

11523. What per centage on the exports do you consider the debenture?—The debenture is nominally 3*s.* 6*d.* per pound on exported silk goods; but deducting what may be paid for the debenture, loss of debentures running out of date, and so on, it is reduced to about 3*s.* a pound, or 5 to 7½ per cent. on the value of goods.

11524. If 5 to 7½ per cent. can have had the effect of increasing the exports to such an extent, do you see any means of still further increasing the export?—From what I know of the export trade, a very little addition to the drawback would ere long be found to have a beneficial effect.

11525. Would a debenture of 5*s.* per pound increase the trade?—It is the opinion of others besides myself, that if the drawback were 5*s.* the exports would

J. Brocklehurst, jun.
Esq.

16 July,
1832.

rapidly increase, and thus act in favour of the home trade, which would then in turn extensively participate in the advantages of export.

11526. Do you not believe the export of goods has been profitable to manufacturers when you put out of view bandannas?—I am inclined to think not.

11527. But it has been a relief to the manufacturer, from the superabundance of stock he finds it desirable to get rid of?—I am afraid that the export hitherto, instead of being a proper and natural export, has been an export of those goods which were sold at half price. Eventually we may have an export at times with a profit; the course most likely to be successful is, to send out small adventures to all promising markets, instead of large masses of goods at very low prices, and to support these adventures the manufacturers should have profits in the home market. By this time the country must be convinced of the folly of attempting to force a bankrupt trade to extend its exports.

11528. You are of opinion probably, that the export trade in England might be similar to that now exercised by France with regard to her goods, that when she has supplied the home market with a superior commodity, the refuse, which she could not get rid of without injuring the home market, would be exported?—That is precisely my view, and I think that the export trade would extend, and that it might eventually become a profitable trade; for I well recollect that the export trade in these goods, bandanna handkerchiefs, commenced at a loss on almost every thing we sent out; it was preferable to export all goods we sold at a loss, especially all goods that were imperfect; for if we had sold them in the home market at a loss, the buyers would afterwards turn round upon us, and expect to have all other goods at the same price. The French invariably stipulate that the goods they sell at a loss shall be exported, so as not to come into subsequent injurious competition with their newer productions.

11529. Where do you export them to?—One house made 15,000*l.* worth of the 26,000*l.* exported to France; two other houses, who export perhaps 10,000*l.* worth more of the same article, making 25,000*l.* out of the 26,000*l.* that are stated to have gone to France; the remaining portion of the 500,000*l.* go to all parts of the world; and all the reciprocity we obtain from France is as 26 is to 500.

11530. Would not the throwster be exposed to greater competition by the Italian throwster when the debentures should be at a higher price?—It appears to me that the high price of the debenture obtained by the consumer of foreign thrown would not be of any advantage to the Italian throwster; my opinion is, that the high price of the debenture would only benefit the first party; for the high price of the debenture would imply a brisk export, of course a demand for goods, and this must naturally be accompanied by a brisk demand for throwing, and thus benefit the throwster.

11531. Did you ever know the debenture to sell at a price to be of service to the consumer of foreign throws?—In 1830, before the Italians deluged this market under the 3*s.* 6*d.* duty, debentures sold for 6*d.* to 9*d.* a pound, and if the 5*s.* duty had not been disturbed in 1829, so as to encourage the Italian throwster to send such a glut in 1830, my belief is, that debentures would now be selling at a price worth the consideration of the consumer of foreign throws, and our export trade would have been advanced most conspicuously; and if once this debenture could acquire a buoyancy of value, they would be found to help all parties in turn; viz. the consumer of foreign thrown, the exporter and the British throwster.

11532. Do you not consider the debenture a tax on Spitalfields?—I do not; it belongs first of all to the Government of our country, to protect the throwster by a duty, and that duty goes to the Revenue; but if the Government see fit to return it to the exporter, they do a service to Spitalfields and Coventry, by enabling him to carry out of the country a certain portion of goods which would otherwise only add to an overloaded market; any imperfectly made goods would be the first to be exported, being the cheapest; there is no manufacturer gives out the same class of silk to the weavers, but he will have different qualities of goods brought in, and it is the inferior qualities that would be first exported. On referring to the official returns as to the channels through which the drawback flows, it will be seen that the last year, 23,360*l.* was paid on goods quitting the Port of London, and 23,292*l.* paid on goods passing the Out-ports, such as Liverpool, &c. whence a good portion of the Manchester and country goods are shipped, by which it appears that the benefits are pretty equally divided.

11533. So that in effect many of the goods manufactured for the home trade, are shipped for the export trade?—Undoubtedly.

11534. What

11534. What goods do you understand to be generally exported?—Bandannas and other handkerchiefs, the low gros de Naples of Spitalfields, and Manchester job goods, and mixed goods; and an eminent manufacturer at Coventry informs me, that the debenture last winter had carried off a great many of the jobbed ribbons of Coventry; I am sure that if the Government really wish to do all they can for the silk trade, they have it in their power, by advancing the duties, so as to benefit all parties; and by increasing the debenture, increase the export trade.

J. Brocklehurst, jun.
Esq.

16 July,
1832.

11535. Do you suppose the British silk trade have obtained any established markets abroad?—I believe not, but a great many assay parcels are sent out to every market where we think there exists a chance of success; and by means of the debenture, if increased, I entertain hopes of obtaining a footing for English silks abroad; though at present we have very strong prejudices in favour of France and India to contend against. There is a circumstance to which I will call the attention of the Committee, that is the comparison of the India bandannas and the British bandannas; there has been an increased export of the India goods, and British goods at the same period have remained at the amount; of 1829, I see 13,979 pieces of India goods were sold, and 10,828 British; in 1830, 17,922 of India goods and 21,000 British; in 1831, 40,000 of India goods and 20,000 of British sale; these are the exports of one house, showing that we are not making that progress in export of our own goods which we might do, while others are increasing.

11536. Do these appear in the official returns of goods exported from this country?—No; these were the private transactions of one house as exporters.

11537. How do those goods, which are only printed in this market, and which are of foreign manufacture, appear in the returns of exports?—They are printed in bond; they are not entered as articles of export; they are exported from a bonding warehouse.

11538. Would there be any considerable export of bandannas, without the drawback of 3*s.* 6*d.* now allowed?—I think that the export of all silk goods would again dwindle to what it was before 1829; Mr. Hume, in his evidence, has given a very decided opinion on this point, that without debenture there would be no export.

11539. In the weaving of bandannas and other silk goods, you say that a part of the wages is paid by the poor's rate?—It is becoming too much the case for wages of silk manufacturing to be made out by the poor's rate.

11540. Then a bounty is given by the parish?—I think the parish is now paying one-third of the wages of labour.

11541. So that in fact what may appear as profitable export trade, may be made up of wages and the revenues of the parish?—That is my decided opinion.

11542. Should you see any difference between a bounty given by the parish, and a bounty paid by the Treasury, except that the one is local and the other national?—I see no difference at all.

Mercurii, 18^o die Julii, 1832.

LORD DUDLEY COUTTS STUART, IN THE CHAIR.

John Brocklehurst, Jun. Esq., called in; and further Examined.

J. Brocklehurst, jun.
Esq.

11543. HAVE you any further information to give to the Committee, or any Table that you wish to put in?—I have a Table here of the earnings of weavers in our employ, their comparative earnings in 1824 and 1831, showing also the quantities of silk consumed at each period. In 1824, I find from our books, that 500 weavers, in one week, worked 620 lbs. of silk, and their wages amounted to 370*l.*; the average earnings being 15*s.* a week, from which have to be deducted the usual expenses for a quill winder, loom standing, and other incidental expenses of 2*s.* 6*d.*, their earnings would then be 12*s.* 6*d.*; the quantity of silk used in each loom averaged 1 lb. 4 ozs.; the cost of weaving that silk would be 9*d.* per ounce. In 1831, taking the average work of that year, I find that 500 weavers worked up 875 lbs. of silk per week, and that their wages was 171*l.*; the average earnings of these weavers would be 7*s.* a week, from which are to be deducted the same expenses of quill winding, loom standing, and other incidental expenses, leaving the net earnings of 500 weavers to be 4*s.* 6*d.* per head; at this period they worked up

18 July,
1832.

J. Brocklehurst, jun.
Esq.

18 July,
1832.

1 lb. 12 ozs. each loom; the cost of weaving would be 3*d.* per ounce; in 1824 it was 9*d.* per ounce. By this, it appears, that they now consume 40 per cent. more silk than in 1824, and that their present wages are about one-third of what they then were. As to the other manufacturers, who have lately turned their attention to the making of plain goods, I am satisfied their books would, in such instances, show the weavers to be working up an immense proportion of material, at a very low rate of wages, to what they did before the change of system, in some instances eight times the quantity for the same money.

11544. Having spoken of the beneficial effects of the East India Company's periodical sales, I would ask whether the Company can render their silk more serviceable to the general purposes of the silk manufacture?—During the last 24 years, I have observed all the various kinds of silk that have been imported from India, and though some of it often appears superior in quality, in the raw state, yet in no instance have I ever seen a skein of India silk, when worked and dyed, fit to compare with the staple and quality of French or Italian silk, or similarly applicable to the finer branches of manufacture. But there might be an important improvement in arranging and describing the sizes of reeling and assorting India silk, which would be of great convenience to the buyers, and the consequent difference of price would remunerate the Company for the application of the requisite skill and trouble. For several years the India Company described the various sizes of their raw silk by three letters, A., B. and C., A. being intended to describe the finest; but latterly they have extended their description to A. 1, 2 & 3, B. 1, 2 & 3, and C. 1, 2 & 3, A. 1, being the finest. Now the system in this country, in the various branches of spinning wool, cotton or linen, is to describe the size of the yarn by a number, say No. 30, which indicates that a certain number of yards weighs a pound. But as regards India silk, it is well known, that the raw silks coming from the different filatures, vary so much altogether, that one district may send A. 1 silk as coarse in size as the silk of the C. size of another part of India; and as seasons and methods of reeling vary in India, the A. size one year is often as coarse as the B. of the preceding year; this is a great disadvantage to the purchasers, who from the way the samples are exposed for sale, have no means of judging of the actual size but by the eye. To remedy this the Company have merely to follow the Italian and French method, which describes 400 ells of silk thread to weigh so many deniers, this would be preferable to adopting the practice of a descriptive number used in the other articles referred to, particularly as France and Italy have already a similar system, and it would be preferable therefore for the East India Company to adopt the same instead of attempting to convert those countries to any new one of their own projecting.

11545. What is your opinion of the change of measures in 1824 and 1826?—I consider it a most ill-judged change, grounded on the Report of the Committee of the House of Lords, made in 1821, which sat with the view to extend the foreign trade of the country; they made some inquiries into the silk trade, and unfortunately the Committee of that day made a Report on very imperfect information.

11546. In what way do you so consider it?—The Report was unfortunately acted upon, and the result has proved a total failure, and the subsequent change in 1829 has only aggravated the evil. The trade regret to find that the Board of Trade are still too much inclined to be influenced by the advice of persons not well acquainted with manufacturing and its details, and with all its difficulties, theoretic and speculative persons who have not displayed skill in the management of their own affairs, persons who have no stake in the trade or in the country, but are very ready to offer bold suggestions to the Government, and who to this day receive more attention than the representations of manufacturers who have still property to protect, and a mass of people around them whom they wish to see rescued from distress.

11547. What do you consider to be the worst features of the several alterations?—No equivalent hitherto for the sacrifice of a large revenue readily collected upon an article of luxury; in 1824, a remission of the duties on raw and thrown silk, annually amounting to upwards of 700,000*l.*, a return of duty to the trade on stock amounting to 470,000*l.*; in 1826, a remission of annual duty on printed silk handkerchiefs of from 50*l.* to 100,000*l.*, also the duties on soap, dye, stuffs, &c.; and last not least, the galling fact, that the silk trade, if left untouched, would now in all probability be producing 1,000,000*l.* to 1,500,000*l.* of revenue a year, instead of which, the change has merely been productive of the ruin of hundreds of respectable men engaged in this trade, involving thousands of honest industrious artisans in the same wreck.

11548. Has

11548. Has the depression complained of in the silk trade been more severely felt in the other branches of manufacturing industry?—Though the return to cash payments may have had an effect in throwing out of employ a great mass of the labouring and manufacturing classes of the country, yet during the same period, there have evidently been a growing taste for, and greatly increased consumption of silk goods here and throughout the civilized world. I am therefore confident that there would have been no permanent depression in the silk trade during the last six years, and I have every reason to believe, that if the silk trade had been properly protected, ere now we should have had a large export trade out of profits from our home trade, (as I have already explained in a former part of my evidence,) instead of which, the present position of the silk trade is reduced to a pitiful contest between the starving artisan and the wealthy nefarious trader, that is, the people with large capital who encourage smuggling, a state of things bitterly aggravated by the doubt as to which party the Government look most favourably.

*J. Brocklehurst, jun.
Esq.*

18 July,
1832.

11549. Do the evils complained of extend to every branch of the silk trade?—They do.

11550. Explain how every branch of the silk trade is affected by the evils complained of?—The distress I complain of, as felt by the silk trade, extends to every branch of it. The merchants have lost hundreds of thousands since the experiment was tried, the manufacturers are more than one-half of them swept away, the throwing mills of the country are more than half closed, half the artisans are out of employ, and no person connected with the silk trade has benefited by this change except some of the wholesale dealers, who contrive to keep down the few manufacturers left in the trade, by applying the great lever of foreign competition to overturn one after another, as they attempt to obtain remunerative prices.

11551. Do you see any remedy for the evils complained of by the silk trade?—I know of no remedy so effectual as extended protection, but certainly I have heard a sweeping remedy suggested from rather high authority; the same remedy was promised in 1826, as forming a part of the new system, and in my judgment it ought to have preceded the change, for if the means of subsistence had been first reduced to the work people, they would have been placed in a position to enter into competition on more equal ground with their foreign rivals, who it is acknowledged live at half the expense this country will admit of, and they would have been without the great cause of complaining, the injustice of their being called upon to contend on disadvantageous and cruel terms as to the first necessities of life.

11552. Would the reduction of the prices of subsistence have benefited the silk trade?—I fear that ere long these favourite low prices we have been descending to for the last few years, will be found to be a cause of much of the general prevailing distress. We have certain engagements which we are bound to fulfil at a fixed price, and to enable us to do so without pressure on any interest, all other prices should be maintained in a relative degree; and with respect to the fallacy of cheap bread being a remedy, I have observed every reduction hitherto has tended only to place the loaf and the artisan at a greater distance from each other; so long ago as in 1826, the land-owners were warned of their danger, but from some cause they could not see any analogy between corn and the silk manufacture, but I feel convinced that in 1826, if the trade had had a committee of inquiry granted, much of the distress, ruin and discontent that at present exists, might have been obviated.

11553. Do you then consider the land-owners to be interested in the result of the inquiry?—I am of opinion that the silk trade forms one of the great outworks of defence to the property of the land-owner; he cannot long expect to have cheap manufactured goods, and a high price for corn; indeed, in 1826 we were often assured by the Government that ere long the system of free trade would be extended to corn, and I should say the land-owners must begin to feel they are drawing near such a reduction of their protection as will ultimately sweep away all rent, in the same corresponding ratio that the reduction of the protection once possessed by the silk trade has destroyed all its profits and wages.

11554. Then you do not advocate low priced provisions, as the remedy for the distress of the silk trade?—If the landed interests take no direct steps towards protecting the industry of the country against unjust foreign competition (for I cannot lose sight of the protection corn growers enjoy of from 50 to 60 per cent., whilst industry has but from 20 to 30 per cent.), I see no choice left but to join the desperate, and it will ere long be found irresistible, cry of "No Corn Laws;" but I would much rather see the land-owners come forward promptly and unanimously, to crush the

further

J. Brocklehurst, jun.
Esq.

18 July,
1832.

further ruinous schemes of political economists, and to raise up industry to their own necessary level of protection.

11555. Do you consider the dealers in silk goods capable of giving the best advice to the Government for the general welfare of the silk trade?—Some of them, who for some years have had the ear of Government, seem unable to understand how a trade can be ruinous to the manufacturer and the workpeople so long as they (the dealers) are buying and selling; but it would appear to any one accustomed to live among the work people, that the best criterion of the welfare of a trade is the condition of the people employed, whether they are paying their way, or whether parishes and capitals are not furnishing the means of this cheap buying and selling. From this general censure, I am happy to say, there are some honourable exceptions, who, setting aside their own immediate interests, evince great candour in the investigation of a question involving the future condition and prosperity of a large branch of manufacture.

11556. How do you justify the opinion you have given, that the silk trade in this country is in its comparative infancy?—I am of opinion that the silk trade of England, under judicious and better protection than it has obtained for the last six years, may yet become a most valuable and extensive source of profitable employment; but it is to be regretted, that the silk manufacture of England has been stationary in quantity, and has retrograded 50 per cent. in the finer branches during the last six years, whilst the silk manufacture on the Continent has in the same period been shown to have advanced 50 per cent. in quantity and proportionately in excellence. From all the information I have collected, there seems to exist no limit to the extent of the growth of the raw material; and as it declines in price, I cannot but imagine that the general consumption of silk will continue to increase. It is well known, that but a few years ago the cotton trade was looked down upon by the more staple linen and woollen trades, but to what an important state has the cotton trade arrived since the Arkwrights and the Peels applied their great mechanical powers of mind towards its improvement and promotion, under ample protection? I know it has been said, that it were well this country had never possessed a silk trade; but I would ask, should the prediction I have ventured as to its future extensive progress be verified, and should other countries only, who may have wisely cherished this trade in its infancy, be at this future period enjoying the benefits resulting from such a prosperous manufacture, what would be the bitter regrets of a narrow-minded policy that would either drive or have excluded entirely from our shores this now so persecuted silk trade. Now, with respect to the present production of the raw material in Europe, there is Italy producing seven and France three to four millions of pounds. I cannot but regret to find so insignificant a portion as one-sixth part fall to the share of England, possessing, as I have shown she does, mills, machinery, and an immense unoccupied population skilled in the throwing and weaving of silk, and a consumption of silk goods greater in this than in any other country; and I may once more be allowed to repeat, that the most likely way to obtain our proportionate share of this rising manufacture will be to give the trade such a degree of protection as shall enable it to feel confidence in its own market: grant it but this, and it will soon be seen that as its means increase, so will its enterprise. But this line of reasoning might extend too far, and occupy too much of the time, for the Committee to complete the evidence before them; and seeing the necessity that the labours of this Committee should be brought to a close, I am unwilling to prolong my examination, and in preference I beg to recommend, that the artisans from the country may be allowed to detail their own circumstances; and I have now only, with all respect, to state, that there is a growing anxiety on the part of the trade to have an early Report made by this Committee; it will allay much alarm, and tend to inspire considerable confidence.

Mr. Thomas Johnson, called in; and Examined.

Mr.
Thomas Johnson.

11557. WHAT part of the trade are you engaged in?—The silk throwing trade.

11558. What number of mills are in your neighbourhood?—Forty-five mills; 58 concerns; the same establishment sometimes are occupied by two persons.

11559. What is the horse power?—About 316.

11560. Do you know generally the value of the mills?—I believe the value is about 140,000*l.*

11561. How many has been erected since 1824?—Fourteen; six of them have been

been converted to other purposes; the greater part of them were erected soon after that year.

11562. How many are now employed?—Twenty-one.

11563. What number of spindles were at work in 1823, and what number are now at work?—In 1823 there were 146,352 spindles at work; in 1832, 97,860 spindles.

11564. What wages did you pay in 1823, and what in 1832?—The wages for a man in 1823 was 15s.; for a young man from 15 to 20, about 8s.; for a young woman from 15 to 20, 7s.; children from 10 to 15, about 5s.; and children from 7 to 10, about 2s. 9d.. In 1832 the wages of men were about 10s., young men 5s. 6d.; a young woman from 15 to 20, 5s.; children about 3s., and the younger children 1s. 6d.; that is for six days per week; but as they have been at a reduced time, the wages have been reduced in proportion.

11565. What was the number of hands employed in 1823, and what is the present number?—In 1823 there were 3,961, and in 1832 2,219.

11566. How many hands are out of employment?—From the best information I can obtain, about 1,700; probably not quite that number; they have been getting a little more into work since the East India Company's sale.

11567. How do these hands subsist?—Some on the poor's rate, others by begging, others by thieving, and many of the females by prostitution.

11568. What is the state of your town with respect to the poor rates?—I have an authenticated statement from the assistant overseer, it comprises the 10 years from 1821 to 1832. In 1828 there was 678*l.* 2*s.* 5*d.* paid to the regular poor, and 70*l.* 10*s.* paid to the casual poor, making 748*l.* 12*s.* 5*d.*; there are different sums paid every year, up to 1832; the amount paid to the regular poor and casual poor in 1831–1832, is 1,520*l.* I beg to deliver this Table in.

[The same was delivered in, and read.]

STATE of the Poor in the Town of Congleton, from the Year 1821 to Lady-day 1832.

Population, according to the Census in 1821 - - - - 6,405

Population, according to the Census in 1831 - - - - 9,352

YEARS	Average Number of Casual Poor receiving Relief Weekly.	Average Allowance per Head per Week.	Number of Poor in the Workhouse.	Annual Rate per Pound.	Annual Amount paid to the Regular Poor.	Annual Amount paid to the Casual Poor.	TOTAL.

I hereby certify, That the Statement, as above, showing the condition of our working people since 1821, is a true and accurate account.

Oliver Buckley,

Ass^t Overseer.

14 July 1832.

11569. Are any of the hands employed in the mills supported by the parish?—This statement will show that they are.

11570. How long has this been the case?—Since 1826, with few exceptions.

11571. What do you consider the reason of it?—A reduction of wages and scarcity of employment, forced upon the masters by a reduction of the duty on foreign silks.

11572. Have you made any improvement in machinery since 1824?—Yes; a gradual improvement has extended through the machinery; we are continually

Mr.
Thomas Johnson.

18 July,
1832.

Mr.
Thomas Johnson.

18 July,
1832.

endeavouring to make our machinery better, and the old machinery is being replaced with new.

11573. To what part of the machinery does the increase of speed apply?—To all, more or less.

11574. What benefit is derived from the increase of speed?—Very little; a little factory room may be all the benefit which we have derived from the increase of speed.

11575. Is there an increase in the application of machinery now used, for the labour of persons that were formerly employed in the mills?—Wherever we increase the speed, we require a greater number of hands.

11576. What has been the effect of the reduction of the import duty on foreign thrown silks in 1829, from 5*s.* to 3*s.* 6*d.*?—An increase of the importation of Italian thrown silk; secondly, a less quantity of Italian raws; thirdly, they will take care, in my opinion, indeed the fact proves it, to keep the best silks for their own mills, and send us the worst; fourthly, Italy is able to supply the whole of this market with thrown silk; fifthly, many more of the throwing mills in this country will be out of work, and their operations transferred to Italy, and by degrees the whole trade of throwing in Italian silks will be lost to this country.

11577. What would be the effect of a still further reduction of the import duty?—Destruction of the British throwster; we are all but annihilated as it is; our property is made useless. I have a capital of 15,000*l.* sunk in a silk mill and machinery; the mill is of no more value to me than this piece of paper; it gives me no return; I have not only sacrificed my own labour, but I have sacrificed funds, and property which I derive and draw from other sources; it all seems to sink, and I am keeping this mill in action in hopes of better and improved times.

11578. When did you erect this mill?—In 1810.

11579. Is your mill as favourably situated as any other?—It is beautifully situated as a mill, and has water power; nothing can excel the situation.

11580. Is the labour as cheap with you as in other parts of the kingdom?—Most decidedly.

11581. Is it as cheap as it is at Manchester?—Cheaper, I should think.

11582. Have the Italian States now the power of supplying this market more abundantly with thrown silk?—I believe they have.

11583. When did you feel the effect of lowering the duties of foreign thrown silk?—In 1826, the first effects were that we fell back in wages and profits.

11584. By 1829, had you by reduced wages, &c. in some degree accommodated yourselves to the then times?—Yes; for in 1830 we were getting round, if I may use the term; the last reduction to 3*s.* 6*d.* had not had time to fetch the thrown silk from Italy; at the end of the year it arrived, and ever since that we have been in a state of ruin.

11585. Out of the fourteen mills which have been built since 1826, how many have been built since 1829?—Not any.

11586. Were they all built between 1826 and 1829?—They were all built from 1824 to 1826.

11587. Were the whole of the fourteen which you have stated to have been built subsequent to 1824, built prior to the year 1829?—I think they were all built previous to 1826.

11588. Out of these fourteen, six are converted to other purposes?—Yes.

11589. Do you throw so much Italian silk in Congleton as formerly?—No; good Italian silks are not in the abundance they were formerly, nor does it pay us to work them.

11590. Are the mills and machinery at Congleton principally employed in the coarser silks?—Yes, they are.

11591. Can you state what may be the condition of the throwster relative to his affairs, or in what way have the alterations affected you personally?—The condition of the throwster, as far as I am able to see by looking around me, is one of great privation and distress; the little he had seems to have been lost; instead of being a respectable individual, he is sinking fast into a state of degradation, and a very little longer will annihilate him as a practical man; as far as regards myself, I am losing my capital daily.

11592. Does this state of things affect the land in the neighbourhood?—Yes; for if we have not wages to pay the poor, the poor must fall on the parish rates.

11593. Having stated that your own mills return you no profit, do you consider the other mills are in a better condition than your own?—Certainly not; for I have

an

an intimate and friendly acquaintance with my neighbours, and they would one and all be glad to relinquish them at a most terrible sacrifice; as I am deputed by them, I have their permission to make this general statement relative to that fact.

Mr.
Thomas Johnson.

18 July,
1832.

11594. I think it is quite plain from your evidence, that you view an increase of duty on the importation of foreign thrown silk as an object of the throwster of this country, is it not so?—Yes, a great object.

11595. State to the Committee what you would consider the amount of duty that would be, in your estimation, a protection to the throwster of England?—I should like to return to the old duty.

11596. Which was?—Fourteen shillings, and 9s. on the raws.

11597. Would nothing less satisfy you?—Yes, most decidedly.

11598. State what you consider, in your opinion and that of others, would satisfy the throwsters in and around Congleton?—I believe they would be satisfied with the duties previous to the last alteration.

11599. Will you name them?—Five shillings on organzine and 3s. on tram.

11600. You consider that 3s. 6d. does not protect the throwster?—We have been sinking fast into ruin since the alteration was made.

11601. Do you look much to the advantage derived from the export trade?—I confine myself to my own situation; I know what I was doing previous to the alteration, and I know where I have been going fast since; I do not wish to enter into the other part of the question; I know how the alteration has affected me, and I speak to that only.

11602. You stated that out of the fourteen mills built since 1824, that six had been converted to other purposes; have any of the mills built prior to 1824 been converted to other purposes, or are any of them now standing still?—My answer is more applicable to the fourteen particular mills which have been built since 1824; but in answer to your question, I should say there are some standing still.

11603. So that though there may be an increase in the number of mills, some of them are quite out of work?—Quite out of work.

11604. Has the quantity of employment much increased in Congleton since 1824?—Quite the reverse.

11605. How many mills are there now at work?—Only twenty-one.

11606. All at work?—Twenty-one all at work.

11607. Forty-five is the gross number?—Forty-five is the gross number, but there are fifty-eight concerns; some establishments have two proprietors in one mill.

11608. Sometimes two establishments belong to the same mill with a separate name?—Yes.

11609. Out of forty-five, fourteen of which have been built since 1824, and twenty-one are now at work, so that there are ten less at work now than there were prior to the year 1824?—Exactly so; but even the twenty-one that are at work till within these few weeks, have been working short time only partially; although my own mill may be considered a mill at work, it is half standing; the hands were only working three or four days a week until lately.

11610. The quantity of employment to the operatives has very greatly decreased?—Decidedly.

11611. The operatives are in a very distressed and demoralized condition?—They are sinking fast in a state of degradation; their wants press on them in various ways, their bellies go half full, their backs half clothed, and the people feel no inclination to send their children to school; and a state of degradation and immorality is fast overtaking them.

11612. There is nothing like comfort about their dwellings?—If they have comfort about their dwellings, pride naturally causes them to seek other comforts; if they have food, they seek for clothing; when they can get clothing, and can appear decently among their neighbours, they seek for education. There are many instances around me, when I have corrected the parents for not sending their children to school, their answer has been that they were ashamed to send them, for they had not decent clothing to send them in.

11613. When you built your mill in 1810, what description of silk did you usually employ?—We had a great variety of silk at that time; we threw a good deal of Italian silk, we seldom touch it now.

11614. Was the large proportion of silk that you threw Italian?—At that period it was.

11615. What is the description of silk that you now throw?—Coarser silks; Bengal silks or coarse Chinas.

Mr.
Thomas Johnson,

18 July,
1832.

11616. For what market did you usually throw silk when you commenced?—For the London market.

11617. For what market do you now throw?—Chiefly for Manchester.

11618. Which is the most preferable to the throwster, the throwing fine or coarser silks?—It is all a matter of chance; if we get a fair price for round silks, we probably prefer them; but if we get fine silks, and get fairly paid, it does not much matter.

11619. In which is the greater waste?—The finer silks make the largest quantity of waste, and give a larger quantity of work; I could as soon work three pounds of coarse silk as I would one pound of fine.

11620. Is there more work required in throwing the coarser silks or the finer silks?—The coarser silks do not require the same work as the finer.

11621. The finer silks require more work than the coarser?—Decidedly.

11622. You say there are only 45 mills, and that 14 have been erected since 1824?—Yes; they were erected from 1824 to 1826.

11623. And also say that there are now 21 at work?—Yes.

11624. If the 14 were deducted from the 21, it leaves only 7?—If the 14 are deducted from the 45, it leaves 31.

11625. There are 10 less at work now than there were in 1821?—No; we have 21 now at work.

11626. Do you mean to say, that the new mills that have been built since 1824, are employed, and that all those that have gone out of employ are the old mills?—No; I say that we have only 21 mills at work.

11627. How many mills are not employed at this moment?—I cannot say.

11628. There are 18 standing still, and six converted to other purposes, making 24, and there are 21 at present at work?—That is my opinion.

11629. Of those 18, are they or are they not the old established mills that existed between 1810 and 1824?—There are some of both.

11630. You said that six of these mills had been converted to other purposes, have they been so converted at great loss to the proprietors?—Two-thirds of their value I should think.

11631. Is not one great difference between the Italian silks and the coarser silks from China and Bengal, that the finer silks affords much more employment to the throwster?—Most decidedly.

11632. Is it not therefore very decidedly, in order to promote the employment for the throwing mills of this country, desirous that the importation of Italian thrown silks should be discontinued?—Decidedly; one pound of Italian raw silk will give as much employment as three pounds of another sort.

11633. Do you consider it of importance to get raw silk from France imported here?—Yes.

11634. At the present rate of duty that it is imported into Italy?—Certainly.

Jovis, 19^o die Julii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. John Prout, called in; and Examined.

Mr.
John Prout.

19 July,
1832.

11635. ARE you a silk weaver?—Yes.

11636. Where do you reside?—At Macclesfield.

11637. How long have you been employed in the silk trade?—Including the period of my apprenticeship, 34 years.

11638. Are you prepared to give evidence before this Committee as to the state of your trade before the alterations in the law, and since the introduction of foreign raw silk?—I am prepared with facts connected with our case, and proved by my own experimental knowledge, to show the injury our trade has sustained, and I trace it to that part of the laws which introduced foreign wrought silks at reduced duties.

11639. What was the staple trade of Macclesfield when you first began to work?—The manufactures consisted of bandannas and black figured handkerchiefs till about the year 1809, when the figured and fancy trade was introduced.

11640. Can you state to the Committee a brief view of the improvement in the silk

silk manufactures of Macclesfield?—From the year 1809, till the years 1824 and 1825, there was a great deal of improvement in the beauty and texture of the silk manufactures took place, during that period industry was rewarded and ingenuity encouraged. The fancy trade made very great improvements, a great number of looms were employed in weaving the light and valuable part of the trade and by the introduction of a process peculiar to the manufactures of Macclesfield; our light fabrics obtained a superiority by the operation of steam, chiefly confined to our manufactures, it enabled us to finish goods in a superior way, and we had great advantages in our department from it; they endeavoured to make the fabrics manufactured in Macclesfield rival any part of the world, although it was stated that competition would improve our genius, brighten our faculties, make us better workmen, and contradict the degrading refutation of slothfulness attached to the character of a silk weaver of Britain, nothing will more refute the imputation than the character given of our manufactures in the opinion expressed by certain American gentlemen, as detailed in the Report of Evidence delivered in 1821, in the House of Lords Committee; namely, that with respect to the quality of the silk manufacture, stated not only by persons interested in the trade, but by American gentlemen, that setting the question of price aside, it is in many respects fully equal to the French, equal in the article of piece goods, superior in gloves and hosiery, as well as poplin and other mixed manufactures.

11641. What improvement has taken place in the trade since 1824 and 1825?—I am not aware of any; the object has been to produce a cheap article for the reason that the maximum price of English silk goods must be the price which enabled them to sell in the market in competition with the French manufacturer, and any attempt to raise the price above that, would injure the workmen and manufacturers.

11642. In what part of the trade were you chiefly employed?—In the figured and fancy trade which since suffered so severely; before the alterations of the laws came into operation, I was employed in weaving a description of fancy goods, for which I received for every 16 ounces of silk, 1*l.* 16*s.* 3*d.*; at the present period I am employed in weaving another description of silk goods; for every 20 ounces of silk I consume, I receive only 6*s.*; thus in the former case, for every 100*lbs.* of silk I consumed in weaving, I received 176*l.* 10*s.*, and in the latter instance, only 20*l.*, or in other words, the price of weaving in the former case was 2*s.* 3*d.* per ounce, and in the latter instance only 3*d.* I have to make an observation; I wish to state that although this may be considered an extreme case, it must be considered generally applicable to the whole number of looms I then had under my employ, having no such a thing as a plain article in my possession for a great number of years previous to the alteration.

11643. Is your case a particular instance, or does it apply to any extent as far as regards the situation of the Macclesfield weavers?—It is not a particular instance; although it has been urged that competition excites to improvement, it has been demonstrated, that such a competition as we have been subject to is destructive of it. As a proof of that, a great number of looms were employed in weaving a light and valuable article, which consumed from 16 to 20 ounces weekly, for which the workmen received from 20*s.* to 30*s.* per week; that branch of our trade is nearly annihilated, and instead of this description of goods, we are now employed in weaving bandannas and other petty articles, which consume from 40 to 50 ounces weekly, for which workmen receive as wages, from 7*s.* to 9*s.* weekly, subject to incidental expenses connected with their employment. I will, with permission, make an observation here that I think bears strongly to elucidate our distress, without taking the extreme case of the raw material, that the present amount is upwards of three millions. I believe that in the year 1832, the amount was not much greater than in 1824–5, and take that for granted, and then consider that although our articles have been of that description as not only to reduce the value of manufactured articles, but lower the value of wages of labour in a proportion of six to one, you see that the raw material has not corresponded in importation in proportion to the decay of that valuable part of our trade, it accounts for the existing privation among us; only consider with reference to this particular case, a case founded on truth; a case that bears the strongest scrutiny, that I have most lamentably to complain of, if I weave that quantity of silk with as much labour for 3*d.* as formerly I did for 2*s.* 3*d.*

11644. What country has taken from you your figured and fancy trade?—The decline of our fancy trade is coincident with the introduction of fancy articles from

Mr.
John Prout.

19 July,
1832.

France, and as there never was any exportation of fancy articles to any great extent, the just inference to be deduced is, that our fancy articles have been superseded by the French, and I conceive it will appear clear when it is considered there is a decay of our native manufactures, and at the same time a consumption of fancy articles.

11645. Can you produce any proof that a change of fashion had not caused a decay of the light fabrics of your trade?—The plain facts of the case are these, that although there must, from any change in the demand, be a variation in the article manufactured, yet the most valuable part of our trade declining with the introduction of foreign manufactured articles, it at one view I think shows, that it was not a change of fashion but foreign competition which caused that decay, when it is proved that there is equally a demand, and that these fancy articles are greatly worn when not made by us.

11646. Was there not a great excitement and rise of wages in the years 1824 and 1825?—There was not a great excitement, considering the circumstances of the case: the trade was relieved of a very heavy duty upon the raw material; that, as a natural result, produced a cheaper article, while at the same time a prohibitory enactment continued, and we enjoyed the home market; yet it cannot be denied there might have been some excitement in the minds of some manufacturers, though, from the repeated declarations made by the Chancellor of the Exchequer, they had their expectations raised that nothing could shake until the evil came upon them, and although the manufacturers have been repeatedly blamed for not withdrawing their capital and preparing themselves for the altered circumstances into which the trade was to be plunged, yet the injustice of such an imputation will be found, when the declaration then made by Mr. Robinson is considered, who expresses the firmest confidence in the prosperity and stability of the trade. The substance of the speech was, that we had fertilized the world with our commerce; that we should henceforth enjoy a period of uninterrupted prosperity. I should have been happy if such had been the case. There was no great rise of wages at that period, though it has been often stated there was a rise of wages: it was stated that a great influx of hands took place into the town; that was not the fact. I shall prove, in its proper place, that during a period of 25 years the staple article of the trade was at a lower price in 1825 than it was in 1810.

11647. Can you state to the Committee an account of the price of labour in the silk weaving trade?—I have prepared a Table, exhibiting a comparative view of the prices of labour in the years 1810, 1819, 1825 and 1832. I have selected, not the whole of the works, but that part of the trade that was the staple industry of the town; and I have chosen those periods when the most excitement was stated to prevail, as well as those periods when the greatest depression prevailed. In the bandannas there was comparatively a stationary amount of wages; that was the staple trade of the town, and all others must be derived from it; that was, in 1810, 4s., and in 1825, 3s. 6d.; while, in the short space of seven years, from 1825 to 1832, it decreased to 2s. 3d. for seven yards. The plain sarsnet articles remained at a comparatively stationary price from 1810 to 1825, and from 1825 to 1832 they reduced from 9d. to 4d. The gros de Naples were reduced, in the same period, from 13d. to 6d.; the small figured handkerchiefs were reduced from 8d. to 4d.; and the rich mountures from 24s. to 9s. during the same period.

[The Witness delivered in the following Statement:]

	1810:	1819:	1825:	1832:
Bandannas - -	4s. 1d. per cut.	3s. 6d. & 4s. per cut.	3s. 6d. per cut.	2s. 3d. per cut.
Plain Sarsnets - -	10d. per yard.	9d. per yard.	9d. per yard.	4d. per yard.
Gros de Naples - -	- - -	- - -	1s. 1d. per yd.	6d. per yard.
Black Bars - -	11s. 6d. per doz.	10s. 6d. per doz.	9s. per doz.	6s. 3d. per doz.
8 Shaft Figures - -	- - -	8s. per doz.	8s. per doz.	4s. per doz.
100 ditto - -	- - -	14s. per doz.	13s. 6d. per doz.	7s. per doz.
Mountures, &c. - -	- - -	30s. per doz.	24s. per doz.	9s. per doz.

You

Mr.
John Prout.

19 July,
1832.

You will perceive that during a period of 25 years the wages of labour in the silk trade remain comparatively stationary: taking the years when excitement was stated to prevail, and taking the highest price at the last named period, it will show that the price, when contrasted with the year 1810, is rather lower in some instances; yet, during a short period since, our labour has fallen in some instances from 50 to 60 per cent. According to the most correct statement that could be made in the year 1824, our average wages were near 19s. per week; in 1825 they were much about the same; but from that are to be deducted the incidental expenses. It appears that in 1825 the number of looms, from the most correct statement that could be made, was 5,325, and that the weekly amount paid in wages was 5,214*l*. From the last estimate we made, in endeavouring to ascertain the correct amount of the looms now employed, there appeared to be about 3,500, and the average wages appeared to be about 6s. a week, it might amount to 6s. 6*d*.; that is the extreme highest rate that we could fix on. I estimate the loss of labour of the trade of Macclesfield, contrasting it with the number of looms, to be about 189,000*l*. annually.

11648. How many persons are there employed in each loom?—A loom is estimated to give employment to four persons, but it does not do that accurately.

11649. Is the 6s. 6*d*. per week the nett wages of the weaver?—I consider it to be the nett wages of the workman deducting the incidental expenses; at the same time, I wish to state, it is the highest rate that could possibly be fixed on, not only that, but I have further to state that these are the wages when fully employed, not taking into account the casualties that take place.

11650. What do you call the incidental expenses?—Every weaver must have a quill winder; that is an expense.

11651. How much does he receive a week?—I cannot get a good winder under 1s. per week.

11652. Is the 6s. 6*d*. the nett wages of the weaver?—I consider it as such.

11653. Without any deduction?—Yes, without any deduction.

11654. In the 5,214*l*., do you include the wages of the throwster?—No.

11655. Nothing but that which is paid to the weaver, and the persons attendant on the weaver and his loom?—Yes.

11656. Is it your opinion, that the silk weavers of Macclesfield have suffered through the alteration in the laws, and can you show any reasons to prove the same?—It is my opinion they have suffered extremely through the alteration in the laws; and I have only to state their past and present situation to show the truth of that remark. Previous to the alteration in the laws, there was a degree of comfort attached to the situation of a weaver of Macclesfield; their wages were never to any great amount, but yet it appeared to afford them the competency that might be considered sufficient to produce the comforts of life. Since the alteration in the laws their situation has gradually and progressively deteriorated, their condition is such that I should be inadequate to describe; their clothing, a great part of it is deposited in the pawn shops; their children are, in numberless instances, obliged to go barefoot, and they present a spectacle of misery in their countenances. If one sees a weaver that one has not seen before for some time, when you see him again his appearance indicates the extreme of human misery. A great number of them that formerly attended places of divine worship on a Sunday, are now prevented from doing so from the want of decent apparel to appear in, and a great number have applied to the parish for relief, and break stones on the highway, and are even loth to leave such a degrading occupation to return to the looms, although their allowance from the parish is only 1s. per day; this has been aggravated by other circumstances. Their employment has been continually so irregular, and although wages appear exceedingly low, yet the diminished employment has aggravated their situation; every succeeding year has produced a fresh convulsion in the trade, and each succeeding season has produced a great depression, and the means of charity are now decaying that formerly relieved their wants; for my own part I feel a difficulty in introducing any particular situation of my own before this honourable Committee, but I have suffered in common with my fellow workmen; I feel at the same time that poverty does not necessarily infer degradation, because we may be poor from causes over which we have no control. I can say that previous to the alteration in the laws, I was enabled to contribute to the parochial rates and assessments; I could support my family with the decency that becomes an honest and industrious man, but since that period my own condition has been considerably deteriorated. I have been exempted from the payment of poor rates and parochial assessments on

Mr.
John Prout.

19 July,
1832.

account of the poverty of my situation; and without entering at length into such a painful subject, I beg to assure this honourable Committee, that when I have seen my children surrounding the table, and heard their cries for food, embittered with the reflection that I had none to give them, I have frequently wished that a protracted life of misery might be closed by premature disease. I appeal to this honourable Committee, as guardians of our rights and liberties, whether industry does not deserve a better fate; having thus very inadequately stated the situation of my fellow workmen, in connexion with my own, I feel at the same time a duty incumbent on me, to show to the Committee the reasons of this distress emanating from the alteration in the laws. I hope and trust, as I speak the voice of my fellow labourers, and as my interest is identified with theirs, that this Committee, which has been appointed to inquire into the state of their distress, will allow me to go through my reasons: I know it has been stated, that the silk question is a particular question as regards this branch of manufacture; but I conceive it, as a general question, received in connexion with the commercial policy of the country, and having stated these premises, with the permission of the Committee, I will show the reasons why the alteration of the laws must have had that effect; there is the disadvantage we labour under with reference to the competition with France, there is the cheapness of the article; the comparative price of provisions; all these are subjects which have been disposed of; but I would submit to this honourable Committee, that all laws which are made on a partial principle must be unjust. One reason why the alteration in the laws has most severely caused us to suffer is this, that it is a perversion of principle that should identify justice as the basis of legislative enactment, for under the policy of free principles, we have imported wrought silks at nominal duties, of from 25 to 30 per cent., articles which we do not want from the foreigner and can produce ourselves, while articles which we do in reality want, and which could not be brought into competition with British labour, and which would constitute proper equivalents for our exports, are subject to duties ranging from 60 to 200 per cent. I will give another reason why the alteration in the laws has caused this distress, the alteration in the laws, by importing foreign wrought silk at the before mentioned duties, have not only diminished our employ, but it aggravates the situation of the labouring population by reducing the value of labour, without any equivalent in the reduction of the price of provisions, thus doubling the pressure of taxation; and the inevitable result is, entailing want and misery on the labouring population, of whom I form a part.

11657. Do you not imagine that the competition of the Lancashire cotton weavers has greatly caused a reduction in your wages?—The competition of the Lancashire cotton weavers existed before the alterations in the laws, and no such effect was produced; the weaving of seven yards of bandannas in the year 1792, was 3*s.* 9½*d.*; in 1825, from 3*s.* 6*d.* to 4*s.* 1*d.*; thus during a period of near 30 years, in the article which the cotton weavers might most easily weave, our wages remained comparatively stationary; while in another description of goods, the black fringe article, it increased from 7*s.* to 10*s.* 6*d.*; and yet during a period of seven years since the alteration of the laws, bandannas have been reduced to 2*s.* 3*d.*, and the black fringe to 6*s.* 3*d.*; thus clearly proving that our distress has arisen from other causes than the competition of the cotton weavers.

11658. Are you informed of the various depressions that have taken place in your trade?—In the year 1826, there was a general depression of the silk trade; not only did the measures then coming into operation appear most materially to affect the capitalist in the diminished employment of his labourers, but to meet the competition in the market, wages were seriously reduced. In the latter part of 1829, the trade was again fluctuated; wages then, as compared with 1824 and 1825, had fallen four per cent.; diminished employment followed; and notwithstanding the general misery of the labouring population, representations as fallacious as unjust were set forth, that as the raw material had increased in the importation, our misery would be only temporary; the fabrics manufactured had been changed from light to heavy goods; from 1829 to the present time, every succeeding season has produced a further reduction in labour, and diminished employment.

11659. What do you propose as a remedy for the evils that afflict the silk trade?—We claim the protection due in reference to our circumstances, and those of our foreign rivals; we claim an effective protection to that extent, and I believe that could not be obtained without returning to prohibitory enactments; and while the principle of the corn law recognizes the justice of protection to the corn grower, we require an application of that principle to the silk trade. It does appear that the

the silk trade will always suffer in every general case which affects the commercial industry of the country; it appears equally clear that there is a specific evil to contend with, a competition in our own market, with a foreign rival possessing the greatest advantages over us. In order to place the silk trade on the same basis as the other branches of industry, we should enjoy the home market, and this can only be accomplished by the protection before named.

Mr.
John Prout.

19 July,
1832.

11660. Have you no other remedy to propose, short of prohibition?—I certainly should prefer an increase of the duties on plain goods to 30 per cent. and a seclusion of the figured branch of trade from the market; at the same time I am bound to state, that we have a right to that protection that will secure us.

11661. You stated the amount of wages at 6 s. or 6 s. 6 d.; has not the weaver to pay sundry expenses necessarily incident to his employment, such as keeping the loom in repair, purchasing tackle, procuring quill winders, &c. out of the amount which you have stated as his nett earnings?—No, I should conceive I had deducted the whole expenditure connected with that department; they took a census which ranged from 5 s. to 6 s. 6 d.; I do not wish to make an overstrained case of distress, so I name the highest sum.

11662. So that in point of fact the weaver does not receive so much as 6 s.?—In many cases.

11663. When he receives 6 s. 6 d. he has not that to spend, but he must deduct some of it for necessary expenses; is that so?—In some cases, I cannot apply it generally.

11664. Can you put in a Table showing the number of looms, and the earnings of the weavers, and the amount of the wages of these weavers by the week in 1824 and 1825; at Macclesfield also, the same account and number of looms and earnings to the present, concluding with the calculation of how much is the falling off from the value of weavers' wages?—

[The Witness delivered in the same.]

TABULAR VIEW, exhibiting the Amount paid for LABOUR in the WEAVING DEPARTMENT of the SILK TRADE of Macclesfield, in 1825 and 1832; likewise showing the Average Wages of the Weavers, Weekly Amount, and Annual Loss in the before named periods.

PER WEEK:

	Number of LOOMS.	Average Wages per Week.		Weekly Amount paid in Labour.	
		s.	d.	£.	s. d.
In 1825 - - - -	5,214	19	7	5,214	1 3
In 1832 - - - -	3,500	9	-	1,575	- -

THE loss on the Amount paid for Labour in 1832, as compared with 1825, is upon the most moderate calculation, upwards of 189,000 l. annually; and as it may in all probability appear to this honourable Committee, that there is some discrepancy in the Statement of 9 s. per week, it must be observed, that this applies to the weaver when fully employed, and includes the incidental expenses connected with his employment, and which, when deducted from the before-named sum, will reduce his wages in both periods near 3 s. per week, and in the latter instance to about 6 s.; and as the whole amount of wages paid to the weaver is distributed in the Town, every abstraction from the same is an evil, and the foregoing Statement will at one view show and account for the general decaying state of the retail traders and shopkeepers, who have every year increased burdens with diminished means, until the fearful prospect of utter ruin presents itself to their view.

11665. Before the period of which you now complain, have you known any other periods of distress in your branch of the trade?—I never knew any period of distress which might be considered of any permanency; any previous depression that arose in the trade, was only of temporary duration; further, it appears obvious from the Table I put in, that prior to 1825, wages had remained 50 or 60 per cent. higher than they are at present.

11666. You are aware there is a duty on thrown silk?—I am.

11667. Supposing the duty was removed, have you ever turned it in your own mind

Mr.
John Prout.

19 July,
1832.

mind what benefit is likely to be derived to the weaver?—I have considered the subject, but I have never considered that it would permanently benefit the weaver; the duty on thrown silk, I believe, amounts to about five per cent. on manufactured goods, admitting that the fabrics are composed two-thirds of tram, and one-third of organzine. In Macclesfield, where my children are dependent on the throwing establishments, and the population are dependent on it for their support, the diminished deduction in the throwster's wages must materially aggravate our situation.

11668. Do you think that 3 s. 6 d. amounts to as much as five per cent. on manufactured articles?—In some cases; I take the heavy fabric, not the light valuable articles, for on them it would be about 2½ per cent.

11669. Has there been any new trade introduced into Macclesfield since the alteration of the system and the reduction in the price of wages?—There has been a few more Jacquard machines introduced, but they were introduced previous to the alteration; they commenced in 1824; there has been no new trade since.

11670. I mean unconnected with the silk trade?—None at all; the trade has gradually declined, and the wealthy and prosperous appearance of the inhabitants has changed. There is one circumstance I wish to mention, it has had a great effect on the peaceable and loyal disposition of the people; at the last public meeting that was called to memorialize His Majesty's Ministers and the Board of Trade, the people would not have the word "praying" inserted in the petition; but I took care to have it inserted; when I sum it up in a few words it has produced poverty; poverty has produced demoralization, and demoralization disaffection to His Majesty's person and government; in short, we are obliged now to have soldiers to keep the peace, whereas the constables formerly did it.

11671. You alluded to a particular method of manufacture at Macclesfield?—This is a simple process called steaming, which is similar to calendering, which is only applicable to handkerchiefs; this did not come in competition with the manufactures of Spitalfields. It was a peculiar process in the first instance of our own, and I was employed wholly in that department of the trade.

11672. Has it not been adopted in other parts?—Yes, latterly; but some of these fabrics have been abolished by the introduction of foreign articles.

11673. Is the manufacture at Macclesfield of a finer or coarser description than it used to be in the years 1824 and 1825?—It is greatly changed to a coarser description; I can instance it in reference to my own employment; formerly I was employed in the light and valuable fabrics of the trade; I have nothing now in my possession but plain goods, and these of a heavy description. The work I formerly made at from 1 s. 6 d. to 2 s. 3 d. per ounce, I now make at about 3 d. per ounce.

Mr. Joseph Smith, called in; and Examined.

Mr.
Joseph Smith.

11674. WHAT is your profession?—A silk weaver.

11675. Residing where?—At Macclesfield.

11676. Are you acquainted with the present state of the artisans employed in the silk trade?—I am; I have been a silk weaver for twelve or thirteen years, and have had some experience among them, and I believe I can speak pretty correctly as to the general circumstances of the persons employed in the trade.

11677. Is there a great amount of distress among the operatives unemployed in that branch of the manufacture?—There is a very great amount of distress among the operatives, and I believe that those who are in constant employment participate in the distress as well as those who are not at work; I know instances of persons who have two or three small children that cannot work, and of course are dependent on them for subsistence out of their small earnings; although they are in constant employment, they cannot procure comforts for even themselves, much more their family, and I know that great privations are endured by these persons; I suppose the average earnings of the weaver to be between 6 s. and 7 s. per week, and frequently the man has a wife and two or three children to support out of that.

11678. Do you consider the depression experienced in the silk manufacture to be of a temporary or permanent character?—According to the facts I have witnessed of late years, I consider it to be of a permanent character, for the depression has been greatly increasing; I have not witnessed any periods at which we could say we have been returning backwards to prosperity; every thing appears to me to be getting worse and worse; every struggle the men make to better their condition proves fruitless, and from these circumstances I am led to conclude that it is of a permanent character.

11679. Do

Mr.
Joseph Smith.

19 July,
1832.

11679. Do you recollect the condition of the persons employed in the manufacture of silk prior to the admission of foreign wrought silk into the market?—I do; and, generally speaking, I believe that persons employed in the silk manufacture were as well and as comfortably situated as persons in any other branch of manufacture whatever. A year or two prior to the introduction of foreign silk the people were remarkably well off; they had got clothes and furniture, and comforts of almost every description that appertains to the condition of workmen; but now their furniture has disappeared from their houses, the bulk of them have no clothes to go out in on a Sunday, and they cannot even procure a little recreation of any kind, but are compelled to sit at home and witness their own poverty and destitution.

11680. Has the situation of the operative greatly deteriorated since the measure first came into operation?—As I observed before, I have witnessed a gradual deterioration in the condition of the operative generally, and I believe that deterioration will increase unless some measures are adopted to arrest its progress.

11681. To what cause do you ascribe the deterioration in the circumstances of the persons employed in the silk manufacture?—I ascribe it to the introduction of foreign wrought silks, which come into competition with the home manufacture; the English artisan is compelled to manufacture at the same price as the foreigner, otherwise he would find his employment taken from him; this would entirely deprive him of the means of subsistence, therefore he is compelled to submit to work at the same price as the foreigner, although his wages will not yield him comfort, or even a mere subsistence.

11682. Are you acquainted with the opinion of the operatives, generally, as to the causes which have produced this lamentable change in their condition?—I am; I believe that the general opinion among the operatives is, that it arises from the circumstances I have mentioned; I believe that, owing to the repeated applications they have made for redress of grievances having proved fruitless, an opinion is generally prevailing among them that the Government of the country is totally indifferent to their situation, and I know that representations would be more frequently made were not this the case, but many of them appear to have totally given up all hope, and do not care what comes next.

11683. Do you believe that the privations endured by the artisans employed in the silk manufacture has a tendency to deteriorate their moral character?—Yes, I have known many instances of persons who, while they could get a comfortable living, were considered respectable characters, but now, owing to all attempts to procure a comfortable living having proved fruitless, they have sunk into a state of despair, and do not seem to care what becomes of them.

11684. From your intimate and extensive knowledge of the character and condition of persons engaged in the silk manufacture, perhaps you can inform the Committee if there are any means of arresting the progress of this moral degradation to which you have alluded?—If I am confined to any specific remedy, I should say, prevent the introduction of foreign wrought silks, which compete with our goods; that would be the most effectual, as respects the silk trade.

11685. Do you believe there is a strong inclination to acquire knowledge among the working classes, which is nullified by the state of destitution to which they are now reduced?—Yes, I know a number of persons most anxious to obtain information, but who are totally precluded from obtaining it by the circumstances in which they are placed; I know many persons who formerly had small libraries by them, and while their circumstances would admit were continually increasing them, but owing to the pressure of the time they have been compelled, however reluctantly, to part with the works they then possessed, and now they have given up all hope of being able to purchase any works at all; their thoughts are solely engrossed by the more necessary demands of nature.

11686. Do you think that if they had the means of procuring these comforts which they formerly possessed, a great improvement in their moral character would be the consequence?—Certainly.

11687. Are the artisans of Macclesfield able to produce as good an article as the artisans of any other town?—I should think that in the branch of manufacture in which they have been more particularly employed they would exceed the artisans of any other town.

11688. You do not consider their distress arises from want of knowledge or ability, but from other causes over which they have no control?—Certainly; I conceive if there was a probability of their being placed on an equal footing with the artisans of any other town or any other country, I believe the artisans of Macclesfield would rival those of any other place whatever.

Mr.
Joseph Smith.

19 July,
1832.

11689. Can a workman earn more money when employed in some particular branches of silk manufacture, than when employed in other branches?—There are particular branches, such as the fancy branches, in which a workman can earn more money than he can when employed in the manufacture of coarser articles; but there is a gradual deterioration in the condition of even this class of workmen, and I believe they are fast approaching to the situation of their fellow workmen; those who are the most skilled feel a kind of indifference as to whether they continue in such kind of employ or not; it requires a little more care and attention, and perhaps a little more skill, but finding they are not rewarded in proportion to their skill and attention, they feel rather inclined to accept of the lower kinds of work, and I believe that the finer kinds of work, unless encouraged, will gradually grow into disuse.

11690. Do you consider that the tendency of the circumstances in which the workmen are at present placed, is to deteriorate the quality of the silk manufactured?—I certainly do, for the reasons before assigned.

11691. Do you not think if the artisans were properly encouraged, great improvements may be made in the silk manufacture?—I certainly do; for I know that while the artisans were encouraged, improvements were continually taking place, their reward was a stimulus to improvement, but now the most valuable kind of labour is continually falling in value; they plainly see that in a while they will be reduced to a level with their brethren who have not so much skill as themselves, consequently they feel a kind of apathy to continue these kind of works in existence, and I believe that unless some means are taken to reward skill where it is found, that it will totally disappear from among the workmen.

11692. Can you state whether the weavers wait for work, and how long, and if out of place, how long they are before they can obtain fresh employment?—I believe that a weaver on an average waits about one-sixth or one-seventh of his time, I mean those who are in work, but there are a considerable number, I suppose one-third, constantly out of work.

11693. When you state 7s., you mean that as the wages of those who are in work?—Yes; not including the time they wait for work. With the permission of the Committee, I will state a circumstance that has come under my own observation, to show the demoralization that prevails among the workmen, and the impositions practised on the parish in consequence of the workmen being reduced to such a state of destitution. I happened to be in a room where there were five or six looms, and there were two persons present whose gains were so small that they were obliged to receive relief from the parish, in a smuggled way of course; I observed these persons going from their work at the time when they were required to be in attendance by the parish to receive their pay, and they afterwards returned to their work to make up sufficient to obtain a subsistence. This practice has been very prevalent in Macclesfield, of late years, the men feel they are all circumstanced alike, they are compelled to adopt this stratagem in order to obtain a subsistence, and I believe they would not divulge the secret for any consideration whatever.

Mr. *Thomas Cope*, called in; and Examined.

Mr.
Thomas Cope.

11694. WHAT is your profession?—A silk weaver.

11695. Where do you live?—At Macclesfield.

11696. How long have you been employed in the silk trade?—Since 1817, to the present time.

11697. Have you been employed by the same master since 1817?—Yes.

11698. Is the employment under that master as regular as that of others?—My employment under him has been more regular than most others in the town.

11699. How were you employed, and what were your earnings from 1817 to 1823 inclusive?—During that time my employment was steady and regular, with the exception of a few weeks in the summer of 1818, at which time the weaving department of the silk trade was rather slack, but not to any serious amount; my earnings from 1817 to the beginning of 1819, were rather less than afterwards, because during that time I was employed in making plain goods or chiefly so, but taking into my account the time which is unavoidably lost in this department of our trade, I would earn 15s. or 16s. per week. In the commencement of 1819, I began weaving fancy work and continued to do so for several years, so that my earnings from that time to 1823, were upwards of 20s. per week.

11700. What do you mean by time being unavoidably lost in the weaving department of your trade?—I mean that time which a weaver loses in waiting for warps and

Thomas Cope.

19 July,
1832.

and shute. It is commonly the case that when a weaver has finished his warp he waits a week, sometimes a fortnight, and seldom less than two or three days even in good trade, and besides which it often happens that a weaver has to wait for shute, and I think it may fairly be said, that weavers, taking them as a whole, lose one fifth part of their time unavoidably; I intend this to apply to the weaving department of our trade; since 1826 to the present time, trade has been so precarious from the introduction of the free trade measures, that weavers lose one-fifth part of their time unavoidably.

11701. What causes them to wait for the shute?—The unsteadiness of the trade and not knowing what to prepare.

11702. You could do more work if you had it?—Of course we could.

11703. How were you employed in 1824 and 1825, and what were your earnings?—In those years my employment was regular, and my earnings much the same as in the preceding period, with a small advance in 1825, but which lasted but a very short time.

11704. How have you been employed since 1825 to the present time?—My employ since 1825 has been very unsteady and irregular, and has met with several interruptions and long depressions, which have caused me and my family to suffer very severe privations.

11705. What have been your earnings during this latter period?—During this latter period my earnings have rapidly decreased, so much so, that if I were fully employed I cannot live as a working man ought to do, and pay my way honestly. If I take into my account the difference of the work at which I am now employed as compared with that at which I was formerly employed, my earnings are reduced considerably more than one half.

11706. How much can you earn a week?—It is a very difficult thing to ascertain the precise average earnings of weavers, so many variations take place in their employment, and the description of work they make, that it is a very difficult point to come at; it may be estimated at somewhere about 6s.

11707. What was the condition of the silk weavers at Macclesfield generally, from 1817 to 1825?—Comparatively easy and prosperous; they were then not only enabled by their industry to feed and clothe themselves and families respectably, but they were enabled to lay something by for a rainy day; in proof of which I beg leave to say, that between 1820 and 1826, several building societies were formed; the principal part of the members of these building societies were men employed in the silk trade, by which societies there have been built I suppose not less than three or four hundred houses; but unfortunately for the members of these societies, the principal part of the houses so built have fallen into other hands, in consequence of the depressions in our trade, which have taken place since 1825.

11708. What has been the condition of the silk weavers at Macclesfield from 1825 to 1832?—The condition of the silk weavers of Macclesfield has been gradually declining; their wages have been reduced from 30 to 50 per cent. upon plain works; their employment has been very irregular and deficient; their fancy trade since 1825, has been, as they suppose, superseded by the foreigner, and they are now compelled to labour upon the poorest and worst paid works: their clothing, bedding and furniture, are nearly exhausted, so that now, every period of distress that overtakes them, finds them in a worse condition than before to endure its hardships; our workhouse is filled with paupers, and our streets with beggars; the stimulus to industry is now destroyed, and it is become a matter of indifference with some men whether they have employment or not, because they find by experience that they can live as well upon parish allowance as they can by their own labour; I remember a circumstance which occurred in Macclesfield last winter, which will illustrate their condition; a weaver employed by a respectable house, when he had finished his piece, instead of taking it home to his employer, he took it off and sold it, and when he was brought before the Court, and asked why he had committed the crime, he said, "I have worked hard, I have been careful in expending my money, and still I find that I cannot pay my way and live; in fact, I find my affairs going worse and worse every week, and therefore I have committed the crime in order that I may be transported beyond the sea."

11709. To what do you ascribe the want of regular employ, and the reduction of your wages?—To the introduction of foreign wrought goods into our market.

11710. Does not the distress of the weavers in other manufactures equal yours? I am not acquainted with other manufactures, and therefore I cannot speak to them.

Thomas Cope.

19 July,
1832.

11711. Does not the increase of silk weaving in Lancashire account for your distress, and is not the manufacture prosperous, both as regards master and men? —I will not say there has been no increase in Lancashire, but I will venture to say that the increase has been very small, as compared with what it has been stated to be; and likewise, that the increase which has taken place in Lancashire (admitting that there is an increase) does not account for the depression of the trade in Macclesfield and Spitalfields; whether the trade is prosperous or not as it regards the masters, I do not know, but according to my notion of prosperity, I am sure it is not so with the workmen, nor can they ever be in a prosperous state, supposing them to be fully employed, unless they have more wages for their work, or otherwise their provisions, rents and clothing, cheaper. It is the opinion of some men, that if the people have plenty of work, they must be well off; but this is far from being the truth, for it is quite possible for the people to be fully employed, and still to be in a very poor condition, in consequence of the price of their labour not being proportioned to the price of provisions, rent, clothing and taxes; the people do not merely want employment, but they want to be paid for that employment in such a manner as will enable them to live as Englishmen have been accustomed to do, by the fruits of their industry; before I proceed to lay before this Committee the state of the Lancashire silk trade, I think it will be proper to state the reason why any inquiry was instituted respecting that trade.

11712. Are you acquainted with the trade?—I think I am. In March last, when the motion was made for this Committee of Inquiry, we were informed by the public newspapers that the Right honourable Mr. Poulett Thomson had said, that the silk trade in Lancashire was prosperous; that in 1824 there were 6,000 looms in Manchester, and that the number had increased from that time to the present to 15,000. In consequence of having read this statement, the Weavers' Committee determined to ascertain if possible whether it was correct or not; accordingly they sent myself and another man down into that country; our business was to inquire what number of looms there were going in Lancashire, in the neat silk and mixed trades; what description of goods they were making; what reductions had taken place in their wages since the free trade measures were introduced; what number of Jacquards there were employed; whether in the silk or mixed trade; how they had been employed during the last winter, and what was the general condition of the Lancashire silk weavers. With these instructions we set off to Manchester, and from there to all the principal places in Lancashire where the silk trade is carried on. At Manchester, including Salford and Harfieldsay, we found 950 looms; in the Middleton district, including Broadman-lane, Jumbo-Tongue, Chadderton, Whitgate, Moston and the town of Middleton, we found 2,121. In the Failsworth district, including Failsworth, Hollinwood, Taunton, Droilsden, Woodhouses, Newton, Garton, Swinton and Eccles, 2,623. In the district of West Leigh, including Leigh, Pennington, Beaford, Atherton, Tilsey and Astley, 3,000. At Stockport and the Moor, 270, making a total of 8,964; about 3,000 of these looms are employed in the mixed trade; so that it appears by this statement that there are not quite 6,000 looms employed in the neat silk trade in Lancashire. The description of goods made in Lancashire is as follows: grey bandannas, principally made of spun silk, and of an inferior quality; single sarsnets, three and four singles (these latter are called the lowest or poorest description of gros de Naples); I believe these descriptions of work are from the principal part of the manufacture of Lancashire; in the neat silk trade, there may be some few gros de Naples of a finer texture, and besides these I believe there are a very few florets in factories. In Manchester, there is some little of the handkerchief trade carried on, but not to any extent; those looms employed in the mixed trade I leave out of the question, because I do not consider them as belonging to the silk trade at all; their wages have been reduced 50 to 60 per cent. since the free trade measures have been introduced; the number of Jacquards employed in the neat silk trade, in March last, was about fifty, and about 300 in the mixed trade; during the last winter distress prevailed to a very great degree in Manchester; we were informed that there had not been more than one-third of the looms employed, and those employed had not had more than half work. In Middleton, out of about 1,400 looms, there had been 900 of them unemployed for more than three months of the winter. In the Failsworth district, their sufferings had not been quite so great, in consequence of being employed in the mixed trade. In the Leigh district, the people had had very little to do during the winter; and if we must judge of their condition by their appearance, their clothing and household furniture, they are wretched beyond any thing ever

ever experienced by them at any former period. When we asked them how it was that they had not made their case known to the Government, they said they did not believe that Government cared any thing about them; that it was of no use to petition them; that the only aim of Government was to aggrandize themselves, no matter what became of the working classes: this opinion generally prevails among the working people of the North.

11713. Has not the amount of hand labour thrown out of employ by the cotton power loom, occasioned the depression in your wages, and your want of employment?—I do not think so; I am aware that the great majority of the weavers now weaving silk in Lancashire were formerly employed in the cotton; but I am likewise aware that the greater part of these had fled to the silk trade before the introduction of the measures which opened our market to the foreigner, but without having occasioned any perceptible inconvenience to us, either as to wages or our employment.

11714. How do you prove that your want of employment and the reduction in your wages arise from foreign competition, when the consumption of the raw material is so much increased since the introduction of the measures in 1824?—I do not know that any thing which I have to offer will amount to a complete proof of my opinion; but there are several circumstances connected with the silk trade, which if they do not amount to a complete proof, will appear to be very strong presumptive evidence of the fact. The first is the fact, that before the introduction of the measures in 1824, the silk trade steadily, but progressively advanced in its magnitude, notwithstanding the partial and temporary embarrassments with which it met, and which for the moment impeded but did not arrest its progress, which will be seen by referring to the Custom House Returns. In the second place, it appears that the trade, notwithstanding the improvements in our machinery, our increased speed, the reductions in our wages, and the efforts of both masters and men to compete with their foreign rival, has decreased, as will be seen by the Return, alluded to above. Thirdly, from 1817 to 1825, our wages were little reduced, but since 1825 they have been reduced 30 to 50 per cent. Again, during the former period, up to 1825, the trade suffered very little distress, but since then the silk trade has undergone three very serious depressions, all in the compass of five or six years.

11715. Have not workmen generally better means of informing themselves as to the number of the looms than their masters?—I believe they have; there is one circumstance I might mention: in 1829 there was a very formidable union of the silk weavers in Lancashire; they had books, and sent men round to all the different places, villages and hamlets, to ascertain the number of looms there were in Lancashire, and they put the names of the places and the number of looms down in the book wherever any weaving was going on: from these books we have obtained the number of looms. Our next inquiry was, as to whether any increase had taken place since the year 1829, and whether any new houses had been built; we found there had been a very inconsiderable increase since that time, therefore I think the result justified us in relying on the number of looms we obtained from that source.

11716. Why is it that the workmen can give better information on this point than their masters?—In Lancashire it is the prevailing practice to have more harnesses (the apparatus by which the work is performed) in their workshops than they have actually at work; that I believe to be pretty generally the case as far as that county is concerned. Supposing this to be so, and one person has eight harnesses and only five looms, the manufacturer makes a return of eight looms, while in reality he has only five employed.

11717. How long were you in Lancashire?—Five days.

11718. Although you were there only five days, were you acquainted with the county previously?—Yes.

11719. Was your companion a native of Lancaster?—Either a native, or bordering on it.

Mr. *David Rowbotham*, called in; and Examined.

11720. WHAT is your trade?—A silk weaver, residing in Macclesfield. I was the person who accompanied the last Witness through Lancashire, and can bear testimony to the truth of what he has stated.

11721. How long have you been a silk weaver?—Seventeen or eighteen years.

11722. How were you employed before?—I have been employed in nearly all

Thomas Cope.

19 July,
1832.

Mr.
David Rowbotham.

Mr.
David Rowbotham.

19 July,
1832.

the various sorts of fancy goods made of cotton and spun silk, and in the common fabrics of cotton as well.

11723. What induced you to leave the cotton and go to the silk?—I was one of many thousands at that time whose employment was superseded by the operation of the power loom, many of whom found an asylum in the silk trade, which at that time afforded a very fair remuneration for labour.

11724. Was there a great increase of silk weavers at that period?—I believe there was as great an increase from the year 1816 to 1820 as there has been in the same number of years at any subsequent period; this increase came from the cotton trade.

11725. Was that attended by a great reduction of wages?—I am not aware there was any reduction of wages during the years I speak of; the supply of work remained very steady, therefore no material injury was done to those who had been before employed.

11726. Was there not a great depression in the years 1818 and 1819?—I believe there was a slight depression about that time, but it was so trifling, as compared with what we have experienced since, that it is scarcely remembered by the workmen, while those of 1826, 1829, and last winter made an impression never to be erased; the depressions in 1818 and 1819 were temporary, and soon passed away.

11727. What was the state of the silk trade, as far as your experience went, during the period you allude to, and up to 1823, as it regards the silk weavers generally, and particularly as to yourself?—From the time I commenced the trade, in 1815, up to 1823, the trade seemed to be steadily advancing, particularly the fancy trade; we experienced very little inconvenience from want of employ. A silk weaver might in those days maintain his proper rank in society, as an honest industrious man and a good member of the community; as to myself, my condition was such as to enable me to gain a comfortable living, and make some provision for the decline of life.

11728. How were you situated in 1824 and 1825?—About the same; in 1825 I considered myself to be worth 150*l.*; now, I do not know that I am worth 10*l.* My money is all gone; my property is rendered of very little value.

11729. How has the trade been since 1825?—As far as my experience goes, it has been very unsettled, and rapidly sinking; the condition of the workmen has generally been wretched in the extreme.

11730. Can you state what the reduction in price has been in the five years prior to 1826 and the five years subsequent to that period?—I believe it is impossible to know precisely what the reduction has been on all the various descriptions of work made in the trade, but I think I have a statement here which will place the matter in as clear a light as it can be placed; whether this statement is exactly similar to that which has been given before I do not know, but it is a statement I have been at considerable pains to collect and ascertain the correctness of.

[It was delivered in.]

THE following SCALE of REDUCTIONS will best serve to show when the heaviest pressure fell upon the Trade.

YEARS.	Mountures, per Dozen.		Figured Stage Harness of 100 Shafts, per Dozen.		Black Handkerchief, per Dozen.		Bandannas, per Cut.		Single Sarsnets, per Yard.		Gros de Naples, per Yard.	
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.
1821	30	—	14	—	10	—	3	6	—	9	1	1
1822	30	—	13	—	10	—	3	6	—	9	1	1
1823	24	—	14	—	10	—	3	6	—	9	1	1
1824	22	—	12	6	9	—	3	6	—	9	1	—
1825	24	—	13	6	9	—	3	6	—	9	1	1
1826	16	—	12	—	8	—	2	6	—	7	—	7
1827	14	—	12	—	7	6	2	6	—	7	—	7
1828	14	—	12	—	7	—	2	6	—	5½	—	8
1829	12	—	10	—	6	6	2	6	—	5	—	7
1830	11	—	9	—	6	9	2	3	—	4½	—	6
1831	9	—	7	6	6	3	2	3	—	4	—	6

I only

I only wish to make one observation: yet with all these reductions our supply of work has greatly fallen off, and numbers have been wholly thrown out of employ, and those that are in work cannot, by their utmost exertions, shield themselves from poverty and want; in fact, there is no stimulus to industry, for he that lives upon the parish is as well off as he that works for his living. In proof of that, I have been acquainted for many years with a man with whom I served in the army, and whom I always considered a very respectable man; I have noticed him sweeping the streets, and I have asked him how it was that he continued to sweep the streets; he said, "I cannot do any better." I said, "Cannot you get any more by your trade than by sweeping the streets?" "No," says he, "I cannot get so much; if I go to the loom, that may not be so regular; I may have many a blank week, and there are many operatives who cannot obtain work; I do not wish the overseers to come at a knowledge of this, for if they do they will force me to work."

Mr.
David Rowbotham.

19 July,
1832.

11731. How do you reconcile the fact, of an increased importation of silk since 1823, with the falling off of the trade?—That question has been so often asked, and answered in general terms, that I think I cannot do better than to put in the comparative view of my workshop, taken last March, compared with what it was in March 1823, which statement will show, that in March 1823, I received for work, made in my garret, 1*s.* 10½*d.* per ounce; at the present period I receive 5½*d.*

[It was delivered in.]

A COMPARATIVE VIEW of my WORKSHOP, in the Years 1823 and 1832.

[illegible]

Here I have £. 1. 4. 10. per week to maintain a family of seven persons with, or about 3s. 6d. per head; and we are one of the best situated families that I know of: there are hundreds that have not a third part of the income that we have; we are all workers but one. I do not know only one other in Town as well off as I am.

D. Rowbotham.

Mr.
David Rowbotham.

19 July,
1832.

11732. Do you consider this a fair criterion whereby to judge of the general state of the trade?—Perhaps not exactly so; it is not an exaggerated statement. If I was asked to give an opinion of the fact, generally, I should say that it required twice the quantity of silk to employ the same number of looms, and four times the quantity to afford the same amount of wages.

11733. Having been a Lancashire weaver, you are probably acquainted with the silk trade of that county?—I have always kept up a correspondence with my friends, and I have recently been through all the manufacturing districts, and made inquiry into the state of the trade and the condition of the workmen.

11734. What is the result of that inquiry?—The information that we obtained was that the trade had suffered a greater degree of depression during the last two years, and last winter in particular, than it had ever experienced before; the people had suffered more than they had ever done previously, and had it not been for the extraordinary crop of potatoes, they had last summer, they must have literally starved. They complained grievously of oppression from all quarters, and heaped the bitterest imprecations on those who had brought about the changes which had reduced them to their present condition.

11735. Did you find much of the higher branches of the trade in Lancashire?—Very little; we heard of some few looms of florets and figured handkerchiefs, but nothing of any importance.

11736. What did their trade principally consist of?—There is a considerable diversity of goods; but from the observations I made, as well as my former knowledge, I conclude that the better half of the trade is an inferior description of gros de Naples, the remainder consists chiefly of a light texture of mixed goods, in my opinion not calculated to interfere with the manufactures of Spitalfields or of Macclesfield. I admit that a few substantial goods are made in the mixed trade, but they are two-thirds cotton, and cannot be considered as part of the silk trade; I know that their fancy trade has gradually declined under the present system; I know, from my own personal experience, that the fancy trade has declined in Manchester.

11737. Do you know whether the rich figured trade of Spitalfields, the ribbon trade of Coventry, or the handkerchief trade at Macclesfield, are carried on at Manchester?—It is impossible these branches of trade could have been carried on there without its coming to my knowledge; and I have no hesitation in saying, they are not carried on there to an extent to be sensibly felt in other places; if they deal in these goods, they must be made elsewhere, probably at Lyons.

11738. Has the manufacture of silk goods, or goods made from silk and cotton, been recently introduced into Lancashire?—No, it is of very long standing; my mother-in-law was bound apprentice to a silk weaver, in Lancashire, more than 70 years ago. I have some printed lists of prices, which were her's, and which in some degree show the progress of the trade at remote periods; here is a list, that bears date 1786, of the prices of the Manchester trade at that period; I compare that with one of 1796, which displays a gradual increase of the trade; there are a greater number of works, of different sorts, principally of silk mixed goods, it bears the signatures of 15 manufacturers in the silk trade, at Manchester, in 1796. If you compare that with 1810, you will see that there is a very great increase of the different descriptions of goods that are made, so that it appears the trade of Manchester has been progressively increasing.

11739. Did you meet with any ribbon weavers in Lancashire when you were making this inquiry?—We did not find a single ribbon loom or ribbon weaver in Lancashire, nor had they ever heard of any; I made particular inquiry into that branch of trade.

11740. Has not the cotton weaver derived an advantage, equal to your loss, under the present regulation?—Certainly not; they derived considerable advantage before these regulations came into operation, but none since; in my opinion, in our fall, we dragged them along with us. I conceive that no portion of the community has been benefited by the new system except the wealthy, and particularly those who have fixed money incomes. These measures appeared to me to be based on that passage in holy writ, which says, "He that hath nothing even that which he hath shall be taken away, and he that hath much, more shall be added unto him."

11741. Are there many cotton weavers in Lancashire and Cheshire, that can easily turn their hand to silk if it was advantageous to them?—The number susceptible of the change is now very limited; cotton weaving is a branch of industry that is fast falling into decay, and silk weaving seems to be on the same road.

11742. To what cause do you ascribe the difficulty which you complain of?—In my

my opinion there are various causes to which they may be ascribed; all of them, I am sorry to say, appear to me to have originated in the building in which I now stand; the most prominent is, that our home market is supplied by other countries; the flower is given to the Frenchman, and nothing but the dry stem which it grows on is left for us.

11743. Has not the introduction of the Jacquard machine been of great service to you?—The Jacquard machine was a benefit in 1824 and 1825; but I have never been able to use mine to any advantage since that time. If I attempted to do any thing in the fancy trade, I was invariably a loser by it; if I got a cane, and put it into the loom, it almost invariably stopped at the end of it; that has been a great inconvenience to me, for I was trained to the fancy trade from my infancy, and never worked a piece of plain goods from the time I was fourteen years of age up to 1826, and I am now near fifty years old.

11744. You have not experienced any distress hitherto in your own family?—I have only been sheltered from the distress by what I saved in better times; other branches of my family have suffered in common with my fellow workmen. I would beg to introduce one instance; I have a relative residing in Macclesfield, who, if the Lancaster trade had been so very beneficial, would have remained there; so far from its being prosperous, it was such as to induce him to believe he would do better at Macclesfield; he came to Macclesfield about twelve months ago, and got into employment; he very soon felt that his condition was not bettered; he is a timid shy man, and one of those not willing to make a display of their poverty; I was unacquainted with his situation until his family, by actual starvation, had been reduced to that state of health that three of his children were ill of a fever; he was obliged then to make application to me, and I found them in the most wretched condition that the imagination of man can conceive; they had nothing in the house; I had to strip my own beds to shelter them in their sickness; and I discovered that at that period they had not had more than 4s. to subsist on for a fortnight.

11745. Has not home competition been the cause of all this?—I cannot possibly conceive that home competition can be charged as the cause of it; if that be an evil that is calculated to lower our wages and do us injury, I should conceive the evil must be greatly aggravated when it extends to country against country; if the competition of one manufacture against another, and one town against another, be calculated to reduce our wages, it must be a great aggravation of the evil to extend the competition to country against country.

11746. Do you consider that a repeal of the duty on foreign thrown silk would have the effect of benefiting the trade?—I think very far from it; I have found by experience that lowering the duties on foreign thrown silk subjects us to considerable inconvenience; the silks that we have had to work since the duties have been lowered have not been so well thrown as before; we have had more trouble with them. The circumstance of taking away the duties would be a matter that could not be kept a secret; the buyers would take advantage of it, and I believe we should be materially injured by the measure.

John Wright, called in; and Examined.

11747. ARE you an operative silk throwster at Macclesfield?—I am.

11748. Do you consider distress inherent in the silk trade prior to the alteration in the duties?—I know of no distress from 1801 up to the year 1826, save and except between the year 1815 and 1816, which arose from the sudden transition from war to peace.

11749. What was the condition of the hands employed in the throwing mills at Macclesfield up to 1825?—The condition of the labouring classes was remarkably fair; the price of labour was good; the work people were contented and happy; we had bread enough and to spare, and there was no complaining in our streets.

11750. What alteration has taken place since, both as respects regularity of employment and amount of wages?—The trade is so subject to fluctuation that we are in jeopardy almost every season; we sometimes thought we were going to drive all before us, when the operation of the free trade system, like a mighty tornado, had almost swept all before it, and left us, the operatives, in a most destitute and forlorn condition; indeed I cannot fully describe the amount of the misfortunes that have befallen us, although I was appointed in the year 1826 to distribute the charity; and I think the state and condition of the working classes was at that time

Mr.
David Rowbotham.

19 July,
1832.

John Wright.

Mr.
John Wright.

1832.

without a parallel; it seem to rain from one end of Macclesfield to the other, and as far as my researches went, I have often seen men eating their food with their tears, and while they have been eating their scanty morsel, tear after tear, like a plentiful shower, have dropped from their eyes; as regards wages, our earnings are from 50 to 60 per cent. less than they were in 1824; and I am sorry to say we look forward to a further reduction.

11751. How do you attribute your distress to the alteration of the law?—In the year prior to the alteration we had only one enemy to contend with, which was the Italian throwster; but observe we have now three, namely, the regular trader from France, bringing his wrought silks; the regular trader from Italy, bringing his thrown silks, and the smuggler.

11752. Had you not the smuggler before the prohibition?—Allow me to say that smuggling was carried on upon a very small scale till after the alteration of the duties, nothing of any consequence.

11753. What improvements have been made in silk machinery, about what time and where?—It is my opinion that the country is indebted to Macclesfield and Congleton for the many improvements that have been made in silk machinery. The Dublin frame was invented upwards of 25 years ago; this machine was incomplete until a person in Macclesfield invented the cleaner, also the roller in the room of a star in the winding process was the improvement of Macclesfield and Congleton conjointly. Speed is sometimes called an improvement, this we had as early as 1818.

11754. What difference is there betwixt what is termed Macclesfield and Manchester machinery?—Macclesfield is on a par with Manchester as respects machinery, we have all sorts and all speeds, so has Manchester; that which is termed in particular Manchester machinery, is made of metal enjoying no advantage over that made of wood, having a cylinder and cords instead of a drum and straps; this we had in Macclesfield 15 years ago.

11755. Do you consider that silk can be thrown better and cheaper on the new machinery, with extra speed, than on good machinery of the old construction, and at a slower speed?—I am fully persuaded that silk is thrown worse with a cylinder and cords than with a drum and straps, for this very reason, cords naturally either give or take according to the weather, and being frail and tender, compared with the straps, are subject to break, and the silk is invariably more irregular in its spin and throw by cords and cylinder than by drum and straps, cheaper it cannot be thrown on what is stated to be Manchester machinery, all things considered; in the first place, there is double the cost on the Manchester machinery compared with that which is termed the Macclesfield; in the second place, more waste is made with extra speed; in the third place, there is extra expense in turning; in the fourth, more hands are necessarily required, and there is more expense in the wear and tear; in the last place, there must be a more costly silk, and great speed is only applicable to the best qualities.

11756. What is the amount of horse power employed in the throwing of silk in Manchester, and what is the horse power idle in Manchester and Congleton alone?—Here I appear to tread on very delicate ground; it seems according to the statement that lies before me, that I am about to make a sweeping remark on a very marvellous statement that caught my eye sometime ago in Macclesfield; a friend called on me and put into my hand the Mirror of Parliament, wherein I found it stated that the horse power of Manchester was 342; it struck my mind very forcibly that nine or ten mills never could hold machinery employing that number of horse power. I was deputed by the operatives committee to go to Manchester to ascertain the fact, I and my colleague took nothing on second hand, we went direct to the mill, and all the information I am about to lay before the Committee on this subject, I received from every manager or every master; the horse power of Manchester employed in the throwing of silk is 138, it having been stated to be 342.

11757. You mean mills actually at work?—Actually at work. I will now mention what is idle at Macclesfield and Congleton alone, to say nothing of the many mills all round the country; the idle horse power at Macclesfield is 331; at Congleton, 157; total, 488.

11758. As you reside in the neighbourhood of Manchester, what do you know of the condition of the throwing trade of that place?—In January last, the operatives of Manchester sent a Memorial to the Board of Trade, stating the reduction in their earnings to be 40 per cent. less than in 1826; when I and another went

to

*John Wright.*19 July,
1832.

to Manchester, and inquired of the operatives what was their then condition, they stated that it was considerably worse, with the expectation of a further reduction; the first gentleman throwster that we waited on, was Mr. Longworth; we asked him if the silk trade was in a healthful condition, and whether it had been so since the alteration in 1826; his reply was, we went on fair and prosperously till 1826, but since then, there has been nothing but distress; the second gentleman we saw, was Mr. Taylor, of the firm of Harrop, Taylor & Pearson; he informed us, that their mills in the last year, worked for about four or five months four days per week, and a short time some part of this; he said he was half inclined to stop his mill altogether; the next gentleman we were honoured with speaking to, was Mr. Smith, we asked him if the throwsters' protection were removed, could he compete with the foreigner; he was quite sure he could not; we asked, would there be an export trade if the duty on Italian thrown silk was removed, and of course the drawback; in reply, he stated that the exportation of silk would come to an end entirely; we also desired the two last gentlemen to say whether they could throw silk cheaper than Macclesfield and Congleton; we made the same inquiry at Broughton mill; they all with one consent declared, they could not; at the last mentioned place we learned that distress had thrown its gloomy mantle over every mill in Manchester, not excepting Mr. V. Royles. At Messrs. Occleston's we met with the same information precisely, we inquired of Messrs. Taylor, Smith, Occlestone & Williams how it was, since they could not throw cheaper than the above mentioned places, they ventured such amazing capital in building and machinery; they candidly owned that the erection of their mills was under the fostering care of Government at a time when the silk trade was making rapid advances, and it was difficult to get silk thrown; therefore the erection of our silk mills was mere convenience, as being attached to our looms. I was much struck with what fell from the lips of the Right honourable Gentleman, that Manchester was sucking up the trade of Macclesfield and Congleton; I think we discovered that the thing lay very easy on their stomachs, and that they would, if they could obtain back again their outlay, throw it upon the shores of the Bollin.

11759. Cannot the throwster exist if his protection be removed, and how would it affect the manufacturer?—First, the fact of the trade having suffered so much already by a reduction of duties from 7*s.* 6*d.* to 3*s.* 6*d.*, our earnings having sunk from 50 to 60 per cent., and the profits of our employers gone, which has been clearly shown; without multiplying words, I think it is evident to the Committee from what has been stated, that if the duty was lowered or taken away, the throwster would be annihilated at once; I beg further to state, that owing to circumstances over which we have no control, we are not prepared successfully to compete with the Italian throwster; namely, the great and pressing national burthens, we are in patience and in common honesty bound to sustain, until some equitable means be devised to emancipate us from them; till then, protection is absolutely necessary; again, the difference of the price of labour in the two countries is decidedly in favour of the Italian; the wages of a man in Italy being 8*d.* per day, in England 2*s.*, making a difference of nearly 70 per cent., to which add poor rates and taxes on the materials used in building and machinery. The second part of the question is, how would it affect the manufacturers; I think it appears to be the intention of Government to take care of the manufacturer; it shall be mine, as far as my slender ability goes; the repeal of the duties would be directly opposed to political economy; the English throwster being destroyed, the manufacturer must look to a foreigner for the supply of his looms; a monopoly would of course be created, and that entirely in the hands of strangers; and when the English throwster was gone to ruin and decay the Italian would ask what he thought proper for his thrown silk. I do not know how it could be otherwise, seeing that there would be no check upon him, he having the command of the throwing trade of Europe. If Government intends to ensure a cheap pound of thrown silk for the British weaver, allow the existence of the English throwster to be a check upon the Italian.

11760. How is it that you complain of want of employment, when it is stated that a large quantity of raw silk has been imported latterly?—Since the alteration in the silk duties, a complete revolution has taken place in the silk trade; a change from light to heavy goods, and of course from fine to round silk.

Veneris, 20^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

John Wright, called in; and further Examined.

John Wright.

20 July,
1832.

11761. HOW is it you complain of want of employment, when it is stated that a larger quantity of raw silk has been imported latterly?—I stated yesterday that a complete revolution had taken place in the silk trade, a change from light to heavy, from fine to round silks. From my own observation I find, that although there may be an increase of raw material to this country since the alteration to some small amount, yet the labour on that is considerably less than we derived from the fine silks; I observe, that according to the present circumstances we are pursuing in the silk trade, one machine will do as much as two formerly did, which were employed in the throwing of fine silks. We have been told frequently that we lose nothing, because we have the export trade; but as the present system only gives about half employ to the hands employed in throwing silk, I think it is quite clear there is no room for boasting concerning the large quantity of raw silk imported into this country since the alteration; the change of system has been to us like changing a hen for an owl; there is a great deal of boasting that the export trade has been a beneficial thing to us; that is my simple idea of it.

11762. Has the throwster any right to protection?—Yes, for various reasons: first, the silk throwster erected his mills on the faith of Government, the protection afforded to the silk throwing trade of the country in its infancy and afterwards; secondly, the amazing outlay of capital entitles him to protection, there being, according to the estimate taken in 1826, no less a sum than two millions of outlay in building and machinery.

11763. Where is that estimate taken from?—It was made by the London Committee in 1826. The reason that the throwster has a right to protection is, that the land-owner is protected; fourthly, and if I am rightly informed, the cotton spinner has a protecting duty of 10 per cent.; and in the fifth and last place, I believe that the importance of the great staple commodity of the country is in a great measure owing to the existence of the English throwster. It has been stated by a great but now lamented statesman, that the cotton and silk trades were sisters; I beg to say, that the silk trade is the eldest sister, and that Sir Robert Arkwright might have had on his escutcheon to this day, if he chose, what were the implements of his father's employment, if the principle of the cotton system had not been taken from the throwing machines. We had then our dames spinning cotton and flax by wheel and distaff, and the throwing machine, all ranged, spinning like they are now employed in the spinning of cotton, now employed by drum and strap and cylinder and cord, I remember seeing when I was a little boy, I think, which is one grand reason why the silk throwing of this country ought to be preserved, if it were only a relic of the importance it has given in the suggestion of the principle of spinning cotton, of such consequence and importance to this country.

11764. Can other trades give employ for the silk hands if their trade be destroyed by the removal of their protection?—No, they cannot, for turn which way you may you will see no prospect of admittance into other trades; and on the supposition that we could learn another business as speedily as we could say, as some time is said in the art of legerdemain, "Fly, Jack," there is no room for us; to make this appear, I direct your attention to the present state of circumstances; firstly, I look in the face the overwhelming surplus of the people, and ask them whether these are times to turn a whole trade upon them; secondly, turn your thoughts to the alarming increase of pauperism and of poor rates, and ask the overseers and rate-payers whether it is good policy to turn a whole trade on them at once. I think I can further show that other trades cannot find employ for us, from the labouring and bending of great minds in the Upper House, in order to find employment for the overplus labourers in the corn-growing districts; also the Emigration Committee arrayed before the Board of Trade, &c. Again, the silk throwing and weaving has been an asylum to hundreds, if not thousands of persons once engaged in the cotton trade, but, owing to the invention and improvement of machinery have been thrown out of employment, and turned to the silk trade for a morsel of bread.

11765. What do you know of smuggling, and what is your opinion concerning the smuggler?—I know nothing of it practically.

11766. Are

*John Wright*20 July,
1832.

11766. Are you particularly acquainted with the qualities and kinds of silk thrown in this country as compared with those imported from foreign parts as thrown silk, and what is your opinion of the mode of throwing in this country, is it inferior to the works on the Continent?—It is rather superior.

11767. In case the finest silks from France and other parts of the Continent could be brought into England in a raw state at as low a duty as the Italian raw silks are now brought, do you believe that your mills and the mills of the country could throw their raw silks into as good thrown silk as is now imported from Italy?—I believe we could, rather better.

11768. Has there been any change in the sort of silk and the mode of throwing within the last few years?—Yes, a very great change.

11769. Before the alteration of duty, what was the mill you were acquainted with, and what was it in the habit of throwing?—One mill I have the oversight of was, prior to the alteration, employed principally, if not altogether, with the very best Bergam silks.

11770. For what market were those silks thrown?—For the London market; for a gentleman of the name of Christie.

11771. Since that period has there been any change?—There has been a very great change; we have been obliged to throw all sorts of inferior silks, coarse round silks of Bengal and China and Persia, giving less employ, less wages, and less profits.

11772. For what market are they thrown?—Some for London, some for Manchester; the inferior goods are a sort of gros de Naples.

11773. Are you aware whether your master threw on the account of manufacturers before 1824, or on his own account?—It was principally by commission for manufacturers at a distance.

11774. Does he throw on his own account now or by commission?—Both.

11775. Has he very much ceased to throw the Italian raw silks?—Scarcely a bale comes; the little fellows dance for joy when they see an Italian bale come in; the employer seems to be overjoyed when he sees Italian silks come into his warehouse.

11776. How many hands are there employed in the mills you superintend?—Ninety-five.

11777. What is the average rate of wages paid to them?—The average rate of wages are about 4s. 6d.

11778. What are the ages?—They are from seven years old to 40.

11779. What is the lowest rate of wages, and what is the highest?—The lowest rate of wages is 1s. per week, and the highest is 10s.; in 1824, the highest rate of wages was 20s. and the lowest was about 2s. or 2s. 6d.

11780. Was the rate of wages the same for some years previous?—I remember wages remarkably steady; in 1810, I had 10s. for piecing, at what is called spinning mills; in 1824, there was paid about the same price for the same work.

11781. Then there had been little alteration from 1810 to 1824?—No great deal.

John Middlehurst, called in; and Examined.

11782. ARE you employed as an operative throwster at Macclesfield?—I have been employed in that business about 24 years. *John Middlehurst.*

11783. Can you state to the Committee whether the throwing trade has been steady or otherwise during the time you have been so employed?—It was a steady and remunerative employment prior to the legislative interference of 1826.

11784. Do you consider the distress of the silk trade to have been occasioned by the operation of these laws?—I do; for in the first place it has destroyed the finer fabric of manufacture, and thereby diminished the demand for the finer qualities of thrown silk; in the second place, the rate of duty on foreign thrown silk is so low that it gives the Italian throwster, coupled with the advantage of a first pick of silk, the exclusive command of the British market.

11785. Do you think if there was a higher duty imposed on foreign thrown silk so as to prevent the importation of it, the manufacturer would get as good silk in point of quality and workmanship, as he now gets from Italy?—I am of opinion the manufacturer would get a better article, for this reason, the English throwster would then get good raw silk from Italy, and from my own knowledge of the two, there is no comparison in point of workmanship, between the Italian and English thrown silk, and I have past a great quantity through my hands lately, and remarked

John Middlehurst.

20 July,
1832.

to the person who owned it, it would be exceedingly lessy in consequence of its being so badly got up; the party said he was aware of it, but the price and quality was a sufficient inducement. My opinion is, if the Government goes on to encourage the Italian throwster, he will get the better of this imperfection, and then I do not know what we shall do.

11786. To what extent have the wages of people employed in the silk trade of Macclesfield been reduced?—The workmen have been reduced from 50 to 70 per cent since the legislative interference of which I before spoke, thousands are thrown out of employ and have nothing to subsist on but what they get from the parish, and the applicants for relief have been so numerous that the overseers have been obliged to refuse relief to those applicants who could earn 2s. 6d. per week.

11787. Do you not think that the reduction in wages has been greater than the state of the trade required?—I believe it has not; in my opinion the master throwsters have been the greatest sufferers.

11788. What means have you of knowing that such a necessity does exist on the part of the master throwsters?—The situation I hold is such that my employers necessarily put confidence in me; I can state from my own knowledge that the price paid for throwing Italian silk has been reduced from 60 to 70 per cent., in addition to this, the poor rates have been trebled, and they frequently have to stand still for three or four months for want of silk. I know many throwsters who came into the trade with a capital of some hundreds who are now dependent on the parish for support, and others are obliged to work at any thing they can get however humble, to prevent further degradation; I may just mention one throwster who had several hundred pounds embarked in the throwing trade, was sweeping the streets as a common scavenger, on the day that I left Macclesfield to give evidence before this Committee, he came to me and desired I would impress on the Committee the necessity of extending relief to the trade, by which alone he could ever expect to be relieved from his present degradation and misery which had been his lot for three years. I know one spirited proprietor who, in 1829, actually gave the throwsters who occupied his mills the use of the mill and engine to work for themselves, they accepted the offer, and worked it as long as they could, at last they were under the necessity of asking the proprietor to put the engine in repair, being themselves unable to do so.

11789. What mill was that?—The Soho mill at Macclesfield, which is a very large mill, and is capable of doing a great deal of work, the machine there is uncommonly good, and is able to throw silk as cheap as any other throwing mill provided it was protected.

11790. What was the horse power employed in the throwing trade of Macclesfield in 1824, and up to the present period?—In 1824, it was 575; in 1828, 333; in 1831, 255; and in 1832, 244, being a diminution of the horse power from 1824 to 1832, of 331.

11791. What were the number of hands employed in 1824, and what at the present period?—In 1824, it was 10,229, whose actual earnings were 11s. per week; in 1828 and 1829, 5,254, whose net earnings were 5s. 5d.: I must remark here, that the time was reduced from 76 to 66 hours per week; in 1831, 3,762; the earnings at the usual time of working 76 hours might have been 5s., but their being reduced to 44 hours, the average earnings were two-elevenths in 1832 of what they were in 1831, only the number of hands had decreased to 3,610.

11792. Is not the throwing trade of Macclesfield distressed in consequence of its being transferred to some other place?—I do not believe the trade has been transferred to any other place but Italy; I know there has been a great deal said about Manchester's absorbing and sucking in the trade of the country; I know that the throwing trade of Macclesfield has not been distressed by Manchester; there has been no material increase there since 1824. I am aware there are two new mills built very lately, but one of them is to supplant an old one, and the other for the purpose of manufacturing ferrets, galloons, and doubles by steam, and only a small portion to throw such a silk as will enable them, the proprietors, to complete small orders; such orders as it is not worth while to give out small quantity of silk to throw to enable them to complete.

11793. When you say galloons, do you mean shoe-strings?—I think ferrets are more usually used for shoe-strings; galloons are what they bind shoes with.

11794. Do you know what has been the horse power at work in the silk mills at Manchester?—The horse power at Manchester was 138 in May last.

11795. How

John Middlehurst.

20 July,
1832.

11795. How did you ascertain that?—By going to the several proprietors of the mills, who gave me their horse power, where I could see the proprietors; in many instances, where I did not see the proprietors, I took it from the managers.

11796. How many horse power is there out of work at Macclesfield?—Three hundred and thirty-one.

11797. Do you think that the trade has been very little carried from Macclesfield to Manchester?—I do, and I have the best authority for thinking so; when I heard it stated that there was a superiority in the Manchester manufacture, which gave them a decided advantage, I went there to ascertain how such an assertion was borne out by facts; I had access to several mills, and I found the principle exactly the same at Macclesfield, being merely a transfer from wood to iron, and from leathern straps to cotton bands.

11798. There is no improvement of any importance?—Of no actual importance; I also went to several proprietors, and they all told me they could not throw silk as cheap as they could get it thrown at Macclesfield.

11799. What is the difference of speed at Macclesfield and Manchester?—The difference is nothing; we have machinery at Macclesfield going as rapid as any at Manchester.

11800. Did you see all the mills at Manchester?—I saw several.

11801. Did you see Mr. Royle's?—I was in it but I did not see the machinery; other mills boasted of having as good machinery as Mr. Royle's, and told me their speed was exactly the same as his.

11802. Were you ever in treaty with any of the Manchester throwsters for the superintendence of their mills?—I was, but I did not engage, the wages offered not being sufficient; the party told me he should be glad to give me what I wanted, but the trade was in such a state, owing to the unjust interference of Government, that he should be glad to dispose of his machinery at a very great sacrifice.

11803. In what year was that?—In 1827; I wish to observe, I got a friend of mine to see how cheap he would throw a pound of silk of 30 deniers, he put the persons he worked to throw it at the lowest wages, and when the people know it is piece work that is a necessary stimulus to exertion, it cost him 2s. 9d. labour, besides rent and turning, and incidental expenses.

11804. What is the difference between the price of wages at Macclesfield and Manchester?—There is not any material difference.

11805. In what way can you throw silk cheaper at Macclesfield than at Manchester?—I do not know whether it is in consequence of the better judgment of the Macclesfield people. In proof of the distress of themselves, at various times, I took a statement from a Macclesfield throwster, he allowed me to examine his books from 1818 to the present period.

[The Witness delivered in the following Table:]

SILK INTO ORGANZINE.

1821	8	—	1829	4	—
1822	8	—	1830	5	—
1823	8	—	1831	3	6
1824	7	6	1832	3	6
1825	10	6			

11806. You are at present engaged in a mill?—I am.

11807. What number of hands are employed in it?—I do not know the precise number of hands.

11808. But about what?—I am what is termed a maker up, and I make up for more persons than one; I have access to two or three mills, and I enjoy the confidence of the whole, therefore I can speak more generally.

11809. Did not the silk people at Manchester go to cotton, when their wages were too low?—I believe they did, they originally came from the cotton; when they are not sufficiently remunerated in silk, they return to cotton again.

11810. And the silk people at Macclesfield do the same?—No; they have no other means of living but by silk weaving.

*John Middlehurst.*20 July,
1832.

11811. Are the wages liable to be lower at Macclesfield than at Manchester?—
I think they are, owing to that circumstance.

11812. Did you hear last year of a very large house at Manchester stopping
when the mill was turning off hands, and buying foreign thrown at a cheaper price
than they were throwing?—I did.

11813. Did you know that was the case?—I knew that was the case.

John Kelly, called in ; and Examined.

John Kelly.

11814. WHERE do you live?—At Manchester.

11815. Did you sign the petition presented to the House of Commons, from
the silk weavers of Manchester?—I did.

11816. You are a silk weaver?—Yes.

11817. How long have you been a silk weaver?—Twenty-seven years.

11818. What length of time have you been in Manchester?—Since 1819.

11819. Can you inform the Committee what has been the state of the silk
weavers in Manchester, from that period to the commencement of the free trade
system?—In 1819, the state of the broad silk weavers gradually increased until
1825; in those years the weavers were generally employed, and the prices for
weaving afforded themselves and their families a comfortable subsistence to live
upon.

11820. What was your average earnings per week from 1819 to 1825?—I was
for three or four years employed in the figured branch of neat silk weaving, it simply
means this, it is not spun silk. My earnings for these years were upwards of 1*l.*
per week, clear of all deductions for winding, candle-light, and so forth. When I
was employed in the plain work, my average earnings were from 16*s.* to 17*s.* per
week, clear of all deductions.

11821. What are your average earnings per week at this time?—For the last
two years my average earnings have been 6*s.* 9*d.* not deducting candle light, &c.

11822. Is that in plain or figured goods?—The plain branches.

11823. What was the average earnings of silk weavers generally, before the
free trading system commenced?—They have been nearly the same as my earnings,
when both in the figured and plain branches.

11824. What are the average earnings of silk weavers generally at this time?—
From 6*s.* to 7*s.*, varying only as they are more or less employed, not deducting for
winding, candle light and so forth.

11825. To what cause do you attribute your present distress, and the low prices
paid for weaving?—Principally to the introduction of foreign wrought silks, which
have had a tendency to reduce the price of weaving above one-half since 1825, a
list of which I hold in my hand, and will give in; I beg leave to make one or two
observations on this list. When the introduction of foreign wrought silks came in,
in 1826, then our prices fell, and the weavers feeling they had so much taken from
their wages, in 1827 they formed a union, and in consequence of the union we
advanced our prices, and maintained that until the duty came off again in 1829, and
then we were reduced to the prices here stated in 1831 and 1832.

[The Witness delivered in the following Lists.]

In the second place, we have not been as well employed since these measures came into operation. I have taken a calculation for two years since they came into operation; I find I have waited for work nearly six months in two years, and the weaver generally has been in the same situation.

11826. When you speak of a second reduction of duties, you allude to 1829?—Yes.

11827. If the silk weaving in Manchester and its neighbourhood be so unprofitable why do you not leave it?—There are some to whom an opportunity has presented itself, and they have availed themselves of it; others, I am sorry to say, have taken their employers' work, and have sold it to support themselves and families until they could obtain a better employment; but generally speaking, a poor weaver, with his family, cannot shift, particularly when he is in debt with his neighbours and friends, taking into account that he has no cash to shift with, therefore he is compelled to bear the burthen that others have placed on him; and his case is still aggravated to believe the cotton weaver better off than himself.

11828. If the silk trade of this country has a greater protection given to it by law, in your opinion, would that have a tendency to increase employment?—I should think so; and as a proof of this, I have only to refer to the prosperity and comfort the trade yielded to the masters and workmen in those years when we had a protection by law; the workmen could then obtain a fair remuneration for their labour on all goods made, whether they were of the same description of goods made in London or not; from these circumstances, coupled with the facts of the case which have been laid before this honourable Committee, I am therefore of the same opinion

*John Kelly.*20 July,
1832.

opinion with those on whose behalf I now appear before you, that if we have not a greater protection given to us as a trade generally, our case is hopeless, and we shall be doomed to misery and starvation all the days of our life. Permit me here to make a remark, at the present time a silk weaver is a person looked on with contempt; if I am asked the reason why, it is not because they are dishonest generally, but because he has no money, and the means of obtaining so small a pittance weekly; this was not the case before the measures of 1826 came into operation; then they could pay their way and appeared respectable, and formed a part of civil society which did credit to themselves. Since the introduction of the free trade measures, he has been obliged to go to the parish to receive a small pittance to maintain himself and his family. I may say scores have been placed in that situation.

11829. You mean to say that he is obliged to make up out of the poor rates for the deficiency of what he receives for his labour?—Yes.

11830. Are you aware that in former times the silk weavers in Manchester and Macclesfield, and Spitalfields, used to have premiums given to them by respectable tradesmen to teach their sons the art of weaving?—Yes, I have known instances of that; I myself served my time to a silk weaver, and I have known cases where money has been given by way of premium to teach persons.

11831. Is that the case now?—No; on the contrary, as many as could find any sort of employment endeavour to leave it.

11832. You say, if you had more protection, it would tend to increase your wages, in what way?—If fewer foreign goods were to come in, and the foreigner was compelled to pay a higher duty than at present, there would be more for us to make; and the foreign goods, being dearer, would as a matter of course tend to so increase our wages.

11833. Can you remember when the silk weaving was at the greatest extent in Manchester?—I should think in 1823, 1824 and 1825; and had it not been for the introduction of foreign wrought silks, I am of opinion its prosperity would have continued.

11834. Do you consider that in the last year as many goods have been made at Manchester as in the years 1823, 1824 and 1825?—No, if that had been so, there would not have been so many hundreds of persons walking about the streets, both in town and country. I beg leave here to make an observation: previous to the introduction of foreign wrought silks, when we took our work home weekly, we had to wait three, four, five or six hours before our work was taken in to the warehouse and we received our wages; at the present time a weaver may get fitted in an hour or an hour and a half, which proves there are not so many workmen employed as formerly.

11835. Were the silk goods in 1823, 1824 and 1825 for garments, or of what description mostly?—For garments chiefly, also figured and plain gros de Naples, also handkerchiefs and figured shawls.

11836. Is the figured branches at Manchester on the increase or decrease?—On the decrease; at the latter end of 1823 I worked for Messrs. Wilson & Williams; they at that time lent me 10*l.*, to put a figured scarf to work; I did so, and paid for the machinery, and obtained a good living: for these last eight years it has been laying useless.

11837. Were the goods made in 1823, 1824 and 1825 of as good a quality as those made at present?—No.

11838. Do you see handsome rich silks in the shop windows at St. Ann's-square at Manchester?—Yes, of various descriptions, plain and figured, with labels on them; rich French silks.

11839. Did you ever see any of this description making by the weavers in your neighbourhood?—No.

11840. Are there not many manufacturers employing looms that were not known in 1825?—Yes, but that does not prove that the trade has increased, for this reason: the same manufacturers have left the weaving department, either in the whole or part, also many old establishments do not employ half as many weavers as they did before our trade was thrown open to foreign competition, so that the new manufacturers employ only a part of the looms thrown out of work, and the rest remain idle.

11841. What description of broad silks were you employed in before 1826?—Previous to 1826 I was employed in making figured scarfs half a yard wide, and figured garments a yard wide, and figured handkerchiefs.

11842. Were

*John Kelly.*20 July,
1832.

11842. Were these of the highest description of figured silks?—Yes, especially the handkerchiefs and the garments.

11843. What description of silk was used in the manufacture?—Those I made into handkerchiefs and garments was Piedmont, especially by the master, to accomplish his own orders.

11844. Do you consider that the quality of plain goods manufactured now in Manchester is superior or inferior to the quality of plain goods manufactured before 1826?—Inferior.

11845. Is the silk employed in this manufacture Piedmont or Bengal?—I am not able to speak to that at the present moment; in 1823 and 1824 we had neat silk dyed; we have now supples, that is to say, the silk has not the whole of the gum boiled out of it.

11846. Are the figured goods now made in Manchester of neat silk, or a mixture?—I am not aware that there are any making of neat silk; there may be some few, but they are very few in comparison with what were made previously.

John Scott, called in; and Examined.

John Scott.

11847. ARE you a silk weaver residing at Manchester?—Yes.

11848. How long have you been a silk weaver?—Better than 15 years.

11849. When did you come to Manchester?—In the beginning of 1821.

11850. Did you sign a petition presented to the House of Commons?—I did.

11851. Where did you live before you came to Manchester?—In Dublin.

11852. Were you engaged in the silk trade there?—Yes, about three years.

11853. What was the state of the silk trade of Dublin before you came to Manchester?—In a most depressed condition; indeed it was almost annihilated.

11854. And to what cause do you ascribe that great depression?—To the repeal of the protection duties, for while they existed the manufacturer could make goods at some profit, but no sooner were they repealed than all the mercers' shops were crowded with English silks; nearly all the manufacturers became insolvent; the weavers were thrown destitute of employment, and compelled to seek work in Manchester and elsewhere; but for that reason I would not have been here: my father was in business at that time; he fell a victim to the free-trade system which was brought about between England and Dublin.

11855. When you came to Manchester, did you find the silk trade in a prosperous state?—Yes, so much so that I found not the least difficulty in obtaining employment; I had work that I could earn 18s. a week at, and if I had the same work now I could not earn half that sum; it was the best silk that could be got, whereas what we have now is of the coarsest sort.

11856. What length of time did that state of things continue?—It continued with growing prosperity until near 1826.

11857. What was the general condition of the Manchester weavers prior to 1826?—Their condition was vastly better than what it is now; they had constant employment and a reasonable price for doing it.

11858. Have not the weavers been as well employed since the free trade measures, as they were before?—No, quite the reverse; for before that time as the weavers increased in number employment kept pace with the increase, and we seldom waited for warps; and as a proof that our employment was more permanent, and not subject to these great fluctuations which we have since experienced, I will relate an incident that will substantiate what I say; it was customary to stile the weavers by the particular branch to which they had been confined, such as those who wove black handkerchiefs, were called black handkerchief weavers, and those who wove sarsnet or gros de Naples, were called sarsnet or gros de Naples weavers, from the length of time that they were known to weave that work without changing to other descriptions, and it was the same with the other branches of weaving; but it is far different now, for the weavers generally, and particularly in the handkerchief branch, not only have to wait a considerable time for work, but are kept in suspense as to what kind they must start next; so that when a weaver gets a different sort, which is almost invariably the case, he undergoes an additional loss of time and expense before he can earn a penny for himself.

11859. What is the present condition of the weavers at Lancashire?—Their condition is most distressing, though many of them may have work now, their wages are so trifling, that they are not able to procure a sufficiency of the coarsest necessities of life, much less repair the evils they have rendered while out of employment.

John Scott.

20 July,
1832.

ployment. I perhaps have a better opportunity of knowing their condition than many; a few weeks since I visited nearly all the weavers' places in Manchester and Salford, and I cannot describe the misery I witnessed; their garrets were without furniture, in many instances there was no bed, and nothing but their looms; previous to 1826, I very well recollect, that the weavers generally used to provide themselves with a week's provision at once, now that is not the case; they have to make a meal after meal just as they can.

11860. How do you know the condition of so large a population, spread over the weaving districts of Lancashire?—I very well know their condition; I am acquainted with numbers from all parts, their appearance, together with their complaints, and the many times I have been in their districts, afford me a better opportunity than most men of knowing their situation, and I must say that it is hard for such a number of honest, peaceable and industrious artisans to be plunged into such a depth of misery and want which they have been ever since the admission of foreign wrought silks. I know there are some, who endeavour to prove, that the evils we complain of arise from different causes to what we ascribe them, and that others go so far as to say that the silk trade is not at all in such a distressed condition as is represented; but it is impossible to make a reflecting mind believe, that the great reduction, which has been made in his wages, proceeded from any other cause than that which we assign, namely, the introduction of foreign wrought silks; knowing as we do that cheap labour was the primary object of those who brought about the system.

11861. You have alluded to having gone through the country on business relative to the union, what did you mean by that?—Relative to the union of the silk weavers, formed to protect their wages.

11862. Do you consider the master manufacturer as good a judge of the condition of his work people as a workman is?—I do not; for a weaver will never disclose the particulars of his situation to his employers, which he will freely do to a fellow sufferer, and even if he would, experience makes a deeper impression than a mere knowledge of the case can.

11863. Is there any difference of opinion among the weavers, as to the cause of their present distress?—I do not know that there is; I am inclined to believe there is not among the thinking part of the weavers of Manchester.

11864. How do you know there is no difference of opinion in Manchester as to the cause of your present condition?—From frequent intercourse among them, and from petitions that have been sent to Parliament.

11865. Can you inform the Committee how many looms there were weaving for Manchester, previous to 1826?—From the best of my knowledge there were about 9,000 in 1824 and 1825.

11866. How many looms do you suppose there are now?—Not more than 9,000 or 10,000 when they are all at work.

11867. Do you mean silk looms, or silk and mixed?—The 9,000 in 1824 and 1825 were mixed, and neat silk looms, and the same now.

11868. Can you state the number of silk looms, at both periods, as distinguished from silk and cotton?—There were about 5,000 or 6,000 in 1824 and 1825.

11869. Can you state how many there are now of that description?—About the same.

11870. Do you mean to say there are 5,000 or 6,000 employed in silk only, and the remainder in silk and mixed?—Yes.

11871. How can you prove there are no more looms at work in Manchester now than there were in 1824 and 1825?—I do not consider that the introduction of French silk had at all a tendency to increase the number of looms, but rather the contrary effect; and as a proof that they have not increased in Lancashire, I will relate a circumstance that took place there. In 1826 we commenced our union, in which we inrolled about 6,000 looms, and it was computed, that with the bandannas, the shawl, and a few others that were never in the union, there could not be less than 3,000, making in all 9,000.

11872. How was that computed?—It was calculated that the bandannas and shawl looms, and some few others, that were unwilling to join the union, were about 3,000.

11873. Did you take the numbers, or how was it managed?—We had meetings, at stated times, composed of delegates from every district; I have been there some scores of times, and the delegates gave in the numbers of those in their districts who were in, and those who were out of the union.

11874. It

*John Scott.*20 July,
1832.

11874. It has been stated that Manchester employs 15,000, is it not possible for them to have increased to that number since 1826?—It was also stated then that there were but 6,000 weaving for Manchester in 1824, and as I have endeavoured to show that in 1826 there were 9,000, it is very difficult to account for the great reduction that took place in the price of weaving, seeing that labour must have increased one-half in the demand, and consequently should have prevented the reduction; and it is yet more difficult to account for the still greater reduction in wages when we find that from 9,000 they have increased to 15,000; but the truth is, there can be no such number, for when I come to calculate the weight of silk that 15,000 looms would work up in a year, I find that it would take nearly double the quantity of silk to what I apprehend is worked up by Manchester. Suppose there to be 9,000 gros de Naples looms, each weaving twenty-four yards a week, at 1 oz. to a yard; 2,500 bandanna looms at four cuts each, or 32 oz. per week; 3,500 mixed and other neat silk goods, such as black handkerchiefs, Welsh shawls, romals and some few other looms of neat silk goods, 3,500 at an average of 12 oz. of each per week, the weight of silk for fifty weeks will be 1,056,250, allowing the weaver to earn from 6s. to 8s. including expenses of every kind. I have stated the number to be 9,000 or 10,000, and supposing 10,000 to be regularly employed, making the same length and weight of work, for instance, gros de Naples looms, 4,500; bandannas, 2,500; mixed and other goods, 3,000; the weight these looms would work up in fifty weeks is 700,000 lbs. The mills of Manchester are reckoned to throw 350,000 lbs. per annum, and reckoning them to purchase 200,000 lbs. which is as much as they do, 10,000 looms must play more than one-fourth of their time; and the honourable Committee must recollect I have not taken into account the small ware trade, the fringe trade, and the sewing trade, which would take perhaps 60,000 or 70,000 lbs. more; neither have I taken the silk wholly in the raw, so that according to this calculation there cannot be the number of looms that have been stated.

11875. Are not all the looms fully at work?—No, they are not, particularly in the handkerchief branch; and I would here inform the honourable Committee that that part of the trade has become nearly extinct when compared with what it was.

11876. You do not mean bandannas?—No, silk handkerchiefs that are not made for printing; they come out of the loom ready to wear; they are made from dyed silk.

11877. But does not the increase in the gros de Naples stand as a substitute for the handkerchief branch?—I do not believe there are a greater number of gros making now than there were of other descriptions making then for the same purpose, the greater part of which are not making now, and consequently the gros cannot be a substitute for the handkerchief trade.

11878. What were the descriptions of goods making then which you say the gros have substituted?—There were vast quantities of figured sarsnet, yard wide, plain and figured sarsnet dresses, which have all gone down; three and four doubles, very few of which are making at present, and a great many three singles, called gros now.

11879. Did you make rich gros, or three and four doubles, so far back as 1822?—I made three and four doubles, in 1822, for Messrs. Benjamin & Thomas Williams, and I know they had a great many making at that time.

11880. Were they of a better quality in 1822 as compared with what are making now?—I think there is but little comparison, they were made of a far superior silk, and I know the weavers liked them better.

11881. Do you consider that a weaver has a better knowledge of the quality generally making, than a master can have individually?—He must necessarily have a better knowledge generally of what is making, and also of the quality, for while a master sees only his own work, a weaver has an opportunity of seeing the work of all the masters, by going into the weavers' workshops, as they frequently do.

11882. What are the description of goods making at present at Manchester?—Gros de Naples, two thread sarsnets, black handkerchiefs, romals, turbans or negligees, bandannas, Welsh shawls and some few looms of other kinds, besides the mixed looms of various sorts.

11883. What do you mean by romals?—The striped silk handkerchiefs that gentlemen wear round their necks.

11884. Are there not some rich figured gros making at Manchester?—I cannot state the exact number; I should think there are not many; the weavers told me that

John Scott.

20 July,
1832

that the masters were stopping some, and the men were giving up others on their own account, for the prices were reduced.

11885. Are there any steam looms working silk in Manchester?—There was an attempt made by a very eminent person in Manchester, Mr. Royle, a man well respected by his work people and a very ingenious man; he made an attempt to start a steam loom; I know the person who worked on it while it was in operation; that loom has stopped, and the weaver is now weaving the warp in his own place; he lives in the same street that I do.

11886. How long is it since that loom stopped?—About six or seven weeks ago, as near as I can recollect.

11887. Have you ever seen any produce of that loom?—I have not.

11888. Has the weaver that worked at it told you what it made?—I do not know what was the cause of the loom being stopped; he told me it would not do; it was for weaving bandanna handkerchiefs.

11889. It was not in the higher branches of the trade?—No, the silk is of a superior quality, and it is picked and dressed ready for the steam loom; I do think, if there is a man in Lancashire capable of weaving silk by steam it is Mr. Royle; he is a very ingenious man.

11890. How many out of the 9,000 employed in weaving silk are employed on neat silk?—I believe between 5,000 and 6,000.

11891. In the figured branches of trade at Manchester are they chiefly employed in mixed or in neat silks?—Nearly all in mixed goods.

11892. Of a light description?—Yes.

11893. In which a very small quantity of silk was used?—Very small; they are two-thirds cotton; in some cases more.

11894. What is the quality of the figured manufactured silk now made at Manchester?—China and Bengal alone.

11895. What may be the selling price of it?—I cannot say.

Jonathan Sisson, Esq. called in; and Examined.

*Jonathan Sisson,
Esq.*

11896. WHERE do you reside?—In Dublin.

11897. Are you engaged in the silk trade?—In the early part of my life I was engaged in the silk trade, and at subsequent periods I was for several years an importer of raw and organzine silks.

11898. Were you ever in the throwing line?—Never.

11899. How long were you engaged in the silk trade?—For several years in the importation of raw and thrown silk to Dublin, which I sold to the silk manufacturers; I am not at present connected in trade.

11900. Did you continue to be a manufacturer at the time you were a merchant?—Certainly not.

11901. When you commenced business as a silk merchant, how long did you continue in it?—I commenced about 1816 or 17, and continued in it about nine or ten years.

11902. When did you give up the business?—I continued importing till the year 1826.

11903. What induced you to give up your connexion with the trade?—I found the silk trade rapidly declining in Dublin and persons preparing to quit the business, besides which there was little or no profit to be realized; on the last silk I imported there was a considerable loss.

11904. What reason do you assign for your importations of raw and thrown silk being less profitable than formerly so as to induce you to abandon it?—The operation of two measures; the first was the sudden and unexpected repeal of the union protecting duties and the admission of foreign silk into Great Britain and Ireland; the effect of the former was to inundate Ireland with the British fabric, and the effect of the latter with French fabrics; there was consequently little room left for the existence of either the importer or the manufacturer in Dublin, besides which, the British manufactures about this time were sent to Dublin in large quantities and sold by auction at destructive prices.

11905. To what do you attribute the latter circumstance?—To the distress among the silk trade of England, who improved the opportunity then opened of getting rid of their heavy stocks.

11906. What was the cause of the loss on the importation of silks to which you allude?—Some of my former answers have in a great degree replied to that question, but

but there is another which goes to what has mainly contributed to this loss; namely, the sudden reduction of duties on thrown silk by Treasury order in November 1825, from 7s. 6d. to 5s. per pound; the effect of such an additional shock as this being 50 per cent. on the duty, almost paralyzed the exertions of persons in the silk trade in holding on against such continued injurious legislative enactments; there was a want of confidence naturally created when such important changes were made without previous notice or Acts of Parliament being passed for their adoption.

11907. Was the last importation of your's thrown or raw?—It was thrown; there were different bales, and of different descriptions.

11908. Have you since the period you allude to continued to inform yourself of the state of the silk trade in Dublin?—I am one of the representatives of the Corporation of Weavers in the Common Council of the city of Dublin, and it is my duty to attend to the trading interests of my constituents, besides which, permit me to say, though not personally interested, I could not but deeply deplore the calamitous appearances which presented themselves among the manufacturers of Dublin generally, particularly the silk ones. I therefore have devoted as much of my time as possible to ascertain the causes and extent of that distress, and if possible provide some remedy for the suffering state of a once prosperous and healthy trade.

11909. Having continued to inform yourself of the state of the trade in Dublin, what is it?—It continues still in a very depressed state; I believe I can best answer that question by giving in a statement I brought over here in the year 1824, of the number of looms then employed in Dublin; there was at that time in Dublin from the best computation I could make 1,200 broad silk looms of different kinds, and there were 996 ribbon machines; I took an account prior to leaving Dublin of the present number, and of broad, narrow and every description of loom, and there were only 150.

11910. Are you able to distinguish those that are used entirely for silk and those used for mixed goods?—The broad silk loom was principally engaged in the making sarsnets, velvets and Irish tabinets, and which we call part of our silk trade.

11911. Could you say out of the 1,200 what was used for silk goods, such as velvets and sarsnets, and what for tabinets and poplins?—I think if I was to say 400 it would be about the number; there was a good deal of throwing going on in Dublin in 1824, and there were about 10 silk mills then engaged, at the present time I think there is two.

11912. Was any computation ever made of the value of property invested in thrown silk in Ireland?—I do not think there was any particular computation, but generally speaking there was a very large proportion in the silk throwing; we had some very extensive factories; the trade was rapidly increasing in 1824, and exclusive of the mills which were in operation, a great number of silk mills were erected that have never come into use, but have gone to perfect destruction; I know one silk mill that cost something like 2,000*l.* and the factory was sold in the year 1829 for under 50*l.*; there was another factory, as extensive, and arriving to very great perfection; it was making Italian organzine silks very well indeed; the person became bankrupt, and the whole of that machinery, which cost about 4,000*l.* was sold for 62*l.*; when we look at the effects, we must charge them to the causes which we consider to have produced them, happening as they did so short a time before; the extent of distress in 1826 it is almost impossible for me to enumerate; in that year it was indeed an awful thing to go through the Liberties of Dublin. A meeting was called by a requisition to the Lord Mayor, and a large subscription made for these persons; the effect of the distress was tremendous; the number of beings huddled together as they were, without any thing to support them, created a famine; the dreadful fever of 1826, then called the famine fever, was the consequence, and Government was obliged at the end of that year to erect hospitals even in the fields to receive these people. What became of them it is difficult to say; great numbers fell a sacrifice to a premature death, others have amalgamated themselves into the common distress that Ireland abounds with, and have endeavoured to obtain some other kind of employment. I have seen them as news vendors and sweeping the streets; the Mendicity Institution in Dublin contains several of them. I was speaking to a throwster some time ago, and asking him how his business was going on, and whether he was doing any thing; he said he had some ten hands employed. I asked him where he got these persons when he wanted them; why, said he, whenever any stir of business comes, I send to the Mendicity, where I find these

Jonathan Sisson,
Esq.

Jonathan Sisson,
Esq.

20 July,
1832.

people, and instead of being engaged in an elegant nice trade like the silk trade, pulverizing oyster shells to manure the land.

11913. Can you state what has been the effects on the moral habits of females and others who formerly were employed at mills and other branches of the silk trade?—The effects on the moral feelings of the country are very awful; numbers of young females who were turned out of bread, and had no possible means of getting any support, were obliged to turn to prostitution; several have left the land of their nativity to seek employment in different parts of England, where I believe they have always been received with very great kindness, but still encountered great difficulties, as they had no claim on the poor laws of England, and were often disappointed in obtaining work. Some of them, who were obliged to come back from want of employment, are amalgamated, I may say, in one common mass of ruin and desolation.

11914. Were you ever engaged in any committees in Dublin to raise subscriptions to enable distressed weavers to find refuge in England?—Yes; in the year 1826, I was one of a committee under the Lord Mayor; in 1829, there was another scene of distress and another meeting called, and a committee was formed, who devoted part of the subscriptions received to that purpose, at the request of the operatives. In 1832, a meeting was also called, of which committee I am also a member, who allocated some of the funds for a similar purpose, but to a very trifling extent, as the accounts received from England did not hold out encouragement, from the low state of the silk trade there; the persons principally sent over were those who had friends or relations in England that could be of some assistance to them.

11915. Did these meetings more particularly relate to general distress, or the distress of the silk trade?—They related to general distress among the trades; but when we came to ascertain who were the principal persons seeking relief, we found the majority were persons who were or had been earning a support from the silk trade. It may not be amiss to mention that the last committee was for the purpose of providing against this lamentable evil the cholera morbus; as a member of that committee, I have not the least doubt that the disease was increased in the Liberty of Dublin by the distress to which I have already referred; I found the disease at the worst also in Ringsend, another part of Dublin, which had suffered in the same way from loss of employment, and trades that formerly existed there, which confirms my former opinion. In Ireland, the business is not so much carried on by factories as it is in England; each person is in the habit of having his loom at his own residence. As all the silk manufacture was carried on in that part of Dublin called the Liberty, something like Spitalfields, the house property which a great many of the silk weavers were possessed of has become almost valueless; there are whole streets nearly desolated; when the houses have fallen down they have not been considered worth rebuilding or preserving.

11916. Were these houses occupied by persons connected with the silk trade?—They were inhabited by persons of different trades, perhaps mostly by the silk branches; there are particular places, called Fordham's Alley and Skinner's Alley, which I walked through the other day, and most of the houses are down or falling; these places were formerly occupied principally by persons in the silk trade, and an extensive throwing factory of long standing had been established there; the occupier, a most respectable man, died lately, having lost his property, consisting chiefly in his factory and expensive machinery, which became nearly valueless since the changes in the duties on Italian thrown silks. Some gentleman in this country, who owned property in the Liberty, walked up lately to see where his property stood, but he could find no vestige of houses whatever. I possess some property there, and I begin to tremble even for the ground rents; I believe it would be as valuable to the Earl of Meath, who is the owner of it, if it were growing grass.

11917. Was not there distress, in former times, in the Liberty of Dublin?—Certainly.

11918. What was the cause of the former distress among the silk weavers of Dublin?—There were different causes; famine sometimes made its appearance in Ireland, and then of course distress was felt for a time; or the change of fashion, muslins for instance being worn instead of silks, was sometimes a cause, but when the causes ceased the effects ceased also, and trade returned to its natural prosperity; one of our late Secretaries, Lord Levison Gower, while in office, during this distress, said that there was no particular distress in Dublin but what had existed for 100 years, since the days of Bishop Pulter; that having been stated to the people of England, from whom I have always perceived the best feeling towards Ireland,

Ireland, when made truly acquainted with her real state and interests, I think it right to say that such was not the fact, the noble Lord was misinformed. There never was a period of any distress in the Liberty of Dublin, that lasted as it has now done since 1826 for six years, to the almost total extinction of its manufactures, the ruin of that part of the city where such manufactures exist, and the pauperism of so many thousands of its once prosperous inhabitants. I beg further to say, that some of the evidence taken by the late Committee on the state of the Irish poor, went nearly to the same effect, and also charges the decline of the silk trade of Dublin to the arrangement of wages under an Act analogous to the Spitalfields Act. This I beg to say is also incorrect, for the silk weavers of Dublin, in the year 1826, fearful of the importation of French silks, broke through all these former arrangements, and at a public meeting, where the Lord Mayor presided, of their own accord, agreed to reduce 15 per cent. on the prices then existing; and since that time the prices of weaving silk goods have been reduced still further, 30 to 40 per cent. The prices of weaving in Dublin, at present, are about the same as Macclesfield and Manchester. While on this subject, I beg to state, that there is a circumstance which the people of Ireland feel deeply as an additional cause of the present existing distress in the silk trade. A committee of manufacturers sat at my house, the day before I came here, under orders from this honourable Committee, and they said do state this fact: we feel it very severe that France should inundate us with her fabrics. I assure you there was no unkindly or jealous feeling among them, although they believe that the superior advantages and capital of England is more than Ireland can compete with. They referred particularly to French manufacture, and said, is it not a severe circumstance that we are inundated with the produce of the Lyonesse loom, that we see our former customers clad in that fabric, and yet France will not take our commodity in return. I particularly allude to the Irish tabinet, which was actually prohibited. Since I came to town I have heard of some amelioration, but which if it be fact, still amounts to almost prohibition, as being, I am informed, between 50 and 60 per cent. duty on the value. In the year 1829, when I found the distress continuing, I came over at the suggestion of the silk manufacturers and operatives of Dublin, with a petition to Parliament, for an increase of duty on French silks, and remonstrating on the want of reciprocity in France; I waited on the then Prime Minister, the Duke of Wellington, and also on the then President of the Board of Trade, Mr. Vesey Fitzgerald, I particularly stated how Dublin would be benefited if an opening could be made for our manufacture into France. Since then I have been endeavouring to show the necessity of something of the kind being done, or that fabric which Ireland still excels in, will be altogether extinct in a little time. The silk trade of Great Britain petitioned, and remonstrated at the same period against a decrease of duty, and in favour of an increase on French silks, but I regret to say without effect.

11919. Do you think it would be a great advantage to the manufacturer of Ireland, if there was a reciprocal feeling on the part of France to receive the tabinets of Ireland?—May I be permitted to state a fact, which occurred just before I left Ireland. A lady of very great patriotism, who had been in France a short time before, waited on one of the manufacturers, to inform him, that if an opening could be made for Irish manufacture, she would herself find persons who would take 300 dresses which would be about 700 *l*.

11920. Do you think it would be a great advantage to the manufacture of Ireland?—So convinced were the Parliamentary Commissioners, appointed in 1821, and who sat in Dublin, on the necessity of upholding the tabinet manufacture, that in their Report it was recommended, that some change should be made for the encouragement of the export of that fabric; and I beg to submit, that in this view of the case, the subject is particularly connected with the present almost prohibitory regulations of France; permit me to say that no nation is justified in expecting commercial advantages to the detriment of that country whose liberality she does not think proper to imitate. For while Great Britain and Ireland are inundated with French manufactures, to the consequent loss of employment of the home operative weaver, the manufactures of Great Britain and Ireland (unless in some partial instances) are strictly prohibited from French Ports. Such an arrangement, may I be allowed to say, does not merit the appellation of free trade, it is free alone to the foreigner. A nation that principally involved the British Empire in the present enormous debt, is permitted commercial advantages which she denies to the British Empire, though that very debt is one cause of her inability to cope

1832.

with other nations less incumbered and taxed than Great Britain, unless where in some cases British skill, perhaps aided by machinery, but with a sacrifice on profits, endeavours to support the unequal conflict.

11921. How long has the silk trade been established in Dublin?—It commenced in Dublin about the same time that it did in Spitalfields, and from the same causes. It was under the reign of Louis the Fourteenth, at the time the Protestants came over here.

11922. To what extent have you known the silk trade to flourish in Dublin?—I take the period of 1783, and in the average three years, 1781, 1782 and 1783, there were 114,525 lbs. of raw and thrown silk imported, which shows it to have been a trade of some moment; the imports of three years, was but 86,443 lbs.; from the year 1801 to 1821, the average amount of raw and thrown silk imported into Dublin annually, was 70,654 lbs., so that it appears to have been an increasing trade; from the number of looms at present employed partially, the amount of silk imported annually cannot exceed 7,000 to 8,000 lbs.

11923. From what countries did you import?—I believe from the same countries as London; from Italy, Turkey, and from the East Indies, &c.; but all payments came through London, and the silks are generally forwarded by the same channel, as few ships came direct, this raises the price on the Dublin manufacturer by commissions, transit of goods, &c.

Mr. William Beckwith, called in; and Examined.

Mr.
William Beckwith.

11924. IN what profession are you?—A silk manufacturer.

11925. Where do you carry on your business?—In Spital-square and Coggeshall in Essex.

11926. How long have you been engaged in the silk trade?—About 23 years, with the exception of four years, when I was engaged as a silk warehouseman.

11927. What has been the greatest number of looms you have employed?—About 250.

11928. In what branch of business have you employed your looms?—In nearly all the branches of the broad silk trade, but principally in the article of serge for coat linings, and in fancy waistcoatings and velvets.

11929. Have you ever been an importer of silks and fancy velvets?—I have, from Germany and France.

11930. Do you continue to import?—No, I left it off because I found that other importers could supply me at from 15 to 20 per cent. less than I could import for myself.

11931. Were they smugglers from whom you bought these cheap goods?—I have no direct knowledge of that; but I must presume that such was the case as I purchased for ready money.

11932. What description of goods were they?—Figured velvets for waistcoats, and figured silks.

11933. Are these the same description of goods you say you can purchase at a cheaper rate?—I did purchase the identical patterns from 15 to 20 per cent. cheaper; so much so, that I took the advantage of a contract being ten days behind time, to decline having the parcel.

11934. Were these cheap goods bought from large warehouses in London?—The largest, the very largest establishments.

11935. Do you mean that they were houses on a large scale, and of great business in this town?—Decidedly, the largest houses in the trade.

11936. Have you any objection to give their names?—Messrs. Morrison & Company, Leaf & Company, and the agents of foreign houses, Spencely & Lynch and others. I beg most distinctly to state, that I do not charge these houses with being smugglers.

11937. Has your practice of buying of these houses been so frequent as to satisfy you that they do not sell their goods at a loss?—About two years ago a Frenchman came to me, and asked me if I would give him a large order for the autumn; 30 or 40 yards is considered a large quantity, but in this instance he tied me down to give him an order for 90 or 100 yards of each pattern, to be delivered the first week in October. I gave him an order for a few hundred pounds' worth. In September the identical patterns were offered to me 15 or 20 per cent. below my contract. In order to protect those I had coming, I thought I could not do better than purchase of these large houses; I did so, and made a second purchase.

At

At last my own came, 20 per cent. dearer than the job houses were enabled to supply me: I was then protected, by buying up all that I could, as well as importing my own.

Mr.
William Beckwith.

20 July,
1832.

11938. What do you mean by job houses?—Houses that have very extensive dealings, and only purchase at a great sacrifice, excepting in the brisk time of the year, at spring or autumn. At the present time the jobbers are in the market; I might this morning have sold a parcel at 30 per cent. cheaper than I could manufacture them, for the custom was, 15 years ago, to write up, "Job warehouses," but the parties having become rich they discontinued this operation; they now all call themselves respectable honest dealers, and feel offended with the word "jobber," which used to be a premium for them to do their business.

11939. They are persons who profess to purchase goods from the manufacturer, the manufacturer making a sacrifice?—Yes; I remember an instance of a large dealer stating that he would not keep his warehouses open without he could supply his customers 10 or 15 per cent. below the manufacturing prices; I believe it is a fact that he continues to do so at the present time. What I referred to applies more particularly to a French importer. I have another instance of goods imported from Germany, where the agent who sold me the goods, when they arrived at the Custom House, offered to take my money, and save me 15 or 20 per cent. in the duties, the duties being 47 on figured velvets. I was very much annoyed at this, for my opponents went round to my customers and stated, that whatever my price was, they could supply them at 15 per cent. less. To prove the fact, I advanced the money, and sent my warehouseman down with the German agent: my young man told me, that he managed it with the lighterman or some other parties, and he got them through the Custom House; it was an understood thing; he passed goods for several houses to a large extent, and offered to contract with me at 15 per cent.; I told him I had understood it was done at 10 or 12; he said his price was 15. I paid the regular duty, and gave up the trade of importer, and got out of it as soon as I could. It had the effect of stopping all my looms, and I was ruined as an importer.

11940. How recently was your last transaction with such an agent as the German agent?—Two years.

11941. Has the rate of smuggling decreased since?—I asked him a few days ago, when I met him, and I think he said it was 15 or 20 per cent. on velvets at the present time.

11942. There has been no change?—No, I think not.

11943. What, in your opinion, would be the effect of lowering the duty to 15 per cent. on manufactured goods?—He said, if the duty was lowered on velvets this autumn, he thought that at 20 or 25 per cent. they would be able to inundate the market, with low goods in particular.

11944. Have you been in the habit of making large stocks for the spring and autumn trade?—I have; I held a large stock of fancy waistcoating last August, and should have continued a great many looms upon that article but for a large importation of Messrs. Leaf & Company, which caused such a sudden glut in the market as to affect my stock full 15 per cent. in less than 10 days, as nearly all my best customers became acquainted with the circumstance, and would only purchase mine as a job lot, which I partly submitted to in this market, and risked the others on consignments to several foreign markets.

11945. You do not continue to manufacture fancy velvets?—I have given that trade up altogether.

11946. On what are your looms employed now?—They are principally employed on the lowest description of works, the three singles, serges, and other works by which the weavers can earn 7s., 8s., or 10s. a week, with so many reductions, they grumble dreadfully. I used to give them 2*l.* a week; then they were well clothed, comfortable and happy.

11947. In what branch was that?—In weaving rich fancy silks and velvets. I was driven, by the high rate of labour, from Spitalfields, and I established a factory in Essex. I used to pay 2*s.* 6*d.* for an article in Spitalfields, which I now make and sell at 2*s.* 4*d.* per yard; I give 7*d.* or 8*d.* for weaving it now. I stopped all my looms about a month or two ago, and offered a reduction of wages of 25 to 30 per cent., which necessity has compelled them to accede to, but I have only been able to supply a small portion of my looms at that price. About two years ago I made a similar reduction of wages, and I received a letter signed "Swing," stating, that if I did not advance my labour in two days, my factory should

Mr.
William Beckwith.

20 July,
1832.

should be burnt down. As I was not then insured, I paid men to watch, and as a proof the threat was not sham, two houses were destroyed at that time. I was refused by two offices an insurance; I now have got my factory insured, with some difficulty, at 11s. per cent., and the weavers could not do me a greater favour than to burn it down. I put it up to auction on one occasion, and would have sold it at 65 or 70 per cent. loss, but rather than submit to that I was disposed to work it a little longer, to wait for better times.

11948. Have you been an exporter of silks?—Yes, to 20 different markets.

11949. Did any of these markets answer your purpose?—Only some two or three, but the drawback is too small to continue the trade.

11950. What did you export?—All description of goods, from the lowest to the richest; from some markets my returns were of a ruinous description.

11951. Were those velvets that you purchased here for exportation or home manufacture?—All home manufacture; I am sending off some old foreign velvets this week at 50 per cent. loss; I have exported some thousands of pounds, and my answers have invariably been that although your goods are stouter and heavier than the French we can only sell them at a great sacrifice, as the French novelties, although thin and flimsy invariably have the preference; I have a letter from Philadelphia to that effect, another from Rio, and another from Valparaiso, as to the Cape, there are only some few particular description of goods that the French have not interfered with me, so that I have been fortunate enough to realize a profit, but as regards the competition with French goods in other markets it is quite out of the question.

11952. Can you suggest what would create a better export trade?—I take the liberty of suggesting that you should increase the debenture to 7s. on goods made only of silk, leaving the silk and cotton and the silk and worsted mixed as they now are; viz. silk and worsted, 7d. per pound; silk and cotton, 14d. per pound; silk only, 3s. 6d.; that would have the effect of exporting all the old fancy stocks at the end of each season. I think I could now make light flimsy articles all silk, both waistcoatings and garments that would beat the French, and by sending them fresh out of the loom of the same quality as theirs, with a drawback of 7s., I see no difficulty to contend with them in the American and other markets; at present our patterns are exposed two or three months, and foreigners look upon them as old goods and beat us with French novelties.

11953. You mean that should take place for one year?—I should like it to be permanent, at all events for two or three years, so that we might obtain a footing in the different markets, which would afterwards be difficult to drive us out again.

11954. Is your markets principally American?—No; I send to the Colonies, North and South America, New York, Malta, Rio, Cape of Good Hope, Lisbon, Valparaiso, Cadiz, Demerara, Palermo, Vera Cruz; I have tried them from 50l. or 60l. up to 500l. worth.

11955. Would your proposal affect any fancy silk goods now mixed with cotton?—It would have the effect of stopping my looms on three singles and serges, and I would venture to make figured goods all of silk, thus retaining the double chance of the home trade or the export trade; the present drawback on silk and cotton is so trifling that it is not worth while to look after the debenture.

11956. Are umbrellas and parasols now allowed any drawback?—No, they are not, but they ought to be in my humble opinion, as they are about the only article exported made from thrown silk, and they are mounted so superior in this country that no doubt the trade would increase to a considerable extent if that was allowed; I believe this is the only article made from thrown silk with a prospect of profit on exportation.

11957. What is the present price of silk debentures?—They are almost valueless, I sold them as low as a farthing per pound last week; it was my misfortune to loose by the dates expiring, something like 2,000 or 3,000 pounds; last week I sold 1,500 pounds weight at a farthing per pound; parties are always looking after them when they are going to export, and they want one of my unfortunate dates, one that is just expiring.

11958. Do you know whether the Custom House officers have been remunerated for the late seizure of smuggled silks?—The officers lately informed me they had not yet got a shilling; it became a matter of secondary consideration whether they should not look to other parties for remuneration, if silk goods were presented at the Custom House, in fact, one man came to me who is a poor miserable fellow, that was once a captain of a ship, but who is now reduced to be one of the hangers

on

Mr.
William Beckwith.

20 July,
1832.

on about the Custom House, he considers himself fortunate to get employed four or five half days at 3 s. 6 d. a day, he was placed in the situation to weigh three or 400 pounds of silk; a certain importer made him a liberal offer, being in a half starved state, I told him I thought he had better make sure of something for himself, and let me know who was the party; I went with his name to the Board of Trade, but they declined seeing him; I was very persevering with his case, for he is really an intelligent man, and though others do it, he would not hurt his conscience by touching any bribery money; his name is Allan Fraser, a man well known, and I think who deserves to be better taken care of.

11959. Do you believe that smuggling continues?—I believe that man could prove the fact, that 300 lbs. or 400 lbs. of silk are passed in the scales, and 100 lbs. or 150 lbs. is called out, and then the 500 l. a year clerks reckon up the correct duties; he could throw immense light on smuggling.

11960. Is there any body else connected with smuggling, whom you yourself know, that could give us any information on that subject?—I think I could find some; the thing is notorious.

11961. I think your opinion of free trade was once different?—It was.

11962. Be good enough to tell me the reasons you have for changing it?—Practical experience, great losses; nothing goes on at a profit; I contended with my men for a reduction of wages; I thought the price of labour in Spitalfields was exceedingly high; I could not sell my goods at a profit, and I thought the duties on thrown silk might be reduced.

11963. Before the alteration, were you not in the habit of giving advice and suggesting to the Board of Trade the advantages likely to be derived from an open trade?—Yes; I got up two petitions to both Houses of Parliament on that occasion.

11964. Have you, since your change of mind, memorialized them in any way, stating that your opinion was altered, and that the results had not been exactly what you expected?—Yes; I waited on all the parties who had been the means of leading me into this serious error; I stated that I had been seriously deceived; Lord Goderich and Mr. Huskisson I saw half a score times; they promised, if it was only persevered in, to reduce the duty; they would take care that I should have cheap corn by and by, and a repeal of this, that and the other; that it would be all honey and God-sends. I since took the liberty of calling on his Lordship, and stating that it had answered my purpose miserably bad; and I went to the Board of Trade, and tried to make a better bargain with them, but they still kept to the reduction of duties on foreign thrown silk; I said further reduction might benefit the manufacturer but it would ruin the throwster. I might reduce my labourer further till I was ashamed to go amongst my weavers.

11965. As far as your experience goes, the alteration which you desired has been productive of very great disadvantage to the silk trade of this country?—Very great indeed; scarcely a manufacturer is so well off as he was a few years ago; there are one or two large houses loth to acknowledge the fact. I should be glad to get out of my trade if I could get the cost price for my machinery; but not at 60 per cent. loss. I must still live in hopes of getting this cheap corn, and some other such God-sends by and by.

11966. Do you consider it a free trade when there is 30 per cent. duty levied on it?—I never thought it was a free trade.

11967. You do not consider the 30 per cent. is collected?—Certainly not; I should say not in two-thirds of the trade.

11968. Do you know this of your own knowledge?—I believe it is so.

11969. In what way would you suggest such an alteration should be made as would place the law on that footing which it was intended to be, viz. that the 30 per cent. should be collected, I mean what changes or alterations would you make as to the Custom House?—I am in hopes of total exclusion of the fancy or figured branch, or it will soon be lost here; I would say to collect the 30 per cent. there might be stamping, a pattern book and a few other strict regulations; and one port, the port of London only, one warehouse, and some persons who know what silk goods really are. If you go down there, you see a man who perhaps never saw a piece of silk in his life before he had the luck to get such an appointment there; he is taking the duty on all sorts of fancy toys, clocks and other things. The German agent told me that goods worth 12 s. a yard could be passed at 4 s. There are some men there who pass goods without knowing the value, &c. &c.

11970. Would it satisfy your view if the 30 per cent. was *bond fide* collected, or would you consider a more extended protection or prohibition on foreign goods requisite?—

Mr.
William Beckwith.

20 July,
1832.

requisite?—If the 30 per cent. was collected, that might do upon plain silks, with a stamp; I think 40 per cent. ought to be put on the figured; I am now making a few.

11971. Then with import duties to the extent of 30 or 40 per cent. and strict regulations at the Custom House so as to prevent the dishonest importation by smuggling, you would be satisfied without having recourse to prohibition?—Yes; I put it at 40 per cent. on figured goods, with a certificate from the Consul abroad, and the importer's name to be entered. When I say 40 per cent. on fancy goods, I mean with reference exclusively to my own particular branch, but not to apply to ribbons, gauzes or the fancy and figured trade generally.

11972. You restrict this to fancy waistcoatings?—Yes; figured silks and velvets for waistcoats.

Sabbati, 21^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. William Beckwith, called in; and further Examined.

Mr.
William Beckwith.

21 July,
1832.

11973. WHAT do you think would be a check to smuggling?—My answer to that question would be, immediate exposure before a magistrate; at present it is a long process of 12 or 18 months in the Exchequer before an exposure takes place. I once detected the largest smuggler that ever was in the trade.

11974. Do you mean the exposure of the goods, or the exposure of the man?—An exposure of the man; immediate exposure, or immediate judgment. If he was examined before the Lord Mayor of the city of London, the name of the parties and the house would be published, and the firm would be held in disgrace by the trade; then the whole trade might be aware of the circumstance. Fine and imprisonment for the first offence, and I think it would not be too hard if we ask for transportation for the second, or for the treadmill, and all partners to be liable who belonged to the firm; it might be very hard for partners living at a distance with property (they might live at Brighton or other places), but we say that the profits would reach him, and therefore we would say that the losses ought to reach all partners.

11975. In the same way as with a banker?—Yes. About nine or ten years ago I purchased some smuggled thrown silk on the part of the trade, and we made a seizure of one bale. I think it was full 18 months before the case came on in the Court of Exchequer; we convicted the smuggler; his name was Little. He had been a smuggler for many years, in cambrics and thrown silks more particularly. At that time thrown silk paid 14s. 7d. per lb. duty, and I think the value of the silk at that time was worth 35s. or 36s. per lb. The market price was 50s., duty paid, I believe, and I purchased it at 42s. He stated, at that time, that he had got 40 or 50 bales coming, and I believe he stated he sold 140,000l. per annum to his customers. Some of the aldermen were impeached, and some of the first houses in the trade, and they were very much annoyed by the exposure; but it was nearly 18 months afterwards that we got into the Exchequer for final conviction, and a more complete case, the Judge said, was never made out. It ruined the man in his smuggling transactions, and we heard no more of him. The duty was afterwards reduced to 7s. 6d. I ought, however, to state, that in the mean time the man took the opportunity of traducing my character, stating that he would not have cared but I was a private friend, and that I boarded with him for three days a week, and so forth, whereas I had never seen the man in my life before this transaction, and knew nothing of him.

11976. How are your weavers now employed at Coggeshall?—Very badly indeed, many of them upon low works, such as three singles, serges, and a few upon figures; the remainder, I believe, are out of work, and have been for the last three or four weeks. I am fearful to speculate upon fancy silks in the autumn, lest I may be served the same trick as I was last year, when I did so; Messrs. Leaf & Company imported a great quantity from France for this market, and caused mine to be sold at 15 per cent. loss.

11977. How do these men live when they are out of work?—By parish rates, begging, thieving, poaching, &c.; it is no uncommon thing for me to have two or three

three hares offered me at a time; they would steal any thing at an hour's notice when they are out of work: as to the poor girls, they are prostitutes by dozens. There is only one more factory there, belonging to Mr. Hall, and he gets the people to work night and day for him; he has one set of hands for the night and the other for the day, and that is the way he makes up better wages for some of his hands than I can afford to give. Some of the girls, of 16 or 18 years of age, only earn as low as 3s. 6d. or 4s. per week.

11978. How can he, by employing them night and day, give them more wages?—He does not give them more; he gets more labour out of them; his business is of a throwing description, he does not weave at nights.

11979. Is there any other information which you would wish to give to the Committee?—I wish to produce a few patterns, in illustration of my evidence of yesterday. [*The Witness produced the same, some handsome figured and fancy waistcoat silks and velvets.*] I was speaking, in my last day's evidence, about the drawback, that if the drawback was increased to 7s. per lb. on all silk goods, which would about draw back the surplus Government hold on thrown silks imported, I should be able to make new and light flimsy figured goods, and export them to the foreign markets; at present I make them heavy, for the home trade only, and in consequence of the old patterns going in competition with the light flimsy novelty of the French, they beat me; I have no inducement now to send the light flimsy goods there: letters from all my correspondents state that that is the fact; my old goods, though stouter and better, do not sell against the light French goods. I have also a sample of Manchester goods, which is said to be better than ours; I leave the Committee to decide whether it is or not. [*The Witness produced the same, a thin shabby silk and cotton waistcoat silk.*]

11980. Is that a silk for waistcoats?—Yes, we make it of silk and cotton. The Manchester manufacturer is allowed to obtain a drawback of 14d. a lb. upon that thin article, which is equal to my getting about 7s. per lb. upon all silk; I ought to have at least 7s. upon my silk, to enable me to export against the French.

11981. What is the duty paid upon this?—[*Witness produces a pattern of French silk.*]—It ought to be 30 per cent., but from the price at which it is sold in the London market at this time, I should think they do not pay above 15 per cent. I have another sample, I beg to show to the Committee, of Manchester goods, which claims the drawback of 14d. a pound; I should imagine it has half an ounce of silk in half a dozen yards. [*The Witness produced the same.*] I have a sample made in Spitalfields about 50 or 60 years ago; if I had encouragement of a good drawback of 7s. per lb., I think I should revive that trade. [*The Witness produced the same, a beautiful rich figured silk.*]

11982. What was this made for?—I should imagine for Court dresses; they are attempted to be brought in by houses at this time, and I dare say we shall succeed if we have encouragement in making them. I was yesterday asked, whether I was once a free trader, which I acknowledge; but I have been deceived by not having the Corn Bill repealed and smuggling checked, &c. &c. An article I have with me, I once paid for weaving it 2s. 6d. per yard; I was under the necessity of reducing it in Essex to about 6d. or 7d.; I can now only obtain 2s. 6d. per yard in the market for it on this day. [*Producing the same, a black figured silk and cotton.*] It is of that description that I cannot afford to export it with a 14d. drawback; if I had a larger drawback I would make it all silk, or make a flimsy novelty which I should find a good encouragement for.

11983. The drawback of 3s. 6d. upon that would not be sufficient if it were made all of silk, would it?—No, it would not; 7s. would about do it. Here is an article of figured velvet, [*producing the same.*] That is a trade that I once employed 50 or 60 men upon; the French have now all that trade.

11984. What is this a yard?—If they paid proper duty it would have stood me in 24s. per yard.

11985. You state that, to your knowledge, while the duty was 14s. 7d. upon thrown silks, there was a considerable quantity smuggled, and you stated further, that you did not think there was that smuggling in thrown silks now?—No, I think not in thrown silk.

11986. That being your opinion, as to the facts in both cases, would you not think that any considerable increase in the present rate of duties upon thrown silks, would rather tend to encourage smuggling again?—I do not know how far that might go; I think with proper regulations, with regard to Custom Houses, and so forth, it would be prevented; but I have always considered it as wilful negligence.

Mr.
William Beckwith.

21 July,
1832.

July 12
1832

Mr.
William Beckwith.

21 July,
1832.

There is one part of my evidence of yesterday, I beg to make an observation upon, having stated that 30 per cent. upon plain goods, and 40 upon figured, would be a protection. I have a calculation with me this morning, made by one of the most intelligent manufacturers, and I think a good calculator too, who states that he thinks the difference in plain goods is 39 per cent., and on figured 46 per cent., and I have gone into the calculation myself, and concur in his opinion.

11987. You have been asked whether raising the duty on foreign thrown silk would not encourage smuggling, do you think 5 s. a pound on thrown silk is as likely to encourage smuggling as the duty of 14 s. 7 d. did?—No, certainly not; I said that if it was raised to 14 s. 7 d. it might have that effect.

11988. Not at 5 s.?—Not at 5 s.; I have no objection to go back to the old times and take our chances; I presume if there was no smuggling at 3 s. 6 d. there would be none at 5 s.; but if you go back to the old system I have no doubt that the trade would revive again.

Mr. Thomas Pittifor, called in; and Examined.

Mr.
Thomas Pittifor.

11989. HAVE you had opportunities of learning the usual amount of the earnings of weavers in the Jacquard loom?—Yes, I have had frequent opportunities of learning it.

11990. In what situations have you been placed?—I have been employed for the last two or three years as designer and draftsman in Jacquard looms, and as the general manager of the fancy business of Morris & Oswin; I have been employed for a much longer period than that in the same way in other situations.

11991. What do you conceive the amount of the earnings of weavers to be?—About 14 s. a week upon the average; I think that is the highest average we could possibly take.

11992. Do you mean by that to include the time at which they are out of employment throughout the year, or do you mean to say that that is the amount when employed?—I mean that that is the amount when employed; I do not take into account the time when they have no employment at all.

11993. Have you found in your inquiries upon this subject, any exception to this general rule, which you lay down in regard to the average of wages?—I have found a great many below it, but I have found very few over; but if the Committee will allow me, I will read a paper, which I obtained from Mrs. Dresser, who employs a great number of hands in the Jacquard looms.

11994. Those are the cases of persons that receive more than 14 s. a week, are they not?—Yes; I have obtained a list from Mrs. Dresser, of eight persons, and they include all those of her hands, (and she employs more than 200) who have obtained more than that sum. I had a great deal of conversation with Mrs. Dresser upon the subject, and she was of opinion that a higher sum than 14 s. could not be taken as the average, and she had never given any information to any person which could lead to a supposition that it was higher.

11995. And those are the cases that she mentioned to you of persons receiving more than 14 s.?—She gave me a list, five of them received more than 14 s. a week, and the rest received about that average.

11996. Will you state the circumstances under which they receive more than 14 s.?—Yes, I have it written down here, the way in which they obtained it, and it is from their own personal communication. Samuel Franklin has earned in twelve months 71 l. 10 s., from which 5 l. 10 s. must be deducted for quill winding or filling, which would leave 65 l. or 25 s. a week; during the whole time he has constantly employed an assistant or picker up, and he has made the utmost exertions. But the only circumstance which enabled him to earn the money was this, that as he became indebted to Mrs. Dresser, at the time his loom was put to work, a sum amounting to nearly 20 l., a written agreement was entered into, binding him to repay the money within a certain time, and binding Mrs. Dresser to find him constant employment for that period without alteration of pattern. Joseph Francis's earnings, are stated in Mrs. Dresser's account at 63 l.; but there appears to be some error in this, he himself believes his earnings to have been, as nearly as possible, an average of four lengths in six weeks, or 276 pieces of 20 d. clipped gauze, at 6 s. 6 d. per piece, amounting to 89 l. 14 s., from which, deducting filling, 6 l. 18 s., there is left 82 l. 16 s. To produce this, two persons have been constantly employed 13 hours every day, and if one is called away for any purpose, such as going to the warehouse to fetch out warps, or to take in the work, or in picking or making it up, a third person

person supplies his place. In this way two persons are constantly and another occasionally employed, and the earnings of the whole amount to 31s. 10d. per week; the loom has been exceedingly well employed, and there has been no alteration of pattern in the whole time. C. Benn has made 102 pieces of 30d. clipped gauze, at 12s. per piece, amounting to 61l. 4s., from which, deducting filling, 4l. 5s. leaves 56l. 19s., or 21s. 11d. per week; he has several times employed a picker-up, and has had no alteration of pattern; he is a tenant of Mrs. Dresser, and at the beginning of this time was indebted to her 7l. or 8l., and has been favoured for employment to enable him to pay it; he assured me that for a long time previous to the last twelve months, he did not earn more than 7s. or 8s. per week. Thomas Hulm has made 126 pieces of 24d. clipped gauze, in 53 weeks, at 8s. 6d. per piece, deducting filling, 4l. 10s., leaves 49l. 1s.; he paid for assistance, 1l. 16s., and for the use of his loom, 5l. 6s., which leaves 41l. 19s. or 15s. 10d. per week. William Payne has made 72 pieces of 20d. gauze, at 6s. 6d., and 72 pieces 24d. at 8s. 6d., amounting to 54l., from which, deducting filling, 4l. 4s., leaves 49l. 16s. or 19s. 2d. per week, from which should be deducted the payment of an assistant for eleven weeks. These are the only hands of Mrs. Dresser which will show a higher rate of wages than I have named.

11997. From those cases which you have given in it appears, that in the first place, owing to a debt which they had contracted with their employer, it was the interest of the employer to give them constant employ, and from the list it appears also that very often where it is stated that a person is gaining so much, he is not in fact gaining that, because he has to pay out of what he is getting so much to the persons he is employing?—Yes, that is the case in all those cases, and very frequently in others.

11998. For instance, in one case where you state a person is getting 31s. 6d. a week, from that you must deduct the sum which he of course is obliged to give to the other two persons, and the one person occasionally that he employs?—Yes.

11999. Which would make it about what?—I should think it would make about 16s. or 18s. a week remaining.

12000. And the reason of his obtaining 16s. or 18s. a week upon the whole, which would be without any deduction of time when he was at work, that it had become the peculiar interest of his employer to give him peculiar employment?—In the case of Franklin it was, but not in this case; but I have no doubt that this pattern sold well, and therefore it was the interest of the employer to get as much of it done as possible; under ordinary circumstances it could not have been the case.

12001. It is a rare thing that a pattern continues for any length of time without change, is it not?—Yes.

12002. Therefore it was under very rare circumstances that he got this sum?—Yes.

12003. Have you obtained a list of the sums earned by the weavers from any other manufacturers?—Yes, I have obtained a list from Mr. Hands.

12004. Are these cases of exception also?—Yes; the list is as follows:—John Brown made, from March 26th, 1831, to March 23d, 1832, twenty pieces of 30d. damask, at 13s. and 115 pieces of 30d. gauze at 12s. amounting to 82l., from which deducting filling, 6l. 19s. leaves 75l. 1s. or an average of 1l. 8s. 10d. per week. Brown informed me that during the greater part of the time mentioned he had no employment for any other loom, and as he had permission from Mr. Hands to make as much as he pleased in this, the exertions of three or four persons, including himself, and his son, twenty-four years of age, were used to get as much out of it as possible; and he assured me that for a long period as much was produced in it as is usually produced from two; John Cole, made from March 11, 1831, to March 17, 1832, 20 pieces of 30d. damask at 13s. and 62½ pieces 30d. gauze at 12s. making 50l. 10s., from which deducting filling, 4l. 4s. 6d. leaves 46l. 5s. 6d. or 17s. 5½d. per week. John Cox has made from March 6, 1831, to March 10, 1832, 64 pieces of 20d. striped gauze at 4s. 4d. and 110 pieces 30d. at 12s., making 87l. 17s. 4d., 7l. 10s. deducted for filling, leaves 80l. 7s. or 1l. 10s. 4d. per week. The work was hurried forward by order of Mr. Hands, and for a part of the time the loom was kept going nearly day and night; two persons were constantly employed upon it and sometimes three. This person I had not an opportunity of seeing personally, but I had this information from a person who did see him, and on whose accuracy I can rely. Henry Hulm made from February 12, 1831, to February 18, 1832, 152 pieces of 24d. gauze at 8s. 6d.

Mr.
Thomas Pittifor.

21 July,
1832.

Mr.
Thomas Pittifor.

21 July,
1832.

per piece, amounting to 64 *l.* 12 *s.*, filling, 6 *l.* 7 *s.* 6 *d.*, would leave 58 *l.* 4 *s.* 6 *d.*, or 1 *l.* 1 *s.* 11 $\frac{1}{2}$ *d.* per week; he has constantly employed an assistant or picker-up the whole time. Benjamin Kimberley, made from March 15, 1831, to March 20, 1832, 164 $\frac{1}{2}$ pieces of gauze at 8 *s.* 6 *d.* per piece, amounting to 69 *l.* 18 *s.* 3 *d.*, filling, 6 *l.* 17 *s.* would leave 63 *l.* 1 *s.* 3 *d.*, or 1 *l.* 3 *s.* 9 $\frac{1}{2}$ *d.* per week; this person assured me that there were always two or three persons employed on this loom. Dusson and Pickard made from February 15, 1831, to February 14, 1832, 164 pieces of 20 *d.* gauze at 6 *s.* 6 *d.* per piece, making 51 *l.* 6 *s.*, filling, 3 *l.* 1 *s.* 6 *d.*, leaves 48 *l.* 4 *s.* or 18 *s.* 6 *d.* per week; Dusson worked in the loom one part of the year and Pickard another. Samuel Shilton has made from March 4, 1831, to March 3, 1832, 160 pieces of 20 *d.* gauze, at 6 *s.* 6 *d.* per piece, making 52 *l.*; deduct filling, 4 *l.*, leaves 48 *l.*, or 18 *s.* 6 *d.* per week; he has always employed a picker-up. The earnings of the eighth, William Walsh, amounts exactly to the sum I have named, 14 *s.* per week.

12005. Did you not state at the commencement that that was a statement which you had received from Mr. Hands?—Yes; Mr. Hands has also appended to it a statement of what he conceives to be the average quantities of gauze made by gauze weavers that were regularly employed; he thinks, in a ten shuttle loom, of 16 *d.* gauze, five pieces per week at 5 *s.*, 1 *l.* 5 *s.*, deduct for filling, 2 *s.*, 1 *l.* 3 *s.*; in an eight of 20 *d.* ditto, four pieces at 6 *s.* 6 *d.*, 1 *l.* 6 *s.*, deduct for filling, 2 *s.*, 1 *l.* 4 *s.*; in a six of 24 *d.* ditto, three pieces at 8 *s.* 6 *d.*, 1 *l.* 5 *s.* 6 *d.*, deduct for filling, 2 *s.*, 1 *l.* 3 *s.* 6 *d.*; in a five of 30 *d.* ditto, two and a half pieces at 12 *s.*, 1 *l.* 10 *s.*, deduct for filling, 2 *s.* 6 *d.*, 1 *l.* 7 *s.* 6 *d.*; and from this Mr. Hands would deduct one-fourth for time lost in alteration of pattern and putting in fresh warps, which would leave to the weaver of 10 *d.*, 17 *s.* 3 *d.* per week; of 20 *d.*, 18 *s.*; of 24 *d.*, 17 *s.* 7 $\frac{1}{2}$ *d.*, and of 30 *d.*, 20 *s.* 7 $\frac{1}{2}$ *d.* This statement Mr. Hands assured me was the one he made to Mr. Baggallay; he told me that was what he conceived would be about their earnings.

12006. Under the most favourable circumstances?—Yes, with complete work all the year through.

12007. He did not state that those were the earnings now, but what they might be under favourable circumstances?—Yes, with a good hand well employed.

12008. Do they receive that at this moment?—I do not know; I do not think that they do.

12009. Does Mr. Hands say they do?—No, he does not.

12010. Has Mr. Hands taken into that calculation the time that is lost in putting in the warps?—Not in the quantity first taken.

12011. You are not laying this down then as the profits of the weavers under all circumstances in those looms, but as the profit which would occur in the most favourable circumstances to a weaver who was only out of employment in the times when it was necessary to change the warps?—Yes; I think that the hands could not earn more than that under the most favourable circumstances; but I do not think the circumstances are so favourable as this statement supposes; Mr. Hands, I think, does not deduct sufficient for the time lost.

12012. What difference is there between your calculation and that contained in the paper?—I should think the average was nearer five months than three.

12013. Do you apply that to the present period?—I mean within the period of the last two or three years, if trade was good it would be the interest of the manufacturer to get things ready, and there would then not be so much time lost.

12014. There would be only three months under such circumstances lost?—I think three months would still be lost even under the most favourable circumstances.

12015. You have given in exceptional cases of the highest amount of wages which any weavers receive?—Yes, the very highest.

12016. And you have been taking the high cases without taking all the cases, and merely stating the particular circumstances under which those persons who receive more than 14 *s.* receive those wages?—Yes.

12017. In the statement which you have given in, it is understood that those are not ordinary cases, but cases of exception which you have collected together and which are examples of the highest rate of wages which any persons receive?—Yes, precisely so.

12018. And which you account for in most cases by being under very particular circumstances?—Yes; I wish to show by this the way in which a great deal of delusion takes place with regard to the earnings even in Coventry itself, for these circumstances are things sometimes unknown to the manufacturer himself, he only knows the sum paid to the person who takes out the work.

12019. In

Mr.
Thomas Pittifor.

21 July,
1832.

12019. In most of those cases you have given in, you have not only received the statement from the persons to whom you allude, but you also have been to the individuals themselves to whom those particulars refer, and you have got a corroboration of the statement from them, which you are now giving in to the Committee?—In all, except the one that I referred to.

12020. When you speak of 14*s.* as the average, you take that from your information also?—Yes, certainly.

12021. You have given the average of 14*s.* according to your own information and your own observation?—Yes.

12022. For what time do you take this average?—I should take it for the last two or three years. In May last I had occasion to make out a statement of the earnings of four of our best hands in order to send them up to Mr. Morris, who was then in London, there was a dispute between him and the hands, and I wished to let him know what their real earnings were, two of them have been taken at 12 months, and the other two for the whole time they had worked for us; had I taken our other looms, I am sure they must have shown considerably less, but circumstances had prevented them from being so regularly worked as to draw any fair inference from them; the earnings of one hand averaged 10*s.* 9*d.* a week, of another, 14*s.*, of another, 15*s.* and another, 18*s.* 6*d.*; they had then just finished their spring patterns, and they have since lost more than a month in alteration.

12023. Those were the four persons who had the best employment?—Yes, under the most favourable circumstances I could find.

12024. Did they receive that throughout the year or only in the time during which they were employed?—Throughout the year; but I made no deduction for the assistance which they received, they received assistance, but I could not tell for what period, but if I were to deduct the time which they have since lost it would be considerably lower; if I were to take it for the last 12 months from the present date it would make it considerably less.

12025. You have neither deducted the time which they have since lost in consequence of the want of their former employment, nor the loss which they received by the assistance which they received?—No.

12026. You know that they received assistance?—I know that they received assistance frequently.

12027. But you do not know the amount paid for that assistance?—No; neither do I suppose they could themselves tell.

12028. The whole of your evidence on this branch would go to prove that when the manufacturer states what he has given to his weaver he does not know what is the amount of the wages that weaver receives and puts into his pocket?—No. This statement surprised Mr. Morris very much, he had no idea their earnings were so low.

12029. But the weaver getting employment, and he finding a number of other persons out of employment, gets others to assist him whom he has to pay?—Yes.

12030. You say that a great deal of time is necessarily lost, how is it that so much time is necessarily lost?—Owing to the continual alterations of pattern; we are continually obliged to change our pattern, and especially where we find so much competition and so little demand.

12031. It is the want of demand in a great measure?—It is that in a great measure which causes it, but there must be always a great change of pattern under the most favourable circumstances, and wherever the demand is bad the changes will be greater.

12032. Therefore, taking into account the various changes of the patterns, during which the weavers must be necessarily out of employment, they must receive higher wages when they are employed?—Yes, certainly.

12033. Would it not be possible while one pattern is making to make such arrangements for the next pattern as to prevent a great deal of the loss of time now incurred?—Undoubtedly there might, and would be, if the demand were more certain; but the state of trade has usually been such for some years past as rather to make the manufacturers afraid than anxious to commence for a new season; and to enable them to arrange their next patterns while the present ones are making, they must be designed a considerable time before hand; but this they are often afraid of, as they naturally apprehend that when they are finished the French may introduce some new style which will cast theirs into the shade; or at least a different style, if not a new one, which may lead the fashion into a direction contrary to

Mr.
Thomas Pittifor,

21 July,
1832.

what they had expected. They therefore find it safer to follow in the path of the French than to strike out into any new one of their own; and a great deal of time is lost in endeavouring to find what direction the French are taking. In this way the hands not only lose the time required in the alteration of a pattern, but also that which is lost in determining upon it.

12034. They cannot make arrangements previous to the time at which they ascertain what the French patterns are likely to be?—No; our season begins much later than it would but for those circumstances.

12035. Do you work to order or not?—It is not at all common in the English market; I believe it is customary with the French, but not with us.

12036. They cannot receive orders if they have to wait for the patterns?—No; before orders would be given by warehousemen in London, he would be of course himself anxious to know what the French were doing.

12037. How often do those alterations occur of which you have been speaking?—Under the most favourable circumstances, they would occur twice in the year, for the spring and winter seasons; but I have known them to occur as often as four or five times in the year.

12038. What time does it at present take to make an alteration of pattern?—If the loom, for instance, were making figured gauze, and the alteration was to another pattern of figured gauze, and the arrangement of the silk in the harness was such as to suit both patterns, if the cards were got ready while the other pattern was making, the change might be effected in a few minutes; but if the arrangement of the threads were different, and which is usually the case, the time would be prolonged according to the difference there was in that arrangement; but if the change were from figured gauze to satin figure, or to lutestring, or double figure, or from satin figure or lutestring figure to gauze, or any alteration of that kind, the time lost would be from one to two or three months.

12039. Are those alterations requiring one or two or three months which most frequently occur?—I cannot say that those requiring two or three months most frequently occur; but those that require less time than a month are not very frequent; I should think the average of the time lost in alteration would be a month at least. In fact, the time lost in the alteration of some patterns is very great indeed, exceeding even three months; I have known a longer time than three months employed in getting out a single pattern.

12040. But taking the average of patterns you would say about a month is required for an alteration?—Yes.

12041. If a French pattern comes over here it requires a month before we can have manufactured goods to the same pattern?—Yes, to get the pattern ready, not to manufacture the goods.

12042. How long would it take to manufacture the goods?—That would depend upon the quantity wanted; a loom can only produce two or three or four pieces in a week.

12043. If there were a foreign demand, how long would it require to supply that demand by the English manufacturer?—It would depend upon the facility of the patterns, and the number of looms that the manufacturer could put upon them; if he could put a quantity of looms upon them, he would finish them of course more quickly.

12044. Are grosses or half grosses usually warped for figures by you?—Half grosses in most cases.

12045. Would it not save time if you were to warp whole grosses?—Many persons imagine that it would, but they are not so well acquainted with the trade as we are; the hand would no doubt have to wait less frequently for his warps; but the advantages would not be so great to him as it appears to be, for if the silk is at all of inferior quality or badly warped, the warps become so much crossed and entangled towards the latter end, that more time is lost in clearing and disengaging them than would have been incurred in twisting in fresh warps for the latter half; at the same time it is often very inconvenient to the manufacturer, for often when he has occasion to stop the pattern he may find a great quantity of work in the looms, and it does not enable him to make that variety of colours which is desirable; if he puts in grosses he must have four pieces of every mixture of colours, which is very inconvenient where only a small quantity is made.

12046. Therefore you do not think upon the whole that much time would be gained by employing whole grosses instead of half?—I do not think there would be much advantage; but the disadvantages would be very great.

12047. Is

Mr.
Thomas Pittifor.

21 July,
1832.

12047. Is the loss of time much greater in the preparation of fancy ribbons than of plain ones?—Yes, very much greater; a plain ribbon consists of only a single warp, or at most of two, which are of one colour, while a fancy ribbon sometimes consists of many warps, perhaps five or six, and it is possible that they may be each of a different colour, and therefore if one of those is wanting, the whole loom may be standing for want of it; and as fancy colours are dyed in small quantities, as they remain in fashion for only a short time, therefore those colours are sooner exhausted and are oftener wanted than the colours used in the plain trade, which are in regular demand, and dyed in large quantities; casualties and hindrances arise from this source much more frequently than in the plain trade.

12048. Upon the average it takes more time to get a pattern of fancy goods than it would plain goods?—Yes, a pattern of plain goods may be got in a very short time.

12049. You have stated that in most of those cases where the persons received more than 14s. a week they have been employing a picker-up?—Yes.

12050. What would a person give a picker-up?—I should think it would generally amount to about a third part of the earnings; it would depend entirely upon agreement.

12051. Therefore, if the person was nominally receiving 24s. a week, and employing a picker-up, he would only be getting 16s.?—Yes.

12052. And if he were employing two, he would only receive 8s.?—That is a case which could hardly be expected to occur; but it is a very inconvenient and unpleasant method, and cannot be carried on to any extent when trade is good. No person will be employed as a picker-up who can get employment of his own.

12053. Do not the hands often purchase the looms of their masters?—Yes, they do sometimes, but it is not so much that they wish to have the looms as that they imagine that while they are paying for them they may be so much favoured for employment as would make nearly a remuneration to them for all they pay their master for the loom.

12054. Then it is in fact inducing the master to employ them?—Yes, the master employs those that buy the looms of him, because he is more sure of having his money.

12055. Do you consider there is any undue proportion between the earnings of plain weavers and figured weavers?—No, I do not; I do not think there is that proportion that there ought to be; the weaving of figures requires a great deal more skill than the weaving of plain goods, and I certainly think there is not that paid to them which is sufficient to pay for that additional skill, and the plain weavers have this additional advantage, that their earnings are more regular; all the earnings of the fancy weavers are so irregular, that at times he is sinking to the brink of starvation, though at other times he is getting more than the plain weavers; I think nothing can be more disadvantageous to him; if he received his earnings more regularly, he could more easily regulate his expenses.

12056. The plain weavers are divided into two classes, those that are old and those that are young—apprentices, boys?—The making of narrow sarsnets is principally confined to women and apprentices, men are not able to earn a living upon them; but in the better articles in the plain trade I think there is very little difference between the weaver and the fancy weavers, certainly not so much as there ought to be. The fancy weavers ought to get more, and not the plain weavers get less.

12057. The same proportion exists between the better class of plain weavers and the worst class of plain weavers as there does between the better class of plain weavers and the weavers of fancy goods?—I think the difference between the earnings of the lower and the better class of plain weavers is greater than between the better class of plain weavers and the figured weavers.

12058. Do you think that the present prices of the figured weavers would be sufficient, if part of the delay they are now subject to could be removed?—If the demand were made more certain, and there were a fairer profit, I should have no doubt that the manufacturers themselves would take such measures as to prevent that delay, but it would be an expensive method, and such as I believe the manufacturers now cannot afford; but if such regulations could be made as would increase the demand—(I do not attempt to point out what is the best mode of doing so)—I am quite sure that this very great evil would be avoided, and the present prices would enable a workman to live in comfort.

12059. Are not the delays of two descriptions, one necessary from the necessary

Mr.
Thomas Pittifor.

21 July,
1832.

work in which the weavers of fancy goods are employed, and the other consequent on the want of demand, which operates so as to make those causes act more strongly?—Yes.

12060. Have you yourself made any calculations at all as to what would be the difference between the cost, calculating according to the wages of a French article and the cost of an English article of about a similar description?—Yes.

12061. What are the data on which you found the cost of the French article?—The Tables were furnished to me by the manufacturers of Coventry, and given to me in French prices; I was requested to turn them into English money, and to contrast them with the prices paid in England, and to take a per centage upon them.

12062. How do you know that those French prices are correct?—I cannot say that they are; they were furnished to me; I cannot prove their authenticity.

12063. Have you reason to know that they are authentic in any way?—Yes, I understand that some evidence which was laid before this Committee in the French language was sent down by a member of the Committee, with a view that it might be translated; it was put into my hand to translate, and I was requested at the same time to make this statement to the Committee.

12064. You do not know those prices to be originally correct?—I cannot answer for their original correctness; they might have been incorrect when they were laid before the Committee; I cannot say that those prices are paid in France.

12065. You can answer for the paper which you have translated being the paper that was laid before the Committee?—Yes.

[The Witness delivered in the same, which was read.]

Of these prices, the English Weaver receives two-thirds, and pays for his Quill-winding; the Undertaker retains one-third for the winding and warping of the Warp, the winding of the Shute, and the use of the Looms.

The French Weaver receives half; the other half is retained by the Undertaker, for the winding of the Shute, the use of the Looms, and some small accommodations to the Workman.

Dr. Bowring's prices have not been taken in these calculations, as some particulars are not mentioned by Dr. Bowring at all, and some others he seems to confound together.

The calculation is made on the supposition that the French and English weights would be equal, though from the superiority of the French silk, there is no doubt that a better quality than the English might be made from a smaller weight.

Ambrose Moore, Esq. called in ; and further Examined.

*Ambrose Moore,
Esq.*

21 July,
1832.

12066. IN what respect do you consider the alteration of system in the silk trade has miscarried?—I think the reason why the alteration of system has in a great measure miscarried, is to be found in the over great haste with which it has been sought to bring this trade from its former artificial state, occasioned by taxation and restrictions into a state to compete with foreign manufactures ; by not at first giving a longer time after the duty was taken off raw silk, before foreign manufactured goods were admitted into this country, so that we should have had a better opportunity of preparing for that competition, by not at the time of the opening of the Ports to French goods when the system was first changed, insisting upon having the export of French raw silk allowed from that country to this, and by the rapid succession of reductions in the duties on thrown silk by which the throwing trade of this country has been so much injured and retarded.

12067. Do you think that that protection has been given to the trade since 1824, which it was led to expect it would receive?—I apprehend that it has not.

12068. In what respect?—The compact has been broken which was entered into with the trade when the Ports were opened ; and that protection has been withheld which was stipulated for by both branches of the trade ; a duty of at least 30 per cent. was to be collected, smuggling was to be put down, and the throwsters protected. Instead of protection being given to the united interests of the silk trade, endeavours are made to divide it by its being represented to manufacturers that their interests are opposed to those of the throwsters, and by sacrificing the latter to the former, instead of protecting the trade as a whole.

12069. Will you state to the Committee what amount of duty upon foreign thrown silks you would consider a reasonable protection for encouraging throwing silk in this kingdom?—With a due consideration to the interests of the whole silk manufacture of Great Britain, and with a view to promote the best interests and the extent of that manufacture, I should say that 5s. on foreign thrown organzine and 3s. on foreign thrown tram, are the lowest duties that are consistent with those interests, and I think that they are sufficient. I think it was an error to reduce the duties in 1829, below the rates I have just mentioned.

12070. In the opinion of the trade have the most effectual measures been taken to repress smuggling?—The opinion of the trade generally is, that little or no endeavours have been made to suppress smuggling.

12071. What reason is there for that opinion?—The belief is, that the wish of Government is, that French silk goods should come in considerable quantities to this country, and that they had rather have them come smuggled than not at all. If high duties were enforced the quantity of goods imported would be less, which might, it is supposed, prevent so much cotton twist or other English goods being smuggled into France in return ; and that the object of Government in not preventing smuggling while the duties remain as high as they are at present, is to get the duties on French silk goods reduced to a point which shall let in still larger quantities than at present ; whether this impression is right or wrong I know not, but it exists in the trade to a great extent, and is supported by the refusal to recommend to Parliament the stamping of foreign silk goods, and to attach some sort of criminal punishment to the offence of smuggling, in addition to the pecuniary penalties to which the smuggler is now liable ; on this last mentioned point it is supposed a difficulty is felt, lest there should be retaliation on the part of foreign Governments, and by that means smuggling of English goods into other countries should be checked ; notwithstanding that smuggling is notoriously carried on in silk goods to an enormous extent, and they are to be met with in almost every direction, yet scarcely any instances of detection occur ; and when a very flagrant case of this kind came to light a few months ago, the prosecution of it was compromised ; no matter what high fine was paid as the condition, a compromise of any kind gives colour to the belief that no great anxiety was felt to put down smuggling in silks. I do not mean to impute any unworthy motives, I dare say the public good is the object in view, but still I believe ever since 1824, there has been no intention to take any energetic measures to prevent smuggling ; in short my opinion upon this subject and that of the trade is founded upon this, that the Government do not wish to check the smuggling of English goods into France, and that for that reason they are backward in putting down the smuggling of French goods into England.

12072. The Committee have been informed that there is a considerable local taxation in France which is a burthen upon manufacturers there, do you think that

the local taxation of France is greater than that of England?—I think that the local burthens of all classes in England are much greater than the local taxation in France, and that the real question for the consideration of the Committee upon this point is, the relative cost of living of the English and French artisans, and not the mere point of what tax a French artisan may happen to pay upon a bottle of wine or a loaf of bread.

12073. There is a heavy duty, the Committee are told, upon iron in France, which operates to enhance the price of wood, and thus to injure the silk trade, by making the machinery expensive; do you think that the French manufactures suffer very much from that circumstance?—With all those points of the French manufacture which at all enter into competition with the silk manufacture of this country those duties have nothing to do, and can have no effect whatever upon them; they can apply only to the throwing branch of the trade, and not in the least to the weaving; and as far as throwing establishments are concerned, all the necessary buildings and plant in a throwing establishment in England are infinitely more costly than similar establishments in France.

12074. There is a tax upon raw silk imported into France; is this, do you think, a great disadvantage to the French manufacture?—The duty is but small, and the Committee will recollect that it can apply only to a small part of the silk the French use, three-fourths of it, and upwards, being the growth of their own country; and it is a fact proved beyond contradiction, that they get their own raw silk very much cheaper than we get Italian raw silk in England.

12075. Do you then, or do you not think that, taking altogether the disadvantages mentioned in the three foregoing questions, they are such that, excepting the cases in which taste and long experience and aptitude enter largely into their productions, their merit either is passing away or is likely to pass away?—My opinion is, that the circumstances referred to in the three preceding questions are not producing that effect, and cannot produce any such effect.

12076. The Committee understand that the French manufacturers are under considerable disadvantages as compared with those of Switzerland, as it respects the commissions upon the import of silk from Italy, brokerage, the pillage of silk at Lyons, &c.; do you think this is a correct opinion?—So far from the French being under any such disadvantage as it respects the cost of their silk, the fact is, that they get their raw silk very much cheaper than the Swiss manufacturers get theirs; the Swiss manufacturer derives his silk from Italy, and the French manufacturer gets the larger part of his from the growers of silk in his own country, and it is a well-known fact that the French silk, on an average, is considerably cheaper than Italian can be obtained, for as to the commission paid in Switzerland upon the importation of Italian silk, I believe the Swiss manufacturers have no means of getting their Italian silk that are not equally open to the French manufacturers; I do not believe that they have any advantage, even in respect to the obtaining Italian silk, over the French. As far as brokerage is concerned, it is always worth the while of a manufacturer to pay a brokerage; it is no loss to me if I employ a broker to buy silk for me; it is better worth my while, as a matter of profit, to pay his commission, than to have the trouble and loss of time in purchasing it myself; and therefore, if the Swiss do not pay a brokerage, and the French do, the former are no gainers by that circumstance; and as to pillage, I confess I can see no possible advantage that a large town in Switzerland, such as Zurich, with its 12,000 looms, can have over a large town in France: I have no doubt that there is pretty much the same degree of honesty and dishonesty in all manufacturing places.

12077. Do you think there is a strong English feeling in France with respect to trade with England?—I believe there is a strong disposition in France to sell goods to the English, but I believe there is no English feeling beyond that. I had occasion to hear a person who went to France to buy silk goods speak of this strong English feeling; it was soon after the dethronement of Charles the Tenth, and when the French trade was in consequence in a state of great embarrassment: he told me how very happy the French were to see him, saying, that England was their best customer, and that she was looked upon by the French silk trade in a very much more favourable light than any of the French people used to look upon her, because she took so many of their French goods; but there is no feeling in favour of any fair and honourable reciprocal trade with England.

12078. Do you think that such an institution as the Conseil des Prud'hommes can be of any advantage to the silk manufacture of England, as it regards the com-

Ambrose Moore,
Esq.

21 July,
1832.

Ambrose Moore,
Esq.

21 July,
1832.

petition with other countries?—None whatever, as it regards the competition between England and other countries; it may be a useful institution, but it can have nothing to do with the course of inquiry before this Committee; there is nothing in it which enables the French, or if we had a similar institution in England there could be nothing in it which would enable the English to enter better into foreign competition.

12079. Do you attach any importance to the plan the French have of ascertaining the condition of silk at Lyons?—As I said, in reply to the last question, this institution also may be useful; whether it is more useful than the plan we have I am not quite sure; the plan in England is, that if silk is out of condition, a broker, who is supposed to be a person understanding silk well, and the condition that it ought to be in, is employed between the parties, to determine the state and condition of the silk, and if it be not in good condition, to award such an allowance to the buyer as he thinks right. I never found any disadvantage in that plan, but it has nothing to do with the main question of inquiry before this Committee.

12080. Is it not surely an improvement upon the ascertainment of the quality and condition of the silk?—It has nothing to do with ascertaining the quality of the silk, it only determines the condition, and even in that respect I do not consider it of any importance.

12081. In point of fact, has this plan any thing whatever to do with the quality of the silk?—I believe not with the quality, only with the condition; the condition is perfectly distinct from the quality.

12082. Do not the manufacturers here adopt the same system of ascertaining the condition as is pursued at Lyons?—In some cases I believe they do; different people have different ways; there is no public institution of the kind.

12083. Is there not the same system in the trade of examining the condition when the silk is received from the throwster?—Yes, its result is the same; if I buy a bale of silk, and I ascertain that it is damp, or not in a right condition in any respect, I send for the broker, who examines it, and he adjusts the matter between the seller and the buyer.

12084. Is it your opinion that the success of the French in their competition depends at all upon such regulations as have been mentioned in the preceding questions?—Not at all; I consider them quite beside the question; and if the Committee should allow their attention to be drawn to them as to matters of importance, it would lead them away from the principal features of the case.

12085. To what do you consider their success is owing?—To the exclusive possession of their own raw silk; the low rate at which they can afford in France to perform all the operations of manufacture; their having, as it respects taste and excellence, the prejudice of all the world in their favour; their being in actual possession of all the markets of Europe and America, and the consequent certainty and confidence with which they carry on all their operations. This certainty and confidence encourage and enables them to employ the best artists and to incur expense in the preparation of works of skill and fancy, in a way the English never can venture upon while they have no better protection than at present.

12086. What is your opinion as to the total quantity of foreign silk goods that find their way to this country?—From my own observation and all the inquiry I could make, I am of opinion that the amount of French goods which some how or other find their way into this country is at least double that which the French official accounts of exports would show.

12087. Has the use of silk goods in this country increased 50 per cent. and has the importation of the raw material increased in the same proportion?—I have no doubt that the use and the wear of silk goods in this country has increased at least 50 per cent. since the year 1826, while the average imports of raw and thrown silk for the last six years have actually fallen off as compared with those of 1824 and 1825.

12088. Would you consider it an important benefit to the silk manufacture of this country if the prohibition to export raw silks into France was done away with, and if a nominal rate of duty was levied upon their import into England, similar to that levied on imported Italian raw silks?—I consider that it would be a great advantage in point of price to obtain the French raw silk, as it would tend to equalize the prize of silk in France and in England, but still it would not give to England all the advantage which the manufacturers of France would still have from being on the spot where the silk is raised, in like manner that the Italian throwsters have an advantage over the throwsters of this country, from the power they have of getting the choicest of the raw silk; it would moreover leave the French in possession

possession of all their other advantages, such as have been enumerated in the answer I gave to a former question.

Alexis James Dozat, Esq., called in ; and further Examined.

12089. IT has been mentioned, on your part, by Mr. Ballance, in the course of the first day of his examination, June the 8th, that you communicated confidentially to two Members of this Committee, on the 9th of May last, a detailed Statement of the exports of French manufactured silks, drawn from official Returns of their Customs, with computations into English weight and money, and circumstantial notes thereon, of which Mr. Ballance gave an abstract only to the Committee, because it was judged more in order that you should yourself, on some other occasion, deliver in that document which had been adverted to already in Mr. Heath's evidence on the 11th May. You, being present on the second day of Mr. Ballance's examination, when reference was again made by him to that document, expressed to the Committee that you were ready to deliver in that statement, but that you had received other documents on which you were then occupied, and which you were desirous to deliver in conjointly, as also some other papers referrible, (and as an appendix) to your examination, on the 11th, 13th, 17th, 18th and 19th of April last; will you now deliver in those papers, and accompany them with such observations as may appear to you necessary in connexion with their subjects? —I will, and in so doing I shall endeavour to be as brief and concise as the importance of the subject will allow me. I have the honour to deliver in the paper in question, No. 26, extracted from the Returns of French Customs, of their exports of French manufactured silks for 1829, it presents a distinct statement of every description of those goods, their weights in kilogrammes, and their total value in francs, as also the official value assigned to each denomination of goods per kilogram; and then my computations into English weights and money, not only as regards the totals, but the prime cost in France per pound weight and per ounce English. In that statement will be found also an approximative estimate of the quantity of pounds weight of raw silk, the very major part fine raw silk, (much finer than the standard on which our silk manufacturers have worked for some years past,) that may have been required to produce the quantity of kilogrammes, 958,000 equal to 2,108,000 pounds English of manufactured silks of high and very high descriptions, namely, about 2,882,000 pounds English of fine raw silks. It is right to observe here, that those 958,000 kilogrammes, comprise 85,000 kilogrammes of silks, mixed with cotton, &c. of high descriptions however; but those 958,000 kilogrammes are exclusive of various items of export, such as silk umbrellas, modes, and woollens mixed with silk, of which I have specified the quantities, &c. at the foot of the said statement of exports for 1829, having collected them from various parts of the said official Customs Returns for that year, and they more than compensate for the portion of cotton contained in the said 85,000 kilogrammes. There are besides some quantities of goods manufactured with waste, which I have also indicated, and which likewise are not comprised in the general statement of 958,000 kilogrammes above mentioned. I will now beg leave to read some brief notes which I have made on that statement, explanatory of its principles and bearings. (See notes at the bottom of the statement, for 1829, down to "above mentioned, 9th May.") I should observe here, that I received those official returns for 1829, about a year ago or more, and that they appeared to me to present so interesting an arrangement and classification, that I sent them not long after I had received them, to one of the principal officers of His Majesty's Customs, for his inspection. I have the honour to put in three papers, No. 27, 28 and 29, which present similar returns of exports of French manufactured silk goods, for the years

(No. 27.)	-	-	-	-	-	1827	} with similar computations ;
(No. 28.)	-	-	-	-	-	1828	
(No. 29.)	-	-	-	-	-	1830	

and to which the notes and observations attached to the Returns for 1829, I have just read, are equally applicable. I further have the honour to put in a Paper No. 30, which presents an abstract recapitulation of those Returns, for 1827, 1828, 1829 and 1830, in order to bring them under one distinct view. At the foot of this paper will be found an abstract, which I have made of the exports of manufactured silks from waste, of silk umbrellas, modes, and woollens mixed with silk, to which I have just alluded. Further, a Paper, No. 31, containing a detailed statement of the imports of foreign manufactured silks into France, for home consumption, for the years 1827, 1828, 1829 and 1830. And a Paper, No. 32, which is an estimate

of the total amounts of the silk manufactures of the United Kingdom, for the periods 1815-17, 1818-20, 1821-23, and 1824-25, distinguishing the amounts of duties, of wages, profits, &c. of the cost of raw and thrown silk, waste, &c., and the rates per pound on an average, of the various descriptions of silks consumed, inclusive of waste, &c. Also, Paper, No. 33, which is a similar estimate for 1826 to 1831, distinguishing the averages for the last three years, 1829 to 1831. Also, a Paper, No. 35, which is an abstract statement of the exports of French silk manufactures, for the years 1827 to 1830, conjointly with an abstract view of the total amounts of the silk manufacture of the United Kingdom, for the years 1826-31, 1829-31, and 1815-17 to 1824-25. It will be observed, that the average amounts of the market values here of the silk goods, declared out, exported from France in the years 1827 to 1830, is 6,280,000*l.* on an average, per annum, independently of the considerable quantities exported from the other Continental silk manufactures, constituting in the aggregate an enormous amount of silk manufactures of various descriptions, disposable for export (independently of the quantities retained for home consumption, which latter quantities are but limited in regard to Switzerland, the Rhenish provinces, &c.)—disposable for export, I say; no inconsiderable portions of which continually press upon us, but with increased intensity under contingent circumstances, frequently adverted to in the course of my examination in April last. The magnitude of the amounts of foreign silk manufactures will be more evident when compared with the total amounts to which the British silk manufactures have been reduced during the last three years, an amount, the average of which I have overstated at 5,244,000*l.*; an amount contrasted with the rapid increase of the years

1815-17	-	-	-	at £.4,000,000,
1818-20	-	-	-	at 5,290,000,
1821-23	-	-	-	at 6,085,000,
1824-25	-	-	-	at 7,811,000;

See p. 939.

all which amounts, for the years 1815-17 to 1824-25, are considerably understated, for the reasons particularized in my printed paper, No. 4, delivered in to this honourable Committee on the 11th of April last. And here I may be allowed to repeat, that there is no saying to what extent this branch of our national industry would have attained, had we remained protected by the laws of 1766, jointly with the benefit of reduced duties to 5*s.* on thrown silks, and 1*d.* per pound on raw silks, with wages in the ratio of 8½*d.* per yard for weaving well neat gros de Naples, of the description frequently alluded to in the course of my evidence. According to every comparative point of view, whether it be on that basis, or on the former gradations relative to the periods of high duties and wages, at the moderate rate of 10½*d.* for weaving the same description of goods, we ought to have been at the amount of more than 10,000,000*l.*, of which 6,000,000*l.* and more of wages, &c., and duties, for the years 1829 to 1831, contrasted with about 5,250,000*l.*, their actual amount, 2,500,000*l.* of which is the amount of wages, &c., and duties, at which I have over estimated the result of those three years. Had we manufactured at those low duties, with that rate of wages, and the benefit of a continuance of our protective laws, I am convinced that the comparatively little smuggling that took place previously to 1826, would have been almost entirely done away with.

12090. Under what point of view do you consider those amounts raised by the silk trade?—As taxes on luxury, and as a transfer from the superfluities of the rich and easy to industrious employment, and that by most equable gradation, according to the respective means; whilst it is well known that in regard to the cotton and most other articles of manufacture, the lower classes of society consume of them in far greater relative quantities than of silks; but on these subjects, a letter received from Calais, dated 4th of June last, furnishes some curious data: the quantities exported from that port to England are stated thus in that letter.

	Kilogrammes of Plain Silks.	Kilogrammes of Figured Silks.	Kilogrammes of Ribbons.	Value of Blondes.
For 1831 - - -	95,971	208	10,984	96,517
For 1832 to 29th May - -	44,216	120	5,623	71,496

Now the quantity alone of plain silks, 95,971 kilogrammes, is equal to 211,000 pounds English; and by reference to our Custom House Returns for 1831, No. 205, House of

Alexis Dozat,
Esq.

21 July,
1832.

of Commons, 27th February 1832, and Customs same date, it will be seen that the whole quantity of silk goods from all parts of Europe, plain, figured, gauze, crape, ribbons, fancy goods, &c., was only 148,729 pounds in weight; this of course, exclusive of certain quantities of net, tulle, millinery, and unenumerated goods, entered by square yards, by the numbers and by valuation, the whole of which would appear to constitute a small aggregate only in weight: and here there opens to us another field for most important observation in the value, abstractedly, in the value alone, of those 95,971 kilogrammes of plain goods declared out at Calais for England, which at the official rate of the French Customs of 120 francs per kilogram for plain goods is 11,516,520 francs, constituting alone about two-thirds of the amount of 18,000,000 of francs, stated by the official returns of the French Customs as the whole of the exports of French silk manufactures to this country for that year: now there is reason to believe that a large proportion, that is about two-thirds of the silk goods which we receive from France, is composed of various descriptions which do not come under the denomination of plain silks "*Etoffes unies*," which would constitute the remaining one-third. We see by the official returns of exports from the port of Calais, that the goods declared out of other descriptions than plain, amount to only 1,440,637 francs, compared with the amount of 11,516,520 francs, referrible to plain goods alone. What does this show? That not only considerable quantities, even of those goods which are declared out from France for England, do not pass through our Custom Houses, but beyond this, that immense amounts of goods sent to this country are never declared out. If the returns from Calais present us with such a case, and *nota bene*, the quantities of plain silks alone declared out from that port, show an amount at once of two-thirds of the 18,000,000 francs, stated as the whole amount of French silk goods exported to this country. If the returns from Calais present us with such a case for the year 1831, fully corroborated by the subsequent returns from that port up to the 29th May 1832, as before enumerated, what must we judge of the collective amounts of the actual exports from the whole line of the French coast, so many parts of which offer, for obvious reasons, much greater facilities still than the port of Calais, for the purposes of illicit trade with this country, although we have seen by the premises what considerable portions even of the quantities declared out from Calais have been introduced here clandestinely. On this particular point I must notice here, that whilst the declared exports of plain silk goods from Calais for 1831, the declared alone, show 95,971 kilogrammes equal to 211,000 pounds English; the whole quantity of plain goods from all parts of Europe which appear in our Custom House Returns for that year, is only from 50 to 60,000 pounds weight, that is only about one-fourth part even of the declared exports, the declared exports alone, of plain silk goods at Calais for this country. But speaking again abstractedly on the subject of quantities of raw and thrown silks, waste, knubs and husks consumed in our manufactures, I beg leave to deliver in a Paper (No. 37), which I have arranged since I had the honour to be before this Committee in April last, which brings this subject in all its bearings into one condensed point of view.

See p. 873.

12091. You state at the head of the first column of your Paper (No. 37), that the quantities indicated therein of raw and thrown silks, waste, and knubs and husks, duty paid, are taken from Parliamentary Returns only, and I observe that that column presents a progress of 36 per cent. from 1815-17 to 1818-20, whilst in the adjoining column of quantities which you have estimated as actually brought into consumption, and which you have computed into one standard, that of Italian silks, you show a less progress during the same period, that is of $31\frac{1}{2}$ per cent. compared with the 36 per cent. you draw from Parliamentary Returns; how do you account for that difference which you show against your view of the question?—On this particular, I beg to refer to the note adjoined to my Paper (No. 1), relative to the mode in which I have established my estimates of consumption, all of which it will be seen by the said Paper, are brought to one ultimate amount, which is balanced for the whole series of years by Parliamentary Returns, a mode of analysis which I have adopted in order to bring into one form the whole subject in the most correct point of view, and by which means every quantity of the various descriptions of silks, duty paid, that is entered for home consumption, and actually brought into consumption at the various periods, can be traced step by step.

See p. 873.

See p. 932.

12092. In your former examination you have stated that on an average the manufacturers in France are provided with fine raw and thrown silks, at lower rates than we import them from Italy, and than they can be imported into France from Italy, owing to the manufacturers in France being so greatly provided with silk of their own growth, and consequently that there was for the major part no analogy

Alexis Dorat,
Esq.

21 July
1832.

See pp. 871, 872.

between the prices of silks at Lyons and those of Italy, and in this country; can you furnish the Committee with any statement corroborative of your view of this subject?—I have the honour to put in a paper (No. 36) relative to this point; and in order to detain the Committee as little as possible on this subject, which has already taken up so much time, I will confine myself in explanation of the principles on which this paper is grounded, to the reading of two notes joined to it. The title of the paper is “Statement intended to show the Differences which range between the prices of silks at London and at Lyons,” with an Appendix, to show the range of differences in the prices between Milan and Bergam and Lyons. I shall only further observe here, in abstract, that the differences in the first part of this comparative statement, that is, between London and Lyons, are,

s.	d.		s.	d.	
4	1	- in 1826	2	2	- in 1830
1	8 $\frac{3}{4}$	- in 1827	1	5	- in 1831, and
-	8	- in 1828	1	8	- in 1832.
3	6 $\frac{1}{2}$	- in 1829			

I shall only add with respect to the Appendix, that the differences it shows between Milan, &c. and Lyons, are,

s.	d.		s.	d.	
2	10	- in 1826	1	9 $\frac{3}{4}$	- in 1830
1	5	- in 1827	1	7 $\frac{1}{4}$	- in 1831, and
1	- $\frac{1}{2}$	- in 1828	1	3 $\frac{1}{4}$	- in 1832.
4	4 $\frac{1}{2}$	- in 1829			

12093. You stated in evidence before this Committee, in April last, that you assigned about 5,500,000 lbs. weight of raw and thrown silks to the manufacture in France, are you still of the same opinion?—I am.

12094-5. It has been mentioned in evidence that that consumption consists of only 4,000,000 lbs. weight of raw and thrown silks, and that the quantity of manufactured silks of all descriptions, including sewings, trimmings, &c. does not exceed in weight 2,600,000 lbs. to 2,671,000 lbs., of which about 2,226,000 lbs. weight exported, and 445,000 lbs. weight for home consumption. How do you reconcile those estimates with that you have just now again mentioned?—I will endeavour to answer that question as briefly as possible; and in the first place I shall observe, that by reference to my Table, No. 30, it will be seen that it nearly coincides with the quantity of 2,226,000 lbs. weight stated as the official returns of exports of French manufactured silks, which official returns however I should repeat here (conformably with the notes to my Paper, No. 26) do not comprise the whole of the quantities exported. Now I would recal to the recollection of this honourable Committee, that which has been frequently stated, that there is no duty whatever collected in France, directly or indirectly, on silk of their own produce; and that on every inquiry which for some years I have sedulously made through various channels from which I conceived the best information on these subjects could be derived, I have been informed that no exact estimate of the quantities of raw silks produced in France could be formed, as there were no adequate means whatever to that effect; consequently the various accounts which I have received at different periods and from various quarters on this subject present some differences and discrepancies in the several modes in which those estimates have been established, it is on this account that (as I had the honour to state before to this honourable Committee) I have not thought myself justified in giving in those statements as part of my evidence; I shall only state here that the average of the various statements embracing the years 1820 to 1828 presented an amount of 5,342,214 lbs. English weight as the consumption of silks in France per annum, and of 5,710,000 lbs. per annum for the years 1824 to 1828. It is from the aggregate result of those inquiries that I thought myself justified in my communications with the Board of Trade, in 1829 and 1830, in stating that I understood the consumption of silks by the French manufacturers to be about 5,500,000 lbs. weight per annum. On this subject I have not made any further particular researches of late, convinced from all the results of my previous inquiries, that they could not have been productive of any data more valid, and that it would have been causing needless trouble to our correspondents. I should add on this subject, that I fully coincide with the opinion given in evidence before this Committee, that the cultivation of silk in France has been for some years past in a course of rapid increase, that cultivation being very beneficial, as I understand, in those extensive parts of France which are so peculiarly favourable to it. Having stated those particulars, I now return to the quantity

See p. 866.

of 445,320 lbs. weight of manufactured silks to which this question refers, as having been given in evidence as the total of French manufactured silks retained for home consumption, to which I beg to observe it will, in fairness, be necessary to add 45,000 lbs. import of foreign manufactured silks in France for home consumption to which I have before adverted; and this would give a total of 490,320 lbs. English of French and foreign manufactured silks (inclusive of every description of silks, sewings, trimmings, furniture, &c.) for the consumption of a population of 34 millions, that is from one-fourth to one-fifth part of an ounce per head; and in money, 77 c. per head in France, equal to $7\frac{1}{4}$ d. sterling per head; computed (speaking in round numbers):

upon - - 490,000 lbs. English,
equal to - 223,000 kilogrammes,
valued at - - 118 francs per kilogram.
equal to 26,314,000 francs.
equal to £. 1,028,000 sterling;

say $7\frac{1}{4}$ d. per head in France,

contrasted with 6s. 2d. per head in the United Kingdom;

that is, 10 to 1; and this ratio, computed only upon the amount which we had attained in our own manufactures in 1824-5, (considerably under-stated by me; *vide* my Papers, No. 4, delivered in by me on the 11th April, and No. 33, delivered in to-day,) at 7,811,000 l. from which I have deducted 456,000 l. for silk and even mixed goods, exported per annum during the last three years, over-stated in value, leaving the amount of 7,355,000 l. spread over 24,000,000, inclusive of the population of 8,000,000 in Ireland, of which only a very small fraction can touch that article of luxury; in other words, an amount of 1,028,000 l., distributed over 34,000,000 in France, and an amount (under-stated) of 7,355,000 l. distributed over 24,000,000 in this country. Having exhibited these results, I think all comment upon them superfluous; there are many other points of importance towards which I would feel anxious to solicit the attention of this honourable Committee, but I will not further trespass on their indulgence. Before I withdraw from their presence, however, I would beg leave earnestly to draw once more their most deliberate attention to the analysis which I have had the honour to place before them, of the researches which it has been in my power to make into this important branch of our national industry, in my various Tables, but more particularly in that (No. 2,) which I have delivered in on the 11th of April; and I beg leave to recal here, abstractedly, in the most brief way, some numbers contained in that Paper: they relate to a comparative view of the respective progresses of THE SILK and THE COTTON TRADES in this country, in regard to *quantities alone*, from 1815-17 to 1824-25, that is previously to the removal of our protective laws to the silk trade of 1766; which progresses were as follow;

Three years, from 1815-17 to 1818-20, $31\frac{1}{2}$ per cent. the Silk, against 22 per cent. the Cotton;
Six years - from 1815-17 to 1821-23, 70 per cent. the Silk, against 48 per cent. the Cotton;
Eight years, from 1815-17 to 1824-25, 156 per cent. the Silk, against 83 per cent. the Cotton;

whilst those progresses have been INVERTED thus:

In the last six years, 1826 to 1831, compared with the medium of 1821-23, 1824-25, $19\frac{1}{2}$ per cent. the Silk, against $41\frac{1}{2}$ per cent. the Cotton;

although the progress of the cotton trade itself during the last six years has been a little less than during the former periods. Then in regard to the average amount of wages, duties, profits, &c., the silk trade presents, abstractedly, the following results;

In those two periods, 1815-17 to 1824-25, and 1826 to 1831, say,

For 1815 to 1817, three years, at the average of £ 2,073,000 per annum;

1818-20 - - three years	- - - - -	2,719,000	—
1821-23 - - three years	- - - - -	3,514,000	—
1824-25 - - two years with low duties and	- - - - -	4,263,000	—
the same rate of wages, at the average of	- - - - -		

(The Amounts for these eleven years under-stated, respecting which, *see* my Table, No. 4.)

Whilst the average per annum of the last six years

1826-31, has been about - - - - - £. 2,685,000; and that

of the last three years 1829-31, has been about - - - - - 2,534,000;

(The Amounts for these last six years over-stated, as noticed in the course of my evidence;)

instead of the rate of about 6,000,000 l. at which we ought to have been for the last three years, according to several comparative Estimates, made in various ways and grounded on various antecedents; and this is the trade that has been pointed out as exhibiting a triumphant proof of the successful application of the principles of Free Trade.

£.

Besides £. 34,272 Sterling Value of Silk Umbrellas, at p. 51 } Douanes.
and - 101,735 - Modes - - - ibid.

(Minute made 9th June.)

Note.—It would appear by the Preamble ("Avertissement"), p. 2. of the "Administration des Douanes, 1829," that the French Official Values were fixed in 1825, and definitively confirmed on the 29th May 1826, at which period the prices of Raw and Thrown Silks were on an average much higher than of late years, and the rates of weaving were somewhat higher on an average; but those Official Values were, as it would appear, fixed low at the time, considering those circumstances, and the classes of Silk goods exported from France, many of the Plain being in delicate costly colours, some of light textures, many more yards of which to the lb. than the thicker descriptions. The Figured seem to have been valued at low relative rates, and the Ribbons at very low rates, that is at 120 francs per kilogram, which is the same as Plain goods, whereas the Ribbons are on an average higher, and considerably higher, when we take into account the class of light or highly finished Gauze Ribbons, of which France exports large proportions.

Query.—Are all the Silk goods exported from France included in these Returns? The Export Duty being at a small fraction only, it is possible that the French Customs are not very particular in regard to declarations of them; and under these circumstances, are all the goods exported for the purpose of being smuggled into this country included in those Returns? if not, then those quantities short declared would have to come in addition to the considerable quantities and amounts of Exports enumerated in these Returns.

If we consider the high classes of goods of which the Exports from France are composed, we shall find that an amount of 4,400,000 l. sterling would represent a market value here of more than 6,000,000 l. sterling, independently of the very large amounts of goods which the Swiss and the Rhenish manufacturers export.

Finsbury Square,
9th May 1832. }

Averages of 1826-31, 6 years	92,000	2,594,000	3,813,000 *			2,685,000	2,957,000		5,642,000	
Averages of 1829-31, 3 years	77,000	2,457,000	3,988,000			2,534,000	2,710,000		5,244,000	

* By reference to my Paper, No. 2, it will be seen that the Quantities, duty paid, as per Parliamentary Returns, of all descriptions of Raw and Thrown Silks, Waste, &c. in 1824-25, were equal to those of 1826-31, on an average; and by the same Paper, that the same is the case in regard to the Quantities brought into consumption, computed into Italian Standards in those two periods.

	Quantities consumed brought into One Standard, that of fine Italian Silks.		Computed Differences between the Quantities of all Descriptions brought into Consumption, and those Quantities computed into fine Italian Standard.	
	lbs.	lbs.	lbs.	lbs.
Averages per annum, viz. 1824-25 †	3,807,000	3,611,000	2,783,000	- - being 23 per cent. less.
Ditto - - - 1826-31 -	3,819,000 †	3,813,000	2,765,000	- - being 27½ per cent. less.

Quantities of all descriptions brought into consumption, according to Mr. Doxat's Tables, Nos. 1 & 2, delivered in on the 11th April.

† Large Quantities of Waste Silk, &c. in the last six years, and also large proportions of coarse Silks.

- (a) Very large quantities of Waste in those years.
(b) Taken from a statement which I have made from period to period of "Approximative Prices and Amounts of Raw and Thrown Silks, Waste, &c. consumed in Great Britain, from 1815-17 to 1831."
(c) The prices of Raw and Thrown Silks were higher in 1828 than in 1827, but the much larger quantity of Waste, &c. in 1828 brought down the average to the same rate of 17s. 11d. per lb. of all descriptions.
(d) The low rate of 13s. 0½d. per lb. for the average of Silks of all descriptions, in 1831, arises not only from some fall in the prices since 1824-25, but from the larger proportions in late years of coarse descriptions, and particularly of Waste Silks and Knubs and Husks, the value of which being comparatively very little, has the effect of lowering the average price of Silks collectively of all descriptions.

The Scale of per Centages joined to this Table of Prices, indicates in a great measure the degrees of fineness of the Standard on which we have worked at various periods; it will be seen that up to 1824-25 inclusive, we gradually worked on a finer standard, whilst the inverse, on an average, has taken place since that period; and beyond this I should observe here again, that of late years we have applied Silks of the same Standard to lower descriptions of Goods on an average; for example, large quantities to the Manufacture of plain Goods, which used to be worked into figured and fancy Goods.

	Prices of 3-4 to 4-5 Cocoons, Milan and Bergam Raw Silks, exclusive of Duties.	Total Average of Raw, Thrown, Waste, &c. (i. e.) of Silks of all Descriptions, exclusive of Duties.	Differences per Cent. between those relative Prices.
1815-17 -	s. d. 32 -	s. d. 25 11	s. d. 6 1 = to 19 p' ct.
1818-20 -	31 4	26 7	4 9 = 15
1821-23 -	24 4	28 8	3 8 = 15
1824-25 -	21 9	19 8	2 1 = 10
The protective Laws of 1766 removed.			
1826 -	20 9	16 6	4 3 = to 20 p' ct.

1829 -	18 5	14 2	4 3 = 23
1830 -	17 6	13 9	3 9 = 21
1831 -	17 3	13 0½	4 2½ = 25

(Mr. Alexis Dorat's Paper, No. 35,
Delivered in to Select Committee on the Silk Trade,
21st July 1832.)

AN ABSTRACT STATEMENT of the EXPORTS of FRENCH SILK MANUFACTURES, for the
Years 1827 to 1830; conjointly with an ABSTRACT VIEW of the TOTAL AMOUNTS of the SILK
MANUFACTURES of the United Kingdom, for the Years 1826-31, 1829-31, and 1815-17 to 1824-25.

Folios of Printed Returns.	Quantities of Manufactured Goods, mostly of high and very high descriptions.	Valued in Francs at	Computations into English		Approximate Estimates of what would be the Value of those high descriptions of Goods in our Markets, taken at 40 per Cent. above Prime Cost in France.
			WEIGHTS	and VALUE.	
	Kilogrammes.*	Francs.	Lbs. English. †	£. Sterling.	£. Sterling.
40 - - 1827	978,000	115,247,000	2,152,000	4,564,000	6,390,000
40 - - 1828	983,000	115,468,000	2,163,000	4,573,000	6,402,000
48 - - 1829	959,000	111,156,000	2,109,000	4,402,000	6,163,000
48 - - 1830	950,000	111,119,000	2,090,000	4,401,000	6,161,000

N. B. These Exports are independent of the considerable Quantities exported from the
other Continental Silk Manufactures.

The Total Amounts of our Silk Manufactures have been
In 1826-31 - - 6 years, per Annum £. 5,642,000 } Taken at Estimates Overstated
1829-31 - - 3 ditto - - ditto - 5,244,000 } in regard to Wages.

Previously to the removal of our Protective Laws of 1766, they were

In 1815-17 - - 3 years, per Annum £. 4,000,000
1818-20 - - 3 ditto - - ditto - 5,290,000
1821-23 - - 3 ditto - - ditto - 6,058,000
1824-25 - - 2 ditto - - ditto - 7,811,000
Medium { 1821-23 - - } 5 years, per Annum £. 6,935,000 } Taken at Estimates very much Understated
in regard to Wages, respecting which,
see my Paper No. 4, delivered in to
the Committee on the 11th of April,
relative to the mode in which I have
made my Estimates.

* Those Quantities of French Manufactured Silks Exported, comprised some Silk mixed
with Cotton; viz.

Kilo. 50,000 in 1827

61,000 - 1828

86,000 - 1829

74,000 - 1830

But of high descriptions; and those por-
tions of Cotton which they may contain,
are more than compensated by various
Items of Exports, such as Silk Umbrel-
las, Modes, and Woollens mixed with
Silk; besides Goods made with Waste,
&c. none of which are comprised in
these Statements, as they are introduced
under various distinct heads, in the Re-
turns of the French Customs; all of
which I have also made Abstracts for
each Year, from the said Returns; re-
specting which I beg leave to refer, in
order to avoid superfluous repetitions,
to the circumstantial notes joined to the
detailed Returns for the Year 1829.

† It is estimated that those Quantities of Manufactured Silks of high classes, would require about

lbs. 2,943,000 English

2,958,000 ditto

2,882,000 ditto

2,858,000 ditto

Of Raw and Thrown Silks, mostly
of fine Standard.

(Mr. Alexis Daxat's Paper, No. 36,
Delivered in to the Select Committee on the Silk Trade,
21st July 1832.)

STATEMENT intended to show the DIFFERENCES which range between the PRICES of SILKS at London
and at Lyons.

	Prices Current of Milan and Bergam Raw Silk, of 3-4 to 4-5 Cocoons, at London.	PRICES CURRENT of French Organzine of 24-25 Deniers at Lyons. Notes.—The point of comparison has been taken between the prices of Milan and Bergam Raw Silks of 3-4 to 4-5 Cocoons at London; and of French Organzines of 24-25 deniers } collectively, at Lyons.
Ditto, Tram - - - 24-26 ditto }

because quotations of French Raw Silks are but seldom received in London, besides our being but imperfectly acquainted with their denominations. I should observe, that I have reason to believe that French Organzine and Tram are made with Raw Silks of qualities superior on an average to the range of the qualities of Milan and Bergam Raw Silks of 3-4 to 4-5 Cocoons comprised in our Prices Current.

This Scale being made for the whole series of years on the same descriptions of Raw Silks at London, and of Thrown Silks at Lyons, it answers all the ends required as an index of the relative variations in prices that have taken place in those two markets, from quarter to quarter and year to year, for the reasons which I have stated in various instances during the course of my Examinations before this Honourable Committee, on the 11th, 13th, 17th, 18th and 19th of April last.

MINUTES OF EVIDENCE TAKEN BEFORE

APPENDIX TO PAPER (No. 36.)

	Prices Current of Milan and Bergam Raw Silk, of 3-4 to 4-5 Cocoons.			Aggregate of French Organzine, of 24-25 deniers, and Trams of 24-26 deniers.	DIFFERENCES between the Prices at which Milan and Bergam Raw Silk, of 3-4 to 4-5 Cocoons, stand in at Lyons, and the Aggregate of French Organzine, of 24-25 deniers, and Trams of 24-26 deniers, at Lyons.

Notes.—In order to extend this point of view, and to render it more comprehensive, I present here-with the Prices Current at Milan and Bergam of Raw Silk of 3-4 to 4-5 Cocoons, with the computa-tion of the prices at which those Silks would have stood imported at Lyons; and the differences which they present in the various periods, with the collective prices at Lyons of French Organzine of 24-25 deniers, and Trams of 24-26 deniers, will show again how erroneous must be the idea expressed of an analogy, in general, between the prices of Silks in Italy and in France, and that the prices in Italy govern those of France; while I contend that the partial Imports of Italian Silks operate only as moderators in favour of the French manufacturers, who can always have recourse to them when the prices of their own Silks ascend to the points at which Italian Silks can be imported, and that in general they obtain the Silks of their own produce, both Raw and Thrown, at lower prices (speaking of relative qualities) than they can import the produce of Italy.

We see by the Comparative Table between

London and Lyons, differences ranging at various periods of - -

s. d. *s. d.*
4 1 to — 8

And from Milan and
Bergam }

and Lyons - - ditto - - ditto - -

4 4 $\frac{1}{4}$ to 1 0 $\frac{1}{2}$

So that it is not, in respect to our market alone, that those differences fluctuate so considerably; but with respect to Italy itself, notwithstanding its great proximity to the Lyons market, than which nothing more can show how essentially the French manufacturer rests on the produce of its own soil, and what vast advantage accrues to that manufacture, from its having reserved for it the exclusive consumption of that produce, both in respect of prices and qualities.

(Mr. Alexis Doxat's Paper, No. 37.

Delivered in to the Select Committee on the Silk Trade, 21st July 1832.)

AN ABSTRACT VIEW of the PROGRESS of the SILK TRADE of Great Britain and Ireland, from 1815-17 to 1821-23, 1824-25, and to 1826-31, (in regard to Quantities.)

RAW and THROWN SILKS, WASTE, and KNUBS and HUSKS.

AN ABSTRACT VIEW of the PROGRESS of the COTTON TRADE, in Great Britain and Ireland, during the same periods.

(In regard to Quantities.)

Conformably with Parliamentary Returns only. (Vide my Paper, No. 1, delivered in on the 11th of April.)			Conformably with Computations made by Mr. Alexis Doxat. Vide my said Paper, No. 1.		
QUANTITIES on which Duties have been Paid. (Large Quantities of Coarse Silks, and considerable Quantities of Waste in the last six years.)	PROGRESS in Quantities, in the respective Periods. Lunæ, 25^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQ. IN THE CHAIR.

Allan Fraser, called in; and Examined.

Allan Fraser.

23 July,
1832.

12096. HAVE you been employed at the Custom House?—Yes.
12097. In what capacity?—As an extra weigher occasionally.
12098. Are you now so employed?—When there is plenty of business, not being a class weigher, I am obliged to wait for my turn.
12099. What is the rank or class of officer you have served under?—Landing waiter.
12100. What is the duty of a landing waiter?—To see all the goods duly weighed and tallied as they are landed from the ship or in warehouses.
12101. What is the rank and class of officer next above a landing waiter?—Surveyors.
12102. What is the duty of a surveyor?—To check the landing waiter occasionally in the course of the day, and to sign his book as a proof that he has been there.
12103. You have been engaged at a wharf weighing and examining cargoes occasionally, have you not?—Yes.
12104. Was more than one vessel discharging at the same time?—Sometimes two, sometimes three, I have known.
12105. How many scales are there generally at the wharf?—Frequently two.
12106. How many men to each scale?—There ought to be two, but very often there is but one; I have to attend to two scales myself.
12107. Has there been any alteration lately made in that respect, are there fewer men to the scales now than there used to be sometime before?—Yes.
12108. When was that alteration made?—I believe within the last two or three years.
12109. How long have you been employed?—Two years.
12110. Was it before you began?—I understood from other officers who had been longer in the service than myself, that there used to be frequently three at the scale, and when there ought to have been two in my own time there has frequently been only one.
12111. How are those men paid?—Three shillings a day, when they are called upon by turn.
12112. Their employment is not constant?—No, I had but 87 days from the 14th of June 1831, to the 31st of December.
12113. Do you receive any pay exclusive of that?—No, I have been obliged to wait six weeks after that before I got my money.
12114. Whose duty is it to superintend the weighing?—It is the landing waiter's duty to superintend.
12115. Whose duty is it to inspect their conduct?—The landing waiter's.
12116. How frequently does he do that?—He is supposed to do it all the day from eight or nine o'clock in the morning.
12117. Is he always there?—Sometimes he is away; perhaps he has got duties to attend to in the warehouse when we are alongside the ship.
12118. Are you ever left so long as half an hour?—Yes, and sometimes an hour.
12119. May you, during that time, pass many parcels of goods?—Yes; but they must not go away till he has given his judgment and signed the warrant for their removal.
12120. Does he ever insist on his return on those things being re-weighed?—Sometimes I have seen them re-opened after they were examined and packed, but not in all cases.
12121. During the hours of business particularly whilst ships are open or goods lying about unexamined in the quay, does the landing waiter ever quit his post?—Sometimes.
12122. Can he evade the surveyor?—Yes, he can.
12123. How many scales does a landing waiter superintend?—Sometimes he superintends two, and one pair of scales has been totally out of his sight, by being placed

placed in a different position when there were other goods weighing, the weigher likewise himself has been obliged to come and report to him the weight or the tale.

12124. Could you, if you had been so minded, have sent away those cases without his knowing it?—No, that would have been prevented at the dock gates.

12125. Would he have known whether the weight you returned was correct or not?—Not unless he saw it weighed over again.

12126. Was there any check upon you?—Only the landing waiter.

12127. Were you serving as a landing waiter?—No, as a weigher.

12128. In order that there might be fraud, there must be collusion between the weigher and landing waiter?—Yes, certainly in some cases.

12129. Is there any case in which you are left quite alone or not?—Yes; it has devolved upon me to be sent into a warehouse, perhaps at the London docks, to examine cases of toys and music, the landing waiter whom I have been under, and who has signed my certificate when the duty has expired, I have known come only occasionally, he has stepped up and taken the tale and has entered the number of articles those cases contained.

12130. Those were toys, not silk?—Yes, generally speaking cases of toys and cases of glass.

12131. Has that ever occurred with regard to silk?—No, I cannot take upon myself to say that it has.

12132. In order that there should be fraud in the weighing of silk goods, it is necessary there should be collusion between the weigher and the landing waiter?—Yes; there is a check clerk belonging to the Dock Company, who is also a check on the landing waiter.

12133. Do you believe that there are frauds committed on the Customs in the entry of silk goods?—I have no hesitation in saying that I am positive there have been.

12134. State the grounds on which you entertain that belief?—In my experience not being a very great judge of silk, I know disputes have arisen upon the value of it between the merchant that it belonged to, the Dock Company's clerk and the landing waiter, the surveyor, they have all disputed, and not been able to come to an opinion whether the value put upon it was right in regard to the revenue and the justice of the merchant.

12135. What reason have you to suppose there was any fraud committed, you not being conversant with the value of silk?—I know that it is probable that it would take place, I have had to weigh that silk.

12136. All you can speak to is, that you have heard there have been disputes regarding the value of silk?—Yes, after the entry made of the value.

12137. Have you any reason to believe that silks are passed at a less weight than they actually weigh?—I cannot take upon myself to say that they are from my own experience of weighing, though I have weighed a great many bales.

12138. You have no reason to believe there is a fraud in that respect?—I know there is a possibility of it; in some cases the judgment of the revenue officer has been given up to the judgment of the merchant, who was obliged to be satisfied with the entry as made.

12139. Have you reason to believe that the entry of the merchant was not correct?—Certainly I cannot take upon myself to say that.

12140. Then how can you be sure that fraud was committed in consequence of that difference?—I am perfectly certain there has been.

12141. Has any proof of that come within your knowledge?—No; but I am certain it has been often so on account of what the merchant contended at the time.

12142. Will you state any case of that nature you have seen?—I cannot state any one in particular; I should not wish to state any other but what has come home to my own knowledge.

12143. Has any case come under your own immediate notice?—Not as to the actual fraud that I cannot take upon myself to say; but I am positive that it took place from that difference of opinion between the merchants and the revenue officers.

12144. What reason have you to believe there was fraud on account of that difference of opinion?—Because it is very probable there was more value than it was entered at.

12145. Have you any reason to believe that it was so?—No, not particularly.

12146. Do you speak of bales of thrown and raw silk, or silk goods?—Of both.

12147. Do you speak of manufactured goods?—Not manufactured goods; I mean bales of raw and thrown silk.

Allan Fraser.

23 July,
1832.

12148. Do you know anything respecting silk manufactured goods?—I have seen a great many passed.

12149. Have you had any thing to do with the weighing of them?—Yes, but not very frequently.

12150. In what manner are they weighed, is it in any particular place?—In what is generally considered the silk warehouse on the quays.

12151. Are they all weighed in the same place?—No, not all.

12152. Are there scales for the weighing these situated in different places?—Yes.

12153. Does it ever happen that the same landing waiter is employed to look at more than one of these scales at the same period?—Yes.

12154. Do you mean to say that the same landing waiter may be employed to superintend two sets of scales, that are so situated that he cannot see them both at the same time?—I do mean to say so.

12155. You mean to say so with respect to silk manufactured goods?—In some cases; sometimes the silk is not landed till the surveyor comes.

12156. He comes, of course, for further security?—Yes, that is his duty every day to go round to the landing waiters.

12157. Then the security is increased by his attendance?—Yes; the landing waiter submits to him what he is about, and takes his judgment upon it.

12158. Does the surveyor keep a book?—No.

12159. In what way is the entry made?—By reporting it to the landing waiter.

12160. Is that merely a verbal report?—Yes, except tallying the scales, then of course I bring the report how many the bale contains.

12161. Do you bring the report in writing?—Yes; but I have no book because I have no commission.

12162. You bring it on a sheet of paper?—Yes.

12163. When you put down the weight on paper, you do not consider the setting it down as part of your regular duty, but set it down because the landing waiter is not present at the moment you weigh it?—Yes, he asks of course whether my account is correct.

12164. Whom does he ask?—The weigher who keeps a memorandum.

12165. In that case he has nothing to depend upon but the word of that person who has weighed it, unless he chooses himself to see it weighed over again?—Just so.

12166. Does he often see it weighed over again?—No.

12167. Do you mean to say that the landing waiter does not see the goods weighed?—Not always.

12168. The goods are passed without the landing waiter actually checking the weighed goods?—Unless he chooses to have them weighed over again, when there are two scales going at once.

12169. How can it be ascertained, that the landing waiter takes down weight except by the weigher?—By reference to the books in the office, which they receive in the morning, and return at night.

12170. The landing waiter keeps a book in which he takes down the weights given him by the weigher?—Yes.

12171. How can it be ascertained that the weights he puts down are the real weights given him by the weigher; what check have you?—None whatever, except that when the surveyor comes round he supposes that that is correct; he is supposed to have seen what the landing waiter has done all day.

12172. Do you know any case in which the surveyor has weighed goods again after the weight has been taken down by the landing waiter?—Yes; in some cases perhaps he will weigh one cask or two casks under his own eye.

12173. Is that common?—Not every day.

12174. Supposing a person weighs 300 lbs. what should prevent the landing waiter putting down 200?—Nothing whatever.

12175. Did you ever see goods which the surveyor weighed after the landing waiter?—Yes, the surveyor has made me do it frequently; but it has been merely where there was a number of casks or cases, he has said bring one back which he selected, and weighed it over again.

12176. Has any error been discovered in such case?—Sometimes.

12177. Do you know of any errors in silk manufactured goods having been discovered in that way?—Not particularly in silk goods.

12178. Do you know Mr. Beckwith?—Yes, that was the gentleman that introduced my name.

12179. Have

*Allan Fraser.*23 July,
1832.

12179. Have you ever been offered money by a merchant, to whom silk has belonged when weighing it?—Yes.

12180. On what occasions?—To falsify the weight, and I have refused it with indignation.

12181. Did you not report what had happened to the surveyor when that offer was made to you?—No.

12182. Why did you not?—Because I did not know the person; he was off, and sent another person to superintend.

12183. Who went away?—The person that offered the bribe.

12184. Was it not the merchant who came to clear the goods?—The merchant's clerk I suppose.

12185. Should you not think it your duty at once to report that circumstance to the surveyor?—I should have considered it my duty, and I endeavoured to ascertain the man's name, but could not.

12186. Has that happened to you more than once?—Yes, I may say frequently.

12187. You did think it your duty to convey it to the surveyor?—I should have represented it to the landing waiter, but I could not find him, he went away.

12188. Was not it in your power to have mentioned, that the merchant or his clerk had offered you without giving his name?—I believe they pretty well understand one another upon that.

12189. Why did not you report it?—Because I had not an opportunity; I was employed in keeping 42 men at their work.

12190. Why did you not do it after the day was over?—I considered that I had no inducement.

12191. Have you, then, no duty to perform?—I have performed my duty in strict justice, and have refused bribes, considering that my duty as superior.

12192. What instructions had you when placed on duty?—None whatever; we are told where to go when we are appointed in the morning; one or two landing waiters send for us. If I am taken as an extra man, I am informed where to go to, either on the quays or in the docks; I have my particular duty, and the landing waiter says, you may take this or the other duty; I know nothing of any instructions.

12193. What is your duty?—To weigh them, or take the number.

12194. That is all you do?—Yes, and the landing waiter signs the warrant form as to those of us who have been employed, as he is supposed to be responsible for the duty performed by the weighers that day, and by means of that certificate we get the money six weeks afterwards.

12195. Have you any other income but the 3s. per day for the days you are employed?—No.

12196. If a bribe is offered, you do not consider it your duty to report that matter to your superior officer?—I have no inducement to do so; I would if the man had stopped there, but he went away, and I could not go away to look after him.

12197. The fact was you did not report it?—No.

12198. Do you consider it your duty to report such things?—I do.

12199. And you did not perform your duty?—In that case I could not, while I had to attend to so many men employed belonging to the quays.

12200. Could you not have reported this after the hours of labour were over?—Yes.

12201. But you did not?—No.

12202. Do you recollect such a circumstance as between three and four hundred being passed in the scales, and only 150 called out?—No.

12203. It has been given in evidence, that you are able to prove the fact that three or four hundred pounds are passed, and only 150 entered?—No, I rather think there is an error in that.

12204. If that has been given in evidence before this Committee, you do not consider it correct?—No, I do not.

12205. You cannot prove that fact?—I cannot; I will not take upon me to do it.

12206. Is your name Allan Fraser?—It is.

12207. Is there any instance in which you have ever known the quantity of silk reported less than the actual amount weighed?—I am not aware of it.

12208. Have any bribes ever been received within your knowledge?—I have not seen it, but I know that the parties have met for that very express purpose after the day's labour was closed.

Allan Fraser.

23 July,
1832.

12209. What parties?—The Custom House officer who had consented to accept the bribe.

12210. How do you know that the Custom House officer has consented to accept the bribe?—Because I have seen them drinking together frequently.

12211. Is that the only evidence you have of it?—Yes, because I have not wished to intermix with them, to know the full particulars.

12212. Then it is only suspicion, you have no direct proof?—I have never seen the money pass.

12213. Has any body ever told you they have received money?—Yes.

12214. Who has told you that they have received money?—Several officers, whose names I choose to withhold, and I have said to them that they have incurred a great responsibility.

12215. If you charge this against officers, you must state their names, as an act of justice to those who are not guilty?—I will not involve the responsibility of any one, nor will I charge any man wrongfully, but I know it has been done at the wharf repeatedly; but I am disposed to withhold any thing else but that I know that they met for eating and drinking.

12216. The question put to you is this, whether any public officer has told you he has received money as a bribe to alter the amount?—Yes, one in particular, but unfortunately he was one, I was going to say, of the same class I was; but he was an extra officer for twelve years, and he died about a month ago through starvation, or something very much like it.

12217. At what period was the transaction with that person who is now dead?—Previous to the month of March 1831.

12218. Do you mean to say he is now dead?—Yes.

12219. What was his name?—Hine.

12220. You stated before that there were several?—He expressly told me, and I believe, that it was from real necessity he did it.

12221. State any other?—I will not mention any others by name, if you please.

12222. You stated to the Committee, that several persons have actually told you that they had received money; one, you say, is now dead: in justice to the department you belong to, you must state the names of the others?

[The Witness was directed to withdraw.]

[Strangers were directed to withdraw.]

[The Witness was again called in.]

12223. The Committee consider, that after the charge you have made on several parties, it is their duty to ascertain who those parties were that told you they had received money as bribes?—I must beg the same liberty to be allowed to me which has been to some others, of not giving names, but perhaps it has come within the knowledge of the Committee that one party has been discharged within the last 12 months who was in the silk floor, but that is not within my knowledge.

12224. What is his name?—His name is Bodman, who was employed in what is called the silk floor.

12225. Was he one of the parties who told you he had taken money?—No, he did not tell me that.

12226. Are any of those parties who told you they had received money now in the Custom House?—Occasionally, as I am myself employed, as landing officers; no otherwise.

12227. Is there any one who is a regular officer who has told you so?—No.

12228. The parties who told you they had received bribes were not regular Custom House officers?—Not by salary; such as weighers are considered to have a salary, the first class 45*l.*, then the next 35*l.*

12229. They were persons like yourself, casually employed?—Yes.

12230. Have you any objection to state their names?—Yes, I should be held up to disrespect by them for charging them with this.

12231. Does not it appear to you to be much more unjust to the whole class to which you belong to have cast a stigma upon them, by stating that individuals among them had told you they had received bribes, than to state the names of the individuals who told you so?—No, I do not conceive so.

12232. Do you mean to say, you would not think it unjust for a person to accuse the whole of your class when only one was the guilty man?—It may appear to the minds of the Committee singular, but I mean no personal injury to any one, and I beg not to give their names because it has been dire necessity that has induced them

23 July,
1832.

them to accept of it, to make up the dreadful deficiency when they had but 15 or 20 pounds a year.

12233. How many parties have told you they have received money?—I can say as many as three.

12234. Are they still living?—Two of them, and one of them is dead.

12235. Is that one who is dead the one you mentioned before as being dead?—Yes.

12236. You were understood to say, that he had not told you he had received money?—Yes, he told me so expressly.

12237. What was the sum they told you they had received?—I had not the sum mentioned.

12238. What did they state to you?—That they had been offered money, and had taken it; that is all.

12239. For doing what?—For foregoing their duty, I suppose.

12240. They did not state to you for what particular purpose this money had been given?—No.

12241. Did they state by whom it had been given?—No; there are a number of persons employed on the wharfs, such as merchants' clerks, agents and others, to do business for them.

12242. What did they state to you?—That they had been offered money, and had taken it.

12243. For what purpose?—I suppose to make short weight; that is what I understood by them.

12244. When did this happen?—Months ago.

12245. How long ago?—Last year, not this year; for I have had but seven days employment in the Custom House this year.

12246. What time of the year?—That I cannot say; it might be somewhere about this time last year.

12247. About July?—Yes.

12248. Was it a matter of conversation between these two persons and yourself?—No, not particularly, it only came out in casual conversation, as it might arise where officers are sometimes an hour or two together.

12249. Casually in conversation, they stated that they had made a good job?—No, I do not say that; but that they had been offered money, and in some instances had taken it.

12250. Did they tell you in what way they managed to get the goods free?—No; but in the one instance I mentioned just now it was done; the goods were sent home, and the house thought it was a snare laid for them, and they returned the goods; and in consequence of that it came out, and he was discharged.

12251. Those parties did not state to you the manner in which they had done the business?—No.

12252. What reason had you to suppose it was for the passing short weights?—Because they had no other means of doing it; we are never two days in one place at the Custom House, or very rarely; nor yet with the same landing waiters two days, and particularly the extra weighers; we are with a different landing waiter every day. I believe one month last year I had twenty-three days, when they were very busy at the London Docks.

12253. You know no particulars regarding those transactions?—No.

12254. You only know generally, that those people told you they had taken a bribe?—That is all I know about it.

12255. You do not know the amount?—No, I do not.

12256. You do not know the particular branch of duty required?—No, conscientiously I do not.

12257. You state that the persons who told you they had been offered money did not tell you for what purpose it had been offered?—Not expressly.

12258. Then why do you think it was a bribe?—Because I am certain of it, they being on duty at those places; had they not been on duty they would not have had it.

12259. All those persons told you they had been offered money without stating for what purpose?—Yes.

12260. You conclude it was for some improper purpose?—They told me that; but not the particular business they had been on.

12261. Did they tell you it was for the purpose of making short weight?—Yes, and I have had bribes offered to myself for the express thing.

Allan Fraser.

23 July,
1832.

12262. You positively refuse to state the names of the parties who communicated this to you?—Yes, I do, on the very grounds I have claimed the indulgence on, because I shall be held up to disgrace from every officer if I do it.

12263. Do not you think you will be held up to much more disgrace for having passed a general stigma upon those people?—I do not think it is a general stigma; it is merely those three instances which have come within my knowledge; they took it, and my case was the exception, it having been offered to myself; those men perhaps were no more in distress than I was, but still I myself had a different feeling.

12264. Do not you think, that if the Custom House is satisfied of the truth of that you have stated with regard to conversations between yourself and two extra officers, they will feel it their duty to discharge every extra officer, in order to get rid of the men who had been guilty of this act?—I think it might be more just on one ground; but I am satisfied from the responsibility which has fallen upon those extra officers, equal sometimes to that of the class officers, if there is a sound classification of officers that evil will be removed.

12265. If you consider that as part of the duty of the Custom House, do you not think you are inflicting a great hardship on all the innocent officers by refusing to give up the names of the men who are alone guilty out of the whole number?—That is not my intention.

12266. Do not you see that you cast suspicion upon the whole number of 100, as no one can know who are the three who have been guilty of this?—They never will know it from me; I am not aware that it was ever offered or ever taken by any of the others; I have never extorted a confession from any of them; when that was the case it was voluntarily said to me by those to whom I refer when we were waiting for duty.

12267. Have you any value for your own employment or not; you cannot possibly suppose that the Government can continue you in employment if you, being a servant of theirs, shall conceal from them the knowledge of those persons who have defrauded the revenue?—I would say, as a matter of right and of conviction, I feel the importance of that duty I have had to perform and should have to perform again; if I were continued, I should feel it my duty on all occasions to report to my superior officers in a case of that description, though I have not done it, though I hold no commission; but it is very little consideration whether I am continued or not, nor do I come here to say what I do from any motive of interest.

12268. Why did you not do it on the surveyor coming to you, referring to the goods which were probably then there?—The surveyor was gone; he is not there above five minutes, then he is off to the next landing waiter's box.

12269. Did not he come again the next day?—Next day I was in another part, and there might be another surveyor.

12270. Did you set aside the goods and report them to the landing waiter?—I did not do that.

12271. Do you know what particular goods the offer was made to you respecting?—No; for there were three or four different kinds of goods landed at the same time; it is impossible for the weigher to know about it.

12272. You have referred to other persons having been excused giving names, other persons who may have requested not to give up names are not placed in the same situation you are; they were asked as to the names of private individuals, you are asked in consequence of a charge being made against a public servant?—That may be true, but still I wish not to answer to the names.

12273. It comes to your knowledge that frauds have been committed against the Crown; you being a paid servant of the Crown, during the time of your employment, do you not feel yourself called upon, in the performance of your duty, to give the names, otherwise the House of Commons may feel themselves bound to enforce the giving the names?—Very good.

12274. Do you remember any case in which a liberal proposal was made to you to pass goods by an importer of silk goods, which you communicated to Mr. Beckwith?—Not particularly silk; I wish it to be understood, that I never wished Mr. Beckwith to say that respecting silk, I said with different goods where I have been engaged.

12275. You never stated to Mr. Beckwith that a liberal offer had been made to you to pass silk goods?—No, not silk goods, certainly.

12276. Did you state to him that a liberal offer had been made to you to pass other goods?—Yes, I did.

12277. What goods were those?—Different goods.

12278. What

*Allan Fraser.*23 July,
1832.

12278. What goods?—Toys, and different descriptions of fruit.

12279. What have you stated to Mr. Beckwith?—I told him that bribes had been offered to me frequently, but that I had rejected them.

12280. Did you state that they had been offered to you to pass a smaller quantity of goods?—I have frequently.

12281. Did you say that a bribe had been offered to you to pass a certain quantity of goods?—That I might call less weight; I have no power to pass the goods, that is done by warrant, but to call less weight.

12282. State how that applies to toys; toys are not weighed?—They are numbered.

12283. Would it then be for altering the tally?—Yes, certainly; we very often have the power to do that, giving a less number.

12284. What was Mr. Beckwith's answer to you?—I do not know what his answer was, it was sometime before that conversation took place; he asked me what had come out during the time I had been employed, not that I thought I should have come here.

12285. Did Mr. Beckwith apply to you to give evidence before the Board of Trade?—No, not that I am aware of; I do not recollect it; I believe I recollect he said something to me, in case he should wish it, whether I should have any objection, and I said no.

12286. Would you have any objection to give the names of those parties to the Board of Trade?—Certainly, I should have equally as here, from the very motive I have mentioned.

12287. Coming up before the Board of Trade, you would not have thought it right to give them all the information in your power?—Yes, I should, with the exception of withholding the names, which I do from a personal feeling.

12288. Of what use would that information be if it fell short of affording them the means of discovering the fraud?—It would only tend to prove that such things do exist, and have existed.

12289. What is the use of the proof, if means are not afforded of doing away with the evil?—The Committee can draw their own conclusions from that, from the thing having existed.

12290. You mean to say that different merchants, or their agents, have offered you bribes to pass goods, calling the weight less than it was, or calling a tally less number?—Yes.

12291. Do you believe that to be frequently done?—Not very generally, but there are opportunities where a weigher has, on his own responsibility, to attend a case; he comes up into the warehouse, and goes on taking the weights till the whole is weighed.

12292. How many days in a year do you say you are employed?—I think 87 I calculated last year.

12293. How much a day did you get?—Three shillings.

12294. In the course of your employment, when you had to see the goods weighed, have there not opportunities occurred when you could commit frauds in the weights you have had to specify?—There have.

12295. You believe there are those temptations in the way of those individuals, who have only that small remuneration for performing their duty?—I do.

12296. Have you reason to believe, that from the poverty of those individuals, the opportunities which are afforded to them are numerous?—Yes.

12297. And also from the knowledge that money has been offered by those individuals to yourself?—Yes, that is true.

12298. After the Government business has been over for the day, have you ever been sent on errands by your superior officer?—Very generally.

12299. What had you generally to do on such occasions?—Sometimes to carry parcels of goods to some acquaintance, with different things, which had been drawn as samples, presents made by merchants.

12300. Are you to be understood to say, you had to carry for your superior officer, different things made presents of by the merchants?—Yes, trifles, not to any extent of value, certainly; but those are things which we could not in prudence refuse.

12301. What reason had you to know those things were presents that you carried?—Because I have known them from this reason, that where the merchants have been in the same warehouse, or their agents, they have drawn so many small

Allan Fraser.

23 July,
1832.

articles out of the box ; instead of their being put in again, they have been out of compliment given to the landing waiter.

12302. Have you seen that done ?—Yes, but not to any great value.

12303. Of what did they consist ?—I cannot tell, there have been different things in bags and paper parcels.

12304. State any one thing ?—I cannot undertake to state any one thing.

12305. You have carried the parcels, you have seen the things given, and you must be able to state what they were ?—Sometimes some little mock cut glass, an article not larger than this inkstand, or an article to put soap in, or one which was a little cracked, which no duty was paid on.

12306. Where were they brought to ?—On the quays from London Bridge to the Tower.

12307. What landing waiter have you ever given such a thing to ?—I have been employed under every one.

12308. How often have you seen such things ?—Not above two or three times.

12309. What was the value of the article ?—Not five shillings perhaps ; perhaps the article was cracked.

12310. Did you say by whose desire you took it ?—No, when those things were left out, if there is more than could be put in, or one is a little broken, it is not considered of any value, nor any fraud upon the revenue ; they are generally things which have got a little injured by packing or unpacking.

Mr. George Stephens, called in ; and further Examined.

Mr.
George Stephens.

12311. HAVE you any information to give to the Committee as to the mode in which silks are passed at the Custom House ?—No, I have not any information to give upon that point.

12312. You mentioned to a Member of this Committee a letter you had seen ?—I made some communication to some silk manufacturers to-day, respecting a letter I saw on Saturday last in the hands of a person accustomed to attend the Custom House.

12313. Have you that letter ?—I have not that letter, it was a private communication which I have reason to believe was sent from a Custom House officer to a person used to attending the Custom House for the passing of silk.

12314. What was that letter ?—It was an invitation to attend a breakfast given yesterday morning by a Custom House officer when private matters it was said were to be arranged.

12315. A private breakfast ?—I apprehend so.

12316. Did you see the letter ?—I did.

12317. Did you read its contents ?—I did ; I am not sure as to the exact words of it, but it was requesting his attendance at a breakfast to-morrow morning, when matters should be arranged.

12318. Did any conversation pass between you and him before the letter was shown to you ?—Yes, the conversation led to his producing the letter.

12319. Have the goodness to state the conversation that you had upon the subject ?—It was with a person with whom I am in the habit of doing business, he is serving in a large silk house.

12320. Can you mention his name ?—I cannot ; in the conversation I said to him, your business will be shortly put an end to ; I trust we shall see Orders in Council that will take your business out of your hands ; he said, we are prepared for it, it will make no difference to us ; I said, whatever your expedients may be I am convinced that this will quite overthrow you ; he said, I do not care, we know what will be done, we are quite prepared, we have something beyond that (referring to his system of business) ; he then showed me the letter, and said, do you see how we manage things here ; he told me it was from a Custom House officer, but he held his hand over the name.

12321. You pronounce his words as if he was a foreigner ?—Yes, he is a foreigner.

12322. What do you mean by their system of business ?—That which I meant was this ; he does not hesitate to inform me he can pass silks lower than we can, and I know that he can pass silks lower than we can.

12323. How do you know that ?—We have made repeated observations, we have had silks of the same kind which have come from the same place, and within a week of the same time, and they have been always lower than ours.

12324. Do

12324. Do you know how they came in?—We know in some cases they came through the Custom House.

12325. Have you ever ascertained whether they paid the same duty for those articles that you have done?—I have not.

12326. It is not within your knowledge that they come through the Custom House paying a smaller duty than your's?—No, but he has not hesitated to acknowledge that they can get them through the Custom House lower.

12327. You have not ascertained whether that is the fact?—No.

12328. Do you know the mode in which he gets them through lower?—No.

12329. Did he ever say to you that he paid smaller weight than the goods really weighed?—No, he has not said in what way he does it.

12330. Do you believe it has been the practice with that house to do so?—Yes, I believe it has.

12331. To a great extent?—Yes.

12332. Why do you believe that?—From the quantity of goods they import, from their always selling them lower than we can import them, and from the regularity with which they have their goods to the time they name; the regularity of their arrival.

12333. That is not the case with smuggled goods in general?—No.

12334. Is this a house at the West end of the Town or in the City?—I hope I shall not be compelled to answer that.

12335. You have made a charge against a public department, you must either state the name of the officer if you know it, or of the individual?—I did not see the name of the officer.

12336. Unless you come to individuals there is no opportunity in the Committee of tracing the transaction to the foundation?—That is very just; I should be very glad to give this Committee or the Government any information, but I do not know the name of the officer.

12337. But you know the name of the party who spoke of this as a system carried on, and that though Government might change the persons, they were prepared to evade any new system, or any alterations, that is very important information?—Yes, it is; but I hope I shall not be compelled to give the name; I was assured, before my last examination, I should not be compelled to give the name, if I gave information on this subject.

12338. You stated that you could buy goods in this market considerably lower than you could import them?—I did.

12339. You stated that in some instances those goods were smuggled?—Yes.

12340. You stated, in other instances your belief that they must have been passed through the Custom House under the regular duties, by reason of your buying them of those individuals who import them at a much less price than you could pass them through the Custom House?—Yes, I stated that I believed certain goods had come through the Custom House.

12341. But you gave as your reasons for your belief, that you were in the habit of buying them at a much less price than you could import them?—Yes, and some other circumstances which I have stated as to the times of the arrivals.

12342. There is no certainty as to the time of arrival of smuggled goods?—There is not.

12343. That is a disadvantage?—Yes.

12344. With respect to those other goods from the time of their arrival you were convinced they had passed through the Custom House?—Yes, and from other circumstances.

12345. State what those other circumstances were?—Those I stated on the last examination; in one case I went into the particulars; I was resolved if possible to ascertain whether any goods came through the Custom House lower, and I satisfied my mind, as far as those circumstances could satisfy me, that that was the case, a lot of goods were bought by an English importer, and another lot by a French buyer of Paris at the same time in Lyons; they left Lyons, for each party on the same day, arrived in London on the same day, we having bought some of them in Paris of the French buyer; they arrived on the same morning, they came by the same vessel, and we could buy them in London at 15 per cent. lower than we could import them, and I had the person's word that they came through the Custom House.

12346. Have you any other reason than this for supposing the goods came in at shortweights?—No, but I have that they came in at lower duty.

12347. You

Mr.
George Stephens.

23 July,
1832.

Mr.
George Stephens.

23 July,
1832.

12347. You mean that they came in at short weights?—No; that they came in for less duty than ours did.

12348. By what means do you believe that those goods passed through the Custom House for less than the legal duty?—I apprehend from their being taken *ad valorem* and less amount given.

12349. Do you mean by the goods being entered at less than the actual weight?—At less than their value.

12350. How did you enter your goods?—They came by weight.

12351. Do you know how their goods were entered?—I am not sure how the others came, whether *ad valorem*, or by weight.

12352. Is it optional as to the same goods?—I believe it is optional with the officers.

12353. The only reason you have for supposing those goods came in fraudulently, or paid less duty than they ought to have done was, that they were sold at a cheaper rate than you could afford to sell yours?—That is the fact; and that they left at the same price, and arrived on the same day ours did.

12354. You did not ascertain that they left at the same rate, did you?—Yes; we ascertained that.

12355. Do you not believe that the house in London might be induced to sell them to you at a sacrifice?—No; they were quite new; I saw them opened, and made a purchase immediately.

12356. Persons may sacrifice, you know, for particular reasons sometimes; had you reason to suppose that that house is ever placed in such a situation as to require money immediately, and that they did in that case?—No, I think not; it is a respectable house.

12357. Were they fresh fashioned goods, such as a person would be able to find a market for immediately?—Yes.

12358. They were not job goods?—No, they were not job goods.

12359. What was the difference of price, considerable?—It was 15 per cent.

12360. Have you any reason to believe, that those goods coming in in that way, came in by fraud or connivance with the officer?—I do not know by what means it is done; they came through the Custom House, I believe.

12361. Have you any other instances where you suspect goods have been run through the Custom House at a lower duty?—I have not.

Mr. William Beckwith, called in; and further Examined.

Mr.
William Beckwith.

12362. YOU were asked about imported goods, "Were they smugglers from whom you bought those cheap goods;" the answer was, "I have no direct knowledge of that, but I must presume such was the case:" you then mentioned Messrs. Morrison & Company, Spencely & Company, and others, (foreign houses) as the houses from which you bought those goods referred to in the answer you have given; then you answered to a second question, "I do not charge those houses with being smugglers." How do you reconcile those two answers; first, that you bought cheap goods from houses that you presume must have been smuggled, and you afterwards say, that you do not accuse those houses of being smugglers?—There must be some mistake in the report; as I distinctly stated at the same time, that I ceased being an importer of foreign silk goods, because I could purchase from some of the largest houses in the city of London for 15 or 20 per cent. lower than I could import myself, though I paid ready money, and that on large parcels of some hundreds of pounds.

12363. You stated that you left off because you found other importers could supply you at 15 per cent. less than you could import for yourself; you were then asked, were they smugglers from whom you purchased, and you said you must presume they were, because you purchased for ready money; you were asked to name the persons, and you named those whose names have been read, and you add, that you do not charge those houses with being smugglers, though you had previously said, that they were smugglers?—No. I stated, that I left to the Committee to judge how those houses could supply me at 15 or 20 per cent. less; I have since called upon one of those who supplied me last year, to know whether they could repeat that sort of business; he said he had a large quantity coming in about ten days, and for that reason I am now not making a single loom of figured velvet, because I anticipate that that house alone will be able to supply me, I will venture

to say, at full 20 per cent. less than any honest houses can import, and pay the proper duty.

12364. Do you mean that those houses from whom you bought those goods did smuggle those goods?—I believe I distinctly stated, that I could not prove the houses to be smugglers, but I leave it to the Committee to judge how they could supply me at 15 to 20 per cent. less.

12365. In one part of your evidence you stated, you could not conceive those could have been so sold except by a smuggling transaction, but in another part you state, you do not wish to have it understood that the persons from whom you bought were smugglers?—I distinctly stated, that I did not wish to charge the parties with smuggling; I stated the fact of my own transaction, that I did once give an order about midsummer to a certain French house, to supply me with figured velvets, and deliver them in October.

12366. Have you any other grounds for believing those goods were smuggled than that you could purchase them cheaper from those houses than you could import them?—I have, from a very respectable source at the Custom House, ascertained that certain large houses were in the habit of passing figured silks for the duty on plain; I do not attend to that sort of business myself.

12367. Do you mean to say that the information you obtained from the Custom House led you to believe those houses had passed figured goods for the duty on plain goods?—There is a strong impression upon my mind, which leads me to believe that is the case. I handed a letter to Mr. Ballance, as a member of the Silk Committee, which states that many houses had repeatedly passed figured silks for plain. I have known the individual for nearly twenty years who signs the letter, and believe him to be respectable.

12368. Are the Committee to understand that you distinctly state as your opinion that the houses of Messrs. Morrison & Co., and Leaf & Co., and others named by you, do defraud the revenue?—No; I have distinctly stated that I do not charge any house with smuggling, but that there are ways and means of employing agents, that do such things. What am I to understand when I am obliged to leave off my business as an importer, and purchase from these houses? I beg to leave the matter to the Committee to form their own conclusions as well as I do.

12369. Will you be able to produce the parties from the Custom House who have given you the information?—I believe I can do so.

12370. Is it your wish to bring the subject before the Committee?—I have no objection. The letter to which I refer was addressed to the Silk Committee.

12371. You have stated that you had bought goods from large houses at 15 and 20 per cent. lower than you could import them; is that the reason you believe that they must have been smuggled?—I can only make my own conjectures; I would wish to leave that to the honourable Committee to judge for themselves.

12372. Have you any other reason for believing it?—Yes; a certain agent in the Custom House told me that I should not stand on the same footing as other persons, unless I allowed him to bring in some goods in the regular way, which I understood him to say was at low duties. I declined doing so; and the agent who sold me the goods on the part of his master, afterwards called upon me and said, that he was agent for passing silks upon the best terms; and if I did not have my goods so introduced, other houses would have an advantage over me.

Mercurii, 25^o die Julii, 1832.

THE RIGHT HON. THE EARL GROSVENOR, IN THE CHAIR.

Mr. William Fairclough, called in; and Examined.

12373. YOU are a landing waiter in the Customs?—I am.

12374. You have been for some time accustomed to be on the silk floor, have you not?—I have.

12375. Can you, from experience yourself, describe the process of weighing and examining silk goods on their landing, by the officers of the Customs?—I can; when the packages are brought to the silk floor for examination, on being opened, it is customary to count the number of inner packages, so as to be enabled, when the different articles are selected, to see that we have the whole; they are then
678. opened,

Mr.
William Beckwith.

23 July,
1832.

Mr.
W. Fairclough.

25 July,
1832.

Mr.
W. Fairclough.

5 July,
1832.

opened, and the different descriptions of silk are selected, so as to have each description put into the scale at once; the weight is then taken by the landing waiter, and entered into a blue book similar to that I hold in my hand; the operation is then finished as far as the landing waiter is concerned, until he is superintended by the landing surveyor, whose business it is to re-weigh after the landing waiter, and to make a calculation of the weight of the boxes, for the allowance of the tare called tareing, which is always done by the landing surveyor; the operation is carried on in the mode of selecting certain paper parcels, according to the number there are, so as to get as accurately as we can at the allowances of tare; when that is done, the landing waiter, in connexion with the agent of the merchant, or the merchant himself, casts out the allowances which are made, deducting them on each description of silk from the weight in gross, and after that deduction, the nett quantity is ascertained on which the duties are charged.

12376. Is it the practice on the silk floor that one landing waiter should have to attend to more than one pair of scales?—It is not.

12377. You are not aware that any instance has occurred, in which that has been the case?—I am not aware that it has ever occurred, at two of the floors it would be impossible, for there is not convenience enough to put up two pair of scales.

12378. It has been stated to this Committee, that a landing waiter has frequently to attend to two pair of scales at once, can that possibly be the case?—It cannot.

12379. That has never come within your knowledge?—No, nor do I think it has ever been the practice; it is on only one of the floors out of three that there is an opportunity of putting up two pair of scales.

12380. Do you conceive that if the landing waiter attends to his duty, it is possible for the weigher to commit a fraud?—I think it is impossible for the weigher to commit a fraud.

12381. It is only therefore by connivance with the landing waiter, that a fraud could be committed by the weigher?—I should think so.

12382. Do you know any way in which such negligence could occur on the part of the landing waiter, as to permit a fraud by the weigher?—I know no instance, except by concealment of a package or a fraud of some kind on the part of the weigher, and it is scarcely possible, because the landing waiter is generally in attendance on the package as the different articles are taken out of it.

12383. In fact, the weigher by himself cannot defraud the revenue, supposing the landing waiter to do his duty?—He cannot.

12384. Is it the practice to allow the same landing waiter constantly to remain on the silk floor, or are they changed?—They are changed monthly.

12385. Are they changed irregularly?—They are from station to station.

12386. It has been stated to this Committee, that instances have occurred of the weighers receiving bribes to defraud the revenue, do you conceive that it would be of any advantage to bribe the weigher, unless arrangements could also be made for the landing waiter being bribed?—I think it would be impossible almost, that he could carry on the trade under such circumstances if the landing waiter did his duty, because, as I have before stated, he is in attendance on the whole of the operation, and it is not his duty and his practice generally to take the weight as called out, but to see the weight, for in silk we weigh to an ounce.

12387. Is the landing waiter always present?—Yes.

12388. You have never known him absent?—No.

12389. Have you ever known any instance in which the scales have been left to the weigher, without the attendance of the landing waiter?—No, and I doubt its being possible.

12390. Do you think it possible that the weigher could call out 150 pounds when there were 200 in the scale, without the landing waiter being aware of it?—It is impossible.

12391. Does the landing waiter always go and weigh the package?—Always; he sees it weighed; he does not put the weights into the scale, but he calculates the weights which are put in, himself.

12392. He never trusts to the calling out of the weigher?—Never.

12393. If it was reported that he had so trusted, would that lead to his reprimand or removal?—Certainly, and very deservedly in my opinion.

12394. You cannot undertake to say such a thing never happened?—No, I cannot, I can speak for myself, and I believe I can for my brother officers.

12395. Frauds might be committed by collusion?—Certainly that is possible.

12396. Is there not also a check over the landing waiters by the surveyor?—Constantly,

Mr.
W. Fairclough.

25 July,
1832.

Constantly, and at uncertain times; in fact the landing waiter never knows when the supervision is taking place; the surveyor, according to the state of business, is at his back at any moment of the day, and re-weighs and examines after the officer, so that that sort of operation would be a very doubtful one for a man to lend himself to.

12397. The surveyor makes it a practice, does he not, to attend, and frequently when parcels of silk are being weighed, to have a particular parcel that has passed the scale, but an uncertain parcel, re-weighed?—Frequently.

12398. Supposing there were collusions between the weigher and the landing waiter, it would be very difficult indeed, or at all events a great risk for them to run, to attempt to pass a parcel at short weight, as it might be at once discovered by the surveyor on ordering that particular parcel to be re-weighed?—Certainly he would run that risk and be certain of detection, unless there was a means of conveying a parcel of goods out of the warehouse, which we do not conceive there is.

12399. Do you conceive, in case of collusion between the landing waiter and the weigher, it would be next to impossible for a man to pass goods at short weights?—I do not say it would be impossible, but it would be next to impossible; the probability is, that the surveyor would detect a thing of that description.

12400. What is the salary of a landing waiter?—They are various; there are three or four classes, the first is 400*l.* a year.

12401. So that a man inclined to assist in a fraud of that kind, would be risking so good a place as that, with a tolerable certainty of being discovered?—I think almost with a certainty of that.

12402. If therefore such a statement as this has been made to the Committee, that the same landing waiter is employed to superintend two sets of scales that are so situated that he cannot see them both at the same time, you would say that statement is positively false?—I should consider that it is positively false; I know in one room only they can put up two scales, and when there have been those two put up, there has been an officer in attendance on each.

12403. It is only on one floor out of three that that can be done?—Yes, there is not convenience for putting up two; two have been worked on some occasions but very seldom.

12404. Have there ever been attempts to pass figured goods for plain?—I cannot say there has not been an attempt, the selection is generally made by the officer previous to the goods going to the scale.

12405. Such a thing might be done?—Then I should say, that the officer must be very unenergetic in his examination, they are very easily known.

12406. If an attempt of that kind were made, to pass figured goods for plain, would the parties passing them not be subject to some control as in the case of the weights?—Decidedly.

12407. They would be subject to the supervision in the first instance of the landing waiter, and secondly of the surveyor?—Yes.

12408. Do you open every package?—Yes, sometimes there are as many as 50 or 60 in a large case.

12409. Do you find more goods passed through the Custom House since the large seizure which took place a few months ago?—No, the business is complained of as being slack.

12410. In what manner are toys and other goods that pay duty by tale, counted or examined?—In the same manner that silks are, the whole goods are taken out of the package, and when they pay an *ad valorem* duty, a calculation is made of the value of the article.

12411. Do they ever count the articles or examine them without a landing waiter being present in any process?—Frequently, some of those cases.

12412. In that case may not the persons so employed report a short number?—No, I think not.

12413. If he is left alone to do that?—They are tied up in parcels and we make the weigher take out the number of parcels, the whole of them, so that the officer can count them as well as the weigher, so that if the weigher under such circumstances was inclined to commit a fraud and cheat the officer, we have the means of checking him, it is only by a selection of the numbers we know what they are, and see the number contained in them.

12414. Does not that person frequently count over the packages when the landing waiter is not present?—No.

12415. Are you sure that he never can in one floor count over and report to you

Mr.
W. Fairclough.

25 July,
1832.

when you are in another?—There are some descriptions of things which he does, kid skins and those sort of things, which are taleable.

12416. And toys?—Toys are taken by the count in the paper.

12417. That cannot be the case as regards silk?—No, certainly not; the operation is quite different as to silk.

12418. You think the officer so employed may report short those articles taken by tale?—He may partly, but he would be checked by the officer, each parcel of goods are selected and put by the weigher, so that the officer can see the number of the articles if he supposes the weigher has told him wrong and endeavoured to impose upon him, he can check him himself.

12419. Could he do so without examining the contents of the case?—Yes.

12420. Do you mean to say no case undergoes examination without the landing waiter seeing the case?—Not without his seeing the package; skins are articles rather excepted, because they are tied in bundles, we have a number of bundles and we make the weighers go on counting the number of skins in a bundle; with regard to silk it is quite different.

12421. Generally speaking, are the Committee to understand that the landing waiter has a check even on articles, the duty on which sums is paid by the tale?—We do not trust wholly to the weighers, but even in taleable articles like skins we tell some bundles over again.

12422. Is it possible that any person could make a present of any portion of those toys to any trifling amount?—He might a dog and butcher, or a dog, or something of that kind, there may be 300 little dogs and toys and so on, and put it into his pocket, being so small.

12423. You could not miss hundreds or miscount hundreds?—No, certainly not.

Mr. *Joseph Beals*, called in; and Examined.

Mr.
Joseph Beals.

12424. YOU are a landing surveyor in the Customs?—I am.

12425. Will you state to the Committee the nature of the checks which the landing surveyors have upon the landing waiters in the examination of silk goods?—We make uncertain visits upon the landing waiters on duty, and when we go on we re-weigh what has been done and re-examine, and examine the landing waiters' books to see that the correct denomination has been made to the goods which had been examined and weighed.

12426. Is it the constant practice with yourself and other surveyors, to attend during the time the silk goods are weighed occasionally and at uncertain intervals, and to have parcels re-weighed in order to compare with the weights delivered to you?—Yes, it is our duty to do so.

12427. You would consider that you would be neglecting your duty if you did not do that?—Yes, certainly.

12428. You believe that to be the constant practice enforced in the Custom House?—I do.

12429. Have you ever known an instance upon re-weighing goods after the landing waiter of finding that a wrong weight had been put down, so as to lead you to suspect connivance or fraud had been attempted?—No, I do not remember an instance of it.

12430. How long have you held your present situation?—Eight years; I have been 27 years in the service.

12431. You do not mean to say a mistake may not happen by accident?—It has never come to my notice that there has been a misweight called.

12432. It might be done by accident?—No case either by accident or fraud has come under my notice.

12433. You never in your experience have had occasion to believe that erroneous weights have been delivered to you by the landing waiters for a fraudulent purpose?—No, I never had reason to suspect such a thing.

12434. Is it the practice to change the landing waiters frequently in the silk warehouse?—Yes, it is, they are changed monthly, there are two stations, and the landing surveyors change stations monthly, one takes the upper station one month and then he goes to the other the next month; one landing surveyor is not constantly in the same situation.

12435. Do you equally think it your duty to turn your attention to the qualities of the goods, whether goods are plain or figured?—Certainly; we always examine to

to see whether they are correctly returned in the book, we look at them ourselves to see that they are so, and make a selection when we visit the officers.

12436. Do you examine all the parcels, or at uncertain periods?—We make our visits at uncertain times, and after they are taken out the quantity is put by itself, different descriptions; and we examine them, and select them out for weight or for tale.

12437. It is your duty officially to weigh for the tare?—Yes.

12438. That is a duty never left to the landing waiter?—Never.

12439. You tare down to half an ounce do not you?—We tare down to a quarter of an ounce, we bring it to as great a nicety as possible, even standing weight we take it; there are a great many internal packages, which require a great deal of nicety, they are selected out, and we make one or two trials, just as we think sufficient, according to the number, and the weight is put down and cast out by us.

12440. Though you attend very frequently, and at uncertain times, may it not be possible that frauds may be committed sometimes in your absence?—Certainly, it is possible if there is the connivance of the officers; I superintend other officers, not only one department; one cannot be constantly in one place.

12441. They might avail themselves of particular occasions if they were inclined to commit fraud?—Yes; but they are liable to my coming, and re-weighing, it would be at a great risk; I do not say that it is not possible.

12442. You have said, that you never knew erroneous weights delivered to you by the landing waiter?—They do not deliver them to us, but they are entered regularly in their book.

12443. You mean to say, in the course of the number of years you have been in the service, you never heard of such a thing as erroneous weights being given in by the landing waiter?—No, I never did in silk goods.

12444. Would you not consider that a landing waiter was running a very dangerous risk, if he were, by collusion with the weigher, to attempt to pass goods at an under weight?—Certainly.

12445. Would he not be risking the very good place which he has but for a moderate consideration?—No doubt he would, if he were detected he would be dismissed.

12446. Do you think there is any pecuniary consideration which it would be worth while for parties desirous of passing goods at short weights to offer to the landing waiter, which would be sufficient to remunerate him for the risk of the loss of his place in case of discovery?—I think not.

12447. You think if he had a good place of from 200*l.* which is the lowest, to 400*l.* a year, the chance he has of passing the goods unknown to you fraudulently, would be so little, as not to make it worth while for him to risk the loss of that place?—Certainly; I should think not.

12448. You would consider, that although he might perhaps succeed with one, or half a dozen parcels, on the second or seventh he might be discovered, and that there would be every probability of his being discovered?—Certainly; if he made it a common practice, I have no doubt he would be discovered.

12449. Are not goods frequently entered below their value?—Yes, and I frequently make detections.

12450. Are you not liable, in fine fancy goods, to be deceived?—We take the best care we can of that; if we have any doubt about it we apply to the trade.

12451. If you suspect it you take to the goods, allowing the parties a certain per centage, do not you?—We do not do that unless we get information from the trade that they are undervalued.

12452. Have you reason to believe that those goods have been frequently entered considerably under value; and yet when you have so detained them, and allowed the parties a per centage of 10 per cent. you have lost by them?—If they are brought to sale they have brought the 10 per cent. sometimes.

12453. Have you, in all cases been able to make the amount?—If they are detained as undervalued the merchant gets his return of the duty, and 10 per cent., when they are put up to sale; there have been instances where the goods have been sold for the amount; circumstances may arise that may prevent that.

12454. Do you think, if a man entered his goods at 20 per cent. less than the value, the great chance would be, that on sale you would not obtain the money?—Goods are not often detained and sold for 20 per cent. under value, they are frequently made 50 per cent. and even more than that.

Mr.
Joseph Beals.

25 July,
1832.

Mr.
Joseph Beals.

25 July,
1832.

12455. When they are seized and sold, having been entered at 50 per cent. under value, it is very seldom you can realize the value, is it?—Yes, repeatedly more, I detained some silk goods some time ago, which were sold at more than the price entered, and the duty and the 10 per cent. paid to the merchant.

12456. Was that the case with any considerable quantity?—About 150*l.* or 160*l.* worth.

12457. Do you recollect whether they were purchased by any persons in the trade?—I do not know, they were sold at the public sale.

12458. Does it not more frequently happen that the goods do not fetch their value?—Sometimes it has happened from a change of market, or combinations in the trade, or circumstances of that kind.

12459. Do not the people in the trade often set their face against the seizure, and form a sort of combination?—Sometimes I believe there is a combination of the trade, and they will not buy the goods at the sale, and they frequently do not fetch their value at those sales; sometimes they fetch more than the value, sometimes not the value.

12460. When you have reason to suspect that a quantity of silk goods are entered below their value, you in the first instance stop those goods, and take the opinion of persons in the trade as to their value?—Yes.

12461. So that you have, in the first place, the security of the opinion of persons in the trade regarding the goods before you finally determine on seizing them?—Yes; we do not seize them in the first instance until we have satisfied ourselves by inquiring of the trade of their value.

12462. Is not that a great security to you against loss, inasmuch as you have, before you undertake the responsibility of the goods, the advice of the trade as to their value?—Yes.

12463. When you call on persons in trade as to the value of those goods, when they are not common articles, do not you find often a difficulty or variance in the valuation?—We have certainly great difficulty in ascertaining the true value of goods frequently.

12464. Persons in the trade have a difficulty in agreeing as to the value within 10 or 15 per cent. have they not?—We frequently have differences of opinion as to their value.

12465. You say they are sometimes entered 40 or 50 per cent. under value?—Yes, there have been such cases.

12466. Supposing they are entered at 20 per cent. under value, do you not think you should have considerable difficulty in some cases in proving that fact?—It is a very unpleasant thing for the officers, we get such various opinions that sometimes we do not know how to act.

12467. Upon the whole are you of opinion that you are enabled, with the assistance and the advice of the trade, which you have in the first instance prior to the seizure of the goods, to force the importer of the goods to value them at about the just price?—I think generally; the undervaluings are very few comparatively with the number of goods we pass.

12468. You are anxious to detain them, if you have reason to believe the goods are undervalued, inasmuch as a profit arises from doing so?—We participate in the profit; the Crown takes half, and the officers take the other moiety.

12469. Does that difference amount to much?—That depends upon the amount on the sale of the goods.

12470. Generally speaking, do you get much by it?—No; we do occasionally in some instances.

12471. Do you not get quite enough to induce you to be anxious to make the seizure if possible?—Certainly.

12472. With all the difficulties you have described in ascertaining the real value yourself, and a difficulty of the persons in the trade in ascertaining the value when they are called on, if a man is inclined to enter his goods only 10 or 15 per cent. under value, do not you think his goods would be passed without detection?—No doubt, 10 or 15 per cent.; we could not be justified in seizing them for that difference.

12473. When the goods are stopped, and the parties have 10 per cent. allowed upon them, the parties can run no great risk?—No; we should not stop them for 10 or 15 per cent.

12474. Then the probability is, that in all cases they may enter those goods 10 or 15 per cent. under value?—That may be done.

12475. Does

12475. Does your experience lead you to believe that the goods are considerably under valued, they being allowed to be entered 10 per cent. under value, inasmuch as 10 per cent. is allowed by the Crown in case of seizure; do you conceive they are entered much below that 10 per cent?—Not generally; some merchants will risk; but I do not think that is often done.

Mr.
Joseph Beals.

25 July,
1832.

Lunæ, 27^o die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQUIRE, IN THE CHAIR.

Mr. John Manning, called in; and Examined.

Mr.
John Manning.

27 July,
1832.

12476. YOU are Surveyor General of the Customs?—Yes; one of them.

12477. Can you state to the Committee whether there were not some misrepresentations made at the latter end of last year by anonymous letters sent to the Chairman of the Customs stating the writer could prove that frauds to the extent of 50,000 £ per annum were practised upon the Customs by passing silks at wrong weights; letters signed under the name of Veritas?—Yes, there were; they were private and confidential; all those papers, all the communications, and all the correspondence, was private and confidential, to the Chairman of the Board of Customs; they were addressed in the first instance to Lord Auckland.

12478. They were addressed in the first instance to Lord Auckland, and by him forwarded to the Chairman of the Board of Customs?—Yes.

12479. Are you aware that any investigation took place in consequence of these representations?—There was an inquiry; perhaps I may be permitted to read from memorandums the particulars that I ascertained, and which I know of my own knowledge during the time that that correspondence between Veritas and the Chairman was in progress. The writer was called upon to substantiate the facts, and transmitted to the Chairman an account of 24 packages of silk goods, imported at sixteen different periods in the last year.

12480. Those 24 packages were not of the value of the 50,000 £, which was stated, were they?—No. He did not appear personally at all in the correspondence.

12481. So that the writer of that letter, in the first instance having stated that he could prove frauds to have been committed to the extent of 50,000 £, annually, came down to this accusation of twenty-four cases?—Of twenty-four cases containing the marks and numbers of each importation, and requested that it might be returned to him filled up with the weights in each package of each description of silks, and the quantity of duty paid; these particulars were prepared from the landing waiters' books, in which the original examination of the goods were entered by him, and a copy of the account sent by the writer was filled up, and returned to him by the Chairman as requested. In a few days (three or four days) after this, an account was received from the writer of the particulars of eight of the packages.

12482. Eight out of the twenty-four?—Yes, No. 22, and upwards of three of those importations, from which it would seem that the goods in those eight packages were passed at a considerable less weight than the writer's account specified. This not being considered satisfactory proof of the alleged fraud, the writer was then called upon, and subsequently produced invoices of the goods, but I am not prepared to say whether those invoices contained the weights of the silks; and another specification of the weights of the goods in each of the eight cases before mentioned as weighed by the importers when they received them into their warehouses, between which and their former account there was a trifling difference, as they stated, a mere clerical error; those are the particulars so far on that point.

12483. They were compared with the weights which were charged from the landing waiter's book?—They were.

12484. And they were manufactured silks?—Yes, they were.

12485. Not organzine?—No; manufactured silk goods of two or three descriptions, I believe gauzes and those subject to the higher rate of duty and to the lower rate of duty.

12486. Is it usual for the invoices of silk goods to contain the weights of the different descriptions in each package?—They are not usually produced to the

Mr.
John Manning.

27 July,
1832.

landing officers, but I understand from inquiry of the importers that mode is general since this transaction, that the weights of the goods are not inserted in the invoices.

12487. Did the invoices sent to the Custom House of these eight packages contain the weights?—The invoices were forwarded to the Custom House by the party.

12488. Could not these invoices have been made out subsequently to the account being furnished?—They might, I think; there was time after the particulars were given from the landing waiters' books to have obtained invoices from Paris; I do not however mean to say that such was the fact; but an affidavit was sent from Paris dated the 14th of February, that is nearly two months after they were produced.

12489. Can you state to the Committee what the amount of the difference of the duty was between that taken on the landing account on these parcels, and what should have been taken, according to the statement of the weights received by the importers, provided those weights had been correct?—Between 280*l.* and 290*l.*; about 285 or 286 *lb.*

12490. On those eight cases?—Yes; the difference of duty admitting the proofs produced by the writer to be correct, the difference of duty to the prejudice of the Crown was between 280*l.* and 290*l.*

12491. Have you reason to believe at the Customs, that these weights given in the invoices were correct?—There was an affidavit of the importers who received them at their warehouses; there was also an affidavit produced at the latter end of February from the manufacturer or the party at Paris, from the house at Paris from whom they were received. An affidavit was sent from Paris, dated the 14th of February, and produced by the writer Veritas, in proof of the correctness of a statement thereon of the particulars of the goods in the eight cases (No. 22 and upwards) which exactly corresponded with the writer's specification of them. There is a circumstance I discovered in looking over the papers yesterday, which I think important to state if I may be allowed: it is singular that this affidavit in French hand writing, with the particulars of the goods in English hand on the other side, that they are written on a sheet of foolscap paper with the maker's name, "J. Coles, 1830," precisely similar paper to that on which Veritas's long correspondence is written. In comparing the paper of this French affidavit, it was written on precisely the same paper indeed as the specification; it may be therefore inferred that a copy of Veritas' specification was sent to Paris for the purpose of obtaining the affidavit thereto.

12492. You would infer from that, that the weights stated in that by Veritas were most likely the weights which were filled up after he had received the real landing weights from the Customs?—Certainly; the weights in his two specifications which I have been speaking of before those weights were transmitted to the Chairman subsequent to the information given him from the landing officer's books; and this affidavit was dated the 14th of February, and transmitted to the Chairman about the 20th or 21st of February; and on comparing that paper, it was exactly as the copy of the specification was written by the English dealer in the same hand-writing (the English hand-writing) on precisely similar paper to all the different letters of Veritas, which amounted to about twenty.

12493. Then the only proof that you have of the weights being really correct weights, was this affidavit taken in France, which appears to have been made out in England?—There was an affidavit, also, accompanying the letter of Veritas. When he transmitted the affidavit there was also an affidavit of the importers of these eight cases to the same effect, stating that these specifications were correct, and those were the weights received in their warehouses.

12494. But did not you state that you had received from the importers, through Veritas, an account of weights as the goods were delivered into their warehouses, which tallied within a very trifling difference with the weights of the Custom House?—No, I beg pardon; the first account received from Veritas, and a subsequent specification as he called it, but made out in a very different form, more minutely, those two documents correspond with a trifling variation, mere clerical errors as I stated.

12495. But the result of this investigation, and of the charge brought by Veritas, beginning with an assertion that he could prove that 50,000*l.* annually was fraudulently introduced into this country, ended at last in proof being adduced, adduced only of eight cases, and upon those, from the facts submitted to you, very great doubt was entertained?—Certainly I should not receive that as proof, even if any mistake arises and the goods are delivered out of the custody of the officer of the Crown; merchants of the highest respectability in London would get no redress

from any subsequent examination or affidavit on their part of the correctness; even if it is admitted there is an error, it is never acknowledged, consequently it is not deemed satisfactory proof of fraud, because the importers of these goods, who were parties connected with Veritas all through the transaction it seems, their account would not be taken certainly, without it was confirmed by some other proof.

Mr.
John Manning.

27 July,
1832.

12496. Are you aware from your communication, and from the manner in which the Chairman employed you in part of this business, that the greatest pains were taken at the Custom House to investigate the whole of the transaction alluded to by Veritas?—Veritas's remarks were general; therefore there was no point on which we could trace, except these eight cases, and then the landing books were produced, and the accounts appeared to be regularly taken; and on one or two occasions subsequently to that transaction, the Chairman directed me to visit the silk floors, which I did, and in several instances I saw what were the proceedings of the landing officers, and I re-examined several packages which I found to be correct after they had gone through this examination, but it happened at a time when there was a slackness of business, and it was confined to these particular marks that he gave, and there were very few impositions subsequent to that period.

12497. From your investigation of this matter, are you of opinion that with regard to those eight cases even fraud was committed?—It is a difficult thing for me to say, I can only say, from the general character of the officers who examined these goods, that I should think it could not be correct, but certainly it is possible. From the general respectability of the officers who are employed in the examination of those goods, I should almost think it impossible that an officer will so commit himself, holding a respectable situation, for any paltry consideration made to him, even if it were 100*l.* or 200*l.* or 300*l.*, that would not be a compensation for the chance of the loss of his situation, which it is most likely would be the consequence, because a thing of that sort could not long escape detection.

12498. But the result of this investigation was not produced by Veritas, was it?—Certainly not; the whole extent of the alleged frauds, at least according to his own statement, was upon these eight packages, and the difference was about 280*l.*; the amount of duty paid was between 700*l.* and 800*l.*, and Veritas's statement was about 1,000*l.* or 1,100*l.*

12499. What was the difference of the duty that ought to have been paid?—Between 280*l.* and 290*l.*; but as regards the officers, in perusing Veritas's statement, I think it important, if I may be allowed to state, "That on a remark in one of the Chairman's letters to the writer, namely, that if there are any officers in the establishment who have betrayed their trust, they should at least be known." The writer replied, in a subsequent letter, it would be treachery to make known the individual or individuals who were parties to the frauds practised in the eight cases, No. 22 and upwards, set forth by him, particularly as they are not your officers, though all his correspondence in which he presumes those extensive frauds have been practised, the officers of the Customs are accused of being in connivance with the parties, and instrumental in effecting them, but yet in these eight he says, as I said before, they are not your officers.

12500. So that after having stated that great frauds were committed by the connivance of the Custom House officers, when brought to the proof he is only able to adduce one single instance, and that fraud he states was not committed by the connivance of the Custom House officers?—That is his own statement, though his grounds of assertion are, that the officers of the Customs are in connivance with the parties, and instrumental in effecting them; that was the result of all this inquiry.

12501. The Committee understand you to say, that the amount of duty received by the Customs on these eight cases was about 800*l.* when they ought to have received 1,040*l.*; now does not that amount to nearly 30 per cent. on the duty alone?—I should think it does.

12502. So that it is a very serious saving, though it will not appear a very considerable thing; but if the amount of the duty be something less than 100*l.* received by the Custom House on each case, and it should be 135*l.* that is clearly a saving of 35 per cent. on the amount of duty?—Admitting the fraud to have taken place, certainly.

12503. Which you do not admit?—It cannot be admitted, because there is no proof other than the affidavit of the parties; and that is a bare statement of the precise net weight. Now there is a great process in the examination of these goods by taking the rollers and weighing them, and allowing a tare; now all this did not appear; it was not a detailed statement but merely a general statement.

Mr.
John Manning.

27 July,
1832.

12504. With regard to the class of men employed by you as occasional officers for weighing, you are aware many are employed from day to day as they are required; what are the wages allowed to them?—There are several classes, I think 35; perhaps 25; I cannot exactly say; there are three classes.

12505. But speaking of the wages of the lowest class?—They have a fixed salary and a rate of payment per day when employed.

12506. You mean to say that there are no persons occasionally employed who have not a fixed salary?—In the importation of the goods generally there are a considerable number above the established officers, but in the examination of silks I do not know that an instance has ever occurred of a man that is not an established officer being employed on that duty; indeed they are selected as the most worthy and best men.

12507. Do you know a man of the name of Allen Fraser?—No, I do not.

12508. Have you had occasion to make inquiry respecting him?—I suggested, when the man was named, that I would inquire as to the character of this man, and what he was; the result of that inquiry is, that he was appointed as what was termed a glut weigher; that is, when all the established men are employed, men by the Commissioners on recommendation are approved of and paid when employed at the rate of, I believe, 3s. a day; this man was first appointed in June last.

12509. Have you brought with you a statement from the Custom House books of the number of days, and of the dates of the employ of that man?—I have; not at the docks but the quay station, where these goods are usually, and indeed always examined.

12510. Where alone silk goods are examined?—Yes.

12511. Does it appear from that statement that Allen Fraser could ever have been employed in weighing silk manufactured goods?—It has been ascertained on examination of the books, there is always an account kept of the duty that each man is employed on, and I have procured an account of that for the information of the Committee; and it appears, that the man has been employed about 12 or 14 days since August last on the quay station. At the docks no account was taken, and if I may be permitted, I can state on what duty he was employed on each of those occasions. It does not appear that he has ever been employed in the examination or weighing of silk. A man of that description would not be employed in that.

12512. That is a statement of the wages, and of the dates, as well as of the places at which that man was employed?—(*Producing a paper*)—It is.

[*The same was handed in, and read.*]

The following is a STATEMENT of the DAYS upon which *Fraser* has been employed on the Quays where Silk Goods are examined only, and it does not appear that he has ever been employed in the examination or weighing of Silk Goods.

DAYS.	STATION.	DUTY.	Under whose SUPERVISION.
9 August - 1831	Coxe's Quay - -	Weighing Flax - -	Mr. Green.
10 - - - -	Globe Yard - -	Tallying Skins - -	Mr. Diggs.
1 Sept. - -	Fresh Wharf - -	Shipping sundry Goods	Mr. Arnaman.
2 - - - -	Ditto - - - -	Ditto - - - -	Mr. Coxe.
1 Oct. - -	Brewer's Quay - -	Ditto - - - -	Mr. Kennedy.
4 - - - -	Custom House Quay, } (Ground Floor) - -	Opening Cases * - -	Mr. Hammond.
5 - - - -	Ditto - - - -	Ditto - - - -	Ditto.
3 Nov. - -	Brewer's Quay - -	Tallying Apples - -	Mr. Rowen.
5 - - - -	Fresh Wharf - -	Ditto Skins - -	Mr. Arnaman.
9 - - - -	Coxe's Quay - -	Ship of Fruit - -	Mr. Poer.
14 Dec. - -	Custom House Quay } (Ground Floor) - -	Opening Cases - -	Mr. Johnson.
16 - - - -	Botolph Wharf - -	Tallying Skins - -	Mr. Blake.
19 - - - -	Custom House Quay } (Ground Floor) - -	Opening Cases - -	Mr. Pocock.
20 - - - -	Brewer's Quay - -	Tallying Apples - -	Mr. Hervey.
27 April - 1832	Custom House Quay } (Ground Floor) - -	Tallying Skins - -	Mr. Field.
28 - - - -	Galley Quay - -	Opening Cases (Clocks)	Mr. Green.
10 May - -	Custom House Quay - -	Ditto - - (Eggs)	Mr. Ferguson.

* N.B. It has never been the practice to examine Silks on the Ground Floor at Custom House Quay.

Mr.
John Manning.

27 July,
1832.

The Witness.]—It appears he was only employed three days at the quays.
12513. And those three days on which he was employed at the quays he was employed on the ground floor where no silk goods are ever opened?—It is only on the several occasions that I mention in this Account (about four days) that he was employed in opening cases on the ground floor of the warehouse under the silk floor, where no silk goods are ever opened, if they are it must be a casual thing; it probably may happen, in a case where the contents are unknown, they may commence opening, but from the situation of the place it is not a suitable place for it.

12514. Has Allan Fraser any fixed salary?—He has not.

12515. And what allowance did he receive for each of the days' work, and how many hours was he employed?—The hours of attendance are according to the season; in the winter from nine to four, and in the summer eight to four; and I think he received 3s. a day.

12516. Do you consider 3s. a day, under such circumstances, sufficient wages for a man on whom you are to place confidence in taring weights?—He is immediately under the eye of the landing waiter, the officer does not trust him; he merely puts in the weights and balances the scale, the landing waiter sees to a pound what the goods weigh.

12517. Are we to understand, in all such cases, the landing waiter is the person who takes the tare or keeps the weight, and the other party merely his labourer?—In such goods as skins, a merchant will enter 20 bales of skins with an endorsement of the contents of each bale; in that case the landing waiter knows that the bale is endorsed as 100; he will trust that man; he is present and sees it; but he does not perform the operation himself of turning over the skins, but this man tallies them and announces there are 100 in that bale, then the landing waiter selects another bale, and if he is satisfied he will discharge the 20 bales on the examination of one, two, three, four or five, as the case may be.

12518. What is your duty at the Custom House?—Surveyor general for investigation of cases generally, and occasionally to go on to the quays.

12519. Your duty is that of a surveyor general, to see generally that the surveyors, as you call them, do their duty; is it not?—Not particularly; we are employed in matters generally, all cases; it does not often occur that we have an opportunity of going out, but occasionally to see that no more officers are employed than are necessary, and that the officers are on duty; and if we visit the docks we see that the landing waiters and surveyors are acting in the due performance of their duty.

12520. The landing surveyors are the parties charged with the immediate superintendence of the landing waiters?—They are; they are instructed to re-weigh, re-examine and to settle all tares on goods of every description, and no case of silk goods is ever discharged without the immediate examination and supervision of the landing surveyor as well as landing waiter.

12521. Do you mean to say that every package of silk goods is re-weighed and re-examined by the landing surveyor?—No, it is not delivered without the supervision of the officer; there is no case of silk goods scarcely, but what requires a tare, and they are all laid out on a table similar to this; the whole contents of the case; the landing surveyor goes and takes the landing waiter's book, in which there is a specification of each description; he sees those, and he selects from the blocks and the different figured silks, a certain number, for the purpose of ascertaining the tare, and then he sees the contents; indeed they are frequently weighed in his presence.

12522. Has it come to your knowledge that there had been any defect in ascertaining the particular kinds of manufactured goods, to charge them agreeably to the Schedule in the Act?—In fancy articles of silk goods there have been sometimes doubts on the part of the officers, but whenever they entertain a doubt, they always consult the trade; there is a diversity of opinion even among the trade, and then of course a representation is made to the Board, and it is decided by the prevailing opinion.

12523. Have you formed any opinion whether the appointing of a person bred to the trade, and a weaver, as a judge of manufactured silk goods, would facilitate the entries and proceedings of the Customs?—I think it would not; I think the practical officers of the Customs, from day to day, in the course of their examination, know every article of importation, perhaps from experience and practice, as well as an individual bred up in the trade; in short, I think with submission, that that would not be a good arrangement, for that individual, particularly in regard to the goods to be valued, might be interested; if that individual is consulted, that individual would be liable to be biassed more than an officer who had no interest

Mr.
John Manning.

27 July,
1832.

either in the trade, or any other person, but whose interest it is to protect the revenue.

12524. But the Committee are supposing a person to be appointed to protect the revenue as much as any other Custom House officer, without any connexion in trade, or with any manufacturer?—I do not think that that individual could know, or give such good information as the officers attain from the merchants in the trade generally. I remember there was once a skin inspector; there were skins of different descriptions; there were great varieties of them; that skin inspector did not know so well, although he was appointed on purpose, as many of the officers; we did not send to him, because he did not know from time to time, and we always referred it to the trade. If a new case occurs in the importation of silk goods, where there is a doubt, the officers apply to the trade, and they are not satisfied with applying to one, two or three.

12525. Are the Committee to understand you to say, that no advantage would be derived by appointing a person who is qualified?—I think it would be an injury to the revenue. That individual's opinion would be taken perhaps, and it would be an erroneous one, and the officers would be relieved from their responsibility.

12526. But do not you find the opinions of persons called in very often erroneous?—They differ, and it is impossible to say which is right, until it is ultimately decided one way or the other; therefore that party that it is decided against, it is presumed, gives an erroneous opinion.

12527. But do they not differ, to a very great degree very often, as to the value of goods; have you known the difference of opinion?—It is not in my practice, but the landing surveyors; but there are cases frequently in our department for further inquiry.

12528. In making the inquiry, with regard to the cases alluded by Veritas, would not the investigation have been much more easy, supposing the goods had been stamped?—That would have led to nothing; it was a transaction that had gone by.

12529. You examined it by the invoices of the importer?—No, the goods were not examined by any document produced by the merchants.

12530. The investigation took place by your having the invoices of the importer handed to you?—There was no investigation of the transaction, other than an inquiry to lead to whether his allegation was correct; whether his statement of frauds was correct, and we could not trace that during the whole of the inquiry, and during the correspondence and his repeated allegations of those frauds, he could not substantiate, or at least did not attempt to establish that any fraud had been committed but this one.

12531. Had not you the invoices of the goods handed to you by Veritas?—They were handed in, but not to me.

12532. Were they not handed to the Customs by Veritas?—They were; this was after the transaction.

12533. Were not those invoices handed in subsequently, when they might have been made up for the purpose?—They might have made invoices.

12534. It should seem, from the nature and tenor of your evidence, that you had a suspicion on your mind, that the invoices were made up for the occasion?—I am not prepared to insinuate as much as that.

12535. If there had been an opportunity of comparing those invoices with the goods in the possession of the importer, and the goods had been stopped, would not the investigation have been much more easy?—The merchant might have had an importation of a similar description of goods the week before, you could not identify them after they were once out of the custody of the Crown; but if goods were required to be stamped generally, any goods found in a merchant's possession not stamped, would of course be liable to seizure.

12536. But supposing the goods were corresponding in the stamps, that the stamps were made of such a description as to be able to identify the goods according to the invoices, in that case would not the investigation have been more easy?—The mere fact of discovering the goods to have been stamped, would have been satisfactory proof that the duty was paid.

12537. But supposing the stamps did not correspond with the invoice?—The stamps contain nothing, that I am aware of, to lead to any comparison of the invoice; the invoice is merely a statement of the particulars of the goods, the number of pieces and lengths, or whatever they may be, and the price of the article; but as to the stamp, it has no reference to any thing of the sort.

12538. Does

12538. Does the landing waiter ever superintend more than one scale?—Not that I am aware of. Of silk goods, certainly not; there are no means in the silk floors; there is only one scale fixed in the silk floors.

Mr.
John Manning.

12539. And a landing surveyor only superintends one floor?—During the whole of the legal hours he is moving from one floor to another at the different stations; the landing surveyor.

27 July,
1832.

12540. But a landing waiter?—The landing waiter remains, and never leaves a case when the lid is taken off; he never leaves that case till he has ascertained the whole contents of it.

12541. And at that period he is never supposed to be superintending another scale?—Never.

12542. You stated that the letter of Veritas was in some degree confirmed by an affidavit made by the importers?—Yes, there was an affidavit.

12543. And also by an affidavit made by a Frenchman?—Yes.

12544. So that if he were inaccurate those affidavits must both of them have been false?—Certainly, if he were incorrect.

12545. Then either there must be some mismanagement, some error or connivance in the Custom House, or those two affidavits must have been sworn falsely? —Yes. It does not prove that there was fraud on the part of the officers, but there must have been some error on the part of the officers; it would not prove the fact of fraud. It is quite possible, during the examination of goods, for a person to put a small parcel under the table or under the counter; such a thing is possible, but I should hardly think that such a thing is done.

12546. You know nothing of the examination of goods yourself?—I have known it forty years.

12547. Because you mention there is a difficulty in ascertaining the tare; do you know that French ribbons are not imported on wooden blocks, as you stated?—They are imported on rollers, or something of that sort.

Mr. *William Beckwith*, called in; and further Examined.

12548. IN your evidence before this Committee, you have stated that you purchased velvets of Morrison & Co. ?—Yes.

Mr.
William Beckwith.

12549. And you have stated that you purchased them for fifteen per cent. cheaper than you could import them, although you imported them for ready money?—Yes; and upon that part I beg to correct a little error I have fallen into in stating it without my documents at the time. I am now ready to correct it by the documents themselves; it appears the velvets were 25 or 30 per cent. cheaper instead of 10 or 15 per cent., as appears by my invoice, from Lyons, and Messrs. Morrison & Co.'s invoice in one instance—[*producing the invoices, marked B. C. D.*].

For C. Devaux & Co.

Oct. 18, 1828.

E. Hutton.

I have made a double mistake, Morrison & Co. supplied me at three month's credit, while I paid ready money at Lyons, which makes another difference which ought to be taken into consideration; instead of 15 it should be nearly 30 per cent.

12550. Have you made any other purchases of foreign goods at Morrison & Co.'s?
—Yes, several.

12551. What was the date of that purchase by the invoice?—Fifteenth October 1828.

12552. Did the evidence which you gave first here allude to that transaction, or to any other transaction?—To this transaction, and others as well, but this is one case I thought sufficient to illustrate, without bringing all.

12553. What were the others?—Some other velvets.

12554. And at what period?—About the same period.

12555. Where these other velvets part of the same parcel, or were they different?
—Different, and of course they were a different date and a different invoice.

12556. Now what is the date of the second?—I have not brought the second; I believe it was previous to this; I think so.

12557. Now

Mr.
William Beckwith.

27 July,
1832.

12557. Now what was the transaction of velvets, stated in your first evidence to have been purchased by you at 15 per cent.; was that the identical transaction you allude to, or any other?—I should say, there is a doubt on my mind that it is not; that the other will be about 15 per cent., and this proves to be about 30. I think if I had brought the other document probably it would not have been so strong a case as this one.

12558. Did you not afterwards state, that from their cheapness you inferred that they could not have paid the regular duty?—I think I did.

12559. Now in consequence of having said so, had you ever any communication with any of the partners of Morrison & Co.'s house?—I had. I had a long letter or two from Mr. Dillon.

12560. Did you see the invoice of those goods that you considered to have bought so very cheap; at the time that you had an interview with Mr. Dillon, were you shown the invoice of the goods and the accounts at the Custom House?—I did not look at them and examine them minutely, I did look at a great book that was produced, and I said that I would not go into the question as to how fair and honest Morrison & Co. had come by them; I could not doubt but what they had got them in a proper manner.

12561. But do you recollect whether Mr. Bridges or any gentleman accompanied you to that house?—Yes; but not for that purpose; I remember the case, that I received a letter from Mr. Dillon one morning as I went from the Silk Committee; on my return home, I called on him to know what his letter referred to.

12562. Is Mr. Bridges a partner in the house of Bridges & Campbell?—Yes.

12563. Have you no recollection of his being present at the time when this conversation passed between you and Mr. Dillon, with respect to those invoices and charges?—Yes. Mr. Crow was also present.

12564. Did you not at that time declare yourself perfectly satisfied?—Yes, as much as I am now, that they had got them cheaper than I could.

12565. Now did you not at that time express your regret at having expressed a doubt of these goods having been smuggled, and not regularly entered?—No; I never expressed any regret about the matter, nor do I now regret it; it is a matter of profit, and I saved a great deal of trouble by going to Fore-street instead of sending to Germany, or anywhere else.

12566. Did you not, having charged the house with having got those goods in a smuggled way?—I stated, in my former evidence, I never charged the house with smuggling; I never did, and do not mean it now.

12567. But did you not express a doubt, of those goods, which were bought so cheap, having paid the regular duties?—Yes, I doubt it now; if mine had paid that duty they would have been seized, I have no doubt.

12568. Did you not at that interview, when Mr. Bridges was present, expressly declare having seen the invoices, you were perfectly satisfied you were in error?—No; had I paid the duty, and entered mine at 10s. per yard, they would have been seized. How am I to reconcile the point of goods that are entered at a difference of 50 per cent.? I entered mine at 15s. per yard, and theirs must have been entered at 10s. per yard, to allow them to supply me at 15s. 6d. per yard.

12569. The question is this, did you or did you not, having once charged the house with an illegal transaction, did you not express yourself satisfied you had been wrong?—No, I did not; I never charged the house with smuggling.

12570. The Committee is alluding to the conversation which took place with a partner of that house, as regards that transaction, and not at all to what passed in evidence, this is a prior period?—I deny having charged the house with any illegal proceeding.

12571. Did you declare that you thought your suspicions were incorrect?—My suspicions then and now are, that they must have been entered at an inferior value, or they could not possibly have come in at the proper duty.

12572. Did you not express your regret at that time at having stated to any body that you suspected that house of an illegal transaction?—I never regretted it either then or now.

12573. You never expressed it?—I do not know that I did.

12574. Not in conversation?—If I did, I said I was sorry Mr. Dillon felt himself charged with smuggling; I should be sorry if he felt that imputation of being a smuggler; I do not charge him with it, I state the fact, and leave the honourable Committee to draw their own conclusions from the invoices now produced.

Mr.
William Beckwith.

27 July,
1832.

12575. Did you, in that conversation, express any regret at having stated suspicions against the house?—I have not stated them that I am aware of. Will Mr. Dillon state that I did to any other party or to any person.

12576. The question is simply this: if you will attend to it, you can answer it aye or no. Did you, in the conversation with Mr. Dillon, express a regret that you should have, to any other parties, stated a suspicion that the transaction of the entry of the velvets by that house had not been regular?—I will acknowledge that I have indirectly made such an observation; I think I wrote him a letter to that effect, that if I had, I would go with him to any person that considered it an imputation of smuggling against the firm, and set the matter right. The fact is, I wrote that letter with the advice of some persons in Mr. Dillon's establishment, on purpose that I might continue to deal with Morrison & Co. and save a law suit. I distinctly say now, I do not charge Morrison & Co. with being smugglers, but leave the honourable Committee to form their own opinions.

12577. Will you answer the Committee this question; will you state to the Committee whether you did or did not at that time express your suspicions of these goods having been illegally introduced?—Who did I express that to?

12578. Did you or not express that opinion?—Who was it to? There was only Mr. Dillon that I had any conversation with, he made a charge upon me, he said, "You have circulated a report that we are smugglers," and that is an unpleasant thing. I said, "No, I have not. Perhaps I may have stated this transaction of velvets to one or two in the trade, but I will make a point of seeing those individuals and explain the matter," and I did so; Mr. Dillon did not ask me for the names of any party he charged me with having circulated the report to.

12579. Are the Committee to understand that you had expressed your suspicions to others of those goods being illegally introduced?—No, I do not wish the Committee to infer any thing of the sort; I had my suspicions then, and I have now, and as such I kept purchasing instead of importing.

12580. The question is, whether you expressed those suspicions to others?—I am not aware that I did, except in my own establishment perhaps.

12581. Did you not, at the interview which the Committee have alluded to, state your regret that you should have mentioned any such suspicions, and offered to write a letter to the house expressly stating that regret?—I do now charge my memory, and I regret very much that I destroyed Mr. Dillon's correspondence; it is only a fortnight ago that I destroyed it. Since my examination, I thought it was done with; and in those letters I recollect there was this observation. "I would not have cared," says Mr. Dillon, "for any observation upon such an occasion as this, had not the allusion come from a respectable manufacturer like yourself; if it had come from a discarded servant I should not have cared."

12582. Read that letter, and say whether you have any recollection of such a letter.—(*Handing a letter to the witness.*)—In the first place, what is the date of that letter?—The 2d of December 1831.

12583. Now just run over it, and say whether you recollect any such letter?—I remember a letter something to this effect.

12584. Well, that is a letter from Mr. Dillon to you?—It is a letter asking me whether I had been up to Lord Auckland, or any of the members of the Board of Trade, stating they were smugglers, to which I said I had not.

12585. Is that a copy of the letter which you say you destroyed lately?—Before I give a direct answer to that question, I had better read it all through. There was also another long letter from Mr. Dillon.

[*The Letter was handed in, and read, as follows:*]

Dear Sir,

"Fore-street, December 2d, 1831.

"SINCE I saw you here, I have more fully investigated the matter as to the velvets. As I understand it, you expressed an opinion to our Mr. Kirsop, that the silk velvet you bought of us in September and October 1828, could not have been duty paid on account of the low prices at which we invoiced them to you, you having ordered similar goods from France about the same time at much higher prices. Under ordinary circumstances this is a matter which I should not have felt any disposition to explain or enter upon. That we should astonish our customers by the cheapness of our goods is no new matter; but I think there are at present reasons why I should more fully explain to you the matter, and call upon you for an explicit declaration respecting it. The facts are these;—we sold you as follows: September 10th, 1828, 268 yards figured silk velvet 18s. 241l. 4s. October 15th, 1828, 178 $\frac{7}{8}$ of ditto, 15s. 6d. 138l. 12s. 6d. These velvets formed the greater portion of two lots, the bought invoices of which now lie before me; viz. August 13th, 1828. Bought by us, of C. V. Turbe,

C. V. Turbé, Lyons, in English money, 171*l.* 6*s.* 9*d.* September 10th, 1828, Bought of the same, 86*l.* 7*s.* 10*d.* We paid duty on these, September 5th, 1828, 49 lbs. figured silk velvet 27*s.* 6*d.* 67*l.* 7*s.* 6*d.* October 13, 1828, 28 lbs. 15 oz. ditto ditto, 27*s.* 6*d.* 39*l.* 16*s.* The first lot came in three cases ex Belfast; the last in a case ex Heros, Calais to London; the duty in both cases being paid by our agent, Mr. J. W. Wilkinson. The original document you and Mr. Bridges saw when last here, and may again see if you please; as at that time you expressed yourself satisfied of your mistake, the matter might have dropped here, but as you so fully believed it that you could name it to one of our buyers, it is highly improbable but that you should also, during the course of three years, have named it in some other quarter. I must call on you, therefore, to state in the same quarter, that you are now fully satisfied that your impression was a mistaken one. This is a matter which I may, perhaps, feel more personally than as affecting the house, which may well disregard such reports, though even as affecting the house, whilst there are parties who either from interest or bad feeling have a disposition to misrepresent us, it is desirable that in all respectable quarters such misrepresentations should be done away. You know that a French trade forms a very small part indeed of our business; that in French broad silks we do next to nothing, and that it is quite as much our interest as it is that of the English manufacturers that smuggling should be put down. The best trade for us is a home trade; and that is the business which we have always cultivated. A statement similar to the one you made, had it come from a discarded servant, or from any party who sought to injure others, in order to cover his own misconduct, I should not have stooped to have noticed; but coming from a respectable manufacturer like yourself, I have thought it right, in the first place, to undeceive you, and, in the second place, to call upon you as a matter of justice, to explain the matter correctly in every quarter where, whilst labouring under a mistake yourself, you may have misrepresented it to others.

"I remain, dear Sir, awaiting your reply,

"Your's, very truly,

"John Dillon."

12586. Have you any recollection of receiving a letter nearly to the same purport as that?—I have; but before I give the answer to that letter, you had better have the other letter read, because that letter of mine, I believe, was in answer to both.

[*The Letter of the Witness, in answer to Mr. Dillon's letter, was handed in, and read, as follows:*]

"Dear Sir,

Spital Square, Dec. 5th, 1831,

"My absence from town till a late hour on Saturday night, prevented me the pleasure of acknowledging the receipt of your letter of the 2d instant. I am very sorry for your uneasiness respecting the figured velvets, which I am now satisfied came regularly through the Custom House; and I shall therefore make a point of informing the few friends I had mentioned the matter to, and this I trust will fully satisfy you. But should you know of any person to whom I have named it, and you think yourself or your Firm injured by it, I shall have great pleasure in accompanying you to correct any mis-statement I have erroneously made. Having been always on friendly terms with your Partners, I trust you will not attribute any such unworthy motives to me, as to think me capable of misrepresenting your House in any quarter, to cover my own misconduct.

"I remain, dear Sir, your's truly,

"W. Beckwith."

"To John Dillon, Esq. Fore-street."

12587. That letter is dated three years subsequently, is it not, to the purchase you made?—Yes.

12588. Having heard that letter and answer, how do you reconcile the statement in that letter with the evidence you gave before this Committee, that you still suspected these goods were smuggled, and that you left the Committee to draw what conclusion they thought proper?—I stated that I did not charge the house with smuggling, either then or now; and with regard to that letter, I beg to state, that before I wrote that letter I had written a very long one, with the intention of answering Mr. Dillon's, defending my suspicions as far as I could. I am perfectly aware Mr. Dillon states in his letter that the French trade forms a very small proportion of their business; I remember perfectly well writing the letter, and stating, instead of that, my suspicion was a little confirmed by one of their firm, Mr. Crow, being in France the major part of the year, purchasing goods; and I then stated, that another part of my suspicions was that their house, like many others, had greatly increased since Leaf's affair, and I destroyed that letter. I was defending my suspicions, and, by the advice of some friends, they thought, as the business was dying away, it would be more to my interest and advantage to let the matter drop; and then it was that I wrote that letter.

Mr.
William Beckwith.

27 July,
1832.

Mr.
William Beckwith.

27 July,
1832.

12589. Do you mean to say, when you wrote that letter, you wrote that which you did not believe at the time you wrote it?—Yes; leaving Mr. Dillon to draw his own conclusion.

12590. When you wrote that letter, you wrote that which you did believe or did not believe at that time?—I wrote it with a very strong suspicion in my mind, that if the goods did pay the legal duty they must have been entered at something like 30 per cent. under value.

12591. Then when you wrote that it was your conviction that those goods had come regularly through the Custom House, you wrote that which at the time you did not believe?—They would then come regularly, and Messrs. Morrison & Co's. house would be quite free from suspicion of smuggling; but I had entered some a few days before, and I entered mine at 15s. per yard, or in that proportion, by weight.

12592. Then you conceive that you could state, as an honest man, that you believed that those goods came regularly through the Custom House, when it was your belief that they had been entered at a lower price than they ought by law to have been entered at?—It is regular and common and ordinary for people to run the chance of goods being seized, by entering at under value.

12593. Do you mean to state that you believe that goods could regularly come through the Custom House, when you believe those circumstances to have been the case, which the Committee have stated?—There appears only two days difference in the importations, and yet they sell them to me at the price I enter mine for, and say they get a good profit too.

12594. Then, is that the ground on which you have a suspicion that Morrison & Co. did not pay the regular duty?—I dare say they did pay the duty if they entered them below their value, which risk I would not venture to run, for fear of being seized upon.

12595. With the sentiments expressed in that letter, how can you reconcile the evidence you gave the other day?—Interested motives, and dealing with the house, letting the business die away, I thought I should very likely be spared a law suit.

12596. Do you mean to say, that this letter which has been put in (the letter of Mr. Dillon to you) did not give you the full particulars, the price of the goods, and of the value at which they were entered?—Mr. Dillon has not answered the charge in the way that I do; and, before admitting that I have made any serious error, I call upon him for the note of the entry at the Custom House.

12597. Is it not in that letter?—That is only Mr. Dillon's assertion; and I disbelieve him.

12598. At the time you called on Mr. Dillon at his house, or where this meeting took place, were the Custom House documents then produced to you?—On my honour, I really do not recollect it.

12599. Did you or not see the Custom House documents at that time; aye or no?—I am sure I would not venture to assert that.

12600. Will you assert, Mr. Dillon did not offer to show you the Custom House documents?—He offered to show me so many documents, and I was very much fatigued.

12601. The letter which was addressed to you, gave every item of entry; and here are these words, to which I beg your attention, "The original documents you and Mr. Bridges saw when last here, and may again see if you please;" now I ask you, how do you reconcile that with the evidence you have given?—I do not reconcile it, I leave the Committee to reconcile it; by having the facts and invoices before them, they may judge for themselves; I do not give an opinion. There is a difference somewhere between us of about 50 per cent. in the entry; mine were entered at 15s., and they sold theirs to me at 15s. 6d.; they were the identical patterns and quality I had ordered of a man in Lyons, who had promised to send me the first supply from the looms.

12602. Did you not state that you thought the Frenchman had cheated you, by supplying them with the goods first?—I did, and I think so now; and I have no doubt of this fact, that Mr. Crow being over at Lyons, he tempted the man with ready money to part with the goods that were intended for me, as I really had purchased quite largely enough of this Frenchman at the time at 19s.; but in my own defence I was obliged to go into this job warehouse, and buy velvets at 25 per cent. less than I could import them for myself, and that was a mortifying thing to me; I bought them in my own defence, or they would have undersold me. Some of their own establishment advised me to write that letter, or it would be seriously injurious to my interest in business with the house; I deal largely with them, and I did

I did it upon that principle only, or else I should have sent them a long letter defending my assertion.

12603. Did you ever charge the house with smuggling?—I am not aware that I ever did; on the contrary, for fear that impression should be taken, I stated distinctly here, that it was a large house which supplied me; then some honourable Member led me into the question, and pressed for names, and it was then I stated Morrison & Co.

12604. Did you charge that house directly with smuggling?—I believe I did not, I feel almost confident I did not.

12605. Do you mean to say you bought certain goods 25 or 30 per cent. in that house lower than you could import them at?—I not only say so, but I now prove the fact by the invoices before the Committee.

12606. And did that circumstance lead you to suppose that the Frenchman must either have cheated you, or that this house must have passed their goods at less through the Custom House than you did?—Yes.

12607. Are those the motives and the reasons?—Those are the motives; had the Frenchman called upon me again, I should have wanted the explanation how it was that he could supply Morrison & Co. at 25 per cent. less than he did me.

12608. Are you or not convinced of the fact, whether you really did buy these goods at less than yours were entered to you at?—I think they must have entered them at a considerable lower rate.

12609. Did you buy them at a considerable less price than yours were entered at at the Custom House?—The article was fashionable at that time, and so far from my being bold enough to enter mine at a reduced value, I entered them at their real value, for fear of their being seized, even at 15s. per yard.

12610. Are you convinced of the truth, that your goods were entered to you at the Custom House at a higher price than you afterwards got them from this house?—My goods were entered at 15s.

12611. You say you bought them at 25 per cent. less than you could have imported them; is that the truth?—Yes.

12612. And that that circumstance, and that alone, was the ground of your suspicions?—Yes, 25 or 30 per cent. difference I think justify my suspicions.

12613. That was the only ground of your suspicion?—That was the only ground of my suspicion; I stated the other day, when Mr. Morrison was not present, that I left it to the Committee to judge for themselves.

12614. Are not velvets charged by weight?—Weight or value, just as it pleases the importers, I believe.

12615. Were those goods in the invoice that you have produced here paid by the weight or by the value?—Mine were paid by the weight, I presume.

12616. How much per pound weight?—Twenty-seven shillings and sixpence, but I have no doubt that I also stated the value at the Custom House; I have no doubt about it.

12617. State to the Committee what you mean by saying that the goods were passed at a lower valuation; if yours were passed by weight, what had value to do with it in paying the duty?—It is optional I believe; you may enter either by weight or value.

12618. But supposing both parcels of goods were passed by weight, has value any thing to do with it?—Yes, I think it has.

12619. Supposing yours paid duty by the weight, and Messrs. Morrison & Co's. parcel paid duty by the weight too, how can you say that it makes a difference whether the goods were valued less or more at the Custom House; they paid duty there both by weight, and not by value?—Mine did, and I think they stated their's were entered by weight; I do not know whether their's were entered by value as well, but a value ought to be stated.

12620. Have you said that they were entered at a different value?—I said I presumed so, for they sold them to me at the price I entered mine at.

12621. But is it within your knowledge that they were absolutely entered under value?—No.

12622. Your own were entered by the weight?—Yes.

12623. Was it not in Mr. Dillon's letter stated, the others were entered by the weight also?—I am sure I do not recollect.

12624. Will you read the letter, and see if it is not there stated, that they were entered by weight?—Yes, but this is Mr. Dillon's assertion; I should like the Custom House note, the same as I have brought, of my own.

12625. Were

Mr.
William Beckwith.

27 July,
1832.

12625. Were you not shown that?—I dare say I was, but I was fatigued, and paid but little attention to it.

12626. Did he or not offer to show you that?—I dare say he did, a large quantity of documents were brought forward.

12627. Mr. Dillon having stated the duty was paid by weight, and he having offered to show you the document in which it was shown it was paid by weight, and the duty on your goods having also been paid by weight, how do you now reconcile this with your former statement, respecting the circumstance of the goods having been entered at a different value?—My suspicions are founded on the difference of price.

12628. Then although Mr. Dillon stated they were entered by weight, and offered to show you the document; and although you knew yours were entered by weight also, you thought you were justified in calling on the Committee to presume their's must have been entered at a different valuation?—It does not even alter my opinion now, any figured velvet manufacturer would express the same doubts which I have.

12629. Did you not see the invoice of the goods you bought from Messrs Morrison & Co. the invoice of those goods bought at Lyons?—No, I am not sure that I did; Mr. Crow acknowledged afterwards, that he got six or eight per cent. profit by the transaction, when I was since talking to him about it, and then I stated to him, I remember, that the Frenchman must have been a great rogue to serve me in the way he did.

22630. Have you any recollection of having seen the invoice?—I do not recollect it.

12631. But it was offered to you?—I do not recollect that, they offered books and papers, which I did not choose to look at, because they could not convince me further than I was convinced.

John Dillon, Esquire, called in; and Examined.

*John Dillon,
Esq.*

12632. YOU are a partner in the house of Morrison & Co.?—I am.

12633. There is a letter there dated the 2d December 1831, purporting to be signed by you, is that your hand writing?—This is a copy of a letter I wrote to Mr. Beckwith, after the interview I had with him.

12634. Well now what passed at that interview which led to the writing of that letter?—Perhaps I may be allowed to state what led to the interview; one of our buyers told me that Mr. Beckwith, in the course of conversation with him, had said, that from the cheap price at which he had bought the velvets of us two or three years before, he believed that they were not duty paid; I was a little startled by the information: and I deliberated and I believe consulted with my partner, Mr. Crow, as to whether it was or was not worth while taking notice of such an imputation; we determined however to take notice of it, and to convince Mr. Beckwith of the falsehood of his suspicions. It happened that Mr. Beckwith, accompanied by Mr. Bridges, called upon us, and in the presence of my partner, Mr. Crow, I repeated to him what he had stated, and I said, Now, Mr. Beckwith, we are desirous of putting you in possession of the facts, and you are quite at liberty to see them; I will show you, with regard to those velvets, the original purchase, and all the documents connected with them.

12635. Do you allude to the velvets which you sold to Mr. Beckwith in 1828?—I do; the only velvets that we ever sold him.

12636. And it is respecting those velvets that Mr. Beckwith had entertained suspicions with regard to the regular entry of the goods?—Yes; I began by asking Mr. Beckwith the ground of his suspicions; he stated that he had ordered velvets which were so much dearer than those he bought of us; that he inferred from that circumstance that we could not have paid the duty; and upon comparing notes, and my mentioning the name and producing the invoice, he said he had bought them of the very same man. I then said, I will now convince you that the duty was paid on those goods, and we searched and found the two original invoices, for there were two transactions occurring within a month of each other; I produced to him then what I produce now (*producing two invoices.*)

12637. These are the original invoices?—These are the original French invoices, by which we discovered, as he said, that we had bought them of the same man as he had bought them. We bought ours of Charles V. Turbé, of Lyons.

12638. Now

John Dillon,
Esq.

27 July,
1832.

12638. Now where is Mr. Beckwith's invoice?—I never saw Mr. Beckwith's invoice; he informed me it was the same man, and he abused the man for selling to us at a rate so much lower than he had sold to him.

12639. Then, if these invoices are from different houses, of course Mr. Beckwith must have been in error, in supposing they were supplied from the same house?—He must have been so; he certainly did so state to me, and was very indignant with the Frenchman for having charged him 30 or 40 per cent. more than he charged us.

12640. However, you produce now the original invoices to you of those velvets purchased by you at Lyons, part of which you sold to Mr. Beckwith?—Yes, the greater part of which we sold to Mr. Beckwith.

12641. Your letter is dated the 2d of December 1831, on what day did Mr. Bridges and Mr. Beckwith call on you?—It was some three or four days before; I expected to hear again from Mr. Beckwith, and after an interval of three or four days not hearing from him, I addressed that letter to him.

12642. Now did you show to Mr. Beckwith and Mr. Bridges these original invoices which you now produce?—I showed them to Mr. Beckwith, Mr. Bridges was standing by.

12643. Did you show the value or the weight; did you show the entry or any document to satisfy him of their having gone through the Custom House?—I showed him the only document which we possessed, the account of our agent, in which the duty was paid.

12644. Who is your agent?—Our agent's name is Wilkinson; and I stated to Mr. Beckwith that if he wanted to see the original entries, they were made by Mr. Wilkinson on such a day, mentioning the date and giving the marks of the package, and every clue by which he might make the necessary inquiry, producing the vouchers for our payment of the duty.

12645. Then did Mr. Beckwith at that conversation express to you any alteration of his opinion, or that his suspicions were removed, if suspicions he had entertained of this being an irregular transaction?—He did most unreservedly.

12646. Well now, in that letter you state your readiness, if he is not satisfied, again to show him all the documents?—I do.

12647. Will you look at that letter of Mr. Beckwith's; is that the answer which you received from Mr. Beckwith to your letter of the 2d?—It is.

12648. Does that letter contain any expressions of regret different from those which, in conversation, Mr. Beckwith expressed?—Certainly not at all different in their purport; he owned himself, in the conversation with me, perfectly satisfied with the documents I showed him; he expressed regret for having entertained such suspicions, and was willing to explain it in any quarter in which he had made those mis-statements; and it was in consequence of that declaration of his that he would make the explanation in other quarters, and three or four days having elapsed, and he having made no such explanation, that I wrote him this letter.

12649. Now subsequent to that letter did you ever understand that Mr. Beckwith had again stated his suspicions or charged your house with irregular proceedings?—I never did.

12650. You are aware that doubt has been expressed in his evidence given before this Committee?—I am.

12651. Now did you write any other letter, and did you receive from Mr. Beckwith any other letter respecting that transaction than those two that are now produced?—I wrote Mr. Beckwith two other letters subsequent to the receipt of this; I see my first letter was dated on the second, and his reply on the fifth; on the sixth therefore (the next day) I wrote, "Dear Sir,—In reply to yours of yesterday, I beg most unequivocally to assure you, that when speaking of parties who misrepresented others in order to cover their own misconduct, I in no way whatever referred to you, as you may be assured by a reference to my former letter. The very fair and friendly tone of your letter is gratifying to me, and what I should have expected from you; as you state that whilst labouring under a misapprehension you mentioned the matter to a few friends, and now express a willingness to explain the truth to them; I beg to know the names of the individuals in question, as I can then form a better judgment of the steps which ought to be taken. When the matter first arose Lord Auckland's name was mentioned; I shall be obliged by your saying whether the fact in question, or the opinion which it appears you entertained, was mentioned by you to that nobleman, or in any way conveyed to him, or to any party connected with the Board of Trade. After the candid declaration in

John Dillon,
Esq.

27 July,
1832.

your letter I cannot doubt your readiness to give every information, and to do any thing in your power to remedy any mischief which may have arisen. Fully sensible of the fairness and propriety of which, I remain, dear Sir, yours truly, John Dillon."

12652. Did you receive any answer to that letter?—To that I received no answer; I waited for some days and consulted with my partner (Mr. Morrison I believe was out of town at the time)—with my partner Mr. Crow, as to whether we should or not take any steps to compel an answer, and after the interval of some days (that is from December the 6th to the 17th) I addressed this letter to Mr. Beckwith. "Dear Sir,—I beg to remind you of my letter of the 6th, to which you have not yet favoured me with an answer. Your's truly, John Dillon." To that also I got no answer, and there the matter dropped.

12653. Then you have never received any other letter from Mr. Beckwith respecting his suspicions on that transaction, except the one which has been shown you dated the 5th?—I have not. In every thing Mr. Beckwith wrote and said to me, up to this moment, he always conveyed to my mind that he was perfectly satisfied with the matter; and if I did not know from undoubted information that he had given such evidence, I could not have believed it, it is so inconsistent with all that he has ever said or written on the subject. I have two remarks to add; one is, that I at that time showed Mr. Beckwith by calculations, or offered to enter into calculations to show him, that after we had bought those goods at the invoice prices, and paid the duty and expenses, that we still got a profit on them, and I wish also to explain, on the subject of weight, that there is no option on the part of the purchasers as to entering by weight or by value; the option is on the part of the Government, and not on that of the importers, and the Government at that time always collected the duty by weight.

12654. You paid duty on that parcel of goods by weight, did you not?—We did, by weight, and we had no power or option to do it otherwise, we always do it by weight, and so does every body else.

12655. Now will you examine Mr. Beckwith's invoices of the 24th, and your's of the 23d of September, as it is understood the velvets were of the same pattern and the same quality, and state what is the difference per cent. between the price charged to Mr. Beckwith, and the invoice price charged to you?—Our invoice prices of September the 23d, are at the two prices of 15 francs and 18 francs, and Mr. Beckwith's invoice of the succeeding day (the 24th) is at 19 francs.

12656. Now what proportion of your's was at the 15 francs?—I really cannot say, for I perceive that in other invoices some of our's were 21 francs; the price depends on the width, quality, &c.

12657. Does it not depend also on the person who they are bought of?—Certainly.

12658. Your's may have been bought from the manufacturer and the others from an agent?—Yes.

12659. With the profit of the intermediate dealers is not that so?—Yes; besides that one manufacturer may sell much dearer than another, and the same manufacturer may sell much dearer to one person than he does to another.

12660. Will not those two invoices explain a difference of 20 or 30 per cent. in prime cost, and account for the difference of price at which Mr. Beckwith seems surprised?—On the face of the thing I should say that does appear so.

12661. Look at that invoice of Mr. Beckwith's, were those goods, according to that invoice, bought from the manufacturer at Lyons or from an agent in London?—From the fact of its being written in the French language, and with a French pen, I should say that the goods were bought in France.

12662. Who were they bought of?—Mr. Beckwith's?

12663. Yes?—The invoice says, Felix Vernet of Lyons.

12664. Is not there another importer below?—No, that is the charge of Devaux.

12665. Look at the heading of the invoice?—The heading of the next invoice is, "Mr. Beckwith to C. Devaux" it is for charges on two pieces of velvet by the Superb from Calais.

12666. Do those appear by the invoice to have been bought through an agent, or of the original manufacturer?—They were shipped only by Devaux; I should infer from this invoice, that the goods were bought from the manufacturer at Lyons.

12667. Is Mr. Crow a partner of your's?—He is.

12668. Is the person who acts as your agent in France, and who is stated to have been resident there nine months, a partner of your's?—He is not a partner, he

he is the brother of our partner, and certainly never was resident there nine months in any one year, or any thing like it.

William Banbury, Esq., called in; and further Examined.

12669. IN your former evidence you alluded to some compromises said to have been made by several large houses whom you did not particularize, are you prepared to point out the houses that you then alluded to, or do you wish to withdraw the evidence, or what do you wish to be done about it?—I would rather withdraw the evidence than mention names. When I was examined before, I said, I hoped I should not be called upon to name any house, because it would be extremely unpleasant to me, and I did not wish to do it, and then I was not pressed any further on the subject; I do not know that that evidence at all relates to this inquiry, and it was the only part of my examination that I found myself unpleasant in, and extremely sorry I am that I was led into it, and made any observation of the sort, and if it can be withdrawn I shall be very happy.

12670. Well, do you in that evidence refer to a particular transaction, namely, that of Marshall of Watling-street, or do you refer to other matters of the same sort that came under your notice?—Several things of this kind have come under my notice, but I did not mention any names; and I do not wish to mention any names I am sure. I have been told it was supposed I alluded to the honourable Member there (*pointing to Mr. Morrison*) but I certainly can say I did not allude to him nor to his house. I did not allude to the honourable Member for Leicester. I have two that I could allude to; I should be very sorry to mention their names, because I had not it from authority, mine is only hear say; I have not been an assignee, or heard the trials or any thing.

12671. The Committee understand you to say that you do not allude to the two honourable Members who are Members of this Committee, and engaged in that trade?—No, I say it does not apply to them.

12672. But that you feel a difficulty in pointing out the houses to which you do allude?—There is a man, I suppose he would not mind if I mentioned his name; but I would rather not, because he tells me when he meets me, “Well Banbury when do you get out of business, because I have had a good deal of your money, and if you do not get out I will have more yet.” Somebody has had it for I have lost 25,000*l.* in business.

12673. Then there are two or three houses to which you do allude, but you do not allude to the respectable manufacturers of London generally?—Certainly not.

12674. But who the houses are, are pretty notorious in the trade?—I was very glad I was not before compelled to mention the names; I said it would be extremely hurtful to my feelings to do it, and I was not pressed any further.

12675. How many houses were there in that case of Marshall & Company in Watling-street?—Upon my word I do not know really.

12676. In the case of Marshall & Company, were there not four houses against whom actions were brought?—Upon my word I forget; I am sure there was one I know in Cheapside, or in that neighbourhood, and one or two in the country.

12677. Do you know of any other instances in which actions have been ever threatened or brought against individuals, or where actions have been compromised?—I think I have heard of such things, but they do not come within my own knowledge.

12678. You were asked “Do you mean to apply that charge of making those compromises, to all the great dealers in the city?” and your answer is, “I believe it is pretty general.”—There have been a great many I know nothing about; there have been actions I have seen in the newspapers. Sometimes people that have had actions brought against them have had verdicts in their favour, and sometimes they have been convicted, but I do not recollect, I am sure, all these transactions.

Mr. Thomas Stone, called in; and further Examined.

12679. It is understood you wish to make some further addition to your evidence in explanation of that which you have already stated, have you any papers to produce, or any statement to make in explanation or confirmation of your former evidence, and to what part of your evidence does that allude?—It alludes to the duties on foreign thrown silk. I consider that at present this Committee have not a fair statement of the Spitalfields case before it; I consider that the operatives in Spitalfields would be injured if the Committee were now to decide on

*William Banbury,
Esq.*

1832.

*Mr.
Thomas Stone.*

Mr.
Thomas Stone.

27 July,
1832.

the evidence, as far as I understand it, (and I have been here regularly attending upon it) unless they had the case more fully stated on the part of the Spitalfields weavers. I have taken pains to take the opinions of some of the most respectable, and the most extensive manufacturers in the Fields, and I have got a paper with their signatures attached to it, and they, together with Mr. Gibson and myself, employ at least 3,500 looms. Now I believe that the Trades' Committee have not, altogether, so many as 500 looms in Spitalfields, independent of those who are throwsters. My reason for mentioning this is, that 500 looms is nothing in comparison with 3,500 or 3,700.

12680. But have you any thing to state in explanation or in confirmation of the opinions which you gave respecting the importation of thrown silk?—I consider this Paper highly confirmatory of it.

12681. What part of your evidence does that allude to?—To that part in which I have stated my opinion, that if French wrought goods were still to come into this country, the duties on Foreign thrown silk should be removed to enable the master weavers in Spitalfields to compete with the French manufacturers.

12682. In what part of your evidence have you so stated?—I have stated in my evidence, it was decidedly my opinion that that should be the case.

12683. Now the 3,700 looms that you speak of as employed by yourself and other manufacturers in Spitalfields, how many of them are Spitalfields looms?—More than 3,000.

12684. And you have also stated, that what you call the Trades' Committee (you perhaps know best what you mean by the expression) employ only 500 looms, is that statement correct?—I believe, as respects Spitalfields, it is correct in respect to the manufacturers who are for an increase of duties, except that they are throwsters; but I believe, even if I were to include them, that it would amount to but a few more.

12685. Have you not stated in your evidence, that you believe the throwsters are now working for a loss, and if the duty were further reduced they must be destroyed, and a great part of their property destroyed?—I have stated, in my evidence, that I consider the throwsters are now in a very depressed situation, and I do not wish to lessen the force of that admission. My only desire is to have a fair statement of the case before the Committee, and then I shall be satisfied with the decision the Committee may come to; at present I think they have not a fair statement.

12686. What is the paper which you were about reading?—"We, the undersigned silk manufacturers, are of opinion that the removal of the duties on foreign thrown silk would be a great benefit to us. Signed, Peter Bedford & nephews. As a manufacturer I fully agree to the above, but as a throwster should prefer the duties remaining as they now are. Signed, J. J. Buttress," (a man that employs 520 looms. "Charles Rugg, Fore-street."—"We think nothing will substantially benefit the silk trade but prohibition; if that is not granted we think it would be most desirable to remove the duty entirely from Piedmont organzine. "Duff, Brooks, Emerson & Co."—"We think the same. J. & W. Robinson and Co.; Robert Graham & Sons, W. Brandon, Spital-square; W. Wilson & Co., "11, Fort-street; W. Soker, 16, Fort-street, Spital-square." I am certainly within the mark when I say, that these gentlemen employ 3,700 looms, our own and Mr. Gibson's included.

12687. Are any of those gentlemen members of the Trades' Committee?—I believe that Mr. Emerson was one of the Members of the Trades' Committee.

12688. None of the others?—Really I am not sure.

12689. How many of the 3,700 looms are employed in Spitalfields?—I have answered that question, I said 3,000.

12690. How many looms are there altogether in Spitalfields, Bethnal Green, and the neighbourhood?—Something like 16,000 looms altogether, and about one-third of those are out of employ.

12691. Do you mean to state, that the gentlemen composing the Trades' Committee, and holding opinions in unison with theirs, do not employ more than 10,000 looms?—I mean to say, that they do not employ 1,000; that is to say in Spitalfields.

Lunæ, 30^e die Julii, 1832.

EDWARD AYSHFORD SANFORD, ESQ. IN THE CHAIR.

Mr. *Thomas Stone*, called in; and further Examined.

12692. HAVE you any thing further to say in confirmation or explanation of your former evidence?—Having been favoured with the permission of seeing my former evidence, the part that I should refer to is No. 5789; what I said the other day is in confirmation of that. There were some more questions put to me on that subject, I had no copy of the evidence, therefore I could not exactly say that that was the case; I should have said more if more questions had been asked me on the subject at the time; but I believe that this is quite sufficient to show that I hold the opinion which I have now endeavoured to confirm. I do not wish to say any thing more unless there was some further question put to me.

12693. Have you any explanation to give on the subject of the average earnings of your weavers in Spitalfields?—I believe the weavers on three singles, after necessary deductions are made, are earning something like 7s. a week, not more.

Mr. *Robert Graham*, called in; and Examined.

12694. WHERE do you live?—Spital Square.

12695. What are you?—A manufacturer, of Spitalfields only.

12696. What number of looms do you employ?—About 400.

12697. How many years have you been a manufacturer, and how many years have you been acquainted with Spitalfields?—I have been 25 years a manufacturer, and have been acquainted with it all my life.

12698. Have you been in the habit of employing throwsters during the whole of the period since you have been a manufacturer?—A very great portion of the time within the last 20 years, and perhaps a little longer, I am not quite sure.

12699. Have the prices which you have paid for throwing silk varied very much during that time?—Yes, very much.

12700. What was the price that you were paying for throwing silks the last year?—I have taken the statement from 1826 to the present time, from my own silk book; the prices which I paid for fine Italian silks from 1826 to March 1828 was 3s. 6d. per tram.

12701. Is that taken on an average?—It is taken from my own silk book; during the whole of that time I paid 3s. 6d.

12702. Without variation?—Yes; and then from March 1828 to May 1829, I paid 3s., and from May 1829 to May 1830, I paid 2s. 9d., and from May 1830 to January 1831, I paid 3s. 6d., and from January 1831 to the present time, 3s.; this is for the best and finest silks deniers 24–26. In January 1826 I paid 6s. 6d. for organzine, which continued till February 1827.

12703. Do those prices per tram include the waste?—No; from February 1827 to January 1828, I paid 6s.; and from that time to January 1829, it was 5s., and from January 1829 to February 1830, 4s. 6d.; from February 1831 to January 1831, 5s. 6d., and from January 1831 to April 1831, 5s., and from April 1831 to March 1832, 4s. which is the present price.

12704. That is also exclusive of waste?—Yes; I do believe that many have worked at lower prices.

12705. You have no account of the prices paid before 1826?—I have not them with me; but I can remember 10 years ago we paid 8s., or about 8s. was the price.

12706. Do you recollect it being lower than the price you have given in before?—I think it very probable it ranged from 8s. down to 6s. 6d.

12707. Has any alteration taken place in the price recently?—Not with me.

12708. What is your opinion of the effect of the duty on thrown silk in the trade of Spitalfields?—I believe, under the present regulations, that we ought to be placed on similar terms with all other competitors, if we are to have this powerful competitor, the French, it appears to me we ought to be enabled to go into the market on similar terms.

12709. Do you not consider that the lowering or the total removal of the duty on thrown silk would be very satisfactory both to the manufacturer and the operative

Mr.
Thomas Stone.

30 July,
1832.

Mr.
Robert Graham.

Mr.
Robert Graham.

30 July,
1832.

in Spitalfields?—I am not aware how far it will affect the operatives; there is so much competition that I am afraid it will prevent the high prices.

12710. By competition, you mean competition for labour?—Certainly, in Manchester particularly.

12711. There is no fair monopoly of the silk trade in the home market?—I think not; the whole of that which I have to say would depend entirely on the competition we have to sustain; cut off that competition, and make any arrangements you please between yourselves.

12712. Is it your opinion that the competition in Manchester has had the effect of lowering wages in Spitalfields since 1826?—Certainly it was the primary cause.

12713. Do you believe, if the prohibition of French silks was again enforced, that would have the effect of raising wages in Spitalfields, seeing the competition that exists between Manchester and Spitalfields?—Reasoning on general principles, it must have a tendency to lessen competition, prices will advance.

12714. That is to say, if the French manufactured goods were excluded from the market, there would be less competition than at present, you would then have the competition of the home market only to contend against, instead of having the additional pressure which comes from the French goods?—Yes.

12715. Is not the competition on the part of the weavers in Spitalfields not alone with the people employed in manufacturing silks in London, but also with the great mass of cotton weavers, who can, in case of a demand for labour, turn their hand to the manufacture of silks?—Yes; and I thought so 20 years ago, I saw the probability of this period arriving, and in fact stated it.

12716. Under no circumstances do you expect that any material improvement in the rate of wages can take place in Spitalfields?—I am afraid not.

12717. Did you sign the Petition to the House of Commons?—I do not know what you mean.

12718. The petition for inquiring into the Silk Trade?—I am not quite sure, but I rather think I did not.

12719. Is it your opinion that the duty levied on thrown silk here has the effect of giving the French manufacturer an advantage equal to the difference of duty paid in the two countries upon the whole of the fine silks?—Certainly; and it was upon that very ground only that I came before this Honourable Committee, seeing that Spitalfields, from its contiguity to the seat of fashion, would necessarily have a large portion of the finer fabrics to manufacture, provided we could sell them on similar terms, or nearly so. The French has this identical silk which makes the finest fabrics; namely, the Piedmont organzine silk. It has already been shown we are at a very great distance in the cost of production; every addition of duty, or even the present duty, must place us still further from being able to compete with them. I am speaking of the fine plain silk goods entirely. I do not intend to mix myself up with any other question than that which I clearly understand. It has been stated elsewhere that there is upwards of 30 per cent. difference in the cost of production; it appears to me the present duty, which is 3*s.* 6*d.*, which takes a range from eight to ten per cent., still places us so much farther from being able to compete with the French trade.

12720. Are you only in the plain trade?—Yes.

12721. Do you mean to say that the duty of 3*s.* 6*d.*, which is now paid on foreign silks, amounts to as much as between eight and ten per cent. on the higher description of plain goods?—I take it as a middle equality of the finer fabrics, and that will range from eight to ten per cent. on that article.

12722. Do you include in the 3*s.* 6*d.* the duty which is equally paid by the Italian silks which is imported into France?—No, I do not.

12723. You are aware there is a duty paid on Italian silk going into France?—I am.

12724. Therefore that ought to be deducted from the 3*s.* 6*d.*?—Certainly.

12725. Therefore the 2*s.* 6*d.* would not be within the 10 per cent.?—No.

12726. How do you show it would make a difference of between eight to ten per cent.?—Suppose that the price for a pound of silk worked into plain gros de Naples would cost 32*s.*, then by deducting the duty of 3*s.* 6*d.* from it, the difference is shown at once.

12727. Are not goods also made with tram, that pay a duty of 2*s.* 2*d.*, imported in that state?—Yes.

12728. And for the throwing of which you pay now only 3*s.*?—Yes.

12729. In

Mr.
Robert Graham.

30 July,
1832.

Sic orig.

12729. In the manufacture of what class of goods are the foreign thrown silks employed?—That is a matter of taste in the manufacturer.

12730. Is it not very much a matter of price?—No, some people have a predilection in favour of Piedmont silk; we can throw silk as well as they can.

12731. Does not one manufacturer use foreign thrown silks, and others English?—Yes.

12732. What proportion of the whole quantity of foreign silk imported is consumed in Spitalfields?—I do not know.

12733. Do you consider a large proportion is used in Spitalfields?—I am not aware of it.

12734. Are they not employed in the manufacture of finer goods?—Always.

12735. Are they not usually employed in that way?—Yes; as regards the organzine; but the best ——— is used in the common goods.

12736. Does it not therefore follow that this class of goods comes into competition with the foreign silks?—Particularly so; that is my objection.

12737. Then it operates injuriously to Spitalfields in that competition?—Yes.

12738. Is it your opinion that the drawback at all counteracts the effects of the duty?—No, it is not; I will give you my reasons: as I have stated before, the finer fabrics are more generally made in Spitalfields; we come immediately in contact with the French; we cannot hope for exportation in the finer trade, because the cost of production is so dissimilar; but then the drawback which has hitherto been paid on the cost of goods is a tax on Spitalfields for the benefit of Manchester.

12739. Do you export any goods yourself?—No, I never do; I am confined entirely to the manufacture of Spitalfields.

12740. Have you any further observation which you wish to make on the evidence; mention what you intended to say respecting the improvements that have taken place in silk weaving or silk throwing?—Very great improvements; I know it has been asserted to the contrary; yet I think both may be proved to be true with explanation, I mean as respects throwing; I could get silk as well thrown twenty years ago as I can now; but there are fifty times as many could throw equally well now and with as great a facility. With respect to any improvements in weaving, in the plain branches I do not perceive any; but in figured weaving the introduction of that powerful machine the Jacquard engine was probably the greatest invention that ever was introduced into the silk trade.

12741. Do you conceive there are a great quantity of goods imported from France of the description which you mentioned in Spitalfields?—Of late I have not come in contact with them, but those that deal westward have.

12742. You spoke of the Jacquard loom; do you know when that was introduced into this country?—I do not know exactly; I believe Mr. S. W. was indefatigable in introducing it.

12743. Was it prior to 1824?—I think it was; I speak merely from memory.

12744. Do you happen to know whether they are more used now than they were in 1824 or 1825?—No, I do not of my own knowledge; I know there are makers of them in Spitalfields; but I believe they are principally made for the country.

12745. Do you happen to know there are several of the manufacturers, in some of the finer branches, who had recourse to the Jacquard looms, who found it necessary to discontinue them?—I do not know it myself.

12746. Have you heard so?—I think it very probable.

12747. You said there was a great deal of competition for labour?—Certainly.

12748. You have stated that the competition of Manchester must affect the labour of Spitalfields?—I know it does.

12749. Well then if the Reading manufacture must have created a competition unfavourable to Spitalfields, must not it have put Spitalfields in a much worse condition when they have so large a competition to contend with from foreigners?—I have already stated so.

12750. That is your opinion, that the introduction of the finer branches of the finer goods from France operates much against labour?—Yes, it tends to depreciate the profits and lower labour.

12751. Now has there been a great falling off in wages within the last few years?—Yes; in June 1825, it was 10*d.* per yard, 1*d.* above the original book price, there being a demand during that season (that was after the Spitalfields' Act was repealed); in March 1826, it was 8*d.*; in May 1828, it was 7*d.*; in August

Mr.
Robert Graham.

30 July,
1832.

1829, it was 6*d.*; in November 1829, it was 5*d.*; in March 1830, it was 5½*d.* and from August 1831 to the present period 5*d.*; this is the lower kind of goods.

12752. But do you apprehend that the throwing has been latterly a very profitable thing to the throwster or otherwise?—I know nothing of throwing except the price that I paid.

12753. You do not know whether the profits and wages are reduced?—Yes, I have stated that.

12754. Do you happen to know in consequence of that there has been a good deal of distress?—I think it very probable.

12755. Have any of the throwsters that you have been in the habit of employing discontinued their business and allowed their mills to stand still?—None of the respectable ones; we have sometimes found it more advantageous to purchase the silk thrown of the throwster rather than buy it in the raw and take the chance of the market, and the throwsters in a great measure brought on themselves, from the same cause, the alteration in the market.

12756. Have you stated, and is it now your opinion, that nothing will substantially benefit the trade but prohibition?—No, I did not state so, nor do I intend to offer an opinion upon what would be beneficial to myself.

12757. Do you mean to say that you have not signed a paper within these few days containing such a declaration, that nothing will substantially benefit the silk trade but prohibition?—It appears to me that would be the best.

12758. And you have signed such a paper?—I signed a paper on Monday, I believe in this room.

12759. At whose request?—A gentleman who had it in his hands.

12760. Who asked you to sign that paper?—Mr. Stone.

12761. And was it stated on that paper that you signed, that nothing would substantially benefit the trade but prohibition?—I am of opinion that that would be the most advantageous, my reason is this, every additional competitor tends to lessen profit, and on the contrary, lessening competition will increase the profit.

12762. Which Mr. Stone did you speak of?—Mr. Thomas Stone.

12763. I would ask you what was the condition of the silk trade in the year 1827?—I do not know now; I think I have a statement of the prices, but I am not quite sure; I made out a comparative statement from the information of my broker; I asked him for the average prices of silk from the year 1822 to the year 1831, which I believe you have already had; it was merely for my own guidance.

12764. Was not the state of the silk trade at that time what you would call a fair trade?—I think it was, but from my memory I cannot state which year.

12765. How was it in 1828?—I think it was not good.

12766. You have already stated that wages declined to 5*d.*, which had been 10*d.* on particular articles?—Without further reference, whenever wages decline profits decline.

12767. What was the condition of the trade throughout the year 1831?—I should term it a bad year, because every purchase we made during that year in manufactures we were met in the face by a falling market.

12768. Were there not a great many looms out of employment towards the close of the year 1831?—A very great many.

12769. Did you apply to the Board of Trade in 1829 for a reduction of the duties upon foreign thrown silk?—I am not sure in what year; I applied personally, not mixed up with any party, for information, and I gave what information I knew once or twice.

12770. Were you unaccompanied?—In my opinions which I delivered there; for I expressly stated to the Board of Trade, that I must be considered as coming alone.

12771. Did you accompany any person there?—I went with a Mr. Beckwith, who caught hold of me in the street, and asked me if I would like to take a ride.

12772. Was not your proposal to Government to repeal the duties on foreign thrown silk, but not to repeal the duties on foreign manufactured silk?—I believe I did not make any such proposition to them.

12773. What proposition did you make?—It was principally that they make a rate of duty on velvets, rather than an *ad valorem* duty.

12774. Was it not always a rated duty on velvets?—No.

12775. That could not have been the object of your visit, because the law has always enforced a rated duty on velvets?—I have been called on by the officers of the

Mr.
Robert Graham.

30 July,
1832.

the Customs several times to make out a valuation for velvet, which shows to me they were not a rated duty.

12776. At the time Mr. Beckwith accompanied you to the Board of Trade, was not a proposition made to reduce the duties on the foreign thrown silks?—I think it very probable; but I do not recollect a word of it.

12777. You do not know whether you concurred in that or not?—I do not know.

12778. Who was with you besides Mr. Beckwith?—I do not recollect the third person.

12779. What sort of duty did you propose to have put upon velvets?—That which is now levied. There were two other persons accompanied me, I find, Mr. Cooper and Mr. Tate.

12780. Did you hear any proposition made to the Government for the reduction of the duty on foreign thrown silks?—If such a proposition was made I must have heard it, but I do not recollect it.

12781. Which do you consider more advantageous to the manufacturers, a duty of 5s. per pound on thrown silk, with a duty of 15s. per pound on manufactured silk, or a duty of 3s. 6d. per pound on thrown silk, with a duty of 11s. per pound on manufactured silks?—Assuming both to be correct, it is a matter of arithmetic. It appears to me 15s. would be the best, as matter of calculation. I wish it expressly to be understood, that all I have said upon that subject is entirely grounded on what has been said, that the duties cannot be collected: collect a large duty, and I have nothing to say.

12782. If a large duty could be collected on manufactured silk, you would have no objection to some increase in foreign thrown silk?—If a proper protection was thrown around the manufacturers of Spitalfields, as a weaver, I could have no objection to all the protection that might be granted to the other branches.

12783. When you speak of other branches, do you allude to the throwsters?—Certainly.

12784. Are you of opinion there are many fancy silks made at Spitalfields?—I do not know of my own knowledge; but I understand my opposite neighbour makes a great many.

12785. What is his name?—Mr. Stone.

12786. How many looms do you suppose Mr. Stone employs?—I do not know; I have not the means of knowing; I do not interfere with him.

12787. Do you refer to such looms as are worked by the Jacquard engine?—That part I do not know any thing about.

12788. It has been given in evidence, that if the duties were reduced, the throwing of Italian silk would be discontinued in this country; is that your opinion?—Certainly not; or I should not have come here if I had had that opinion; but I may be mistaken, and that opinion is grounded upon something here that I could show you were it necessary, from which I draw my conclusion. I offered one throwster ten bales of silk to throw, which he refused, without having an additional price. I received a letter from him afterwards, stating he was sorry he had not made the engagement, but when he arrived home, as he had already intimated, he was obliged to advance his wages; and his own words are, "Throwing is plenty, hands are scarce."

12789. When was that?—A fortnight ago, immediately after the last sale.

12790. Did you ever hear from any throwster before that letter, that hands were scarce and business was brisk?—No.

12791. Did not this occur immediately after the East India Company's sale, when silks to be thrown are more abundant?—It did.

12792. You stated, in answer to a question put by one of the Honourable Members, that Manchester is the primary cause of low wages in Spitalfields?—I did.

12793. If Manchester be the primary cause of low wages in Spitalfields, how comes it the wages paid for making velvets have lowered in Spitalfields, though that article is not made in Manchester?—They have not been lowered in a similar proportion to other goods; the prices that were paid for the middle qualities in 1826 was 4s. 6d.; in July 1826, in the same year, they were reduced to 4s., and they continued till September 1828, and of course through the season, at 4s.; in 1829, we paid 3s. 9d.; then in July 1829 they were advanced to 4s.; in June 1830, 3s. 6d.; and they remain at the same price now.

12794. Have not velvets been made as low as 2s. 3d.?—Not by me; I have stated the lowest price I have paid.

12795. Do

Mr.
Robert Graham.

30 July,
1832.

12795. Do you not make a lower article than that?—One lower, 3s.; which is 6d. under these prices; I stated these were the middle prices.

12796. I understand you to say, that you had been frequently called upon to value velvets from Germany, at the Custom House, not since the rated duty, but before the rated duty?—Yes; and caused some three or four thousand pounds worth to be detained, and they were disposed of by public auction.

12797. You mean by that, that the Government paid the 10 per cent. and kept the goods?—Yes; it was my opinion at the time they were undervalued.

12798. Now putting it to the prices of the counts 1200?—I only pay one price under this which is 3s.; and I have none less, which I stated before.

12799. What was the price in 1825, of the 1100 count, for which you now pay 3s.?—I have not gone back to 1825; my statement only refers to 1826.

12800. Was not the price of 1100 in 1823, before the Act was repealed, 4s. 3d.?—Yes.

12801. As you have no mill of your own, nor any interest in one, the opinion you have given, respecting the duty on foreign thrown silks regard only the interest in your own branch of the trade, and has no reference to that of the throwster?—No.

12802. Do you not think the throwster, as a British subject, has as much right to be protected as the weaver?—I have always said so.

12803. Has the throwster or the weaver the greatest amount of fixed capital invested in his trade?—The throwster, of course.

12804. Do you use principally foreign thrown or English thrown silk?—Both; I have a statement of the quantities.

12805. State the proportions of each?—The foreign will be a statement of Italian.

A P P E N D I X.

LIST OF APPENDIX.

Appendix	Page
(A.)—RETURN of all Raw and Waste Silk imported and entered for Home Consumption, in each Year from 1814 to 5th January 1832; distinguishing the Importations from the East Indies, China, St. Helena, the Cape of Good Hope, and Turkey, from other Parts; and stating separately, in each Year, the Quantity of Raw, Thrown and Waste, including Knubs and Husks, and the Amount of Duty separately - - - - -	918
(B.)—AN ACCOUNT of the Drawback paid each Quarter, from 5th January 1830 to 5th January 1832, upon the Exportation of British Manufactured Silk Goods; distinguishing the Amount paid upon Stuffs or Ribbons of Silk only, upon Stuffs or Ribbons of Silk and Cotton, and upon Stuffs or Ribbons of Silk and Worsted mixed; and distinguishing London from the other Ports - - - - -	920
(C.)—AN ACCOUNT of the several Kinds of Silk imported; distinguishing the Quantity of Raw, from Italy, the Levant, Bengal, and China; also of Thrown, distinguishing Organzine from Trams and Singles, from the same Places; in each of the Years from 1820 to 1831 - - - - -	922
(D.)—RETURNS of the Amount of Poor Rates and Rate of Assessment in the under-mentioned Places; viz.	
1.—AMOUNT of Poor Rates collected in the United Parishes in the City of Coventry, by Twelve Rates in each Year, and the Amount in the Pound - - -	926
2.—AMOUNT of Poor Rates collected in the Parish of Bedworth; with the Number of Rates, the Rate of Assessment, and Gross Amount of Property Assessed - - -	927
3.—RETURN of the Property Assessed in the Parish of Stoke, in the County of Warwick, with the Number of Rates, Rate of Assessment, and Gross Amount on all Property Assessed in the said Parish of Stoke, from the Year 1815 to the Year 1832 inclusive - - - - -	927
4.—AMOUNT of Poor Rates collected in the Parish of Shilton, in the County of Warwick; with the Number of Levies, and Amount collected in each Year from 1815 to 1832, and the Gross Amount of all Property Assessed - - - - -	928
5.—AMOUNT of Poor Rates collected in the Parish of Nuneaton; with the Amount of Assessment, Rate in the Pound, and Number of Levies, from the Year 1821 to the Year 1832 - - - - -	928
6.—AN ACCOUNT of the Disbursements of the Parish of Bedworth, in the County of Warwick, for Ten Years, to the County Rates and the Poor - - - - -	929
(E.)—STATE of the Silk Trade of Dublin, 1824 - - - - -	930

LIST—continued.

Appendix

(F.)—PAPERS delivered in by Mr. Alexis Doxat, at his Examination before the Committee, on the 11th, 13th, 17th, 18th and 19th of April 1832 - - - Page 932-945

DATES on which the Papers were delivered in to the Committee.	PAPERS.	I N D E X.
11th April.	No. 1.	Imports: the various descriptions of Raw and Thrown Silks, and Waste and Knubs and Husks, imported from 1814 to 1831, separated and computed into one standard; all balanced by the Parliamentary Returns of Quantities, Duty paid - - - p. 932
11th Ditto.	No. 2.	Large Comparative View of the Silk and the Cotton Trades, in regard to their respective and relative Progress, both in Quantities, and in Duties, Wages, Profits, &c. from 1815-17 to ^{1821-23,} _{1824-25,} and 1826 to 1831; and various Remarks thereon - - - p. 934
11th Ditto.	No. 3.	Statement under three heads;— A. Compendious Comparative View of the Silk and the Cotton Trades, in regard to Quantities, and to Duties, Wages, &c., during the same Periods - - - p. 936 B. Distinct Statements of the Amounts of Duties, and of the Amounts and Rates of Wages, &c., accruing from the Silk Trade during those Periods - - - p. 938 C. Comparative View of the Progress of the Silk and the Cotton Trades during 5,—5, and 5 Years: 1816 to 1820; 1821 to 1825, <i>i.e.</i> Medium of ^{1821-23,} _{1824-25,} ; and, 1826 to 1830 - - - p. 938
11th Ditto.	No. 4.	Explanation of the Principle upon which I have grounded my Estimates of the Silk Trade here, from 1815-17 to ^{1821-23,} _{1824-25,} and from 1826 to 1831 - - - p. 939
11th Ditto.	No. 5.	Detailed Costs of the Manufacture of good Plain Silk Goods, in common Colours, at London and at Lyons; also, a Recapitulation of the Differences of those Costs per lb. and per cent.; and Estimates of the Charges of Import, through the Custom House, and by Smuggling - - - p. 940
17th Ditto.	No. 6.	Abridged Comparative View of Costs at London and at Lyons of good Plain Silk Goods in common Colours; and, Statements relative to their Legal Imports, } [printed in Evidence, see p. 243.] and to their Illicit Imports.
19th Ditto.	No. 7.	Costs and Statements, as per Paper No. 6, presented in an Inverted View. - - - [printed in Evidence, see p. 263.]
18th Ditto.	No. 8.	Statement D, showing every Charge of the Silk Manufacture dissected, (made in April 1829.) and the relative proportions in regard to Wages of Labour,—to Machinery, &c.; also the relative Charges abroad for Throwing, dissected - - - p. 942
18th Ditto.	No. 9.	Statement E, Idem, grounded on a lower Rate of Charges for Weaving, (made in April 1829.) &c.; Charges for Throwing, the same - - - p. 944

N. B. These two Statements (D. & E.) were furnished on the 11th April 1829, to the Right Honourable Vesey Fitzgerald, at his request.

LIST—continued.

DATES on which the Papers were delivered in to the Committee.	PAPERS.	INDEX—continued.
13th April.	No. 10.	Comparative View of the Quantities of Italian Thrown Silks, and of Italian Raw Silks, consumed in this Country from 1815-17, to 1829, 30, and 31. - - - - - [printed in Evidence, see p. 227.]
13th Ditto.	No. 14.	Minute relative to Throwsters' Work; showing the Consumption of Raw Silks of all descriptions in the Years 1824-25, and in the Years 1826-31, dissected and computed into one Standard, and compared with regard to the Rates of Labour and Profit they have afforded to the Throwster; also, Remarks thereon. [printed in Evidence, see p. 224.]
13th Ditto.	No. 15. (See No. 22)	A Manuscript Statement of the Market Prices here of Italian Raw Silk, compared with those of Italian Thrown, was read by me at my Examination before the Committee on the 17th April; but the subject of it will be found extended in my printed Paper, No. 22, given in on the 19th.
13th Ditto.	No. 16.	Statement of the Quantities of Raw and Thrown Silks imported into France from Italy and other Parts, during the Years 1825, 1826, 1827 and 1828; also, Imports of Waste Silks. [printed in Evidence, see p. 218.]
13th Ditto.	No. 17.	Minute relative to the Degrees of Fineness of the various descriptions of Silks on which our Manufacturers have worked during the last Six Years, 1826 to 1831. - - - - - [printed in Evidence, see p. 221.]
18th Ditto.	No. 18.	A nearer View of the respective Charges of every Item of the Manufacture of good Plain Gros de Naples; in common Colours, at London and at Lyons, taken from my Papers, Nos. 5, 6 & 7; With Remarks as to their effect on our Rates of Labour, &c., and on the Quantities of our Work - - - - - p. 945
19th Ditto.	No. 21.	Appendix to No. 18; in which the Charges relative to every Process of the Manufacture of good Plain Goods, at London and at Lyons, in 1821-25, and in 1826-31, are placed next to each other, with their respective Differences set forth in per centages; And various Remarks as to the calamitous Results which have attended the Changes in our Protective Laws of 1766, effected in 1826,—Changes which have been repeatedly adverted to as “an Experiment only;” And Opinion expressed as to the ultimate View which the Right Honourable William Huskisson would have taken of those Results, had his Life been spared. - - - - - [printed in Evidence, see p. 258.]
19th Ditto.	No. 22.	Comparative View of the London Market Prices of Milan and Bergam Raw Silks of 4 to 5 Cocoons, and of Milan and Bergam Organzines of 26 to 28 Deniers, at various Periods, from June 1824 to February and April 1832; With Notes thereon as regards the British Throwster. [printed in Evidence, see p. 261.]

Appendix (A.)

RETURN of all RAW and WASTE SILK imported and entered for Home Consumption, East Indies, China, St. Helena, the Cape of Good Hope, and Turkey, from other Parts; Knubs and Husks, and the

IN the foregoing Account, the Importations are assigned to the several Countries from the Ports of which they were shipped directly to the United Kingdom. In what proportion they consisted of the Produce of such Countries respectively, or of the Produce of other Countries, this Department is not enabled to state, as, during the period which the Account embraces, the Schedule of Duties which regulates the form of the Entry at the Custom House has had no regard to the origin of imported Silk, except in the case of Silk the produce of the British Territories in the East Indies, imported previously to 25th March 1824.

Inspector General's Office,
Custom House, London,
24th April 1832.

WILLIAM IRVING,
Inspector Gen^l of Imports & Exports.

Sir,

Nuneaton, June 4th, 1832.

IN obedience to your command, I have transmitted to you our Assessment and Rate from 1822 to 1832, the period which I have been assistant overseer; I have applied to the person whom I succeeded in office, who served under various overseers, some of whom are dead, and some have left the town, so that we cannot come clearly to the Assessment beyond the above dates.

I am, Sir, &c. &c.

To E. A. Sanford, Esq. M. P.

Thomas Ralphs,
Assistant overseer of Nuneaton.

BESIDES the great increase of the Poor's Rates, the Poor have been supplied gratis with fuel by some of the more respectable inhabitants and proprietors of land, &c. of the parish. The Poor were supplied with soup and bread at very near half the cost price, both in 1829 and 1831. Both the poor and middling classes are at this time decidedly in a much worse state than they ever were for the last twenty years: there are numbers of the poor without bed or bedding for themselves and their families to lie upon; and the Poor Rates press so heavily upon the rate-payers, (who are so much reduced in numbers from the depressed state of the trade,) that it is impossible for them to afford that relief which the necessities of the poor absolutely require; and it is my firm belief, that another year like the past will reduce most of the middling class of the parishioners to a state of pauperism. The number of summonses that have been issued this year against the payers to the Poor Rates for non-payment thereof, has been unprecedented in my recollection. The Poor's Levy collected on each rate up to 1829, amounted to from 230 *l.* to 240 *l.*; at the present time it does not amount to more than 190 *l.* or 200 *l.* The Magistrates having taken into consideration the distressed state of the rate-payers, have considerably reduced the allowance formerly granted to the poor; at the present time, each pauper has only 1 *s.* 6 *d.* per week, formerly they had 2 *s.* 6 *d.* per week allowed them; but the effect has been severely felt by many of the farmers, not less than 50 sheep having been stolen in the parish within the last twelve months, besides numbers that have been stolen from the parishes adjoining, which amount to a considerably greater number than those stolen in this parish during the same period. There are now numbers of families who are obliged to receive relief from the parish, although the man and woman are both in full employment, their earnings being so very small, that it is impossible for them to get as much as the Magistrates allow for their earnings to be made up to.

John Yates,
Acting Overseer.

Appendix (E.)

STATE of the SILK TRADE of Dublin, 1824.

NUMBER of Broad Looms employed, including Tabinets	-	-	-	1,200
Broad and narrow Ribbon Engines	-	-	-	996
				<u>2,196</u>

Ten silk mills at work in 1824.

If I take into account the other trades depending on the silk manufacture, such as the winder, warper, throwster, dyer, &c. I think the number of persons employed, and who were receiving subsistence dependent thereon, to be about 6,000; and this statement agrees with a return made at that period, which gave the number 6,280.

I beg further to state, that the number of looms which I have said are now employed in Dublin, are but partially so, from six to nine months in the year. In the throwing branch, I have ascertained that but 50 to 60 persons are employed, and that but occasionally. The prices of weaving, throwing, &c. are about 50 per cent. lower than 1824.

I have not said any thing about the ribbon-engine branch; it appears so almost annihilated, that, scattered as the few engines are through the liberties of Dublin, it was difficult to ascertain the number in the short time I had to prepare, but I am quite sure that the number cannot exceed 30 to 40. I think I over-rate, and would prefer doing so.

I find, by a return received from the Room-Keepers' Charitable Society, that the number of families receiving assistance in 1824 was - 4,765
 1826 - - - 6,497
 1831 - - - 13,149.

This statement corroborates the former evidence I have given, for it was to such institutions that the destitute silk weaver was led first to look for assistance, the families being regularly visited, and, of course, the weaver had not the same feelings applying there as to the Mendicity Institution, where the mode of relief was different, but to which asylum refuge was at last taken by many; and I find that in 1824, the numbers were, in that Institution, but 1,448, while in the year 1831, the numbers increased to 3,004; proving increasing manufacturing as well as other distress.

I now beg leave to mention a further fact; that so prosperous was the silk-throwing trade of Dublin in 1824, prior to the reduction of duty on Italian thrown silks, and the opening of our ports to French manufactures, that raw silks were sent from England to be thrown, not only in Dublin, but the mills being full there, large quantities were sent to a place called Tullymore, 40 miles from Dublin, where a factory had been erected for many years, for both throwing and manufacturing of silk. This factory, with another about 7 miles from Dublin, have been since given up, proving unsuccessful. One proprietor, I am informed, is gone to America, and the other, a very old and respectable silk manufacturer, has embarked into another way of life, having lost the whole of his capital in the silk trade.

I know of no regular importer of silks into Dublin; at present there is no opening for the trade. Our principal importers have embarked into other pursuits, or retired altogether. Some silk manufacturers have become principally importers of British and French silks, and others, who had realized property, have quitted a pursuit which they could not carry on successfully, while the operative has been mainly thrown on the public for support, or become an alien from his country, to seek for employment elsewhere.

A very few manufacturers still continue to labour against the current, but to a small extent. I have known some to continue their weavers merely to give them bread, while little or no demand existed for the goods thus made.

I beg further to state, that notwithstanding the injury inflicted on the silk trade of Dublin by the loss of the Union protecting duties, yet it appeared to have been the determination of some of the trade (however hopeless) to have grappled, if possible, in a competition with the English silks; and the trade was, in point of fact, however unprofitable, carried on in a degree after such protecting duties had ceased. But whatever feeling of that description had existed to make the trial, it appeared to have been almost wholly given up, when the effect began to be felt of the importation of French silks, which followed shortly after, but particularly

particularly in 1829, when, against the continued remonstrances and petitions of Great Britain and Ireland, the *reduction* of duty took place on French silks. The Irish manufacturer had then a *twofold* difficulty to contend with, in both English and French manufacture, which they were wholly unable to contend against; and the result has been the almost total extinction of the silk manufacturers in Dublin, save a *remnant* of the tabinet fabric. To such a state are the manufacturers of Dublin reduced, that societies are forming to promote the wear of native manufacture. I had a letter from a respectable and extensive manufacturer in Dublin last week, which stated that he had laid by almost all his looms, and would never be able to manufacture in Ireland with success under the present existing state of things.

It is a remarkable fact, that the same remonstrances that are now made by the silk manufacturers of *England* against the want of sufficient protection for their trade with *France*, were made use of by the *Irish* silk manufacturers against the withdrawing of the protecting duties which their trade then possessed with *Great Britain*; and the consequences were then predicted which have since happened. There appears a strong analogy between the two cases.

May I be permitted to state another fact, which appears to me to bear strongly on the present inquiry; it is part of an examination which took place before a Committee of The Lords, in 1785, on the Silk Trade, as printed.

“ Q. I understand the witness to say, that while French silks were permitted to be imported here under a very high duty, the importation was to such an amount as to be almost ruinous to the English manufacturer; the question I will now ask is, whether that importation has or has not diminished since the *prohibitory* duties were changed into *absolute* prohibition; that is, is the importation less *now* than it was *before*?—A. I believe a great deal less.”

I shall not trouble this Honourable Committee by making any comment; the circumstance speaks for itself.

May I be allowed further to submit, that if France relaxed her almost prohibitory system against British and Irish commerce, then there could be no objection to open a fair treaty of commerce, and admit her silks, but so as to *protect* SUFFICIENTLY the British and Irish manufacture, particularly against the *smuggling* system of France; and I have no doubt that some of the manufacturing distress in Dublin would be relieved in part by an export of her staple article, (assisted by bounty, as silks are now from Great Britain) as well as many parts of England and Ireland, whose different manufactures are now prohibited. But permit me to say, that the present system of free trade (so called), undefined as it is in its objects, appears an absurdity in practice, and most injurious to the nation that adopts it.

I beg most respectfully to refer to the Parliamentary Committee that sat in Dublin in 1821, which has been before adverted to; and would submit, that had a Committee, formed on such principles, but more extended, been appointed to act permanently in Dublin (for temporary Committees can have little time or opportunity to receive information), and to extend its inquiries, not to the silk trade only, but the general interests of Ireland, of which England at present can know but little, and reported from time to time, much labour would be saved now and at all times to Parliament, and to the Government of Ireland. Enactments which have passed, so injurious not only to the silk trade, but the general interest of Ireland, would not have been proposed; while the valuable information therein afforded would probably have led to measures that would have alleviated the distresses under which Dublin and Ireland generally labour, affording means of employment in the development of her great internal resources, have promoted consequent peace and happiness; for it is evident that want, if suffered to exist, will create discontent, and discontent produces greater evils.

On this subject, if I am not incorrect in referring to it, permit me to say, I have already communicated my opinions to the Noble Lord at the head of His Majesty's Government.

Jonathan Sisson.

Appendix (F.)—No. 1.

Statement made in March and April 1830, for 1814 to 1829; and continued to 1831, in March 1832.

N. B.—The small quantities of Manufactured Goods exported, are comprised in these Amounts of Consumption.

Appendix (F.)—No. 1.

- TABLES, (A.) (B.) and (C.)

* Computation with Reference to the Rates of Wages, &c. which various Descriptions of Silks, Waste and Knubs and Husks, afford respectively,—

ESTIMATED AT

Bengal & China's	$\frac{3}{5}$ of fine Italians	1814 to 1829
and -	$\frac{1}{6}$ ditto	for 1830
Turkey - -	$\frac{2}{5}$ ditto	1814 to 1831
Waste - - -	$\frac{1}{2}$ ditto	1814 - 1830
Waste with Knubs & Husks }	$\frac{5}{12}$ to $\frac{1}{3}$ ditto	1814 - 1830

Minutes made in March and April 1831.

The quantities consumed, as set forth in this Table, in the respective periods and years, are taken from the Compendious Parliamentary Table, dated *Customs*, 28th April,=*Parliamentary*, 5th May, 1829,—

“An Account of Total Quantities of Raw and Waste and Thrown Silks, entered for Home Consumption in Great Britain and Ireland, in each year, from 1814 to 1828, both years inclusive, and Rates of Duty thereon:”

and subsequent Return. Whilst former Statements were unconnected,—published under heads varying from each other, without sequel as to their application,—and showing a greater increase than the above, from 1815-17 to 1821-23;—that published on the 5th and 8th May, 1829, of “Imports and Exports of Thrown and Raw Silks, and Waste Silks, from 1814 to 1828,” shows an increase of 102 per cent. in the years 1815-17 to 1821-3.

The above-mentioned Parliamentary Returns of Quantities, *duty paid*, from 1814 to 1828 and to 1831, presenting under one column, all the various descriptions of Raw Silks, with the addition of Waste Silk, and Knubs and Husks, which descriptions are so greatly differing from each other, with regard to the amounts of Wages of Labour, &c. accruing from them respectively,—I have investigated, and separated them into their several Classes;—viz. Bengal and China Raw Silks,—Italian, &c. Turkey,—Waste and Knubs and Husks,—and Thrown Silks; and computed them into one Standard,—that of fine Italian Raw Silks.

I have also taken into consideration, in the amounts consumed in the respective periods, the state of Stocks (Duty paid) greater or less, which remained on hand, as nearly as it has been in my power to ascertain them from various sources.

I have brought all those Estimates of Quantities to an ultimate Balance with the said Parliamentary Returns (Duty paid), as may be seen by this Table;—which is a Compendium of all the Documents from which I have established those dissected Returns.

* Besides those quantities which have been exported after having paid Duties, (i. e. entered for Home Consumption,) I believe that about

50,000 lbs. were exported, Duty paid also, in 1825; and about

60,000 - ditto - ditto, in 1826; but I have not any exact Returns of those Exports; and I have not noticed them, in deductions, on either side, as those two quantities,—referrable to two different periods—1821-25, and 1826-31,—nearly balance themselves.

PARLIAMENTARY RETURNS.

Dated 30th April, } 1829.
- 5th May, }
From 1814 to 1828, & subsequently.

Minute made in April 1831.

Appendix (F.)—No. 4.

(* This Heading has reference to the General Statement of June 1830.)

(The Estimate of 1830 was made in March 1831.)

AN ABSTRACT OF ESTIMATES contained in the foregoing Columns* (No. 1 to 13) of the Consumption of Raw and Thrown Silks, and Waste, and Knubs, and Husks, during a period of 15 Years, viz.

From 1815 to 1823, with very high Duties, and moderate Rates of Wages, *i.e.* 10½ *d.* for weaving Plain Gros de Naples "10 to 1100, 3 double," neat London make, and other Wages in proportion; (good proportions of Figured and Fancy Goods in those years):

and from 1824 to 1825, with reduced Duties, same Wages, with the continuance of exclusion of Foreign Manufactured Silks; (good proportions of Figured and Fancy Goods in those years):

and from 1826 to 1829, when the Duties were further reduced, and the Rates of Wages reduced to 7½ *d.*, 8 *d.*, 7 *d.*, and 6 *d.* (1830, 6¾ *d.*; 1831, 6 *d.*); but our Ports were opened to Foreign Manufactured Silks. (Reduced and greatly reduced proportions of Figured and Fancy Goods in these last Four years).

In these Estimates the same Rate of Profits has been calculated during the whole Series of Years, from 1815 to 1829—

that is - - 5 per Cent. on Plain Goods, and 10 per Cent. on Figured;

Incidentals 3 ditto on ditto and 6 ditto on ditto.

Waste at the Mills - - - - - ¼ of an Ounce on lb. 1. 0¾;

Ditto in the ulterior processes of manufacture ½ ditto on 12 Ounces of Silk dyed all bright, or on 13½ Ounces of half bright Dye, and half Souple.

The Castings of the amount of Wages, &c. during the whole period of 1815 to 1829, have been made on the supposed same price of fine Raw Silk, that is 20s., although the prices were much higher in the former years, which would also have contributed to add to the amount of the Estimate of Wages, and other Charges of Manufacture and Profit. The amounts of Cost of the Raw, and Thrown and Waste Silk, &c. have been cast at the real approximate prices of those respective articles.

Various deductions have been made in those Castings from the rates in former years, paid for throwing, winding, as also in the weaving of Figured Silks, referrible to improvements made in subsequent years in our Machinery, and with regard to more economical Processes and Management.

No account has been taken in these Estimates of considerable additions that accrued to the amount of Wages of Labour, &c., from our Silk Manufacturers making, in former years, great quantities of Goods mixed with Cotton and Wool, such as Chambrays (figured and plain), Poplins, Bombazeens, &c. &c., which branches of manufacture have been reduced to comparatively very small quantities of late years.

Under all these circumstances, it is obvious that the present Estimates are considerably under-rated for the years 1815-17 to 1824-25.

March 1832.

(* The actual Charge for throwing good Organzines of 22-24 drs. in $\left\{ \begin{smallmatrix} 1821-23 \\ 1824-25 \end{smallmatrix} \right\}$ was 9 s.; but for the reasons stated in my printed Paper marked No. 4, I have introduced, at 7 s. 6 d. only, that charge in my Estimates for that period.—And the same with regard to the work of fine good Tram, 4 s. 6 d. instead of 5 s. 6 d.—Also of winding Warp, 2 s. 9 d. instead of 3 s. 3 d.—And of winding Shute, 2 s. 6 d. instead of 3 s.)

MINUTES relative to the above No. 18, as also to Nos. 5, 6 and 7.

THE purport of this Paper is to show, in one distinct view, all the elements of the various of one yard of good PLAIN Gros de Naples, in common colours (which I take as the basis "of 10 to 1100, 3 double," of superior make, at LONDON and at LYONS, respectively Raw Material, and to the various processes of Manufacture.

Also, what are the amounts per cent. of those differences between our Manufactures and (as well as other Foreign Manufactures) are greatly dependent on Export, and hence continue and considerable variations, over which our Manufacturers have no control; thus greatly increasing the intensity with which Foreign competition presses on this branch of our National Industry, Labour alone, independently of other charges of Manufacture, obtain in the ratio of, at least,

10 to 1

of the charges referrible to Machinery, in its most improved application.—(Respecting which Nos. 8 and 9.

April 1832.

B.

Baggallay, Richard (Analysis of his Evidence.) Dealer in ribbons and broad silks, and importer of French goods after 1826, 7326-7332 — Expense and loss of time in purchasing French over English goods, 7333-7341 — Reduction of purchases of ribbons from Coventry, 1827-1829, from importations from Switzerland, and recovery by Coventry from 1829-1831; 7342-7346, 7369-7372 — Diminution in price and improvement in quality of Coventry over Switzerland, 7347-7351 — Duty collected by weight, amount thereof, 7352-7354 — Rate at which Swiss ribbons have been smuggled, 7355-7359 — Swiss make plain sarsnet ribbons cheaper and better than the French, 7360, 7361 — English narrow ribbons dearer than the French, 7362, 7363 — Inferiority of the English from not being able to get the French silk, 7364, 7365 — Decrease in the quantity of plain satin ribbons, purchased, 7366-7368 — French goods sometimes mixed with and sold as English, 7373-7376 — Coventry can manufacture equal to France, though France has more original taste, 7377 — Effect of duty upon the price of French and English ribbons, English cheaper without duty, but taste in favour of the French, 7378-7389 — Improvement in Coventry manufacture; English colours more permanent than
678. 6 G

Baggallay, Richard (Analysis of his Evidence)—*continued.*

than the French, 7390—Duty on fancy satins, which are now got from Coventry, 7391-7393—Preference of consumers latterly in favour of English goods, 7394-7396, 7401-7404—Amount of duty necessary to enable Coventry to compete with the French, 7397, 7398—French pattern could be copied at Coventry in sufficient time for the fashion, 7399, 7400—If pattern sent to Coventry to be copied, it would be public before the French goods come over, 7406—Duty on each kind of ribbon imported, 7407—Comparative prices between Switzerland and England, and proportion for expenses on plain sarsnets, and plain striped ribbons, 7408-7412—Reason of distress at Foleshill, 7413, and not at Coventry, 7419—Duty on plain gauze ribbons imported, 7414, 7415—Striped gauze ribbons not imported from loss thereby, 7416, 7417—Duty on figured gauzes, 7420, 7421—Duty necessary thereon to prevent smuggling, 7422-7426—Wages higher for the manufacture of that article than others, 7427-7429—Duty necessary to meet high rate of wages thereon, 7430, 7431—Comparison as to earnings of weavers at Coventry upon plain and figured gauzes, and quantity of work, and hours of labour, 7432-7437.

Preference of weavers for their own looms, and methods of purchasing them, 7437-7440—Weavers fully employed at Coventry, 7441-7446—Amount paid for clipping, 7447-7449—Wages of winders and warpers, 7450-7452—Quantity of plain sarsnets made at Coventry of different kinds at one time, with rate of wages, 7453-7456—Improvements in the engine loom, 7457—Machinery would be extended in Coventry, but for the objection by the weavers to the use of new machinery, 7458—How far improvement in Coventry manufacture from foreign competition, 7459—Intention to establish power looms at Manchester, for the manufacture of plain sarsnet ribbons, 7461—Manchester and Spitalfields shut out the French at present in the manufacture of broad silks, 7462-7469—Duty on French broad silks, 7470—How far they are smuggled, 7471, 7472—Importation of rich figured goods given up from loss thereon, 7473-7475—Price thereof, 7476—Price of English plain goods, 7477-7479—Manner in which the silk trade at Manchester interferes with Spitalfields, description of goods made at Manchester, 7480-7501—Description of trade at Macclesfield, 7502-7507—Letter from Germany upon the manufacture of velvets, 7508-7511—English velvets improving, 7512, 7513—Comparison of prices and duty upon German and English velvets, 7514-7518—Greater facilities for smuggling now than before 1826, 7519-7522—Duty would be better collected by weight than *ad valorem*, 7523, 7575, 7576—Rate of insurance upon smuggling, 7525, 7526—Assimilation of style between France and England, since opening the trade, 7527-7531—Rate of insurance could not be lowered if duty reduced, 7532, 7533—Smuggling would be attempted even under prohibition, 7534-7537—Difficulty in distinguishing between certain French and English goods in 1824, and greater difficulty now, 7538-7549—Distress in Spitalfields not so great lately as formerly, 7550-7565—State of trade among retailers more regular and better at present than for some years, 7566-7568—State of trade among manufacturers better, few large failures at Manchester, 7569-7573—Difficulty of ascertaining a proper rate of duty upon importation of French goods, 7574—How far Manchester trade, and not importations from France, have affected the Spitalfields trade, 7577-7590.

Ballance, John (Analysis of his Evidence.) Silk manufacturer in Spitalfields, 8353-8355—Spitalfields trade growing and prosperous, previous to 1826, 8356—Custom House returns of raw silk and wages, 1816-1826, 8357-8359—Causes of distress in the silk trade, 1792 and 1816, 8360, 8361—Increase of smuggling since removal of prohibition, 8362, 8363—Distress of Spitalfields weavers, and periods thereof, 8364-8366—Periods of reduction in wages, and proportion thereof, 8367, 8368—Reduction of duty upon foreign wrought silks did not prevent smuggling, from the smuggler reducing his profits, 8368-8370—Present rate of wages of weavers, 8371-8373—Amount of wages paid on 5,000 lbs. of wrought silk, 1816-1831, 8373—State of the poor in three parishes of St. Matthew Bethnal Green, Christchurch Spitalfields, and Mile End Old Town, comprising the district called Spitalfields, taken from parish accounts in February 1832, 8374-8378—Poor in the workhouse and casual poor of the parish of St. Matthew Bethnal Green, 1821-1832, 8378—Population of the Spitalfields district, 8379—Number dependent on silk manufacture, 8380—Estimate of how much less wages paid in Spitalfields now and before 1826, 8381—Effect of reduction of wages on the character and habits of the Spitalfields population, and in causing them to be disaffected to Government, 8382—Account, showing manner in which less wages are paid for working up a larger quantity of silk, 1822-1831, 8383, 8384—Rate of wages per week, 1822-1831, 8385-8387—Manufacture of richer silks abandoned since 1826, 8388-8390—Consumption thereof in England has increased, but is supplied from France and not from Manchester, 8391-8393, 8409—Description of goods made at Manchester, 8394, 8400—Description of the term plain, figured and fancy goods, 8395-8400—Silk trade at Manchester has been in existence since 1806, 8401, 8402—Before the opening the ports, prosperity of either Manchester or Spitalfields, showed prosperity of the other, 8403—Spitalfields has since been obliged to adopt the Manchester trade to the injury of both, 8404, 8405.

Distress at Manchester not so great as in Spitalfields, from its being partly cotton manufacture, 8406—How distress in Spitalfields attributed to opening the Ports, 8407,

Ballance, John (Analysis of his Evidence)—*continued.*

8407, 8408—Detail of advantages possessed by France and the Continent over England, 8410—Comparative view of the prices at Lyons of French tram, the produce of French raw, with price in London at the same periods for Italian tram, in averages of three months, from July 1827, to March 1832, 8410—Comparative view of the prices at Lyons of French organzine, the produce of French raw, with prices obtained in London at same periods for Piedmont organzine, in averages of three months, from July 1827 to March 1832, 8410—Advantages in favour of France from rate of wages being lower, difference in 1826 and 1829, 8410-8412—Advantages to France from its exports of manufactured silks, with particulars thereof in 1829, 8413—Advantage to France, from expense in construction of patterns, grows out of her command of foreign markets, manner thereof, 8414, 8415—Exclusion of foreign manufactured silks, the only effectual counteraction for those advantages, 8416—Benefits of export trade, and how it might be extended by increasing the price of debentures, 8417-8419—If duties lowered, smuggler would again lower his profits, 8420—Lowering duty on foreign thrown would not enable the manufacturer to come down to the smuggler's price, 8421, 8422—Present rate of smuggling, 8423-8425—Lowering duties on foreign thrown would ruin throwsters, and cause great mischief, 8426—Disadvantages of being dependent upon Italy for thrown silk, 8427—Not necessary for a manufacturer to use foreign thrown, 8428—English costs rather more than foreign, 8429—Under good Custom House regulations, properly enforced, smugglers' risk would be increased, and more duty than the present amount collected, 8432, 8433—Advantages to the plain silk trade, by increasing the risk of the smuggler, 8434, 8435.

Fancy branch can only be preserved by prohibition, 8436, 8437—State of the fancy trade prior to and since 1826, 8438-8442—Importance of the fancy branch to the silk trade, 8443—Reduction in the number of manufacturers since 1826, 8444-8447—Consequent distress of the weavers employed by them, 8448—Supplanting one branch will be the ruin of the others, 8449, 8450—No advantage to this country from the importation of foreign silk goods, 8451—How far increase of crime from the distress of the weavers in Bethnal Green, 8452-8454—Distress of the silk trade from reductions of duty and increase of smuggling, remonstrances to Government thereon, 8455-8463—Proposed regulations against smuggling, that of criminal punishment for the smuggler and stamping goods to detect the receiver, 8464, 8465—Necessity for stamping, 8466—Reasons submitted to the Committee for stamping silks, 8466, 8467—Certain checks should be used to prevent stamps being forged, 8468—Paper with signatures declaratory of the sentiments of the silk trade in favour of stamping, 8469, 8470—Plan for stamping in order to prevent forgery, 8470—Regulations applicable to plain goods, 8471—Prohibition the only preservation for the fancy branch, 8472—Why in that event the English would not lose in point of taste and fashion or pay higher price, 8473, 8474—Manner in which the middle man between the manufacturer and consumer has benefited by the decrease of wages and the present system, 8475-8478—Duties that might be collected on plain goods under proposed regulations, 8479-8482—Manner in which the silk trade would revive thereunder, 8483—Manner in which it would remove the existing distress in Spitalfields, 8484, 8485—Spitalfields competes with Manchester from being deprived of her rich trade, 8486—How both would be restored to their former trade under proposed regulations, 8487-8490—The best English fancy goods are made in Spitalfields, 8491, 8493—The peculiar manufacture of Spitalfields has not been depressed by Manchester, but by France, 8494—Decrease of wages has not reduced price to the fullest extent to the consumer or manufacturer, 8495, 8496.

(Second Examination.) Reduction in the weight of silk in the process of manufacture in France, 8497-8504—Comparison of wages in France and Switzerland, 8505-8512—Rate of wages in Spitalfields, 1824-1831, 8513, 8526—Rate of wages in other manufacturing districts, 1817-1825, 8527-8530, 8534, 8535—By what Spitalfields wages regulated, 8531-8533—Present state of Spitalfields rather better, 8537-8540—Cotton and woollen trades have not been subject to similar distress as the silk trade, 8542—Places where the Jacquard at present in use, 8543-8545—Number of yards per day weavers can make, 8546-8549—Examination as to the use of the fly-shuttle, 8550-8555—Examination upon the competition with France, and protecting duty necessary for the English manufacturer, 8556-8583—More waste in the manufacture of poor than rich goods, 8584—Difference in price of goods imported by the trade committee and similar goods made at Spitalfields, 8586—Importation of black goods 8587-8593—Consumption thereof, 8594, 8595—Competition with France in black satins, their colours, 8596-8598—Price of black goods, 8599-8601—Cost of smuggling, 8602-8604—Manufacturers who have been beaten out of the market in the fancy trade employ their weavers on black goods, 8605, 8606—Duty that might be collected and smuggling prevented by proper Custom-house regulations, 8607-8611—Failures of manufacturers of broad goods, 8612-8619—Less rich goods making than last year, 8620—Description of French black satin mostly in use, 8621-8623—Appointment of the Committee at Weavers'-hall, its object and number of members interested in throwing, 8624-8635, 8652—Not part of the business of the Association to get the duties on raw silk lowered, 8636—Their minutes will show that smuggling in 1815 was limited and confined to the coast, 8637—Smuggling at present exceeds the amount legally

Ballance, John (Analysis of his Evidence)—*continued.*

legally imported, 8638—Proportion of legal and illegal imports to the gross sales of the country, 8639—Amount imported from France that interferes with Spitalfields, 8640-8642—Hands thrown out of employment by foreign importations, legal and illegal, 8643-8645.

Proportion of fancy trade to the whole previous to 1825, 8646—Injury to throwsters from reduction of duty in 1829, 8647-8651, 8653-8655—Reduction of wages for throwing from reduction of duty, 8656, 8657—How throwsters' price regulated, 8657—Advantage of silk being thrown in this country, 8658-8663—Duty necessary to protect throwster, 8664, 8665—Advantages in favour of Italy of less expense in throwing and in the selection of raw silk, 8666-8668—Reduction of duty would cause dependence upon Italy, 8669—Ruin throwsters and augment misery of labouring classes, 8670—Italian would be benefited thereby, 8671—Value of mill property in 1826 and at present, 8672, 8673—Amount per cent. the manufacturer would be relieved by lessening the protection of the throwster, 8674-8676—Cause of the difficulty in getting the best description of Italian raw silk, 8677-8682—Witness must give up manufacture if he could not get English thrown silk, 8683-8685—Advantages of English thrown silk and of encouraging throwster, 8686, 8687—Greatest injury to Spitalfields is from the Continent, competition with Manchester is of a secondary nature, 8688—Distress of the silk trade greater than formerly, 8689—Sacrifices made by manufacturers, 8690—Reduced wages has partly stopped legal importation of plain goods, 8691—Calculation as to earnings of weavers, 8692, 8693—Calculations founded upon weight are fallacious from difference in value, 8694—Description of goods whether of British or foreign manufacture depend upon the class of customers to be supplied, 8695—Reducing duty to the smugglers' price gets rid of both smuggler and manufacturer, 8697—Operation of stamping and manner of preventing forgery, 8698, 8699—Importations of watered silks from France and labour displaced thereby, 8700-8704—Manchester has not suffered so much from foreign importations as Spitalfields, 8705, 8706—Manchester and Spitalfields would both be benefited by prohibition, 8707—Other advantages of France would counterbalance ours had we her raw material, 8708—Wages in Spitalfields and effect thereon by repeal of Act regulating labour, 8709-8712—Contingencies the English manufacturer liable to and protection necessary, 8713-8715—Amount per cent. more cost to English manufacturer of goods manufactured, than smuggled or jobbed in from France, 8716-8722—Comparative statement of the cost of manufacturing 500 yards of plain gros de Naples in London and at Lyons, 8722.

(Third Examination.) Increase of smuggling in 1824, 11825—From French goods being warehoused previous to the opening the Ports in 1826, 11009-11013—Comparison of Dr. Bowring's statement of exports from France with duty on imports into this country, showing limited smuggling, 1826-1831, and how far contrary to the fact, 11014—Silk goods smuggled out of France, and method thereof, 11016, 11017—Examination in answer to Dr. Bowring's evidence upon the value of the silk trade, and labour consumed therein in France, 11018-11020—Injury to the silk trade from exports of cotton, 11021-11026—Labour displaced in the silk trade not taken up by the cotton trade, 11027-11031—Examination upon the employment of weavers in the silk and cotton trade at Spitalfields and Manchester previous to and since 1826, 11032-11045—Manchester would have kept its low trade if Spitalfields had not been interfered with by France, 11046-11050—Importations of crapes from France interfere with those places where they are manufactured in England, 11051-11057—Number of looms that would have employment in the event of their manufacturing the goods imported from France, 11058-11072, 11075-11079—Quantity of figured silks consumed in this country, 11073, 11074—Increase in the consumption of fancy goods, 11080-11082—Value of foreign importation, 11083-11096.

Banbury, William (Analysis of his Evidence.) Partner in the house of James Vere & Co., 4403-4408—Period of Acts passing prohibiting the importation of foreign wrought silks and velvets and manufactured ribbons, 4409, 4410—Bad effects of their repeal, 4411—Beneficial effects of their operation, 4412, 4413—Increase of manufactures and employment of operatives under them, 4414-4416—Account of the progressive increase of duty on foreign thrown silk, 1660-1768, 4417-4420—Account of the progressive variation of duty on raw silk, 1660-1786, and from 1784-1825, 4420—Injury to capital invested in mills and machinery in consequence of the repeal of the prohibitory laws, 4421-4423, 4425—Up to period of the repeal, silk trade progressively improving, 4424—Reason for submission to high duties on thrown silk, 4426, 4427—Trade still increased, notwithstanding heavy duties on thrown silk, 4428-4432—Present bad state of the throwing trade, 4433-4440—To what attributed, 4441-4446—Bad effect of the reduction of duty on organzine, 4447—Bad effect of further reducing duty on foreign thrown silk, 4448—Bad effects of reducing duty thereon by a Treasury order in 1825, 4449-4455—Necessity for encouraging the throwing Italian silk in this country, 4456—Difference of credit on sales before reduction of duty, and at present, 4457-4461—Duty that would protect throwsters, 4462-4465, 4481-4483—Effect of the duty remaining as it is, 4466-4470—Rise in the price of foreign silk, if throwing trade here destroyed, 4471—Expense of importing silk from Milan, 4472-4474—Remuneration

Banbury, William—continued.

neration to the throwster, and difference in price between raw and thrown silk, 4475-4480
 —Reason for importation of thrown silk at present, 4484-4488—Reasons for low rate of wages, 4489-4491—Expense of throwing latterly paid out of capital, 4492—Importation of thrown silk decreasing at present, 4493-4501.

Trade at present improving, but will not continue, 4502—How the importation of manufactured goods affects the throwster, 4503, 4504—Bad state of silk manufacturers at present, and how affected by large houses purchasing under prime cost, 4505-4515—How far short credit and bad profits beneficial to the consumer, 4516-4525—Trade has not flourished since fair profits ceased to be obtained, 4526—How far a few large buyers depress the market, 4527—In the event of failures, actions are brought against those houses purchasing under prime cost, 4528-4534—Injury done to manufacturers by those houses, 4535—How far those houses operate to continue a man in insolvency, 4536-4542—Compromises between creditors and those houses, 4543-4545—How far trade in a better state at present, 4546-4551—Credit and discount at present allowed, 4552-4565—Plan of guarantee pursued by brokers and per centage thereon, 4566-4580—Effect of the Berlin and Milan decrees upon the silk trade, 4581-4588—Inconvenience of being dependent upon Italy for silk, 4589—Necessity for protecting the throwing trade, 4590, 4591—Prohibition the only remedy for the present distress, 4592, 4601—Reason why raw silk from Piedmont prohibited, 4593-4596—France prohibits the export of all silk except manufactured, 4597—Importance to obtain French raw silk, 4598-4600—Good effect of prohibition, 4602-4605—Benefits of high duties, 4606-4610—How far prohibition would stop smuggling, 4611-4622—Italian silk for manufacture equally good as the French raw, if that cannot be obtained, 4623-4634, 4639—Advantage to the French manufacturer from the cheapness of the article he uses, 4629, 4635-4637, 4655-4658—At what period thrown silk sold at a less price than raw, 4640, 4641—Italian silk can be as well thrown in England as in Italy, 4642, 4643, 4645—Approximation of prices, 4644—Improvements in silk throwing, 4646-4650—No improvement in quality of Bengal silk, 4651—Some good China silk, 4652—Importation of waste, and in what state exported, 4653, 4654.

(Second Examination.) Examination upon job houses who have had actions brought against them, and compromises made between them and creditors, with witness declining to mention their names, 12669-12678.

Bandannas. No smuggling bandannas at present, premium thereon formerly paid, *Clay* 6879-6888; *Bottrell* 7820-7825—Effect of removal of prohibition upon East India bandannas upon increasing the manufacture of English, *Dillon* 7733-7736—Duty thereon, *Bottrell* 7820-7825—Examination upon importation of India bandannas, duties thereon, and alterations necessary therein, *Brocklehurst* 11466-11471—Exportation of British and India bandannas, 1829-1832, *Brocklehurst* 11535-11538.

Bank of England. Unsteadiness of trade at Manchester caused by Bank circulation, *Royle* 3233-3238—Account of promissory notes and post bills of the Bank in circulation every week, from 10th April 1830 to 7th January 1832, *Royle* 3235.

See also *Currency*.

Basle. State of the ribbon trade at Basle, and method of conducting it, to what countries exported, and proportions, *Bowring* 9119.

Beals, Joseph (Analysis of his Evidence). Landing surveyor in the Customs, 12424—Their duty, and manner in which they check the landing waiters, 12425-12428—No recollection of finding a wrong weight put on goods, through fraud, on weighing, 12429-12433—Landing waiters' stations changed periodically, 12434—Examination as to the quality of the goods, 12435, 12436—Method of weighing for the tare, 12437-12439—Possibility of fraud from connivance of officers, but great improbability thereof, 12440-12443—Improbability of collusion on the part of the landing waiter from the value of his situation, 12444-12448—Goods sometimes entered under the value, detained and sold, and fetch more than the value, 12449-12458—Sometimes they do not fetch their value, 12459—Reference to persons in the trade to ascertain value of articles out of the common course, 12460-12464—Goods generally valued very near the value, 12465-12467—Division of profit on goods seized, and consequent inducement for seizing, 12468-12471—Amount per cent. goods allowed to be entered under value, 12472-12475.

Beck, Mr. See *Looms*.

Beckwith, William (Analysis of his Evidence). Silk manufacturer at Spital-square and Coggeshall, 11924-11926—Greatest number of looms employed, and on what description of goods, 11927, 11928—Importation of certain goods discontinued, from being able to purchase them cheaper in London, 11929-11933—Description and names of job-houses, and their method of transacting business, 11934-11939—Rate of smuggling, 11939-11942—Effect of lowering duties on manufactured goods on smuggling, 11943—Bad effects of importation by Leaf & Co. on certain goods manufacturing by witness, 11944, 11945—Description of goods on which looms at present employed upon, and reduction

Beckwith, William (Analysis of his Evidence)—*continued.*

reduction in wages, 11946, 11947—Manner in which the French interfere with the export trade, 11948–11951—Manner of increasing the export trade by increasing the price of debentures, 11952–11957—Custom House officers have not been remunerated for the late seizure, and are imperfectly paid, 11958—Manner in which smuggling is carried on at the Custom House, 11959, 11960—Witness's opinion formerly in favour of free trade, and reasons for changing it; great disadvantage to the silk trade from last alterations, 11961–11965—Amount of duties that ought to be collected on plain and figured goods, 11966–11972.

(Second Examination.) Method to be adopted for preventing smuggling, 11973–11975—Witness's weavers at Coggeshall employed upon low works, their dishonesty and immorality from distress, 11976–11978—Alteration that should be made in the amount of drawback, 11979–11983—Amount of duty necessary for protection, and its effect upon increasing smuggling, 11984–11988.

(Third Examination.) Supposition of smuggling transactions by certain houses, from their selling goods in London lower than they could be imported for, 12362–12365, 12369–12372—Supposition that certain houses in the habit of passing figured goods for duty on plain, 12366, 12368.

(Fourth Examination.) Production of invoices of certain goods bought of Morrison & Co. showing how much per cent. goods bought cheaper than imported for, 12548–12551—Other transactions with Morrison & Co. of a similar nature, 12552–12557—Examination as to witness's having expressed regret for previously inferring that Morrison & Co. had not come properly by those goods, 12558–12580—Examination upon the correspondence that took place between witness and Morrison & Co.'s house relative to that transaction, 12581–12587—How far the goods would have been regularly passed though the Custom House although entered lower than their regular duty, 12588–12599—Difference in the duty on goods imported by witness and sold to him by Morrison & Co., 12600, 12601—Supposition that one of Messrs. Morrison & Co.'s partners being at Paris, induced the manufacturer to supply their house instead of witness with goods he had ordered, 12602—Witness did not charge Messrs. Morrison & Co.'s house with smuggling, 12603, 12604—Purchase of goods 30 per cent. lower than import price, proof of the manufacturer cheating witness, or that Morrison & Co. must have passed their goods lower than witness, 12605–12613—How much per pound weight witness's goods entered at; how far both parcels of goods being entered by weight would affect their value, 12614–12631.

Bedworth Parish:

Amount of the Poor Rates collected in the parish of Bedworth, with the number of rates, the rate of assessment and gross amount of property assessed, *App.* p. 927.

An Account of the disbursements of the parish of Bedworth, in the county of Warwick, for ten years, to the County Rates and the Poor, *App.* p. 929.

Belgium. See *Smuggling.*

Bengal, establishment of a filature, and reeling establishment there; cost price of silk raised thereat, and reason of the establishment not answering, *Grout* 10322–10324, 10331–10334—Comparison of quality of the Bengal silk reeled upon the Bengal and the Italian principle, *Grout* 10368.

Bengal and China Silk, consumption thereof, *Royle* 3204—Drawback acts as a bonus on the use of, *Royle* 3357, 3358—Increase in the importation of China silk, *Brockwell* 3567—Importation of China, Turkey and Bengal silk, *Brockwell* 3690–3693—For what Bengal silks are used in France, *Doxat* 4113, 4114—Importation of Bengal and China silk, *Doxat* 4278—China silks have improved, but not Bengal, *Doxat* 4302; *Banbury*, 4951, 4652—Purposes to which Bengal and China silk applied, and its comparative quality, *Stone* 6183–6198, 6203–6213, 6217, 6218, 6232–6234—How far Bengal silk affects the consumption of Italian, *Stone*, 6214–6217, 6221—Chinese silk interferes more with the Italian, *Stone* 6222—How far cheaper than the Italian, *Schwabe* 9867–9870—Difference as to substance between Bengal and Italian silk, *Grout* 10369—Improvement in the quality of Bengal silk, *Stone* 6219, 6220—Quality of East India silk has deteriorated, *Harter* 9309–9311—Increase in quantity and decrease in price of Chinese silk, *Stone* 6223, 6224—Importance of increasing the supply of China silk, *Stone* 6235—Its comparison with Bengal silk, *Stone* 6236, 6237—Loss to the French from importation of China silk, *Bowering* 9118—Imports of China silk and increase therein since the Company discontinued its importation, *Harter* 9295–9299, 9304—Price and quality of Bengal and China silk for making certain articles, *Schwabe* 9841–9845—Market for Bengal silk open to the French as well as the English, *Schwabe* 9865, 9866.

Bennett, Richard (Analysis of his Evidence.) Silk manufacturer at Spitalfields, 10713–10715—Progressive increase of the plain branch previous to 1826, 10716, 10717—Bad consequences to trade from the admission of foreign goods, 10718–10720—Distress of weavers since, and bad moral consequences therefrom, 10721–10726—Rich plain and

Bennett, Richard (Analysis of his Evidence)—*continued.*

and fancy silks formerly made in Spitalfields, 10727—Not as many goods now made there as formerly, 10728—Increase of consumption of silk goods, 10729—Description of Manchester goods, and their prices, 10730, 10731—Competition with France, and not with Manchester, the cause of the distress in Spitalfields, 10732-10734—Every exertion made to meet foreign competition; reduction of prices of goods, 10735-10737—Weavers do not work so well from working more hours, 10738—Weekly earnings of weavers formerly and at present, 10739—Reduction of wages and profits by alteration of duties in 1829, 10740—Smuggling not prevented thereby, 10741, 10742—Increase thereof, 10743—Further reduction would little benefit the manufacturer, and totally ruin the throwster, 10744—Smuggling during prohibition was not injurious to trade, 10745, 10746—Houses in the habit of smuggling now who would not have incurred risk under prohibition, 10747, 10748—Manner in which the French regulate the fashion and lead the market, 10749, 10750—Reduction of duty will not protect the market against jobs, 10751—Decline in the fancy trade; number of looms formerly and at present, 10752-10755—Under prohibition, home competition would be a sufficient protection as to price and quality, 10756-10759.

Benefit to the plain branch and operatives by extending the fancy trade, 10760, 10761—Advantage of France from growth of silk and cheapness of labour, 10762-10764—Spitalfields manufacture might be extended by prohibition, certain duties on organzine and tram, and further protection against smuggling, 10765-10771, 10775—Entire prohibition most beneficial, but plain goods might be admitted under proper Custom House regulations, 10772—Influence of duties upon rate of smuggling, 10773, 10774—How prohibition would benefit trade, 10776, 10777—Small increase of price would not lessen consumption, 10778-10787—Necessity of commencing throwing, from diminished profits of manufacture, 10788, 10789—English thrown organzine better than foreign, 10790—Consumption of Piedmont organzine, 10791—Fossembrone the best Italian raw, 10792, 10793—Reduction of duty on thrown would be a greater inducement to Italians to send more thrown and less raw, 10794-10796—Parties who grow and throw silk in Italy, 10797-10800—Silk thrown in Italy at a less price than in England, 10801-10805—Reducing price of throwing in England prevents its being properly done, and causes reduction of wages, 10805, 10806, 10808—No profit upon the throwing organzine at the present rate, 10807—Under a larger protecting duty silk would be better thrown than at present, 10809—Throwing has gone back for want of a remunerating price, 10810-10812.

Berlin, consumption of Silk therein, *Heath* 5693.

See also *Milan*.

Bethnal Green. See *Spitalfields District*.

Black Goods. Importation of black goods, *Ballance* 8587-8593—Consumption thereof, *Ballance* 8594, 8595—Competition with France in black satins, their colours, *Ballance* 8596-8598—Price thereof, *Ballance* 8599-8601—Manufacturers who have been beaten out of the market in the fancy trade employ their weavers on black goods, *Ballance* 8605, 8606—Description of French black satins mostly in use, *Ballance* 8621-8623.

See also *Crape*.

Black Ribbons. See *Ribbons*, 2.

Blonde. Duty on blonde lace from France, *Menetrier* 8306—Amount smuggled, and rate of smuggling, *Menetrier* 8307-8313, 8331-8335—Duty that would prevent smuggling in blonde, *Menetrier* 8336, 8337.

Board of Trade, witness's letter to, *Royle* 3123—Cause of it, *Royle* 3263, 3438—Examination upon memorial to the Board of Trade, and petition to the House of Commons, as to the state of the Silk Trade at Manchester, *Royle* 3254-3262—Copy, memorial, *Royle* 3262—Same names signed to both memorial and petition, *Royle* 3426, 3427—Negociations with the Board of Trade, with regard to stamping goods and making smuggling a penal offence, and answer by the Board in the negative, *Wadden* 10034, 10035—Witness's application to the Board of Trade in 1829 for reduction of duty on foreign thrown silk, *Graham* 12769-12772, 12776-12778, 12780.

See also *Duty on Importation*. *Smuggling*.

Bolter, Robert (Analysis of his Evidence.) Impossibility of earning a livelihood in Spitalfields at present, 11000—Average wages, 11001—Government have not protected the trade as they were bound to do, 11002—Injury to workmen and shopkeepers in Spitalfields from repeal of prohibitory laws, 11003—Relief would be given by prohibition, punishing the smuggler severely, or by putting duties under Excise, 11004—Difference in wages in 1769 and at present, 11005-11007—Difficulty of weavers obtaining work in other branches after serving an apprenticeship, 11008.

Bombazines, decrease in the importation of certain silk used in the manufacture thereof, *Heath* 5696-5703.

See also *Norwich*.

Bottrell, Richard (Analysis of his Evidence.) Smuggling not carried on to a greater extent now than formerly, and in different goods, 7753-7755, 7945-7948—Expense of smuggling previous to 1826, 7756, 7773—Method of conducting smuggling prior to 1826, great profit thereon, and who were purchasers, 7757-7765—Quantities of smuggled goods, by whom bought, and amount of seizures, 7766-7772, 7774—Present method of smuggling from France, 7775, 7776—Seizures, 1816-1826, 7777—Not so easy to dispose of smuggled goods now as during the prohibition, but less risk in keeping them, 7778-7783, 7807—Greater variety of French goods now than during prohibition, 7784-7786, 7808—More gauze ribbons smuggled in 1830 and 1831 than paid duty, 7787—Reason of diminution in the rate of smuggling, 7788, 7789—How close a vessel could approach the shore formerly and at present with smuggled goods, without seizure, 7790, 7791—Further examination upon the profits and risk of smuggling formerly, 7792-7800—Comparison of present and former rate of smuggling, 7801-7811—How far reduction of duty would decrease smuggling, 7813, 7814—Necessity for foreign goods being examined at one place and subject to a greater check, 7815, 7816—Proportionate value of French broad silks smuggled now and before 1826, 7817—Of ribbons now smuggled, 7818, 7819—No smuggling in bandannas at present, duty on them, 7820-7825—Fewer persons concerned in smuggling now from diminution of profits, 7826-7828—Reduction in price and quality of French goods since 1826, 7829, 7830—Very little thrown silk smuggled prior to 1826, 7831, 7832—Preventive service only stopped smuggling for a time, 7833, 7834—How far smuggling would be carried on if duty reduced, 7835-7840—No smuggling in cambrics; duty thereon, 7841, 7842—Sea voyage too long to smuggle velvets from Germany, 7843—Silks are not smuggled from Belgium or Holland, 7844—Manner in which communication for smuggling is carried on between Dover and Calais, 7844-7846—Small encouragement to King's sailors to effect seizures; small amounts received by them, 7846—Greater risk in inland carriage than sea voyage, 7847—Goods that were formerly, but are not now smuggled, 7848—Effect of repeal of prohibitory laws upon the French coast, 7849—Quantity of smuggled goods of not so much consequence as the low price at which they are jobbed, 7850.

Large quantities of English goods smuggled into France through Belgium; description of them, and expense attending it, 7851-7857—Low rate of profit upon smuggling has diminished it; how far it would be renewed if prohibition revived, 7858-7864—Suggestions of regulations and duties for the prevention of smuggling, 7865, 7866, 7967—Manner in which goods have been passed at the Custom House lower than at their proper rate of duty, 7867-7869, 7882—Necessity for inspector at the Custom House being in communication with manufacturers to ascertain the value of goods, 7870-7878—Reason of taste and design being in favour of France, 7879, 7880—Comparison of advantages between France and England, both in legal and illegal trade, 7881—Variation in duty on plain silks, 7883—Examination upon the qualities of certain gauze ribbons exhibited to the Committee, to show amount of duty between French and English, 7884-7888—Description of goods seized from Messrs. Leaf's, 7889-7892—Small amount of seizures this year, 7893—Greater encouragement to smuggle under high duties, 7894—No advantage in smuggling paying shillings for francs, rate of exchange thereby, 7895—Increase of silk manufacture in Russia since 1820, 7896, 7897—Increase of duties upon importation into Russia, 7898-7900—How profits upon smuggling divided, 7901, 7902—Comparison of wages between France and England, 7903-7907—Articles the French at present employed upon, and for what market intended, 7908-7912—French crapes do not come into competition with Spitalfields manufacture, 7913-7916—Broad goods of France come into competition with Spitalfields, 7917-7920—Only rich French goods ordered for the English market, 7921—Description of goods sent by France into Germany, 7922—Rise in the price of French orgazine from small stocks on hand, 7922, 7923.

Extent of silk manufacture of France; importation, growth and number of looms, 7924-7926—Origin of the disturbances at Lyons about wages, 7927, 7928—Did not extend to St. Etienne, 7927—Bad state of the weavers at St. Etienne, and from what causes, 7930-7934—Advantages of stamping goods to prevent smuggling, 7935—Hours of attendance of the Commissioners of Customs, 7936, 7937—How far certain Custom House officers are open to bribery from the amount and manner of paying their salaries, 7938, 7939—Necessity for silks paying duty at one place, 7940, 7941—Certificate of British Consul should be sent with silks imported into England, 7942—Method by which silks might be stamped without risk of forgery; diagrams of four seals for that purpose, 7943-7944—Duty should be levied both by *ad valorem* and by weight, 7949—How far prohibition would protect British manufacture, 7950—How far English manufactures improved since French goods imported, 7951, 7954-7956—Dissatisfaction among the Custom House officers from not being remunerated properly, 7952, 7953—Losses upon importation of China crapes from their being superseded by the French, and successfully imitated by the English, 7957-7959—Increase in the glove trade since 1826, 7960, 7961—Upon what fashion depends, 7962-7964—Artisans in most countries in a worse situation than formerly, 7965—Spitalfields manufacturer has rivals both at Manchester and Lyons, 7966—Temptations to Custom House officers from badness of pay and only occasional employment, 7968-7970—Increase of import duties into Prussia, 7971.

Bouillon,

Bouillon, Francis Felix (Analysis of his Evidence). Dealer in foreign silk goods, 10152-10157—More fancy than plain goods sold this year, 10158-10161—Reason for not dealing in British goods, 10162-10167—English plain goods come into the market as cheap as the French, 10168-10170—Gauze ribbons a great deal superior to the English, 10171—Amount of French goods sold per annum, 10172-10175—Purchases in France in plain goods have been latterly reduced, 10176-10179—Duty on importation, 10180, 10181—Difficulties in the way of stamping, 10182-10185—Increasing the duty on gauzes would prevent jobbing, 10186-10189—Duty sufficient on satin and sarsnet ribbons, 10190-10194, 10195—Extent of the manufacture of ribbons by certain houses in France, 10191-10193—Extent of smuggling, 10196-10201—Facilities less for receiving smuggled goods under a prohibition than at present, 10202, 10203—Punishment instead of fine must be used to prevent smuggling, 10207-10209—Whether smuggling not carried on to a greater extent under prohibition than at present, difficulties in the way of it, 10210-10217—Under prohibition, French patterns would be obtained and manufactured by English manufacturers, 10218, 10219—Certain plain goods made in this country from French patterns cheaper than in France, 10220-10226—Goods are jobbed cheaper after the fashion is over, 10227—English broad silks are prohibited in France, 10229—French Custom House regulations prevent smuggling, 10230, 10231—Alterations might be made in English Customs regulations, 10232, 10233—Proportion of English sales by witness's house annually, 10234, 10235.

Bounties. Additional bounties on exportation by Act 59 Geo. 3, c. 112, *Hume* 60—Amount of bounty and drawback paid in the United Kingdom on British manufactured silk goods exported, *Hume* 64—Manner in which drawback and duties affect different branches of the silk trade, *Hume* 92-99—How far drawback acts as a bounty on exportation, *Hume* 103-112—How far duty and drawback is a tax upon one manufacturing district for the benefit of another, *Hume* 113-119.

See also *Drawback*.

Bowring, John, LL.D. (Analysis of his Evidence). Proportion of labour to the cost of production between goods imported into France and England from each other, 8723—Means by which witness obtained information as to the state and condition of the silk trade in France, 8724-8729—Disadvantages under which the French silk trade is suffering at present, 8730, 8769-8771—Importations into and exportations from France of raw and thrown silk, 1825-1831, 8731—Account of the weight of silk imported for the consumption of France, 1820-1831, 8735—Account of the value of silk imported for consumption of France, 1820-1831, 8735—Account of the value of raw silks, all sorts, imported into France from the year 7 to the year 1806, and of the quantities and value, 1815-1819, 8735—Report of the importations of raw and thrown silks, and of the duties levied 1825-1830, reduced to English weights and measures, 8736—Ports of exportation from France and quantities of foreign silks exported, 1828-1830, 8736—Extent of consumption of French silk, 8737-8739—Superiority of French silk at Cevennes, and cost thereof, 8740, 8741—Annual production thereof, 8742, 8743—Value of silks in France, shown by price current, 8744—Production of French silk increasing, 8745—Method of the silk production and manufacture, from its earliest stage, 8745—Price of silk of native manufacture, and how far on the decline, 8746-8749—Price of cocoons and raw silk of Cevennes, 1822-1831, 8749.

Method taken in France to ascertain the quality and weight of silk, 8750-8752—French Government intend to allow the exportation of raw silk, 8753, 8754—Advantage to France from their superior taste, 8755-8758—Extent of protection to the French silk trade, 8759—Importation of foreign manufactured silks into France, and how far beneficial to it, 8760-8766—History of the invention of the Jacquard machine, 8767—Also, of the introduction of the bar loom, 8768—Improvements that have taken place in English silk manufacture since 1825, and fear of the French from English competition, 8772-8777—Importation of English manufactured silks into France, 8778-8787—Superiority assigned to French goods is not through prejudice, 8788—Account of silk manufactures exported from France, 1828-1830, 8789, 8790—Mode of valuation, 8791, 8792—Increase of smuggling from France, 8793—Imports of manufactured silk to England, 1818-1824, 8793—Fluctuations in the silk trade at Lyons, 8794-8796—Number of looms employed therein at different periods, 8796-8798—Quantities of silk imported from foreign countries which have entered the bonding warehouses of Lyons, 1822-1832, showing quantities entered for home consumption, and exported, 8799—Establishment of La Condition, for ascertaining the weight and quality of silk, 8800, 8801—Statement of the fluctuations in the price of silks in the market of Lyons, 1822-1832, 8802, 8803—Cause of the fall in the number of looms at Lyons in 1789, 8804—Quantity of foreign silk sold in the Lyonesse market for 10 years, 8804—Description of handkerchiefs exported from France to England, 8805—Reasons for superiority of French taste, particularly from the establishment of schools of art and weaving schools, and encouragement given to talent, 8806-8825.

(Second Examination.) National taste in France for works of art encouraged by all public works of art being open to public inspection; other branches of art in which France excels England, 8826-8832—Weight of silk submitted to La Condition, 1806-1820, 8833—Proportion of silk sent to La Condition and sold without, 8834, 8835—

Bowring, John, LL. D. (Analysis of his Evidence)—continued.

Modifications about to be made in the tests applied by La Condition, 8836—To what improvement in English silk manufacture attributed by the French, 8837-8839—Operation of l'Ecole de Tissage, specimens of their work and prizes given therefor, 8840-8848—Means of preserving the rights of patents through the establishment of the Conseil des Prud'hommes, 8849-8853, 8869-8871—Constitution of the Conseil des Prud'hommes, their sittings and duties, 8854-8868, 8872—Price of throwing silk in France, 8873-8878—Absence of waste does not depend on its being thrown directly after being reeled, 8879, 8880—Wages to reelers and persons in throwing, 8881-8883—Prices paid for dyeing, 8884—Frauds by French dyers and weavers, 8885—Comparison of superiority between English and French as to dyeing, 8886-8895—Professional chemists in France, 8889, 8890, 8896—Disadvantage from the French being prevented getting their drugs from England, 8897-8899—Wages paid for winding, 8900, 8901—Tariff of weavers' wages at Lyons, 8902-8904—Tariff not obligatory; riots in November 1831, from endeavouring to make it so, 8905-8908—Manner in which the Conseil des Prud'hommes settle disputes as to wages, 8909-8911—Means by which riots put an end to, by removal of weavers, 8912-8915—Manner of their removal, 8920-8922—Average production of weavers per day at Lyons, 8916—Hours of labour of weavers in Lyons, 8917-8919—Fluctuation in the demand for labour at Lyons, 8923, 8924—System of work pursued by the weavers, their wages and cost of living, 8925-8928—Amount paid by the Lyonesse weaver for taxes, 8929—Communications from two weavers relative to the method of living; hours of labour, wages, &c. of weavers at Lyons, 8930—Saving banks have little influence, 8931.

New poor association among labourers, for their protection, 8932, 8933—Rate of wages, and their operation upon the price of goods at Lyons, 8934-8938—Profit and loss to a Lyonesse manufacturer, their disadvantages from foreign competition, 8940-8944—Local taxation of Lyons, 8945-8947—Expense of changing patterns, and disputes between masters and weavers thereupon, and how affected by order trade, 8948-8958—Change of opinion in France with regard to its commercial relations with England, 8959, 8960—Facilities for ascertaining the state of the trade of St. Etienne, 8961-8963—Increase of the ribbon trade there, 8964, 8965, 8969, 8970—Migration of trade between Lyons and St. Etienne, 8966—How far establishment of la Condition exists at St. Etienne, 8967—Artists employed there, 8968—Prices of silk there, 8971—Proportion of foreign silk used there, 8972—Nature and price of marabout silk, and advantages of the French thereby, 8973-8977, 8979-8981, 8989—Introduction of the bar loom into St. Etienne, 8978—How far improvements therein, 8982-8984—Comparison of prices of warping and dyeing between Lyons and St. Etienne, 8985-8988—Number of ribbon manufacturers at St. Etienne, 8990—Daily produce of ribbons, 8990, 8993—Looms are not all of the same sort, 8991—Ribbon weavers at St. Etienne district are also agricultural labourers, 8991, 8992.

(Third Examination.) Description of looms employed at St. Etienne, 8994-8996—Number and description of ribbon looms employed at Lyons, 8997—Cause of the introduction of the ribbon trade at Lyons, 8998—Wages of weavers at St. Etienne, 8999-9001—St. Etienne manufacturers do not export on their own account, 9002—Examination upon the proportions of labour, raw material and cost of manufacture at St. Etienne, 9003-9007—Prices of ribbon weaving per piece at Lyons, and number of pieces manufactured, 9008-9015—The like at St. Etienne, 9016-9020—Proportion of different classes of ribbons manufactured at St. Etienne, 9021, 9022—Duties on importation of foreign ribbons into France, 9023—Benefits to France of foreign competition, 9024-9028—Social condition of the St. Etienne weavers, 9029—Decreased consumption in France, and increased export, 9030-9032—How St. Chamond is connected with St. Etienne, 9033—Conseil des Prud'hommes at St. Etienne less popularly constituted than at Lyons; of what it consists, 9034—Nature of the tax on patents, 9035, 9036, 9043—Table of the width of French ribbons, 9037—Population of St. Etienne, and number connected with the silk trade, 9038, 9039.

Population of France rated to the land tax, 9040—Manufacturer must take out a licence to vote, 9041—Amount of octroi, and manner in which it depends upon the population, 9042, 9045-9051—Advantages of the Swiss over the French in ribbon manufacture, 9052-9056, 9065-9068—Calculation of expenses and earnings of French weavers, 9057, 9058—Where silk thrown, and its conveyance to St. Etienne, 9059-9061—Description of diet of weavers, 9062-9064—Population, and state of trade at Nismes, 9069-9075—Patterns handed in of sarsnets from Avignon, 9076-9078—Production of raw silk in the Vaucluse department, 9079—Improvements in English manufacture shut out the smuggling trade from Avignon, 9079, 9080, 9111, 9112—Consumption of silk, and prices in the Vaucluse department, 9081—Increase in the cultivation of silk in the Vaucluse department, 9083-9085—How far French growers throw their own silk, 9086—Price of reeling and labour, 9087-9090—Men employed in throwing, women and children in reeling, hours of labour, 9093, 9094—Improved manner of rearing the worm makes the employment more healthy, 9095—Size of deniers, 9092-9097—Manner in which the silk is sold, 9098, 9104—Superiority of English thrown silk over French, 9105—Price paid for winding and warping at Avignon, 9106—Food, clothing and lodging of labourers, 9107-9109—Number of looms at Avignon, 9110—Hours of labour, earnings and general condition of weavers at Avignon,

Bowring, John, LL. D. (Analysis of his Evidence)—continued.

Avignon, 9111-9113—Their opinion as to competition with foreign markets, 9114—Both France and England would be benefited by the export of French raw silk, 9115, 9116—How far foreign silk used at Avignon, 9117—Loss to the French upon importation of China silk, 9118.

(Fourth Examination.) State of the ribbon trade at Basle, and mode of conducting it; to what countries exported, and proportions, 9119—Effect of the introduction of French silk goods into England upon French manufactures, 9120—Goods that were smuggled into England previous to 1826 that have ceased since, 9121—English demand is for articles of taste, 9122—Official value of silks exported from France, 9123-9126—Analysis of the manner in which the different quantities of French silks, plain and figured, are distributed in foreign countries, 9127—The like of crapes, 9128—The like of ribbons, 9129—Examination upon the foregoing statements, 9130-9133—Qualities of the different French goods taken by England, 1825, 1828 and 1831, 9134—Relative position of the English and French manufactures in the United States, 9135—Export of manufactured silks from France to England, 1818-1830, 9137, 9138—Increase of smuggling, 9138, 9139—Institution of a commission in France for considering its relations with this country, 9141, 9142—Disadvantages of prohibition by increasing smuggling, 9143—Smuggling in fewer hands than under prohibition, and how it places the manufacturer in a worse situation, 9144-9148—Greater difficulty in smuggling into France, and greater severity of the Custom House and municipal regulations, 9149, 9150—Manner in which the smuggler in France is considered a public benefactor, 9151-9153—How far expectation realized, that upon changing prohibition for duties, odium would attach to the smuggler, 9154-9158—Profits of the higher class of smugglers, great extent of smuggling, and large capital employed therein, 9159-9163, 9170—Better feelings of the people towards smugglers according to the greater risk they run, 9164-9165—How far prohibition would change the smugglers from a few large to a great many small ones, 9166-9168.

Premium of smuggling higher into France than England, 9169—Difference in the proportion of labour between English and French goods, 9170—Smuggling cotton twist into France in the same manner as silk into England, 9174—Question of displacing labour should be looked at with a view to the manufacture of the country, and not the silk manufacture only, 9172-9174—Further examination as to the smuggler being a public benefactor, and as to the exchange of exports between France and England of silk and cotton, 9175, 9176—Amount of importation of cotton twist into France, 9177—Amount of duty that would decrease smuggling, 9178—Protection to the silk manufacturer illusory, 9179—Silk manufacture would increase by removing all protection, 9180—Great expense to France of its protection of its cotton twist trade, without any effect, 9181, 9185, 9186—Advantages of France and England from admitting French goods at a low duty and obtaining the raw material, 9182-9184—How far price of French silk regulated by the price paid for Italian silk, 9187—Reduction of duty on thrown would place English manufacturer on equal footing with the French, 9188—If silk trade has increased there is no displacement of labour, 9189, 9190.

Balance of trade between England and France against England, 9191—Articles smuggled into France, 9192—Their Custom House regulations, 9193—French Custom revenues, 9194—Increasing number of revenue officers gives a greater chance for smuggling, 9195—Bounty and drawback on exportation of silk from France rejected by the Council of Commerce, 9196, 9197—Disadvantages of the protective system to France, 9198, 9199—Natural advantages of France for producing fine goods and of England for coarser, 9200, 9201—Not profitable to cultivate the mulberry tree in this country, 9202, 9203—Disadvantages of protective interest to shipping trade of France by increasing the duties on iron, 9204, 9205—How smuggling would be increased under prohibition, 9206-9209—Small amount of smuggling in gloves, 9210—Duty that might be collected therein, 9211—Advantages of an *ad valorem* duty on importation, 9212—Plan of the Americans with regard to invoices sent with their goods from France, 9213—How much above their proper rate duties are levied in England, 9214—Calculation of loss to England by prohibition of French silks, 9215—Reducing duty on importation will destroy smuggling, 9216, 9217—Encouragement given by receiver of goods cannot be checked, 9218-9221—Seizure and protection therefrom of English goods in France, 9222, 9223.

(Fifth Examination.) Importations between France and England, and proportion of labour in the manufactures of each, 9616-9626—Importations of silk previous to and since removal of prohibition, 9627-9630—How far France has obtained a foreign trade in silks from its home trade being unprotected, 9631, 9632—How far the advantages of France act as a protection, 9633-9635—Increase and decrease of Lyons and St. Etienne silk trades, 9636-9642—How far the importation of silk manufactured goods from France tends to displace English labour, 9643-9650—Improvement in quality of French and Italian raw and French manufactured silks imported since removal of prohibition, 9651-9653—Proportion of silk manufactured goods imported in 1825 that were warehoused against the opening the ports in 1826, 9654, 9655—Comparison of French and English labour as regards local taxation, 9656, 9657—As regards national taxation, 9653-9661—Taxes on iron and machinery for building mills dearer in France than England, 9662-9664, 9670-9672—Advantage of Switzerland over France as to
678. 6 H 2 taxation

Bowring, John, LL. D. (Analysis of his Evidence)—continued.

taxation of machinery, 9665-9669—Reasons for the French not importing silk from Italy as well as the Swiss, 9673, 9674—No brokerage upon receiving silk direct from the foreign producer, 9675, 9676—How far pillage of silk greater at Lyons than in other countries, 9677, 9678—Rate of interest in France, 9679, 9680—Complaint in Lyons of England supplying the American market, 9681-9683—How far English manufactures have improved from competition with France, 9684-9688—Superiority of the French and inferiority of English silk manufactures, and disadvantages of prohibiting importation of French manufactures, 9689-9706—Increase of consumption of silk in England, 1821-1825, 9707, 9708.

Comparison of importations, 1814-1825, 9708-9711—Improvement in ribbon looms in Lyons, 9712-9715—Price of marabout in France and how manufactured, 9716-9718—Difference in prices of certain silks and ribbons, 9719—Whether sarsnets manufactured at Avignon are worn now, 9720, 9721—State of trade at Nismes, without export trade from being protected, 9722-9725—Competition between France and England, and advantages and disadvantages with respect to fine and coarse goods, 9726-9736—State of trade in certain districts in France, 9737-9744—Loss of capital in mills from insufficient protection, 9745-9747—State of the cotton trade in England, and how far it has prospered from being the least protected, 9748-9756—Further examination as to importation between France and England, 9757-9765—How far English goods exposed in the shop windows in France, 9766, 9767—Preference in favour of French goods is from their superiority, and not prejudice, 9768—Increase in exportation of English silk goods in certain years from 1821, 9769—Further examination as to the decline or increase of English labour from importations from France, 9770-9774—Relative prices of French and Italian silk in France, 9775-9778—Advances by the French and English merchants to the Piedmont growers, 9780-9782—Comparison of distress in the silk and other trades in France, 9783-9787—How far export of coarse silks to France in consequence of the drawback, 9788—Value of Jacquards in England and France, 9789-9795—Expense of changing patterns in France and England, 9797-9802—Destination of weavers sent away from Lyons, 9803—Advantage of the English weaver over the French from poor-rates, 9804, 9805—Comparison of throwing between France and England, with improvement of the latter from improved machinery, 9806-9815—Prices of provisions in France and England, 9816, 9817—State of trade at St. Etienne, and how far its superiority to be attributed to the bar loom, 9818-9821—Price of smuggling and its connection with duties, 9822-9824—Character of witness's evidence, and from what sources obtained, 9825-9827.

(Sixth Examination.) Distinction conferred by the French Government for superior skill in silk manufacture, 9936—Extract from a letter showing the fear of the French manufacturers that the Committee will recommend the prohibition of their manufactures, 9937-9940—Further examination upon the produce of silk manufactures and consumption and number of looms in France, 9941-9960.

(Seventh Examination.) Further examination upon the value of silk manufactures and consumption in France, and of cost for labour, materials, &c., 10027-10029—Duties paid in France on foreign manufactured silks entered for home consumption, 1828-1830; Duties received in France on the export of French silk manufactures to foreign countries, 1828-1830, 10029—Backwardness of the throwing and reeling establishments in France, 10029.

Bribery. See Custom House.

Bridges, William (Analysis of his Evidence.) Silk manufacturer at Spitalfields in the fancy trade, 10370-10374—Flourishing state of the silk trade, and description of goods made before opening the Ports in 1826, 10375-10378, 10426, 10439, 10440—Number of looms employed, with proportion on figured and proportion on plain goods, 10379-10381—Goods manufactured by witness worn by the Royal Family, 10382—Patterns drawn by English artists, 10383—No want of taste and skill on the part of the English manufacturer, 10384—Number of Jacquard looms employed upon their introduction, 10384-10388—How far reduction of wages thereby, 10389, 10390—Description of goods made under present wages, 10391-10393—Reduction of looms from the gauze trade having left the country, 10394—Comparison of witness's and Mr. Fulton's goods, 10395-10403—Import of gauzes from France, and manner in which they interfere with the English trade, 10404-10421—Goods made from orders formerly, 10424, 10425—Preference by witness in favour of English thrown silk, and value thereof, 10427-10436—Necessity for encouraging the importation of good raw silk, 10437, 10438—Decrease of the fancy trade from the importation of foreign goods, 10441-10449, 10463-10468, 10500-10509—Advantages to the French that make their goods cheaper, 10450-10452—Disadvantages of removing duty on importation of thrown, and as to the French obtaining their raws cheaper than the English, 10453-10462, 10493.

Pattern of the Queen's coronation dress, and dresses for drawing-rooms, manufactured by witness, and loss thereby, through the importation of foreign goods, 10469-10475—Facility for disposing of plain and fancy goods at a loss, 10476-10483—Sometimes temporary employment for looms when French goods scarce, 10484-10486—Prohibition the

Bridges, William (Analysis of his Evidence)—*continued.*

tion the only means of restoring the trade, 10487, 10488—Advance of wages that would satisfy the operatives, 10489-10491—Pence not an object in price to the consumer of figured goods, 10492—Improvements in manufacture attributed to the Jacquard looms, previous to and not since the opening the Ports, 10494-10496—Manchester has not taken fancy trade from Spitalfields, 10497, 10498—England not on a fair footing with France, 10499—Composition of the Trade Committee; how far they are interested in throwing, 10510-10515—They have not interfered with the evidence to be given before this Committee, 10516-10528—Different views of silk manufacturers as to importation of French goods, 10529, 10530—Not large manufacturers, who are anxious for removing duty on thrown silks, 10531-10533—No fear of home competition, if foreigner kept out, 10534-10540.

Broad Silk. See *Silk, IV. Spitalfields Trade.*

Brocklehurst, John, jun. (Analysis of his Evidence.) Silk manufacturer at Macclesfield, 11320-11322—Throwsters' trade increasing before 1826, 11323—Good condition of the operatives at that period, 11324—Ruin of throwing interests since 1826, 11325—Number of persons employed in the throwing mills at Macclesfield, 1824-1832, 11326-11328—Number of spindles at work 1824-1832, 11329-11332—Hours of work in silk mills, 11333—Their wages 1824-1832, 11334-11336—Statement of the number of spindles, and mill people and wages, at Macclesfield, 1824, 1828, 1831, 11336—Subsistence of hands out of employment, 11337—Annual consumption of silk prior to and since 1826, showing decreased consumption in the latter period, 11338—Increase of consumption of silk goods but for interference of the French, 11339—Price of silk not lower after repeal of duties in 1824, 11340, 11341—No stocks of English silks on hand when the French were admitted, 11342-11345—Yearly decline of trade since 1826, 11346—Progressive increase from 1808-1826, 11347-11349—Ministers expected the alteration would place the silk trade on a level with the cotton trade, 11350—If consumption of silk has increased since 1826, the goods manufactured have been of an inferior quality, 11352-11354—Advance in the silk trade of the continent over that of England, 11355—Decreased amount of wages upon manufacture of a larger quantity of silk, 11356, 11357—Decrease in consumption of Italian raw, 1824-1831, 11357—Increase of looms at Lyons over England, 11357, 11358—Number of throwing mills in Macclesfield, and number erected, 1814-1824, and 1824-1832, 11359-11364—Power thereof, 11365—Cost thereof, 11366—Mills and Machinery not convertible to other manufacture, 11367—Number of counties in England in which silk mills are established, 11368—Power of mills at Manchester, 11369, 11370.

Comparison of power and advantages of silk mills at Macclesfield and Manchester, 11371, 11372—Mills that are out of employment are, from throwing trade being transferred to Italy, and not from disadvantageous situations of mills, 11373-11380—Scarcity of fine silk for throwing at present, 11381—Annual amount of poor rates at Macclesfield, 1821-1832, 11382, 11385—Number of families receiving relief, 1821-1832, and reduction in the amount of allowance, 11383-11385—Average increase in weekly expenditure to the poor, 1832 over 1823, 11386—Statement of weekly payments to the casual and regular out poor of Macclesfield, 1832 and 1823, 11386—Weekly relief to casual poor, 1821-1831, 11387, 11388—Empty houses and houses not contributing to the poor's rate, 11389, 11390—Charge of overtrading against Macclesfield prior to 1826, unjust, 11391—Advertisement for increased hands at Macclesfield was only of a local and temporary nature, 11392, 11393—How increase of houses built in 1822 warranted, 11394—Desertion of houses show the state of the silk trade, 11395—Price of corn nearly the same, 11396—Distress of operatives, and bad moral effect therefrom, 11397-11402—Distressed state of the town of Macclesfield in consequence, 11403—Number of failures, 1814-1826, and since, and causes thereof, 11404-11408—Difficulty of removing capital invested in machinery, or converting machinery to other purposes, 11409-11412—Deterioration in mill property, 11413-11418—Wages for throwing cannot be reduced lower, 11419, 11420—Cost of throwing, and amount of protection necessary for the British throwster, 11421-11423—Throwing trade given up from loss from foreign competition, 11424, 11425—Importance of the throwing trade, 11426-11430—Statement of decreased importation of Italian raw, and increased thrown, from reduction of duties, in 1829, 11431, 11432—Examination thereupon, 11433-11435—How the silk manufacture might be increased under proper duties, 11436-11442—Importation of foreign raw and thrown silk, 1827-1832, and effect of present duty thereon, 11443-11448—Tendency of low prices to degenerate the silk manufacture, 11449.

Statement of the leading articles made at Macclesfield, with rates of wages, 1821-1831, showing reduction therein, and consequent distress of weavers, 11450-11453—Progress of manufacture checked by interference from the Continent, 11454—How the silk trade would have improved under better protection, 11455—Description of goods made before and since 1826, and loss of trade since, 11456, 11457—Loss of time by weavers more now than formerly, 11458—They have no other employment when out of work, 11459—Distressed state of the Irish weavers, and the silk trade in Dublin, 11460-11462—Advantages from the East India Company's sales of silk, 11463-11465

Brocklehurst, John, jun. (Analysis of his Evidence)—continued.

—Examination upon importation of India bandannas, duties thereon, and alterations necessary therein, 11466-11471—Manner in which the Company's imports of silk goods acts injuriously to the manufacturer and to themselves, 11472—Account of the profit and loss upon the sales of Bengal raw silk sold by the East India Company, 1816-1830, 11473—Their manufactured goods come into contact with their raws imported, 11474—State of raw silk in the East India Company's warehouses, 1829-1832, 11475—Quantity of silk refused at the Company's sales, 1831 and 1832, and causes thereof, 11476-11478—Duty that would effect, and advantages that would result from the Company importing raw material instead of manufactured goods, 11479-11484—Importation of English silks into France, 11485—No necessity for foreign competition as a stimulus to improvement of manufacture in England, shown by the production of certain patterns, 11485-11487—No want of taste, if trade properly protected, 11488-11491, 11500, 11501—Monopoly by France of the valuable branches which will eventually cause the loss of the silk trade, 11492—Obstacles in the way of the employment of power looms to broad silks, 11493-11499—Injury to trade by smuggling, and who are the promoters of it, 11502, 11503—Remedy therefor by imprisonment and hard labour, and stamping goods, 11504, 11505—No advantage in transferring silk trade to France in exchange for its taking our cotton yarn, 11506—Offers to witness to establish himself in the silk trade in the Netherlands, and state of the silk trade there, 11507-11518—Value of the British export trade, 1831, 11519—Advantage thereof, and state thereof, from alteration of the law, 11520, 11521—Effect of debentures thereon, 11522-11525—Manner in which the export trade might be made more profitable, 11526-11528—Proportion of exports between France and other parts of the world, 11529—Effect of debentures on throwsters and consumers, 11530, 11531—Why debenture not a tax on Spitalfields, 11532—Goods that are generally exported, 11534—British silk trade has no established markets abroad, 11535—Exportation of British and India bandannas, 1829-1832, 11535-11538—How far wages upon goods exported, paid by the parish, 11539-11542.

(Second Examination.) Wages of weavers, 1824-1831, showing greater quantity of silk worked up at reduced wages, 11543—Benefits that would be derived by the East India Company altering the description of the arrangement of their silks, 11544—Evils arising out of the alterations in the laws in 1824, 1826 and 1829, 11545-11550—Effect of the price of provisions, and corn laws upon the silk trade, 11551-11554—How far dealers capable of advising Government upon the state of the silk trade, 11555—Necessity for protection to obtain increase in the silk trade; tendency of low priced raws to increase it; increase in the cotton trade, and manner the silk trade might equally increase, 11556.

Brockwell, Thomas (Analysis of his Evidence.) Silk broker in London and Manchester, 3439-3447—No difference in the price per pound of throwing silk in Italy during the high duties, and at present, 3448-3453—Price in England does not regulate the price in Italy, 3454—Germany and her own people, the largest customers of Italy, 3456—France a large customer to the King of Sardinia, 3457—Quantity of silk produced in Italy, 3458, 3459—Proportion grown in Italy, 3460—England hitherto the largest customer for raw silk, 3462—Importation of Italian raw silk diminishing, 3463-3468—Increase of thrown silk imported, 3469, 3470—Reducing duty would cause Italy to throw more, 3471, 3472—Ruin of English throwsters will throw the trade more into the hands of Italy, 3472, 3473—Quantities of Italian raw and thrown silk imported into different countries, 3474-3476—Consumption of foreign thrown silk, 1828-1831, 3477-3482—Reduced duty on foreign trams, not a sufficient protection to the English throwster, 3483, 3484—Ruin to throwsters from the low prices of throwing Italian silk in England, 3485-3489—Failures of manufacturers and throwsters last year, 3490-3493—Interest of the manufacturer, that the throwster should gain instead of loose, 3494—Those manufacturers who want foreign silk without duty, have small vested interest in the silk trade, and would be ruined, 3495-3497—Who have the vested interests, 3498—Silk trade will flourish as the throwster is protected, 3499, 3500—Regulations that should be adopted to prohibit the importation of French and Swiss manufactured goods, or compel the French and Swiss to export their raw silk, 3501-3515.

Necessity for encouraging export trade, 3516, 3517—If French raws exported, and manufactured goods admitted, differences in the prices of labour might be afterwards regulated, 3518, 3519, 3525—Method of trade adopted by the French manufacturer, 3520-3524—Piedmont silk, the best thrown exported from Italy, 3526-3528—Greater proportion of the best quality of Piedmont silk exported to France than England, 3529-3532—Prices of Milan raw and thrown silk 1819-1831, 3533-3539—Difference in price to the Italian grower, between raw and thrown since 1819, 3540, 3541—Price of Italian thrown silk acts on that of English, 3542, 3543—Prices of throwing, 3544-3548—Difference of price that remunerates the Italian and that which will not remunerate the English throwster, 3549-3553—Italian would not send raw silk to England if he could not obtain a remunerating price for throwing it, 3554, 3555—Trade of Italy with England, France and Germany, 3556-3559—How far the price of raw silk can be maintained in England, 3560-3562—Capability of Italy to increase the

Brockwell, Thomas (Analysis of his Evidence)—*continued.*

the raw material is limited, and that of increasing thrown greater, 3563-3566—Increase in the importation of China silk, 3567.

(Second Examination.) How price of Italian thrown silk in the British market affected by that of British Italian thrown, 3568, 3569—Advantages possessed by the Italian throwster over the English, 3570-3572, 3681—Why the English have not similar advantages, 3573-7577—How the purchase of silk between Italy and England is carried on, 3578-3581, 3592-3594—How far price obtained regulates the sales, 3582-3584—Different qualities of Italian silk in the same bale, 3585, 3586—Advantage to the Italian therefrom, and from selecting silks not liable to waste, 3587-3591, 3683—Italians retain their best quality of silk themselves, 3595, 3596, 3682—Effect of reducing the duty on thrown silk on price and quantity of Italian raw silk, 3597-3600—Average difference of price between Italian raw and thrown silk, 3601-3608—How far a remuneration to the Italian throwster, 3609-3614—Different style of thrown silk in each country, 3616—Importations of raw and thrown silks, 1824-1831, 3619—Average weight of a bale of silk, 3620-3626—Importation and consumption of foreign thrown silk and duty, 1819-1831, 3627-3636—English mills can produce as good thrown silk as any other country, 3637-3642—Ruin of throwsters by reducing duty on foreign thrown, 3643—Prices of throwing in England, 3646-3650—Reasons why British throwster cannot compete with Italian, 3644, 3645, 3651-3654—Protection that should be given to English throwsters, 3655-3657—Expenses of throwing mills, 3658, 3660—Quality of Fossembrone silk, and its importation into this country, 3661-3667—How the importation of thrown silk has been checked, 3668-3675.

How far improvement has taken place in the quality of Italian raw silk imported, 3675-3679—Difference in the expense of throwing according to the quality of the silk, 3680—Difference in the price of raw and thrown silk if duty repealed, 3684-3686—Greater distress to the operatives if duty taken off, 3687, 3688—Increasing duty would cause a greater supply of Italian raw silk, 3689—Importation of China, Turkey and Bengal silks, 3690-3693—Increase of waste silk, 3694, 3695—Necessity in the Manchester trade for the best Italian silks to mix with China, 3696-3698—Necessity of debentures for the export trade, 3699-3703—Process of exportation by debentures, 3704, 3705—Quantity of waste silk imported, and from whence, 1828-1831, 3706-3710—Inducement of debentures to increase certain branches of trade, 3711—Effect of duty upon the importation of foreign thrown silk, 3712-3716—Stock of silk in Italy low at present, 3717-3722.

Brokers. Plan of guarantee pursued by brokers, and per centage thereon, *Banbury* 4566-4580—Commission and brokerage, *Martin* 5458-5461; *Heath* 5711; *Hall* 6536-6538—They seldom guarantee, *Martin* 5490—Business of a silk broker, and sources of their information, *Stone* 6453-6458; and how far they purchase on their own account, *Heath* 5713-5720—Examination upon broker's commission; sale, credit and discount upon silk sales, *Stone* 7015-7025—Extra commission for guaranteeing, *Heath* 5712—No brokerage upon receiving silk direct from the foreign producer, *Bowring* 9675, 9676.

See also *Discount*.

Bronze. Productions of the French in bronze have made their way in the same manner as their silk goods into all the markets of the world, *Bowring* 8830.

Brunskill, William (Analysis of his Evidence.) Distress of the ribbon trade caused by foreign competition, 121—Beneficial effects of prohibiting foreign ribbons, 122—Difference in the causes of the distress in 1817 and at present, 123—Prohibition the only remedy for the distress, 124—French ribbons would be imported at 20 per cent. higher duty, 125-128—Same description are made at Coventry, 129—Rate of duty upon different description of ribbons, and upon what it depends, 130-133—Reason why an *ad valorem* duty would not answer, 134-136—Great increase of smuggling since the repeal of the prohibition, and reasons for it, 137-144—Methods of checking smuggling, 145, 146—Price of debentures, 147-149—Effect of lowering the present rate of duty to an amount that would prevent inducement to smuggle, 150—Present rate at which goods can be smuggled for, 151—Rate at which smuggled by Messrs. Leaf, 152-154—Method adopted by them, and amount paid those employed, 155-163—Not the same extent of stock prepared as formerly, the consumption at Coventry is much the same, but a commoner article, taking less labour, 164-170, 444-446—Extent to which English manufacture has improved by the admission of French goods, 171-173—Comparison of skill in different branches with France, 174-178—Period of introduction of machinery, and where used, 179-188—Who would be benefited by increased price in the event of a return to the prohibitory system, 189-194, 486—Morals of the work people worse, from the poverty to which they are reduced, 195—Distress of the Spitalfields' trade through foreign competition, 196-200—Extent to which the Spitalfields' trade is affected by the Manchester trade, 201-205—Demand for foreign plain goods so great, that they sell in preference to English goods of the same quality, and much cheaper, 206-224—Quantity of velvets imported from Germany, 225-229—Rate of duty thereon, 230-233—*Ad valorem* duty can be collected on heavy articles, but not on fancy articles, 234—Duties not sufficiently high for protection, 235—Spitalfields' trade would revive if prohibition granted, 236—Advantage

Brunskill, William (Analysis of his Evidence)—*continued.*

to France by the use of machinery, 237, 238—In the event of prohibition there would be an increase of machinery in Coventry, 122, 289-241—Objection to power looms there, one destroyed, 242, 243, 245-247—Wages in France cheaper for fancy articles, 244—Particulars of the forming the list of prices for wages, and how they affect engine work and hand work, 248-268—In what the French manufacture excels the English, 269-272.

Ineffectual attempt to get the article at Coventry equal to that of the French, through the refusal of the work-people from the lowness of the wages, 273-316—English goods are cheaper than French goods can be imported for, 317-321—Cost of machinery a bar to its general introduction, 323—The similarity of wages for plain and fancy work at St. Etienne approach nearer than at Coventry, 324, 325—Effect of machinery in equalizing wages for different descriptions of work, 326-328—How much per cent. English goods are worse than French, and manner of making them equal, 329-331—Different rates of wages, 332-338—Distress of the weavers, particularly the single-hand looms, number of looms unemployed, 339-342, 455, 456—Difference in quantity of work and wages of the engine loom and single hand, 343-348—Employment in the black ribbon trade, 349-353—Raw article in France costs less than here, 354—How far obtaining material cheaper would enable the giving better wages, and producing the article cheaper, 355-363—Prohibition more necessary than reducing the duty on foreign thrown silk, 364-366—Quantity of British and foreign thrown silk consumed at Coventry and Spitalfields, 367-370—For some purposes English thrown silk answers better than foreign, 371-373—No duty could protect the fancy branch, it being entirely governed by the French fashions, 374-377—Increase in the silk manufacture at Coventry has not been in proportion to the population, 378-382—Possibility of distinguishing between French and English manufactured goods, although difficult in some cases, 383-400—English dye their goods equally well with the French, 401-405—How far the distress of the Spitalfields' trade is to be attributed to competition with Manchester, 406-426—Difficulties the fancy trade have to deal with from the prevailing fashion in favour of foreign goods and a glutted market, 427-443—The smuggling which took place formerly on a small scale was beneficial, 447-450—How far reducing the duty on certain manufactured goods would relieve one party at the expense of another, 451-454.

Bad effects upon trade from the opening the Ports in 1824, 457-463—How far debentures assist in exportation, 464-468—How far the general use of cottons has interfered with the silk trade, 469, 470, 475-479—Small remuneration upon the exportation of silk, 471-474—Suspicion of smuggling for some time, but none found out till the case of Leaf's, 480-485—Rate of wages at Coventry, 487-492—English wages double those of foreign, 493, 494—Employment of the weavers till the foreigners found out the channels of trade, 495, 496—Effect of removing the protecting duty upon the price of thrown silk, 497-501—Effect of the duty on foreign silk in the price of ribbons, 502, 503—Preference given to foreign thrown silks over English, 504-511—Beneficial effect of taking off the duty on foreign thrown silk, and lowering that of manufactured silks, 512-514—Usual method of smuggling, 515-520—Gauzes formerly manufactured, and at present, 521—Rate of insurance in cases of smuggling, 523-530—Increase of smuggling since 1826, 531—Manufacturers who thought well of the alteration in 1826 that have changed their opinion since, and left the trade, 532-536—Proposition of a fine was the main cause of not being able to get the work-people to do the quantity of work required, 537-545—Description of foreign silk used at Spitalfields and Coventry in the manufacture, 546-551—Amount of duty that would be sufficient protection against smuggling plain goods, 552-556—Nothing but prohibition will answer for fancy articles, 557.

(Second Examination.) Amount of extra expenses in importing goods from France beyond what they would cost in England, 558-562—That amount is so much additional, but not a sufficient protection to the English manufacturer, 563-565—Amount per cent. the value of labour in England exceeds that of France, 566-575, 593-610—Amount that per centage on labour bears to the value of the article, 576-578—Proportion of wages to the cost of the article at Coventry, 579-582—Amount per cent. the duty causes the English manufacturer to pay over the French manufacturer upon importation of Italian thrown silk, 583-592—Causes that have reduced the wages in Spitalfields, 611-622—Reasons for Spitalfields struggling against Manchester, 623-625—Articles that are manufactured at Manchester, and their quality, 626-631, 637-639—Importation of velvets from France, 632—And from Germany, 633—Importation of satins from France, 634, 635—Importation of velvets has increased, 640-642—Method of manufacture of velvets at Elverfeldt and Crefeldt, 643-646—Certain ribbons made in England cannot be made equal to the French from their not allowing the material of which they are made to be exported, 647-654—In what cases French patterns are copied, 655-660—Reasons for Swiss ribbons not being imported to the same extent as formerly, 661-663—Duty thereon, and how collected, 664-668—Causes of English fancy goods being worse than the French, 669—French raw silk superior to any other, 670-672—English manufacture of fancy articles will not equal the French from the cost of machinery preventing its use, 673-679—Reason for goods now manufacturing at Coventry being better than they usually are, 680-683.

Amount

Brunskill, William (Analysis of his Evidence)—*continued.*

Amount per cent. at which Leafs' smuggled their goods is only conjecture, 684, 685
 —Prices obtained for French goods, 686-688—Time taken for preparing loom, and
 expense of setting the pattern and manufacturing goods in imitation of French goods,
 689, 690, 727-733—Quantity and description of foreign silk annually consumed in
 Coventry, 691-702—Amount per cent. the protecting duty causes the Coventry ma-
 nufacturer to pay more for his silk, 704-707—No increase or improvement in ma-
 chinery from its cost, 708-712—Best method of preventing smuggling, 713-715—
 Quality of different machinery, 716-719—Method of making purchases in France, 722-
 726—Reason why prohibition the only protection for the fancy trade, 734-736—
 Smuggling can never be entirely stopped but can be reduced to a sufficient extent to pre-
 vent injury, 737, 738—Patterns here are cheaper and as good as the French, but the
 taste is in favour of the French, 739-746—Disadvantage to the English manufacturer
 from keeping a stock on hand, 747-749—There were more orders for ribbons formerly
 than at present, 750-753—Competition is that of fashion, 754—Large imports of
 plain goods now, 755.

Bruton, increase of poor's rate at, *Ward* 3983.

C.

Caffi, Francesco, (Analysis of his Evidence.) Manner of buying cocoons in Italy for
 reeling, 7031-7036—Method of advances between the landlord and labourer, 7037-
 7042—Period of reeling, and by whom done, 7043-7045—Expense of reeling and
 weight of the silk, 7046-7057—Value in English money of the Italian livre, 7048-7056
 —Expenses of throwing tram, with weight per lb. English, 7058-7066—The like for
 throwing organzine, 7067-7071, 7087—Prices of throwing, and during what periods,
 7072-7076—Charges for throwing more in Piedmont than Lombardy from its being
 better done, caused by the raws not being allowed to be exported, 7077-7082—Attempts
 to get exportation of raws prohibited from Lombardy, 7083-7086—Method of paying
 operatives when throwing mills not at work, 7088-7092—Mills if worked all the year
 could not throw all the silk produced in Italy, 7093-7095, 7108—Advances by throw-
 sters to reelers, 7096-7099—Mills would work all the year if they could get a better
 price for throwing, 7100-7105—Quantity of silk produced in Lombardy, and quantity
 thrown, 7106-7112—Manner in which the crop of France affects the exports from Italy,
 7113-7114—How far price of throwing remunerates the throwsters, 7115—Com-
 parison of wages and profits in silk and other businesses, 7116, 7117—Manner in which
 quantity of silk thrown or raised bears to other kinds of produce, 7118—Advantage to
 the throwster in working the silk fresh from the cocoons, 7119-7121—Care required in
 the cultivation of mulberry leaves, 7122-7124—Exports from Italy to different countries,
 7125-7136—Premium for smuggling raw silk from Piedmont, 7137-7141—Descrip-
 tion of the silk, and for what purposes used, 7142-7145—Size of mills, their rents and
 power, 7146-7150—Improvements in machinery, 7151, 7152—Improvement in the
 quality of silk, 7153-7155.

Capital of mill-owners; taxes and out-goings of mills, 7156-7159—Descriptions
 of silk sent to different countries, 7160-7165—No profit in sending trams to England,
 7166—Rent would not increase if mills worked all the year, 7167, 7168—Wages,
 diet and cost thereof of women and children employed in reeling, 7169-7192—Ne-
 cessity for keeping them in good health, 7193—Wages of women employed in wind-
 ing, and where done, and amount of work per week, 7194-7208—Operation of doubling,
 and wages, 7209-7218—Operation of twisting and throwing, hours of labour, wages
 and amount of work, 7219-7229, 7236-7241—Wages of superintendents, 7230-7234,
 7242-7248—Manner of subsistence of operatives when mills not at work, 7249—
 Liability of throwsters if work not delivered at the day named, 7250-7256—Great
 wealth of persons engaged as throwsters, 7257-7268—Calculation of charges upon a
 bale of thrown and raw silk from Italy to London, 7271-7278—Losses latterly to
 Italian merchants sending thrown silk here, 7279-7283—How far other countries pay
 better, 7284, 7285—Italian raw being thrown here the cause of sending Italian thrown
 being unprofitable, 7286, 7287—If duty reduced, a greater quantity of thrown would be
 sent here, 7288-7290—Raw silk in Italy higher than thrown, 7291-7293—Quantity
 of thrown that would be increased if duty reduced, 7294-7296—French and English
 manufactures are smuggled into Lombardy, 7297-7304—Wages of agriculturist and
 other labourers in Italy, 7305-7313—Prices of provisions, 7314-7317—Rents of
 cottages, 7318, 7319—Period at which mulberry tree fit to supply the worms, 7320
 —Value of leaves, 7322, 7323—Planting mulberry trees stopped from an intention to
 impose a duty, 7324, 7325.

Cambrics. Duty in 1826 on French cambrics, *Clay* 6862-6872—How far reducing duty
 prevented smuggling in cambrics, *Clay* 6873-6878—No smuggling in cambrics; duty
 thereon, *Bottrell* 7841, 7842.

Cape of Good Hope. See *Importation*, 2.

Capital, sufficiency thereof for the purpose of importation, *Cheeper* 902, 903—Difficult to transfer capital invested in machinery, *Jacobs* 1767, 1768; *Brocklehurst* 11409-11412—There are not more men of capital employed in the business now than formerly, *Cor* 2212—Injury to capital invested in mills and machinery, in consequence of the repeal of the prohibitory laws, *Banbury* 4421-4423, 4425—Expense of throwing latterly paid out of capital, *Banbury* 4492—Comparison of capital, 1824-1826 and to 1831, in the silk trade, *Royle* 3102; *Martin* 5454-5457; *Stone* 5769—How far additional capital in trade since 1824, *Harter* 9352-9356—Loss of capital in mills from insufficient protection, *Bowring* 9745-9747—Amount of capital invested in buildings and machinery, *Grout* 10300—Capital invested causes the necessity of continuing manufacture, though at a loss, *Grout* 10313—Less capital since alteration of system, *Moore* 11172.

See also *Roman States*.

Carriage. Rate of carriage of goods, *Swift* 3765-3770—Manchester has no advantage from rate of carriage, *Swift* 3774.

Cash Payments. More cash payments than formerly, *Stone* 5768, 5959-5962—Manner in which cash payments and short credit act favourably to trade with regard to solvency, *Dillon* 7706-7713.

See also *Bank of England*. *Credit*.

Cevennes. See *France*.

Chamond, Saint, manner in which it is connected with St. Etienne, *Bowring* 9033.

Cheeper, Anthony. (Analysis of his Evidence.) Calculations of the proportion of the value of labour in the manufacture of ribbons, and upon what founded, 758-770—Quantity of ribbons imported in the quarter ended 10th October 1831, and amount of duty paid, 771-777—Per centage paid according to the present duty, 778-780—Articles that are smuggled, 781—Amount of duty that might be collected, 782-784—Smuggling would take place but to small extent under prohibition, and who would be likely to carry it on, 785-807—Difficulty of disposing of smuggled goods, 808-812, 847-851—Possibility of an English manufacturer making a small quantity of goods here and smuggling a larger quantity from France, 813-815—Smuggler or disposer of smuggled articles is at the mercy of his customers and servants, 816-819—Trade depressed at Coventry, 820-822—Not half employment for the operatives, 823-825—Injury to the trade from glut in the market, and means of preventing it, 826, 827—Disadvantages of contending with the French fashions, 828-832—Trade was increasing up to the admission of foreign goods, 833-835—But for foreign competition, English goods would equal the French, 836—Losses to English manufacturer from change in the fashion, 837-846—Increase of smuggling since 1826, and amount of loss of English labour thereby and by foreign importation, 852-857—Description of benefit that would be derived from the small amount of smuggling under prohibition, 858-861—In the event of prohibition, the standard of taste would cease to be regulated by France, 862-865—Improvement in taste not to be attributed solely to France, 866-868—Benefit to English manufacturers from a variety of patterns, 869, 870.

Foreign colours have not superseded the English, 871-873—Quantity of goods smuggled, and from what source information obtained, 874-876—Internal competition necessary to protect the public, but not foreign competition, 877-887—Beneficial effects of prohibition over duty, and amount that would be smuggled under it, 888-896—Bad effects of jobbing, from the large stocks on hand, 897-901—Number of large importers, and sufficiency of capital for that purpose, 902, 903—Period the Coventry weavers have been in their present distress, 904-907—Difference in the amount of insurance upon smuggling under prohibition and protecting duty, 908-912—Possibility of distinguishing between French and English manufacture, and persons who would be likely to do so, 913-929—Amount of duty upon foreign importation compared with labour, 930-932—Description of English goods that were made superior than at present before foreign goods allowed to be imported, 933-935—Increase and improvement in machinery, 936-939.

Children. See *Operatives*.

China. See *Bengal and China*. *East India Company*. *Importation*, 2.

Clay, Robert (Analysis of his Evidence.) Importer of foreign manufactured goods; number engaged in the trade, 6758-6763—Method of purchasing goods in Paris, 6764-6768—State of import trade from 1826, 6769-6774—Reduction in the price of French plain goods between 1826 and 1828, 6775-6781—Comparison between French and English in the manner of finishing their goods, in favour of the French, 6782—Change in the import trade from plain to fancy goods, and prices thereof since 1829, 6783-6795, 6841-6843—Unprofitableness of the French import trade, 6796, 6797—Goods are all of the best kind, 6798, 6842—Manner in which jobbing arises, from goods being rejected after orders given, 6799-6803—Increase in manufacture of cut ribbons, 6804-6807—English plain goods have beat the French out of the market, 6808-6811—Watered silks are imported, 6812, 6813—Necessity for selling French goods immediately they come over, from their being immediately copied by the English and sold much cheaper, 6814-6835—Revolution in France stopped the home trade, and caused the exportation of goods at a loss to the manufacturer, 6836-6839—State of trade with regard

Clay, Robert (Analysis of his Evidence)—*continued.*

regard to French goods in England, 6840—Rate of duty upon French goods, and manner it operates upon smuggling, 6844-6853—Rate of insurance upon smuggling, 6854-6857—Duty that might be collected that would prevent smuggling, 6858, 6859, 6922-6924—Description of tulle, and where made, 6860, 6861—Duty in 1826 upon French cambrics, 6862-6872—How far reducing duty prevented smuggling in cambrics, 6873-6878—No smuggling bandannas at present; premium thereon formerly paid, 6879-6888—Smuggling greater before alteration of duty than at present, 6889-6891, 6893, 6894—No smuggling in gloves, 6892—Articles that were smuggled formerly and at present, and duties on them, 6895-6903, 7000-7006—How return might be obtained from the French Custom House books, which would show the extent of smuggling into England, 6904, 6905—Reducing duty the only mode of preventing smuggling, 6906—Stamping goods would not answer, 6907.

Why rated duty more advantageous than *ad valorem*, 6908-6910—Number of houses in France who guarantee the goods, and number in England who smuggle them, 6911, 6912—Danger in smuggling under a prohibition, but not at present, 6925-6927—Smuggling would be increased if prohibition revived, 6928-6931—Silk trade on the decline as regards imports, 6932-6936—Preference to French watered silks over English, 6937-6941—Prosecution of parties for smuggling who have not the chief interest in the goods, 6942-6952—Price of certain plain goods, and duty thereon, 6953, 6954—Number of manufacturers at Lyons of whom bought, 6955-6959—Quantity of French silks sold now greater than in 1826, 6960, 6961—Use of silk goods increased since 1826, 6962—Smugglers' price regulated by the amount of duty, 6963-6965—Causes of the decrease in the price of silks, 6966-6970—Reason for the French improving their manufacture in cut ribbons, 6971-6973—French have been compelled to reduce their prices and improve their manufacture, 6974, 6975—English beat the French in low priced plain goods, 6976—Competition in England causes the French manufacturer to be employed instead of the English, though upon English patterns, 6977-6987—Duty on the French causes the English manufacture to be cheaper, 6988-6990—Goods that have paid the duty are more valuable than those smuggled, 6991, 6993-6995—Reason of preference given to French goods, 6992—French merely manufacture to the extent of their order from England, and not for other countries from the same pattern, 6996-6999.

Clipping, Amount paid for, *Baggallay* 7447-7449.

Coarse Goods. See *Labour*.

Cocoons. See *Italy*. *Reeling*.

Coggeshall. See *Wages*, 2.

Collusion. See *Custom House*.

Colonies. Manufacture to which silk grown in English possessions is applied, *Dorat* 4296, 4297.

Colours. Foreign colours have not superseded the English, *Cheeper* 871-873—English goods have been varied as much in colour as the French, *Jacombs* 1699, 1700—Colours the French are in the habit of producing, *Stephens* 2975—Would not be bought if made in England, *Stephens* 2982, 2983—English colours more permanent than French, *Baggallay* 7390.

Commission. See *Brokers*.

Competition. Is both home and foreign, *Jacombs* 1694-1696—Home competition would be met on equal terms, *Jacombs* 1749-1752; *Cox* 2215-2217; *Swift* 3908; *Dorat* 4063; *Bridges* 10534-10540—Foreign competition causes home competition, *Jacombs* 1721-1723; *Ratliff* 1956—In the event of prohibition, competition in England would increase the use of machinery and amount of wages, *Cox* 2218-2229—There was always competition; the greatest competitor is the foreigner, *Sawer* 2395, 2396—Home competition gives a fair security to the public, and will allow a fair profit, *Sawer* 2415-2418—Home competition more important than French, *Gibson* 4832, 4833—Profits of manufacture and wages determined by competition, *Gibson* 5049—Too many mills and competition too great here, *Heath* 5301—Whether Foreign or English competition regulates the market here, *Heath* 5304—Competition in this country sufficient, *Stone* 6142—Tendency of English competition more to render goods cheap than to improve them, *Sedgwick* 8034-8039—Under prohibition, home competition would be a sufficient protection as to price and quality, *Bennett* 10756-10759.

See also *Fashion*. *Foreign Competition*. *France*. *Manufacturers*. *Spitalfields*. *Throwsters*.

Condition La. Establishment of La Condition for ascertaining the weight and quality of silk, *Bowring* 8800, 8801—Weight of silk submitted to La Condition, 1806-1820, *Bowring* 8833—Proportion of silk sent to La Condition and sold without, *Bowring* 8834, 8835—Modifications about to be made in the tests applied by La Condition, *Bowring* 8836—How far establishment of La Condition exists at St. Etienne, *Bowring* 8967—Such an establishment would be no benefit to England, and is not of importance to this inquiry, *Moore* 12078-12084

Congleton, Amount of Population, 1821 and 1831, *Johnson* 11568—State of the poor's rate, and allowances therefrom, 1821 and 1831, *Johnson* 11568—How far hands employed paid by the parish, *Johnson* 11569-11571.

See also *Wages* 3.

Conseil des Prud'hommes. Means of preserving the rights of patents through the Establishment of the Conseil des Prud'hommes, *Bowring* 8849-8853, 8869-8871—Constitution thereof at Lyons, their sittings and duties, *Bowring* 8854-8868, 8872—Manner in which they settle disputes as to wages, *Bowring* 8909-8911—It is less popularly constituted at St. Etienne than at Lyons; of what it consists, *Bowring* 9034—Nature of the tax on patents, *Bowring* 9035, 9036, 9043—Manufacturer must take out a license to vote, *Bowring* 9041—Institution of the Conseil des Prud'hommes, and that for ascertaining the condition of silk in France would be no benefit to England, and is not of importance to this inquiry, *Moore* 12078-12084.

Consuls. Certificate of British Consul should be sent with silks imported into England, *Bottrell* 7942.

Consumers. How the higher classes of consumers benefit by reduction of wages and profits, *Stephens* 2825-2831—Public prefer a large house to deal at from the great variety, *Stephens* 2843, 2844—How far short credit and bad profits beneficial to the consumer, *Banbury* 4516-4525—Description of goods, whether of British or Foreign manufacture, depend upon the class of customers to be supplied, *Ballance* 8695.

See also *Higher Classes*. *Lower Classes*.

Consumption of Silk. See *France* IV. *Silk* I.

Cope, Thomas (Analysis of his Evidence.) Silk weaver at Macclesfield, 11694-11698—Earnings, 1817-1823, 11699; and in 1824 and 1825, 11703—Manner in which weavers unavoidably lose time in their work, 11700-11702—Irregularity of work and rate of wages since 1825, 11704-11706—Prosperous state of weavers, 1817-1825, 11707—Distressed condition and dishonesty of them, 1825-1832, 11708—From introduction of foreign goods, 11709, 11714—Increase of silk trade in Lancashire does not account for distress at Macclesfield, 11711—Number of looms and description of trade in the silk districts in Lancashire, 11712—Cotton trade has not depressed silk weavers wages, 11713—Why workmen have better means of informing themselves of the number of looms than their masters, 11715-11719.

Corn. Price of corn nearly the same as in 1822, *Brocklehurst* 11396—Effect of the price of provisions and corn laws upon the silk trade, *Brocklehurst*, 11551-11554.

Corn Laws. Necessity for getting rid of them, imperative, *Bowring* 9657.

Cost Price of manufacture. See *Etienne, St.*, *France* III. 2.

Cottages, rent thereof in Italy, *Caffi* 7318, 7319.

Cottons and Cotton Trade. How far the general use of cottons has interfered with the silk trade, *Brunskill* 469, 470, 475-479—Effect of taking off the duty on printed cottons on the silk trade, *Royle* 3059, 3060—Comparison of protection between the silk throwster and cotton spinner, *Royle* 3112—How cotton trade affects wages in Manchester, *Royle* 3239-3243, 3247-3249—Comparison of the silk and cotton trade, *Doxat* 4036, 4037—Calculations as to duties, wages, profits, &c. upon silk and cotton, 1814-1831, *Doxat* 4038—Comparison of the consumption of silk in periods of five years, 1816-1830, as compared with cotton, *Doxat* 4046, 4047—Progress of the silk trade over the cotton to 1826, and contrary effect since, *Doxat* 4140—Cotton and woollen trades have not been subject to similar distress as the silk trade, *Ballance* 8542—Importation of cotton twist into France, *Bowring* 9175-9177—State of the cotton trade in England, and how far it has prospered from being least protected, *Bowring* 9748-9756—Injury to the silk trade from exports of cotton, *Ballance* 11021-11026—Cotton trade has suffered with the silk from the present regulations, *Rowbotham* 11740—Observations upon the progresses of the silk and cotton trade, 1815-1832, *Doxat* 12094.

See also *Duty on Importation*. *France*. *Labour*. *Manchester*. *Silk trade*, 2. *Smuggling*. *Wages*. *Weavers*.

Country trade. Prevalence of taste for French goods in the country towns, *Sawer* 2356—Ready sale of goods formerly in the country trade, *Sawer* 2412-2414—Manufacturers formerly frequented country towns with patterns of ribbons, *Stephens* 2702.

Coventry, the consumption of silk at, is much the same, but a commoner article, taking less labour, *Brunskill* 164-170, 444-446—In the event of prohibition there would be an increase of machinery at, *Brunskill* 122, 239-241—Ineffectual attempt to get English manufacture equal to the French caused by refusal of weavers from the lowness of wages, *Brunskill* 273-316, 537-545—The similarity of wages for plain and fancy work at St. Etienne, approach nearer than at Coventry, *Brunskill* 324, 325—Increase of the silk manufacture has not been in proportion to the population, *Brunskill* 378-382—Trade depressed at, *Cheeper* 820-825—Ribbon trade and watch trade the principal manufactures at, *Poole* 945—Greatest number of persons employed in the ribbon trade, *Poole* 946—Articles made at Coventry are finer than those made at other places,

Coventry—continued.

places, *Poole* 1124—Increase and decrease of population, 1821–1831, *Poole* 1165–1173—Principally consumes foreign organzine, *Dorat* 4219–4224—Disadvantages to Coventry ribbon trade by introduction of foreign manufactured goods, *Hall* 6657–6659—With witness's looms at Coventry, and hands working cordially, France might be defied, *Hall* 6666—Ruin to Coventry if ribbon trade gets to Manchester, *Hall* 6674, 6675, 6701.

Disadvantages to Coventry from having to compete with Manchester and the foreigner, *Hall* 6704—If Coventry would adopt improvements it would prevent Manchester hurting it, *Hall* 6711–6713—Combinations prevent Coventry men working for witness, *Hall* 6722—Reduction of purchases of ribbons from Coventry, 1827–1829, from importations from Switzerland and recovery by Coventry from 1829–1831, *Baggallay* 7342–7346, 7369–7372—Diminution in price and improvement in quality of Coventry over Switzerland, *Baggallay* 7347–7351—Coventry can manufacture equal to France, though France has more original taste, *Baggallay* 7377—Improvement in Coventry manufacture, *Baggallay* 7390; *Sedgwick* 8005—Amount of duty necessary to enable Coventry to compete with the French, *Baggallay* 7397, 7398—Examination as to copying French patterns, *Baggallay* 7399, 7400, 7406; *Dillon* 7693; *Sedgwick* 8009, 8017, 8018—How far improvement in Coventry manufacture from foreign competition, *Baggallay* 7459—Increase in the purchase of ribbons at Coventry, *Dillon* 7638—Inferiority of Coventry ribbons is in taste, *Sedgwick* 8004—No orders given to Coventry at present, *Sedgwick* 8147—Account of the sums expended in the united parishes of the city of Coventry, by weekly payments, to the permanent and casual poor in each year, 1815–1831, with gross amount of parish expenditure for each year, also average price of wheat, *Poole* 965.

Papers laid before the Committee:

Amount of the Poor Rates collected in the united Parishes in the City of Coventry, by twelve rates in each year, and Amount in the pound, *App.* p. 926.

See also *Fancy trade. Foleshill. Jacquard Machine. Looms. Manufacturing Districts. Sarsnets. Silk trade. Wages, 4. Weavers, 3.*

Cox, Richard Saurey. (Analysis of his Evidence.) Loss of witness's business in the gauze and finer branches of the trade since the introduction of foreign goods, 2051, 2052—Number of gauze looms in 1826 and 1831, 2053, 2054—Number of looms generally, and persons employed therein, 2055–2057—Comparison of prices of certain articles in 1824 and at present, 2058—Wages of plain, engine and Jacquard weavers, 2059, 2060—Number of Jacquard looms in 1824, 1826 and at present, 2061, 2062—Quantity of time lost by the men in fixing their work, and what assistance they have, 2064–2071—Looms sometimes quite out of employment, 2072—Advantage in the manufacture in the application of engine over single hand looms, 2073—Masters supply the looms, and are subject to their wear and tear, 2074–2076—Expense of Jacquard looms for changes of pattern, and yearly average per loom, 2077, 2078—How far the style and quality of goods has improved since the admission of French goods, 2079–2082—Distress at Coventry attributable to the introduction of French goods, 2083—Duty on foreign fancy goods is no protection, 2084—Advantage of prohibition, 2085—Loss of trade with a particular house since the admission of French goods, that being entirely supplied with them, 2086–2094—Cause of the disadvantage of competition with the French, 2095, 2096—French ribbons find their way every where, 2098—Quantity of foreign silk used in English manufacture, 2099, 2100—No difficulty in discovering between home and foreign manufacture, 2101, 2102—Proportion of the value of labour to the value of material in different articles, 2103.

(Second Examination.) Average wages of single-hand weavers, 2104—Increased consumption of silk does not benefit the labourer, 2105, 2106—Calculation of the cost of labour upon one pound of silk, 1824–1831, 2107–2111—Difference in the price of labour between France and England is very considerable, 2112—How far single-hand weavers employed, and amount of wages, 2113, 2114—Description of goods for which witness's house pays a higher price than others, and reasons, 2115–2119—Advantage to the master by employment of engine-looms, 2119, 2120—In what the advantage of employing an undertaker consists, 2121–2123—In the event of a prohibition there would be no difficulty in ascertaining between Foreign and English goods, 2124–2131—There would be great risk in distributing a large quantity of French goods over the country, 2132–2136—Difficulty of smuggling under it, 2137–2144—There could be a sufficient quantity and variety of goods manufactured at home for supply of the home market, 2145—Manner in which the introduction of foreign goods causes a glut in the market, and compels the manufacturers to job their goods, 2146–2149—Loss by manufacturing goods upon a guess of the French patterns in the event of any variation, 2150–2152—Those who now order their goods in France used formerly to order them in England, 2153, 2154—Extent of goods made to order at present in Coventry, 2155–2157—From what patterns ordered goods used formerly to be made, 2158–2160—Some goods at present are sold to the large houses, 2161, 2162—Conversation with Lord Auckland, showing how the French set the fashions here, 2162–2164—Fancy trade requires a prohibition, 2165—Extent of duty that would protect the plain trade, 2165–2168—Quantity of silk manufactured, 1824 and 1831, 2169—Manufacture of gauzes predominated, 1824–1827, and were then partly discontinued from the French importing

Cox, Richard Saurey (Analysis of his Evidence)—*continued.*

importing them, 2170-2176—How far the Coventry trade affected by change of fashion before opening the trade, 2177-2185—Ribbons are more universally worn now than formerly, 2186—How far changes in the market, according to the fashion, affect speculations, 2187-2190—Proportion the higher branches bear to the whole trade in ribbons, 2191, 2192—Prohibition should extend to all French fancy ribbons, 2193-2195—In calculating profits allowance is made for any sacrifice that may take place, 2196-2198—Lower classes are supplied by persons in that particular branch; fancy goods are not made with any view to show, 2199—No good answered by the introduction of foreign goods while weavers are out of employment, and wages inadequate, 2200.

More failures in Coventry since the introduction of foreign goods, 2201, 2202—Quantity of French goods imported, and number of hands they would have employed if made in England, 2203, 2204—Preference for French goods is owing to the taste, not the price, 2205—Superior articles made, 1822-1825, than since, 2206, 2207, 2211—Dependence on the French fashions for the quantity of ribbons used, 2208, 2209—There are not more men of capital employed in the business now than formerly, 2212—Present duty not a protection for plain goods, 2213, 2214—Competition in England would not be more injurious than competition with France, 2215-2217—In the event of prohibition, competition in England would increase the use of machinery, and amount of wages, 2218-2229—How far French goods are paid for by British labour, 2230-2234—If many inferior gauzes are made, the French will soon supply the whole country, as no one will buy the English, 2235-2243—How far they may suit exportation, 2244-2247—Proportion of foreign silk used in manufacture, and how affected by duty, 2248-2257—Comparative quality of different foreign thrown silks, and English thrown, 2258-2260—Best thrown silk is used for the finer purposes, 2261—British thrown Italian silk is better than Italian thrown, 2262-2266—In what the superiority in throwing consists, 2267—Not much improvement in the quality of British thrown silk since 1823, 2268, 2269—No silk thrown out of England is superior to British thrown silk; Piedmont silk is used for particular purposes, 2271—Disadvantages of being dependent upon the Italian throwster, 2270-2274—There is now a fair competition in price for marabout silk, 2275-2279—Its quality has retrograded, 2280—Where it comes from, 2281.

Drawback allowed upon exportation of ribbons, 2282—Comparison of English and French designers, and reason for the French being able to employ a superior class, 2283-2292—Average value per pound of silk used at Coventry, 2293—During 1813 and 1814 there were as many pieces of ribbon used, but not of the same description, 2294—Introduction of the Jacquard loom into England, 2295—Description of goods it can make, 2296—French did not use it in 1813, 2297—Engine looms are not much increased with the exception of the Jacquard, 2298—Breadths were not required formerly, or they could have been made; same quantity could have been made formerly as are at present made with the Jacquard, 2299-2304—Jacquard is only for peculiar patterns, 2305—Effect of reducing the duty upon foreign thrown silk, 2306-2310—On what the prices of English and Italian thrown silk depends, 2311-2319—Number of looms employed and wages paid in Spitalfields, 1814-1827, in the manufacture of broad silks, 2320-2327—Discontinued in 1827, from being superseded by the French fancy goods, 2328—Manufacture at Manchester or in any other part of England did not interfere with that branch, 2329-2331—Description of goods made, 2332, 2333—French goods of that description are not intrinsically so good as those made here formerly, 2334-2337—French import something new in large quantities every season, 2338-2341—How far goods would be made at Manchester in the event of prohibition, 2342-2345—To what extent supleing is carried by the French, 2346-2348—Importation of French silks has increased lately, 2249—Generally takes place to a large extent at the present time of the year, 2351—Anxiety of the silk trade to prevent smuggling, 2352.

Crape. Not so easily smuggled as plain silk, *Hume* 13—French crapes do not come into competition with Spitalfields, *Bottrell* 7913-7916—Losses upon importation of China crapes from their being superseded by the French, and successfully imitated by the English, *Bottrell* 7957-7959—Description of raw silk used in the manufacture of different crapes, *Grout* 10278-10283—English black crapes selling at ruinous prices; present foreign competition therein, *Grout* 10311, 10312—Consumption of white and coloured crapes, 1826-1831, from French and other foreign productions, *Grout* 10340—Comparison of quality and price of English and French crape handkerchiefs, *Stephens* 10581-10592—Importation of French crapes, or manufacture thereof, in certain parts of England does not interfere with Spitalfields, *Wallis* 10945-10949—Importation of crapes from France interfere with those places where they are manufactured in England, *Ballance* 11051-11057.

Credit. Difference of credit on sales before reduction of duty and at present, *Banbury* 4457-4461; *Gibson* 5095-5100; *Stone* 5950-5958—How far short credit beneficial to consumer, *Banbury* 4516-4525—Credit at present allowed, *Banbury* 4552-4565; *Martin* 5462, 5463; *Wadden* 10150, 10151—Reasons for reducing credit, *Martin* 5466, 5467, 5472-5475, 5480, 5481—When period of credit altered in England, *Martin* 5533—Present method of transacting business arising from difference of credit, and benefit thereof, *Stone* 5967-5993.

See also *Brokers.* *Cash Payments.* *Consumers.*

Creditors.

Creditors. In the event of failures, actions are brought by creditors against houses purchasing goods under prime cost, *Banbury* 4528-4534—How far those houses operate to continue a man in insolvency, *Banbury* 4536-4542—Compromise between creditors and those houses, *Banbury* 4543-4545.

Crifeldt. See *Velvets*.

Currency, how silk trade affected by change in, *Royle* 3055-3058.

See also *Bank of England*.

Custom House. Manner in which goods are sometimes imported through the Custom House at less than their proper duty, and how to be prevented, *Stephens* 2779-2787, 2973, 2974, 2976-2981, 2984-2996, 10639-10649; *Bottrell* 7867-7869, 7882; *Wadden* 10117-10122, 10126-10129; *Beckwith* 11959, 11960; *Beals* 12472-12475—Articles purchased at the Custom House for exportation, and smuggled in for home consumption, prior to 1826, *Stephens* 2854-2861—Necessity for foreign goods being examined at one place, and subject to a greater check, *Bottrell* 7815, 7816, 7940, 7941—Suggestions of regulations and duties for the prevention of smuggling, *Bottrell* 7865, 7866, 7967—Necessity for inspector at the Custom House being in communication with manufacturers, to ascertain the value of goods, *Bottrell* 7870-7878—Hours of attendance of the Commissioners of Customs, *Bottrell* 7936, 7937—How far certain Custom House officers are open to bribery, from the amount and manner of paying their salaries, *Bottrell* 7938, 7939, 7968-7970—Dissatisfaction among Custom House officers from not being properly remunerated, *Bottrell* 7952, 7953; *Beckwith* 11958—Under good Custom House regulations, properly enforced, smugglers' risk would be increased, and more duty than the present amount collected, *Ballance* 8432, 8433, 8607-8611—French Custom House regulations, *Bowring* 9193, and revenues, *Bowring* 9194—Increasing number of revenue officers gives a greater chance for smuggling, *Bowring* 9195—How much above their proper rate duties are levied in England, *Bowring* 9214.

Leaf's transaction was not done with the connivance of the Custom House officers, *Wadden* 10123—It is not an isolated case, *Wadden* 10124—Officers have not received the compromise money, and reasons, *Wadden* 10125; *Beckwith* 11958—Extent of smuggling to be partly accounted for by the looseness of the Customs regulations, *Wadden* 10130, 10131—Alterations might be made in English Customs regulations, *Bouillon* 10232, 10233—Manner of levying duties at the Custom House; fraud a common occurrence, *Stephens* 10650-10662—Duty of landing waiters, *Fraser* 12099, 12100—Duty of surveyor, *Fraser* 12101, 12102—Number of ships discharging at one time, *Fraser* 12103, 12104—Number of men at the scales and reduction in the amount thereof, *Fraser* 12105-12110—Pay of extra weighers; not constant employment, *Fraser* 12111-12113, 12195—Examination as to opportunities of removing goods during absence of landing waiter, *Fraser* 12114-12124.

Fraud must be caused by collusion between the weigher and landing waiter, *Fraser* 12125-12128, 12132—Instance of weighers being left alone, *Fraser* 12129-12131—Disputes between Custom House officers and merchants as to the value of silk, *Fraser* 12133-12136—No knowledge of silk being passed at less than the actual weight, *Fraser* 12137—Possibility of fraud from value being left to the judgment of the merchant, *Fraser* 12138-12147—Method of weighing silk manufactured goods, and difficulty from landing waiter attending two sets of scales, *Fraser* 12148-12154—Examination, showing the responsibility of the weigher, and want of check upon the landing waiter, *Fraser* 12155-12171—Instances of goods being re-weighed by the surveyors, *Fraser* 12172-12177—Refusal of bribes by witness, and reasons for not reporting their offer to the landing waiter, *Fraser* 12179-12191, 12196-12201, 12268-12271, 12274-12289—No instructions given to extra weighers when going on duty, *Fraser* 12192—Duty of extra weighers, *Fraser* 12193, 12194—No recollection of a smaller number being entered than that actually passed, *Fraser*, 12202-12207—Examination upon the fact of the commission of bribery among the Custom House officers, *Fraser* 12208-12212—Examination as to the names of officers who have told witness of their receiving bribes for not doing their duty, with witness declining to mention them, *Fraser* 12213-12249, 12262-12267, 12272, 12273—Supposition that the bribe was for passing short weights, *Fraser* 12250-12261—Opportunities of committing fraud from the poverty of extra weighers, *Fraser* 12290-12297—Presents of small value to landing waiters from merchants, *Fraser* 12298-12310—How far a trifling present might be made of toys, *Fairclough* 12422—Examination as to a letter from a Custom House officer, with inference of bribery therefrom, *Stephens* 12311-12320—Silk passed through the Custom House lower than if done by a fair trader, *Stephens* 12321-12333, 12338-12345—Witness declines giving the name of his informant, or the Custom House officer, *Stephens* 12334-12337—Knowledge of goods coming in under *ad valorem* duty at less than their proper value, *Stephens* 12346-12361—Supposition that certain houses in the habit of passing figured goods for the duty on plain, *Stephens* 12366-12368—Difficulty of such an attempt, *Fairclough* 12404-12408.

Process of weighing and examining silk goods on their landing, *Fairclough* 12375—Landing waiters do not attend to more than one pair of scales, *Fairclough* 12376-12379—Difficulty of the weigher committing a fraud without connivance with the landing waiter, *Fairclough* 12380-12383—Landing waiters changed periodically, *Fairclough* 678.

Custom House—continued.

12384, 12385; *Beals* 12434—No advantage to bribe the weigher without the landing waiter, *Fairclough* 12386—Landing waiter always present, *Fairclough* 12387, 12388—Not possible for the scales to be left to the weigher without the attendance of the landing waiter, *Fairclough* 12389—Landing waiter never trusts to the weigher, but always calculates the weight himself, *Fairclough* 12390-12392—He would be removed if he did, *Fairclough* 12393, 12394—Frauds might be committed by collusion, *Fairclough* 12395—Operation of the check of the surveyor upon the landing waiter, *Fairclough* 12396, 12397—Which would prevent collusion between the landing waiter and weigher, *Fairclough* 12398, 12399—Salary of landing waiters, *Fairclough* 12400—Consequent improbability of their being open to fraud, *Fairclough* 12401—Not often two scales in use at one time, but when so there is an officer to each, *Fairclough* 12402, 12403—Not more goods passed through the Custom House since the last seizure, *Fairclough* 12409—Manner of examining and counting other goods not silk, showing difficulty of improperly counting, *Fairclough* 12410-12421, 12423.

Duty of landing surveyors, and manner in which they check landing waiters, *Beals* 12425-12428—No recollection of finding a wrong weight put on goods through fraud on re-weighing, *Beals* 12429-12433—Examination as to the quality of the goods, *Beals* 12435, 12436—Method of weighing for the tare, *Beals* 12437-12439—Possibility of fraud from connivance of officers, but great improbability thereof, *Beals* 12440-12443—Improbability of collusion on the part of the landing waiter from the value of his situation, *Beals* 12444, 12448—Goods sometimes entered under the value, detained and sold, and fetch more than the value, *Beals* 12449-12458—Sometimes they do not fetch their value, *Beals* 12459—Reference to persons in the trade to ascertain the value of articles out of the common course, *Beals* 12460-12464—Goods generally valued very near the value, *Beals* 12465-12467—Division of profit on goods seized, and consequent inducement for seizing, *Beals* 12468-12471—Amount per cent. goods allowed to be entered under value, *Beals* 12472-12475.

Examination upon an investigation in consequence of a letter signed "Veritas" and addressed to Lord Auckland, alleging a fraud upon the Customs, and difference in the proper amount of duty, and that paid, *Manning* 12477-12500—Amount per cent. of saving upon the amount of duty, admitting a fraud to have taken place, and reasons for not admitting that as a fact, *Manning* 12501-12503—Employment of extra men, and how paid, *Manning* 12504-12506—Only established officers employed in the examination of silks, *Manning* 12506—Allan Fraser never employed in examining silks, *Manning* 12507-12511—Statement of the dates, station, duty, and under whom Fraser employed on the quays where silk goods are usually examined, *Manning* 12512—Silk goods not usually opened on the ground floor where Fraser employed, *Manning* 12513—Wages received by Fraser, and number of hours labour, *Manning* 12515—How far his situation a place of trust, when he is immediately under the superintendence of the landing waiter, *Manning* 12516, 12517—Duties of surveyors general, *Manning* 12518, 12519—Duties of landing surveyors, particularly with regard to silk goods, *Manning* 12520, 12521—Manner in which doubts entertained by the Custom House officers are cleared up by reference to the trade, *Manning* 12522, 12526, 12527—Why appointing a person on purpose to judge goods, and charge them according to their value, would not be beneficial, *Manning* 12523-12525—Examinations of the allegations of Veritas, by the invoices which might have been made up for the occasion, *Manning* 12528-12534—Landing waiters only attend one scale, and never leave a case after the lid is off till they know its contents, *Manning* 12538-12541—Statement by Veritas confirmed by affidavits, which would be false if fraud not proved against officers; manner in which officers may be liable to error, *Manning* 12542-12547.

Cut Ribbons. See *Ribbons*, 3.

D.

Damages. See *Italy*.

Debentures, sales thereof, *Hume* 97-99—Price thereof, *Brunskill* 147-149; *Doxat* 4307; *Gibson* 5079—Value of debentures would depend on the proportion of thrown silk imported, as compared with the quantity of British goods exported, *Hume* 100—Advantages of debentures to the export trade, *Hume* 101, 102; *Brunskill* 464-468; *Brockwell* 3699-3703; *Wadden* 9997-9999; *Brocklehurst* 11530, 11531—Process of exportation by debentures, *Brockwell* 3704, 3705—Inducement of debentures to increase certain branches of trade, *Brockwell* 3711—Raising the price of debentures by diminishing imports or increasing exports, will benefit the manufacturer at the expense of the throwster, *Gibson* 5084-5094—Benefits of export trade, and how it might be extended by increasing the price of debentures, *Ballance* 8417-8419; *Beckwith* 11952-11957—Debentures no advantage to the importers of Italian silk, beyond the price of the debentures, *Wadden* 10000—Effect of debentures on export trade, *Brocklehurst* 11522—Why debenture not a tax on Spitalfields, *Brocklehurst* 11532.

See also *Exportation*. *Manchester*.

De Ponilly & Co. Witness ignorant of the circumstances attending a seizure at Messrs. *De Ponilly's*, *Menetrier* 8222-8226, 8243, 8244—Whether silks used by *De Ponilly's* houses were

De Ponilly & Co.—continued.

were dyed in France or in England, *Menetrier* 8227-8231—Articles manufactured by De Ponilly & Co., that were fashionable in France but not in England, caused them to give up their manufacture here, *Menetrier* 8235-8238, 8250-8253, 8285-8288—Whether the English government allowed De Ponilly & Co. to import organzine free of duty, *Menetrier* 8239-8242—Furniture made by De Ponilly & Co., at Spitalfields, for Windsor Castle, *Menetrier* 8243-8247—Number of looms employed by De Ponilly & Co., *Menetrier* 8248, 8249—A few of the head weavers brought from France, *Menetrier* 8256—Their Jacquards partly brought from France and partly manufactured at Manchester, *Menetrier* 8257—How far their speculation succeeded, *Menetrier* 8261-8265—Some weavers employed from Paisley as good as the French weavers for gauzes, *Menetrier* 8265, 8266—Importations by De Ponilly & Co. legally, *Menetrier* 8269-8271—Number of looms employed on the order for Windsor Castle, *Menetrier* 8276-8280—Where thrown silk obtained, *Menetrier* 8282-8284, 8292-8296—Goods manufactured at Manchester from French patterns, *Menetrier* 8289-8291—Names of De Ponilly's partners and designer, *Menetrier* 8297-8300.

Designs. Fashion set by the designs that come from France, but many copied in England, and come out as soon as the French, *Bouillon* 10165.

Designers, nature and employment of them, *Perkins* 1559, 1560—Comparison between French and English, *Jacombs* 1674-1677; *Cox* 2283-2292—How far fluctuation in trade affects designers, *Jacombs* 1688-1691—Reason for the French being able to employ a superior class, *Cox* 2283-2292—Designers used to be employed in the Spitalfields trade formerly at high salaries, *Dubois* 10263-10267—Patterns drawn by English artists, *Bridges* 10383.

See *France*.

Dillon, John, (Analysis of his Evidence.) Description of the mode of transacting business by the house of James Morrison & Co. 7591-7597—Statement of purchases of broad silks and silk handkerchiefs at Spitalfields and other English manufactories, for five years previous to 1826, 7598-7600—Similar statement for five years and nine months since 1826, 7601—The like as to ribbons, 7601.

(Second Examination.) Proportion of purchases of French and English ribbons, 7602-7604—Statement of proportion, per 100*l.* of whole French trade in silk, 1827-1831, 7605-7607—The like in ribbons, 7607—The like of English silks and ribbons, 7608—French trade decreasing from the great improvement in English manufactures, and reduction in price, 7609-7612, 7624—Statement of proportion, per 100*l.* of different descriptions of French ribbons bought, 7613—Per centage gauze ribbons bear to the whole production of French ribbons, 7613, 7614—Statement of proportion, per 100*l.* of different descriptions of English ribbons, 7615—Month which calculation taken, 7616—Velvets and Swiss ribbons superseded by English articles, 7618—How far consumption of foreign goods on decline when official documents show an increase, 7619-7621—Smuggling has decreased, 7622, 7623—Proportion of each kind of ribbon purchased in France and England per 100*l.*, 7625-7627—Estimate of the amount of the silk trade of England, and proportion the French imports bear to it, 7628-7639—Proportion of ribbons made in France and in England, 7631-7636—Increase in the purchase of English broad silks, and from what parts since the admission of the French, 7637, 7638—Increase in the purchase of ribbons at Coventry, 7638—Places where goods sold at Spitalfields are manufactured, 7639-7641—Manner in which the warehouseman's business is conducted, and how far a benefit to the public, 7642-7655.

Improvement in English over French manufacture, demand for French goods diminishing, and in what goods French likely to retain a superiority over the English, 7656-7662—Manner in which the French excel the English in superiority of taste and design, 7663-7670—Opinion as to town and country trade as to the sales of rich or coarse goods, 7671-7678—Amount of present rate of duty collected by weight, 7679, 7680—Rate of premium, for smuggling, 7681, 7682—Reduction of duty necessary as a protection against smuggling, 7683, 7686—Comparison of cost price of striped and figured gauzes in France and England, 7684, 7685, 7687, 7688—Similar comparison of French and English lustrings, 7689—Superiority thereof rather in favour of the French, 7690—Duty necessary to equalize the prices of French and English satins, 7690—How far striped and plain gauzes of the same quality, 7691, 7692—French patterns copied at Coventry do not destroy the sale of the French pattern imported, 7693—French trade has not been beneficial to trade from the distance of the market, 7694, 7695—Profits not greater upon the sale of French than English goods, but losses are, 7696—Why glut in the market from French job goods do not hurt the English manufacturer, 7697-7700—Reason for failures being reduced in the silk manufacture, 7701—Less goods at Spitalfields now than usually at this time, 7702, 7703—Fewer failures among the retailers latterly, 7704, 7705—Manner in which cash payments and short credit act favourably to trade with regard to solvency, 7706-7713—Examination upon the purchases by large warehousemen, and how they act upon profit or loss to the manufacturer, 7714-7729.

Dillon, John, (Analysis of his Evidence)—*continued*.

(Third Examination.) Comparison of silk trade with that of other departments for certain periods, 7730-7732—Effect of the removal of prohibition upon East India bandannas, upon increasing the manufacture of English, 7733-7736—Interference of Manchester with the Spitalfields trade, 7737-7739, 7745—How far actions have been brought, and compromises made with assignees of manufacturers and warehousemen respecting goods supposed to be improperly bought, 7740-7742—Gloves are not smuggled, 7743—French gloves less profitable than English, 7744—Report from France with regard to the manufacture of French ribbons there, 7746, 7747.

(Fourth Examination.) Witness's account of interview with Mr. Beckwith, in which witness produced proof of certain velvets sold him having paid duty, 12632-12637—Examination as to the production of invoices to Mr. Beckwith, and his expressing his alteration of his previous opinion, 12638-12646—Correspondence between Morrison & Co.'s house and Mr. Beckwith as to the latter's charge against the former of irregular proceedings, 12648-12653—Duty on witness's parcel paid by weight, 12654—Difference in price between the two parcels, and how far from being bought of different persons 12655-12666—Witness's agent in Paris is not a partner; period of his residence in Paris, 12668.

Discount, rate of, at present allowed, *Banbury* 4552-4565; *Martin* 5464, 5554—Not sufficient to produce cash payment, *Martin* 5464, 5465.

Distress. See *Coventry*. *Fancy Trade*. *Manchester*. *Operatives*. *Ribbons*, 7. *Silk Trade*. *Spitalfields District*. *Spitalfields Trade*. *Throwsters*. *Weavers*.

Doubling. Operation of doubling, and wages, *Caffi* 7209-7218.

Doxat, Alexis James, (Analysis of his Evidence.) Silk merchant in London, importing from Italy, 4031-4034—Imports and consumption, 1814-1831; situation of the trade before and since the importation of foreign manufactured silks; comparison of the silk and cotton trade; duties on silk and cotton; rate of wages per yard, 4036, 4037—Silk duties easily collected, 4037—Calculation as to duties, wages, profits, &c. upon silk and cotton, 1814-1831, 4038—Degree of distress in the silk manufacturing districts, 4039—Advantage of low duties on the importation of raw, and high duties upon thrown, 4040—How price of the raw material would have been affected thereby, 4041-4043—Increase of wages, 1815-1825, and decrease to 1831, 4045—Comparison of consumption in periods of five years, 1816-1830, 4046—Compared with cotton, 4047—Comparison of wages and duties, 4047—Decrease of manufacture of fancy goods, 4049-4051—Comparative cost of manufacture at London and Lyons, 4051-4052.

(Second Examination.) Comparison of quantity of labour and rate of wages at London and Lyons, 4053-4055, 4073-4079—Rate of wages per yard, 1815-1825, 4056-4061—Deductions in wages since 1826, and variation in the quantity of employment, 4062—State of trade at home regulates itself, 4063—Description of low and mixed trade carried on at Manchester to take advantage of debentures for exportation, 4064—How fluctuations in the silk trade in France act detrimentally to English industry, 4066-4068, 4073—Quantities of silk consumed at France and Switzerland, and proportion therein, 4074-4078—Statement of import of raw, thrown and waste silk into France, 4078—Quality of French silks, and improvement in reeling, 4079, 4080—Looms employed in Switzerland and Spitalfields, 4081—Importations into France from Switzerland of velvets and plain goods, 4082—Method of levying duty on importations into France, 4083, 4085—Difficulty of getting at the total quantity of exports from Italy, 4086, 4087—Importations into Switzerland, 4088, 4089—Quality of silks imported into England, France and Switzerland, 4090-4092.

Importation of Swiss ribbons into France, 4093-4096—Cheapness of manufacture in Switzerland, 4094—Duties on Importation into Switzerland and Germany, 4097, 4098—Imports and exports to and from Vienna, 4099-4101—Articles worked at Vienna for the Levant, 4103—Comparative quality of silk imported into England and other countries, 4104-4110—Comparative statement of the quality of silk used in England and France, 4111, 4112—For what Bengal silks are used in France, 4113, 4114—Coarse goods require a mixture of fine with them, 4115—Description of raw silk that fetches the highest price in London at present, 4116-4118—Superiority of French silk, 4119-4121—Attributed to superior reeling, 4119-4121—For what Piedmont silk required, 4123—Why the English do not reel as well as the French, 4124—Estimate of quantities of raw silks consumed in England, 1824-5, and in 1826-31, 4125—Increased importation of raw silk does not show prosperity of the throwster, from the labour being less on coarser descriptions, 4126-4130—Comparative view of the quantities of Italian thrown and raw silks consumed, 1815-31, 4131—Taking off the duty on organzine has increased importation of thrown silk, 4132—But not after every deduction, 4133—Variation in the importation of thrown silk at different periods since 1763 and causes, 4134-4140.

(Third

Doxat, Alexis James, (Analysis of his Evidence)—continued.

(Third Examination.) Reasons for prosperity at Manchester, and distress at Spitalfields, 4140—Progress of silk trade over cotton to 1826, and contrary effect since, 4140—Reduction in wages of the Spitalfields trade owing to foreign imports since 1826, 4141, 4143—Extent of smuggling, 4144-4147—Bills drawn from France for payment thereof, 4148-4155—How far Manchester trade interferes with Spitalfields, 4156-4160—Effect of foreign competition thereon, 4161, 4162—Improvement of the Spitalfields trade, 1815-1825, 4163—Great distress since, and causes, 4164-4168—On what the competition between France and Spitalfields depends, 4169, 4170—Difference in price of materials and wages between Lyons and Spitalfields and Manchester, 4171-4183—Variations in the price of silk between Lyons and London, and causes thereof, 4184-4193—Price of Italian organzine in Lyons and London, 4194-4202—Disadvantages of the English manufacturer competing with the French, 4203-4207—Import duties and charges upon raw silk into Lyons and London, 4208-4213—The like upon thrown, 4214, 4215, 4217, 4218—Method of assaying a bale of silk in France, 4216—Spitalfields consumes principally English organzine; Coventry foreign, 4219-4224—Higher price paid by the English than the French weaver, 4225—Proportion of import duty to the price of Italian thrown, 4226-4229—Advantages of the French weaver in manufacture, 4229—Protection required by English throwsters, 4229-4234—Ruin to the throwster by removing the duty on foreign thrown silk, 4235-4237—Disadvantages of being dependent upon foreign throwsters, 4237, 4238—Why the Swiss do not suffer disadvantage therefrom, 4239, 4240—Greater importation of Italian thrown, if duty reduced, 4241-4244.

Advantages of the Italian throwster over the English, 4245-4247—Increased importation of thrown from reduction of duty in 1829, 4248—Variation in importation of Piedmont organzine, 4249—Further disadvantages of reducing duty, 4250, 4251—Prices of silk in France are lower than in England, independent of duty, 4252, 4253—Silk thrown equally well in England as in Italy, 4254, 4255—Italian silk comes over on consignment, 4256—Export of Piedmont raws prohibited, 4257—Price of Italian silk thrown in Italy and England, 4258—Increase in the produce of French silks, and less necessity for importing Italian, 4259-4263—Difference in price of silk in Lyons and Italy, 4264-4269—Difference of price at which the manufacturers at London and Lyons is supplied with material for manufacture, 4270—How duty on importation of Italian thrown silk affects price in England and France, 4271-4275—How English manufacture relatively cheaper than Italian, 4276—Advantage from water in Italy, 4277—Importations of Bengal and China silks, 4278—Abridged recapitulation of comparative cost of manufacture at London and Lyons, 4279—On legal and illegal imports, 4279.

(Fourth Examination.) Price of Italian raw silk imported into Lyons, 4280-4286—Marabout not thrown in Italy, 4287—Advantages of the French over the English throwster, 4288-4290—How far the importation of French raw silks would be beneficial, 4291-4295—Manufactures to which silk grown in English possessions is applied, 4296, 4297—Proportion of wages on silk grown in the Colonies and in Italy, 4298—Relative increase since alteration of duty in the importation of Italian with other silks, 4299-4301—China silks have improved, but not Bengal, 4302—Relative increase in manufacture of coarse goods since 1825, and consequent diminution of labour, 4303-4305—Diminution in the price of silk in the home market corresponding with the reduction of duty on imported thrown silk, 4306, 4307—Price of debentures, 4307—Comparison of the reduction of wages between cotton and silk, 4308-4311.

(Fifth Examination.) Further examination as to the price of silk at Lyons and in London, 4312-4315; and importation of foreign silk into France, 4316-4318—How far the silk trade of France improving, 4319-4322—How far certain natural and political causes have affected import of thrown silk into England, 4323-4325—How far prices of French manufactured goods imported last year sufficient to remunerate manufacturer, 4326-4329—Quantity of manufactured goods exported from France and consumed therein, 4330—Advantage to the French in the price of Italian raw silk, 4331—In what instances the French use Italian raw, and prices, 4332-4344, 4357-4374—Effect of import of Italian silk into France on prices and consumption of French silk, 4341-4352—Raw and thrown silk dearer in England than in France, 4353-4356—Price of Piedmont organzine in London and quantity imported, 4375-4378—Price of coarse silks in France, 4379, 4380—Depression of throwing trade from the importation of foreign thrown, 4381—How sale price of Italian silk regulated on commission, 4382-4389, 4393—Exportation to other countries if the market depressed, 4390, 4391—Approximation in price of Italian and French silk at Lyons, 4392—With the exception of difference of duties and charges, French pay the same for foreign silk as other parts of the world, 4394—Statement respecting the great reduction of wages, and table, showing rates at London and Lyons, 4395—Difference in 1825 and 1831 in the price of throwing between Lyons and England, 4396—Comparative view of the market price at London of certain raw silks, 1824-1832, 4397—Remuneration to the throwster, 1824-1831, 4398-4402—Statement of cost of manufacture of plain goods at London and Lyons, 4402.

(Sixth Examination.) Documentary evidence put in by witness as to French and English imports and exports, and silk manufactures generally, and examination thereon, 678.

Doxat, Alexis James, (Analysis of his Evidence)—continued.

12089-12092—Exports of silks from Calais to England, 1831, 1832, 12090; and examination showing inference of smuggling from official exports, 12090—Examination as to difference of price of raw and thrown silk at London and Lyons, 12092—Examination as to consumption of silk in France as shown by certain documentary evidence, 10293-10295—Observations upon the progresses of the silk and cotton trade, 1815-1832, 12094.

Administration des Douanes; Exportation des Tissus de soie de fabriques Françaises, with computation into English weight and value, *Doxat* 12094—Marchandises Exportées de l'Intérieur Seulement, *Doxat* 12094—Marchandises Exportées de l'Intérieur du Royaume en payant des Droits, en Franchise ou avec prime, *Doxat* 12094.

Recapitulation of the Annual Exports from France, 1827-1830, of French manufactured Silks of every description; showing their quantity in French weight and value in francs, computed into English weight and value, *Doxat* 12094.

Douanes Royales de France; Imports of foreign manufactured Silks into France for home consumption, *Doxat* 12094.

Estimate of the total Amounts of Silk Manufacture of the United Kingdom, during periods 1815-1817, 1818-1820, 1821-1823, and 1824-1825 (understated in regard to wages in these periods), *Doxat* 12094.

Estimate of the total Amounts of Silk Manufacture of the United Kingdom, 1826-1831 (overstated in regard to wages in these years), *Doxat* 12094.

Abstract statement of French Silk Manufactures for the years 1827-1830, conjointly with an abstract view of the total Amounts of the Silk Manufactures of the United Kingdom at different periods during 1815-1831, *Doxat* 12094.

Statement intended to show the differences which range between the Prices of Silks at London and at Lyons, *Doxat* 12094.

Abstract view of the progress of the Silk Trade of Great Britain and Ireland at different periods between 1815 and 1831 (in regard to quantities,) *Doxat* 12094—Similar abstract view of the Cotton Trade, *Doxat* 12094.

Papers delivered in by Mr. Alexis Doxat, at his examination before the Committee, on the 11th, 13th, 17th, 18th, and 19th of April 1832, *App.* pp. 932-945.

DRAWBACK:

1. Generally.

2. Papers laid before the Committee.

1. Generally.

Evils thereof, *Royle* 3205-3207, 3211-3214—Amount of drawback, by whom received, and for what goods, *Royle* 3314-3323; *Gibson* 5074-5078; *Harter* 9273-9275—Effect of withdrawing the drawback, *Royle* 3324-3327—Is a bonus on the use of Bengal and China silk, *Royle* 3357, 3358—Necessity for the drawback for the export trade, *Harter* 9266-9268—Manner in which drawback, causing export, relieves the manufacturer for the home market, *Harter* 9482-9485—Drawback on exportation of a certain article produced, *Tootal* 9545-9549—Drawback on waste silk, and manner the silk is worked up to claim it, *Tootal* 9585-9587—Bounty increases exportation of gros de Naples, *Tootal* 9615—How far export of coarse silks to France, in consequence of the drawback, *Bowring* 9788—Increase in exportation from the drawback, *Wadden* 10105, 10106, 10108—Amount of duty and drawback, 1830, *Wadden* 10111—Inaccuracy of the return to Parliament showing the above, *Wadden* 10111, 10112—Alteration that should be made in the amount of drawback, *Beckwith* 11979-11983—Reason why drawback does not counteract the effect of the duties, *Graham* 12738, 12739. See also *Bengal and China silk. Bounties. Exportation.*

2. Papers laid before the Committee.

Account of the Drawback paid each quarter, from 5th January 1830 to 5th January 1832, upon the exportation of British manufactured Silk Goods; distinguishing the amount paid upon Stuffs or Ribbons of Silk only, upon Stuffs or Ribbons of Silk and Cotton, and upon Stuffs or Ribbons of Silk and Worsted mixed; and distinguishing London from the other Ports, *App.* p. 920.

Dublin. Distressed state of the Dublin silk trade, *Brocklehurst* 11460-11462—Witness's connection with the silk trade in Dublin, *Sisson* 11896-11902—Decline of the silk trade in Dublin, from reduction of duties on British goods, and afterwards from reduction of duties on foreign goods imported into Ireland, *Sisson* 11903-11907—Number of looms and description of goods made therein, in Dublin, in 1824 and at present, *Sisson* 11908-11911—Great destruction of property in 1826, and distress in that year, *Sisson* 11912—Demoralized state of the lower classes in consequence, *Sisson* 11913—Examination upon the formation of committees in Dublin for subscriptions to transplant weavers out of work to England; deterioration in value of houses formerly occupied by persons in the silk trade, *Sisson* 11914-11916—Distress in Dublin of longer duration

Dublin—continued.

duration now than at any former period, *Sisson* 11917, 11918—Silk trade established in Dublin at the same time as in Spitalfields, *Sisson* 11921—Years in which Dublin silk trade most flourished, and imports thereinto, 1781–1821, *Sisson* 11922–11923.

Paper laid before the Committee.

State of the Silk Trade in Dublin 1824, *App.* p. 930.

See also *Union Duties*.

Dubois, John, (Analysis of his Evidence.) Broad silk manufacturer in Spitalfields, 10236–10239—Quality of goods manufactured, 10240, 10241—Number of looms employed formerly, 10242—Description of trade formerly, 10243–10247—Bad effect of opening the ports on Spitalfields fancy trade, 10248–10256, 10261, 10262—Proportion of looms formerly employed, and description of work, 10258, 10259—Not an improvement in English figured silks since the opening the Ports, 10260—Designers used to be employed in the Spitalfields trade formerly at high salaries, 10263–10267—Foreign competition will tend to ruin our manufactures altogether, 10268—There would be no difficulty in detecting French goods under a prohibition, 10269—Smuggling inconsiderable before opening the Ports; stamping would be of service, 10270, 10271—Impossible to continue the fancy trade without prohibition from France, 10272–10277.

Duties. See *Silk Trade*, 2.

Duty on Importation. Principles of Acts of 1824 and 1826, and Tables of 1826, that of substituting a protecting duty of 30 per cent. in lieu of prohibition, *Hume* 3–8—Incorrectness of the Table, from the alteration of value in goods, *Hume* 9—Attempted to be remedied in 1829, *Hume* 10, 11—Witness's instructions in drawing up the Tables, *Hume* 32–34—Causes of alteration from the value of 30 per cent., *Hume* 13–30, 69, 70—In 1829 officers were allowed to take an *ad valorem* duty, or a duty per pound at their pleasure, *Hume* 27—Division of silk goods into three different principles of percentage, *Hume* 31—Table of 1829 increased the protection as compared with 1826, *Hume* 35, 36—Negociations of the silk trade with Government for a protecting duty in 1829, *Hume* 37–41—Table of the duties on the importation of manufactured silk, showing the rates of the duties, and the amount of the same upon the value of the articles, *Hume* 42—Duty on the importation of waste silk, 1815–1831, *Hume* 50—Duties payable on the importation of raw, waste and thrown silk, showing the changes which have been made therein since 1824, *Hume* 52.

Traders would rather pay Government than smugglers, duties regulated to meet the alternative, *Hume* 80–83—Manner in which duties and drawback affect different branches of the silk trade, *Hume* 92–99—How far duty and drawback is a tax upon one manufacturing district for the benefit of another, *Hume* 113–119—Duty not sufficiently high for protection, *Brunskill* 235—How far reducing the duty on certain manufactured articles would relieve one party at the expense of another, *Brunskill* 451–454—Reducing duties has not expanded commerce, *Merry* 2542—Evils of further reducing duty, *Wadden* 10144—It would be in violation of the promise of the Board of Trade, *Wadden* 10145; *Grout* 10342, 10343—Amount of duty compared with labour, *Cheeper* 930–932—Duties on silk and cotton, *Dorat* 4036, 4037—Small duty on importation into Austria, Russia and Germany, *Martin* 5441—*Ad valorem* duty can be collected on heavy articles but not on fancy goods, *Brunskill* 234—Why rated duty on manufactured goods more advantageous than *ad valorem*, *Clay* 6908–6910—Duty would be better collected by weight than *ad valorem*, *Baggallay* 7523, 7525, 7576.

Difficulty of ascertaining a proper rate of duty upon importation of French goods, *Baggallay* 7574—Amount of present rate if duty collected by weight, *Dillon* 7679, 7680—Duty should be collected both by *ad valorem* and by weight, *Bottrell* 7949—Advantages of an *ad valorem* duty on importation, *Bowring* 9212—How far present duties necessary on foreign manufactured goods, *Harter* 9252—Certain duties attaching to the silk trade which should be removed, *Harter* 9314—Further reduction of duty will be an entire destruction of property, *Grout* 10363—Duty paid at the commencement of the season on all goods that come in the regular way, *Stephens* 2752—Decrease in revenue from amount of duties collected since repeal, *Poyton* 10988—Necessity for a well adjusted scale of duties, *Royle* 3178; *Moore* 11263—How far silk manufacture might be increased under proper duties, *Brocklehurst* 11436–11442—Amount of duties that ought to be collected on plain and figured goods, *Cheeper* 782–784; *Beckwith* 11966–11972—Amount of duty on plain goods, and generally, *Stone* 6010; *Bouillon* 10180, 10181—Amount of duty necessary for protection, and its effect on increasing smuggling, *Beckwith* 11984–11988—Examination upon duties on foreign thrown and manufactured silks, and protection necessary for manufacturers and throwsters, *Graham* 12781–12783.

Papers laid before the Committee.

Amount of Duty paid on all Raw and Waste Silk imported and entered for home consumption, 1814–1832; distinguishing from whence, *App.* p. 918, 932.

See also *Coventry*. *Ribbons*, 6. *Silk*, VII. 2. *Smuggling*, V. 2. *Spitalfields*.

Dyeing. English dye their goods equally with the French, *Brunskill* 401-405—Quantity of silk dyed at Coventry, 1824-5 and 1830-1, *Ratliff* 1833—Comparative price of dyeing at London and Lyons, *Gibson* 5158—Comparison of advantages of dyeing between the French and English, *Gibson* 5160-5166—Prices paid for dyeing in France, *Bowring* 8884—Frauds by French dyers and weavers, *Bowring* 8885—Comparison of superiority between English and French as to dyeing, *Bowring* 8886-8895—Professional chemists in France, *Bowring* 8889, 8890, 8896—Disadvantage from the French being prevented getting their drugs from England, *Bowring* 8897-8899.

E.

East India Company. How importation of China silk taxed through the monopoly of the East India Company, *Harter* 9233-9237—Effect of East India Company's monopoly in checking the import of raw silk shown by amount of imports from different parts, 1823-1827, *Harter* 9994, 9305-9308—Imports of China silk and increase therein since the Company discontinued its importation, *Harter* 9295-9299, 9304—Variation in price at the Company's sales, *Harter* 9300-9302—Examination upon certain patterns produced, their sale or export, and prices of similar articles at East India Company's sales, *Schwabe* 9871-9886—Benefits of silk raised by the East India Company, and difficulty of other persons attempting it, *Grout* 10325-10327, 10330—Advantages to the manufacturer from the Company's sales, *Grout* 10345; *Brocklehurst* 11463-11465—Price at which they put up their silks, *Grout* 10346-10348—Method adopted with regard to goods of individuals advertized at the Company's sales, *Grout* 10349.

Company do not withdraw their silk, even though sold at low prices; individuals do, *Grout* 10364, 10365—Manner in which the Company's imports of silk goods acts injuriously to the manufactures and to themselves, *Brocklehurst* 11472—Account of profit and loss upon the sales of Bengal raw silk sold by the East India Company, 1816-1830, *Brocklehurst* 11473—Their manufactured goods come into contact with their raws imported, *Brocklehurst* 11474—State of raw silk in the East India Company's warehouses, 1829-1832, *Brocklehurst* 11475—Quantity of silk refused at the Company's sales, 1831 and 1832, and causes thereof, *Brocklehurst* 11476-11478—Duty that would effect, and advantages that would result from the Company's importing raw material instead of manufactured goods, *Brocklehurst* 11479-11484—Benefits that would be derived by the East India Company altering the description of the arrangement of their silks, *Brocklehurst* 11544.

See also *Bengal and China Silk*.

East Indies. Unhealthiness of the climate renders human life uncertain, *Grout* 10325-10327.

See also *Importation*, 2.

Elverfeldt. See *Velvets*.

Eggs. Silk sometimes smuggled over from France as a case of eggs, *Ballance* 11016, 11017.

Engine Looms. See *Looms*. *Wages*.

English Goods. Statement of the purchases of broad silks and silk handkerchiefs at Spital-fields and other English manufactories, for five years previous to 1826, *Dillon* 7598-7600—Similar statement for five years and nine months since 1826, *Dillon* 7601—Statement of proportion, per 100*l.* of purchases of English silks and ribbons, 1827-1831, *Dillon* 7608—Velvets and Swiss ribbons superseded by English articles, *Dillon* 7618—Feeling in favour of English manufactures at present, *Sedgwick* 8096, 8097—Some English fancy goods equal to the French, *Sedgwick* 8098-8102—Preference in favour of English manufacture, from improvement therein, *Sedgwick* 8110-8116—Improvements that have taken place in English manufacture since 1825, and fear of the French from English competition, *Bowring* 8772-8777—To what improvement in English manufacture attributed by the French, *Bowring* 8837-8839.

How far English manufactures have improved from competition with France, *Bowring* 9684-9688—Reason for not dealing in British goods, *Bouillon* 10162-10167—Proportion of English sales by witness's house annually, *Bouillon* 10234, 10235—English silks have not improved since admission of the French, *Stephens* 10610-10612—Preference in favour of English black and white silk goods over French, *Stephens* 10613, 10614—Improvement in manufacture not to be ascribed to the importation of French goods, *Wallis* 10889-10893—No stocks of English silks on hand when the French were admitted, *Brocklehurst* 11342-11345—No necessity for foreign competition as a stimulus to improvement of manufacture in England, shown by the production of certain patterns, *Brocklehurst* 11485-11487—Improvements would be made in silk manufacture if artisans properly encouraged, *Smith* 11690, 11691.

See also *Avignon*. *Colours*. *Coventry*. *France*, III. *Retailers*. *Ribbons*, 4.

Etienne,

Etienne, St. State of the silk and ribbon manufacture, and situation of weavers at, *Bowring* 8961-9821.

Fairclough, William, (Analysis of his Evidence.) Landing waiter in the Customs, 12373—Process of weighing and examining silk goods on their landing, 12375—Landing waiters do not attend to more than one pair of scales, 12376-12379—Difficulty of the weigher committing a fraud without connivance with the landing waiter, 12380-12383—Landing waiters changed periodically, 12384, 12385—No advantage to bribe the weigher without the landing waiter, 12386—Landing waiter always present, 12387, 12388—Not possible for the scales to be left to the weigher without the attendance of the landing waiter, 12389—Landing waiter never trusts to the weigher, but always calculates the weight himself, 12390-12392—He would be removed if he did, 12393, 12394—Fraud might be committed by collusion, 12395—Operation of the check of the surveyor upon the landing waiter, 12396, 12397, which would prevent collusion between the landing waiter and weigher, 12398, 12399—Salary of landing waiters, 12400—Consequent improbability of their being open to fraud, 12401—Not often two scales in use at one time, but when so there is an officer to each, 12402, 12403—Difficulty of any attempt to pass figured goods for plain, 12404-12408—Not more goods passed through the Custom House since the last seizure, 12409—Manner of examining and counting other goods not silk, showing difficulty of improperly counting, 12410-12421, 12423—How far a trifling present might be made of toys, 12422.

Fancy Trade. *Ad valorem* duty can be collected on heavy articles, but not on fancy articles, *Brunskill* 234—Wages on fancy articles are cheaper in France, *Brunskill* 244—No duty could protect the fancy branch, it being entirely governed by the French fashions, *Brunskill* 374-377, 557; *Cox* 2165—Difficulties the fancy trade have to encounter from the prevailing fashion in favour of foreign goods and a glutted market, *Brunskill* 427-443—Causes of English fancy goods being worse than the French, *Brunskill* 669—They will not equal the French, from the cost of machinery preventing its use, *Brunskill* 673-679—How far importation of the fancy trade affects the plain trade, *Goode* 1228-1232, 1238-1245—Fancy branch in Coventry has increased, and would increase further but for foreign competition, *Goode* 1233, 1237, 1248-1250—Figure branch worse last year than the year before, *Smith* 1262—More skill required in making figured than plain ribbons, on account of extra machinery, *Smith* 1263.

Distress of the fancy trade from foreign competition, *Brunskill* 437-443; *Goode* 1233-1237, 1248-1250; *Marston* 1418-1424; *Jacobs* 1598; *Merry* 2473-2486; *Doxat* 4049, 4051; *Dubois* 10248-10256, 10261, 10262; *Bridges* 10441-10449, 10463-10468, 10500-10509; *Moore* 11286-11289; *Prout* 11644, 11645—Fluctuation in the value of fancy articles according to the time they are brought out, *Jacobs* 1678-1685—Proportion the higher branches bear to the whole trade in ribbons, *Cox* 2191, 2192—Fancy goods are not made with a view to the lower classes, *Cox* 2199—Successful sale of spring goods, but loss at the end of the year from introduction of French goods in the autumn, *Merry* 2473-2486—Comparison of quantity and value of fancy goods made at Coventry five years previously and subsequent to 1826, *Merry* 2605-2609—Few English fancy ribbons sold, *Stephens* 2642—Little improvement in English fancy goods since 1826, *Stephens* 2669-2671—Before removal of prohibition sacrifices could be made after sale of spring stock without ruin, *Stephens* 2731, 2732—Decrease of fancy trade attributed to the public using more plain articles than formerly, *Gibson* 5133-5141.

Fancy articles made in England cheaper than in France, *Gibson* 5142-5147—Figured silks much worn at present, *Stone* 5946-5948—Importation of rich figured goods given up from loss thereon, *Baggallay* 7473-7475—Price thereof, *Baggallay* 7476—Description of the term plain, figured and fancy goods, *Ballance* 8395-8400—Fancy branch can only be preserved by prohibition, *Ballance* 8436, 8437, 8472—State of the fancy trade prior to and since 1826, *Ballance* 8438-8442—Importance of fancy branch to the silk trade, *Ballance* 8443—Proportion of fancy trade to the whole previous to 1825, *Ballance* 8646—Prohibition the only protection for the fancy trade, *Wadden* 10033; *Dubois* 10272-10277—More fancy than plain goods sold this year, *Bouillon* 10158-10161—Effects of opening the Ports on the Spitalfields fancy trade, *Dubois* 10,248-10256, 10261, 10262—Not an improvement in English figured silks since the opening the Ports, *Dubois* 10260—Difference in the quality of certain fancy goods made in France and by Messrs. Fulton, *Stephens* 10570-10572—More money would have been embarked by manufacturers in the fancy trade but for French goods, *Stephens* 10593—Decline in the fancy trade, number of looms formerly and at present, *Bennett* 10752-10755—Benefit to the plain branch and operatives by extending the fancy trade, *Bennett* 10760, 10761—Quantity of figured silks consumed in this country, *Ballance* 11073, 11074—Increase in the consumption of fancy goods, *Ballance* 11080-11082—Few fancy goods made in England that are not made at Spitalfields, *Moore* 11286-11289—Difficulty of reviving the fancy trade while fashion in favour of France, *Moore* 11290, 11291.

See also *Black Goods*. *Fine Goods*. *Gauzes*. *Ribbons*. *Silk Trade*. *Steam*.

Fashion. Competition is that of fashion, *Brunskill* 754—Loss to the English manufacturer from change in the fashion, *Cheeper* 837-846—How far Coventry trade affected by a change of fashion before opening the trade, *Cox* 2177-2185—How far change of fashion affects speculations, *Cox* 2187-2190—Silks are more fashionable, and are used in a greater variety of articles than formerly, *Merry* 2537-2538—Quick succession of, in Paris, obliged, and early sale of goods, *Stephens* 2697, 2698—Under prohibition, English fashions did not follow the French so rapidly, *Stephens* 2699—Upon what fashion depends, *Bottrell* 7962-7964.

See also *France*. *Taste*.

Fine Goods. Increase in the manufacture of fine silks up to 1826, and decrease since, *Willmott* 4731-4736—Parts of England in which the finer description of plain goods are made, *Gibson* 4810-4813—Mills at present at work turn off more fine silks than those formerly in existence, *Gibson* 5119, 5120—Manufacture of rich goods more profitable than low, but less demand for them, *Stone* 5994-6000—From competition with France, *Stone* 6001—Less rich goods making than last year, *Ballance* 8620.

See also *Fancy Trade*.

Fly Shuttle. See *Weavers*.

Foleshill Parish. Evidence concerning the poor's rate of the parish, *Marston* 1349-1413, 1502-1505—Reason for distress at Foleshill, *Baggallay* 7413, and not at Coventry, *Baggallay* 7417.

I. *Generally*.

Benefits to France from foreign competition, *Bowring* 9024-9028—Population of France rated to the land tax, *Bowring* 9040—Great expense to France of its protection of its cotton twist trade without any effect, *Bowring* 9181, 9185, 9186—Disadvantages of the protective system to France, *Bowring* 9198, 9199; and to the shipping trade of France by increasing the duties on iron, *Bowring* 9204, 9205—Rate of interest in France, *Bowring* 9679, 9680.

II. *Silk trade therein*.

Method of trade adopted by French manufacturers, *Brockwell* 3520-3524—Method of assaying a bale of silk in France, *Doxat* 4216—How far silk trade of France improving, *Doxat* 4319-4322; *Moore* 11163—Extent of silk manufacture of France; importation, growth and number of looms, *Bottrell*, 7924-7926; *Bowring* 9941-9960—Means of obtaining information as to silk trade in France, *Bowring* 8724-8729—Disadvantages under which the French silk trade is suffering at present, *Bowring* 8730, 8769-8771—Extent of protection of the French silk trade, *Bowring* 8759—How far France has obtained a foreign trade in silks from its home trade being unprotected, 678.

FRANCE—continued.

II. *Silk Trade therein*—continued.

Bowring 9631, 9632—How far advantages of France act as a protection, *Bowring* 9633-9635—State of trade in certain districts in France, *Bowring* 9737, 9744—Comparison of distress in silk and other trades in France, *Bowring* 9783-9787—To what the success of the French silk trade is owing, *Moore* 12085—Abstract Statement of French silk manufactures for the years 1827-1830 conjointly, with an abstract view of the total amounts of the silk manufactures of the United Kingdom at different periods during 1815-1831, *Doxat* 12094.

III. *Intercourse with England.*

1. Generally.

Description of English goods sold in France, *Stephens* 2914-2930—Change of opinion in France with regard to its commercial relations with England, *Bowring* 8959, 8960—Institution of a commission in France for considering its relations with this country, *Bowring* 9141, 9142—Examination as to exchange of exports between France and England of silk and cotton, *Bowring* 9175, 9176, 9757-9765—Advantages to France and England from admitting French goods at a low duty, and obtaining the raw material, *Bowring* 9182-9184—Comparative statement of the quality of silk used in England and France, *Doxat* 4111, 4112—For what Bengal silks are used in France, *Doxat* 4113, 4114—Reason why French do not buy Bengal silk in the English market, *Martin* 5436—Instance of French thrown silk being obtained here, *Heath* 5332-5339—Quantity coming to London is very small, *Martin* 5420, 5421—No feeling in France in favour of any fair and reciprocal trade with England, *Moore* 12077—Documentary evidence put in by witness as to French and English imports and exports and silk manufactures generally, and examination thereon, *Doxat* 12089-12092—Exports of silks from Calais to England, 1831-32, and examination, showing inference of smuggling from official reports, *Doxat* 12090—No advantage in transferring silk trade to France in exchange for its taking our cotton yarn, *Brocklehurst* 11506.

2. Advantages of France.

Comparison of advantages between France and England, *Brunskill* 237, 238, 244, 354, 566-575, 593-610; *Ratliff* 1855-1858, 1869-1872, 1893-1898; *Doxat* 4331; *Bottrell* 7881; *Ballance* 8410-8415; *Harter* 9231-9250; *Wadden* 10031; *Bennett* 10762-10764; *Moore* 11291-11295—Other advantages of France would counterbalance ours, had we the raw material, *Ballance* 8708—Disadvantages of England over France from taxation of the raw material, *Harter* 9231, 9247, 9248—Advantage to the French from use of machinery, *Brunskill* 237, 238—From price of Italian raw, *Doxat* 4331—From exportation of raw being prohibited, *Royle* 3399-3407; *Harter* 9244, 9245—From setting the fashions, *Cox* 2162-2164; *Harter* 9249, 9250; *Bennett* 10749, 10750; *Moore* 11291, 11292—Working for orders, *Wadden* 10031—From cheap labour, *Brunskill* 244; *Bennett* 10762-10764—From the growth of raw, *Brunskill* 354; *Ratliff* 1855-1858, 1889-1892; *Harter* 9244, 9245; *Wadden* 10031; *Bridges* 10453-10462, 10493; *Bennett* 10762-10764; *Moore* 11291, 11292—How far advantages of France counteracted by the amount of duty collected in England, *Wadden* 10032—England not on a fair footing with France, *Bridges* 10049—French sell only one pattern to one house in different countries, and thereby lessen the cost of manufacture, *Ratliff* 1872—French merely manufacture to the extent of their order from England, and not for other countries from the same pattern, *Clay* 6996-6999—Comparative cost of manufacture at London and Lyons, *Ratliff* 1965-1969; *Doxat* 4051, 4052; *Hall* 6660, 6661—Abridged recapitulation thereof, *Doxat* 4279—Statement of cost of manufacture of plain goods at London and Lyons, *Doxat* 4402—Comparison of quantity of labour, cost of material, and rate of wages at London and Lyons, *Brunskill* 566-575, 593-610; *Doxat* 4053-4055, 4073-4079, 4171-4183; *Bowring* 8723, 9170, 9616-9626, 10027-10029—Examination in answer to Dr. Bowring's evidence thereupon, *Ballance* 10018-10020—Table showing the comparative cost of manufacture between French and English goods, *Pittifor* 12060-12065.

How fluctuations in the silk trade in France act detrimentally to English industry, *Doxat* 4066-4068, 4073—On what the competition between France and Spitalfields depends, *Doxat* 4160, 4170—Variation in the price of silk between Lyons and London, and causes thereof, *Ratliff* 1961; *Doxat* 4184-4193—Import duties and charges upon raw and thrown silk into Lyons and London; *Doxat* 4208-4218—Prices of silk in France are lower than in England, independent of duty, *Doxat* 4252, 4253, 4353-4356—Further examination on price of silk at Lyons and in London, *Doxat* 4312-4315; *Martin* 5511, 5521; *Harter* 9468-9470, 9474-9476—Difference in weaving and dyeing in favour of France, *Gibson* 4842-4847—Charges of transport of raw silk from Lyons, *Heath* 5342—Preference of the French for their own silk, *Ratliff* 1889-1892; *Heath* 5342, 5350—Advantages of France from its exports of manufactured silks, with particulars thereof in 1829, *Ballance* 8413—Balance of trade between England and France against England, *Bowring* 9191—Natural advantages of France for producing fine goods, and of England for coarser, *Bowring* 9200, 9201—Competition between France and England, and advantages and disadvantages with respect to fine and coarse goods,

FRANCE—continued.

III. *Intercourse with England*—continued.

2. *Advantages of France*—continued.

goods, *Bowring* 9726-9736—Obtaining French raw silk would not counterbalance all the disadvantages of France over England, *Moore* 12088—Advantages to the French by the duty on foreign thrown silk here, *Graham* 12719—Statement intended to show the differences which range between the prices of silks at London and at Lyons, *Doxat* 12094.

See also *Orders*.

Papers laid before the Committee :

Detailed Costs of the manufacture of good plain Silk Goods in common colours at London and at Lyons; also a recapitulation of the differences of those Costs per lb. and per cent., and estimates of the Charges of import through the Custom House and by smuggling, *App.* p. 940.

Abridged comparative view of Costs at London and at Lyons of good plain Silk Goods in common colours, and statements relative to their legal imports and to their illicit imports, *Evidence* p. 243.

Costs and Statements presented in an inverted view, *Evidence* p. 263.

Statement (made in 1829), showing every charge of the Silk Manufacture dissected, and the relative proportions in regard to wages of labour, to machinery, &c.; also the relative charges abroad for throwing dissected, *App.* p. 942.

Statement, (made in April 1829,) *Idem*, grounded on a lower rate of Charges for weaving, &c.; Charges for throwing the same, *App.* p. 944.

A nearer view of the respective Charges of every item of the manufacture of good plain gros de Naples, in common colours, at London and at Lyons, with remarks as to their effect or rates of labour, &c., and on quantities of work, *App.* p. 945—Statement in which Charges relative to every process of the manufacture of good plain goods at London and at Lyons in 1821-1825, and in 1826-1831, are placed next to each other, with their respective differences set forth in per centages, *Evidence* p. 258.

3. *Disadvantages of France.*

Taxes on iron and machinery for building mills dearer in France than in England, *Bowring* 9662-9664, 9670-9672—Advantage of Switzerland over France as to taxation of machinery, *Bowring* 9665-9669—Backwardness of throwing and reeling establishments in France, *Bowring* 10029—France not under disadvantages compared with Switzerland, *Moore* 12076.

See also *French goods*.

IV. *Consumption of Silk therein.*

Extent of consumption of French silk, *Bowring* 8737-8739—Decreased consumption and increased export, *Bowring* 9030-9032—Total consumption of raw and thrown in France, *Martin* 5504—Examination as to consumption of silk in France as shown by certain documentary evidence, *Doxat* 12093-12095.

V. *Imports of silk into, quality and value thereof.*

Quantities of silk consumed in France and Switzerland, and importation therein, *Doxat* 4074-4078—Statement of imports of raw, thrown, and waste silk into France, *Doxat* 4078—Quality of silk imported into, *Doxat* 4090-4092—Price of Italian raw imported into Lyons, *Doxat* 4280-4286, 4331, 4332, 4344, 4357-4374—How far regulated by the quantity introduced, *Heath* 5364—Importation of foreign silk into France, *Doxat* 4316-4318; *Heath* 5255, 5263-5267, 5371; *Martin* 5504, 5509, 5510; *Heath* 5650-5658—Importations into, and exportations from France of raw and thrown silk, 1825-1831, *Bowring* 8731—Weight thereof, 1820-1831, *Bowring* 8735—Value thereof, 1820-1831, *Bowring* 8735—Account of the value of raw silks of all sorts imported into France from the year 7 or 1800 to 1806, and the quantities and value, 1815-1819, *Bowring* 8735.

Report of the importations of raw and thrown silks, and of the duties levied, 1825-1830, reduced to English weights and measures, *Bowring* 8736—Quantities of silk imported from foreign countries which have entered the bonding warehouses of Lyons, 1822-1832, showing quantities entered for home consumption and exported, *Bowring* 8799—Quantity of foreign silk sold in the Lyonesse market for 10 years, *Bowring* 8804—Effect of import of Italian silk into France on prices and consumption of French silk, *Doxat* 4341-4352; *Heath* 5663—Approximation in price of Italian and French silks at Lyons, *Doxat* 4392—With exception of difference of duties and charges, French pay the same for foreign silk as other parts of the world, *Doxat* 4394—Quantity of Italian imported, *Heath* 5256, 5257—From whence information of French imports obtained, *Heath* 5260, 5261—Sales of Italian silk registered in France, *Heath* 5270, 5271—Reasons for the French importing fine Italian raw silks, *Heath* 5273-5275—Consumption of foreign organzine at Lyons is principally Piedmont, *Heath* 5351—Quality thereof, *Martin* 5497, 5498—Reasons for the French not importing silk from Italy as well as the Swiss, *Bowring* 9673, 9674.

FRANCE—continued.

V. Imports of Silk into, quality and value thereof—continued.

Papers laid before the Committee.

Statement of the Quantities of Raw and Thrown Silks imported into France from Italy and other parts, during the years 1825, 1826, 1827 and 1828, also Imports of Waste Silks, *Evidence* p. 218.

VI. Exports of Silk from.

It prohibits the export of all silk except manufactured, *Ratliff* 1882, 1883; *Banbury* 4597; *Martin* 5404, 5554—Thrown silk allowed to be exported from France, *Martin* 5404, 5406–5411—Ports of exportation from France, and quantities of foreign silks exported, 1828–1830, *Bowring* 8736—Bounty and drawback on exportation of silk from France rejected by the Council of Commerce, *Bowring* 9196, 9197—Administration des Douanes: Exportation des Tissus de soie de Fabriques Françaises, with computation into English weight and value, *Doxat* 12094—Marchandises exportées de l'intérieur seulement, *Doxat* 12094—Marchandises exportées de l'intérieur du royaume en payant des Droits, en Franchise ou avec prime, *Doxat* 12094—Recapitulation of the annual exports from France, 1827–1830, of French manufactured silks of every description, showing their quantity in French weight, and value in francs, computed into English weight and value, *Doxat* 12094.

VII. Production of Silk therein, quality and value thereof.

Proportion superior silk bears to the whole produce of France, *Heath* 5368—Annual production, *Heath* 5365; *Martin* 5501, 5511; *Bowring* 8742, 8743—Value of silks in France shown by price current, *Bowring* 8744—Production of French silk increasing, *Doxat* 4259–4263; *Bowring* 8745—Method of production and manufacture of silk, from its earliest stage, *Bowring* 8745—Price of silk of native manufacture, and how far on the decline, *Bowring* 8746–8749—Price of cocoons and raw silks of Cevennes, 1822–1831, *Bowring* 8749—Method taken in France of ascertaining the quality and weight of silk, *Bowring* 8750–8752—Statement of the fluctuations in the prices of silk in the market at Lyons, 1822–1832, *Bowring* 8802, 8803—How far French growers of their own silk, *Bowring* 9086—Improved manner of rearing the worm makes the employment more healthy, *Bowring* 9095—Size of deniers, *Bowring* 9092–9097—Manner in which silk is sold, *Bowring* 9098–9104—Price of coarse silk in France, *Doxat* 4379, 4380—Price and quality of certain French silks, *Heath* 5339–5341, 5343.

VIII. Raw Silk.

Regulations that should be adopted to prohibit the importation of French and Swiss manufactured goods, or to compel the French and Swiss to export their raw silk, *Brockwell* 3501–3515—If French raws allowed to be exported, and manufactured goods admitted, differences in the price of labour might be afterwards regulated, *Brockwell* 3518, 3519, 3525—Necessity of prohibiting importation of manufactured goods from France unless she allows the importation of raw silk; amount of duty on manufactured goods in that event, *Moore* 11296–11301—In the event of France putting a duty on the importation of raw, whether that amount should be added to the manufactured goods, *Moore* 11303–11306—Quality of French silks, and improvement in reeling, *Doxat* 4079, 4080—Superiority of French silk attributed to superior reeling, *Doxat* 4119–4121.

Why English do not reel silk as well as the French, *Doxat* 4124—Importance to obtain French raws, *Banbury* 4598–4600—Description of French silks that are superior to the Italian, *Martin* 5500—Higher price of French raw than Italian, *Heath* 5348; *Martin* 5579—In what superiority in French silk consists, *Heath* 5367–5372—Manner in which raw silks are smuggled out of France, *Martin* 5412, 5413—Expense attending it, *Martin* 5414, 5418—Superiority of French silk at Cevennes, and cost thereof, *Bowring* 8740, 8741—French silk superior to any English manufacturer can procure, *Brunskill* 670–672; *Ratliff* 1854, 1878; *Harter* 9246, 9471–9473—French government intend to allow the exportation thereof, *Bowring* 8753, 8754—Both France and England would be benefited by the export of French raw, *Bowring* 9115, 9116—Duty on raw silk imported into France is small, and the French use principally silk of their own growth, *Moore* 12074—Advantage of being enabled to get French raw silks, *Moore* 12088.

IX. Thrown Silk.

Comparison as to quality of French thrown silk, *Stone* 6239–6245, 6248—Expense of conveying them to this country, *Stone* 6246, 6247—Means of ascertaining French silk, *Stone* 6249–6253, 6255–6258—How obtained, *Stone* 6254—For what purposes calculated, *Stone* 6259–6263—Rise in the price of French organzine from small stocks on hand, *Bottrell* 7922, 7923.

X. Imports of manufactured goods into.

Importations into France from Switzerland of velvets and plain goods, *Doxat* 4082—Importations of Swiss ribbons into France, *Doxat* 4093–4096—Importation of foreign manufactured silks into France, and how far beneficial to it, *Bowring* 8760–8766—Importation of English manufactured silks into France, *Bowring* 8678–8787; *Brocklehurst* 11485—How far English goods exposed in shop windows in France, *Bowring* 9766, 9767—Necessity for getting an opening in France for reception of Irish

FRANCE—continued.

X. Imports of manufactured goods into—continued.

Irish tabinets, *Sisson*, 11918-11920—Duty on importations into France, *Doxat* 4083-4085; *Heath* 5255, 5263-5267; *Martin* 5435; *Bowring* 9023, 10029—Douanes Royales de France; Imports of foreign manufactured silks into France for home consumption, *Doxat*, 12094.

See also *America*. *Avignon*. *Bengal and China Silk*. *Chamond, St.* *Condition, La.* *Conseil des Prud'hommes*. *Cottons*. *Country Trade*. *Coventry*. *Crape*. *Dyeing*. *Etienne St.* *Exportation*. *Fancy Trade*. *Gauzes*. *Germany*. *Italy*. *Jobbing*. *Labour*. *Lyons*. *Manchester*. *Orders*. *Piedmont Silk*. *Prices*. *Sardinia*. *Smuggling*, VI. *Throwsters*. *Watered Silks*.

Fraser, Allan, (Analysis of his Evidence.) Extra weigher at the Custom House, 12096-12098—Duty of landing waiters, 12099, 12100—Duty of surveyor, 12101, 12102—Number of ships discharging at one time, 12103, 12104—Number of men at the scales, and reduction in the amount thereof, 12105-12110—Pay of extra weighers, not constant employment, 12111-12113, 12195—Examination as to opportunities of removing goods during absence of landing waiter, 12114-12124—Fraud must be caused by collusion between the weigher and landing waiter, 12125-12128, 12132—Instances of weighers being left alone, 12129-12131—Disputes between Custom House officers and merchants, as to value of silk, 12133-12136—No knowledge of silks being passed at less than their actual weight, 12137—Possibility of fraud from value being left to the judgment of the merchant, 12138-12147—Method of weighing silk manufactured goods, and difficulties from landing waiter attending two sets of scales, 12148-2154.

Examination, showing the responsibility of the weigher and want of check upon the landing waiter, 12155-12171—Instances of goods being reweighed by the surveyors, 12172-12177—Refusal of bribes by witness, and reasons for not reporting their offer to the landing waiter, 12179-12191, 12196-12201, 12268-12271, 12274-12289—No instructions given to extra weighers when going on duty, 12192—Duty of extra weighers, 12193, 12194—No recollection of a smaller number being entered than that actually passed, 12202-12207—Examination upon the fact of the commission of bribery among the Custom House officers, 12208-12212—Examination as to names of officers who have told witness of their receiving bribes for not doing their duty, with witness's declining to mention them, 12213-12249, 12262-12267, 12272, 12273—Supposition that the bribe was for passing short weights, 12250-12261—Opportunities for committing fraud, from poverty of extra weighers, 12290-12297—Presents of small value to landing waiters from merchants, 12298-12310.

Fraud. See *Custom House*.

FRENCH GOODS:

1. Generally.
2. Importation thereof.
3. Advantages of their Importation.
4. Disadvantages of their Importation.
5. Comparison of manufacture between France and England.
6. Preference in favour of.
7. Prices.
8. Prohibition thereof.

1. Generally.

Quantity of manufactured goods exported from France and consumed therein, *Doxat* 4330—Increase in the manufacture of cut ribbons, *Clay* 6804-6807—Articles the French at present employed upon, and for what markets intended, *Bottrell* 7908-7912—Account of silk manufactures exported from France, 1828-1830, *Bowring* 8789, 8790—Mode of valuation, *Bowring* 8791, 8792—Imports of manufactured silk to England, 1818-1824, *Bowring* 8793—To 1830, *Bowring* 9137, 9138—Effect of the introduction of French silk goods into England, upon French manufactures, *Bowring* 9120—English demand is for articles of taste, *Bowring* 9122—Official value of silks exported from France, *Bowring* 9123-9126—Analysis of the manner in which the different quantities of French silks, plain and figured, are distributed in foreign countries, *Bowring* 9127. The like of crapes, *Bowring* 9128. The like of ribbons, *Bowring* 9129—Examination upon the foregoing statements, *Bowring* 9130-9133—Qualities of different French goods taken by England in 1825, 1828 and 1831, *Bowring* 9134.

2. Importation thereof:

Method of purchasing French goods, *Brunskill* 722-726; *Jacombs* 1601-1609; *Clay* 6767-6768—Quantity of French goods imported, *Cox* 2203-2204—French import something new in large quantities every season, *Cox* 2338-2341—Greater variety of French goods now than during prohibition, *Bottrell* 7829, 7830—Importation of French silks has increased lately, *Cox* 2349—Generally takes place to a large extent at the present time of the year, *Cox* 2351—Few goods in France at present, *Stephens* 2685, 2686—Increase of French stocks by wholesale dealers since 1828, *Stephens* 2950-678.

FRENCH GOODS—continued.

2. *Importation thereof*—continued.

—2955, 2969, 2970—Revolution in France a cause of greater importation into England since July 1830, *Heath* 5305-5314—Tendency of any convulsion in France to cause importation into England, *Heath* 5308-5312—Number of persons engaged in importation of foreign manufactured goods, *Clay* 6758-6763—State of import trade from 1826, *Clay* 6769-6774—State of trade with regard to French goods in England, *Clay* 6840—Silk trade on the decline as regards imports, *Clay* 6932-6936—Quantity of French silks sold now greater than in 1826, *Clay* 6960, 6961—Goods that have paid duty are more valuable than those smuggled, *Clay* 6991, 6993-6995—Only rich French goods ordered for the English market, *Bottrell* 7921—Proportion of silk manufactured goods imported in 1825 that were warehoused against opening the Ports in 1826, *Bowring* 9654, 9655—Different views of silk manufacturers as to importation of French goods, *Bridges* 10529, 10530—French goods coming to this country double the amount shown by French account of official exports, *Moore* 12086.

3. *Advantages of their Importation.*

Extent to which English manufacture has improved by their admission, *Brunskill* 171-173; *Cox* 2079, 2082; *Bottrell* 7951, 7954-7956; *Sedgwick* 8006-8008—Who are benefited by their introduction, *Gibson* 5037-5040—How far importation of silk manufactured goods from France tends to displace English labour, *Bowring* 9643-9650—Improvement in the quality of French manufactured silks imported since the removal of prohibition, *Bowring* 9651-9653.

4. *Disadvantages of their Importation.*

Disadvantages of contending with French fashions, *Cheeper* 828-832; *Jacombs* 1743—Introduction of French ribbons has shut out the English manufacturer from both town and country trade, *Jacombs* 1613-1615, 1697, 1698—Contract for a particular pattern not fulfilled from French goods coming over previous to its execution, *Jacombs* 1618-1628—Loss from the imitation of French patterns, *Jacombs* 1635-1639—Loss by the manufacture of certain ribbons by their being superseded by the French, *Jacombs* 1656, 1657; *Cox* 2051, 2052, 2086-2094—Superiority of silk, and nature of the principle of business in France checks home trade, *Ratliff* 1873, 1874—Dependence on French fashions for the quantity of ribbons used, *Cox* 2208, 2209; *Sedgwick* 7995-7998, 8071, 8072—How far French goods are paid for by British labour, *Cox* 2230-2234.

Destruction of trade from their introduction, *Sawer* 2397-2399—Account showing loss of retail trade since 1826, through admission of French goods, *Merry* 2450-2456, 2545-2547—Interference of the French in other branches of the trade, *Merry* 2466-2468—French goods supersede English of a superior quality, *Merry* 2528—Expense and loss of time in purchasing French over English goods, *Baggallay* 7333-7341; *Dillon* 7694, 7695—Fashion commands a higher price to be given for French than Manchester goods of the same quality, *Stephens* 10598-10606—Orders given to France instead of Spitalfields and Manchester in consequence thereof, *Stephens* 10607-10609—Description of French goods at present bought, *Stephens* 10635—Duty that should be paid thereon, *Stephens* 10637—Expectation by Government that a larger amount of French goods would not come in after the alteration, than were smuggled in previously, with contrary result, *Moore* 11196-11200, 11219—Rich goods in the shop windows in Manchester marked French, *Kelly* 11838, 11839.

5. *Comparison of Manufacture between France and England.*

French manufactured goods not so distinguishable from English as formerly, *Hume* 68; *Brunskill* 383-400; *Cheeper* 913-929; *Ratliff* 1849-1853; *Cox* 2101, 2102, 2124-2131; *Stephens* 2667, 2668, 2901-2907; *Stone* 5853-5855; *Baggallay* 7538-7549; *Moore* 11249-11253—Comparison of skill in different branches with France, *Brunskill* 174-178—There would be no difficulty in detecting French goods under a prohibition, *Dubois* 10269—In what French manufacture excels the English, *Brunskill* 269-272, 329-331; *Ratliff* 1860—How much per cent. English goods are worse than French, and manner of making them equal, *Brunskill* 329-331—English dye their goods equally with the French, *Brunskill* 401-405; *Stone* 6002, 6003—British goods equally cheap and durable, *Jacombs* 1716-1719.

Difference in quantity and quality of silk used in manufacturing the same article in France and England, *Ratliff* 1847, 1848—Difference in the number of pieces of a pattern made in France and England, *Ratliff* 1870, 1871—Reasons for French fancy goods being superior to the English, *Sawer* 2427, 2428—Rivalry dare not be attempted, *Sawer* 2429-2431—Comparison between French and English in the manner of finishing their goods in favour of the French, *Clay* 6782—Assimilation of style between France and England since opening the trade, *Baggallay* 7527-7531—French trade declining from the great improvement in English manufactures and reduction in price, *Dillon* 7609-7612, 7624—Improvement in English over French manufacture, demand for French goods diminishing, and in what goods French likely to retain a superiority over the English, *Dillon* 7656-7662—Superiority of the French and inferiority of the English manufacture, and disadvantages of prohibiting importation of French manufactures, *Bowring* 9689-9706.

6. *Preference*

FRENCH GOODS—continued.

6. Preference in favour of.

French goods would be imported at 20 per cent. higher duty, *Brunskill* 125-128—French plain goods will sell in preference to English of the same quality, and much cheaper, *Brunskill* 206-224—Taste in favour of French ribbons, and its effect upon our manufacture, *Jacombs* 1601-1609, 1698, 1716-1719—No reduction in the price of English goods could drive the French out of the market, *Ratliff* 1875—French ribbons find their way every where, *Cox* 2098—Preference for French goods is owing to taste, not price, *Cox* 2205—Proportion French and English ribbons bear to each other in purchases from manufacturers, *Stephens* 2639-2641—Proportion during prohibition, *Stephens* 2654-2666—Preference for French goods, and reasons for it, *Cox* 2205; *Stephens* 2648-2653, 2956-2961; *Clay* 6992; *Bowring* 8788, 9768—In the event of a change of pattern in French goods they can still be sold as such, and accepted as new goods, *Stephens* 2696.

Goods obliged to be disposed of quickly in consequence of the quick succession of fashions in Paris, *Stephens* 2697, 2698; *Clay* 6814-6835—French goods sometimes sold for English, *Stephens* 2708; *Baggallay* 7373-7376—French would have preference, even if English of equal perfection, *Stephens* 2709—Goods are all of the best kind, *Clay* 6798-6842—Statement of proportion per 100*l.* of whole French trade, 1827-1831, *Dillon* 7605-7607—Amount of French goods sold per annum, *Bouillon* 10172-10175—Proportion of different description of goods imported from France, *Sedgwick* 8080-8090—Impossible for fashionable houses to sell goods opposed to the style fashionable in France, *Sedgwick* 8161-8164—French regulate the fashion in all parts of Europe, *Sedgwick* 8190—Superiority assigned to French goods is not through prejudice, *Bowring* 8788—Monopoly by France of the valuable branches will eventually cause the loss of the silk trade, *Brocklehurst* 11492—Merit of the French silk manufactures not likely to pass away from the disadvantages they labour under, *Moore* 12075.

7. Prices.

Amount of extra expenses in importing goods from France beyond what they would cost in England, *Brunskill* 558-562—That amount so much additional, but not a sufficient protection to the English manufacturer, *Brunskill* 563-565—Prices obtained for French goods, *Brunskill* 686-688—How French prices ascertained, *Ratliff* 1859, 1962-1964—Question between French and English is one of price as well as fashion, *Ratliff* 1948—French goods can be bought much cheaper in London than imported, *Stephens* 2757, 2758; *Sedgwick* 8202, 8203—Offers by French warehousemen to deliver to English purchaser free of expense, *Stephens* 2908-2913—How far prices of French manufactured goods imported last year sufficient to remunerate manufacturer, *Doxat* 4326-4329—Reduction in the price of French plain goods between 1826 and 1828, *Clay* 6775-6781—Changes in the import trade from plain to fancy goods, and prices thereof since 1829, *Clay* 6783-6795, 6841-6843—Unprofitableness of the French import trade, *Clay* 6796, 6797—Revolution in France stopped the home trade, and caused the exportation of goods at a loss to the manufacturer, *Clay* 6836-6839—French have been compelled to reduce their prices and improve their manufacture, *Clay* 6974, 6975—Reduction in price and quality of French goods since 1826, *Bottrell* 7829, 7830—Sale price of the richest French silks, *Tootal* 9550, 9551—Advantages to the French that make their goods cheaper, *Bridges* 10450-10452.

8. Prohibition thereof.

They should be prohibited, or French raws allowed, *Brockwell* 3501-3525—Benefits to be derived by the prohibition, *Stone* 5905-5909—Calculation of loss to England by prohibition of French goods, *Bowring* 9215—Extract from a letter, showing the fear of the French manufacturers that the Committee will recommend the prohibition of their manufactures, *Bowring* 9937-9940.

See also *Fancy Trade. Gauzes. Handkerchiefs. Jobbing. License. Manchester. Orders. Prices. Prohibition. Smuggling. Throwsters. Watered Silks.*

French-houses. Number thereof in London, *Menetrier* 8329, 8330.

G.

Gauzes. Gauzes that were formerly manufactured, and at present, *Brunskill* 521—French gauzes now sold in this country for less than operatives paid for making similar in 1824-1826, *Marston* 1371, 1372—How foreign brocade gauzes can be distinguished from English, *Marston* 1458-1460—When fine gauzes first manufactured, *Marston* 1510—Quantity of silk used and cost of manufacture of gauze fancy ribbons in 1823 and at present, *Jacombs* 1629-1634—Cost of manufacture of gauze ribbons in 1823, from their being a new article, *Jacombs* 1668-1673—Advantage of the French in the manufacture of gauze silk, from the cost of the material, *Ratliff* 1855-1858—Gauze trade nearly abandoned at Coventry, *Ratliff* 1863—Manufacture of gauzes predominated 1824-1827, and were then partly discontinued from the French importing them, *Cox* 2170-2176—If many inferior gauzes are made, the French will supply the whole country, *Cox* 2235-2243—How far they may suit exportation, *Cox* 2244-2247—Taste in favour of

Gauzes—continued.

of French gauzes; comparative price thereof, *Sawyer* 2373-2378—Rich cut gauzes were made in 1825 and 1826, *Merry* 2459, 2460—Were discontinued from interference of the French, and not being able to get material for making them so good as the French, *Merry* 2461-2463—Fewer houses make gauzes now than in 1824-1826, *Merry* 2600, 2601—Principal part of ribbons imported from France are gauze, *Merry* 2612, 2613—Proportion English gauze ribbons bear to the French, *Stephens* 2642—Proportion of the trade that consists of gauzes, *Stephens* 2819

Number of pieces of gauze ribbons of a certain width a man can manufacture a week, *Hall* 6757—Duty on plain gauze ribbons imported, *Baggallay* 7414, 7415—Striped gauze ribbons not imported from loss thereby, *Baggallay* 7416, 7417—Duty on figured gauzes, *Baggallay* 7420, 7421—Duty necessary thereon, *Baggallay* 7422-7426, 7430, 7431—Per centage gauze ribbons bear to the whole production of French ribbons, *Dillon* 7613, 7614—Comparison of cost price of striped and figured gauzes in France and England, *Dillon* 7684-7688, 7690-7692—More gauze ribbons smuggled in 1830 and 1831 than paid duty, *Bottrell* 7787—Examination upon the quantities of certain gauze ribbons exhibited to the Committee to show amount of duty between French and English, *Bottrell* 7884-7888—Striped gauzes at Coventry equal to the French, but not figured, *Sedgwick* 8000—If fashion in France changed against gauze ribbons, the prevailing fashion would not have the same superiority in the English market the gauze now have, *Sedgwick* 8017-8019—French gauze ribbons a great deal superior to the English, *Bouillon* 10171—Increasing the duty on gauzes would prevent jobbing, *Bouillon* 10186-10189—Import of gauzes from France, and manner in which they interfere with the English trade, *Bridges* 10406-10421—French gauzes, and not the Scotch, that interfere with Spitalfields, *Stephens* 10573-10580—Whether the fancy gauze trade can go on without prohibition, *Moore* 11312, 11313.

See also *Scotch gauzes*.

Germany, duties on importation into, *Doxat* 4097, 4098—Description of French goods imported into, *Bottrell* 7922.

See also *Duty on Importation. Italy. Switzerland.*

Gibson, Thomas Field, (Analysis of his Evidence.) Broad silk manufacturer at Spitalfields, 4805-4807—Benefits to the Spitalfields trade by reduction of duties on raw and thrown silks, 4808, 4809, 4814, 4815—Other parts of England in which the finer description of plain goods are made, 4810-4813—Increase of competition between Lancashire and Spitalfields, 4816—Its effect on masters and workmen, 4817—No fixed rule of wages in Spitalfields, 4818-4822—Manufacture of velvets entirely, and satins principally confined to Spitalfields, 4823, 4824—Variation of the book price of weaving velvets, 4825, 4826—Proportion of the different kinds of silk manufactured at Spitalfields, 4827—All reductions of duty beneficial to the Spitalfields manufacturer, looking to competition with France, 4828-4830—Home competition more important than the French, 4832, 4833—Increased value per cent. the present duty adds to the goods, 4834-4836—If duty taken off it would equalize the prices in this and the foreign market, 4837, 4838—Advantages possessed by the French manufacturer over the English, 4839-4841.

Difference in weaving and dyeing in favour of France, 4842-4847—Silk thrown as well in England as imported from Italy, 4848—Italian thrown silk not improved, 4849—Operation of throwing in England improved of late years, 4850-4852—Quality of silks imported from Italy, 4853, 4854—Cost of throwing orgazine in Lombardy, 4858, 4859—Cost in England, and which does not remunerate the throwster, 4860-4877—Taking off the present duty would not ruin throwsters, 4878-4882—They would get a better price, 4883—Price of Italian silk regulates that of the English, 4884, 4885—Reasons why reducing the duty would not increase the importation of foreign thrown, 4886-4889—Italians could not rapidly, or to any extent, increase the import, 4890-4892—Difference in the price between raw and thrown in this country does not remunerate the throwster, 4893-4895—Quantity or quality of Italian silk will diminish unless the throwster obtains a fair return for labour, 4896-4898—Cost of reeling silk in Italy, 4899-4905—Advantage of throwing immediately after reeling, 4907, 4908—Price at which Italian throwster would throw to order, 4909-4912—More profitable to the Italian to import raw, 4913—Total abolition of duty would place more advantages in the hands of the Italians, 4914-4919—English cannot produce thrown at the same price as the Italian, 4920—Duty that would protect, 4921-4924, 4927.

Decreasing scale of duty will increase amount of importation, 4925, 4926—Machinery better in England than in Italy, 4928—Wages higher in England, 4929—Rate of wages in Italy, 4930-4933—When silk is reeled in Italy, 4934—Increase in the importation of thrown silk did not increase after reduction of duty till last year, 4935—Decreasing duty would not decrease price of Italian thrown, 4936-4941—Reason of Italian throwster losing in the English market, 4942—If duty reduced he could introduce it at a profit, 4943—Duty that might be collected to protect Spitalfields manufacturer of plain goods against the French manufacturer, 4944-4947—Not much smuggling plain goods, 4948—Amount to which duty might be decreased to prevent smuggling, 4949-4951—Reasons for the Italian increasing his importation at a loss, 4952-4954,

Gibson, Thomas Field, (Analysis of his Evidence)—continued.

4960—Increase of throwing mills in what years, 4955, 4956—Distress of the throwster attributed to home competition, 4957-4959—Produce of silk in Italy, and to what countries exported, 4961-4973—How far reducing duty would act as a bounty on the importation of Italian thrown silk, 4974-4981—Why causes which induce the importation of thrown silk would not act upon the raw, 4982, 4983—Whether reduction of duty would benefit the foreigner at the expense of the English throwster, 4984-4999—Parties who have been benefited by changes in the law since 1829, 5000-5005—On what returns profits calculated, 5006-5011—Whether greater amount of goods selling now than in 1826, 5012-5017—Why goods are manufactured cheaper at Lyons than in England, 5018—Advantages to the French from their orders for fancy goods, 5019-5027—Effect of the introduction of French goods on English prices, 5028-5036—Who are benefited by their introduction, 5037-5040—Why reduction of duties would not prejudice the operative, 5041, 5042—Always a sufficient supply in the English market to answer the demand without foreign importation, 5043-5048—Profits of manufacture and wages determined by competition, 5049—Proportion of labour to the value of plain goods, 5050, 5051—Smuggling would not be put down by prohibition, 5052-5055—Advantages of the Italian over the English throwster, 5056-5060.

(Second Examination.) Descriptions of thrown silk imported from Italy, and to what uses applied, 5061-5066—Broad goods imported from France, 5067, 5068—How taking off the duty would benefit the Spitalfields manufacturer, 5069, 5070—How far it would increase consumption and the demand for labour, 5071-5073—Duty paid on the fine goods of Spitalfields, and the drawback allowed on the common goods of Manchester, 5074-5078—Low value of debentures, 5079—Difference in the price between Italian thrown and raw silk, 5080—Small profit to the Italian to import at present price, 5081, 5082—Imports will be diminished if present price continues, 5083—Raising the price of debentures by diminishing imports or increasing exports will benefit the manufacturer at the ruin of the throwster, 5084-5094—Difference in credit in Spitalfields formerly and at present, 5095-5100—Destruction of the trade of silk men, 5095-5108—Reasons why duties remaining as they are there will be less foreign thrown silk imported, 5109-5112—Comparison of importation of Italian thrown and raw silk during the last three or four years in favour of raw, 5113, 5114—Reason for a larger importation of thrown during last year, 5115, 5116—Proportion of home thrown silk to meet it, 5117.

Causes that operated to reduce the price of trams, 5118—Mills at present at work turn off more fine silk than those formerly in existence, 5119, 5120—Any reduction of duty would be an advantage to the Italian throwster, 5121—Serious evil taking off the whole duty, 5122-5124—Alteration that might be made in the duty, 5125—British thrown silk in the market to meet foreign, 5126-5128—Loss of fancy trade attributed to the public using more plain articles than formerly, 5133-5141—Fancy articles made in England cheaper than in France, 5142-5147—Articles to order are manufactured according to the pattern of each house, 5148-5151—Rates of weavers wages at London and Lyons, 5152-5157—Comparative price of dyeing at London and Lyons, 5158, 5159—Comparison of advantages of dyeing between the French and English, 5160-5166—In what articles smuggling at present carried on, 5167-5172—Advantages the Italian throwster possesses over the English, 5176-5180—Why the English has a better market for his silk than the Italian, 5181, 5182—Silk of the same quality is thrown as well in England as Italy, 5183, 5184—Increased speed in throwing mills is not an injury to the silk, 5185, 5186—Duty that might be collected as a protection to both manufacturer and throwster, 5187-5192—Not a common practice in Italy for those who reel to be also throwsters, 5198—Present rate of wages to witness's hands, 5199, 5200, 5202-5207—Wages higher during prohibition, 5201.

Gloves. They are not smuggled, *Stephens* 2797-2803; *Dillon* 7743—State of operatives in the glove trade, *Willmott* 4801-4803—French gloves less profitable than English, *Dillon* 7744—Increase of the glove trade since 1826, *Bottrell* 7960, 7961—Small amount of smuggling gloves, *Bowring* 9210—Duty that might be collected therein, *Bowring* 9211; *Stephens* 10666-10674—Advantage of an extra duty on gloves, *Stephens* 10689-10691.

Glutted Market. See *Stock*.

Gondolphin, Messrs. See *Importation*.

Goode, Edward, (Analysis of his Evidence.) Two branches in the ribbon trade, 1200—Number of persons employed in the plain branch, and present distress, 1201-1208—Average wages, and reduction therein since 1804, 1209-1213—How far fixed rate of wages departed from according to circumstances, 1214-1216—How far reduction attributed to the importation of foreign manufactured ribbons, 1217-1228—How far importation in the fancy trade affects the plain trade, 1228-1232, 1238-1245—Decline of the plain branch, and in the value of its machinery, 1246, 1247—Fancy trade has increased in Coventry, and would increase further but for foreign competition, 1233-1237, 1248-1250—Ribbons can be made as good in Coventry as in France, 1251—Workmen wish to keep to the tables of wages as closely as possible, though they do not afford a living, 1253.

Good Hope, Cape of. See *Importation*, 2.

Government. Views of Government in altering the system, *Moore* 11174-11176—Time granted by Government to prepare for change not sufficient, *Moore* 11179-11182—Restrictions on labour, and mode of working not removed by Government, *Moore* 11183—Promise by Government that they would collect a 30 per cent. duty, which they have not done, *Moore* 11201-11209, 11217-11219—Representations made to Government by the silk trade on the distress therein, and on the necessity for inflicting criminal punishment on smugglers, and stamping goods, and means of preventing forgery in stamping, and rejection by Government of plans offered, *Moore* 11238-11248—Final answer of Government, *Moore* 11254, 11255.

Graham, Robert, (Analysis of his Evidence.) Manufacturer in Spitalfields, number of looms employed by witness, 12694-12697—Prices paid for throwing silk at different periods, 12698-12707—Effect of removing the duty on thrown silk to the manufacturer and operatives, 12708, 12709—Competition for labour in Manchester, and its effect on lowering the wages in Spitalfields, 12710-12712—How far prohibition of French goods would raise wages in Spitalfields, 12713, 12714—Competition with Spitalfields weavers not only in London districts but with cotton weavers, 12715—Fear that material improvement cannot take place in the rate of wages in Spitalfields, 12716—Advantage given to the French by the duty on foreign thrown silk here, 12719—Per centage duty on foreign thrown silks increases the cost of manufacture, 12720-12728—For what foreign thrown silks employed, and proportion used in Spitalfields, 12729-12737—Reason why the drawback does not counteract the effect of the duty, 12738, 12739—Improvements that have taken place in silk weaving and throwing, 12740—Period of introduction of the Jacquard loom, and whether more or less used than formerly, 12741-12746—Manner in which foreign competition operates against labour, 12747-12750—Falling off in wages within the last few years, 12751—Distress of the throwing trade, and from what causes, 12753-12755.

Opinion that prohibition is the most substantial means of benefiting the silk trade, 12756-12762—State of the silk trade, 1827-1831, 12763-12768—Witness's application to the Board of Trade in 1829, for reduction of duty on foreign thrown silk, 12769-12772, 12776-12778, 12780—And for a rated instead of an *ad valorem* duty on velvets, 12773-12775, 12779—Examination upon duties on foreign thrown and manufactured silks, and protection necessary for manufacturers and throwsters, 12781-12783—Looms employed in the manufacture of fancy silks in Spitalfields, 12784-12787—If duties reduced throwing would not be discontinued in this country, 12788-12791—Manner in which Manchester is the primary cause of low wages in Spitalfields, 12792-12795—Valuation of velvets at the Custom House by witness, and his causing them to be detained, and afterwards sold by public auction, 12796-12800—Throwster as much right to protection as the weaver, 12801, 12802—Throwster the greater amount of fixed capital, 12803—Proportion of foreign and English thrown silk used by witness, 18804, 12805.

Grout, Joseph, (Analysis of his Evidence.) Description of raw silk used in the manufacture of different crapes, 10278-10283—Number of places in which manufacture carried on, 10284—Average number of persons employed, and average rate of wages per week, 1822-1831, 10285—Respectable condition of young people formerly employed, and change in their morals and character since the reduction of wages, 10286-10292—Proportion of persons now employed as to men, women and children, similar to what it was formerly, 10293—Situation of mills for winding and throwing silk, and what power worked by, 10294, 10295—Number of spindles at work in 1822-1831, and their speed, 10296-10298—Machinery on improved principles, 10299—Amount of capital invested in buildings and machinery, 10300—Number of power looms, and cost thereof, 10301, 10302—Hand looms out of employ, and how far displaced by foreign labour, 10304, 10305—Comparison of advantages of power and hand looms in favour of the latter at present, 10306-10308—Power looms in use at Lyons, 10309—Loss of half trade from the introduction of foreign coloured goods, 10310—English black crape selling at ruinous prices; present foreign competition therein, 10311, 10312—Capital invested causes the necessity of continuing manufacture, though at a loss, 10313—Less wages paid for more work since the admission of foreign goods, 10314—Injurious effect of taking off duty on foreign thrown silk, 10315—Great increase of smuggling since removal of prohibition, 10316-10320—Entire prohibition the only means of reviving trade, 10321—Establishment of a filature and reeling establishment at Bengal, and cost price of silk raised there, and reason of the establishment not answering, 10322-10324, 10331-10334.

Benefits of silk raised by the East India Company, and difficulty of other persons attempting it, 10325-10327, 10330—Silk worm improves in Italy and France, but degenerates if taken back to its native place, India or Persia, 10328—Comparison of price of French and Bengal silk, 10335-10337—Manchester has no crape trade, shown by number of looms employed by witness more than in the whole town of Manchester, 10338, 10339—Consumption of white and coloured crapes, 1826-1831, from French and other foreign productions, 10340—Promise by the President of the Board of Trade, that there should be no reduction of import duties, 10342, 10343—Abandonment of crape looms at Manchester, 10344—Advantages to the manufacturer from the

Grout, Joseph, (Analysis of his Evidence)—continued.

the Company's sales, 10345—Price at which they put up their silks, 10346-10348—Method adopted with regard to goods of individuals advertized at the Company's sales, 10349—Advantages promised from change of law in 1826, and disadvantages resulting therefrom, 10350-10354, 10358, 10359—Comparison of earnings in 1823 and 1830, and distress of the work people from reduction, 10355-10357—Amount of loss from the present law, and as to claim upon government, 10360-10362—Further reduction of duties will be an entire destruction of property, 10363—Company do not withdraw their silk even though sold at low prices; individuals do, 10364, 10365—Difference in the mulberry plant between Bengal, and France and Italy, 10366, 10367—Comparison of quality of the Bengal silk reeled upon the Bengal and the Italian principle, 10368—Difference as to substance between Bengal and Italian silk, 10369.

Guarantee System. See Brokers.

H.

Haberdashers. Interest of the large haberdashers to continue the present system, and how far it causes a monopoly, *Stephens* 2804-2817—Small dealers have not increased so much as large houses have increased the amount of their returns, *Stephens* 2821-2823—Reasons why the agents in London selling for the manufacturers will not serve a small house under 5 per cent. higher than a large house, *Stephens* 2832-2842—Public prefer a large house to deal with from the great variety, *Stephens* 2843, 2844—Proportion French and English ribbons bear to each other in purchases from manufacturers, *Stephens* 2639-2641—Before removal of prohibition sacrifices could be made after sale of spring stock without ruin, *Stephens* 2731, 2732.

Hall, John, (Analysis of his Evidence.) Silk throwster and manufacturer at Coggeshall, 6459-6461—Description of silk thrown, and situation of mills, 6462-6464—Amount necessary to cover expenses, and give a profit to the throwster, 6465-6469, 6487-6493, 6501-6506, 6512-6515, 6527, 6528, 6594, 6732—Why reduction of duty would not injure throwsters, 6470—Of what reduction of expenses consist, 6471—Description of persons employed, method of hiring and rate of wages, 6472-6477—Duty necessary to protect throwster, 6478—English organzine better than Italian, 6478-6480, 6507-6509, 6516, 6517—Examination as to other mills in Essex, 6482-6486, 6494-6497—Value of mills at present, 6498-6500—Proportion of silk thrown by witness used in manufacture, 6511—Reasons for taking certain sized silks without always obtaining a profit, 6518-6523—Larger supply of hands could not be obtained in witness's present situation, 6525, 6526—Market for good silk open to every person, 6529, 6530—Method of transacting throwing business, 6531-6535—Amount of brokerage, 6536-6538—Necessity of having a good supply of raw silk for throwing, 6539-6544—Rate of throwing, 6545-6555—Mill in Suffolk assisted to be built by the parish, for the purpose of employing the poor, 6557.

Parochial relief to some parents of children employed by witness, 6558-6580—Rate of wages, 6579, 6584, 6585—Importance to keep up the throwing trade of this country, 6581-6583—Number of hours children work, 6586—Children not worked at night, 6587—Women's wages, 6588, 6589—How far parish officers cognizant of the manner in which children are hired, 6590-6593—Superiority of witness's machinery over that used at Coventry, and reasons for similar not being introduced at Coventry, 6597-6620—Reason of witness giving up his Coventry manufactory, and keeping his throwing mill in Essex, 6621-6630—Fewer hands employed by witness's machinery, 6631-6635—Only English thrown silk used for making black ribbons, 6636, 6637, 6640—Effect of repeal of import duty on value of black ribbons, 6638—Reason for not manufacturing coloured ribbons, 6642—Not an advantage to throw silk for manufacture in the present state of the market, 6643—Advantage of the rack and bar loom over the original looms, 6644-6646—Steam power can be beneficially applied to the manufacture of fancy ribbons, 6647—Uses to which ribbons made by witness applied, 6649—Duty that would secure the American market, 6650—Necessity for removing machinery, if manufacturers ruined, 6651, 6652—Bad effect of repealing duty on mill property, 6653, 6654.

Distress to trade by large capitalists being engaged in smuggling, 6655—Demand for thrown silks would cease, if manufacturers ruined, 6656—Disadvantages to Coventry ribbon trade by introduction of foreign manufactured goods, 6657-6659—Advantages of the French from cheapness of cost of manufacture, 6660, 6661—Rate of wages for plain goods, 6662, 6663—Preference to Spitalfields for broad silk manufacture, 6664, 6665—With witness's looms at Coventry, and hands working cordially, France might be defied, 6666—Difference in wages at Coggeshall and Coventry, 6667, and comparison of goods, 6673—Ruin to Coventry if ribbon trade gets to Manchester, 6674, 6675, 6701—Rack and bar looms not the same as a-la-bar looms, 6676—Advantage of the rack and bar looms, and by whom invented, 6677-6681—Dearness of labour prevents export trade, 6682, 6683—Causes that would prevent the French using the rack and bar looms, 6684-6697—They are better adapted for power than any loom invented, 6699—Export trade would be gained by their use in this country, 6700—Distress caused by glut in the market from Manchester, 6702, 6703—Disadvantage to Coventry from having to compete with Manchester and foreigner, 6704—Ruin to the throwster

Hall, John, (Analysis of his Evidence)—*continued*.

throwster by repealing import duty, 6705-6707—How far it would benefit the manufacturer, 6708—Profit by reduced price of thrown silk would go to the foreigner, 6709, 6710.

If Coventry would adopt improvements, it would prevent Manchester hurting it, 6711-6713—High rates of wages to those employed on rack and bar looms, 6714-6721—Combinations prevent Coventry men from working for witness, 6722—Wages formerly paid at Coventry, 6723, 6724—Wages of agricultural labourers, 6725—Reasons they cannot be employed as weavers, 6726, 6727—Rate of wages given to Coventry men working for witness, 6728, 6729—Negociation with a person at Manchester for witnesses' rack and bar looms, 6730—Difference in cost of rack and bar loom and a-la-bar loom, 6731—Reasons for the French not using the rack looms, 6733-6735—Cost of looms, and present worth, 6736-6739—High rate of wages at Coventry formerly, and difficulty of procuring hands, 6740-6747, 6751-6755—Advantages of former prohibition, 6748, 6749—Wages ordinary workmen can earn at present at Coventry, 6750—Number of pieces of gauze ribbons of a certain width a man can manufacture per week, 6757.

Handkerchiefs. Description of handkerchiefs exported from France to England, *Bouring* 8805.

Harter, William, (Analysis of his Evidence.) Silk manufacturer and mill owner at Manchester, 9225, 9226—Witness's signature to a Petition to Parliament against altering the present silk laws, 9227—Too frequent changes in any trade injurious; interests in the silk trade at present well balanced, 9228—Moderate protection, not prohibition, necessary to the English manufacturer, 9229, 9230—Disadvantage of England over France, from taxation of the raw material, 9231, 9247, 9248—From whence the supply of raw derived, 9232—How importation of China silk taxed through the monopoly of the East India Company, 9233-9237—Duties on Piedmont and Lombardy silks, 9238-9240—Other charges increasing the price to the English manufacturer, 9241-9243—Advantage to the French from their growth of raw silk, and exportation being prohibited, 9244, 9245.

French silk superior to any the English manufacturer can procure, 9246—Advantage to the French from setting the fashions, 9249, 9250—Prohibition not desirable, 9251—How far present duties necessary on foreign manufactured goods, 9252—Effect of reducing duty on foreign thrown silk, on import and price, 9253-9255—Amount of duty thereon at present, 9256-9258—Removal of duty on foreign thrown, and of drawback on export, would reduce export trade, 9259—Reduction of duty would not eventually benefit the manufacturer from ruin of English throwster, 9260—Necessity for retaining the present duty on foreign thrown, 9261-9263—Why duty on thrown silk is not a tax on Spitalfields and Coventry, for the benefit of Manchester, 9264, 9265—Necessity for the drawback for the export trade, 9266-9268—Value of silk manufactures exported last year, 9269—Number of persons export trade would employ if goods made from silk thrown in this country, 9270-9272—Amount of drawback on exports in 1831, 9273-9275—Exports 1821-1831, and increase therein, upon allowance of drawback, 9276-9281—Silk a healthy employment, and carried on in a moderate temperature, 9282-9284.

Reason why English sewing silk not exported, 9285-9288—It could be exported if drawback allowed upon it, 9289-9291—Why it cannot be manufactured so cheap in England as in Italy, 9292, 9293—Effect of the East India Company's monopoly, in checking the import of raw silk, shown by amount of imports from different parts, 1823-1827, 9294, 9305-9308—Imports of China silk, and increase therein, since the Company discontinued its importation, 9295-9299, 9304—Variation in price at Company's sales, 9300-9302—Quality of East India silk has deteriorated, 9309-9311—Increase in the importation of raw silk from all parts, 1831 over 1823, 9312—Increase of consumption on the Continent in a greater ratio than in England, 9313—Certain duties attaching to the silk trade which should be removed, 9314.

Annual consumption of silk at Manchester, and of what description, 9315-9318—Number of mills at Manchester and belonging to it, and number exclusively employed in throwing, 9319-9324—How far profitable, 9325, 9332—Inconvenience sometimes felt from the want of thrown silk, and higher price paid for it, 9325-9330, 9333-9338, 9342-9345, 9348, 9349—How far increase of mills and machinery, 9340, 9346, 9347—How far throwing trade has prospered at Manchester since 1829, 9350, 9351—How far additional capital in trade since 1824, 9352-9356—Permanent supply of thrown best obtained by a good supply of good raw, 9360—Removing duty on foreign thrown would cause dependence on foreign throwster, 9361—Silk cannot be thrown so cheaply in England as in Italy, 9362—Prices of throwing, 1830 and 1831, 9363-9374—Manufacture of narrow goods, Italian thrown used therein, and competition therein with Spitalfields, 9375-7383—Wages at Manchester; contests with weavers; hours of labour; description of looms, 9384-9407, 9413-9420—Employment of weavers between silk and cotton trade, 9408, 9409.

How far improvements in machinery, 9421, 9422—Italian thrown used at Manchester is for similar goods to those made at Spitalfields, 9423-9425—Description of goods exported, when export commenced and drawback allowed, 9426-9437—Taking off duty on thrown would not lower its price, and the throwster must give up, 9439-9442, 9460-9467—Countries to which narrow goods exported, 9444-9447—How far broad

goods

Harter, William, (Analysis of his Evidence)—continued.

goods could be exported if manufactured for less, 9448-9459—How far the English pay more for their silk than the French, 9468-9470, 9474-9476—Quality of silk used in France better than any other, 9471-9473—How far reducing duty on thrown, will add to the price of raw, 9477, 9481—How far price of Italian thrown depends upon price obtained for silk in other parts of the world, 9478-9480—Manner in which drawback causing export, relieves the manufacturer for the home market, 9482-9485—A-la-bar-loom at work 20 years ago, 9486-9488—Distress of weavers of broad goods last winter, 9489—How far manufacture of galloons carried on in Spitalfields, 9490-9492—Prices of throwing at present, 9493-9498—Manufacture by power looms has not thrown workmen out of employ, 9499-9505—Power not applied to the Jacquard loom, 9506—Quantity of silk thrown by the Manchester mills, proportion thereof Italian, 9507-9515.

Hawking. See Licence.

Health. Improved manner of rearing the worm, makes the employment more healthy, *Bowering* 9095—Silk a healthy employment, and carried on in a moderate temperature, *Harter*, 9282-9284.

Heath, John Benjamin, (Analysis of his Evidence). Produce of silk of different states in Italy during 1829-1831, 5211-5213—Most of them capable of increase, 5214—Proportion of increase during the last eight or ten years, 5215, 5216—On what the price of silk depends, 5217, 5218—Proportion made into organzine and tram, 5219-5221—Exports from Lombardy States to different countries, 1831, 5222—Description of manufactured silks exported, and from what parts of Italy, 5223, 5224—Different sizes of silk, but of the same description, 5225—Expense of throwing organzine and tram in Italy, 5226-5235—Export duty paid in different parts of Italy, 5239, 5240—From whence sewing silk exported, 5241-5243—From whence largest import of thrown silk, 5245, 5246—How far imports come through France, 5247-5249—Quality of silks imported vary, 5250-5254—Imports of silks into France and duty paid, 5255—Quantity of Italian, 5256, 5257—Quantity that comes to England, 5258.

From whence information of French imports obtained, 5260, 5261—Proportion of raw and thrown, 5262—Duties paid on import into France, 5263-5267—Sales of Italian silk registered in France, 5270, 5271—Reasons for the French importing fine Italian raw silks, 5273-5275—Imports of silk into Switzerland free of duty, 5276—Getting silk duty free in Switzerland gives small inducement to throw, 5278-5280, 5357-5361—Description of goods manufactured at Zurich, 5281—How far Italian throwster has been a loser by imports to England, 5285-5289, 5302—English throwster has more advantages in the selection of silk than the Italian, 5290-5293—Reasons for failure of English throwsters, 5294, 5306—Period occupied in throwing in Italy, 5295, 5296—Piedmont silk the best of Italy, 5297—Lombardy silk sometimes imported into Piedmont to be thrown, 5298—From what the superiority of Piedmont silk arises, 5299—How far an advantage to the Italian throwster, 5300—Too many mills and competition too great here, 5301—Whether foreign or English competition regulates the market here, 5304.

Revolution in France a cause of greater importation since July 1830, 5305, 5314—Increase of English throwing mills, 5307—Tendency of any convulsion in France to cause importation of silk to England, 5308-5312—England the principal mart for importation of raw silk of Italy, 5313—Method of smuggling a certain description of Piedmontese silk, 5316-5324—Degree of improvement in Italian silk, and from what parts, 5325-5327—Best silks of France bear an increased price over the best silks of Italy, 5328-5331—Specimens of French silk produced, 5330—Instance of French thrown silk being obtained here, 5332-5339—Price and quality of certain French silks, 5339-5341, 5343—Charges of transport of raw silk from Lyons, 5342—Description of silk for making marabout, 5346, 5347.

Higher price of French raw silks than of Italian, 5348—Preference of the French for their own silks, 5349, 5350—Consumption of foreign organzine at Lyons is principally Piedmont, 5351—From whence silk imported into Switzerland, 5355, 5356—Imports into Switzerland from England of China and Bengal silk, 5362—How far the price of Italian silk affects the price of French silk at Lyons, 5363—How far price of Italian is regulated by the quantity introduced, 5364—Average production of silk in France for the last three years, 5365—In what superiority of French silk consists, 5367, 5372—Proportion the superior silk bears to the whole produce of France, 5368—Imports of foreign silk into France, 1825-1830, 5371—Increased production of silk in Italy since the peace, 5373, 5374.

(Second Examination.) Further examination as to imports into and produce of silk in France, 5650-5658—Examination upon the manufacture in different parts of Italy, 5659-5668—Reason of imports in raw silk being more profitable than thrown to the Italians, 5669-5673—Reason for a greater importation of thrown than raw in 1830, 5674-5677—Advantage to the Italian from reeling his own silk, 5678-5680—How profit and loss to the Italian calculated, 5681—Knowledge of silk difficult to be acquired, 5682, 5684—But it has nothing to do with calculating profits of Italians, 5684—Italians find advantage from sending consignments to this country, 5685—678.

Heath, John Benjamin, (Analysis of his Evidence)—*continued*.

Knowledge of silk and experience in reeling, &c., necessary to determine local advantages of Italian throwster, 5686—Reasons of failures among throwsters, 5687-5691—Production of Italy, 5692, 5694—Consumption of Berlin and Vienna, 5693—Exports from Lombardy to France and England, 5695—Decrease in the importation of certain silk used in the manufacture of bombazines, 5696-5703—Prices of throwing in Italy exclusive of waste, 5704—Comparison with England, 5705-5707—Value of silk ascertained from examination, and not from marks on the bales, 5708—Method of conducting business of a silk merchant, 5709, 5710—Amount of brokerage, 5711—Extra commission for guaranteeing, 5712—Business of brokers, and how far they purchase on their own account, 5713-5720—Importation of waste silk, 5721-5724.

Helena, St. See *Importation*, 2.

Higher Classes. Manner in which they benefit by reduction of wages and profits, *Stephens* 2825-2831.

Holland. See *Smuggling*.

Home Consumption. See *Importation* 2.

House of Commons. Effect of the appointment of the present Committee on the silk trade, *Royle* 3061, 3062—Examination upon petition thereto as to the state of the silk trade at Manchester, *Royle* 3254-3262—Copy petition, *Royle* 3262—Names signed thereto, *Royle* 3426, 3427.

Howell & James. Witness a partner in their house, *Sedgwick* 7972-7976—Description of goods sold prior to 1826, *Sedgwick* 7979—Articles made exclusively for the house, *Sedgwick* 8195.

Hume, James Deacon. First changes which took place in the laws relating to silk was in 1824, 2—Principles of Acts of 1824 and 1826, and tables of 1826, that of substituting a protecting duty of 30 per cent. in lieu of prohibition, 3-8—Incorrectness of table from the alteration of value in goods, 9—Attempted to be remedied 1829, 10, 11—Causes of alterations from the value of 30 per cent, 13-30, 69, 70—In 1829 officers were allowed to take an *ad valorem* or a duty per pound, at their pleasure, 27—Divisions of silk goods into three different principles of per centage, 31—Witness's instruction in drawing up the tables, 32-34—Table of 1829 increased the protection, as compared with 1826, 35, 36—Negotiations of the silk trade with the Government for a protecting duty, 1829, 37-41.

Tables of duties on the importation of manufactured silk, showing the rates of the duties, and the amount of the same upon the value of the articles, 42—Period at which prohibition took place, 43-45—Average importation of raw and thrown silk, 1765-1767, 46, 47—From 1785-1831, 48—Of waste silk, 49—Duty on waste silk, 1815-1831, 50—Quantities of raw silk, waste silk and thrown silk imported at certain periods, 1765-1831, 50—Quantities of raw, waste and thrown silk imported into the United Kingdom from 1814, with the quantities entered for home consumption, and quantities exported during the same period, 51—Duties payable on the importation of raw and waste silk and of thrown silk, showing the changes which have been made therein since 1824, 52—Importation of thrown silk did not increase in proportion to the increase of raw silk, 53—Views taken by the silk trade, and applications to the Board of Trade from different places at different periods as to the cause of their distresses, 55-60—Additional bounties on exportation by Act 59 Geo. III. c. 112, 60—Complaints against smuggling, 62, 63—Account of all silks, separately, imported from July 1826, 64.

Official value of manufactured silk imported each year since the repeal of the prohibition, 1826, distinguishing European and East Indian, 64—Amount of bounty and drawback paid in the United Kingdom on British manufactured silk goods exported, 64—Official value of British manufactured silk exported each year from 1821-1830, both inclusive, 64—Prohibition more effectual against smuggling than protecting duty, 66, 68—French and English manufactured goods not so distinguishable as formerly, 68—Reduction of duty on plain goods would have prevented smuggling, but the high rate on gauzes, &c. enables assorted cargoes still to pay for smuggling; plain silks are not smuggled alone to any extent, 71-76.

Smuggling has lately increased, owing to the distress in France, which has thrown large quantities of goods on the market at prices under the market value, 77-79—Traders would rather pay to Government than smugglers, duties regulated to meet the alternative, 80-83—Export of British silk has increased since 1826, 85—Quantity exported, 1826, 1830, 1831, 86, 87—Effect of the change of law in 1829 on the export of silk, 88-91—Manner in which drawback and duties affect different branches of the silk trade, 92-99—Value of debentures would depend on the proportion of thrown silk imported, as compared with the quantity of British goods exported, 100—Advantages of debentures to the export trade, 101, 102—How far the drawback acts as a bounty on exportation, 103-112—How far duty and drawback is a tax upon one manufacturing district for the benefit of another, 113-119.

Husks. See *Importation*, 2.

IMPORTATION :

I.

1. Generally.

2. Papers laid before the Committee.

1. Generally.

Period at which the prohibition took place, *Hume* 43-45—Average importation of raw and thrown silk, 1765-1767, *Hume* 46, 47—From 1785-1831, *Hume* 48—Of waste silk, *Hume* 49—Quantity of raw silk, waste silk and thrown silk imported at certain periods, 1765-1831, *Hume* 50—Quantity imported, 1814-1831, with quantities entered for home consumption, and re-exported during the same period, *Hume* 51—Importation of thrown silk did not increase in proportion to the increase of raw silk, *Hume* 53—Account of all silks, separately, imported from July 1826, *Hume* 64—Official value of manufactured silk imported each year since the repeal of the prohibition, 1826, distinguishing European and East Indian, *Hume* 64—Quantity of ribbons imported in the quarter ended 10th October 1831, and amount of duty paid, *Cheeper* 771-777—Number of large importers, and sufficiency of capital for that purpose, *Cheeper* 902, 903—Quantity of ribbons imported 1831, *Ratliff* 1836.

Manner in which imports and exports of this country should be regulated, *Ratliff* 1958-1960—Comparison of importation of raw and thrown silk, *Royle* 3118, 3119—Imports and consumption, 1814-1831, *Doxat* 4036, 4037—Qualities of silk imported into England, France and Switzerland, *Doxat* 4090-4092—How far imports of silk from Italy to England come through France, *Heath* 5247-5249—Quantity of Italian silk that comes to England, *Heath* 5258—Proportion of raw and thrown silk coming to England, *Heath* 5262—Reason for large imports into England during 1830-31, *Martin* 5580-5585, 5587, 5590—Importations by Messrs. Gondolphin, *Stone* 6415-6419—Inferior quality of goods imported into England since removal of prohibition to meet prices in English market, *Menetrier* 8216-8221—Proportion of legal and illegal imports to the gross sales of the country, *Ballance* 8639—Importations of silk previous to and since removal of prohibition, *Bowring* 9627-9630—Comparison of importations, 1814-1825, *Bowring* 9708-9711—Quality of silk, and not weight, should be looked to as to importations, the coarse diminishing employment of mills, *Moore* 11159-11161.

2. Papers laid before the Committee.

Return of all Raw and Waste Silk imported and entered for home consumption in each year, from 1814 to 5th January 1832; distinguishing the importations from the East Indies, China, St. Helena, the Cape of Good Hope, and Turkey, from other parts; and stating separately in each year the quantity of Raw, Thrown and Waste, including Knubs and Husks, and the amount of duty separately, *App.* p. 918.

An Account of the several kinds of Silk imported; distinguishing the quantity of Raw from Italy, the Levant, Bengal and China; also of Thrown, distinguishing Organzine from Trams and Singles, from the same places, in each of the years from 1830-1831, *App.* p. 922.

The various descriptions of Raw and Thrown Silks, and Waste and Knubs and Husks, imported 1814-1831, separated and computed into one standard; all balanced by the Parliamentary Return of quantities, duty paid, *App.* p. 932.

See also *Bengal and China Silk. Duty on Importation. France, V. French Goods. Italy. Silk. Silk Trade.*

India. See East Indies.

Insolvency. Manner in which houses purchasing goods under prime cost continue a man in insolvency, *Banbury* 4536-4542.

Insurance. See Smuggling.

Intercourse between France and England. See France, III.

Italy. No difference in the price per lb. of throwing silk in Italy during the high duties, and at present, *Brockwell* 3448-3453—Price in England does not regulate the price in Italy, *Brockwell* 3454—Germany and her own people the largest consumers of Italy, *Brockwell* 3456—Quantity of silk produced in Italy, *Brockwell* 3458, 3459—Proportion grown in Italy, *Brockwell* 3460—England hitherto the largest customer for raw silk, *Brockwell* 3462—Ruin of English throwsters will throw the trade more into the hands of Italy, *Brockwell* 3472, 3473—Quantities of Italian raw and thrown silk imported into different countries, *Brockwell*, 3474-3476—Difference in price to the Italian grower between raw and thrown since 1819, *Brockwell* 3540, 3541—Price of Italian thrown acts on that of English, *Brockwell* 3542, 3543—Difference in price that remunerates the Italian, and that which will not remunerate the English throwster, *Brockwell* 3549-3553—Italian would not send raw silk to England if he could not obtain a remunerating price for throwing it, *Brockwell* 3554, 3555—Trade of Italy with England, France and Germany, *Brockwell* 3556-3559—Capability of Italy to increase the raw material is limited, and that of increasing thrown greater, *Brockwell* 3563-3566—Advantages possessed by the Italian throwster over the English, *Brockwell* 3570-3572, 3681; *Swift* 3912-3921; *Ward* 3963-3971—Why the English have not similar advantages, *Brockwell* 3573-3577.

Italy—continued.

How the purchase of silk between Italy and England is carried on, *Brockwell* 3578-3581, 3592-3594—How far the price obtained regulates the sales, *Brockwell* 3582-3584—Different qualities of Italian silk in the same bale, *Brockwell* 3585, 3586—Advantage to the Italian therefrom, and from selecting silks not liable to waste, *Brockwell* 3587-3591, 3683—Italians retain their best quality of silks themselves, *Brockwell* 3595, 3596, 3682; *Swift* 3799; *Ward* 3985-3987—Effect of reducing duty on thrown silk on price and quality of Italian raw silk, *Brockwell* 3597-3600—Average difference of price between Italian raw and thrown silk, *Brockwell* 3601-3608—How far a remuneration to the Italian throwster, *Brockwell* 3609-3614—Stock of silk in Italy low at present, *Brockwell* 3717-3722—Quality of Italian silk not improved, *Swift* 3758-3762—Advantage to the Italians by their silks not being injured by carriage, *Swift* 3798—Difficulty of getting at the total quantity of exports from Italy, *Doxat* 4086, 4087—Italian silk comes over on consignment, *Doxat* 4256—Advantage of water in Italy, *Doxat* 4277—How sale price of Italian silk regulated on commission, *Doxat* 4382-4389, 4393—Exportation to other countries if the market depressed, *Doxat* 4390, 4391—Produce of silk in Italy, and to what countries exported, *Gibson* 4961-4973—Not a common practice in Italy for those who reel to be also throwsters, *Gibson* 5198.

Produce of silk of different States in Italy during 1829-1831, *Heath* 5211-5213—Most of them capable of increase, *Heath* 5214—Proportion of increase during the last eight or ten years, *Heath* 5215, 5216—Proportion thereof made into organzine and tram, *Heath* 5219-5221—Description of manufactured silks exported, and from what parts of Italy, *Heath* 5223, 5224—Export duty paid in different parts of Italy, *Heath* 5239, 5240—Period occupied in throwing in Italy, *Heath* 5295, 5296—Increased production of silk in Italy since the peace, *Heath* 5373, 5374—Gross produce of silk in Italy, and detail of countries from which produced, *Martin* 5376-5383—How far produce of Italy likely to increase, and what countries particularly, *Martin* 5381, 5383, 5386, 5387—Different descriptions of silk manufactured in each country in Italy, *Martin* 5399—To what countries Italians export, with proportions to each, *Martin* 5400-5403—Reasons for knowing the production of Italy without knowing the manufacture of different places, *Martin* 5422-5427—In what parts of Italy improvement has taken place in raw silk, *Martin* 5442, 5443—How far importation of thrown profitable to the Italian since the reduction of duty, *Martin* 5452, 5453—Import of raw most advantageous to the Italian, *Martin* 5470—Whether difficulty in obtaining superior quality of French thrown silks in Italy, *Martin* 5502, 5503—Possible for the Italians to throw a larger quantity, *Martin* 5530; *Stone* 6146.

Sales of silk at fairs in Italy, and how far prices regulated thereby, *Martin* 5537-5543—Advantage of the English market to the Italians, *Martin* 5544—How far best Italian silk retained by Italian manufacturer for his own use, *Martin* 5547-5549—Cocoons have been brought to England by way of experiment, *Martin* 5550, 5551—Present state of the market with regard to the supply of Italian raw and thrown silk, *Stone* 6171-6181—Loss by the Italian merchants from trade with this country, *Stone* 6378-6380—Imports of silk by certain Italian throwsters, *Stone* 6381-6392, 7007-7014—Reason why apparent loss to the Italian throwster may not be actual loss, *Stone* 6420-6423—Examination upon the manufacture in different parts of Italy, *Heath* 5659-5668—Reason of imports in raw silk being more profitable to the Italians than thrown, *Heath* 5669-5673—Reason for a greater importation of thrown than raw in 1830, *Heath* 5674-5677—Advantage to the Italian from reeling his own silk, *Heath* 5678-5680—How profit and loss to the Italian calculated, *Heath* 5681—Knowledge of silk has nothing to do with calculating profits of the Italians, *Heath* 5684—Italians find advantage from sending consignments to this country, *Heath* 5685.

Knowledge of silk, and experience in reeling, &c., necessary to determine local advantages of Italian throwster, *Heath* 5686—Production of Italy, *Heath* 5692, 5694—Claims against Italian merchants for damage on transit from Italy are trifling, *Stone* 5794—Manner in which crop of France affects exports from Italy, *Caffi* 7113, 7114—Manner in which quantity of silk thrown or raised bears to other kinds of produce, *Caffi* 7118—Exports from Italy to different countries, *Caffi* 7125-7136—Improvement in the quality of the silk, *Caffi* 7153-7155—Description of the silk sent to the different countries, *Caffi* 7160-7165—Calculation of charges upon a bale of thrown and raw silk from Italy to London, *Caffi* 7271-7278—Losses latterly to Italian merchants sending thrown silk here, *Caffi* 7279-7283—How far other countries pay better, *Caffi* 7284, 7285—Italian raw being thrown in England the cause of sending Italian thrown being unprofitable, *Caffi* 7286, 7287—Advantages in favour of Italy of less expense in throwing and in the selection of raw silk, *Ballance* 8666-8668—Italian would be benefited by reduction of duty on thrown, *Ballance* 8671—Parties who grow and throw silk in Italy, *Bennett* 10797-10800—Silk thrown in Italy at a less price than in England, *Bennett* 10801-10805—Italians have the power of supplying the market abundantly with thrown silk, *Johnson* 11582.

See also *Bengal and China Silk. Importation, 2. Lombardy. Operatives, 2. Provisions. Reeling. Rent. Throwing mills, 2. Throwsters, 2.*

J.

Jacombs, William, (Analysis of his Evidence.) Account of the general expenses of the parish of Nuneaton, 1581—Number of persons depending upon the ribbon trade, and number of looms, principally single hand, 1582-1587—Reduction of wages since 1826, 1588, 1589—Depreciation in the value of Jacquard looms, from the low profits upon the fancy trade, 1590-1597, 1660-1665—Attributed to the introduction of French ribbons, 1598—Which has checked improvement in the manufacture, 1599, 1600, 1666, 1667, 1686, 1687—Taste in favour of French ribbons, and practice with regard to purchasing them, and its effect upon manufactures here, 1601-1609, 1698—Expense of putting a French pattern to work, 1610—Ribbons are more worn now than formerly, 1611, 1612—Introduction of French ribbons has shut the English manufacturer out from both town and country trade, 1613-1615, 1697, 1698—Reason why steam would not do for the manufacture of fancy ribbons, 1616, 1617.

Contract for a particular pattern not fulfilled, from French goods coming over previously to its execution, 1618-1628—Quantity of silk used, and cost of manufacture of gauze fancy ribbons in 1823 and at present, 1629-1633—Which manufacture abandoned since 1828, 1634—Loss by the imitation of French patterns, 1635-1639—Number of looms fully employed up to 1828, 1640-1648—State of trade in different years since 1820, 1650-1656—Loss by the manufacture of certain ribbons, from their being superseded by the French, 1656, 1657—Cost of manufacture of gauze ribbons in 1823, in consequence of their being a new article, 1668-1673—Comparison between the French and English designers, 1674-1677—Fluctuation in the value of fancy articles, according to the time they are brought out, 1678-1685—How far fluctuation in trade affects the designers, 1688-1691—Depression in the trade generally, 1692, 1693—Competition is both home and foreign, 1694-1696—English goods have been varied as much in colour as the French, 1699, 1700.

Examination upon the cost of labour and material in manufacture, 1701-1715—British goods equally cheap and beautiful, but the fashion is in favour of French goods, 1716-1719—Manufacturers' profits decreased, 1720—Foreign competition causes home competition, 1721-1723—Relief to trade by prohibition of French goods, 1724-1737—Proportion of foreign silk consumed in English manufacture, 1738, 1747—Impossible to compete with the French, from the prejudice in their favour, 1743—No duty would protect, 1748—Home competition would be met on equal terms, 1749-1752—Improvement in the silk trade in 1823 was not owing to French patterns, 1753-1757—To what improvement attributed, 1758-1761—Few houses willing to engage for English goods, 1762—Profits in any trade affected by the competition in it, 1763-1766—Difficult to transfer capital invested in machinery, 1767, 1768—Increase of Jacquard looms at Coventry since 1826, and depreciation in their value, 1769-1774.

Similar description of loom used now as in 1823, as regards the Jacquard, 1775—Quantity of work performed per week, and price paid in a single hand and engine Jacquard loom, showing the rate of wages, 1776-1784—Object of the Tables of Wages in 1829 and 1831, and how far conformed to, 1785-1793—None work at a lower rate than that fixed by the Table, 1794-1800—Parochial relief more in some instances than wages, 1801-1804—Wages are inadequate, from weaver's necessary expenses, 1805-1813—Wages that would be adequate, 1814—At which the French could not be competed with, 1815—Prohibition would cause a higher rate of wages; increased price would not be felt by the consumer, 1816-1820—How far protecting duty not sufficient for competition with the French; seldom English articles made cheaper, from the cheapness of French living, 1821—In what years profits were better than at present, 1822—Better to work at a lower rate than the Table than receive parochial relief, 1824, 1825—Effect of the Table has not been felt by the parish yet, 1826-1828—Increasing the price of ribbons by the reduction of wages would not afford more employment, 1829.

Jacquard machine. Number of Jacquard looms, 1823 and 1826, *Smith* 1264—In 1832, *Perkins* 1537; *Cox* 2061, 2062—Introduction of the Jacquard loom, and alteration of plain looms to enable its use, *Smith* 1281-1292, 1312-1315; *Perkins* 1532; *Cox* 2295; *Graham* 12741-12746—Its introduction has changed the mode of figure weaving, *Smith* 1293, 1294, 1316—No improvement in the Jacquard loom since its introduction, *Smith* 1295, 1296—Number of Jacquard and engine looms in use, 1826 and 1831, *Smith* 1297, 1298—Increase of the Jacquard looms decreased the use of other looms, *Smith* 1299; *Perkins* 1533-1536—Increase of Jacquard looms at Coventry since 1826, *Jacombs* 1769-1774—Necessity for using the Jacquard loom to imitate the French patterns, *Smith* 1321, 1322—Whether more or less used than formerly, *Graham* 12741-12746—Distress not attributed to the Jacquard engine, *Marston* 1378—Jacquard apparatus can be applied to the engine loom, *Perkins* 1540—Number of looms in 1818, and number that have the Jacquard apparatus, *Perkins* 1541-1545.

Depreciation in the value of Jacquard looms, from the low profits upon the fancy trade, *Jacombs* 1590-1597, 1660-1665, 1769-1774—Similar description of loom used now as in 1823, as regards the Jacquard, *Jacombs* 1775—Jacquard looms have been put up in large quantities in this country, but not lately, *Ratliff* 1880, 1881—Sometimes quite out of employment, *Cox* 2072—Description of goods made by it, *Cox* 2296, 2305—French did not use it in 1813, *Cox* 2297—Advantages thereof, *Merry* 2469-2471

Jacquard machine—continued.

—Handsome goods made previously to its introduction, *Merry* 2472—Comparison as to quality of work made in a single hand and an engine loom, each with Jacquard machinery, *Merry* 2587, 2589—Use of the Jacquard decreased in Spitalfields, *Stone* 6016-6019—Places where the Jacquard at present in use, *Ballance* 8543-8545—History of the invention of the Jacquard machine, *Bowring* 8767—Power not applied to the Jacquard machine, *Harter* 9506—Cost of Jacquard looms, *Cox* 2077, 2078; *Tootal* 9552—Value of Jacquards in England and France, *Bowring* 9789-9795—Number of Jacquard looms employed upon their introduction, *Bridges* 10384-10388—Of little use since 1825, *Rowbotham* 11743.

See also *De Ponilly & Co. Looms*.

Jobbing. Bad effects thereof, from the large stocks on hand, *Cheeper* 897-901—Caused by glut in the markets through foreign goods, *Cox* 2146-2149—Injury to the trade by jobbing French goods, *Stephens* 2672-2674—Great quantity of job goods sent over just after the French revolution, *Stephens* 2675-2679, 2683—Manner in which jobbing French goods prevent sale of the English, *Stephens* 2733-2736—The French will not job their own goods in their own markets, *Stephens* 2737, 2738—Goods are jobbed in during the season at half the price paid for them at the commencement of the season, *Stephens* 2753-2756—Not as many English goods jobbed as French in proportion to the capital employed, *Stephens* 2818—How silk manufacturers affected by large houses purchasing under prime cost, *Banbury* 4505-4515, 4535—How far a few large buyers depress the market, *Banbury* 4527—In the event of failures, actions are brought against those houses purchasing under prime cost, *Banbury* 4528-4534, 12669-12678—How far those houses operate to continue a man in insolvency, *Banbury* 4536-4542—Compromises between creditors and those houses, *Banbury* 4543-4545.

Manner in which jobbing arises from goods being rejected after orders given, *Clay* 6799-6803—Why gluts in the market from French job goods do not hurt English manufacturer, *Dillon* 7697-7700—How far actions have been brought and compromises made with assignees of manufacturers and warehousemen respecting goods supposed to be improperly bought, *Dillon* 7740-7742—Quantity of smuggled goods of not so much consequence as the low price at which they are jobbed, *Bottrell* 7850—West end large houses do not deal in job ribbons, *Sedgwick* 8197, 8199, 8200—French job goods find their way into the English market at prices at which the English manufacturer cannot compete with them, *Sedgwick* 8204, 8205—Goods are jobbed cheaper after the fashion is over, *Bouillon* 10227—Facility for disposing of plain and fancy goods at a loss, *Bridges* 10476-10483—Inconvenience of French job goods of the same quality and lower price, *Stephens* 10559-10562—Reduction of duty would not protect the market against jobs, *Bennett*, 10751—Description and names of job houses, and their method of doing business, *Beckwith* 11934-11939.

See also *Creditors*.

Johnson, Thomas, (Analysis of his Evidence.) Number of mills; their power; value; number erected since 1824, and spindles at work at Congleton, 1823-1832, 11557-11563—Wages paid in 1823 and 1832, 11564—Number of hands employed, 1823 and 1832, 11565—Number unemployed and method of subsistence, 11566, 11567—Amount of population of Congleton, 1821 and 1831, 11568—State of the poor's rate and allowances therefrom, 1821-1831, 11568—How far hands employed paid by the parish, 11569-11571—Improvements in machinery, and increase of speed therein since 1824, 11572-11575—Disadvantages from reduction of duty on foreign thrown in 1829, 11576—Destruction of throwster by farther reduction, 11577—Sacrifice of capital and labour in the erection of a silk mill, 11577-11579.

Labour cheaper at Congleton than Manchester, 11580, 11581—Italians have the power of supplying this market abundantly with thrown silk, 11582—Bad effect of reducing duty on thrown silk, 11583, 11584—Mills principally built between 1824 and 1826, 11585-11588—Not much Italian now thrown; mills principally employed in the coarser silks, 11589, 11590, 11613-11617—Ruinous state of the throwsters at present, 11591-11593, 11601—Duty necessary to protect the throwster, 11594-11600—Less number of mills at work now than prior to 1824, 11602-11609, 11621-11630—Distressed and demoralized condition of the operatives, 11610-11612—Finer silks require more work than the coarser, 11618-11621—Necessity for discontinuing the importation of thrown silk, the fine silk giving more valuable employment to the operatives, 11631, 11632—Necessity of getting raw silk from France at same duty as upon Italian importation, 11633, 11634.

K.

Kelly, John, (Analysis of his Evidence.) Silk weaver at Manchester, and signed petition to the House of Commons, 11814-11818—Increase in the broad silk trade, and prosperity of the weavers, 1819-1825, 11819-11825—Their wages at that time and since, 11820-11824—Distress attributed to the introduction of foreign goods, 11825—Prices of weaving 1822-1832, 11825, 11826—Reason silk weavers cannot shift their trade, 11827—Necessity for protection to the silk trade, and distress of weavers from its repeal,

Kelly, John, (Analysis of his Evidence)—*continued*.

repeal, 11828, 11829—Premiums formerly given to weavers to learn the art, 11830, 11831—Why protection would tend to increase wages, 11832—State of the silk trade at Manchester, and description of goods made, 1823-1825, and at present, 11833-11837, 11841-11843, 11846—Rich goods in the shop windows at Manchester marked French, 11838, 11839—How certain looms employed now that were not employed in 1825, 11840—Quality of plain goods manufactured at Manchester inferior to that made before 1826, 11844—Description of silk used in the manufacture now and formerly, 11845.

Knubs. See *Importation*, 2.

L.

Labour. Comparative prices of labour in England and France, *Brunskill* 566-575, 593-610; *Ratliff* 1864, 1865; *Cox* 2112—Means of ascertaining the relative prices of labour between Switzerland and England, *Ratliff* 1903, 1904—Amount per centage on labour bears to the value of the article, *Brunskill* 576-578; *Merry* 2569, 2570; *Gibson* 5050, 5051—Calculations of the proportion of the value of labour, and upon what founded, *Cheeper* 758-770—Loss of English labour by smuggling and foreign importation, *Cheeper* 832-857—Amount of Duty upon foreign importation, compared with labour, *Cheeper* 930-932—Number of hours labour per day, *Poole* 981; *Merry* 2625-2629; *Swift* 3743-3757—Additional labour required in consequence of the Jacquard looms in getting in the warps, *Smith* 1336—Examination upon the cost of labour and material in the manufacture, *Jacombs* 1701-1715; *Cox* 2103—Calculation of the cost of labour upon one pound of silk, 1824-1831, *Cox* 2107-2111—Labour much dearer in England than France, though now reduced to its lowest ebb, *Merry* 2525.

Tendency of the cotton and silk trades to equalize labour, *Royle* 3330-3336—If French and Swiss raws exported and manufactured goods admitted, difference in the prices of labour could be afterwards regulated, *Brockwell* 3518, 3519, 3525—Advantage to the foreigner from the cheapness of labour, *Swift* 3903-3905, 3909-3911—Consequent necessity for low wages, *Swift* 3906, 3907—Diminution of labour from increased manufacture of coarse goods since 1825, *Doxat* 4303-4305; *Willmott* 4727-4730—How far removing duty on thrown silk would increase the demand for labour, *Gibson* 5071-5073—Less labour required in working Bengal silk, *Stone* 6199-6201—Consumption of raw silk no criterion of the amount of labour employed, *Stone* 6202—Examination as to the quantity of labour employed in manufacturing different descriptions of silk, *Stone* 6225-6231—Labour lower at Manchester than Spitalfields, *Stone* 6357—Italian silks takes more labour than Bengal, *Stone* 6406—Prohibition of manufactured goods would cause more employment here, *Stone* 5864—Dearness of labour prevents export trade, *Hall* 6682, 6683.

Hands thrown out of employment by foreign importations, legal and illegal, *Ballance* 8643-8645—Fluctuation in the demand for labour at Lyons, *Bowring* 8923, 8924—Question of displacing labour should be looked at with a view to the manufacture of the country, and not the silk manufacture only, *Bowring* 9172-9174—If silk trade has increased, there is no displacement of labour, *Bowring* 9189, 9190—Proportion of labour to the value of the goods, *Tootal* 9579-9584—How far importation of silk manufactured goods from France tends to displace English labour, *Bowring* 9643-9650, 9770-9774—Comparison of French and English labour as regards local taxation, *Bowring* 9656, 9657—As regards national taxation, *Bowring* 9658-9661—Expense of labour on figured gros de Naples would be increased without the Jacquard, *Wadden* 10020-10024—Increased quantity of silk does not always show increased profit to the labourer from there being more labour in coarser silk, *Wadden* 10146-10149—Labour displaced in the silk trade not taken up by the cotton trade, *Ballance* 11027-11031—Labour cheaper at Congleton than Manchester, *Johnson* 11580, 11581—Finer silks require more work than the coarser, *Johnson* 11618-11621—Statement of the price of labour in Macclesfield 1810, 1819, 1825 and 1832, and examination thereupon, *Prout* 11647-11655, 11661-11663.

Landing Waiters. See *Custom House*.

Land Tax. Population of France rated thereto, *Bowring* 9040.

Large Houses. See *Haberdashers*. *Jobbing*.

Laws relating to the Silk Trade. First change therein in 1824, *Hume* 2—Present regulations do not require alteration, *Royle* 3067, 3073-3075, 3199, 3200—Parties who have been benefited by the changes in the law since 1829, *Gibson* 5000-5005—Witness's signature to a Petition to Parliament against altering the present silk laws, *Harter* 9227—Too frequent changes in any trade injurious; interests in the silk trade at present well balanced, *Harter* 9228—Advantages promised from change of law in 1826, and disadvantages resulting therefrom, *Grout* 10350-10354, 10358, 10359—Amount of loss from the present law, and as to claim upon Government, *Grout* 10360-10362—Failure of the three principles of the alteration, superiority of machinery, skill of artisans, and extent of capital, *Moore* 11173—Evils arising out of the alteration in the laws in 1824, 1826 and 1829, *Brocklehurst* 11545-11550—Only the wealthy have been benefited by the present regulations, *Rowbotham* 11740.

Papers laid before the Committee.

Various remarks as to the calamitous results which have attended the changes in our protective laws of 1766, effected in 1826, and opinion expressed as to the ultimate view which the Right honourable William Huskisson would have taken of those results, *Evidence*, p. 258.

Licence. British manufactures should be protected by a £.20 licence to prevent French agents hawking goods, *Sedgwick* 8117-8119.

Livre. Value in English money of the Italian livre, *Caffi* 7048-7056.

Local Taxation. Amount of octroi and manner in which it depends upon the population, *Bowring* 9042, 9045-9051—Local burthens of all classes in England are greater than the local taxation of France, *Moore* 12072.

See also *Labour*. *Lyons*.

Lombardy. Exports from Lombardy States to different countries, 1831, *Heath* 5222, 5695—Duties thereon, *Martin* 5405; *Harter* 9238-9240—Attempts to get exportation of raws prohibited from Lombardy, *Caffi* 7083-7086—Quantity of silk produced in Lombardy and quantity thrown, *Caffi* 7106-7112—French and English manufactures are smuggled into Lombardy, *Caffi* 7297-7304.

See also *Silk*, VII. 3.

Looms. Dutch looms used in the plain branches of the engine trade, *Poole* 1004—Number of widths an engine loom can make, *Poole* 1005, 1006—Nature of the a-la-bar loom, *Poole* 1007—Examination upon destruction of steam looms at Coventry last November, *Poole* 1012-1046—Manufacture by engine looms, and how long they have been in use, *Poole* 1047-1050—There are articles made in the hand loom that cannot be made in the engine loom, but not the contrary, *Poole* 1080; *Marston* 1381, 1382—Comparison of quantity made between an engine and a hand loom, *Poole* 1085-1089; *Perkins* 1552, 1553—Extent to which there is more employment for the engine weavers than the hand loom weavers since the list of prices, *Poole* 1106-1114—Quality of the hand loom articles preferable, *Poole* 1120, 1121, 1135-1137—How far single hand feels depression in the trade first, *Poole* 1122, 1123—How far the engine loom tends to throw workmen out of employment, *Poole* 1129, 1130; *Marston* 1492, 1493.

The two principal machines for weaving at Coventry are the engine loom and the Jacquard machine, *Poole* 1140-1144—Same description used in France as used at Coventry, *Poole* 1145, 1146—Proportion that Mr. Beck's steam machine would have made to other machines, *Poole* 1148-1152—Mr. Woodhouse's loom was for plain goods, *Perkins* 1547—Number of looms in Coventry, *Poole* 1174-1177—Number of engine looms employed in 1826 cannot be ascertained, *Poole* 1192—Number at present unemployed, *Poole* 1193-1196—But little increase lately from foreign competition, *Smith* 1265, 1266—Improvements in single hand engine would increase if foreign ribbons were excluded, *Marston* 1379, 1380—Depression of trade since the introduction of the engine machine has prevented its being much used, *Marston* 1425—Extent to which the cheapness in the manufacture in the engine loom has acted upon the employment of the single hand looms, *Marston* 1437-1447—Number of fancy looms employed before 1823, *Perkins* 1539.

Number fully employed up to 1828, *Jacombs* 1640-1648—Number of gauze looms in 1826 and 1831, *Cox* 2053, 2054—Number of looms generally, and persons employed therein, *Cox* 2055-2057—Advantage of the engine over the single hand looms, *Cox* 2073, 2119, 2120—Masters supply the looms and are subject to their wear and tear, *Cox* 2074-2076—Engine looms are not much increased with the exception of the Jacquard, *Cox* 2298—Breadths not required formerly, or they could have been made, *Cox* 2299-2304—Same quantity could have been made formerly as at present made with the Jacquard, *Cox* 2299-2304—A-la-bar loom at Coggeshall erected by a French artist;

Looms—continued.

artist; unsuccessful attempt to make satins therein, *Sawer* 2379-2387, 2400-2409—Great deal of excellent work done by hand looms, *Sawer* 2410, 2411—Power loom does not answer, *Sawer* 2434—Improved looms began to be made about the year 1820, *Merry* 2457, 2458—Looms employed in weaving silk and silk mixed with other articles, 1819 and 1831, *Royle* 3038-3045, 3264-3267.

Advantage of the rack and bar looms over the original looms, *Hall* 6644-6646—Rack and bar looms not the same as a-la-bar looms, *Hall* 6676—Advantage of the rack and bar loom, and by whom invented, *Hall* 6677-6681—Causes that would prevent the French using the rack and bar looms, *Hall* 6684-6697, 6733-6735—They are better adapted for power than any loom invented, *Hall* 6699—Export trade would be gained by their use in this country, *Hall* 6700—Negociation with a person at Manchester for witness's rack and bar looms, *Hall* 6730—Difference in the cost of the rack and bar loom, and a-la-bar loom, *Hall* 6371—Cost of looms and present work, *Hall* 6736-6739—Preference of weavers for their own looms, and methods of purchasing them, *Baggallay* 7437-7440—Improvements in the engine loom, *Baggallay* 7457—History of the introduction of the bar loom into France, *Bowring* 8768—A-la-bar loom at work 20 years ago, *Harter* 9486-9488.

Manufacture by power looms has not thrown workmen out of employ, *Harter* 9499-9505—Speed by power looms would be injurious to the silk, *Schwabe* 9838—Number of power looms and cost thereof, *Grout* 10301, 10302—Hand looms out of employ, and how far displaced by foreign labour, *Grout* 10304, 10305—Comparison of advantages of power and hand looms in favour of the latter at present, *Grout* 10306-10308—Sometimes temporary employment for looms when French goods scarce, *Bridges* 10484-10486—Comparison of the number of looms in and since 1824, in the whole Spitalfields district, *Wallis* 10835-10837, 10840—Comparison of number in the parish of Bethnal Green, *Wallis* 10838, 10839—Looms out of work at the beginning of this year, *Wallis* 10884—Proportion of looms at present and formerly employed in the figured and plain branches, *Wallis* 10886-10889—Looms in Spitalfields not increased since 1826, *Wallis* 10967—Number unemployed, *Wallis* 10968-10970.

Number of looms that would have employment in the event of their manufacturing the goods imported from France, *Ballance* 11058-11072, 11075-11079—Obstacles in the way of the employment of power looms to broad silks, *Brocklehurst* 11493-11499—Why workmen have better means of informing themselves of the number of looms than than their masters, *Cope* 11715-11719—How certain looms at Manchester employed now that were not employed in 1825, *Kelly* 11840—Number of looms at Manchester, 1824-1826, and at present, *Scott* 11865-11871—Examination against the increase of looms in Manchester since 1826, shown by the quantity of silk worked up, *Scott* 11874, 11875—Greatest number of looms employed by witness at Spitalfields, and on what description of goods, *Beckwith* 11927, 11928, 11946, 11947—Weavers purchase looms of their masters as a means of keeping in employment, *Pittifor* 12053, 12054—Number of looms in Spitalfields, number out of employ, and number employed by the trades committee, *Stone* 12690, 12691—Number of looms employed by witness in Spitalfields, *Graham* 12694-12697—Looms employed in the manufacture of fancy silks in Spitalfields, *Graham* 12784-12787.

Manchester. Articles that are manufactured at, and their quality, *Brunskill* 626-631, 637-639—How far goods would be made there in the event of prohibition, *Cox* 2342-2345—Number of throwing mills erected there since 1819, *Royle* 3025-3029, 3046-3050—Quantity of mills employed in throwing, and quantity in weaving, *Royle* 3034-3036—Peculiarities of the Manchester trade, *Royle* 3201, 3202—Comparison of quality of Manchester and Spitalfields goods, *Royle* 3208-3210—Difference in the manufacture between Manchester and Spitalfields, *Royle* 3408-3418—Increased demand for goods could be met at Manchester, *Royle* 3215—Effect of alterations in the law upon the silk trade at Manchester, *Royle* 3222, 3223—Few failures therein, *Royle* 3224, 3225; *Baggallay*, 7569-7573—Complaints from Manchester have been instigated from other quarters, *Royle* 3226-3228—No distress at Manchester, *Royle* 3230-3232—Unsteadiness of trade since July 1830; how caused by the Bank circulation, *Royle* 3233-3238—Rate of wages, and how affected by the cotton trade, *Royle* 3239-3243, 3247-3249—Account of poors' rates in Manchester, 1826-1832, *Royle* 3244—French goods have not interfered with the Manchester trade, *Royle* 3245, 3246—Examination upon memorial to the Board of Trade, and petition to the House of Commons as to the state of the silk trade at Manchester, *Royle* 3254-3262—Copy, memorial, *Royle* 3261—Copy, petition, *Royle* 3262—Same names signed to both memorial and petition, *Royle* 3426, 3427.

Silk thrown at Manchester is worked up at Coventry and Spitalfields, *Royle* 3293—Necessity in the Manchester trade for the best raw Italian silk to mix with the China, *Brockwell* 3696-3698—Manchester not superior to the West of England for throwing, *Brockwell* 3731-3734; *Ward* 3997-4001—Silk sent from Manchester to the West of England for throwing, *Swift* 3731-3734—It is not sent, *Ward* 4004—Manchester has no advantage in rate of carriage, *Swift* 3774—Description of the low and mixed trade carried on at Manchester, to take advantage of debentures for exportation, *Doxat* 4064—Reason for prosperity at Manchester and distress at Spitalfields, *Doxat* 4140—Duty paid on the fine goods of Spitalfields, and the drawback allowed on the coarse goods of Manchester, *Gibson* 5074-5078—Distress caused by glut in the market from Manchester, *Hall* 6702, 6703—Intention to establish power looms at Manchester for the manufacture of plain sarsnet ribbons, *Baggallay* 7461—Manner in which silk trade at Manchester interferes with Spitalfields; description of goods made at Manchester, *Baggallay* 7480-7501—Profit of Manchester manufacturers very small, *Sedgwick* 8002—Manchester manufacturers generally inferior in beauty to Spitalfields, but some of them equal; their prices, *Sedgwick* 8010-8014, 8024-8029—Quantity and description of goods manufactured at Manchester, *Sedgwick* 8040-8042; *Menetrier* 8303-8305; *Ballance* 8394, 8400.

Silk trade at Manchester has been in existence since 1806, *Ballance* 8401, 8402—Before opening the ports, prosperity of either Manchester or Spitalfields showed prosperity of the other, *Ballance* 8403—Distress at Manchester not so great as in Spitalfields, from its being partly cotton manufacture, *Ballance* 8406—Manchester and Spitalfields would be both benefited by prohibition, *Ballance* 8707—Annual consumption of silk at Manchester, and of what description, *Harter* 9315-9318—Number of mills at Manchester and belonging to it, and number exclusively employed in throwing, *Harter* 9319-9324—How far profitable, *Harter* 9325, 9332—How far throwing trade has prospered at Manchester since 1829, *Harter* 9350, 9351—Manufacture of narrow goods, Italian thrown used therein, and competition therein with Spitalfields, *Harter* 9375-9383—Italian thrown used at Manchester is for similar goods to those made at Spitalfields, *Harter* 9423-9425—Quantity of silk thrown by the Manchester mills; proportion thereof Italian, *Harter* 9507-9515—State of trade at Manchester, description of goods manufactured, and number of looms employed from 1816, *Tootal* 9517-9535—Number of Jacquard looms employed at Manchester, and on what goods, *Tootal* 9536-9544—Capability of Manchester for the production of rich goods; pattern of a dress made for the Queen produced, *Tootal* 9553-9555.

Consumption of silk in Manchester, *Tootal* 9574—Quantity of silk thrown in Manchester, and quantity of foreign thrown imported, *Tootal* 9575—Quantity of foreign thrown silk used in Manchester, *Tootal* 9576-9578—Throwing mills at Manchester in 1823 and at present; number of spindles and weekly earnings of operatives, *Tootal* 9588-9591—Activity in the silk trade at Manchester at present, *Tootal* 9595, 9602, 9603—Patterns produced of witness's manufacture at Manchester, and statement in explanation thereof, *Schwabe* 9829-9836—Examination as to the number of looms in Manchester, and in witness's employ, with witness's declining to answer as to his own, *Schwabe* 9853-9864—Examination upon certain patterns produced, their sale or export, and prices of similar articles at East India Company's sales, *Schwabe* 9871-9886—Reasons for not doing a larger business with the London upholsterers from long credit taken by them, and prejudice raised by Spitalfields manufacturers against Manchester goods, *Schwabe* 9887-9920—Articles not manufactured better at Spitalfields than Manchester, *Schwabe* 678.

Manchester—continued.

9921-9923—Further examination as to credit, the production of similar goods by Spitalfields weavers, and refusal by witness to have his goods examined by Spitalfields manufacturers, *Schwabe* 9924-9935—Rich silk goods are not made at Manchester, with some exceptions, *Wadden* 10043, 10045—Manchester has no crape trade, shown by the number of looms employed by witness more than the whole town of Manchester, *Grout* 10338, 10339—Abandonment of crape looms at Manchester, *Grout* 10344—Articles of Manchester manufacture now bought, *Stephens* 10550-10554, 10563-10566.

Quality of Manchester goods not sufficient to interfere with the sale of rich French goods, *Stephens* 10555, 10567-10569—Loss to Manchester from copying French goods, and being met in the market by French job goods, *Stephens* 10556-10558—Inferior class consume the Manchester silks, *Stephens* 10594-10595—High prices not given to Manchester manufacturers, *Stephens* 10596, 10597—Description of Manchester goods and their prices, *Bennett* 10730, 10731—Satins and velvets not making at Manchester, *Wallis* 10872, 10873—Manchester would have kept its low trade if Spitalfields had not been interfered with by France, *Ballance* 11046-11050—Particular description of goods made at Spitalfields, Coventry and Macclesfield, not carried on at Manchester, *Rowbotham* 11737—Prosperous state of Manchester throwing trade to 1826, and depression therein since, *Wright* 11758—State of the silk trade at Manchester, and description of goods made, 1823-1825, and at present, *Kelly* 11833-11837, 11841-11843, 11846—Quality of plain goods manufactured at Manchester inferior to that made before 1826, *Kelly* 11844—Reason for the handkerchief branch becoming nearly extinct, *Scott* 11875-11877—Description of goods formerly made in Manchester for which gros de Naples have been substituted, *Scott* 11878-11880—Description of goods now making in Manchester, *Scott* 11882-11884, 11890-11895.

See also *Carriage. Manufacturing Districts. Silk Trade. Spitalfields. Wages, 6. Weavers, 6.*

Manning, John, (Analysis of his Evidence.) Surveyor General of Customs, 12476—Examination upon an investigation in consequence of a letter signed "Veritas," and addressed to Lord Auckland, alleging a fraud upon the Customs, and difference in the proper amount of duty, and that paid, 12477-12500—Amount per cent. of saving upon the amount of duty, admitting a fraud to have taken place, and reasons for not admitting that as a fact, 12501-12503—Employment of extra men, how paid, 12504-12506—Only established officers employed in the examination of silks, 12506—Allan Fraser never employed in examining silks, 12507-12511—Statement of the dates, station, duty, and under whom Fraser employed on the quays where silk goods are usually examined, 12512—Silk goods not usually opened on the ground-floor where Fraser employed, 12513—Wages received by Fraser, and number of hours of labour 12515—How far his situation a place of trust when he is immediately under the superintendence of the landing-waiter, 12516, 12517.

Duties of Surveyors General, 12518, 12519—Duties of landing surveyors, particularly with regard to silk goods, 12520, 12521—Manner in which doubts entertained by Custom House officers are cleared up by reference to the trade, 12522, 12526, 12527—Why appointing a person on purpose to judge goods and charge them according to their value would not be beneficial, 12523-12525—Examination of the allegations of Veritas by the invoices, which might have been made up for the occasion, 12528-12534—How far stamping goods would be beneficial, 12535, 12536—Stamping would have no reference to invoices, 12537—Landing-waiters only attend one scale, and never leave a case after the lid is off till they know its contents, 12538-12541—Statement by Veritas confirmed by affidavits which would be false if fraud not proved against officers; manner in which officers may be liable to error, 12542-12547.

Manufactured Goods. See *France, X.*

Manufacturers. Manufacturers of spring goods with good machinery do not generally stop in May, but single-hand looms do, *Merry* 2487—They do not prepare for the autumn as early as May, *Merry* 2488—Number of failures and withdrawals from business of manufacturers since the introduction of foreign goods, *Stephens* 2751—Reasons why their agents in London will not serve a small house under five per cent. higher than a large house, *Stephens* 2832-2842—Power of the Italians with regard to manufacture over the English, *Royle* 3100, 3101—Difference in the value of fixed property between a throwster and manufacturer, *Royle* 3106-3108—Protecting duty to manufacturers if trade of throwster destroyed, *Royle* 3116, 3117—How far other countries protect their manufacturers more than the English, *Royle* 3144—Failures of manufacturers last year, *Brockwell* 3490-3493—Interest of the manufacturer that the throwster should gain, *Brockwell* 3494—Those manufacturers who want foreign silk without duty have small vested interests in the silk trade, and would be ruined, *Brockwell* 3495-3497.

Disadvantages of the English manufacturer competing with the French, *Doxat* 4203-4207—How far prices of French manufactured goods imported last year sufficient to remunerate manufacturer, *Doxat* 4326-4329—Bad state of silk manufacturers at present, and how affected by large houses purchasing under prime cost, *Banbury* 4505-4515, 4535—Advantage to the French manufacturer from the cheapness of the article he uses, *Banbury* 3629, 4635-4637, 4655-4658—Advantages possessed by the French manufacturer

Manufactures—continued.

manufacturer over the English, *Gibson* 4839-4841—Number at present in Spitalfields, and number who have been ruined, *Stone* 5765, 5771—Some have turned throwsters, *Stone* 5766, 5767—How far reducing duty would benefit the manufacturer, *Hall* 6708.

Number of manufacturers at Lyons of whom plain goods bought, *Clay* 6955-6959—Competition in England causes the French manufacturer to be employed instead of the English, though upon English patterns, *Clay* 6977-6987—State of trade among manufacturers better, *Baggallay* 7569-7573—Reduction in the number of manufacturers since 1826, *Ballance* 8444-8447—Failures among manufacturers of broad goods, *Ballance* 8612-8619—Amount per cent. the manufacturer would be relieved by lessening the protection of the throwster, *Ballance* 8674-8676—Sacrifices made by manufacturers, *Ballance* 8690—Contingencies English manufacturer liable to, and protection necessary, *Ballance* 8713-8715—Amount per cent. more cost to English manufacturers of goods manufactured than smuggled or jobbed in from France, *Ballance* 8716-8722—Comparative statement of the cost of manufacturing 500 yards of plain gros de Naples in London and Lyons, *Ballance* 8722—Moderate protection, not prohibition, necessary to the English manufacturer, *Harter* 9229, 9230—Exertion of the English manufacturer to meet foreign competition has failed, *Wadden* 9972-10057—Possibility, if protected by price, of English manufacture equalling the French, shown by witness's experiments, *Wadden* 10068-10078—Different stages of manufacture, *Moore* 11263—Difficulties the manufacturers have had to contend with to meet competition with France, *Moore* 11274.

See also *America*. *Debentures*.

Manufacturing Districts. Applications from different, to the Board of Trade relative to the causes of their distress, *Hume* 57—How far duty and drawback is a tax upon one manufacturing district for the benefit of another, *Hume* 94, 113-119; *Brunskill* 451-454—Degree of distress in the silk manufacturing districts, *Doxat* 4039; *Wadden* 10041—Distress has been felt at other manufacturing districts as well as Spitalfields, particularly Manchester, *Moore* 11106-11108.

Marabout. French will not allow it to be exported, *Brunskill* 647-654—There is now a fair competition in price for it, *Cox* 2275-2279—Its quality has retrograded, *Cox* 2280—Where it comes from, *Cox* 2281—Its price much reduced, *Merry* 2602, 2603—Process of manufacture thereof, and prices, *Swift* 3811-3837—Advantage of France over England in the manufacture of, *Swift* 3838-3846—Quantity annually thrown, *Swift* 3847-3851, 3868-3870—Reason throwing marabout does not give a larger profit than other silk, *Swift* 3852-3854—Increased employment to operatives in throwing marabout, *Swift* 3875, 3876—It is not thrown in Italy, *Doxat* 4287—Description of silk for making, *Heath* 5346, 5347—Comparison of prices of silk adapted for the manufacture of marabout, *Martin* 5491-5495; *Stone* 6264-6267—Nature and price of marabout silk, and advantages to the French thereby, *Bowring* 8973-8977, 8979-8981, 8989—Price of marabout in France, and how manufactured, *Bowring* 9716-9718—Description thereof, and process of throwing it, *Wadden* 10065—Price thereof, raw and thrown, *Wadden* 10065, 10066.

Market. See *Stock*.

Marston, Joseph, (Analysis of his Evidence.) Operative in the single hand in the ribbon business, 1348—Guardian of the poor of Foleshill, 1349—Meaning of an undertaker, 1352—Number of operatives in Foleshill employed and unemployed, and how the account obtained, 1353-1357, 1361, 1362—Distress of that branch, it has been declining for the last four years, 1358-1360—Average earnings, when in full employment, previous to and since making lists in November last, 1363-1369—Distress attributable to foreign competition, 1370, 1371—French gauzes now sold in Coventry for less than operatives paid for making them in 1824-1826, 1371, 1372—Increase of the poor's rates in Foleshill, 1373—Account of monies actually paid to the permanent and casual poor in the parish of Foleshill, 1819-1831, 1374—Reasons for the establishment of the list of prices in November last, 1375—Not a fair remuneration, 1376—Reasons for the manufacturers not giving better, 1377—Distress not attributed to the Jacquard engine, 1378—Improvements in the single hand engine would increase if foreign ribbons were excluded, 1379, 1380.

Articles that are made in the single hand loom which cannot be made in the engine loom, 1381, 1382—Increase in the population since 1821, within what years the increase took place, and how far employed, 1383-1392, 1501—Cause of the distress in 1818, and proportion it bore to the present, 1393-1396—State of trade in 1827 and 1828, 1397, 1398—How the difference in the amount of poor's rates in certain years accounted for, 1399-1402—Benefits obtained by the local Act rating proprietors of houses to the poor rates instead of the occupiers, 1403, 1404—Number of houses built and uninhabited since 1825, 1405-1407, 1501—Allowances to persons not in the workhouse, 1408-1413—Increase or depression of the weaving trade, 1814-1818, 1414-1417—Distress in the fancy branch of the trade from foreign competition, 1418-1424—Depression of trade since the introduction of the engine machine has prevented its being

Marston, Joseph, (Analysis of his Evidence)—continued.

much used, 1425—Full employment in 1826 in the manufacture of brocade gauzes which have since been made abroad, 1426-1436.

Extent to which the cheapness in the manufacture in the engine loom has acted upon the employment of the single hand looms, 1437-1447—Rise in the wages upon certain articles since the table of prices was fixed, 1448-1450—Trade has partially improved since November 1831, but the distress is so great, improvement is not perceived, 1451-1457—How foreign brocade gauzes and figured satins can be distinguished from English, 1458-1460—Object of the list of November to equalize the wages of the hand loom and engine loom weaver, 1461, 1467-1469—Reasons for the manufacturer being better able to pay the increased wages upon that list, 1462, 1463—More uniformity in the present list than in any former one, 1464-1466—Number of people employed by the undertakers, and amount of the undertakers' profits, 1470-1475—Amount of work apprentices formerly taxed to perform, and amount at present, 1476-1486—Want of work and low wages always accompany each other, 1487—Present rate of wages, although a rise, are quite inadequate, 1488—Greater employment of engine looms would throw more people out of employment, 1492, 1493—Comparison of the state of weavers formerly and at present from the rate of wages, 1494-1500—Number of men employed upon the roads, 1502—Who are paid by a composition rate, which will be spent, in addition to the poors' rate, 1502-1505—Comparison of wages 1818 and at present, 1506-1508—Silk used by the undertakers is always in a dyed state, 1509—When the fine gauzes first manufactured, 1510—Specimens of silks produced by the witness, with examinations upon the manufacture, cost and weight of each description, 1511-1528.

Martin, Andrew, (Analysis of his Evidence.) Gross produce of silk in Italy, and detail of countries from which produced, 5376-5380—How returns obtained, 5382, 5383—How far produce of Italy likely to increase, and what countries particularly, 5381, 5383, 5386, 5387—Injury to Piedmont, from the export of silk not being allowed therefrom, 5384, 5394—Manner in which silk is smuggled thereout, and amount and cost thereof, 5384-5386, 5395, 5396—Reason for want of capital in the Roman States, 5387, 5388—Information upon which witness's evidence furnished, 5389-5393, 5506-5508—Different descriptions of silk manufactured in each country in Italy, 5399—To what countries Italians export, with proportions to each, 5400-5403—Export of raw silk not allowed from France, 5404—Or from Piedmont, 5405—Duties on exportation of thrown from Piedmont and Lombardy, 5405.

Thrown silk allowed to be exported from France, 5404, 5406-5411—Manner in which raw silks are smuggled out of France, 5412, 5413—Expense attending that course, 5414, 5418—Comparison of price thereof with Italian silk, 5415-5417—Piedmont thrown worth more than French thrown, 5419—Quantity of French thrown silk coming to London is very small, 5420, 5421—Reasons for knowing the production of Italy without knowing the manufacture of different places, 5422-5427—Prices of raw and thrown silks in Italy, England and France, (1819-1831), 5428-5434, 5449-5451—Duties on importation of foreign raw and thrown silk into France, 5435—Reasons why the French do not buy Bengal silk in the English market, 5436—Not necessary to have been acquainted with the reeling of silk, to judge of its qualities, 5437—Advantage to Italian throwsters from reeling their own silk, 5438, 5439.

Description of silk supplied to Switzerland and Germany, and from whence, 5440—No duty on importation into Switzerland, 5440—Small duty on importation into Austria, Russia and Germany, 5441—In what parts of Italy improvement has taken place in raw silk, 5442, 5443—Price of throwing in Piedmont, France and Lombardy, 5445-5447—How far importation of thrown profitable to the Italian since reduction of duty, 5452, 5453—Comparison of capital, 1824-1826 and to 1831, in the silk trade, 5454-5457—Commission and brokerage, 5458-5461—Credit at present given, 5462, 5463—Amount of discount allowed, but not sufficient to produce cash payments, 5464, 5465—Reasons for reducing credit, 5466, 5467, 5472-5475, 5480, 5481—Rise in price after reduction of duties in 1826, 5468.

Loss to Italian throwster from imports for several years, 5469—Import of raw most advantageous, 5470—Proportion of import duty paid by foreign throwster, 5471—Spitalfields trade getting into the hands of a few large capitalists, 5478, 5479—Tendency of reduction of duty to increase importation of thrown, 5482—Cause of failures in 1825 and 1826, 5484, 5485—Brokers seldom guarantee, 5490—Comparison of prices of silks adapted for manufacture of marabout, 5491-5495—Countries to which the best raw and thrown silks are sent, and in what proportions, 5496—Quality of Piedmont organzines imported into France, 5497, 5498—Effect of reduction of duty on price of foreign thrown, 5499—Description of French silks that are superior to the Italian, 5500—Estimated production of France, 5501—Whether difficulty in obtaining superior quality of French thrown silks in Italy, 5502, 5503—Imports of thrown and raw into France, and total consumption, 5504—Particular sized raw silks of Italy that sell high in England, 5505.

(Second Examination.) Correct information as to price of throwing in France, 5509—And of importations of Italian silk into France, 5509, 5510—Amount of French crop for last three years, 5511—Comparison of prices in London and Lyons 1831, 5511-5521—How far Piedmont thrown superior to the French, 5524—Difference in price

Martin, Andrew, (Analysis of his Evidence)—*continued*.

price paid by the manufacturer and that received by the Italian, 5525—Distress of the silk trade in England during the latter end of 1831, 5526—Comparison of importations of raw and thrown, and reasons for Italian throwster importing thrown, 5527-5529—Possible for Italians to throw a larger quantity, 5530—Advances made by merchants at London and Lyons to foreign throwsters, 5531-5536—Sales of silks at fairs in Italy, and how far prices regulated thereby, 5537-5543—Advantages of the English market to the Italians, 5544—Comparison of advantage in purchasing silk to be thrown in England and Italy, 5545, 5546—How far best Italian silk retained by Italian manufacturer for his own use, 5547-5549—Cocoons have been brought to England by way of experiment, 5550, 5551—Silk cannot be distinguished that has been reeled immediately, and that which has had a voyage to England, 5552—Price of trams at Lyons and London 1831, 5553—When period of credit altered in England, 5553—Discount on long credit, 5554—French tariff of 1822 prohibits exportation of both raw and thrown silks, 5554—Bad effect upon trade from agitation of the silk question, and appointment of the present Committee from fear of further reduction of duty, 5555-5578—Price of raw silk in France 1831, 5579—Price currents given in, 5579—How far authentic, 5589—Reason for large imports into England during 1830 and 1831, 5580-5585, 5587, 5590—Why trade of Italian throwster not likely to increase, 5586.

Menetrier, Emilie, (Analysis of his Evidence.) Manner of smuggling goods into this country prior to 1826, 8210-8213—Opportunities for smuggling increased after 1826, but smuggling has decreased latterly, 8214, 8215—Inferior quality of goods imported into England since removal of prohibition, to meet prices in English market, 8216-8221—Witness ignorant of circumstances attending a seizure at Messrs. De Ponilly & Co.'s, 8222-8226, 8243, 8244—Whether silks used by De Ponilly & Co.'s house were dyed in France or in England, 8227-8231—Rate of smuggling at present, 8233, 8234—Articles manufactured by De Ponilly & Co. that were fashionable in France but not in England caused them to give up their manufacture here, 8235-8238, 8250-8253, 8285-8288—Whether English government allowed De Ponilly & Co. to import organzine free of duty, 8239-8242—Furniture made by De Ponilly & Co. for Windsor Castle, at Spitalfields, 8245-8247—Number of looms employed by De Ponilly & Co., 8248, 8249—A few of their head weavers brought from France, 8256—Jacquards partly brought from France and partly manufactured at Manchester, 8257—How far speculation succeeded, 8261-8265.

Some weavers employed from Paisley as good as the French weavers for gauzes, 8265, 8266—Importations by De Ponilly legally, 8269-8271—Number of looms employed on the order for Windsor Castle, 8276-8280—Where thrown silk obtained, 8282-8284, 8292-8296—Goods were manufactured at Manchester from French patterns, 8289-8291—Names of Mr. De Ponilly's partners and designer, 8297-8300—Description of goods manufactured at Manchester, 8303-8305—Duty on blonde lace from France, 8306—Amount smuggled, and rate of smuggling, 8307-8313—Smuggling plain broad goods has declined latterly, 8314, 8315—Ruin of smuggling from losses, 8316-8320—Rate of insurance upon smuggling, 8321-8323—On what articles smuggling continues, 8324-8328—French houses in London, 8329, 8330—Rate of smuggling in blonde, 8331-8335—Duty that would prevent smuggling in blonde, 8336, 8337—Fashionable articles are not smuggled, 8338—Loss of property a sufficient punishment without personal punishment of the smuggler, 8339-8343—Who the smuggler is, 8344—Punishing persons ordering the goods or lowering duties would prevent smuggling, 8345-8348, 8351, 8352—Stamp might be imitated if known, 8349, 8350.

Merchants. Merchants in London cannot exercise their trade without being free of the Weavers' Company, *Bowring* 9044.

Merry, William, (Analysis of his Evidence.)

Account, showing loss of retail trade since 1826, through admission of French goods, 2450-2456, 2545-2547—Improved looms began to be made about the year 1820, 2457, 2458—Rich cut gauzes were made in 1825 and 1826, 2459, 2460—Were discontinued from the interference from the French, and not being able to get material for making them so good as the French, 2461-2463—They produce their goods at a lower price, 2464, 2465—Interference by the French in another branch of the trade, 2466-2468—Advantages of the Jacquard machine, 2469-2471—Handsome goods were made previously, 2472—Successful sale of spring goods, but loss at the end of the year from introduction of French goods in the autumn, 2473-2486—Manufacturers of spring goods, with good machinery, do not generally stop in May, but those with single hand looms do, 2487—They do not prepare for the autumn so early as May, 2488—Expense of getting up patterns; how far the French are at the same expense, 2488-2491—English cannot get orders from the prejudice in favour of the French, 2492-2496—Under a prohibition the English would go to every expense to produce goods equal to the French, 2496, 2497.

How far the French have possession of the foreign markets over the English, 2498-2502—Comparison of the price of French and English goods after payment of duty on the French, 2503-2524—Labour much dearer in England than France, though now reduced to the lowest ebb, 2525—In the event of prohibition more machinery would be used, 2527

Merry, William, (Analysis of his Evidence)—continued.

—French goods supersede English of a better quality, 2528—Advantages of the French from previous orders, 2491, 2529-2532, 2537-2539—Advantages of the French with regard to exportation, 2533-2536—Smuggling has increased since lowering the duties, 2540, 2541—It has not expanded commerce, 2542—Depression of wages since 1826; Comparison of 1823-1825, with 1829-1831, 2543, 2544—Under prohibition as many novelties could be produced, and as many designers employed as in France, 2548—Business was increasing, and could have been carried on profitably under a prohibition, 2549-2551.

Sufficient capacity in this country to supply any quantity that might be required, 2553—Present distress entirely caused by foreign competition, 2552, 2554-2557—Silks are more fashionable and are used in a greater variety of articles than formerly, 2557, 2558—Reasons for supposing smuggling is carried on to a great extent, 2560, 2561—Reasons why the present list of wages should be abided by, 2562-2565—Expense of machinery, and value of goods turned out, 2566-2568—Proportion of labour to the value, 2569, 2570—Quantity of certain goods turned out in a given time, showing the average rate of wages, 2572-2586—Comparison as to the quality of the work made in a single hand and an engine loom each with Jacquard machinery, 2587-2589—Making plain satins given up from its being a bad trade, 2590—English manufacturers do not now receive orders for their goods, 2591-2595.

Description of goods that are made at Reading, 2599—Fewer houses making gauzes now than in 1824-1826, 2600, 2601—Price of marabout much reduced, 2602, 2603—Heavy goods are cheaper than the French, and but for prejudice in their favour, would be sold, 2604—Comparison of quantity and value of fancy goods made at Coventry five years previously and subsequent to 1826, 2605-2609—More men have been employed since 1826, but at lower wages, 2610, 2611—Principal part of the ribbons imported from France are gauze, 2612, 2613—Comparison of the prices of silk of the same quality in France and in England, 2614-2617—Improvement in manufacture previous to introduction of French goods, and cause of improvement since, 2618-2624—Average wages, and number of hours of labour, 2625-2629—Means of improving manufacture through the French patterns, during prohibition, 2630-2636.

(Second Examination.) Cost price of French goods less than the English, and profits much larger, 2846-2852—Wages lower than in 1825, 2852—No improvement in machinery since 1825, 2852.

Middlehurst, John, (Analysis of his Evidence.) Throwing a remunerative employment prior to 1826, 11783—Distress occasioned by the alteration of the laws in that year, 11784—Higher duty on foreign thrown silk would cause a better description of silk to be thrown in England, 11785—Reduction of wages, 11786, 11787—Necessity for reduction and distress of throwsters, 11788, 11789—Reduction in horse power at Macclesfield, 1824-1832, 11790—Number of hands employed, and rate of wages, 1824-1832, 11791—Throwing has been transferred to Italy and not to Manchester, 11792, 11793, 11797—Horse power at work at Manchester, 11794, 11795—Horse power out of work at Macclesfield, 11796—Comparison as to superiority between Manchester and Macclesfield, 11797-11801—Wages for throwing at Macclesfield 1818-1832, 11802-11805—Manchester people alternately work between silk and cotton, according to the wages in either trade, 11809—Macclesfield people have no other means of living but by silk weaving, 11810—Wages liable to be lower at Macclesfield than Manchester, 11811—Instance of a mill at Manchester stopping and buying foreign thrown silk cheaper than they could throw it, 11812, 11813.

Middleton. Letter from the Overseer thereof, showing the state of distress there, *Wadden* 10042.

See *Silk Trade*.

Milan. Expense of importing silk from, *Banbury* 4472-4474—Effect of Berlin and Milan Decrees upon the silk trade, *Banbury* 4581-4588—Injurious effect of the Milan Decrees upon importation of Italian silk, and subsequent improvement of Bengal silk therefrom, *Wallis* 10954-10958—Effect of the Milan Decrees in causing difficulty of obtaining silk, *Moore* 11263, 11264.

Mile End Old Town. See *Spitalfields District*.

Mills. See *Capital. Competition. Throwing Mills*.

Moore, Ambrose, (Analysis of his Evidence.) Distress of the silk trade greater, and of more permanent character since 1826, than previously, attributed to opening the Ports, 11099-11105—Distress has been felt at other manufacturing places as well as Spitalfields, particularly Manchester, 11106-11108—Manner in which distress of the throwing trade has been caused by the reduction of duty on foreign thrown silk, 11109-11113—Increase in the importation of raw silk since 1823, caused by high duty on thrown, 11114, 11115—Manufacture of sewing silk has increased, 11116-11118—Importation of Italian raw previous to and since 1824, 11119-11122—Increase in the silk trade for several years up to the opening the Ports, and decrease since, 11122-11134—State of the silk trade immediately previous to the admission of French goods, and means adopted

Moore, Ambrose, (Analysis of his Evidence)—continued.

adopted to prevent too large a quantity coming in at first, 11135-11151—Effects of removal of prohibition and reduction of duty on raw silk should be inquired into separately, 11152, 11153—Consumption of silk, 1824 and 1825, and since, 11153-11156—Prohibition should have been continued some years after duty taken off raw silk, 11157—No increase in throwing establishments since 1824, decrease in number thereof at Macclesfield, 11158—Quality of the silk, and not the weight should be looked at as to importations, the coarse diminishing employment of mills, 11159-11161—Encouraging importation of thrown by lowering duties, diminishes the importation of raw, 11162—Increase of silk manufacture in France during the last six years over England, 11163—No necessity for foreign thrown; richest and best works made from English thrown, 11164, 11165—Distress in the throwing trade is general, and not arising from the transfer from one town to another, 11166.

Foreign thrown silk cheaper than the raw can be bought and thrown for, 11167—No improvement in throwing or weaving since 1826, 11168—Workmanship has fallen off both in throwing and weaving, from low prices, 11169-11171—Less capital since alteration of system, 11172—Failure of the three principles of the alteration, superiority of machinery, skill of artisans and extent of capital, 11173—Views of the Government in altering the system, 11174-11176—Alarm in the trade before the alteration, and on what grounded, 11177, 11178—Time granted by Government to prepare for the change not sufficient, 11179-11182—Restrictions on labour and mode of working not removed by Government; evils of the Spitalfields' Act, 11183, 11194, 11195—Spitalfields' Act repealed at the expense of private parties in the trade, 11184—Repealed as a private Act, with all the expenses attendant thereon, and although opposition by certain Cabinet Ministers, 11185-11193—Expectation by Government that a great amount of French goods would not come in after alteration than were smuggled in previously, with contrary result, 11196-11200, 11219—Promise by Government that they would collect a 30 per cent. duty, which they have not done, 11201-11209, 11217-11219—Evils of reduction of duty in 1829, 11210-11216, 11222—Advantages of reducing the duty on the raw material, 11220, 11221—Advantages to France from the growth of her silk, and leading the fashion, 11221—Less supply of good Italian raw silk now than previous to reduction of duties, from inducement to the Italian throwster to send more thrown, 11223-11225—Local advantages of Italian throwsters over the English, 11226.

(Second Examination.) Distress of throwing trade since alteration in 1829, by reducing profits and wages, and reducing the operatives to assistance of the poor's rate, 11227-11230—Distress of trade occasioned by French importations, 11231—Examination upon smuggling goods out of France, 11232-11236—Representations made to Government by the silk trade on the distress therein, and on necessity for inflicting criminal punishment on smugglers; and stamping goods, and means of preventing forgery in stamping; and rejection by Government of plans offered, 11238-11248—Means of discovering French goods from English, and difficulties in the way of it, 11249-11253—Final answer of Government, 11254, 11255—Statement by the retail trade of difficulties in the way of stamping, 11256—Evils of reducing or removing duties on foreign thrown silk, from being an advantage to the manufacturer over the throwster, and causing the Italians to send all thrown silk, and no raw, 11257-11262—Necessity of a well adjusted scale of duties, 11263—Different stages of manufacture, 11263—Effect of the Milan Decrees in causing difficulty of obtaining silk, 11263, 11264—Necessity for encouraging the importation of raw over thrown silk, 11264—Low prices cause imperfection in the throwing, 11265—Speed in throwing cannot be increased without injury, 11266—Throwing trade retrograded since reduction of duties, 11267—Low duties on foreign thrown have reduced wages in throwing, 11268—Commencement of throwing by witness, duty on thrown at the time, and reasons for embarking in throwing trade, 11269-11271—Throwster should be protected on account of the capital vested in machinery, which machinery can be applied to no other purpose, 11272—Effect upon the price of the manufactured article of reducing so much duty on thrown as would make export duty on thrown from Italy equal to export duty on raw, 11273.

Difficulties the manufacturers have had to contend with to meet competition with France, 11274—Not so much skill in manufacture now as formerly, from not being able to employ so high a class of designers as formerly, shown by a pattern exhibited made 70 years ago, 11274, 11275—Inducements for building mills and increasing machinery; not so many in work now as before 1824, 11276—Reduction in wages, and consequent destitution of weavers therefrom, 11277-11279—Instances of dishonesty in consequence, by absconding of weavers to America with their employers' manufactured property, 11280-11285—Loss of the fancy trade from importations from France; few fancy goods made in England that are not made in Spitalfields, 11286-11289—Difficulty of reviving the fancy trade while fashion in favour of France, 11290, 11291—Advantage to France from her raw silk, 11292—How long the assaying machine for the trial of silk has been known in this country, 11293, 11294—Other advantages of France, 11295—Necessity for prohibiting importation of manufactured goods from France, unless she allows the importation of her raw silk, and amount of duty on manufactured goods in that event, 11296-11301—Means of preventing smuggling in that case, 11302—In the event of France putting a duty on the importation of her raw, whether that amount should be added to the manufactured goods, 11303-11306—

Moore, Ambrose, (Analysis of his Evidence)—*continued*.

Necessity for Italian silk in working up Bengal and China silk, 11307, 11308—Duty on thrown that is necessary to ensure a good supply of Italian raw, 11309-11311—Whether the fancy gauze trade can go on without prohibition, 11312, 11313—Additional duty on thrown silk would be beneficial to the home manufacture, 11314—Greater degree of distress by ruining the throwster than the manufacturer, from his having a larger vested capital, 11315-11317—Prosperity of the silk trade depends upon the duties on the importation of thrown silk, 11318, 11319.

(Third Examination.) Reason why the alteration of system in the silk trade has miscarried, 12066—Protection not given to the silk trade which it was held out it would receive in 1824, 12067, 12068—Protecting duty necessary for throwsters, 12069—Reasons why effectual measures have not been taken to repress smuggling, 12070, 12071—Local burthens of all classes in England are greater than the local taxation of France, 12072—Duties upon implements of machinery in France have no effect as compared with England, 12073—Duty on raw silk imported into France is small, and French use principally silk of their own growth, 12074—Merit of the French silk manufactures not likely to pass away from the disadvantages they labour under, 12075—France not under disadvantage as compared with Switzerland, 12076—No feeling in France in favour of any fair and reciprocal trade with England, 12077—Institution of the Conseil des Prud'hommes, and that for ascertaining the condition of silk in France, would be no benefit to England, and is not of importance to this inquiry, 12078-12084—To what the success of the French silk trade is owing, 12085—French goods coming to this country double the amount shown by French accounts of official exports, 12086—Increase in the use of silk goods in this country, and falling off in importation of raw and thrown, 12087—Advantage of being enabled to get French raw silks, 12088—But it would not counterbalance all the advantages of France over England, 12088.

Morrison, James & Co. Description of the mode of transacting business by their house, *Dillon* 7591-7597—Introduction of invoices of certain goods bought of Morrison & Co. showing how much per cent. goods bought cheaper than imported for, *Beckwith* 12548-12551—Other transactions with Morrison & Co. of a similar nature, *Beckwith* 12552-12557—Examination as to witness's having expressed regret for previously inferring that Morrison & Co. had not come properly by those goods, *Beckwith* 12558-12580—Examination upon the correspondence that took place between witness and Morrison & Co.'s house relative to that transaction, *Beckwith* 12581-12587—How far goods would have been regularly passed through the Custom House, although entered lower than their regular duty, *Beckwith* 12588, 12589—Difference in the duty on goods imported by witness and sold to him by Morrison & Co. *Beckwith* 12600, 12601—Supposition that one of Messrs. Morrison & Co.'s partners being at Paris induced the manufacturer to supply their house instead of witness with the goods he had ordered, *Beckwith* 12602—Witness's agent in Paris not a partner; period of his residence in Paris, *Dillon* 12668—Witness did not charge Messrs. Morrison & Co.'s house with smuggling, *Beckwith* 12603, 12604—Purchase of goods 30 per cent. lower than import price proof of the manufacturer cheating witness, or that Morrison & Co. must have passed their goods lower than witness, *Beckwith* 12605-12613—How much per pound weight witness's goods entered at; how far both parcels of goods being entered by weight would effect their value, *Beckwith* 12614-12631.

Witness's account of interview with Mr. Beckwith, in which witness produced proof of certain velvets sold him having paid duty, *Dillon* 12632-12637—Examination as to the production of invoices to Mr. Beckwith, and his expressing his alteration of his previous opinion, *Dillon* 12638-12646—Correspondence between Morrison & Co.'s house and Mr. Beckwith as to the latter's charge against the former of irregular proceedings, *Dillon* 12648-12653—Duty on witness's parcel paid by weight, *Dillon* 12654—Difference in price between the two parcels, and how far from being bought of different persons, *Dillon* 12655-12666.

Mortality. Unhealthiness of the climate in India renders human life uncertain, *Grout* 10325-10327.

Mulberry Leaves. Care required in the cultivation of mulberry leaves, *Caffi* 7122-7124—Period at which the mulberry tree fit to supply the worms, *Caffi* 7320—Value of the leaves, *Caffi* 7322, 7323—Planting of mulberry trees stopped from an intention to impose a duty, *Caffi* 7324, 7325—Not profitable to cultivate the mulberry tree in this country, *Bowring* 9202, 9203—Difference in the mulberry plant between Bengal and France and Italy, *Grout* 10366, 10367.

N.

Narrow Goods. See *Ribbons*.

Necessaries of life are higher at Coventry than in France, *Ratliff* 1974.

Netherlands. Offers to witness to establish himself in the silk trade in the Netherlands, and state of the silk trade there, *Brocklehurst* 11507-11518.

Nismes. Population and state of trade thereat, *Bowring* 9069-9075—Without export trade from being protected, *Bowring* 9722-9725.

North

North of England. See *Throwing Mills*.

Norwich. Reason for Norwich taking the bombazine trade, *Wallis* 10861, 10862.

Nottingham. See *Manufacturing Districts*.

Nuneaton Parish. Account of the general expenses of the parish, *Jacombs* 1581—
Number of persons depending upon the ribbon trade principally single hand, *Jacombs*
1582-1587—Effect of the table has not been felt in the parish yet, *Jacombs* 1826-
1828.

Papers laid before the Committee.

Amount of Poor Rates collected in the Parish of Nuneaton; with the Amount of Assessment, Rate in the pound, and number of levies, 1821-1832, *App.* p. 928.

Octroi. See *Local Taxation*

OPERATIVES.

In throwing mills.

1. *Generally.*

2. *In Italy.*

1. *Generally.*

Number employed, *Ward* 2936-2938—Hands partly dependent on the poor's rate, *Ward* 3981—Number out of employ, *Ward* 3979, 3980, 4009—Principally females employed, *Ward* 4005—Throwing a healthy and domestic employment, *Ward* 4006, 4007—No means of subsistence if dismissed, *Ward* 4008—Employment of hands before 1826, *Willmott* 4665-4669—Decrease in the employment of hands since 1829, and causes, *Willmott* 4670, 4671—Mill people more important than winders, *Willmott* 4712, 4713—What other employment for the people besides silk winding, *Willmott* 4714-4718—Description of persons employed, method of hiring, and rate of wages, *Hall* 6472-6477—Larger supply of hands could not be obtained in witness's present situation, *Hall* 6525, 6526—Number of hours children work, *Hall* 6586—They are not worked at night, *Hall* 6587—How far parish officers cognizant of the manner in which children are hired, *Hall* 6590-6593—Fewer hands employed by witness's machinery, *Hall* 6631-6635—Average number of persons employed, and average rate of wages per week, 1822-1831, *Grout* 10285—Respectable condition of young people formerly employed, and change in their morals and character since reduction of wages, *Grout* 10286-10292—Proportion of persons now employed as to men, women and children, similar to what it was formerly, *Grout* 10293—Comparison of earnings in 1823 and 1830, and distress of the work people from reduction, *Grout* 10355-10357—Good condition of operatives prior to 1826, *Brocklehurst* 11324—Number of persons employed in throwing mills at Macclesfield, 1824-1832, *Brocklehurst* 11326-11328—Subsistence of hands when out of employment, *Brocklehurst* 11337—Distress of operatives and bad moral effect therefrom, *Brocklehurst* 11397-11402—Number of hands employed at Congleton, 1823 and 1832, *Johnson* 11565—Number unemployed, and method of subsistence, *Johnson* 11566, 11567—Distressed and demoralized condition of the operatives, *Johnson* 11610-11612.

2. *In Italy.*

Method of paying operatives when throwing mills not at work, *Caffi* 7088-7902—Operation of twisting and throwing, hours of labour, wages and amount of work, *Caffi* 7219-7229, 7236-7241—Wages of superintendents, *Caffi* 7230-7234, 7242-7248—Manner of subsistence of operatives when mills not at work, *Caffi* 7249.

See also *Doubling. Reeling. Throwing Mills. Winding.*

Orders. Advantage to the French by previous orders, *Merry* 2491, 2529-2532, 2537-2539; *Gibson* 5019-5027; *Stone* 5903, 5904—English cannot get orders from prejudice in favour of the French, *Merry* 2492-2496—English manufacturers do not now receive orders for their goods, *Merry* 2591-2595; *Stephens* 2690, 2695—When orders for French goods usually given, *Stephens* 2688, 2689—Articles to order are manufactured according to the pattern of each house, *Gibson* 5148-5151—Orders for fancy articles being given to particular English houses will prevent French goods entirely superseding the sale of those orders, *Sedgwick* 8120-8130—When orders formerly given for the spring trade, *Sedgwick* 8146—Orders now given for French fancy ribbons, *Sedgwick* 8157—Orders formerly given for English fancy ribbons and broad goods, *Sedgwick* 8159, 8160—Orders for English goods given later now than formerly to ascertain what the French are likely to produce, *Sedgwick* 8165, 8166—Method of ordering goods in France, *Sedgwick* 8198—Goods made from orders formerly, *Bridges* 10424, 10425.

See also *America. Coventry. France, III.*

Organzine. By whom first mill for throwing organzine introduced into England, *Swift* 3726—Process of manufacture of marabout organzine and tram, and prices thereof, *Swift* 3811-3837—Distinction between organzine and tram, *Wadden* 10064, 10065.

See also *Importation, 2. Italy. Silk, VII. 3.*

P.

Patents. See *Conseil des Prud'hommes*.

Patterns. Benefit to English manufacturers from a variety of patterns, *Cheeper* 869, 870—Manufacturers provide patterns, *Perkins* 1557, 1558—Improvement in the silk trade in 1823, was not owing to French patterns, *Jacobs* 1753-1757—From what patterns ordered goods used formerly to be made, *Cox* 2158-2160—Expense of getting up patterns; how far the French are at the same expense, *Merry* 2488-2491—Means of improving manufacture through French patterns during prohibition, *Merry* 2630-2636—In the event of a change of pattern in French goods they can still be sold as such, and accepted as new goods, *Stephens* 2696—No encouragement now to lay out money in producing novelties, *Stephens* 2730—How far French patterns could be obtained to give taste to English manufacture in the event of prohibition, *Sedgwick* 8056; *Bouillon* 10218, 10219—Advantage to French from expense in construction of patterns grows out of her command of foreign market; manner thereof, *Ballance* 8414, 8415.

See also *Coventry. Manufacturers. Orders. Weavers.*

Perkins, James, (Analysis of his Evidence.) Introduction of the Jacquard machine merely a change in the fancy looms, 1532—Number of fancy looms superseded by the use of the Jacquard machine, 1533-1536—Number of Jacquard machines now at Coventry, 1537—Number of fancy looms employed before 1823, 1539—Jacquard apparatus can be applied to the engine loom, 1540—Number of looms in Coventry in 1818, and at present, and number that have the Jacquard apparatus, 1541-1545—Mr. Woodhouse's loom was for plain goods, 1547—Proportion of extra work of an engine loom over a single hand loom, 1552, 1553—Average wages, 1554-1556—Manufacturers provide the patterns, 1557, 1558—Nature of the employment of designers, 1559, 1560—Time taken in getting the work into the loom, 1563—Number of weeks unemployed in the last year, 1565, 1566—Amount per week witness formerly taxed to earn as an apprentice, 1569—There are satin figures now making, but of a different style and quality, 1570—Description of goods witness at present employed upon, 1571-1573—Quantity made in a certain time, and price thereof, showing the average rate of wages when in full work, 1574-1579.

Peter, St. Examination upon the method of conducting the school of St. Peter in France for the encouragement of Arts, *Bowring* 8806-8825—Extrait du Règlement pour les Etablissements Publics existant dans le Palais St.-Pierre, *Bowring* 8823.

Piedmont Silk. Extent of importation thereof into France, *Ratliff* 1908, 1909—Is used for particular purposes, *Cox* 2271—Is the best thrown exported from Italy, *Brockwell* 3526-3528—Greater proportion of the best quality of Piedmont silk exported to France than England, *Brockwell* 3529-3532—For what Piedmont silk required, *Doxat* 4123—Variation in importation of Piedmont organzine, *Doxat* 4249—Export of Piedmont raws prohibited, *Doxat* 4257—Reasons why, *Banbury* 4593-4596; *Martin* 5405—Price of Piedmont organzine in London, and quantity imported, *Doxat* 4375-4378—Piedmont silk the best of Italy, *Heath* 5297—Lombardy silk sometimes imported into Piedmont to be thrown, *Heath* 5298—From what the superiority of Piedmont silk arises, *Heath* 5299—Injury to Piedmont from the export of silk not being allowed therefrom, *Heath* 5384-5394—Manner in which it is smuggled thereout, and amount and cost thereof, *Heath* 5384-5386, 5395, 5396—Duties on exportation from Piedmont, *Martin* 5405—How far Piedmont thrown superior to the French, *Martin* 5524—Premium for smuggling raw silk from Piedmont, *Caffi* 7137-7141—Description of the silk, and for what purposes used, *Caffi* 7142-7145—Duties thereon, *Harter* 9238-9240—Advances by the French and English merchants to the Piedmont growers, *Bowring* 9780-9782—Consumption of Piedmont organzine, *Bennett* 10791.

See also *Silk*, VII. 3. *Smuggling*.

Pillage. See *Lyons*.

Pittifor, Thomas, (Analysis of his Evidence.) Examination upon the earnings of weavers, 11989-12028—Examination upon the time taken in making alterations in a pattern, and loss to the weaver thereby, and whether less time would be occupied therein, 12029-12043—There would not be much more time or advantage gained by warping whole grosses than half grosses, 12044-12046—Loss of time greater in the manufacture of fancy than plain ribbons, 12047, 12048—Expense of assistance required by weavers, reducing the amount of their earnings, 12049-12052—Weavers purchase the looms of their masters as a means of keeping in employment, 12053, 12054—Not an undue proportion between the earnings of plain and figured weavers, 12055-12057—Delay in weavers' work how far necessary, and method of prevention, 12058, 12059—Tables showing the comparative cost of manufacture between French and English goods, 12060-12065.

Plain Silks were more frequently smuggled than fancy silks, *Hume* 11—Are not smuggled alone to any extent, *Hume* 71-76; *Gibson* 4948—Demand for foreign plain goods so great that they sell in preference to English goods of the same quality and much cheaper, *Brunskill* 206-224—Large imports of plain goods now, *Brunskill* 755—No importation of plain ribbons from France, *Poole* 1125-1128—How far importation in the fancy

Plain Silks—continued.

fancy trade affects the plain trade, *Goode* 1228-1232, 1238-1245—Decline in the plain branch, *Goode* 1246, 1247—Plain goods the best branch for throwsters, *Royle* 3095—Statement of cost of manufacture of plain goods at London and Lyons, *Doxat* 4402—Proportion of labour to the value thereon, *Gibson* 5050, 5051—More plain articles used now than formerly, *Gibson* 5133-5141—English plain goods have beat the French out of the market, *Clay* 6808-6811, 6976—Price of certain plain goods and duty thereon, *Clay* 6953, 6954; *Baggallay* 7477-7479—Variation in duty on plain silks, *Bottrell* 7883—Description of the term plain, figured and fancy goods, *Ballance* 8395-8400—Advantage to the plain trade by increasing the risk of the smuggler, *Ballance* 8434, 8435.

Regulations against smuggling applicable to the plain branch, *Ballance* 8471—Duties that might be collected on plain goods under proposed regulations, *Ballance* 8479, 8482—Reduced wages has partly stopped legal importation of plain goods, *Ballance* 8691—Plain trade may be protected if the smuggler detected and punished, *Wadden* 10033—English plain goods come into the market as cheap as the French, *Bouillon* 10168-10170—Purchases in France in plain goods have been latterly reduced, *Bouillon* 10176-10179—Certain plain goods made in this country from French patterns cheaper than in France, *Bouillon* 10220-10226—Reasons for buying plain silks from France, *Stephens* 10615-10618—Plain goods are smuggled, *Stephens* 10663-10665—Progressive increase of the plain branch previous to 1826, *Bennett* 10716, 10717.

See *Duty on Importation*.

Poole, Benjamin, (Analysis of his Evidence.) Ribbon weaver at Coventry, 940-942—Distress of the working classes, 943, 944—Ribbon trade and watch trade the principal manufactures at Coventry, 945—Greatest number employed in the ribbon trade, 946—No improvement in the manufactures since the introduction of foreign manufactured ribbons, 947, 948, 1002, 1003—Machinery used in the fancy branch has not increased, 948, 949—Improvements in machinery were received by the working classes with alacrity, 950, 1009, 1015-1018—Reasons why machinery not more generally used, 951—Want of employment attributed to foreign competition in certain branches, 952—Which has latterly prevented improvements in Machinery, 953, 954—General rate of wages and reductions latterly, 955-960—Causes of the distress at Coventry, 1815-1817, 961-963—Amount of poor rates at Coventry, 1831, 964, 965—Account of the sums expended in the united parishes of the city of Coventry by weekly payments to the permanent and casual out poor in each of the years ending April 1815-1831, with the gross amount of parish expenditure for each year; also the average price of wheat, 965—Account of the average weekly earnings of weavers having full employment in the plain ribbon trade, including satins and sarsnets, 1815-1830, 965—Working classes do not contribute to the poor's rates, 966—Reasons for difference in the amount of poor's rates between 1830 and at present, 967—Distress greater now than in 1818, 968-979—Average wages for the whole year, 980—Number of hours labour per day, 981—Difference in the rate of wages in 1818 and at present, 982-990—More out of employment now than in 1818, 991, 992—Wages received by journeymen from the undertakers the same as from the manufacturers, 993, 994—Nature of the undertaker, 995—Undertakers superseded by the engine looms, 996-1001—Dutch loom used in the plain branches of the engine trade, 1004—Number of widths an engine loom can make, 1005, 1006—Nature of the a-la-bar loom, 1007—Engine looms have been worked by steam, 1008, 1011.

Destruction of steam looms last November, 1012, 1019, 1022—Meeting of the workmen in November, 1013—Particulars of the meeting, its objects being equal rate of wages, 1019-1024, 1051, 1052—No knowledge by whom the factory was burnt, 1024, 1025—Probable reasons for its destruction, that it would have produced a greater quantity of goods in a given time, and at greater cost than by hand labour, and kept the workmen out of employment, 1026-1042—No expression of dissatisfaction at its existence at the meeting, 1043—Promise of the proprietor not again to apply steam to the manufacture of ribbons in Coventry, 1045—No attempt at its introduction since, 1046—Manufacture by engine looms, and how long they have been in use, 1047-1050—List of prices between 1816 and 1831, and in what instances departed from, 1053-1061—Reduction in the wages of single hand loom weavers between 1829 and 1831, 1062-1064—List of prices of engine loom work agreed to at a meeting of manufacturers held at the Castle Inn, in the City of Coventry, on Thursday, November 10th, 1831, and to commence the following day, 1064—Resolutions of a meeting of the Committee of Ten appointed at the general meeting to make a new standard, held at the Castle Inn, on the 9th November 1831, for deviating from the standard 1822, and regulating the width of sarsnets, 1064—List of prices of single hand work agreed to at a meeting of manufacturers held at the Castle Inn, in the City of Coventry, on Thursday, November 10th, 1831, and to commence the following day, 1064—Meetings at which the above prices were settled, 1065-1067—Comparison of wages earned by the engine and single hand loom weaver, 1068-1070, 1075-1079, 1084, 1117-1119—Discontent among the weavers from some of the masters wanting a further reduction of wages between 1829 and 1831, 1071-1074
678. —There

Poole, Benjamin, (Analysis of his Evidence)—continued.

—There are articles made in the hand loom that cannot be made in the engine loom, but not the contrary, 1080—Many hands out of employment at that time, 1081—Single hand list includes winding and warping but not the engine list, 1082, 1083—Comparison of quantity made between an engine and a hand loom, 1085-1089—Engine loom weaver receives less per piece than the single hand, 1090, 1091—How far the lists were for the purpose of equalizing the wages between an engine loom and single hand loom weaver, 1092-1105.

Extent to which there is more employment for the engine loom weavers than the hand loom since the list of prices, 1106-1114—Wages should continue to be paid according to the prices in the lists, 1115, 1116—Quality of the hand loom articles preferable, 1120, 1121, 1135-1137—How far the single hand feels any depression in the trade first, 1122, 1123—Articles made at Coventry are finer than those made at other places, 1124—No importation of plain ribbons from France, 1125-1128—How far the use of the engine loom tends to throw workmen out of employment, 1129, 1130—Greater consumption of silk at present than ever known, 1131—Foreign competition supplies the demand for manufactured goods, and drives the manufacturer and workmen to a lower description of goods, 1132-1134—Articles made at Reading are not made at Coventry, 1139—The two principal machines for weaving in Coventry are the engine loom and the Jacquard machine, 1140-1144—The same description of machinery that is used in France is used in Coventry, 1145, 1146—Proportion that Mr. Beck's steam machine would have made to other machines, 1148-1152—Examination upon the poor rates and distress from 1815, 1153-1164—Increase or decrease in the number of weavers and population, 1821-1831, 1165-1173—Number of looms in Coventry, 1174-1177—How many months full employment for the weavers last year, 1178-1182—How far a weaver's family assist him, 1183, 1184—Extent to which the consumption of silk will tend to show the beneficial employment of the operative, 1186-1191—Number of engine looms employed in 1826 cannot be ascertained, 1192—Number at present unemployed, 1193-1196.

Poor's Rates. Amount of poor's rate at Coventry, 1831, *Poole* 964, 965—Account of the sums expended in the united parishes of the city of Coventry, by weekly payments, to the permanent and casual poor, in each of the years ending April 1815-1831, with gross amount of parish expenditure for each year; also, average price of wheat, *Poole* 965—Working classes do not contribute to the poor's rate, *Poole* 966—Reasons for difference in the amount of poor's rate between 1830 and at present, *Poole* 967—Examination upon poor's rates and distress from 1815, *Poole* 1153-1164—Increase of the poor's rates in Foleshill, *Marston* 1373—In Bruton, *Ward* 3983—Account of monies actually paid to the permanent and casual poor in the parish of Foleshill, 1819-1831, *Marston* 1374—How the difference in the amount of poor's rates in certain years accounted for, *Marston* 1399-1402—Account of poor's rates in Manchester, 1826-1832, *Royle* 3244—Increase of poor's rates in Sherborne, *Willmott* 4672-4679, 4724, 4800—Amount of assessments for poor's rate, 1816-1832, *Willmott* 4679—Parochial relief to some parents of children employed by witness, *Hall* 6558-6580—Examination as to the poor's rate in Macclesfield, *Brocklehurst* 11382-11390—At Congleton, *Johnson* 11568-11571.

Papers laid before the Committee.

Amount of Poor Rates collected in the United Parishes in the City of Coventry, by Twelve Rates in each year, and the Amount in the Pound, *App.* p. 926.

Amount of Poor Rates collected in the Parish of Bedworth; with the Number of Rates, the Rate of Assessment, and Gross Amount of Property assessed, *App.* p. 927.

Return of the Property assessed in the Parish of Stoke, in the County of Warwick; with the Number of Rates, Rate of Assessment, and Gross Amount on all Property assessed in the said Parish of Stoke, from the year 1815 to the year 1832 inclusive, *App.* p. 927.

Amount of Poor Rates collected in the Parish of Shilton, in the County of Warwick; with the Number of Levies, and Amount collected in each year from 1815 to 1832, and the Gross Amount of all Property assessed, *App.* p. 928.

Amount of Poor Rates collected in the Parish of Nuneaton; with the Amount of Assessment, Rate in the Pound, and Number of Levies from the year 1821 to the year 1832, *App.* p. 928.

Account of the Disbursements of the Parish of Bedworth, in the County of Warwick for Ten Years, to the County Rates and to the Poor, *App.* p. 929.

Population, increase therein since 1821; within what years the increase took place, and how employed, *Marston* 1383-1394, 1501.

Post Bills. See *Bank of England.*

Power looms. See *Machinery.*

Poyton, John, (Analysis of his Evidence.) Distress among the Spitalfields weavers greater since 1826 than formerly, from their being more want of work and want of price, 10979 — Amount of reduction in the price of labour since 1826, 10980 — State of Spitalfields trade rapidly on the increase prior to 1826, 10981 — Distress attributed to repeal of the protecting laws which existed prior to 1824, 10982 — Contrary result of the repeal of those laws from that held out by Government at the time, 10983-10985 — Statement of reasons for opposing repeal of those laws, 10986 — Increase in the quantity of goods exported since, but decline in the value, 10987 — Decrease in revenue, from amount of duties collected since repeal, 10988 — Bad effects upon the silk trade if the present system continues, 10989 — Consumption by weight of silk not a fair criterion of prosperity of trade, from coarser fabrics taking less value of labour, 10990, 10991 — Lyons has been as much injured as Spitalfields, 10992 — Great increase of smuggling, 10993 — Extent of parish relief to weavers, 10994, 10995.

Preventive Service. See *Smuggling*.

Price currents. Price currents given in, *Martin* 5579 — How far authentic, *Martin* 5589.

Prices. Who would be benefited by increased price, in the event of a return to the prohibitory system, *Brunskill* 189-194, 486 — English goods are cheaper than foreign goods can be imported for, *Brunskill* 317-321 — Raw article in France cost less than here, *Brunskill* 354 — How far obtaining material cheaper would enable the giving better wages, and producing the article cheaper, *Brunskill* 355-363 — Comparison of prices of certain articles, 1824, and at present, *Cox* 2058 — French produce their goods at a lower price, *Merry* 2464, 2465 — Comparison of prices of French and English goods after payment of duty on the French, *Merry* 2503-2524 — Heavy goods much cheaper than the French, and but for prejudice in their favour would be sold, *Merry* 2604 — Comparison of prices of silk of the same quality in France and England, *Merry* 2614-2617 — Price of article not an object, *Stephens* 2643-2646 — Difference in the price of ribbons smuggled and that pay duty, *Stephens* 2748-2750 — French goods can be bought much cheaper in London than imported, *Stephens* 2757, 2758 — Reasons why manufacturer's agents in London will not serve a small house under five per cent. higher than a large house, *Stephens* 2832-2842 — Cost price of French goods less than English, *Merry* 2846-2851 — French would reduce the price of their goods if the English did, *Stephens* 2932-2935 — Ribbons worn by ladies are not supplied cheaper than if made in England, *Stephens* 2949 — How price of foreign silk regulated in England, *Royle* 3097-3099, 3103 — Prices of Milan raw and thrown silk, 1819-1831, *Brockwell* 3533-3539.

Variations in the price of silk between Lyons and London, and causes thereof, *Doxat* 4184-4193 — Price of Italian organzine in Lyons and London, *Doxat* 4194-4202 — Price of Italian silk thrown in Italy and in England, *Doxat* 4258 — Difference in the price of silk in Lyons and Italy, *Doxat* 4264-4269 — Difference of price at which the manufacturer at London and Lyons is supplied with material for manufacture, *Doxat* 4270 — How duty on importation of Italian thrown affects price in England and France, *Doxat* 4271-4275 — How English manufacture relatively cheaper than Italians, *Doxat* 4276 — Abridged recapitulation of comparative cost of manufacture at London and Lyons, *Doxat* 4279 — On legal and illegal imports, *Doxat* 4279 — Diminution in the price of silk in the home market corresponding with the reduction of duty on imported thrown silk, *Doxat* 4306, 4307 — How sale price of Italian silk regulated on commission, *Doxat* 4382-4389, 4393 — Difference in price between raw and thrown silk, *Banbury* 4475-4480; *Gibson* 5080 — At what period thrown silk sold at a less price than raw, *Banbury* 4640, 4641 — Increased value per cent. the present duty adds to the goods, *Gibson* 4834-4836 — If duty taken off it would equalize the prices in this and the foreign market, *Gibson* 4837, 4838 — Price of Italian silk regulates that of the English, *Gibson* 4884, 4885 — Why goods are manufactured cheaper at Lyons than in England, *Gibson* 5018 — Effect of the introduction of French goods on English prices, *Gibson* 5028-5036 — Causes that operated to reduce the price of silks, *Gibson* 5118 — On what the price of silk depends, *Heath* 5217, 5218 — Best silks of France bear an increased price over the best silks of Italy, *Heath* 5328-5331.

Comparison of price of raw silk smuggled out of France, and Italian silk, *Martin* 5415-5417 — Prices of raw and thrown silks in Italy, England and France, 1819-1831, *Martin* 5428-5434, 5449-5451 — Rise in prices after reduction of duty in 1826, *Martin* 5468 — Difference in price paid by the manufacturer and that received by the Italian, *Martin* 5525 — Table, showing the nett proceeds of one pound of Italian raw and thrown silk, deducting duty and charges, 1822-1831, *Stone* 6028-6030 — Principle upon which calculations made, *Stone* 6031-6039 — Prices of Italian silk in London and Lyons, and how regulated and affected by the home growth of France, *Stone* 6272-6304 — Causes of decrease in the price of silks, *Clay* 6966-6970 — Duty on French causes English manufacture to be cheaper, *Clay* 6988-6990 — Price not so much an object with higher consumers as having first rate goods, *Sedgwick* 8103-8106 — Pence not an object in price to the consumer of figured goods, *Bridges* 10492 — Decrease of wages has not reduced

Prices—continued.

reduced price to the fullest extent to the consumer or manufacturer, *Ballance* 8495, 8496 — Difference in the price of goods imported by the Trade Committee and similar goods made at Spitalfields, *Ballance* 8586 — Operation of wages upon the price of goods at Lyons, *Bowring* 8934-8938 — How far price of French silk regulated by the price paid for Italian silk, *Bowring* 9187 — Other charges increasing price to the English manufacturer, *Harter* 9241-9243 — Difference in prices of certain silks and ribbons, *Bowring* 9719 — Relative prices of French and Italian silk in France, *Bowring* 9775-9778 — Comparative price of French and Bengal silk, *Grout* 10335-10337 — Small increase of price would not lessen consumption, *Bennett* 10778-10787 — Price of silk not lower after repeal of duties in 1824, *Brocklehurst* 11340, 11341 — Examination as to difference of price of raw and thrown silk at London and Lyons, *Doxat* 12092.

Papers laid before the Committee.

Comparative View of the London Market Prices of Milan and Bergam Raw Silks of four to five cocoons, and of Milan and Bergam Organzines of 26 to 28 deniers at various periods, from June 1824 to February and April 1832, with Notes thereon as regards the British Throwster, *Evidence*, p. 261.

Prime Cost. See *France*, III. *Jobbing*.

Production of Silk. See *France*, VII.

Profits. Profits in any trade affected by the competition in it, *Jacombs* 1763-1766 — Manufacturers' profits decreased, *Jacombs* 1720 — In what year profits better than at present, *Jacombs* 1822 — Great profits of the French manufacturer over the English, *Ratliff* 1866-1868 — Greater profit to the dealer on French than English goods, *Ratliff* 1945-1947 — Decrease of profit since 1826, and how affected by giving higher wages, *Ratliff* 2027-2030 — In calculating profits, allowance is made for any sacrifice that may take place, *Cox* 2196-2198 — Profits upon French goods much larger than on English, *Merry* 2846-2851 — Profits of French dealers and manufacturers, *Stephens* 2936-2947 — Effect of competition on profits, *Royle* 3219-3221 — How far the throwster and manufacturers consider each other's profits, *Royle* 3389-3391 — How far bad profits beneficial to the consumer, *Banbury* 4516-4525 — Trade has not flourished since fair profits ceased to be obtained, *Banbury* 4526 — Reduction of profits and labour by previous reduction of duties, *Willmott* 4740-4744 — On what returns profits are calculated, *Gibson* 5006-5011; *Stone* 6334-6338 — Profits of manufacturer and wages determined by competition, *Gibson* 5049 — Comparison of profits in silk and other businesses, *Caffi* 7116, 7117 — Profits are not greater upon the sale of French than English goods, but losses are, *Dillon* 7696.

See also *Competition. Consumers. France. Silk Trade*, 2.

Prohibition. Period at which prohibition took place. *Hume* 43-45; *Banbury* 4409, 4410

— Prohibition more effectual against smuggling than a protecting duty, *Hume* 66, 68; *Cheeper* 888-896 — Beneficial effects of prohibition, *Brunskill* 122; *Jacombs* 1724-1737; *Cox* 2085; *Banbury* 4412-4414, 4602-4605 — Prohibition the only remedy for the distress, *Brunskill* 124; *Ratliff* 1844-1846; *Banbury* 4592-4601 — Who would be benefited by increased price in the event of a return to the prohibitory system, *Brunskill* 189-194, 486 — Prohibition more necessary than reducing the duty on foreign thrown silk, *Brunskill* 364-366 — Spitalfields' trade would revive if prohibition granted, *Brunskill* 236 — In the event of prohibition there would be an increase of machinery, *Brunskill* 122, 239-241; *Ratliff* 1879; *Merry* 2527 — Bad effects upon trade from opening the ports in 1824, *Brunskill* 457-463 — Manufacturers who thought well of the alteration in 1826 that have changed their opinion since, and left the trade, *Brunskill* 532-536 — Prohibition the only remedy against smuggling fancy articles, *Brunskill* 557, 734-736; *Ratliff* 1910-1916, 1930, 1931, 1934-1940 — In the event of prohibition, the standard of taste would cease to be regulated by France, *Cheeper* 862-865 — Every description of ribbon should be prohibited, *Ratliff* 1917 — Prohibition would place France in the same situation England now is with regard to the ribbon trade, *Ratliff* 1918-1925 — Prohibition should extend to all fancy French ribbons, *Cox* 2199-2195 — Under a prohibition the English would go to every expense to produce goods equal to the French, *Merry* 2496, 2497 — As many novelties could be produced and as many designers employed as in France, *Merry* 2548 — Business was increasing and could have been carried on profitably under a prohibition, *Merry* 2549.

Sufficient capacity in this country to supply any quantity that might be required, *Merry* 2533 — Proportion French goods bore to English during prohibition, how obtained, and difficulty and risk in selling, *Stephens* 2654-2666 — It might benefit, *Royle* 3068-3071 — Bad effects of repealing Prohibitory Acts, *Banbury* 4411 — Increase of manufactures and employment of operatives under prohibitory laws, *Banbury* 4414 — Injury to capital invested in mills and machinery in consequence of the repeal of the prohibitory laws, *Banbury* 4421-4423, 4425 — Up to the period of the repeal the

Prohibition—continued.

the silk trade progressively improving, *Banbury* 4424—Benefits derived from former prohibition, *Hall* 6748, 6749—How far prohibition would protect British manufacture *Bottrell* 7950—Prohibiting French goods would weaken the stimulus for improvement in English manufacture, *Sedgwick* 8043, 8044—Under prohibition English goods might be made from French patterns, *Sedgwick* 8079—Prohibition would be a benefit under severe laws against smuggling and approximation of price between French and English goods, *Sedgwick* 8148-8156—In the event of prohibition there is sufficient competition in England for supply of goods as to price, but not taste, *Sedgwick* 8192-8194.

Exclusion of foreign manufactured silks the only effectual counteraction for the advantages possessed by France, *Ballance* 8416; *Grout* 10321; *Bridges* 10487, 10488; *Bennett* 10722, 10776, 10777; *Graham* 12756-12762—Why, in the event of prohibition, the English would not lose in point of taste and fashion, or pay higher price, *Ballance* 8473, 8474—Moderate protection, not prohibition, necessary to the English manufacturer, *Harter* 9229, 9230—Prohibition not desirable, *Harter* 9231—Entire prohibition most beneficial, but plain goods might be admitted under proper Custom House regulations, *Bennett* 10772—Distress attributed to the repeal of the protecting laws which existed prior to 1824, *Poyton* 10982—Contrary result of the repeal of those laws from that held out by Government, *Poyton* 10983-10985—Statement of reasons for opposing repeal of those laws, *Poyton* 10986—Prohibition should have continued some years after duty taken off raw silk, *Moore* 11157—State of the silk trade, 1827-1831, *Graham* 12763-12768.

Protections. See *Cotton*. *Silk Trade*.

Protecting Duty. See *Duty on Importation*. *Smuggling*.

Prout, John, (Analysis of his Evidence.) Silk weaver at Macclesfield, 11635, 11636—Injury to weavers from introduction of foreign wrought silk, 11638—Improvement in the silk trade at Macclesfield, 1809-1824, but not since 1825, 11639-11641—Decrease in the amount of wages paid upon the manufacture of coarse goods over the fine goods, 11642, 11643—Fancy trade has declined not from the change of fashion, but the introduction of foreign goods, 11644, 11645—State of trade in 1824 and 1825, 11646—Statement of the price of labour in Macclesfield 1810, 1819, 1825 and 1832, and examination thereupon, 11647-11655, 11661-11663—Distress and demoralization of the weavers through the alteration in the laws, 11656, 11659, 11670.

Competition with cotton manufacturers did not reduce wages of weavers, 11657—Depression of trade in 1826 and 1829, 11658—Protecting duty necessary for the silk trade, 11659, 11660—Tabular view exhibiting the amount paid for labour in the weaving department of the silk trade of Macclesfield in 1825 and 1832, with average wages, weekly amount and annual loss, 11664—Distress previous to 1825 not permanent, 11665—Disadvantages of removing the duty on foreign thrown silk, 11667, 11668—No new trade has been made at Macclesfield since alteration of the system, and the trade has gradually declined, 11670—Method of manufacture called steaming peculiar to Macclesfield, 11671, 11672—Coarser description of goods made at Macclesfield than formerly, 11673.

Provisions. Price thereof in Italy, *Caffi* 7314-7317—Comparison of price between France and England, *Bowering* 9816, 9817.

Prussia. Increase of import duties into, *Bottrell* 7971.

R.

Ratliff, Cleophas, (Analysis of his Evidence.) Ribbon manufacturer at Coventry, 1830-1832—Quantity of silk dyed in Coventry, 1824, 1825, 1830 and 1831, 1833—Different leading ribbons manufactured at Coventry in 1824-25 and 1830-31, 1834—Distress of the ribbon trade attributed to the great importation of French ribbons, 1835—Quantity of ribbons imported 1831, and calculation of the employment the making them would have given the British manufacturer, 1836—More plain satins at present introduced into England than formerly, 1837, 1838—English manufacturer can produce as good an article as the French, 1839-1843—Prohibition the only means of enabling the English manufacturer to make goods; the abolition of the import duty on foreign silk would not affect him, 1844-1846—Difference in the quantity and quality of silk used in manufacturing the same article in France and England, 1847, 1848—Whether difficulty in distinguishing between French and English goods, 1849-1853—

Ratliff, Cleophas, (Analysis of his Evidence)—continued.

Difficult to distinguish between different English manufacturers' goods, 1852—French silk superior to any other silk grown in the world, 1854, 1878—Advantage of the French in the manufacture of gauze silk from the cost of the material, 1855-1858—How the French prices ascertained, 1859—French have a superior mode of dressing their ribbons, 1860—Gauze trade nearly abandoned in Coventry, 1863—Comparative prices of labour in England and France, 1864, 1865—Great profits of the French manufacturer over the English, 1866-1868—Further advantages of the French over the English, 1869—Difference in the number of pieces of a pattern made in France and England, 1870, 1871—French sell only one pattern to one house in different countries, and thereby lessen the cost of manufacture, 1872—Superiority of the silk and nature of the principle of business in France checks trade at home, 1873, 1874—No reduction in the price of English goods would drive the French out of the market, 1875.

(Second Examination.) Newly introduced expensive machinery not used in consequence of the superior advantages of the French, 1876—Beautiful quality of French silk, 1877, 1878—More machinery would be used under a prohibition, 1879—Jacquard looms have been put up in large quantities in this country, but not lately, 1880, 1881—All silk is prohibited from France, 1882, 1883—Description of foreign silk manufactured and how obtained, 1884, 1885—Some English silk far superior to Italian, 1886, 1887—And for what goods used, 1888—The French chiefly use their own silk in manufacture, 1889-1892—Prejudice in favour of French goods, and advantage they have in consequence, 1893-1898—Switzerland supersedes France in the manufacture of sarsnet ribbons, 1899-1902—The Swiss manufacture from Italian grown silk, 1903—Means of ascertaining the relative prices of labour between Switzerland and England, 1903, 1904—Swiss goods are imported into England, 1905—Comparison of advantages of the French weaver over the English, 1906, 1907—Extent of importation of Piedmont silk into France, 1908, 1909.

Advantages of prohibition in preventing smuggling; it is the only preventative, 1910-1916, 1917-1925, 1930, 1931, 1934-1940—Facilities for smuggling at present, 1926-1929—Proportion of smuggled goods at present used in town and country, 1932, 1933—Smuggling greater now than previous to 1826, 1940-1942—Quantity of foreign goods in the warehouses of dealers at present and during prohibition, 1943, 1944—Greater profit to the dealer on French than English goods, 1945-1947—The question between French and English is one of price as well as fashion, 1948—Consumption of silk in Coventry has increased, but there are fewer pieces made, 1949—Greater distress in Coventry since 1826 than five years previously, 1950-1954—Attributed to French competition, 1955.

Home competition is caused by foreign competition, 1956—Manner imports and exports of this country should be regulated, 1958-1960—Silk cannot be obtained as cheap in England as the French can obtain it at Lyons, 1961—How witness's table of French rates obtained, 1962-1964—Further calculation of average cost of English over French manufacture, 1965-1969—Present rate of wages cannot be diminished, and still support the weaver, 1970-1973—Price of necessities higher in Coventry than in France, 1974—Object of the list of prices of 1831 to make the rate of wages equal and fair, 1975-1979—Present rate of wages not more than sufficient for the bare subsistence of the weaver, and reasons why they should not be departed from, 1980-2015, 2020-2026—The list does not prevent the man of capital from exercising his own judgment with regard to wages, 2016-2018—It secures against bad work, 2019—Decrease in profit since 1826, and how affected by giving higher wages, 2027-2030—Comparison between allowing the price of raw silk to find its level and that of wages, 2031-2039—How far agreements for wages have been departed from since 1816, 2040-2042—Resolution of 1819 as to half pay apprentices, 2043, 2044—Power might be applied to the coarser but not the finer fabrics of silk, 2045-2047.

Raw Silk. See *France*, VIII. *Importation.* *Italy.* *Silk*, VI.

Reading. Description of articles made at Reading are not made at Coventry, *Poole* 1139—Articles that are made at Reading, *Merry* 2599.

Reeling. Improvement in reeling in France, *Doxat* 4079, 4080—Superiority of French silk attributed to superior reeling, *Doxat* 4119-4121—Why the English do not reel as well as the French, *Doxat* 4124—Cost of reeling silk in Italy, *Gibson* 4899-4905—When silk is reeled in Italy, *Gibson* 4934—Not necessary to be acquainted with the reeling of silk to judge of its qualities, *Martin* 5437—Advantage to the Italian throwsters from reeling their own silk, *Martin* 5438, 5439—Silk cannot be distinguished that has been reeled immediately, and that which has had a voyage to England, *Martin* 5552—Examination upon the process of reeling, and employment of reelers in Italy, *Caffi* 7031-7193—Price of reeling and labour in France, *Bowring* 9087-9090—Women and children employed in reeling in France; hours of labour, *Bowring* 9093, 9094.

Rent. See *Cottages*.

Retail

Retail Trade. Account showing loss thereof by admission of French goods, *Merry* 2450-2456, 2545-2547—State of trade among retailers more regular and better at present than for some years, *Baggallay* 7566-7568—Fewer failures among retailers latterly, *Dillon* 7704, 7705—Description of goods sold prior to 1826, *Sedgwick* 7979—Proportion of French and English goods at present sold, *Sedgwick* 7985-7987, 8015; *Stephens* 10619-10634—Retail houses import more than formerly, *Sedgwick* 8196.

See also *Haberdashers*.

Returns. Increase by large houses of the amount of their returns, *Stephens* 2821-2823, 2950-2955, 2969, 2970.

RIBBONS:

1. *Generally.*
2. *Black.*
3. *Cut.*
4. *English.*
5. *Foreign.*
6. *Duty on Importation.*
7. *Distress of the Ribbon Trade.*

1. *Generally.*

Are more worn than formerly, *Jacombs* 1611, 1612; *Cox* 2186—During 1813 and 1814 there were as many pieces of ribbon used, but not of the same description, *Cox* 2294—Uses to which ribbons made by witness applied, *Hall* 6649—Manufacture of narrow goods Italian thrown used therein, and competition therein with Spitalfields, *Harter* 9375-9383—Countries to which narrow goods exported, *Harter* 9444-9447.

2. *Black.*

Only English thrown silk used for making black ribbons, *Hall* 6636, 6637, 6640—Effect of repeal of import duty on value of black ribbons, *Hall* 6638.

3. *Cut.*

Increase in the manufacture of cut ribbons, *Clay* 6804-6807—Reasons for the French improving their manufacture thereof, *Clay* 6971-6973.

4. *English.*

Similar description to the foreign are manufactured at Coventry, *Brunskill* 129—Certain ribbons made in England cannot be made equal to the French from their not allowing the material of which they are made to be exported, *Brunskill* 647-654—In what cases French patterns are copied, *Brunskill* 655-660—Reason for goods now manufacturing at Coventry being better than they usually are, *Brunskill* 680-683—Time that would be taken for preparing loom, and expense of setting pattern, and manufacturing goods in imitation of the French goods, *Brunskill* 689, 690, 727-733; *Smith* 1323-1335; *Jacombs* 1610—Patterns here are cheaper and as good as the French, but the taste is in favour of the French, *Brunskill* 739-746—There were more orders for ribbons formerly than at present, *Brunskill* 750-753—Description of English goods that were made superior than at present before foreign goods allowed to be imported, *Cheeper* 933-935—No improvement in the manufacture since the introduction of foreign manufactured ribbons, *Poole* 947, 948, 1002, 1003—It has been checked thereby, *Jacombs* 1599, 1600—Ribbons can be made as good in Coventry as in France, *Goode* 1251—Jacquard looms make the article better in point of taste but not quality, *Smith* 1317-1320—Necessity for using Jacquard looms to imitate French patterns, *Smith* 1321, 1322—State of trade in different years since 1820, *Jacombs* 1650-1656—Depression in the trade generally, *Jacombs* 1692, 1693—Examination upon the cost of labour and material in the manufacture, *Jacombs* 1701-1715.

Few houses willing to engage for English goods, *Jacombs* 1762—Seldom English articles made cheaper from the cheapness of French living, *Jacombs* 1821—Different leading ribbons manufactured at Coventry, 1824-5 and 1830-31, *Ratliff* 1834—With same advantages, the English manufacturer can produce as good an article as the French, *Ratliff* 1839-1843—Production of some patterns equal to the French made in the looms of Mr. Henry Atkins, of Coventry, *Ratliff* 1841-1843—Difficult to distinguish between different English manufacturers' goods, *Ratliff* 1852—There could be sufficient quantity and variety of goods manufactured at home for supply or the home market, *Cox* 2145—Loss by manufacturing goods upon a guess of the French patterns, in the event of any variation, *Cox* 2150-2152—Orders are now given in France that used to be given in England, *Cox* 2153, 2154—Extent of goods at present made to order in Coventry, *Cox* 2155-2157—Superior articles made, 1822-1825, than since, *Cox* 2206, 2207, 2211—English goods are not sold as French, they are not so good or so cheap, *Stephens* 2703-2707—French goods sometimes sold as English when English are asked for, *Stephens* 2708—If there were equal perfection in English goods, French would have preference, *Stephens* 2709—Reason for not manufacturing coloured ribbons, *Hall* 6642—English narrow ribbons dearer than the French, *Baggallay* 7362, 7363

RIBBONS—continued.

4. *English*—continued.

—Inferiority of English from not being able to get French silk, *Baggallay* 7364, 7365.

Decrease in the quantity of plain satin ribbons purchased, *Baggallay* 7366–7368—Effect of duty upon the price of French and English ribbons; English cheaper without duty, *Baggallay* 7378–7389—Preference of consumers latterly in favour of English goods, *Baggallay* 7394–7396, 7401–7404—Statement of purchases of English ribbons for five years and nine months, since 1826, *Dillon* 7601—Proportion of purchases of French and English ribbons, *Dillon* 7602–7604—Statement of proportion per 100*l.* of different description of English ribbons, *Dillon* 7615—Proportion of each kind of ribbon purchased in France and England, per 100*l.* *Dillon* 7625–7627—Proportion of ribbons made in France and in England, *Dillon* 7631–7636—Beauty in English ribbons would not carry weight as to their purchase, without knowing the French market, *Sedgwick* 8019—Influence of the French in ribbons over the English market prevents competition by the English manufacturer, *Sedgwick* 8092–8095.

5.—*Foreign*.

Beneficial effects of prohibiting them, *Brunskill* 122, 125–128—Reason for Swiss ribbons not being imported to the same extent as formerly, *Brunskill* 661–663—Statement of the proportion per 100*l.* of whole French trade in ribbons, 1827–1831, *Dillon* 7607—Statement of the proportion per 100*l.* of different descriptions of French ribbons bought, *Dillon* 7613—Report from France with regard to the manufacture of French ribbons, *Dillon* 7746, 7747—Proportion of ribbons now smuggled, *Bottrell* 7818, 7819—French ribbons cheaper than English, *Sedgwick* 7993, 7994—Ribbon trade in France considerable before 1826, *Sedgwick* 8046—Whether proportion of ribbons smuggled greater in broad or narrow, *Sedgwick* 8047–8050—Greater demand for French ribbons during prohibition, from their being a rare article, *Sedgwick* 8051–8055—Comparison of quality between French and English ribbons, and as to price, *Sedgwick* 8057–8061—Increase in the sale of French, and decrease of English ribbons since 1826, *Sedgwick* 8062–8068—Fashionable houses in all parts of the kingdom have the same preference for French ribbons, *Sedgwick* 8077, 8078—Table of the width of French ribbons, *Bowring* 9037—Extent of the manufacture of ribbons by certain houses in France, *Bouillon*, 10191–10193.

6.—*Duty on Importation*.

French ribbons would be imported at 20 per cent. higher duty, *Brunskill* 125–128—Rate of duty upon different descriptions of ribbon, and upon what it depends, *Brunskill* 130–133—Reason why an *ad valorem* duty would not answer, *Brunskill* 134–136—Effect of lowering the present rate of duty to an amount that would prevent inducement to smuggle, *Brunskill* 150—No duty could protect the fancy branch, it being entirely governed by the French fashions, *Brunskill* 374–377; *Jacobs* 1748; *Cox* 2165—Duty on Swiss ribbons, and how collected, *Brunskill* 664–668—Amount per cent. the protecting duty causes the Coventry manufacturer to pay more for his silk, *Brunskill* 704–707; *Cheeper* 778–780.

Amount of duty paid on ribbons imported, in the quarter ended 10th October 1831, *Cheeper* 771–777—How far protecting duty not sufficient for competition with the French, *Jacobs* 1821; *Cox* 2084—Extent of duty that would protect the plain trade, *Cox* 2165–2168—Present duty not a protection for plain goods, *Cox* 2213, 2214—Amount of duty that would prevent smuggling in ribbons, *Stephens* 2759–2762—Manner in which goods are sometimes imported through the Custom House at less than their proper duty, and how to be prevented, *Stephens* 2779–2787, 2973, 2974, 2976, 2981, 2984–2996—Reasons why duty would not prevent smuggling, *Stephens* 2893–2896—Duty on each kind of ribbon imported, *Baggallay* 7407—Duty sufficient on satin and sarsnet ribbons, *Bouillon* 10190, 10194, 10195.

7.—*Distress of the Ribbon Trade*.

Is caused by foreign competition, *Brunskill* 121; *Ratliff* 1835, 1955; *Cox* 2083; *Merry* 2552, 2554–2557—Difference in the causes of the distress in 1817, and at present, *Brunskill* 123—Prohibition the only remedy for it, *Brunskill* 124—Cause of distress at Coventry, 1815–1817, *Poole* 961–963; *Marston* 1393–1396—It is greater now than in 1818, *Poole* 968–979; *Marston* 1393–1396—It is greater since 1826 than five years previously, *Ratliff* 1950–1955—Examination relative to distress from 1815, *Poole* 1153–1164.

See also *Black Goods*. *Duty on Importation*. *Drawback*, 2. *Etienne*, *St. Smuggling*. *Riots*. See *Lyons*. *Wages*.

Roads. Number of weavers now employed upon the roads, and how paid, *Marston* 1502–1505.

Roman States. Reason for want of capital therein, 5387–5393, 5506–5508.

Rowbotham, David, (Analysis of his Evidence.) Silk weaver at Macclesfield, 11720—Previous employment in the cotton trade, and reasons for leaving it for the silk trade, 11722, 11723—Increase of weavers from the cotton trade, 1816–1820, did not hurt the silk

Rowbotham, David, (Analysis of his Evidence)—*continued*.

silk trade or much reduce wages, 11724-11726—Severe distress from reduction of wages, 1829-1831, 11726-11744—Prosperous state of weavers up to 1825, and distressed state since, 11727-11729—Scale of reductions of wages, 1821-1831, 11730—Weavers can obtain more by sweeping the streets than at their work, 11730—Comparative view of prices per ounce obtained by witness for his work, 1823 and 1832, 11731, 11732—Depression of the Lancashire trade, and decline in the fancy trade therein, 11733-11736.

Particular descriptions of goods made at Spitalfields, Coventry and Macclesfield, not carried on at Manchester, 11737—Silk trade in Lancashire of long standing, comparison of prices, 1786, 1796 and 1810, 11738—No ribbon weavers in Lancashire, 11739—Cotton trade have suffered with the silk from the present regulations; only the wealthy have been benefited by the present regulations, 11740—Few cotton weavers can now turn their hand to silk weaving, 11741—Distress attributed to introduction of foreign goods, 11742—Jacquard machine of little use since 1825, 11743—Home competition not the cause of the distress, 11745—Injury by further reducing duty on foreign thrown silk, 11746.

Royle, Vernon, (Analysis of his Evidence.) Silk throwster and manufacturer at Manchester, 3022-3024—Number of throwing mills erected at Manchester since 1819, 3025-3029, 3046-3050—Steam power at present employed in the mills, 3030-3032—Probable quantity of thrown silk that could be produced by them, 3033—Quantity of mills employed in throwing, and quantity in weaving, 3034-3036—Value of the mills, 3037—Looms employed in weaving silk, and silk mixed with other articles, 1819 and 1831, 3038-3045—State of the silk trade, 1819-1830, 3051-3054—Depression in 1831, and how affected by change in the currency, 3055-3058—Effect of taking off the duty on printed cottons on the silk trade, 3059, 3060.

Effect of the appointment of the present Committee on the silk trade, 3061, 3062—Silk trade chiefly home trade, 3063—Proportion of foreign silks thrown, 3064-3066—Present regulations do not require alteration, 3067, 3073-3075, 3199, 3200—Prohibition might benefit, 3068-3071—Duty on foreign thrown silk, 3076—Ruin to the throwsters by taking off the duty, 3077-3088, 3104, 3105—Increased importation thereby, 3077, 3106, 3196—Reason for foreign thrown silk being cheaper than the English, 3084-3087—Throwsters might survive taking off the duty by becoming manufacturers, 3088-3091—Italian throwster would be a greater gainer than the English by taking off the duty, 3092-3094—Plain goods the best branch for throwsters, 3095—How price of foreign silk regulated in England, 3097-3099, 3103—Power of the Italians with regard to manufacture over the English, 3100, 3101—Capital in the silk trade, similar at present to 1826, 3102—Difference in the value of fixed property between a throwster and a manufacturer, 3106-3108—Number of operatives employed by the Manchester mills, 3109—Amount of taxes on materials of throwsters, 3110.

Compensation to throwsters if their trade destroyed, 3111—Comparison of protection between silk throwster and cotton spinner, 3112—Protection by the French to their throwsters, 3113-3115—Protecting duty to the British manufacturer if the trade of throwster destroyed, 3116, 3117—Comparison of the importation of raw and thrown silk, 3118, 3119—Alleged distress of the throwsters, 3120—Reduction of men and wages in cases of pressure, 3121, 3122—Letter by witness to the Board of Trade, 3123—Effect of lists for wages, there are none at Manchester, 3124-3126—Regulation of wages in Italy, 3127-3131—Exportation of English machinery into Lombardy, 3132, 3133—Italians do not keep their best raw silks at home, 3134, 3135—Applications for leave to export machinery, 3136-3142—How far other countries protect their manufacturers more than the English 3144—Injurious tendency of factories regulation Bills, 3145-3149, 3175-3177—Importation of thrown silk does not show prosperity of the silk trade, 3150.

Comparison of English with French and Italian machinery, 3151-3159—Advantages of Italian and French in throwing and wages, 3160, 3161, 3251-3253—Wages in Italy, 3164-3170, 3250—Charge per pound for throwing, 3162, 3163, 3171-3174—Rate of duty should be settled, 3178—Importation of Italian thrown silk, and duty thereon, 3179-3187—Price of Italian thrown silk, 3188-3195—English thrown silk equal to the Italian, 3197, 3198—Peculiarities of the Manchester trade, 3201, 3202—Cause of increase in the silk trade, 3203—Consumption of Bengal and China silk, 3204—Evils of the drawback, 3205-3207, 3211-3214—Comparison of quality of Manchester and Spitalfields goods, 3208-3210—Increased demand for goods could be met at Manchester, 3215—Degree of distress at present, 3216-3218.

Effect of competition on profits, 3219-3221—Effects of alterations in the law upon the silk trade in Manchester, 3222, 3223—Few failures therein, 3224, 3225—Complaints from Manchester have been instigated from other quarters, 3226-3229—No distress at Manchester, 3230-3232—Unsteadiness of trade since July 1830, how caused by the bank circulation, 3233-3238—Account of promissory notes and post bills of the Bank, in circulation, every week from 10 April 1830 to 7 January 1832, 3235—Rate of wages, and how affected by the cotton trade, 3239-3243, 3247-3249—Account of poor's rates in Manchester, 1826-1832, 3244—French goods have not interfered with the Manchester trade, 3245, 3246—Examination upon memorial to the Board of Trade, and

Royle, Vernon, (Analysis of his Evidence)—*continued*.

petition to the House of Commons, as to the state of the silk trade at Manchester, 3254-3262—Copy Memorial, 3261—Copy Petition, 3262—Cause of witness's letter to the Board of Trade, 3263.

(Second Examination.) Number of looms at Manchester, and on what employed, 3264-3267—Increase of the silk trade, and how affected by change in the law, 3269-3272—Admission of foreign silks has rather done good than harm, 3273—Medical certificate of the cleanliness and healthiness of witness's mills, 3274, 3275—Disadvantage to the English throwster by taking off the duty on Italian thrown silk, 3276-3279—Evils of further reduction, 3280—Possible to manufacture fancy goods by power, 3281-3283—Power of the mills at present at work in Manchester, 3284-3289—Certain mills at Manchester will be worked when finished, 3291, 3292—Silk thrown at Manchester is worked up at Coventry and Spitalfields, 3293.

Number of persons dependent upon witness's mills for employment, 3294-3305—Necessity for exporting machinery and labour if duty on foreign silk removed, 3306-3313—Amount of drawback, by whom received, and for what goods, 3314-3323—Effect of withdrawing the drawback, 3324-3327—Weavers would be benefited by taking off the import duty, 3328, 3329—Tendency of the cotton and silk trade to equalize labour, 3330-3336—Effect of reducing duty on foreign thrown silk on weavers and throwsters, 3337-3356—Drawback, a bonus on the use of Bengal and China silk, 3357, 3358—Necessity for a higher protecting duty for the English weaver and throwster than the French, 3359-3388—How far the throwster and manufacturer consider each others profits, 3389-3391.

Whether English or Italian thrown silk regulate the price of each other, 3392-3398—Advantage to the French manufacturer from French silk, not being allowed to be exported, 3399-3407—Difference in the manufacture between Manchester and Spitalfields, 3408-3418—British weaver should not be dependent upon the Italian throwster, 3420—Reasons for extending mills and increasing machinery, 3421-3425—Same names signed to both Memorial and Petition, 3426, 3427—Depressed state of trade in January last, 3428-3432—Witness has commenced weaving, 3433—Reduction of wages if duty on foreign thrown silk taken off, 3435, 3436—Knowledge of intention of removing duty would have prevented increase of machinery, 3437—Reasons for witness's letter to the Board of Trade, 3438.

Russia. Increase of silk manufacture in Russia since 1820, *Bottrell* 7896, 7897—Increase of duties upon importation into Russia, *Bottrell* 7898-7900.

See also *Duty on Importation*.

S.

Sardinia. France a large customer to the King of Sardinia, *Brockwell* 3457.

Sarsnets. Quantity of plain sarsnets made at Coventry of different kinds at one time, with rate of wages, *Baggallay* 7453-7456.

See also *Avignon*.

Satins. Importation of satins from France, *Brunskill* 634, 635—How foreign figured satins can be distinguished from English, *Marston* 1458-1460—There are satin figures now making, but of a different style and quality, *Perkins* 1570—More plain satins at present introduced into England than formerly, *Ratliff* 1837, 1838—No difficulty in distinguishing between French and English plain satins, *Ratliff* 1849-1853—Making plain satins given up from its being a bad trade, *Merry* 2590—Manufacture of satins principally confined to Spitalfields, *Gibson* 4823, 4824—Where manufactured, *Stone* 5772-5774—Duty on fancy satins which are now got from Coventry, *Baggallay* 7391-7393—Duty necessary to equalize the prices of French and English satins, *Dillon* 7690—Use of satins supplanted by the use of gros de Naples, *Wadden* 10141.

Savings Banks have little interest in France, *Bowring* 8931.

Sawer, Thomas, (Analysis of his Evidence.) Prevalence of the taste for French goods in the country towns, 2356—Sale of certain machinery by witness at a sacrifice, 2358-2366—Offer of sale of certain machinery at Stratford-le-Bow, but no purchaser; cost price thereof, 2367-2372—Taste in favour of French gauzes; comparative price thereof, 2373-2378—A-la-bar loom at Coggeshall erected by a French artist; unsuccessful attempt to make satins therein, 2379-2387—Witness's machinery at Coventry superintended by a servant, 2388, 2389—Which plan formerly succeeded, 2392-2394—There was always competition; the greatest competitor is the foreigner, 2395, 2396—Destruction of trade from the introduction of French goods, 2397-2399.

Expected advantages by the introduction of the a-la-bar loom, but which were not realized, 2400-2409—A great deal of excellent work done by the hand looms, 2410, 2411—Ready sale for goods formerly in the country trade, 2412-2414—Home competition gives a fair security to the public, and will allow a fair profit, 2415-2418—Manner in which foreign competition obstructs business, 2419—Disadvantages of the introduction of foreign goods when the market could be supplied at home, 2420-2426—Reason for the French fancy goods being superior to the English, 2427, 2428—Rivalry dare not be attempted, 2429-2431—How far reduction of duties has had the effect of putting down smuggling, 2432, 2433—Power loom does not answer, 2434—Description of silk used in manufacture, 2435-2440—Duty on foreign thrown silk has

Sawer, Thomas, (Analysis of his Evidence)—*continued*.

has no effect upon the greater proportion used at Coventry, 2441—Necessity for encouraging the throwing Italian silk here, 2442, 2445.

Schools. Establishment thereof in France for the encouragement of the arts, *Bowring* 8806.

Schwabe, Louis, (Analysis of his Evidence.) Silk manufacturer at Manchester, 9828—

—Patterns produced of witness's manufacture, and statement in explanation thereof, 9829-9836—Speed by power looms would be injurious to the silk, 9838—Price and quality of Bengal and China silk for making certain articles, 9841-9845—Little difficulty in cotton weavers being employed in silk weaving, 9846-9852—Examination as to the number of looms in Manchester, and in witness's employ, with witness's declining to answer as to his own, 9853-9864—Market for Bengal silk open to the French as well as the English, 9865, 9866—How far it is cheaper than Italian, 9867-9870—Examination upon certain patterns produced, their sale or export, and prices of similar articles at East India Company's sales, 9871-9886—Reasons for not doing a larger business with the London upholsterers from long credit taken by them, and prejudice raised by Spitalfields manufacturers against Manchester goods, 9887-9920—Articles not manufactured better at Spitalfields than Manchester, 9921-9923—Further examination as to credit, the production of similar goods by Spitalfields weavers, and refusal of witness to have his goods examined by Spitalfields manufacturers, 9924-9935.

Scotch Gauzes. They have not interfered with the trade of Spitalfields, though a considerable quantity are sold, *Stephens* 10578-10580.

Scott, John, (Analysis of his Evidence.) Silk weaver at Manchester, and signed Petition to the House of Commons, 11847-11850—Distressed state of the Dublin silk trade from

removing duties on importation of English goods into Ireland, 11851-11854—Prosperous state of weavers at Manchester to 1826, and distress since, 11855-11861—

Weavers know each other's distress better than master manufacturers can, 11862—No difference of opinion among the weavers as to the cause of their distress, 11863, 11864—

Number of looms at Manchester, 1824-1826, and at present, 11865-11871—Commencement of union among Manchester weavers in 1826, and manner of conducting it, 11871-11873—

Examination against the increase of looms in Manchester since 1826 shown by the quantity of silk worked up, 11874, 11875—Reasons for the handkerchief branch becoming nearly extinct, 11875-11877—

Description of goods formerly made in Manchester for which gros de Naples have been substituted, 11878-11880—

Why weavers have a better knowledge of the quality of silk working up than masters, 11881—Description of goods now making at Manchester, 11882-11884, 11890-11895—

Ineffectual attempt by Mr. Royle to weave by steam, 11885-11889.

Sedgwick, William, (Analysis of his Evidence.) Partner in the house of Howell & James, 7972-7976—

Description of goods sold prior to 1826, 7979—Extent of smuggling prior to 1826 in rich goods, 7980-7984, 8020-8023—Proportion of French and English goods at present sold, 7985-7987, 8015—

Increase of sale in English broad fancy goods, 7988, 7989—Principally manufactured at Spitalfields, 7990—But can be manufactured at Manchester cheaper, 7991—

From difference in price of labour, 7992—French ribbons cheaper than English, 7993, 7994—

Dependence of the English market upon the French fashion, 7995-7998, 8071, 8072—Striped gauzes at Coventry equal to the French, but not figured, 8000—

Profit of Manchester manufacturers very small, 8002—Inferiority of Coventry ribbons is in taste, 8004—Improvement in Coventry manufactures, 8005—

Improvement in English manufactures, from introduction of French goods, 8006-8008.

French patterns sent to Coventry to be manufactured prior to 1826, 8009, 8017, 8018—Manchester manufactures generally inferior in beauty to Spitalfields, but some of

them equal their prices, 8010-8014, 8024-8029—Beauty in English ribbons would not carry weight as to their purchase, without knowing the French market, 8019—

How far cost of smuggling less now than prior to 1826, 8030, 8031—Increase of smuggling, from goods being cheaper than those paying duty, 8032, 8033—

Difficulty to say rate of duty that would put an end to smuggling, 8034—Tendency of English competition more to render goods cheap than to improve them, 8034-8039—

Quantity and description of goods manufactured at Manchester, 8040-8042—Prohibiting French goods would weaken the stimulus for improvement in English manufacturers, 8043, 8044—

Ribbon trade in France was considerable before 1826, 8046—Whether proportion of ribbons smuggled greater in broad or narrow, 8047-8050—

Greater demand for French ribbons during prohibition, from their being a rare article, 8051-8055—How far French patterns could be obtained, to give taste to English manufacture, in the event of prohibition, 8056.

Comparison of quality between French and English ribbons, and as to price, 8057-8061—Increase in the sale of French and decrease of English ribbons since 1826, 8062-8068—

Figured lutestrings only used in the common trade, 8069, 8070—Smuggling previous to 1826 only sufficient to stimulate and improve British exertion, 8073, 8074—

Danger of dealing in smuggled goods under prohibition, and how far resorted to by respectable houses, 8075, 8076—Fashionable houses in all parts of the kingdom have

the same preference for French ribbons, 8077, 8078—Under prohibition, English goods might be made from French patterns, 8079—Proportion of different description of goods imported from France, 8080-8090—

Importation of fancy broad silks from France 678.

Sedgwick, William, (Analysis of his Evidence)—continued.

France do not much interfere with English broad silk manufacture, 8091—Influence of the French in ribbons over the English market prevents competition by the English manufacturer, 8092-8095—Feeling in favour of English manufacturers at present, 8096, 8097—Some English fancy goods equal to the French, 8098-8102—Price not so much an object with higher customers as having first-rate goods, 8103-8106—If fashion in France changed against gauze ribbons, the prevailing fashion would not have the same superiority in the English market the gauze now have, 8017-8019—Preference in favour of English manufacture, from improvement therein, 8110-8116—British manufacturers should be protected by goods being stamped and by a 20*l.* licence, to prevent French agents hawking goods, 8117-8119, 8169-8174—Orders for fancy articles being given to particular English houses will prevent French goods entirely superseding the sale of those orders, 8120-8130—Silk more valuable before 1826 than at present, 8131, 8132—How far rich goods manufactured in Spitalfields now, not much by orders, 8133-8145—When orders formerly given for spring trade, 8146—No orders given to Coventry at present, 8147.

Prohibition would be a benefit under severe laws against smuggling and approximation of price between French and English goods, 8148-8156—Orders now given for French fancy ribbons, 8157—Orders formerly given for English fancy ribbons and broad goods, 8159, 8160—Impossible for fashionable houses to sell goods opposed to the style fashionable in France, 8161-8164—Orders for English goods given later now than formerly, to ascertain what the French are likely to produce, 8165, 8166—Why no complaint of want of taste in English manufacture previous to 1826, 8168.

Reduction of duty would not prevent smuggling; rate of smuggling, 8175-8189—French regulate the fashion in all parts of Europe, 8190—Improvement of English taste latterly, from communication with the Continent, 8191—In the event of prohibition, there is sufficient competition in England for supply of goods as to price, but not taste, 8192-8194—Articles made exclusively for Howell & James's house, 8195—Retail houses import more than formerly, 8196—West end large houses do not deal in job ribbons, 8197, 8199, 8200—Method of ordering goods in France, 8198—Smuggling exists to a considerable extent, 8201—French goods can frequently be bought cheaper in London than imported, 8202, 8203—French job goods find their way into the English market at prices at which the English manufacturer cannot compete with them, 8204, 8205.

Sewing silk, from whence exported, *Heath* 5241-5243—Reason why English sewing silk not exported, *Harter* 9285-9288—It could be exported, if drawback allowed upon it, *Harter* 9289-9291—Why it cannot be manufactured so cheap in England as in Italy, *Harter* 9292, 9293—Its manufacture has increased, *Moore* 11116-11118.

Sherborne, increase of poor's rates therein, *Willmott* 4672-4679, 4724—Amount of assessments for poor rate, 1816-1832, *Willmott* 4679—Amount of population, no increase therein, *Willmott* 4680, 4681—What number of hands employed belong to the parish, *Willmott* 4682-4684.

Shilton Parish. Amount of Poor Rates collected in the Parish of Shilton, in the County of Warwick; with the Number of Levies, and Amount collected in each year, 1815-1832, and the Gross Amount of all Property assessed, *App.* p. 928.

I. Consumption of.

How far consumption of silk will tend to show the beneficial employment of the operative, *Poole* 1186-1191—Comparison of consumption in periods of five years 1816-1830, *Doxat* 4046—As compared with cotton, *Doxat* 4087—Comparative view of the quantities of Italian thrown and raw silk consumed, 1815-1831, *Doxat* 4131—How far removing duty on thrown silk would increase consumption, *Gibson* 5071-5073—Greater consumption of silk now than formerly, *Poole* 1131; *Merry* 2537, 2558; *Stone*

SILK—continued.

I. *Consumption of*—continued.

Stone 6404, 6405; Clay 6962; Bennett 10729—Consumption of richer silks in England has increased, but is supplied from France and not from Manchester, *Ballance* 8391–8393, 8409—Increase of consumption on the Continent in a greater ratio than in England, *Harter* 9313—Increase of consumption in England, 1821–1825, *Bowring* 9707, 9708—Consumption of silk 1824 and 1825, and since, *Moore* 11153–11156—Annual consumption of silk prior to and since 1826, showing decreased consumption in the latter period, *Brocklehurst* 11338—Increased consumption of silk goods, but for the interference of the French, *Brocklehurst* 11339—If consumption of silk has increased since 1826, the goods manufactured have been of an inferior quality, *Brunskill* 164–170, 444–446; *Poole* 1131–1134; *Ratliff* 1949; *Brocklehurst* 11352–11354—Increase in the use of silk goods in this country, and falling off in importation of raw and thrown, *Moore* 12087.
Papers laid before the Committee.

Comparative View of the Quantities of Italian Thrown Silks, and of Italian Raw Silks consumed in this Country 1815–17 to 1829–31, *Evidence*, p. 227.

Minute relative to throwster's work, showing the consumption of raw silks of all descriptions in the years 1824–25, and in the years 1826–31, dissected and computed into one standard, and compared with regard to the rates of labour and profit they have afforded to the throwster; also remarks thereon, *Evidence*, p. 224.

See also *Bengal and China Silk*. *Coventry*. *France*, IV. *Manchester*. *Spitalfields*.

II. *Quality of*.

Qualities of silks imported into England, France and Switzerland, *Doxat* 4090–4092—Comparative quality of silk imported into England and other countries, *Doxat* 4104–4110—Comparative statement of the quality of silk used in England and France, *Doxat* 4111, 4112—Coarse goods require a mixture of fine with them, *Doxat* 4115—Quality of silk imported from Italy, *Gibson* 4853, 4854; *Heath* 5250–5254—Different sizes of silk, but of the same description, *Heath* 5225—Degree of improvement in Italian silk, and from what parts, *Heath* 5325–5327—Not necessary to be acquainted with the reeling silk to judge of its qualities, *Martin* 5437—Countries to which the best raw and thrown silks are sent, and in what proportions, *Martin* 5496—Proportion of good silk imported, *Stone* 6436–6440—Districts where Italian plan of throwing is understood produce better raw than those where they are ignorant of it, *Stone* 6444—Best thrown silks of Italy are better than the generality of English thrown, *Stone* 6450–6452—Opinion as to town and country trade as to sales of rich or coarse goods, *Dillon* 7671–7678—Manufacture of richer silks abandoned since 1826, *Ballance* 8388–8390—Scarcity of fine silk for throwing at present, *Brocklehurst* 11381—Description of silk used in manufacture now and formerly, *Kelly* 11845.

See also *France*, VII.

Papers laid before the Committee.

Minute relative to the degrees of fineness of the various descriptions of silks on which our manufacturers have worked during the last six years, 1826–1831, *Evidence*, p. 221.

III. *Value*.

Average value per lb. of silk used at Coventry, *Cox* 2293—Knowledge of silk difficult to be acquired, *Heath* 5682–5684—Value of silk ascertained from examination, and not from marks on bales, *Heath* 5708—Silk more valuable before 1826 than at present, *Sedgwick* 8131, 8132—How long assaying machine for the trial of silk has been known in this country, *Moore* 11293, 11294.

See also *France*, VII.

IV. *Broad*.

Number of looms employed and wages paid in Spitalfields 1814–1827, in the manufacture of broad silks, *Cox* 2320–2327—Discontinued in 1827 from being superseded by the French fancy goods, *Cox* 2328—Manufacture of Manchester, or in any other part of England did not interfere with that branch, *Cox* 2329–2331—Description of goods made, *Cox* 2332, 2333—French goods of that description are not intrinsically so good as those made here formerly, *Cox* 2334–2337—Broad goods imported from France, *Gibson* 5067, 5068—Manchester and Spitalfields shut out the French at present in the manufacture of broad silks, *Baggallay* 7462–7469—Duty on French broad silks, *Baggallay* 7470—How far they are smuggled, *Baggallay* 7471, 7472—Increase in the purchase of English broad silks, and from what parts since the admission of the French, *Dillon* 7637, 7638—Proportionate value of French broad silks smuggled now and before 1826, *Bottrell* 7817—Broad goods of France come into competition with Spitalfields, *Bottrell* 7917–7920—Increase of sale in English broad fancy goods, *Sedgwick* 7988, 7989—Principally manufactured at Spitalfields, *Sedgwick* 7990—But can be manufactured at Manchester cheaper, *Sedgwick* 7991—From difference in the price of labour, *Sedgwick* 7992—Importation of fancy broad silks from France do not much interfere with English broad silk manufacture, *Sedgwick* 8091—Smuggling plain broad goods has declined latterly, *Menetrier* 8314, 8315—English broad silks are prohibited into France, *Bouillon* 10229.

See also *Exportation*. *Spitalfields*.

SILK—continued.

V. Foreign.

Description of foreign silk used at Spitalfields and Coventry in the manufacture, *Brunskill* 546-551, 691-702—French raw silk superior to any other, *Brunskill*, 670-672—Proportion of foreign silk consumed in English manufacture, *Jacombs* 1738-1741; *Cox* 2099, 2100, 2248-2257; *Stone* 5637—Description of foreign silk manufactured, and how obtained, *Ratliff* 1884, 1885; *Sawer* 2435-2440—Proportion of foreign silk thrown, *Royle* 3064-3066—How price of foreign silk regulated in England *Royle* 3097-3099, 3103—For what articles foreign silks used, *Stone* 5638, 5639.

VI. Raw.

Comparative importation of raw and thrown silk, *Royle* 3118, 3119—Italians do not keep their best raw silks at home, *Royle* 3134, 3135—England hitherto the largest customer to Italy for raw silk, *Brockwell* 3462—Importation of Italian raw silk diminishing, *Brockwell* 3463-3468—How far the price of raw silk can be maintained in England, *Brockwell* 3560-3562—How far improvement has taken place in the quality of Italian raw silk imported, *Brockwell* 3675-3679—Cost thereof, *Swift* 3855—Injury to Italian raw silks in their transit from Italy, *Swift* 3914-3922; *Ward* 3988-3989—Inducement of profit to the Italian to send his raw silk here, *Ward* 4028—Advantage of low duties on importation of raw, and high duties on importation of thrown, *Doxat* 4040—How price of raw material would be affected thereby, *Doxat* 4041-4043—Description of raw silk that fetches the highest price in London at present, *Doxat* 4116-4118—Estimate of the quantity of raw silk consumed in England, 1824-5 and 1826-1831, *Doxat* 4125—Import duties and charges upon raw silk into Lyons and London, *Doxat* 4208-4213—How far the importation of French raw silk would be beneficial, *Doxat* 4291-4295; *Banbury* 4598-4600—Italian raw as good as French, if that cannot be obtained, *Banbury* 4623-4634, 4639—Comparative view of the market price at London of certain raw silks, 1824-1832, *Doxat* 4397—Account of the progressive variation of duty on raw silk, 1660-1786, and from 1784-1825, *Banbury* 4420.

More profitable to the Italian to import raw, *Gibson* 4913—Why causes which induce the importation of thrown will not act upon raw, *Gibson* 4982, 4983—More raw than thrown silk imported from Italy during the last two years, *Gibson* 5113, 5114—England the principal mart for the importation of raw silk of Italy, *Heath* 5313—Particular sized raw silks of Italy that sell high in England, *Martin* 5505—Improvement in Italian raw silk, and to what attributed, *Stone* 6164-6170—Necessity for a supply of Italian raw silk, *Stone* 6238—Necessity for having a good supply of raw silk for throwing, *Hall* 6539-6544—Raw silk in Italy higher than thrown, *Caffi* 7291-7293—Custom House returns of raw silk, 1816-1826, *Ballance* 8357-8359—Not part of the business of the Trade Association to get the duties on raw silk lowered, *Ballance* 8636—Cause of the difficulty in getting the best description of Italian raw silk, *Ballance* 8677-8682—Whence the supply of raw silk derived, *Harter* 9232—Increase in the importation of raw silk from all parts, 1831 over 1823, *Harter* 9312—Improvement in the quality of French and Italian raw imported since removal of prohibition, *Bowring* 9651-9653—Price of French and Italian raws, *Wadden* 10132, 10133.

Necessity for encouraging the importation of good raw silk, *Bridges*, 10437, 10438—Increase in the importation of raw silk since 1823 caused by the high duty on thrown, *Moore* 11114, 11115—Importation of Italian raw previous to and since 1824, *Moore* 11119-11122—Advantages of reducing duty on the raw material, *Moore* 11220, 11221—Less supply of good Italian raw silk now than previous to reduction of duties, from inducement to the Italian throwster to send more thrown, *Moore* 11223-11225—Necessity for encouraging importation of raw over thrown silk, *Moore* 11264—Necessity for Italian silk in working upon Bengal and China silk, *Moore* 11307, 11308—Decrease in consumption of Italian raw, 1824-1831, *Brocklehurst* 11357—Necessity for getting raw silk from France at the same duty as upon Italian importation, *Johnson* 11633, 11634.

Papers laid before the Committee.

Return of all Raw and Waste Silk imported and entered for home consumption in each year, 1814-1832; distinguishing from whence, and Amount of Duty, *App.* p. 918.

An Account of the several kinds of Silk imported; distinguishing the Quantity of Raw from Italy, the Levant, Bengal and China; also of Thrown, distinguishing Organzine from Trams and Singles, from the same places, in each of the years 1830-1831, *App.* p. 922.

Various descriptions of Raw and Thrown Silks, and Waste Knubs and Husks, imported 1814-1831, separated and computed into one standard; all balanced by the Parliamentary Return of Quantities, Duty paid, *App.* p. 932.

Comparative view of the Quantities of Italian Thrown Silks, and of Italian Raw Silks, consumed in this country, 1815-1831, *Evidence*, p. 227.

Minute relative to Throwsters' work; showing the consumption of Raw Silks of all descriptions in the years 1824-25, and in the years 1826-31, dissected and computed into one standard, and compared with regard to the rates of labour and profit they have afforded the Throwster; also remarks thereon, *Evidence*, p. 224.

Comparative

1. *Generally.*

2. *Duty on Importation.*

i. *Generally.*

ii. *Disadvantage of reducing.*

iii. *Necessity for increasing.*

3. *Prices of throwing and Thrown Silk.*

1. *Generally.*

Quantity of British and foreign thrown silk consumed at Coventry and Spitalfields, *Brunskill* 367-370; *Doxat* 4219-4224; *Graham* 12729-12737—Comparative quality of different foreign thrown silks and English thrown, *Brunskill* 371-373, 504-511; *Ratliff* 1886-1888; *Cox* 2258-2266, 2271; *Royle* 3197, 3198; *Gibson* 4848; *Swift* 8928; *Hall* 6478-6480, 6507-6509, 6516, 6517; *Bowring* 9105; *Wadden* 10058; *Bridges* 10427-10436; *Bennett* 10790; *Moore* 11164, 11165; *Wright* 11766, 11767—Best thrown silk is used for finer purposes, *Cox* 2261; *Swift* 3867—In what the superiority in throwing consists, *Cox* 2267—Not much improvement in the quality of British thrown silk since 1823, *Cox* 2268, 2269—Improvements in English thrown, and to what attributed, *Stone* 6161-6163—Duty on foreign thrown silk has no effect upon the greater proportion used at Coventry, *Sawer* 2441—Necessity for encouraging the throwing Italian silk here, *Sawer* 2442, 2445; *Banbury* 4456; *Ballance* 8658-8663, 8686, 8687—Proportion of foreign silk thrown, *Royle* 3064-3066.

Different style of thrown silk in each country, *Brockwell* 3616—Importation and consumption of foreign thrown silk and duty, 1819-1831, *Brockwell* 3469, 3470, 3477-3482, 3627-3636—How the importation of thrown silk has been checked, *Brockwell*, 3668-3675—Reason for small increase in the importation, *Ward* 4025—Variation in the importation of thrown silk at different periods since 1765, and causes, *Doxat* 4134-4140—How far certain natural and political causes have affected import of thrown silk into England, *Doxat* 4323-4325—Expense of importing silk from Milan, *Banbury* 4472-4474—Reason for importation of thrown silk at present, *Banbury* 4484-4488—Importation decreasing at present, *Banbury* 4493-4501—Italian thrown silk not improved, *Gibson* 4849—Reasons for Italian increasing his importation at a loss, *Gibson* 4952-4954, 4960—Descriptions of thrown silk imported from Italy, and to what uses applied, *Gibson* 5061-5066—Comparison of importation of Italian thrown and raw silk, *Gibson* 5113-5116; *Martin* 5527-5529—Proportion of home thrown silk to meet it, *Gibson* 5117, 5126-5128—From whence the largest import of thrown silk, *Heath* 5245, 5246—Period of the year at which Italian raw and thrown silk received in England, *Stone* 5616, 5617—English thrown is in the market as soon as Italian, *Stone* 5618—Imports of Italian thrown silk, and at what period the year should be calculated from, *Stone* 6052-6058.

To what place Italian thrown silk exported from this country, *Stone* 6268-6271—Proportion of foreign thrown used in manufacture, *Stone* 5795—Market for good silk open to every person, *Hall* 6529, 6530—Demand for thrown silks would cease if manufacturers ruined, *Hall* 6656—Very little thrown silk smuggled prior to 1826, *Bottrell* 7831, 7832—No necessity for a manufacturer to use foreign thrown, *Ballance* 8428—Witness must give up manufacture if he could not get English thrown, *Ballance* 8683-8685—Inconvenience sometimes felt from the want of thrown silk, and higher price paid for it, *Harter* 9325-9330, 9333-9338, 9342-9345, 9348, 9349—Permanent supply of thrown best attained by a good supply of good raw, *Harter* 9360—Means taken by witness to prevent pillage in dyeing, *Wadden* 10058, 10059—Necessity for discontinuing the importation of thrown silk, the fine silk giving more valuable employment to the operatives, *Johnson* 11631, 11632—Italian silk formerly thrown, but now changed for Bengal, very little Italian silk now thrown, *Wright* 11768, 11775—Proportion of foreign and English thrown silk used by witness, *Graham* 12804, 12805.

2. *Duty on Importation.*

i. *Generally.*

Amount thereof at present, *Royle* 3076, 3179-3187; *Harter* 9256-9258—Effect of duty remaining as it is, *Brockwell* 3712-3716; *Banbury* 4466-4470; *Gibson* 5109-5112; *Stone* 5636, 7026-7028; *Harter* 9261-9263—Alteration that might be made therein,

SILK—continued.

VII. Thrown—continued.

2. Duty on Importation—continued.

i. Generally—continued.

therein, *Gibson* 5125—Why not a tax on Spitalfields and Coventry for benefit of Manchester, *Harter* 9264, 9265—Not injurious to the weaver, *Wallis* 10953—Import duties and charges into Lyons and London, *Doxat* 4214, 4215—Per centage duty on foreign thrown silk increases the cost of manufacture, *Brunskill* 583-592; *Graham* 12720-12728.

ii. Disadvantages of reducing.

It will ruin English throwsters, *Royle* 3077-3083, 3104, 3105, 3276-3279; *Brockwell* 3643; *Swift* 3764, 3877-3880; *Ward* 3972-3975; *Doxat* 4235-4237; *Willmott* 4739; *Hall* 6705, 6707; *Ballance* 8426, 8670; *Harter* 9260; *Wadden* 10079-10080; *Bennett* 10744; *Johnson* 11577; *Wright* 11759—And cause Italy to throw more, *Brockwell* 3471, 3472, 3689; *Swift* 3902; *Caffi* 7288-7290, 7294-7296; *Bennett* 10794, 10796; *Moore* 11257, 11262—And cause dependence upon Italy, *Brockwell* 3472, 3473; *Gibson* 4914-4919, 5121; *Stone* 5925, 5926, 6365, 6366; *Ballance* 8669; *Harter* 9361; *Wright* 11759—And cause distress of operatives, *Royle* 3337-3356; *Brockwell* 3687, 3688; *Ballance* 8670—Disadvantages of being dependent on Italian throwster; *Cox* 2270-2274; *Royle* 3420; *Doxat* 4237, 4238; *Banbury* 4589; *Ballance* 8427—Disadvantages generally of removing or reducing duty, *Cox* 2306-2310; *Royle* 3280; *Doxat* 4250, 4251; *Banbury* 4447-4449; *Gibson* 5122-5124; *Stone* 5644-5649; *Wadden* 10002; *Grout* 10315; *Bridges* 10453-10462, 10493; *Johnson* 11583, 11584; *Prout* 11667, 11668; *Rowbotham* 11746—Effect of removing duty on price, *Brunskill* 497-501; *Brockwell* 3684-3686; *Stone* 5837-5843; *Harter* 9253-9255, 9439-9442, 9460-9467, 9477-9481; *Tootal* 9613, 9614; *Wallis* 10959-10961; *Moore* 11273; *Graham* 12720-12728.

How duty affects price in England and France, *Doxat* 4271-4275—Reduced duty on foreign trams not a sufficient protection to the English throwster, *Brockwell* 3483, 3484—Duty that would protect throwsters, *Swift* 3874; *Banbury* 4462-4465, 4481-4483; *Gibson* 5187-5192—Whether the throwing Italian silk can be continued in this country with a lower rate of duty, *Stone* 6370, 6375—If duties reduced, throwing would not be discontinued, *Graham* 12788-12791—Removing duty has increased importation, *Doxat* 4132—But not after every reduction, *Doxat* 4133; *Gibson* 4935—Effect of reduction in 1826 on price of throwing and wages, *Willmott* 4747-4750—Evils of reduction of duty in 1829, *Doxat* 4248, 4299-4301; *Gibson* 4925, 4926; *Ballance* 8647-8651, 8653-8655; *Wadden* 9997-9999; *Moore* 11210-11216, 11222; *Johnson* 11576—How far taking off duty would increase consumption and demand for labour, *Gibson* 5071-5073—Advantages, or otherwise, of reducing duty on importation, *Brunskill* 512-514; *Stone* 6305-6312, 6445-6448—How it would affect importation of Italian raw and thrown, *Royle* 3077, 3104, 3196; *Doxat* 4241-4244; *Gibson* 4886-4892, 4974-4981; *Martin* 5482; *Stone* 6313-6318.

Reduction of duty would place English manufacturer on equal footing with the French, *Bowring* 9188—Removal of duty on foreign thrown and of drawback on exportation will reduce export trade, *Harter* 9259—Not large manufacturers who are anxious for the removal of duty on thrown, *Bridges* 10531-10533—Reduction of duty thereon would not prevent the sale of French goods, *Stephens* 10704-10712—Encouraging importation of thrown by lowering duties diminishes the importation of raw, *Moore* 11162—Duty on thrown that is necessary to ensure a good supply of Italian raw, *Moore* 11309-11311—Statement of decreased importation of Italian raw and thrown from reduction of duties in 1829, *Brocklehurst* 11431, 11432—Examination thereupon, *Brocklehurst* 11433-11435—Importation of foreign raw and thrown, 1827-1832, and effect of present duty thereon, *Royle* 3179-3187; *Brocklehurst* 11443-11448—Statement of the opinions of different manufacturers as to the removal of duties on foreign thrown silk and on prohibition, *Stone* 12686-12689—Effect of removing duty on thrown silk to the manufacturers and operatives, *Graham* 12708, 12709.

iii. Necessity for increasing.

Necessity for a higher protecting duty for the English weaver and throwster than the French, *Royle* 3359-3388—Advantage of high duties, *Doxat* 4040; *Banbury* 4426, 4427, 4606-4610—Account of progressive increase of duty 1660-1786, *Banbury* 4417-4420—Effect of increasing duty on manufacturer and throwster, *Stone* 6319-6323—Tendency of increased duty on thrown to increase supply of raw, *Stone* 6376, 6377—Additional duty on thrown would be beneficial to home manufacture, *Ward* 3990, 3991; *Moore* 11314—Higher duty would cause a better description of silk to be thrown in England, *Wright* 11785.

See also *Duty on Importation. Exportation. Importation. Spitalfields*

3. Prices of throwing and of Thrown Silk.

On what prices of English and Italian thrown silk depend, *Cox* 2311—Reason for foreign thrown silk being cheaper than English, *Royle* 3084-3087—Price of Italian thrown, *Royle* 3188, 3195—Whether English or Italian thrown silk regulate the price of each other, *Royle* 3392-3398—No difference in the price per pound of throwing silk in Italy during the high duties and at present, *Brockwell* 3448-3453—Ruin to throwsters from the low price of throwing Italian silk in this country, *Brockwell* 3485-3489—Prices

SILK—continued.

VII. *Thrown*—continued.

3. *Prices of throwing and of Thrown Silk*—continued.

—Prices of throwing, *Brockwell* 3544-3548, 3646-3650; *Swift* 3856-3860; *Ward* 3947-3949; *Graham* 12698-12707—Difference in the price that remunerates the Italian throwster, and will not remunerate the English, *Brockwell* 3549-3553—How price of Italian thrown silk in the British market affected by that of British Italian thrown, *Brockwell* 3568, 3569—Difference in the price of raw and thrown silk if duty repealed, *Brockwell* 3684-3686—Reduction in the prices of throwing, *Swift* 3741, 3742; *Ward* 3950—Impossible for throwster to reduce the prices of throwing, *Swift* 3763—Charges that would remunerate the throwster, *Swift* 3796—Difference in the price of throwing certain silks, *Swift* 3923-3926; *Willmott* 4788, 4789.

Price of Italian organzine in Lyons and London, *Doxat* 4194-4202—Proportion of import duty to the price of Italian thrown, *Doxat* 4226-4229—How duty on importation of Italian thrown affects price in England and France, *Doxat* 4271-4275—Difference in 1825 and 1831 in the price of throwing between Lyons and England, *Doxat* 4396—Rise in the price of foreign silk if throwing trade here destroyed, *Banbury* 4471—Approximation of prices between Italian silk thrown in Italy and England, *Banbury* 4614—Cost of throwing organzine in Lombardy, *Gibson* 4858, 4859—Cost in England, and which does not remunerate the throwster, *Gibson* 4860-4877.

Price at which Italian throwster could throw to order, *Gibson* 4909-4912—English cannot produce thrown at the same price as the Italian, *Gibson* 4920—Decreasing duty would not decrease price, *Gibson* 4936-4941—Small profit to the Italian to import at the present price, *Gibson* 5081-5083—Imports will be diminished if the present price continues, *Gibson* 5083—Why the English has a better market for his silk than the Italian, *Gibson* 5181, 5182—Expense of throwing organzine and tram in Italy, *Heath* 5226-5235—Piedmont thrown worth more than French thrown, *Martin* 5419—Price of throwing in Piedmont, France and Lombardy, *Martin* 5445-5447.

Effect of reduction of duty on the price of foreign thrown, *Martin* 5499—Correct information as to the prices of throwing in France, *Martin* 5509—Manner in which the price of thrown silk in England determined, *Stone* 5640-5643—Decrease in the price of thrown, 1831, *Stone* 6057—Prices obtained by the throwster in 1830, *Stone* 6067, 6068—Price of thrown silk and duty in 1830, and manner they increased importation, *Stone* 6079-6134—Effect of duties on the price of foreign and English thrown silk, *Stone* 6324-6328—Prices of throwing in Italy, exclusive of waste, *Heath* 5704—Comparison with England, *Heath* 5705-5707.

Prices of throwing during the last six years, *Stone* 5797-5799—Amount necessary to cover expenses and give a profit to the throwster, *Hall* 6465-6469, 6487-6493, 6501-6506, 6512-6515, 6527-6528, 6594, 6732—Rate of throwing, *Hall* 6545-6555—Profit by reduced price of thrown silk from reduction of duty would go to the foreigner, *Hall* 6709, 6710—Expenses of throwing tram in Italy, and weight per pound English, *Caffi* 7058-7066—The like for throwing organzine, *Caffi* 7067-7071, 7087—Prices of throwing, and during what periods, *Caffi* 7072-7076—Charges of throwing more in Piedmont than Lombardy, and causes thereof, *Caffi* 7077-7082—How far price of throwing remunerates throwsters, *Caffi* 7115.

Comparative view of the prices at Lyons of French tram, the produce of French raw, with price in London at the same periods for Italian tram, in averages of three months, from July 1827 to March 1832, *Ballance* 8410—Comparative view of the prices at Lyons of French organzine, the produce of French raw, with prices obtained in London at same periods for Piedmont organzine in averages of three months, from 1827 to March 1832, *Ballance* 8410—English costs rather more than foreign, *Ballance* 8429—How throwster's price regulated, *Ballance* 8657—Prices of throwing silk in France, *Bowring* 8873-8878—Silk cannot be thrown so cheaply in England as in Italy, *Harter* 9362—Prices of throwing, 1830 and 1831, *Harter* 9363-9374, 9493-9498.

How far price of Italian thrown depends upon price obtained for silk in other parts of the world, *Harter* 9478-9480—Reducing prices of throwing in England prevents its being properly done, and causes reduction of wages, *Bennett* 10805, 10806, 10809—No profit upon throwing organzine at the present rate, *Bennett* 10807—Foreign thrown silk cheaper than the raw can be bought and thrown for, *Moore* 11167—Instance of a mill at Manchester stopping, and buying foreign thrown silk cheaper than they could throw it, *Middlehurst* 11812, 11813—Comparative view of the London market prices of Milan and Bergam organzines of 26 to 28 deniers at various periods, 1824-1832, *Evidence*, p. 261.

See also *France*, III. 2.

Papers laid before the Committee.

Comparative View of the Quantities of Italian Thrown Silks consumed in his Country, 1815-17 to 1829-31, *Evidence*, p. 227.

See also *France*, IX. *Importation. Italy.*

VIII. *Waste.*

Increase of waste silk, *Brockwell* 3694, 3695—Quantity imported, and from whence, 1828-1831, *Brockwell* 3706-3710—Importation of waste, and in what state exported, *Banbury* 4653, 4654; *Heath* 5721-5724.

SILK—continued.

VIII. *Waste*—continued.

Papers laid before the Committee.

Return of all Raw and Waste Silk imported and entered for Home Consumption in each year, 1814–1832; distinguishing from whence, and Amount of Duty, *App.* p. 918.

The various descriptions of Raw and Thrown Silks, and Waste, and Knubs and Husks imported 1814–1831, separated, and computed into one standard; all balanced by the Parliamentary Returns of Quantities, Duty paid, *App.* p. 932.

Silk Men. Destruction of the trade of silk men, *Gibson* 5095–5108.

Silk Merchants. Method of conducting the business of silk merchants, *Heath* 5709, 5710.

SILK TRADE.

1. *Generally.*

2. *Papers laid before the Committee.*

1. *Generally.*

Views taken by the silk trade, and applications to the Board of Trade from different places at different periods as to the cause of their distress, *Hume* 55–60—Trade was increasing up to the admission of foreign goods, *Cheeper*, 833–835; *Banbury* 4424; *Willmott* 4775, 4787; *Wallis* 10860; *Bridges* 10375–10378, 10426, 10439, 10440; *Moore* 11122–11151; *Brocklehurst* 11347–11349—State of trade, 1627 and 1828, *Marston* 1397, 1398—1819–1830, *Royle* 3051–3054—1826–1831, *Stone* 5600–5606, 6357—1824 and 1825, *Prout* 11646—Depreciation of trade since 1826, *Royle* 3055–3058, 3428–3432; *Brockwell* 3738, 3739; *Swift* 3881–3883; *Willmott* 4724, 4767; *Doxat* 4039, 4140; *Martin* 5526; *Wadden* 9969, 10041; *Wallis* 10880; *Brocklehurst* 11346; *Prout* 11658; *Wright* 11748–11750—To what attributed, *Brockwell* 3740; *Stone* 6357–6364; *Hall* 6702, 6703; *Ballance* 8455–8463; *Wadden* 10142, 10143; *Moore* 11231; *Rowbotham* 11742, 11745; *Wright* 11751—Cause of distress, 1792 and 1816; *Ballance* 8360, 8361.

Trade has partially improved since November 1831, but the distress is so great the improvement is not perceived, *Marston* 1451–1457—Specimens of silks produced by the witness, with examination upon the manufacture, cost and weight of each description, *Marston* 1511–1528—Description of goods witness at present employed upon, *Perkins* 1571–1573—To what improvement in trade in 1823 attributed, *Jacobs* 1758–1761—Quantity of silk manufactured, 1824 and 1831, *Cox* 2169—Sufficient capacity in this country to supply any quantity that might be required, *Merry* 2553; *Stephens* 2729; *Gibson* 5043–5048—Improvement in manufacture previous to the introduction of French goods, and cause of improvement since, *Merry* 2618–2624—Effect of taking off the duty on printed cottons on the silk trade, *Royle* 3059, 3060—Effect of the appointment of the present Committee on the silk trade, *Royle* 3061, 3062; *Martin* 5555–5578.

Silk trade chiefly home trade, *Royle* 3063—Importation of thrown silk does not show prosperity of the silk trade, *Royle* 3150—Cause of increase in the silk trade, *Royle* 3203—How affected by change of the law, *Royle* 3269–3272—Parties that have vested interests in the silk trade, *Brockwell* 3498—Silk trade will flourish as the throwster is protected, *Brockwell* 3499, 3500—Situation of the trade before and since the importation of foreign manufactured silks, *Doxat* 4036, 4037—Comparison of the silk and cotton trade, *Doxat* 4036, 4037—Calculation as to duties, wages, profits, &c. upon silk and cotton, 1814–1831, *Doxat* 4038—Progress of the silk trade over the cotton to 1826, and contrary effect since, *Doxat* 4140.

Trade increased notwithstanding high duties, *Banbury* 4428–4432; *Willmott* 4790–4795—Trade at present improving, *Banbury* 4502, 4546–4551—Trade has not flourished since fair profits ceased to be obtained, *Banbury* 4526—Effect of Berlin and Milan Decrees thereon, *Banbury* 4581–4588—Whether greater amount of goods selling now than in 1826, *Gibson* 5012–5017—Extension of the silk trade, and in what countries, *Stone* 5596–5598—Comparison of distress formerly and at present, *Stone* 6393–6403; *Ballance* 8689; *Moore* 11099–11105—How far a certain description of goods that were made formerly, and not at present, is from taste being altered, or from foreign or English competition, *Stone* 5867–5895, 5936–5945—Estimate of the amount of the silk trade in England, and proportion the French imports bear to it, *Dillon* 7628–7630—Comparison of silk trade with that of other departments for certain periods, *Dillon* 7730–7732—Supplanting one branch will be the ruin of the others, *Ballance* 8449, 8450.

Remonstrances to Government thereon, reduction of duty and increase of smuggling, *Ballance* 8455–8463—Manner in which the silk trade would revive under certain duties and regulations, *Ballance* 8483—Protection to the silk manufacturer illusory, *Bowering* 9179—Silk manufacture would increase by removing all protection, *Bowering* 9180—Interests in the silk trade at present well balanced, *Harter* 9228—Certain duties attaching to the silk trade which should be removed, *Harter* 9314—Overwhelming distress in Spitalfields and Coventry, and distress in Macclesfield, Manchester, Middleton

and

SILK TRADE—continued.1. *Generally*—continued.

and Sudbury, *Wadden* 1041—Improvements in manufacture attributed to the Jacquard looms previous to and not since the opening the ports, *Bridges* 10494–10496—Bad consequences to trade from the admission of foreign goods, *Bennett* 10718–10720—To what increase of trade in 1824 and 1826 attributed, *Wallis* 10966—Bad state of the silk trade if the present system continues, *Poyton* 10989.

Government have not protected the trade as they were bound to do, *Bolter* 11002—Relief would be given by prohibition, punishing the smuggler severely, or putting duties under excise, *Bolter* 11004—State of the silk trade immediately previous to the admission of French goods, and means adopted to prevent a large quantity coming in at first, *Moore* 11135–11151—Effects of removal of prohibition and reduction of duty on raw silk should be inquired into separately, *Moore* 11152–11156—Alarm of the silk trade before the alteration of the law, and on what grounded, *Moore* 11177, 11178—Ministers expected the alteration would place the silk trade on a level with the cotton trade, *Brocklehurst* 11350—Advance in the silk trade of the Continent over that of England, *Brocklehurst* 11355—Tendency of low prices to degenerate silk manufacture, *Brocklehurst* 11449—Progress of silk manufacture checked by interference from the Continent, *Brocklehurst* 11454.

How silk trade would have improved under better protection, *Brocklehurst* 11455—How far dealers capable of advising Government upon the state of the silk trade, *Brocklehurst* 11555—Necessity for protection to obtain increase in the silk trade; tendency of low priced raws to increase it; increase in the cotton trade, and manner the silk trade might equally increase, *Brocklehurst* 11556—Protecting duty necessary for the silk trade, *Prout* 11659, 11660; *Kelly* 11128, 11129—Distress previous to 1825 not permanent, *Prout* 11665—Prohibition the most effectual remedy, *Smith* 11684—Since reduction of duties silk trade has changed from light to heavy goods, and from fine to round silk, *Wright* 11760—Witness's opinion formerly in favour of free trade, and reasons for changing it; great disadvantage to the silk trade from last alterations, *Beckwith*, 11961–11965—Reason why alteration of system in the silk trade has miscarried, *Moore* 12066—Protection not given to the silk trade which it was held out it would receive in 1824, *Moore* 12067, 12068—Examination upon the progress of the silk and cotton trade, 1815–1832, *Doxat* 12094—Abstract view of the progress of the silk trade of Great Britain and Ireland at different periods between 1815–31, in regard to quantities; similar abstract view of the cotton trade, *Doxat* 12094.

Estimate of the total Amounts of Silk Manufacture of the United Kingdom during periods, 1815–17, 1818–20, 1821–23 and 1824–25, understated in regard to wages in these periods, *Doxat* 12094.

Estimate of the total Amount of Silk Manufacture of the United Kingdom, 1826–1831, overstated in regard to wages in these years, *Doxat* 12094.

Abstract Statement of French Silk Manufactures for the years 1827–1830, conjointly with an Abstract view of the total Amounts of the Silk Manufactures of the United Kingdom at different periods during 1815–1831, *Doxat* 12094.

2. *Papers laid before the Committee.*

Large comparative view of the Silk and Cotton Trades in regard to their respective and relative progress, both in quantities and in Duties, Wages, Profits, &c. from 1815–17 to 1821–23, 1824–25 and 1826 to 1831, and various remarks thereon, *App.* p. 934.

Compendious comparative view of the Silk and the Cotton Trades in regard to quantities, and to duties, wages, &c. during the same periods, *App.* p. 936.

Distinct Statement of the Amounts of Duties, and of the Amounts and Rate of Wages, &c., accruing from the Silk Trade during those periods, *App.* p. 938.

Comparative view of the progress of the Silk and Cotton Trades during 5—5, and 5 years:

1816 to 1820; 1821 to 1825, *i. e.* Medium of $\left\{ \begin{array}{l} 1821-23, \\ 1824-25, \end{array} \right\}$ and 1826 to 1830.

App. p. 938.

Explanation of the principle upon which Estimates of the Silk Trade grounded, from 1815–17 to 1821–23, 1824–25, and from 1826 to 1831, *App.* p. 939.

Sisson, Jonathan, (Analysis of his Evidence.) Witness's connection with the silk trade in Dublin, 11896–11902—Decline of silk trade in Dublin from reduction of duties on importation of British goods, and afterwards from reduction of duties on foreign goods imported into Ireland, 11903–11907—Examination generally upon the former prosperity and present distress of the silk trade in Dublin, 11908–11923.

Smith, Joseph, (Analysis of his Evidence.) Silk weaver at Macclesfield, 11674-11676—Average wages of weavers, their present distressed state, and former comfortable situation attributed to introduction of foreign manufactured goods, 11677-11681—Examination generally as to the condition of the silk weavers at Macclesfield, 11682-11693.

Smith, David, (Analysis of his Evidence.) Number of Jacquard weavers at Coventy, 1257—Distress in that department caused by the irregularity of employment, 1258—Average earnings per week if in full employ, 1259—Number of weeks unemployed last year, 1260—Figure branch worse last year than the year before, 1262—More skill required in making figured than plain ribbons on account of extra machinery, 1263—Number of Jacquard looms 1823 and 1826, 1264—But little increase latterly in consequence of foreign competition, 1265, 1266—Highest rate of wages earned by figured loom weaver, and at what period, 1267-1270—Jacquard trade as good in 1826 as at any other time, 1271—Employment of the Jacquard weavers, 1826-1831, 1272-1280—Introduction of the Jacquard loom and alteration of plain looms to enable its use, 1281-1292, 1312-1315—Its introduction has changed the mode of figure weaving, 1293, 1294, 1316—No improvement in the Jacquard loom since its introduction, 1295, 1296—Number of Jacquard and engine looms in use, 1826 and 1831, 1297, 1298.

Increase of the Jacquard looms decreased the use of other looms, 1299—Principal employment for the weavers now is in altering patterns, for which there is no wages, 1300-1307—Distress in Coventry at present owing to foreign competition, 1308, 1309—New patterns could be obtained, and variations could be made, but the fashions could not lead from the anxiety to know what patterns will come from abroad, 1310—Which decreases the amount of wages, 1311—Jacquard looms make the article better in point of taste but not quality, 1317-1320—Necessity for using the Jacquard loom to imitate the French pattern, 1321, 1322—Time occupied in setting and changing patterns, and how that work affects the rate of wages, 1323-1335—Additional labour required in consequence of the Jacquard looms in getting in the warps, 1336—Amount of wages earned when the loom is fully prepared for work, 1337—Time taken in preparing the work is a loss to the workmen, besides in some instances the want of work altogether, 1338-1340—Proportion time lost in changing patterns, bears to the time taken in making the article, 1341-1346.

SMUGGLING:

I. Generally.

II. Extent thereof before opening the Ports.

III. Increase thereof since opening the Ports.

IV. Present method thereof and rate of smuggling and Insurance.

V. Means of prevention.

1. Generally.

2. By increasing or reducing Duties.

3. By Prohibition.

i. Advantages thereof.

ii. Disadvantages thereof.

4. By stamping Goods.

5. By punishment of parties.

VI. Smuggling into France.

I. Generally.

Not much smuggling in plain goods, *Hume* 71-76; *Gibson* 4948—Suspicion of smuggling for some time but none found out till the case of Messrs. Leaf's, *Brunskill* 480-485—Articles that are smuggled, *Cheeper* 781; *Stephens* 2880-2892; *Gibson* 5167-5172; *Clay* 6895-6903, 7000-7006; *Menetrier* 8324-8328; *Stephens* 10675-10679—Goods that were formerly but are not now smuggled, *Bottrell* 7848; *Bowring* 9121—Anxiety of the silk trade to prevent, *Cox* 2352—Bills drawn from France for payment thereof, *Doxat* 4148-4155—Larger quantity of French silks admitted illegally, *Stone* 5851—Distress to trade by large capitalists being engaged in smuggling, *Hall* 6655—How return might be obtained from the French Custom House books, which would show the extent of smuggling into England, *Clay* 6904, 6905—Silks are not smuggled from Belgium or Holland, *Bottrell* 7844.

Fashionable articles are not smuggled, *Menetrier* 8338—How far competition of the London houses in underselling each other in French goods induces smuggling, *Wadden* 10040—Supposition of smuggling transactions by certain houses from their selling goods in London lower than they could be imported for, *Beckwith* 12362-12365, 12369-12372—Quantity of ribbons and broad silks seized belonging to Messrs. Leaf's, *Wadden* 10087, 10088—Their subsequent restoration, and being brought into home consumption, *Wadden* 10089, 10090, 10102—How far contrary to law, *Wadden* 10091—Amount of compromise, although in defiance of a pledge by the Vice President of the Board of Trade that justice should be done *Wadden* 10092-10097, 10101—Why a conviction would have been more beneficial to the trade, and which they would have tried

SMUGGLING—continued.

I. Generally—continued.

tried to obtain but for the pledge, *Wadden* 10098-10100—Bad effects of those goods coming into the market by displacing British labour and depriving the manufacturer of his protection, *Wadden* 10104—Persons driven to smuggling in self defence, *Stephens* 10692, 10693—Injury to trade by smuggling, and who are the promoters of it, *Brocklehurst* 11502, 11503—Bad effects of importation by Leaf & Co. on certain goods manufacturing by witness, *Beckwith* 11944, 11945.

II. Extent thereof before opening the Ports.

The smuggling which took place formerly on a small scale was beneficial, *Brunskill* 447-450; *Sedgwick* 8073, 8074; *Wadden* 9984; *Bennett* 10745, 10746; *Wallis* 10930-10934; *Wright* 11752—Proportion French goods bore to English during prohibition; how obtained; difficulty and risk of selling, *Stephens* 2654-2666—Articles purchased at the Custom House for exportation, and smuggled in for home consumption prior to 1826, *Stephens* 2854-2861—Reasons why new goods not passed through the Custom House could not be smuggled, *Stephens* 2862-2868—Smuggling greater before alteration of duty than at present, *Clay* 6889-6894—Expense thereof previous to 1826, *Bottrell* 7756, 7773; *Sedgwick* 8030, 8031.

Method of conducting smuggling prior to 1826, great profit thereon, and who were purchasers, *Bottrell* 7757-7765; *Menetrier* 8210-8213—Quantities of smuggled goods, by whom bought, and amount of seizures, *Bottrell* 7766-7772, 7774—Seizures, 1816-1826, *Bottrell* 7777—How close a vessel could approach the shore formerly and at present with smuggled goods, without seizure, *Bottrell* 7790, 7791—Further examination upon the profits and risk of smuggling formerly, *Bottrell* 7792-7800—Extent of smuggling prior to 1826 in rich goods, *Sedgwick* 7980-7984, 8020-8023—Minutes of the Trade Association will show that smuggling, in 1815 was limited and confined to the coast, *Ballance* 8637—Increase of smuggling in 1824 and 1825, from French goods being warehoused previous to the opening the Ports in 1826, *Ballance* 11009-11013.

III. Increase thereof since opening the Ports.

Complaints against smuggling, *Hume* 62, 63—Smuggling has lately increased, owing to the distress in France throwing large quantities of goods on the market at prices under the market value, *Hume* 77-79—Great increase thereof since the repeal of the prohibition, and reasons for it, *Brunskill* 137-144, 531; *Ratliff* 1940-1942; *Cheeper* 852-857; *Merry* 2540, 2541; *Stephens* 2710-2723, 10765; *Ballance* 8362, 8363; *Bowring* 8793, 9138, 9139; *Wadden* 9985, 9986; *Dubois* 10270, 10271; *Grout* 10316-10320—Quantity of goods smuggled, and from what source information obtained, *Cheeper* 874-876; *Doxat* 4144-4147—Facilities for smuggling at present, *Ratliff* 1926-1929; *Baggallay* 7519-7522.

Proportion of smuggled goods at present used in town and country, *Ratliff* 1932, 1933—Quantity of foreign goods in the warehouses of dealers at present and during the prohibition, *Ratliff* 1943, 1944—How far reduction of duty has had the effect of putting down smuggling, *Sawer* 2432, 2433—Reasons for supposing smuggling is carried on to a greater extent, *Merry* 2560—It is generally now considered that goods are safe when once deposited, *Stephens* 2728—Recent case of smuggling, *Stephens* 2763-2771—It exists to a considerable extent, *Sedgwick* 8201—It has decreased, *Dillon* 7622, 7623—It is not carried on to a greater extent now than formerly, and in different goods, *Bottrell* 7753-7755, 7945-7948—Not so easy to dispose of smuggled goods now as during prohibition, but less risk in keeping them, *Bottrell* 7778-7783, 7807.

Increase of smuggling, from goods being cheaper than those paying duty, *Sedgwick* 8032, 8033—Opportunities for smuggling increased after 1826, but smuggling has decreased latterly, *Menetrier* 8214, 8215—Smuggling at present exceeds the amount legally imported, *Ballance* 8638; *Wadden* 9987—Extent of smuggling, *Bouillon* 10196-10201—Facilities for receiving smuggled goods under a prohibition, and at present, *Bouillon* 10202, 10203—Whether smuggling not carried on to a greater extent under prohibition than at present; difficulties in the way of it, *Bouillon* 10210-10217—Houses in the habit of smuggling now who would not have incurred the risk under prohibition, *Bennett* 10747, 10748—Comparison of Dr. Bowring's statement of exports from France with duty on imports into this country showing limited smuggling, 1826-1831, and how far contrary to the fact, *Ballance* 11014.

IV. Present method and rate of Smuggling and Insurance.

Rate at which goods smuggled by Messrs. Leaf's, *Brunskill* 152-154—Is only conjecture, *Brunskill* 684, 685—Method adopted by them, and amount paid those employed, *Brunskill* 155-163—Usual method of smuggling, *Brunskill* 515-520; *Stephens* 2710-2723; *Bottrell* 7775, 7776—Rate of insurance in cases of smuggling, *Brunskill* 151, 523-530; *Stephens* 2763-2771, 2788-2796, 2869-2879, 2971, 2972; *Clay* 6854-6857; *Stephens* 2710-2723; *Baggallay* 7355-7359, 7525, 7526; *Dillon* 7681, 7682; *Sedgwick* 8175-8189; *Menetrier* 8233, 8234, 8321, 8323; *Ballance* 8423-8425, 8602-8604; *Bowring* 9822-9824; *Wadden* 10038, 10039; *Beckwith* 11939-11942—Difference in the amount of insurance upon smuggling under prohibition and protecting duty, *Cheeper*, 908-912—Offer by a French house to smuggle in some goods, to be purchased for francs and delivered in London for shillings, including insurance, *Stephens* 2772-2778

SMUGGLING—continued.

IV.—Present method and rate of Smuggling and Insurance—continued.

—No advantage therefrom; rate of exchange thereby, *Bottrell* 7895—Method of smuggling a certain description of Piedmont silk, *Heath* 5316-5324—Number of houses in France who guarantee the goods, and number in England who smuggle them, *Clay* 6911, 6912—Rate at which Swiss ribbons have been smuggled, *Baggallay* 7355-7359—Rate of insurance could not be lowered if duty reduced, *Baggallay* 7532, 7533—Reasons for diminution in the rate of smuggling, *Bottrell* 7788, 7789.
 Comparison of present and former rate of smuggling, *Bottrell* 7801-7812—Fewer persons concerned in smuggling now from diminution of profits, *Bottrell* 7826-7828—Manner in which communication for smuggling is carried on between Dover and Calais, *Bottrell* 7844-7846—Greater risk in inland carriage than sea voyage, *Bottrell* 7847—How profits upon smuggling divided, *Bottrell* 7901, 7902—Ruin of smuggling, from losses, *Menetrier* 8316-8320—Profits of the higher class of smugglers; great extent of smuggling, and large capital employed therein, *Bowring* 9159-9163, 9170—Better feelings of the people towards smugglers, according to the greater risk they run, *Bowring* 9164, 9165—Influence of duties upon the rate of smuggling, *Bennett* 10773, 10774—Silk goods smuggled out of France, and method thereof, *Ballance* 11016, 11017; *Moore* 11232-11236.

V. Means of Prevention.

1. Generally.

Methods of checking smuggling, *Brunskill* 145, 146, 713-715—Smuggling can never be entirely stopped, but can be reduced to a sufficient extent to prevent injury, *Brunskill* 737, 738—Premium should be offered for the discovery of smuggled goods, *Stephens* 2897-2900—Preventive service only stopped smuggling for a time, *Bottrell* 7833, 7834—Small encouragement to King's sailors to effect seizures; small amounts received by them, *Bottrell* 7846—Description of goods seized at Messrs. Leaf's, *Bottrell*, 7889-7892—Small amount of seizures this year, *Bottrell* 7893—Encouragement given by receiver of goods cannot be checked, *Bowring* 9218-9221—Method to be adopted for preventing smuggling, *Beckwith* 11973-11975—Reasons why effectual measures have not been taken to repress smuggling, *Moore* 12070, 12071—Smuggling might be stopped, and rewards to informers would enable higher duties to be collected, *Stephens* 10680-10682—Rewards that would check smuggling, *Stephens* 10694-10696.

2. By increasing or reducing Duties.

Amount of duty considered necessary by the silk trade for protecting them against smuggling, *Hume* 37-41; *Brunskill* 552-556; *Clay* 6858, 6859, 6922-6924—Reduction of duty on plain goods would have prevented smuggling, but the high rate of duty on gauzes, &c. enables assorted cargoes still to pay for smuggling, *Hume* 71-76—Traders would rather pay Government than smugglers, duties regulated to meet the alternative, *Hume* 80-83—Effect of lowering the present duty to an amount that would prevent inducement to smuggle, *Brunskill*, 150—Reduction of duty would not prevent smuggling, as smuggler would lower his profit, *Sedgwick* 8175-8189; *Ballance* 8368-8370, 8420—Amount of duty might be decreased to prevent smuggling, *Brunskill* 150; *Gibson* 4949-4951; *Clay* 6906; *Dillon* 7683, 7686; *Bottrell* 7813, 7814, 7835-7840; *Menetrier* 8345-8348; *Bowring* 9178, 9216, 9217.

Manner in which rate of duty on French goods operates upon smuggling, *Clay* 6844-6853—Smuggler's price regulated by the amount of duty, *Clay* 6963-6965—Greater encouragement to smuggle under high duties, *Bottrell* 7894—Difficulty to say rate of duty that would put an end to smuggling, *Sedgwick* 8034—Reduction of duty on foreign thrown would not enable manufacturer to come down to smuggler's price, *Ballance* 8421, 8422—Reducing duty to the smuggler's price gets rid of both smuggler and manufacturer, *Ballance* 8697—How far expectation realized, that upon changing prohibition for duties odium would attach to the smuggler, *Bowring* 9154-9158—Reduction of duties in 1829 increased smuggling instead of reducing it, as was intended, *Wadden* 9988-9993; *Bennett* 10741, 10742—Effect of increasing duties on smuggling, *Wadden* 10036, 10037—Duties should be reduced to the cost of smuggling, *Stephens* 10703—Effect of lowering duties on manufactured goods on smuggling, *Beckwith* 11943.

3. By Prohibition:

i. Advantages thereof.

ii. Disadvantages thereof.

i. Advantages thereof.

Prohibition more effectual against smuggling than protecting duty, *Hume* 66, 68.—Nothing but prohibition will prevent smuggling fancy articles, *Brunskill* 557, 734-736—Smuggling would take place but to small extent under prohibition, and who would be likely to carry it on, *Cheeper* 785-807—Difficulty of disposing of smuggled goods, *Cheeper* 808-812, 816-819, 847-851—Possibility of an English manufacturer making a small quantity of goods here, and smuggling a larger quantity from France, *Cheeper* 813, 815—Smuggler, or disposer of smuggled articles, is at the mercy of his customers and

SMUGGLING—continued.

V. Means of Prevention—continued.

3. By Prohibition—continued.

i. Advantages thereof—continued.

and servants, *Cheeper* 816-819—Description of benefit that would be derived from the small amount of smuggling under prohibition, *Cheeper* 858-861—Amount that would be smuggled under prohibition, *Cheeper* 888-896; *Cox* 2137-2144—There would be great risk in distributing a large quantity of French goods over the country under a prohibition, *Cox* 2132-2136—Great risk of smuggling during prohibition, *Stephens* 2724, 2725; *Clay* 6925-6927—Proper prohibition would prevent smuggling, *Stephens* 2760; *Banbury* 4611-4622; *Wilmott* 4796-4799—Means of preventing smuggling under a prohibition, *Stephens* 2962-2968, 3008-3014—State of the law as to smuggling with regard to the proof of French goods, *Stone* 5860-5863—Danger of dealing in smuggled goods under prohibition, and how far resorted to by respectable houses, *Sedgwick* 8075, 8076.

ii. Disadvantages thereof.

Prohibition would not put down smuggling, *Gibson* 5052-5055; *Stone* 5852-5859; *Baggallay* 7534-7537—Smuggling would be increased if prohibition revived, *Clay* 6928-6931; *Bowring* 9143, 9206-9209—Low rate of profit upon smuggling has diminished it; how far it would be renewed if prohibition revived, *Bottrell* 7858-7864—Smuggling in fewer hands than under prohibition, and how it places the manufacturer in a worse situation, *Bowring* 9144-9148—How far prohibition would change smugglers from a few large to a great many small ones, *Bowring* 9166-9168.

4. By stamping Goods.

Why stamping would not answer as a preventive against smuggling, *Clay* 6907—Advantages of stamping goods to prevent smuggling, *Bottrell* 7935; *Ballance* 8466—Method by which silks might be stamped without risk of forgery; diagrams of four seals for that purpose, *Bottrell* 7943, 7944—British manufactures should be protected by the goods being stamped, *Sedgwick* 8117-8119—Means of preventing smuggling by stamping the goods; expense would not be felt by the consumer; stamp must be varied to prevent imitation, *Sedgwick* 8169-8174—Stamp might be imitated if known, *Menetrier* 8349, 8350—Proposed regulations against smuggling; that of criminal punishment for the smuggler, and stamping goods to detect the receiver, *Ballance* 8464, 8465.

Reasons submitted to the Committee for stamping silks, *Ballance* 8466, 8467—Certain checks should be used to prevent stamps being forged, *Ballance* 8468—Paper with signatures declaratory of the sentiments of the silk trade in favour of stamping, *Ballance* 8469, 8470—Plan for stamping in order to prevent forgery, *Ballance* 8470, 8698, 8699—Negociations with the Board of Trade with regard to stamping goods, and answer by the Board in the negative, *Wadden* 10034, 10035—Difficulties in the way of stamping, *Bouillon* 10182-10185—Stamping would be of service, *Dubois* 10270, 10271; *Stephens* 10697-10702—Statement by the retail trade of difficulties in the way of stamping, *Moore* 11256—How far stamping goods would be beneficial, *Manning* 12535, 12536—Stamping would have no reference to invoices, *Manning* 12537.

5. By punishment of Parties.

Prosecution of parties for smuggling who have not the chief interest in the goods, *Clay* 6942-6952—Loss of property sufficient punishment without personal punishment of the smuggler, *Menetrier* 8339, 8343—Punishing persons ordering goods would prevent smuggling, *Menetrier* 8345-8348—Plain trade may be protected if the smuggler detected and punished, *Wadden* 10033—Negociation with the Board of Trade as to making smuggling a penal offence, *Wadden* 10034, 10035—Punishment instead of fine must be used to prevent smuggling, *Bouillon* 10207-10209—Remedy therefor by imprisonment and hard labour, and stamping goods, *Brocklehurst* 11504, 11505.

VI. Into France.

Effect of repeal of prohibitory laws upon the French coast, *Bottrell* 7849—Large quantities of English goods smuggled into France through Belgium; description of them, and expense attending it, *Bottrell* 7851-7857—Greater difficulty of smuggling into France, and greater severity of the Custom House and municipal regulations, *Bowring* 9149, 9150; *Bouillon* 10230, 10231—Manner in which the smuggler in France is considered a public benefactor, *Bowring* 9151-9153, 9175, 9176—Premium for smuggling higher into France than into England, *Bowring* 9169—Smuggling cotton twist into France in the same manner as silk into England, *Bowring* 9171—Articles smuggled into France, *Bowring* 9192—Their Custom House regulations, *Bowring* 9193—Seizure and protection therefrom of English goods in France, *Bowring* 9222, 9223.

See also *Avignon*. *Bandannas*. *Cambrics*. *Consuls*. *Crape*. *Custom House*. *De Ponilly & Co.* *France*, III. 2. *Gloves*. *Jobbing*. *Piedmont*. *Silk*.

Spindles. See *Throwing Mills*.

Spitalfields Act. Evils thereof, *Moore* 11183, 11194, 11195—It was repealed at the expense of private parties in the trade, *Moore* 11184—It was repealed as a private Act with all the expenses attendant thereon, and although opposed by certain Cabinet Ministers, *Moore* 11185-11193.

Spitalfields District. State of the poor in three parishes of St. Matthew Bethnal Green, Christchurch Spitalfields and Mile End Old Town, comprising the district called Spitalfields, taken from parish accounts in February 1832, *Ballance* 8374-8378—Examination upon the population and state of the poor generally in that district, *Ballance* 8379-8454; *Wallis* 10818-10822.

See also *Weavers*, 7.

Spitalfields Trade.

State thereof and causes of distress therein, and whether greater formerly or at present, *Brunskill* 196-200; *Doxat* 4163-4168; *Stone* 5741-5749, 5775-5777, 5780-5786, 5865, 5866; *Baggallay* 7550-7565; *Ballance* 8356, 8537-8540; *Wadden* 10011, 10012; *Poyton* 10981.

It is getting into the hands of a few large capitalists, *Martin* 5478, 5479; *Stone* 5770, 6004-6009—How long affected by the appointment of the present Committee, *Stone* 5778, 5779.

Methods of improving, *Brunskill* 236; *Gibson* 4808, 4809, 4814, 4815, 5069, 5070; *Ballance* 8484, 8485, 8707; *Bennett* 10765-10771, 10775.

How affected by competition with France and foreign competition generally, *Brunskill* 196-200; *Doxat* 4141-4143, 4161, 4162, 4169, 4170; *Gibson* 4828, 4830, 4944-4947; *Stone* 5787-5793, 5899-5902, 12692; *Bottrell* 7966; *Ballance* 8407, 8408, 8640-8642, 8705, 8706; *Wadden* 10003-10008, 10015-10026, 10053, 10056, 10394, 10469-10475; *Stephens* 10549; *Bennett* 10735-10737; *Wallis* 10885, 10950-10952.

How affected by competition with Manchester and home competition generally, and comparison of goods, *Brunskill* 201-205, 406-426, 623-625; *Royle* 3208-3210, 3408-3418, 4140; *Doxat* 4156-4160; *Gibson* 4186, 4187, 5074, 5078; *Stone* 5826-5831, 7030; *Baggallay* 7577-7590; *Dillon* 7737-7739, 7745; *Bottrell* 7966; *Ballance* 8403-8406, 8486-8490, 8494, 8688, 8707; *Wadden* 10010; *Bennett* 10732-10734; *Wallis* 10857-10859, 10863-10871, 10877-10879, 10917, 10918, 10939-10941.

Description of manufacture and of silk consumed therein; manufacture of velvets entirely and of satins principally confined to Spitalfields, *Gibson* 4823, 4824—Proportion of the different kinds of silk manufactured at Spitalfields, *Gibson* 4827; *Stone* 6011-6015—Description of goods manufactured and number of looms employed, *Stone* 5728-5733—Reference to Spitalfields for broad silk manufacture, *Hall* 6664, 6665—Places where goods sold at Spitalfields are manufactured, *Dillon* 7639-7641—Fewer goods at Spitalfields now than usually at this time, *Dillon* 7702, 7703—How far rich goods manufactured at Spitalfields now; not much by orders, *Sedgwick* 8133-8145; *Wadden* 10046-10052—The best English fancy goods made at Spitalfields, *Ballance* 8491-8493—How far manufacture of galloons carried on in Spitalfields, *Harter* 9490-9492—Spitalfields chiefly employed upon plain low priced goods made from inferior silks, *Wadden* 10009.

Proportion of looms formerly employed and description of work, *Dubois* 10240-10247, 10258, 10259; *Bridges* 10379-10381—Goods manufactured by witness worn by the Royal Family, *Bridges* 10382—Description of goods made under present wages, *Bridges* 10391-10393—Comparison of witness's and Mr. Fulton's goods, *Bridges* 10395-10403—Pattern of the Queen's coronation dress and dresses for drawing rooms manufactured by witness, and loss thereby through the importation of French goods, *Bridges* 10469-10475—Goods bought at Spitalfields formerly and at present, *Stephens* 10545-10548—Not more rich plain goods made in Spitalfields than three years ago, *Stephens* 10688—Rich plain and fancy silk formerly made in Spitalfields, *Bennett* 10727—Not so many goods now made there as formerly, *Bennett* 10728—Figured handkerchiefs never made to any extent in Spitalfields, *Wallis* 10860—More inferior goods now manufactured in Spitalfields and reduced wages therefor, *Wallis* 10874-10876—Inferiority of article manufactured in Spitalfields, but not in workmanship, *Wallis* 10942—Increase of rich goods now making but not in price for weaving, *Wallis* 10943, 10944.

Account showing the cost of silk and wages paid for manufacturing the same into plain gros-de-Naples, *Wadden* 10030.

Stephens, George. (Analysis of his Evidence.) Witness with Halling & Co. of Cockspur-street, 2637, 2638—Proportion French and English ribbons bear to each other in purchases from manufacturers, 2639-2641—Few English fancy ribbons sold; proportion English

Stephens, George, (Analysis of his Evidence)—continued.

English gauze ribbons bear to the French, 2642—Price of the article not an object, 2643-2646—Preference for French goods, and reasons for it, 2648-2653—Proportion French goods bore to English during the prohibition, how obtained, difficulty and risk in selling, 2654-2666—Witness can distinguish between French and English from a lot of goods, but not from a pattern, 2667, 2668—Little improvement in English fancy goods since 1826, 2669-2671—Injury to the trade by jobbing French goods, 2672-2674—Great quantity of job goods sent over just after the French Revolution, 2675-2679, 2683—Extent of the export trade of France, 2680, 2681—Few goods in France at present, 2685, 2686—When orders for French goods usually given, 2688, 2689—Orders were given to English manufacturers during the prohibition, but would not be now, 2690-2695—In the event of change of pattern in French goods they can still be sold as such, and accepted as new goods, 2696—Goods obliged to be disposed of quickly in consequence of the quick succession of fashions in Paris, 2697, 2698—Under prohibition the English fashions did not follow the French so rapidly, 2699.

Manufacturers formerly frequented country towns with patterns of ribbons, 2702—English goods are not sold as French, they are not so good or so cheap, 2703-2707—French goods are sometimes sold as English when English are asked for, 2708—If there were equal perfection in English goods the French would have preference, 2709—Increase of smuggling; method of doing it; rate per cent. of insurance; how far done openly, 2710-2723—Great risk of smuggling during prohibition, 2724, 2725—It is generally now considered that goods are safe when once deposited, 2728—Home manufacture could supply the market without the introduction of foreign goods, 2729—No encouragement now to lay out money in producing novelties, 2730—Before removal of the prohibition sacrifices could be made after sale of spring stock without ruin, 2731, 2732—Manner in which the market is constantly glutted, and the jobbing French goods prevent the sale of English, 2733-2736—The French will not job their own goods in their own market, 2737, 2738—Failures and compositions attributable to a glutted market, and introduction of foreign goods, 2739-2745—No new channel of trade or of employment for weavers, caused by the introduction of French goods, 2746, 2747—Difference in the price of ribbons smuggled and that pay duty, 2748-2750—Number of failures and withdrawals from business of manufacturers since the introduction of foreign goods, 2751—Duty paid at the commencement of the season of all goods that come in the regular way, 2752—Goods are jobbed in during the season at half the price paid for them at the commencement of the season, 2753-2756.

French goods can be bought much cheaper in London than imported, 2757, 2758—Amount of duty that would prevent smuggling in ribbons, 2759-2762—Proper prohibition would prevent smuggling, 2760—Recent case of smuggling and per centage of insurance, 2763-2771—Offer by a French house to smuggle in some goods to be purchased for francs and delivered in London for shillings, including insurance, 2772-2778—Manner in which goods are sometimes imported through the Custom House at less than their proper duty, and how to be prevented, 2779-2787—General rates of insurance upon smuggling, and what it includes, 2788-2796—Gloves are not smuggled, 2797-2803—Interest of the large haberdashers to continue the present system, and how far it causes a monopoly, 2804-2817—Not as many English goods jobbed as French in proportion to the capital employed, 2818—Proportion of the trade that consists of gauzes, 2819—Small dealers have not increased so much as large houses have increased the amount of their returns, 2821-2823—How the higher classes of consumers benefit by reduction of wages and profits, 2825-2831—Reasons why manufacturers' agents in London will not serve a small house under five per cent. higher than a large house, 2832-2842—Public prefer a large house to deal at from the great variety, 2843, 2844.

(Second Examination.) Articles purchased at the Custom House for exportation and smuggled in for home consumption prior to 1826, 2854-2861—Reasons why new goods not passed through the Custom House could not be smuggled, 2862-2868—Rates of premium for smuggling, 2869-2879, 2971, 2972—Description of goods usually smuggled, 2880-2892—Reasons why duty would not prevent smuggling, 2893-2896—Premium should be offered for discovery of smuggled goods, 2897-2900—Possibility of discovering French from English goods, 2901-2907—Offers by French warehousemen to deliver to English purchaser without expense, 2908-2913—Description of English goods sold in France, 2914-2930—The French would reduce the price of their goods if the English did, 2932-2935—Profits of the French manufacturers and dealers, 2936-2947—Ribbons worn by ladies are not supplied cheaper than if made in England, 2949—Increase of French stocks, and returns by wholesale dealers since 1828, 2950-2955, 2969, 2970—Reasons for the preference given to French goods, 2956-2961—Means of preventing smuggling under a prohibition, 2962-2968, 3008-3014—Less than the proper duty sometimes paid at the Custom House, 2973, 2974, 2976-2981, 2984-2996—Colours the French are at present producing, 2975—Would not be bought if made in England, 2982, 2983—Accounts opened with a greater number of wholesale dealers formerly than at present, 2997-3007, 3016-3050.

(Third Examination.) Goods bought at Spitalfields formerly and at present, 10545-10548—Those not now bought there come from France, 10549—Articles of Manchester manufacture now bought, 10550-10554, 10563-10566—Quality of Manchester,
678. 6 s

Stephens, George, (Analysis of his Evidence)—continued.

chester goods not sufficient to interfere with the sale of rich French goods, 10555, 10567-10569—Loss to Manchester from copying French goods, and being met in the market by French job goods, 10556-10558—Inconvenience from job goods of the same quality and lower price, 10559-10562—Difference in quality of certain fancy goods made in France and by Messrs. Fulton, 10570-10572—French gauzes and not the Scotch that interfere with Spitalfields, 10573-10580—Comparison of quality and prices of English and French crape handkerchiefs, 10581-10592—More money would have been embarked by manufacturers in the fancy trade but for French goods, 10593—Inferior class consume the Manchester silks, 10594, 10595—High prices not given to Manchester manufacturers, 10596, 10597—Fashion commands a higher price to be given for French than Manchester goods of the same quality, 10598-10606—Orders given to France instead of Spitalfields and Manchester in consequence thereof, 10607-10609—English silks have not improved since admission of French, 10610-10612.

Preference in favour of English black and white silk goods over French, 10613, 10614—Reason for buying plain silks from France, 10615-10618—Proportions of buyings and stock, French and English, 10619-10634—Description of French goods at present bought, 10635—Duty that should be paid thereon, 10637—Instance of goods coming in through the Custom House lower than their proper rate of duty, 10639-10649—Manner of levying duties at the Custom House, fraud a common occurrence, 10650-10662—Plain goods are smuggled, 10663-10665—Extra duty might be collected on gloves without creating smuggling, 10666-10674—Extent of smuggling and of general description of goods, 10675-10679—Smuggling might be stopped, and rewards to informers would enable higher duties to be collected, 10680-10682—Not more rich plain goods made in Spitalfields than three years ago, 10688—Advantage of an extra duty on gloves, 10689-10691—Persons driven to smuggling in self-defence, 10692, 10693—Rewards that would check smuggling, 10694-10696—Benefits of stamping goods, 10697-10702—Duties should be reduced to the cost of smuggling, 10703—Reduction of duty on foreign thrown silk would not prevent sale of French goods, 10704-10712.

(Fourth Examination.) Examination as to a letter from a Custom House officer, with inference of bribery therefrom, 12311-12320—Silk passed through the Custom House lower than if done by a fair trader, 12321-12333, 12338-12345—Witness declines giving the name of his informant or the Custom House officer, 12334-12337—Knowledge of goods coming in under *ad valorem* duty at less than their proper value, 12346-12361.

Stock. Disadvantage to the English manufacturer from keeping a stock on hand, *Brunskill* 747-749—Injury to trade from glut in the market, and means of preventing it, *Cheeper* 826, 827—Bad effects of jobbing from the large stocks on hand, *Cheeper* 897-901—Manner in which the market is constantly glutted, and the jobbing French goods prevent the sale of English, *Stephens* 2733-2736.

Stoke Parish. Return of the Property assessed in the Parish of Stoke, in the County of Warwick, with the number of Rates, Rate of Assessment, and gross Amount on all Property assessed in the said Parish of Stoke, 1815-1832, *App.* p. 927.

Stone, Thomas, (Analysis of his Evidence.) Spitalfields manufacturer, 5725-5727—Description of goods manufactured, and number of looms employed, 5728-5733—Rate of wages, 5734-5740—State of the Spitalfields' trade, 1826-1829, 5741-5749—In 1831 and 1832, 5775-5777, 5780-5786—Reduction in wages since 1826, 5750-5755—Increase of the silk manufacture in other parts of England, and injury thereby to wages in Spitalfields, 5756-5758, 5761, 5762—Wages at Manchester, 5759, 5760—Reduction in the employment of weavers during the last six years, 5763, 5764—Manufacturers at present in Spitalfields, and number who have been ruined, 5765, 5771—Some have turned throwsters, 5766, 5767—More cash payments than formerly, 5768, 5959-5962—How far capital in the silk trade equal to formerly, 5769—Spitalfields trade thrown into the hands of a few manufacturers, 5770—Where satins manufactured, 5772-5774—How long the Spitalfields' trade affected by the appointment of the present Committee, 5778, 5779—Injurious effect of the duty upon Italian thrown silks upon the manufacturers of Spitalfields, 5787-5793—Claims against Italian merchants for damage on transit from Italy are trifling, 5794.

Proposition of foreign thrown silk used in manufacture, 5795—Price of throwing during the last six years, 5797-5799—Period of briskness in the throwing trade, and difficulty in getting silk thrown, 5800-5813—Manner in which competition with Manchester and the wages given there acts injuriously upon the wages in Spitalfields, 5814-5825—Comparison of articles manufactured at Manchester and Spitalfields, 5826-5831—Comparison of wages between the silk and cotton trade at Manchester, and transfer of hands from one to the other, 5831-5836—Effect of reducing duty on Italian thrown to the Italian seller and Spitalfields' manufacturer with regard to price, 5837-5843—How distress of Spitalfields' weavers to be alleviated, 5847-5850—Larger quantity of French silks admitted illegally, 5851—Difficulty of ascertaining between French and English silks, 5853-5855—Prohibition would not effectually prevent smuggling, 5852-5859—State of the law as to smuggling with regard to the proof of French goods, 5860-

Stone, Thomas, (Analysis of his Evidence)—continued.

5860-5863—Prohibition of manufactured goods would cause more employment here, 5864—Distress in Spitalfields less formerly than at present, 5865, 5866—How far a certain description of goods that were made formerly and not at present, is from the taste being altered, or from foreign or English competition, 5867-5895, 5936-5945.

Quantity of velvet one man can manufacture in a week and wages earned thereby, 5897, 5898—How far the fancy trade of Spitalfields affected by the introduction of French goods, 5899-5902—Advantage of the French over the English manufacturer from previous orders, 5903, 5904—Benefits to be derived from the prohibition of French goods, 5905-5909—Throwsters do not get a remunerating price at present, 5910-5919—Reduction of duty would destroy throwsters' capital, and throw their hands out of employment, 5920-5924—Ruin of English would cause dependence upon foreign throwsters, 5925, 5926—Figured silks much worn at present, 5946-5948—Difference of credit, 5950-5958—Present method of transacting business arising therefrom, and benefits thereof, 5967-5993—Manufacture of rich goods more profitable than low, but less demand for them, 5994-6000—From competition with France, 6001—Goods can be made here equal to those coming from France, 6002, 6003—Manner in which capital in Spitalfields employed, 6004-6009—Amount of duty on importation of plain goods, and generally from France, during the last six months, 6010—Description of silk used in Spitalfields' manufacture, 6011-6015—Use of the Jacquard loom decreased in Spitalfields, 6016-6019—Earnings of weavers at present, 6020-6027.

(Second Examination.) Examination upon the case of the Spitalfields' weavers not being properly before the Committee, and upon the number of looms employed by manufacturers and by the Trades' Committee, 12679-12685—Statement of the opinions of different manufacturers as to the removal of duties on foreign thrown silk and on prohibition, 12686-12689—Number of looms in Spitalfields, number out of employ, and number employed by the Trades' Committee, 12690, 12691.

(Third Examination.) Confirmation of witness's opinion, Question 5789, 12692—Average weekly earnings of weavers in Spitalfields, 12693.

Stone, William, (Analysis of his Evidence.) Partner in the house of Durant & Co., 5593-5595—Extension of the silk trade, and in what counties, 5596-5598—Fluctuations therein in different years, 5600-5606—Italian throwster a loser since 1829, 5607-5608—Small advantages of the Italian over the English throwster, 5609-5612, 5615—Period of the year at which Italian raw and thrown silks received in England, 5616, 5617—English thrown is in the market as soon as Italian, 5618—Period of increase of mills and machinery in England, and where, 5619-5622—How far throwing trade increased, 5623—State of the throwing trade, and prices of throwing 1821-1830, 5624-5635—Effect of duties on thrown silk on Spitalfields and Manchester, 5636—Proportions of foreign silks used in different manufacturing districts, 5637—For what articles foreign silks used, 5638, 5639—Manner in which price of thrown silks in England determined, 5640-5643—Effect of lowering duty on foreign thrown silk, 5644-5649.

(Second Examination.) Table showing the nett proceeds of one pound of Italian raw and thrown silk, deducting duty and charges (1822-1831), 6028-6030—Principle upon which calculations made, 6031-6039—Italian throwster not sufficiently remunerated, 6040-6047—Advantage of Italian over English throwster, if duty repealed, 6048-6051—Imports of Italian thrown silk, and at what period the year should be calculated, 6052-6058—Decrease in the price of thrown 1831, 6057—Weight of bales of 1830 and 1831 lighter, 6059—Bad state of the throwsters in certain years, 6060-6066—Prices obtained by the throwster in 1830, 6067-6078—Prices of thrown silk, and duty in 1830, and manner they increased importation, 6079-6134—Depression of mills in the West, from transfer thereof to the North of England, 6139-6141, 6147-6160—Competition in this country sufficient, 6142—Italians might throw more silk, 6146—Improvement in English thrown silk, and to what attributed, 6161-6163—Improvement of Italian raw silk, and to what attributed, 6164-6170—Present state of the market with regard to the supply of Italian raw and thrown silk, 6171-6181—Purposes for which Bengal silk applied, and its comparative quality, 6183-6198, 6203, 6204, 6209-6213, 6217, 6218, 6232, 6233—Less labour required in working it, 6199-6201—Consumption of raw silk no criterion of amount of labour employed, 6202—Use to which China silks applied, and their quality, 6205-6208—How Bengal silks affects the consumption of Italian, 6214-6217, 6221—Improvement in the quality of Bengal silk, 6219, 6220—Chinese silk interferes more with Italian, 6222.

Increase in quality and decrease in price of Chinese silk, 6223, 6224—Examination as to quantity of labour employed in manufacturing different descriptions of silk, 6225-6231—Application of China silk, 6234—Importance of increasing the supply, 6235—Its comparison with Bengal, 6236, 6237—Necessity for a supply of Italian silk, 6238—Comparison as to quality of French thrown silks, 6239-6243, 6248—Expense of conveying them to this country, 6246, 6247—Means of ascertaining French silk, 6249-6253, 6255-6258—How obtained, 6254—For what uses calculated, 6259-6263—Price of silk used for making into marabout, 6264-6267—To what place Italian thrown silk exported from this country, 6268-6271—Prices of Italian silk in London and Lyons, and how regulated and affected by the home growth of France, 6272-6304—Advantages or otherwise of reducing duty on importation, 6305-6312—How it

Stone, William, (Analysis of his Evidence)—continued.

would affect the importation of Italian raw and thrown, 6313-6318—Effect upon the manufacturer and throwster of increasing duty on thrown, 6319-6323—Effect of duties on the price of foreign and English thrown silk, 6324-6328—How far distress of throwster in consequence of reduction of prices, 6329, 6333, 6339, 6340—How profits calculated, 6334-6338—Distress of weavers, in consequence of reduction of profits, 6341-6345—Whether it has been greater, and of longer duration formerly than at present, 6346-6352—State of trade, 1826-1831; Difficult to account for distress, 6357—Labour lower at Manchester than Spitalfields, 6357—How far distress attributed to admission of foreign manufactured goods, 6358-6364—How far ruin of throwsters would cause dependence upon foreigner for thrown silk, 6365, 6366—Advantage to operatives if foreign competition removed, 6368.

(Third Examination.) Whether the throwing Italian silk can be continued in this country with a lower rate of duty, 6370-6375—Tendency of increased duty on thrown to increase supply of raw, 6376, 6377—Loss by Italian silk merchants from trade with this country, 6378-6380—Imports of silk by certain Italian throwsters, 6381-6392—Comparison of distress formerly and at present, 6393-6403—Greater consumption of silk now than formerly, 6404, 6405—Italian silk takes more labour than Bengal, 6406—Towns in the North to which the silk trade has been transferred from the West, 6407-6411—Importations of tram 1830 and 1831, 6412-6414—Importations, 1830 and 1831, by Messrs. Gondolphin, 6415-6419.

Reason why apparent loss to the Italian throwster may not be actual loss, 6420-6423—Allowance for waste, in calculating nett proceeds of throwsters, 6424-6429—How far throwster did well 1831, 6430, 6431—The year 1831 a bad year for profits, 6431, 6432—Disadvantage to throwsters of working bad Italian silk, 6433-6435—Proportion of good silk imported, 6436-6440—Doubt as to English throwsters, of common run of Italian silk having obtained a remuneration, 6441—Failures among them, 6442, 6443—Districts where Italian plan of throwing is understood produce better raw than those where they are ignorant of it, 6444—Effect of increasing or decreasing duties upon importation of thrown and raw silk, 6445-6448—Smaller importation of thrown and greater importation of raw would give additional employment to English mills, 6449—Best thrown silks of Italy are better than the generality of English thrown, 6450-6452—Business of a silk broker, and sources of his information, 6453-6458.

(Fourth Examination.) Importation, 1828-1832, by certain Italian merchants, 7007—Monthly importations of Italian raw and thrown, 1830 and 1832; examination upon the increased or decreased importation of those parties, 7008-7014—Examination upon broker's commission, sale, credit and discount upon silk sales, 7015-7025—Effect of continuance of present duties upon manufacturers and throwsters, 7026-7028—Extent to which Manchester has interfered with Spitalfields is but fair competition, 7030.

Swift, Lamech, (Analysis of his Evidence.) Silk throwster in Somerset and Devon, 3723-3725—By whom first mill for throwing organzine introduced into England, 3726—Machinery not perfected, from supposed alterations in the silk trade, 3728—Manchester not superior in throwing to the West of England, 3730—Silk sent from Manchester to the West of England for throwing, 3731-3734—Description of silk thrown, and for whom, 3735-3737—Depreciation of trade since 1826, 3738, 3739—To what attributed, 3740—Reduction in the prices of throwing, 3741, 3742—Rate of wages, and hours of labour, 3743-3757—Quality of Italian silk not improved, 3758-3762—Impossible for throwster to reduce the prices of throwing, 3763—Ruin to throwsters, by taking off the duty on foreign thrown silk, 3764—Rate of carriage of goods, 3765-3770—Other charges, 3771, 3772—Reason for distance from London, the obtaining water power and cheap labour, 3773—Manchester has no advantage in rate of carriage, 3774—Wages not sufficient without parish assistance, 3775-3781, 3786-3790—Hands have no other means of employment but silk mills, 3782-3785—Only females employed; their ages, 3791-3795—Charge that would remunerate throwster, 3796—Waste of silk, 3797—Advantage to the Italians by their silks not being injured by carriage, 3798—Italians reserve the best silks for themselves, 3799—Greater wages could be given if throwster paid a remunerating price, 3800-3802—Silk mills near London have been worse off than those in the West of England, 3803, 3804—Average wages of artisans and agricultural labourers, 3805-3810—Process of manufacture of marabout, organzine and tram, and prices thereof, 3811-3837—Advantage of France over England in the manufacture of marabout, 3838-3846—Quantity of marabout annually thrown, 3847-3851, 3868-3870—Reason throwing marabout does not give a larger profit than other silk, 3852-3854—Cost of raw silk, 3855—Cost of throwing, 3856-3860.

Difference in the expense of throwing finer and coarser articles, 3861-3866—Finer description that are imported, 3867—To what distress of throwsters attributed, 3871—Time occupied in throwing a quantity of Bengal or Turkey silk would not be more than

Swift, Lamech, (Analysis of his Evidence)—*continued*.

than consumed in throwing half the quantity of Italian, 3872, 3873—Duty that would be a sufficient protection to the throwster, 3874—Increased employment to operatives in throwing marabout, 3875, 3876—Bad effects to throwster of reduction of duty, 3877–3880—Distressed state of trade since the introduction of French goods, 3881–3883—How far country throwsters affected by the establishment of mills near town, 3884–3889—How affected by the importation of foreign silk, 3890–3901—If duty removed more Italian thrown will be imported, 3902—Advantage to the foreigner from the cheapness of labour, 3903–3905, 3909–3911—Consequent necessity for low wages, 3906, 3907—Home competition rights itself, 3908—Advantages of the Italian throwster over the English, 3912–3921—Injury to raw silks in transit from Italy, 3914–3922—Difference in the price of throwing certain silks, 3923–3926—Water power used by the Italians for throwing, 3927—Distinction with regard to the quality of silks thrown, 3928—Increase of mills and machinery, in consequence of promises of prosperity held out to the silk trade, but which were not realized, 3929–3933.

Switzerland, supersedes France in the manufacture of sarsnet ribbons, *Ratliff* 1899–1902; *Baggallay* 7360, 7361—The Swiss manufacture from Italian grown silk, *Ratliff* 1903—Swiss goods are imported into England, *Ratliff* 1905—Regulations that should be adopted to prohibit the importation of Swiss manufactured goods, or to compel Swiss to export their raw silk, *Brockwell* 3501–3515—In that case difference in the prices of labour could be afterwards regulated, *Brockwell* 3518, 3519, 3525—Quantities of silk consumed, and importation therein, *Doxat* 4074–4078—Looms employed in Switzerland and Spitalfields, *Doxat* 4081—Importations into Switzerland, *Doxat* 4088, 4089—Quality of silks imported into England, France and Switzerland, *Doxat* 4090–4092—Importation of Swiss ribbons into France, *Doxat* 4093–4096—Cheapness of manufacture in Switzerland, *Doxat* 4094—Duties on importation into Switzerland and Germany, *Doxat* 4097, 4098—Why the Swiss do not suffer inconvenience from being dependent upon foreign throwsters, *Doxat* 4239–4240.

Imports of silk duty free into Switzerland, *Heath* 5276; *Martin* 5440—Causing small inducement to Swiss to throw, *Heath* 5278–5280, 5357–5361—Description of goods manufactured at Zurich, *Heath* 5281—From whence silk imported into Switzerland, *Heath* 5355, 5356—Imports into Switzerland, from England, of China and Bengal silk, *Heath* 5362—Description of silk supplied to Switzerland and Germany, and from whence, *Martin* 5440—Comparative prices between Switzerland and England, and proportion for expenses on plain sarsnets and plain striped ribbons, *Baggallay* 7408–7412—Advantages of Swiss over French in ribbon manufacturer, *Bowring* 9052–9056, 9065–9068—Advantage of Switzerland over France as to taxation of machinery, *Bowring* 9665–9669—Duty that should be levied on Swiss and German goods, according to the duty levied thereon by France, *Wadden* 10139.

Sudbury. See *Lustres*.

T.

Tables of Duties. See *Duty on Importation*.

Taste. In the event of prohibition, the standard of taste would cease to be regulated by France, *Cheeper* 862–865—Improvement in taste not to be attributed solely to France, *Cheeper* 866–868—Taste in favour of French ribbons, *Jacombs* 1601–1609, 1698; *Ratliff* 1893–1898; *Baggallay* 7377–7389—Manner in which French excel the English in superiority of taste and design, *Dillon* 7663–7670; *Bottrell* 7879, 7880—Why no complaint of want of taste in English manufacture previous to 1826, *Sedgwick* 8168; *Bridges* 10384—Improvement of English taste latterly from communication with the Continent, *Sedgwick* 8191—Advantages to France from superior taste, *Bowring* 8755–8758.

Reasons for superiority of French taste, particularly from the establishments of schools of art and weaving schools, and encouragement given to talent, *Bowring* 8806–8825—National taste in France for works of art encouraged by all public works of art being open to public inspection; other branches of art in which France excels England, *Bowring* 8826–8832—Operation of L'Ecole de Tissage; specimens of their work and prizes given therefor, *Bowring* 8840–8848—Distinction conferred by the French Government for superior skill in silk manufacture, *Bowring* 9936—Not so much skill in manufacture now as formerly from not being able to employ so high a class of designers as formerly, shown by a pattern exhibited, made 70 years ago, *Moore* 11274, 11275—No want of taste if trade properly protected, *Brucklehurst* 11488–11491, 11500, 11501.

Taxation. See *Labour*.

THROWING MILLS.

1. *Generally*.

2. *Italy*.

1. *Generally*.

Erection thereof, at what periods, and whether increase therein, *Royle* 3025–3029, 3034–3036, 3046–3050, 3291, 3292, 3421–3425, 3437; *Swift* 3929–3933; *Ward* 3942–3946, 3977–3978, 3984; *Willmott* 4663, 4763–4766; *Gibson* 4955, 4956; *Heath* 5307; 678.

THROWING MILLS—continued.**1. Generally—continued.**

Stone 5619-3622; Harter 9340, 9346, 9347; Grout 10296-10298; Moore 11158, 11276; Brocklehurst 11329-11332, 11336, 11359-11364; Johnson 11557-11563, 11585-11588, 11602-11609, 11621-11623.

Situation of mills, number out of employment, and whether caused by disadvantages of situation, Swift 3773, 3803, 3804; Ward 4002, 4003, 4021-4023; Willmott 4754, 4755; Stone 6139-6141, 6147-6160, 6407-6411; Hall 6462-6464, 6482-6486, 6494-6497, 6621-6631; Grout 10294, 10295; Brocklehurst 11373 11380—Comparison of mills in different parts of England, Willmott 4768-4774; Brocklehurst 11368, 11371, 11372—Mill in Suffolk assisted to be built by the parish for the purpose of employing the poor, Hall 6557—Sacrifice of labour and capital in the erection of a silk mill, Johnson 11577-11579.

Power thereof, Royle 3030-3032, 3284-3289; Willmott 4663; Grout 10294, 10295; Brocklehurst 11365, 11369, 11370; Johnson 11557-11563; Wright 11756, 11757; Middlehurst 11790-11796—Probable quantity of thrown silk that could be produced by them, Royle 3033.

Speed thereof and increase therein, Ward 3952-3962; Willmott 4758-4761; Moore 11266—Increased speed not an injury to the silk, Gibson 5185, 5186.

Extent of improvement therein, Ward 3951, 4019, 4020; Banbury 4646-4650; Gibson 4850-4852; Willmott 4757; Stone 5623; Bowring 9806-9815; Wadden 10081, 10082; Bennett 10809-10812; Moore 11168-11171, 11265, 11267; Graham 12740—English mills can produce as good thrown silk as any other country, Brockwell 3637-3642 Doxat 4254, 4255; Banbury 4642, 4643, 4645; Gibson 5183.

Value thereof, and depreciation therein, Royle 3037; Ward 4011, 4012; Hall 6498-6500, 6653, 6654; Ballance 8672, 8673; Brocklehurst 11366, 11413-11418; Johnson 11557-11563—Mills and machinery not convertible to other manufacture, Brocklehurst 11367.

Expenses thereof, Royle 3162, 3163, 3171-3174; Brockwell 3658, 3669, 3680; Swift 3765-3772, 3861-3866; Stone 5624-5635—Advantages of the Italian and French in throwing and wages, Royle 3160, 3161, 3251-3253; Gibson 4907, 4908; Martin 5545, 5546.

Description of silk thrown, and loss by coarse silks, Swift 3735, 3737, 3872, 3873; Ward 4013-4017, 4024; Willmott 4751-4753; Stone 6449; Johnson 11589, 11590, 11613-11617—Waste of silk in throwing, Swift 3797.

Number and description of operatives employed therein, Royle 3109, 3294, 3305; Swift 3791-3795; Brocklehurst 11336—Medical certificate of cleanliness and healthiness of witness's mills, Royle 3274, 3275—Hands have no other means of employment but silk mills, Swift 3782, 3785—Hours of labour, Brocklehurst 11333.

2. In Italy.

Water power used by the Italians in throwing, Swift 3927—If mills worked all the year they could not throw all the silk produced in Italy, Caffi 7093-7095, 7108—Mills would work all the year if they could get a better price for throwing, Caffi 7100-7105—Size of mills, their rents and power, Caffi 7146-7150—Capital of mill-owners, taxes and outgoings of mills, Caffi 7156-7159.

Thrown Silk. See *France*, IX. *Importation.* *Silk*, VII.

THROWSTERS:**1. Generally.****2. In Italy.****3. Papers laid before the Committee.****1. Generally.**

Their distress, and to what attributed, Royle 3120-3123; Brockwell 3481-3489; Swift 3871, 3884-3901; Ward 4029, 4030; Doxat 4381; Banbury 4433-4441, 4503, 4504; Willmott 4762; Gibson 4957-4959; Stone 6060-6066, 6329, 6333, 6339, 6340, 6430-6435; Wadden 10083; Moore 11109-11113, 11166, 11227-11230; Brocklehurst 11424, 11425; Johnson 11591-11593, 11601; Middlehurst 11784, 11788, 11789, 11792, 11793, 11797; Graham 12753-12755—Failures of throwsters, Brockwell 3490-3493; Heath 5294, 5306, 5687-5691; Stone 6442, 6443.

Necessity for protecting the British throwster, Brockwell 3494, 3499, 3500; Banbury 4590, 4591; Hall 6581-6583; Wadden 9977; Brocklehurst 11421-11423, 11426-11430—Protection that should be given to the British throwster, Brockwell 3483, 3484, 3655-3657; Swift 3874; Ward 4010; Doxat 4229-4234; Banbury 4462-4465, 4481-4483; Willmott 4737, 4738; Gibson 4921-4924, 4927; Hall 6478; Ballance 8664, 8665; Johnson 11594-11600; Moore 12069—Protection more necessary to throwster than manufacturer from fixed capital being greater; Royle 3106-3108, 3110; Moore 11315-11317, 12272; Wright 11762, 11763; Graham 12801-12803—Comparison of protection between English throwster and cotton spinner, Royle 3112—Protection by the French

THROWSTERS—continued.1. *Generally*—continued.

to their throwsters, *Royle* 3113-3115; *Doxat* 4288-4290—Reason why British throwster cannot compete with the Italian, *Brockwell* 3644, 3651-3654.

State of trade and remuneration to throwsters, formerly and at present, *Ward* 3992-3995; *Doxat* 4126-4130, 4398-4402; *Banbury* 4475-4480, 4492; *Willmott* 4665-4669; *Gibson* 4893-4898; *Stone* 6424-6428, 6441, 5800-5813, 5910-5919; *Hall* 6518-6523, 6643; *Wadden* 10060, 10061; *Bennett* 10788, 10789; *Moore* 11269-11271, 11318, 11319; *Brocklehurst* 11323; *Middlehurst* 11783—Effect of removing duty on foreign thrown silk on trade of throwsters, *Gibson* 4879-4883, 4984-4999; *Stone* 5920-5924, 6048-6051; *Hall* 6470, 6471; *Moore* 11318, 11319—Compensation to throwsters if their trade destroyed, *Royle* 3111—Protecting duty to British manufacturer if trade of throwster destroyed, *Royle* 3116, 3117—Ruin of English throwsters will throw the trade more into the hands of Italy, *Brockwell* 3472, 3473—Inducement to the throwster to continue, *Royle* 3088-3091, 3976.

2. *In Italy*.

Italian throwster would be a greater gainer than the English, by removing duty on thrown silk, *Royle* 3092-3094; *Gibson* 4984-4999; *Stone* 6048-6051—Advantages of the Italian throwster over the English, *Brockwell* 3644, 3651-3654; *Doxat* 4245-4247; *Gibson* 5056-5060, 5176-5180; *Heath* 5290-5293, 5300; *Martin* 5438, 5439; *Stone* 5609-5612, 5615; *Caffi* 7119-7121; *Moore* 11226—Reason for Italian throwster losing in the English market; *Gibson* 4942; *Heath* 5285-5289, 5302; *Martin* 5469; *Stone* 5607, 5608, 6040-6047—If duty reduced he could introduce it at a profit, *Gibson* 4943—Proportion of import duty paid by foreign throwster, *Martin* 5471—Advances made by merchants in London and Lyons to foreign throwsters, *Martin* 5531-5536—Why trade of Italian throwster not likely to increase, *Martin* 5586—Liability of throwster if work not delivered at the day named, *Caffi*, 7250-7256—Great wealth of persons engaged as throwsters, *Caffi*, 7257-7268.

3. *Papers laid before the Committee*.

Minute relative to Throwsters' Work; showing the consumption of Raw Silks of all descriptions in the years 1824-25, and in the years 1826-31, dissected and computed into one standard, and compared with regard to the rates of labour and profit they have afforded to the Throwster; also remarks thereon, *Evidence*, p. 224.

Comparative view of the London market prices of Milan and Bergam Raw Silks, and Organzines at various periods, from June 1824 to February and April 1832, with notes thereon as regards the British Throwster, *Evidence*, p. 261.

See also *Debentures*. *Silk*, VII. 2.

Tootal, Henry, (Analysis of his Evidence.) Silk manufacturer and throwster at Manchester, 9516—State of trade at Manchester and description of goods manufactured, and number of looms employed from 1816 to the present time, 9517-9535—Number of Jacquard looms employed at Manchester, and on what goods, 9536-9544—Drawback on exportation and price of a certain article produced, 9545-9549—Sale price of richest French silks, 9550, 9551—Cost of Jacquard looms, 9552—Capability of Manchester for the production of rich goods; pattern of dress made for the Queen produced, 9553-9555—Wages of weavers, their hours of labour, quantity produced per day, and deduction for necessary expenses, 1823, 1828 and 1832, 9556-9573—Consumption of silk in Manchester, 9574—Quantity of silk thrown in Manchester, and quantity of foreign thrown imported, 9575.

Quantity of foreign thrown silk used in Manchester, 9576-9578—Proportion of labour to the value of the goods, 9579-9584—Duty on waste silk, drawback on exportation, and manner in which it is worked up to claim the drawback, 9585-9587—Throwing mills at Manchester in 1823, and at present; number of spindles, and weekly earnings of operatives, 9588-9591—Average wages lower than in a cotton mill, 9592—Rate of wages, 9593, 9594—Activity in the silk trade at Manchester at present, 9595, 9602, 9603—Comparison of wages, 1828-1831, 9596-9606—Exportation to America, increase therein, instances of orders to England formerly given to France, 9607-9612—Doubt whether taking off duty on organzine would lower manufactured article to that amount, 9613, 9614—Bounty increases exportation of gros de Naples, 9615.

Trade Committee. Difference in the price of goods imported by the trade committee, and similar goods made at Spitalfields, *Ballance* 8586—Appointment of the Committee at Weavers Hall, its object, and number of members interested in throwing, *Ballance* 8624-8635, 8652; *Bridges*, 10510-10515—They have not interfered with the evidence to be given before this Committee, *Bridges*, 10516-10528—Not part of the business of the association to get duties on raw silk lowered, *Ballance* 8636.

Trams. Causes that operated to reduce the price of trams, *Gibson* 5118—Price of trams at Lyons and London, 1831, *Martin* 5553—Importations of tram 1830-31, *Stone* 6412-6414—No profit in sending trams to England from Italy, *Caffi* 7166—Distinction between organzine and tram, *Wadden* 10064, 10065.

Veritas. See *Custom House*.

Vienna. Imports and exports to and from, *Doxat* 4099-4101—Articles worked at Vienna for the Levant, *Doxat* 4103—Consumption of silk therein, *Heath* 5693.

W.

Wadden, Barrett. (Analysis of his Evidence.) Silk manufacturer in Spitalfields, 9962-9964—Ruin of Dublin silk manufacturers by the repeal of the Union duties, or 10 per cent. on introduction of English silk manufactures into Ireland, 9966—Good condition of the Spitalfields' weavers ten years ago, 9967, 9975, 9976—Reduction of wages upon the opening of the Ports, 9968—Unsettled state of trade since, 9969—Why reduction of wages not immediate upon opening the Ports, 9970—Deterioration of wages and profits progressive to the present time, 9971—Exertion of the English manufacturer to meet foreign competition has failed, 9972—Necessity for supporting the British throwster, 9974—Alteration for the worse of the condition of the Spitalfields weavers, 9977—Examination with statements showing distress of weavers, 9977-9983—Smuggling before repeal of the prohibition a benefit to the manufacturer, 9984—Great increase of smuggling since, 9985, 9986-9994—Disadvantage to the trade by reducing duty in 1829 from lowering wages and profits, and advantage to the export trade thereby from debentures, 9997-9999.

Debentures of no advantage to the importers of Italian silk beyond the price of the debentures, 10000—Disadvantage to trade from a further reduction of duty, 10002—Difficulty in disposing of the rich quality of plain goods manufactured in Spitalfields from the demand for them being supplied legally and illegally from France, 10003-10008—Spitalfields chiefly employed upon plain low-priced goods made from inferior silks, 10009—Spitalfields trade has not removed to Manchester, 10010—Improvement has not taken place in Spitalfields manufacture from the low wages since 1826, 10011, 10012—Importation of foreign silk velvets, 1830-1831, and British labour displaced thereby, 10013—Account showing the cost of raw silk, wages and other charges of manufacturing certain plain and figured velvets imported, 1830-1831, 10013—Comparative view of the cost and expenses of manufacturing certain orgazine and tram in plain gros de Naples at Lyons and Spitalfields respectively, 10015-10019—The like comparative

Wadden, Barrett, (Analysis of his Evidence)—continued.

comparative view on figured gros de Naples, 10020-10024—Expense of labour on figured gros de Naples would be increased without the Jacquard, 10026—Confirmation of the comparative view of cost of manufacture on plain gros de Naples, by calculations on a subsequent importation, 10026.

(Second Examination.) Account showing the cost of silk and wages paid for manufacturing the same into plain and figured gros de Naples in Spitalfields, 10030—Advantages of the French manufacturer over the English, 10031, 10032—Prohibition the only protection for the fancy trade; plain trade may be protected if the smuggler detected and punished, 10033—Further examination as to smuggling, and means of prevention, 10034-10040—Overwhelming distress in Spitalfields and Coventry; and distress in Macclesfield, Manchester, Middleton and Sudbury, 10041, 10042—Rich silk goods are not made at Manchester, with some exceptions, 10043-10045—Small number of looms employed in rich figured and fancy goods in Spitalfields, specimens produced, 10046-10052—Fancy trade in Spitalfields diminished from the introduction of French goods; their superiority, 10053-10056—Efforts of British manufacturer unavailing while France leads the fashion, 10057—Preference in favour of British thrown silk, and means taken by witness to prevent pillage in dyeing, 10058, 10059.

English throwster can produce as good an organzine as the Piedmont throwster if properly compensated, 10060—He has not generally as good raw as the Italian, from the latter having the choice of the market, 10061—Fossebrone silk generally thrown in this country, 10061-10064—Manner of throwing and distinction between organzine and tram, 10064, 10065—Description of marabout and process of throwing it, 10065—Price thereof, raw and thrown, 10065, 10066—How far Fossebrone superior to Piedmont in making organzine, 10067, 10068—Possibility, if protected by price, of English manufacturer equalling the French, shown by witness's experiments, 10068-10078—How throwster and manufacturer would be sacrificed if duty on thrown silk removed or reduced, 10079, 10080—Neither throwing or weaving has improved in England of late, 10081—Manner in which low wages causes deterioration in throwing, 10082—Reason for low wages and distress of throwsters while large importation of raw silks and greater consumption of silk goods, 10083—Number of Spitalfields weavers out of employment, and instances of their absconding to America with their employers' manufactured property, 10084-10086.

Quantity of ribbons and broad silks seized belonging to Messrs. Leaf & Co., 10087, 10088—Their subsequent restoration, and being brought into home consumption, and evils thereof, 10089-10104—Examination upon, exportation and drawback thereon, 10105-10116—Negligence of arrangement at the Custom House by which goods get in at less than their proper duty, 10117-10122, 10126-10129—Leaf's transaction not done with connivance of Custom House officers, 10123—It is not an isolated case, 10124—Officers have not received the compromise money, how far in consequence of a memorial from Leaf's to get the money back, on the ground of the goods not being smuggled, 10125—Extent of smuggling to be partly accounted for by the looseness of the Customs regulations, 10130, 10131—Price of French and Italian raws, 10132, 10133—Number of looms at Lyons and St. Etienne, and how they interfere with Spitalfields and Coventry, 10134-10138—Duty that should be levied on Swiss and German goods, 10139—Use of satins supplanted by gros de Naples, 10141—Distress attributed to the introduction of foreign goods, 10142, 10143—Evils of further reducing the duty on importation, 10144—Lowering duties would be in violation of the promise of the Board of Trade, 10145—Increased quantity of silk does not always show increased profit to the labourer from there being more labour in coarser silk, 10146-10149—Rate of credit of Spitalfields trade, 10150, 10151.

WAGES.

1. Generally.
2. At Coggeshall.
3. At Congleton.
4. At Coventry.
5. At Macclesfield.
6. At Manchester.
7. At Spitalfields.
8. In Foreign Countries.

1. Generally.

Rate of wages; reductions therein, and causes thereof, *Doxat* 4045, 4047, 4062, 4395; *Banbury* 4489-4491; *Willmott* 4698-4711, 4720; *Gibson* 4929, 5152-5157, 5201; *Hull* 6579, 6584, 6585, 6588, 6589, 6662, 6663, 6714-6721, 6740-6747, 6751-6755; *Baggallay* 7427-7429, 7450-7452; *Ballance* 8367-8373, 8385, 8387, 8527-8530, 8534, 8535, 8656, 8657, 8692, 8693; *Bridges* 10389, 10390; *Bennett* 10739, 10740; *Wallis* 10841-10856, 10971-10974; *Poyton* 10980; *Bolter* 11001-11007; *Brocklehurst* 11334-11336, 11543; *Roubotham* 11730-11732; *Wright* 11776-11781; *Middlehurst* 11786-11791; *Kelly* 11820-11826; *Pittifor* 11989-12028—Effect of

WAGES—continued.

1. Generally—continued.

lists for wages, *Royle* 3124, 3126—Reduction of wages if duty on thrown silk taken off, *Royle* 3435, 3436—Wages not sufficient without parish assistance, *Swift* 3775-3781, 3786-3790; *Ward* 3981; *Brocklehurst* 11539-11542—Greater wages would be given if throwster had a remunerating price, *Swift* 3800-3802—Average wages of artisans and agricultural labourers, *Swift* 3805-3810; *Willmott* 4745, 4746; *Hall* 6725—Work cannot be continued at present wages, *Ward* 4026, 4027; *Brocklehurst* 11419, 11420—Proportion of wages on silk grown in the Colonies, and in Italy, *Doxat* 4298—Comparison of reduction of wages between cotton and silk, *Doxat* 4308-4311.

Statement respecting the reduction of wages and tables showing rates at London and Lyons, *Doxat* 4375; *Gibson* 5152-5157—Women's wages, *Hall* 6588, 6589—Wages of winders and warpers, *Willmott* 4698-4711; *Baggallay* 7450-7452—Account showing manner in which less wages are paid for working up a larger quantity of silk, *Ballance* 8383, 8384; *Grout* 10314; *Brocklehurst* 11356, 11357, 11543—Number of yards per day weavers can make, *Ballance* 8546-8549—Advance of wages that would satisfy operatives, *Bridges* 10489-10491—Decrease in the amount of wages paid upon the manufacture of coarse goods over fine goods, *Prout* 11642, 11643; *Smith* 11689—Average wages do not include the time they wait for work, *Smith* 11693—Cotton trade has not depressed silk weavers' wages, *Cope* 11713; *Rowbotham* 11724-11726—Why protection would tend to increase wages, *Kelly* 11832—Expense of assistance required by weavers reducing the amount of their earnings, *Pittifor* 12049-12052—Not an undue proportion between the earnings of plain and figured weavers, *Pittifor* 12055-12057.

2. At Coggeshall.

Difference in wages at Coggeshall and Coventry, and comparison of goods, *Hall* 6667-6673—Rate of wages to Coventry men working for witness at Coggeshall, *Hall* 6728, 6729.

3. At Congleton.

Wages paid to throwsters in Congleton, 1823-1832, *Johnson* 11564.

4. At Coventry.

Particulars of forming a list of prices for wages, and how they affect engine work and hand work, *Brunskill* 248-268—Effect of machinery in equalizing wages for different descriptions of work, *Brunskill* 326-328—Difference of wages for engine loom and single-hand work, *Brunskill* 343-348; *Poole* 1068-1070, 1075-1079, 1084, 1090, 1091, 1117-1119—How far obtaining material cheaper would enable the giving better wages, *Brunskill* 355-363—Rate of wages, *Brunskill* 332-338, 487-492; *Poole* 955-960, 965, 980-990, 1062-1064; *Goode* 1209-1213; *Smith* 1259, 1337; *Marston* 1363-1369, 1495, 1500, 1506-1508; *Perkins* 1554-1556, 1574-1579; *Jacombs* 1588, 1589, 1776-1784; *Cox* 2059, 2060, 2104, 2113, 2114; *Merry* 2543, 2544, 2572-2586, 2625-2629, 2852; *Swift* 3743; *Doxat* 4036, 4037, 4056-4061; *Willmott* 4685-4697, 4721-4723; *Gibson* 5199, 5200, 5202-5207; *Hall* 6723, 6724, 6750; *Baggallay* 7432-7437—Proportion of wages to the cost of the article, *Brunskill* 572-582—Account of the average weekly earnings of weavers having full employment in the plain ribbon trade, including satins and sarsnets, 1815-1830, *Poole* 965—Wages received by journeymen from undertakers the same as from manufacturers, *Poole* 993, 994.

Meeting of the weavers in November for the purpose of equalizing the rate of wages, *Poole* 1019-1024, 1051, 1052, 1065-1067—List of prices between 1816 and 1831, and in what instances departed from, *Poole* 1053-1061; *Goode* 1214-1216; *Ratliff* 2040, 2041—List of prices of engine loom work agreed to at a meeting of the manufacturers, held at the Castle Inn, in the city of Coventry, on Thursday, Nov 10th, 1831, and to commence the following day, *Poole* 1064—Resolutions of a meeting of the Committee of Ten, appointed at a general meeting to make a new standard, held at the Castle Inn, on the 9th Nov. 1831, for deviating from the standard of 1822, and regulating the width of sarsnets, *Poole* 1064—List of prices of single hand work agreed to at a meeting of manufacturers, held at the Castle Inn, in the city of Coventry, on Thursday, Nov. 10th, 1831, and to commence the following day, *Poole* 1064—Discontent among the weavers from some of the masters wanting a further reduction of wages between 1829 and 1831, *Poole* 1071-1074—Single hand list includes winding and warping, but not the engine list, *Poole* 1082, 1083—How far the lists were for the purpose of equalizing the wages between an engine loom and single hand loom weaver, *Poole* 1092-1105; *Marston* 1375, 1461, 1467-1469; *Jacombs* 1785-1793; *Ratliff* 1975-1979—Wages should continue to be paid according to the prices in the lists, *Poole* 1115, 1116; *Merry* 2562-2565.

How far reduction attributed to the importation of foreign manufactured ribbons, *Goode* 1217-1228; *Smith* 1311—Workmen wish to keep to the tables as closely as possible, though they do not afford a living, *Goode* 1253; *Marston* 1376, 1488—How time occupied in setting and changing patterns affects the rate of wages, *Smith* 1323-1335, 1338-1340—Reasons for the manufacturers not giving better wages, *Marston* 1377—Rise in the wages upon certain articles since the table of prices was fixed, *Marston*

WAGES—continued.

4. *At Coventry*—continued.

1448-1450, 1462, 1463—More uniformity in the present list than in any former one, *Marston* 1464-1466—Want of work and low wages always accompany each other, *Marston* 1487—None work at a lower rate than fixed by the table, *Jacombs* 1794-1800—Parochial relief more in some instances than wages, *Jacombs* 1801-1804, 1824, 1825—Wages inadequate from weavers' necessary expenses, *Jacombs* 1805-1813; *Ratliff* 1970-1973, 1980-2015—Wages that would be adequate, *Jacombs* 1814, 1815.

Prohibition would cause a higher rate of wages, and increased price would not be felt by the consumer, *Jacombs* 1816-1820; *Cox* 2218-2229—The list does not prevent the man of capital exercising his own judgment with regard to wages, *Ratliff* 2016-2018—It secures against bad work, *Ratliff* 2019—Neither the public nor the weaver would benefit by lower wages, *Ratliff* 2020, 2026—Comparison between allowing the price of raw silk to find its level, and that of wages, *Ratliff* 2031-2039—Manufacturer departing from agreement would have his goods made worse, *Ratliff* 2042—Description of goods for which witness's house pays a higher price than others, and reasons, *Cox* 2115-2119.

5. *At Macclesfield*.

Statement of the price of labour in Macclesfield, 1810, 1819, 1825 and 1832, and examination thereupon, *Prout* 11647-11655, 11661-11663—In 1817-1823, *Cope* 11699—In 1824 and 1825, *Cope* 11703—Competition with cotton manufacturers did not reduce wages of weavers, *Prout* 11657—Tabular view, exhibiting the amount paid for labour in the weaving department of the silk trade of Macclesfield in 1825 and 1832, with average wages, weekly amount, and annual loss, *Prout* 11664—Wages for throwing at Macclesfield, 1818-1832, *Middlehurst* 11802-11805—Wages more liable to lower at Macclesfield than Manchester, *Middlehurst* 11811.

6. *At Manchester*.

There are no lists there, *Royle* 3124-3126—How wages in Manchester affected by the cotton trade, *Royle* 3239-3243, 3247-3249—Rate of, *Stone* 5759, 5760; *Harter* 9384-9407, 9413-9420—Comparison of wages between silk and cotton trade at Manchester, and transfer of hands from one to the other, *Stone* 5831-5836—Wages of weavers at Manchester, their hours of labour, quantity produced per day, and deduction for necessary expenses, 1823, 1828 and 1832, *Tootal* 9556-9573, 9588-9594—Average wages lower than in a cotton mill, *Tootal* 9592—Comparison of wages, 1828-1831, *Tootal* 9596-9606—How wages in the silk trade at Manchester affected by those in the cotton trade, *Wallis* 10904-10916.

7. *At Spitalfields*.

No fixed rule of wages in Spitalfields, *Gibson* 4818-4822—How regulated, *Ballance* 8531-8533—Rate of, *Stone* 5734-5740, 6020-6027—In 1816-1826, *Ballance* 8357-8359—1824-1831, *Ballance* 8513-8526; *Stone* 12693—Reduction therein since 1826, *Stone* 5750-5755—Injury of the increasing silk manufacture in other parts of England, to wages in Spitalfields, *Stone* 5756-5758, 5761, 5762—Manner in which competition with Manchester, and the wages given there, acts injuriously upon wages in Spitalfields, *Stone* 5814-5825; *Wallis* 10894-10916; *Graham* 12710-12712, 12792-12795—Estimate of how much less wages paid in Spitalfields now and before 1826, *Ballance* 8381—Effect on wages in Spitalfields by repeal of Act regulating labour, *Ballance* 8709-8712—Reduction of wages in Spitalfields, and causes thereof, *Brunskill* 611-622; *Doxat* 4141-4143; *Wadden* 9968-9971; *Moore* 11277-11279; *Beckwith* 11946, 11947; *Graham* 12751—Operation of book prices, and when abolished, *Wallis* 10829-10833—Manner in which smuggling gros de Naples would interfere with wages in Spitalfields, *Wallis* 10925-10129—How far prohibition of French goods would raise wages in Spitalfields, *Graham* 12713, 12714—Fear that material improvement cannot take place in the rate of wages in Spitalfields, *Graham* 12716.

8. *In Foreign Countries*.

They are cheaper in France, on fancy articles, than in England, *Brunskill* 244—The similarity of wages for plain and fancy work at St. Etienne, approach nearer than at Coventry, *Brunskill* 324, 325—English wages double those of Foreign, *Brunskill* 493, 494; *Gibson* 4927; *Bottrell* 7903-7907—Regulation of wages in Italy, *Royle* 3127-3131—Wages in Italy, *Royle* 3164-3170; *Gibson* 4930-4933—Advantages of Italian and French in wages, *Royle* 3160, 3161, 3251-3253; *Ballance* 8410-8412—Comparison of wages and profits between silk and other businesses in Italy, *Caffi* 7116—Wages of agricultural labourers in Italy, *Caffi* 7305-7313—Origin of disturbances at Lyons about wages, *Bottrell* 7927, 7928—Did not extend to St. Etienne, *Bottrell* 7929—Comparison of wages in France and Switzerland, *Ballance* 8505-8512—Wages to reelers, winders and persons in throwing in France, *Bowring* 8881-8883, 8900, 8901—Tariff of weavers' wages at Lyons, *Bowring* 8902-8908—Rate of wages at Lyons, *Bowring* 8934-8938—Of ribbon weavers, *Bowring* 9008-9015—At Saint Etienne, *Bowring* 8999—Of ribbon weavers, *Bowring* 9016-9020.

See also *Clipping. Competition. Conseil des Prud'hommes. Coventry. Doubling. Fancy Trade. France. Labour. Operatives, 2. Profits. Reeling. Sarsnets. Silk Trade, 2. Winding.*

Wallis, William, (Analysis of his Evidence.) Silk weaver formerly in the fancy branch, but latterly in the plain, residing in Bethnal-green, 10813-10815—Distressed state of the Spitalfields weavers since importation of foreign goods, 10816-10818—State of the poor in the parish of Bethnal-green, 10818-10822—Distress attributed to the introduction of foreign wrought silk, 10823—Periods of distress formerly, but none so great as at present, 10824-10828—Operation of the book prices, and when abolished, 10829-10833—How far all the weavers employed in 1830, 10834—Comparison of number of looms in and since 1824, in the whole district, 10835-10837, 10840—Comparison of number in the parish of Bethnal-green, 10838, 10839—Statements of rates of wages, 1769-1825, 10841-10847, 10851-10856—Extent of employment of weavers at present, 10848-10850.

When articles formerly made in Spitalfields transferred to the country, 10857-10859, 10863-10868—Progressive inclination to improvement in the silk trade up to opening the Ports, 10859—Figured handkerchiefs never made to any extent in Spitalfields, 10860—Reason for Norwich taking the bombazin trade, 10861, 10862—Richer goods manufactured at Spitalfields than Manchester, 10869—Few removals of masters or weavers from Spitalfields to Manchester, 10870, 10871—Satins and velvets not making at Manchester, 10872, 10873—More inferior goods now manufactured in Spitalfields, and reduced wages therefor, 10874-10876—Gros de Naples made at Manchester do not interfere with those made in Spitalfields or France, 10877-10879.

More fluctuation in trade since alteration than previously, 10880—Alteration for the worse in the habits and moral character of the Spitalfields weaver since alteration, 10881-10883—Looms out of work at the beginning of this year, 10884—Competition with France most detrimental to the trade of Spitalfields, 10885—Proportion of looms at present and formerly employed in the figured and plain branches, 10886-10889—Improvement in manufacture not to be ascribed to the importation of French goods, 10889-10893—How wages in the silk trade at Manchester affected by those in the cotton trade, and how it acts upon the wages in Spitalfields, 10894-10916—Manufacture of figured lustres at Spitalfields not given up from their being made at Manchester, 10917, 10918—Manufacture thereof at Sudbury and prices paid, 10919-10924—Manner in which smuggling gros de Naples would interfere with wages in Spitalfields, 10925-10929—Smuggling a benefit under prohibition, 10930-10934.

Importation of velvets, and of what description and prices, 10935-10938—Spitalfields more interfering with Manchester than Manchester with it, 10939-10941—Inferiority of the article manufactured in Spitalfields but not in workmanship, 10942—Increase in quantity of rich goods now making, but not in price for weaving, 10943, 10944—Importation of French crapes, or manufacture thereof, in certain parts of England, does not interfere with Spitalfields, 10945-10949—French fancy goods injurious to Spitalfields, 10950-10952—Duty on thrown silk not injurious to the weaver, 10953—Injurious effect of the Milan Decrees, upon importation of Italian silk, and subsequent improvement of Bengal silk therefrom, 10954-10958—How much duty on thrown adds to the cost of manufacture, 10959-10961—Examination upon the use of the fly shuttle, 10962-10965—To what increase of trade in 1824 and 1826 attributed, 10966—Looms in Spitalfields not increased since 1826, 10967—Number unemployed, 10968-10970—Average rate of wages, 1825 and at present, deductions therefrom, and hours of labour, 10971-10974.

Ward, John Sharrer, (Analysis of his Evidence.) Throwster at Bruton in Somersetshire, 3934—Number of hands employed 3936-3938—Average wages, 3939-3941—Number of spindles at work in 1823-1829, 3942-3945—Price of throwing, 3947-3949—Means by which price reduced, 3950—Improvement in machinery trifling since 1823, 3951—Increased rapidity in machinery and extra employment therefrom, 3952-3962—Advantages possessed by the Italian throwster, 3963-3971—Ruin to throwsters by removing import duty, 3972-3975—Inducement to the throwster to continue, 3976—Number of mills formerly and at present, 3977, 3978—Loss to proprietors, the mills being out of employ, 3979, 3980—Hands partly dependent on the poor rate, 3981—Number out of employ, 3982—Increase of poor's rate at Bruton, 3983—Number of spindles at work, 3984—Italians keep their best silk themselves, 3985-3987—Injury to raw silk in the transit, 3988, 3989.

Necessity for increasing the duty on foreign thrown silk, 3990, 3991—More advantageous to work on commission than for private use, 3992-3995—Silk not thrown better at Manchester than in the West of England, 3997-4001—Manufacture could not be carried on so cheap near London as in the West, 4002, 4003—Silk not sent from Manchester to the West lately for throwing, 4004—Principally females employed, 4005—Healthy and domestic employment, 4006, 4007—No means of subsistence if dismissed, 4008—Number who have been dismissed, 4009—Protection that should be granted to the throwster, 4010—Depreciation in the value of machinery, 4011, 4012—Bengal and Turkey silks do not afford employment for mills in the West of England, 4013-4017—Improvement in throwing in the last sixty years, 4019—Means of competing with disadvantages thereby, 4020—Mills disadvantageously situate are thrown out of employ, 4021-4023—Bengal silk would not employ so many as half the quantity of Italian, 4024—Reason for small increase in the importation of thrown silk, 4025—Work cannot be continued at the present wages, 4026, 4027—Inducement of profit to the Italian to send his raw silk here, 4028—How importation of foreign manufactured goods affects the throwster, 4029, 4030.

Warehousemen.

Warehousemen. Manner in which warehousemen's business is conducted, and how far a benefit to the public, *Dillon* 7642-7655 — Examination upon the purchases by large warehousemen, and how they act upon profit or loss to the manufacturer, *Dillon* 7714-7729 — Manner in which the middle man between the manufacturer and consumer has benefited by the decrease of wages and the present system, *Ballance* 8475, 8478.

See also *Jobbing*.

Waste. More waste in manufacture of poor than rich goods, *Ballance* 8584 — Absence of waste does not depend on its being thrown directly after being reeled, *Bowring* 8879, 8880 — Duty on waste silk and drawback on exportation, *Tootal* 9585-9587.

See also *Importation*. *Silk*, VIII.

Watered Silks. Are imported from France, *Clay* 6812, 6813 — Preference of French watered silks over English, *Clay* 6937-6941 — Importation of watered silks from France, and labour displaced thereby, *Ballance* 8700-8704.

WEAVERS.

1. Generally.

2. Time lost by them.

3. At Coventry.

4. At Foleshill.

5. At Macclesfield.

6. At Manchester.

7. At Spitalfields.

8. In Foreign Countries.

i. Generally.

ii. At Avignon.

iii. At St. Etienne.

iv. At Lyons.

1. Generally.

They would be benefited by taking off the import duty on foreign thrown silk, *Royle* 3328, 3329 — Why reduction of duty would not prejudice the operative, *Gibson* 5041, 5042 — Reduction in the employment of weavers during the last six years, *Stone* 5763, 5764; *Wadden* 9980, 9981 — Consequent distress of weavers from reduction of manufacturers, *Ballance* 8448 — Examination as to the use of the fly shuttle, *Ballance* 8550-8555; *Wallis* 10962-10965 — Advantage to the English weaver over the French from poor's rates, *Bowring* 9804, 9805 — Little difficulty in cotton weavers being employed in silk weaving, *Schwabe* 9846-9852 — Calculation as to wages and to price of food, 1824, 1826 and 1831, showing how much per cent. the weaver is worse off than before opening the Ports, *Wadden* 9977-9979, 9982.

How weavers out of employment are supported, *Wadden* 10085 — Distress of weavers since the admission of foreign goods, and bad moral consequences therefrom, *Stone* 6341-6345; *Wadden* 9983; *Bennett* 10721-10726; *Wallis* 10816-10818, 10823, 10881-10883; *Prout* 11638, 11656, 11669, 11676; *Smith* 11683; *Cope* 11708; *Kelly* 11825-11829; *Beckwith* 11976-11978 — Whether distress greater or of longer duration formerly than at present, *Stone* 6346-6352; *Wallis* 10824-10828 — They do not work so well working more hours, *Bennett* 10738 — How far all the weavers employed in 1830, *Wallis* 10834 — Extent of employment of weavers at present, *Wallis* 10848-10850.

Feeling among them that Government is indifferent to their situation, *Smith* 11682 — The acquiring information by them superseded by the demands of nature, *Smith* 11685, 11686 — Proportion of time they have to wait for work, and number constantly out of employment, *Smith* 11692 — Instance of receiving parish relief when in work, *Smith* 11693 — Irregularity of work and rate of wages since 1825, *Cope* 11704-11706 — Previous employment in the cotton trade, and reasons for leaving it for the silk trade, *Rowbotham* 11722, 11723 — Increase of weavers from the cotton trade, 1816-1820, did not hurt the silk trade, or much reduce wages, *Rowbotham* 11724-11726 — They can obtain more by sweeping the streets than at their work, *Rowbotham* 11730 — No ribbon weavers in Lancashire, *Rowbotham* 11739.

Few cotton weavers can now turn their hand to silk weaving, *Rowbotham* 11741 — Increase of the broad silk trade, and prosperity of the weavers, 1819-1825, *Kelly* 11819-11825 — Reasons silk weavers cannot shift their trade, *Kelly* 11827 — Premium formerly given weavers to learn the art, *Kelly* 11830, 11831 — Weavers know each others distress better than master manufacturers can, *Scott* 11862 — No difference of opinion among weavers as to the cause of their distress, *Scott* 11863, 11864 — Why weavers have better knowledge of the quality of silk working up than masters, *Scott* 11881 — Witness's weavers at Coggeshall employed upon low works, *Beckwith* 11976-11978.

2. Time lost by them.

Time occupied in preparing work is a loss to the workman, besides in some instances the want of work altogether, *Smith* 1338-1340 — Proportion time lost in changing pattern bears to the time taken in making the article, *Smith* 1341-1346; *Perkins* 1563; 678.

WEAVERS—continued.2. *Time lost by them*—continued.

Cox 2064-2071—Loss of time by weavers more now than formerly, *Brocklehurst* 11458—Manner in which they unavoidably lose time in their work, *Cope* 11700-11702—Examination upon the time taken in making alterations in a pattern and loss to the weaver thereby, and whether less time could be occupied therein, *Pittifor* 12029-12043, 12058, 12059—There would not be much more time or advantage gained by warping whole grosses than half grosses, *Pittifor* 12044-12046—Loss of time greater in the manufacture of fancy than plain ribbons, *Pittifor* 12047, 12048.

3. *At Coventry.*

Morals of the work people are worse from the poverty to which they are reduced, *Brunskill* 195—Their distress and causes thereof, *Brunskill* 339-342, 455, 456; *Cheeper* 823-825, 904-907; *Poole* 943, 944, 952; *Goode* 1201-1208; *Smith* 1258; *Marston* 1358-1360—Their employment in the black ribbon trade, *Brunskill* 349-353—Difference in the quantity of work of the engine loom and single hand, *Brunskill* 343-348—Employment for them till the foreigners found out the channels of trade, *Brunskill* 495, 496—More out of employment now than 1818, *Poole* 991, 992, 1081—Meeting of them in November, *Poole* 1013—How far the use of the engine loom tends to throw workmen out of employment, *Poole* 1129, 1130; *Marston* 1492, 1493—Increase or decrease in the number of weavers and population, 1821-1831, *Poole* 1165-1173—How many months full employment for them last year, *Poole* 1178-1182—How far a weaver's family assist him, *Poole* 1183, 1184—Extent to which the consumption of silk will tend to show the beneficial employment of the operative, *Poole* 1186-1191—Number of persons employed in the plain branch, and present distress, *Goode* 1201-1208—Number of Jacquard weavers at Coventry, *Smith* 1257—How long unemployed last year, *Smith* 1260, 1272-1278; *Perkins* 1565, 1566—Jacquard trade as good in 1826 as at any other time *Smith* 1271.

Principal employment of the weavers now is in altering patterns for which there is no wages, *Smith* 1300-1307, 1323-1335—How far increase of population employed, *Marston* 1383-1392, 1501—Increase or depression of the weaving trade, 1814-1818, *Marston* 1414-1417—Full employment in 1826 in the manufacture of brocade gauzes which have since been made abroad, *Marston* 1426-1436—Number of people employed by the undertakers, *Marston* 1470-1475—Comparison of the state of weavers formerly and at present from the rate of wages, *Marston* 1494-1500—Increasing the price of ribbons by reduction of wages would not afford more employment, *Jacombs* 1829—Calculation of employment to the British manufacturer that has been lost by importation of French ribbons in 1831, *Ratliff* 1836; *Cox* 2203—Increased consumption of silk does not benefit the labourer, *Cox* 2105, 2106—How far single hand weavers employed, and amount of wages, *Cox* 2113, 2114—More men have been employed since 1826, but at lower wages, *Merry* 2610, 2611—Weavers fully employed at Coventry, *Baggallay* 7441-7446.

4. *At Foleshill.*

Number of operatives at Foleshill employed and unemployed, and how the account obtained, *Marston* 1353-1357, 1361, 1362.

5. *At Macclesfield.*

They have no other employment when out of work at Macclesfield, *Brocklehurst* 11459; *Middlehurst* 11810—Distressed state of Irish weavers at Macclesfield, *Brocklehurst* 11460-11462—Average wages of weavers at Macclesfield, their present distressed state and former comfortable situation attributed to the introduction of foreign manufactured goods, *Smith* 11677-11681; *Cope* 11707-11709, 11714; *Rowbotham* 11726-11729, 11744.

6. *At Manchester.*

Contests with weavers at Manchester, hours of labour, and description of looms, *Harter* 9384-9407, 9413-9420—Employment of weavers at Manchester between silk and cotton trade, *Harter* 9408, 9409—Distress of weavers of broad goods last winter, *Harter* 9489—Manchester people alternately work between silk and cotton according to the wages in either trade, *Middlehurst* 11809—Prosperous state of weavers at Manchester to 1826, and distress since, *Scott* 11855, 11861—Commencement of the union among the Manchester weavers in 1826, and manner of conducting it, *Scott* 11871-11873.

7. *At Spitalfields.*

How distress of Spitalfields' weavers to be alleviated, *Stone* 5847-5850—Distress of Spitalfields' weavers, and periods thereof, *Ballance* 8364-8366—Good condition of Spitalfields' weavers ten years ago, and alteration for the worse since, *Wadden* 9967, 9975-9977—Number of Spitalfields' weavers out of employment, and instances of their absconding to America with their employers' manufactured property, *Wadden* 10084-10086; *Moore* 11280-11285—Distress of Spitalfields' weavers greater since 1826 than formerly, from their being more want of work and want of price, *Poyton* 10979—Extent of parish relief to weavers, *Poyton* 10994, 10995—Impossibility of earning a livelihood

WEAVERS—continued.7. *At Spitalfields*—continued.

livehood in Spitalfields at present, *Bolter* 11000—Injury to workmen and shopkeepers in Spitalfields from repeal of prohibitory laws, *Bolter* 11003—Difficulty of weavers obtaining work in other branches after serving an apprenticeship, *Bolter* 11008—Examination upon the employment of weavers in the silk and cotton trade at Spitalfields and Manchester previous to and since 1826, *Ballance* 11032-11045—Reduction in wages and consequent destitution of weavers therefrom, *Moore* 11277-11279—Examination upon the case of the Spitalfields' weavers not being properly before the Committee, and upon the number of looms employed by manufacturers and by the Trades' Committee, *Stone* 12679-12685—Competition with Spitalfields' weavers not only in the London districts but with the cotton weavers, *Stone* 12715.

See also *Spitalfields' District*.

8. *In Foreign Countries*.

i. Generally.

ii. At Avignon.

iii. At St. Etienne.

iv. At Lyons.

i. Generally.

Comparison of advantages of the French weaver over the English, *Ratliff* 1906, 1907; *Doxat* 4229—Higher price paid by the English than the French weaver, *Doxat* 4225—Calculation of earnings and expenses of French weavers, *Bowring* 9057, 9058—Description of diet of weavers, *Bowring* 9062-9064—Expense of changing patterns in France and England, *Bowring* 9797-9802—Advantage of the English weaver over the French from poor rates, *Bowring* 9804, 9805.

ii. At Avignon.

Hours of labour, earnings and general condition of weavers at Avignon, *Bowring* 9111-9113—Their opinion as to competition with foreign markets, *Bowring* 9114.

iii. At St. Etienne.

Bad state of weavers at St. Etienne, and from what causes, *Bottrell* 7930-7934—Social condition of them, *Bowring* 9029.

iv. At Lyons.

Average production of weavers per day at Lyons, *Bowring* 8916—Hours of labour of weavers in Lyons, *Bowring* 8917-8919—System of work pursued by the weavers; their wages, and cost of living, 8925-8928—Amount paid by the Lyonesse weaver for taxes, *Bowring* 8929—Communications from two weavers relative to the method of living, hours of labour, wages, &c. of weavers at Lyons, *Bowring* 8930—Association among weavers for their protection, *Bowring* 8932, 8933—Expense of changing patterns, and disputes between masters and weavers thereupon, and how affected by order trade, *Bowring* 8948-8949.

See also *De Ponilly & Co. Etienne, St. Labour. Looms. Spitalfields District. Wages*.

Weavers' Company. Merchants in London cannot exercise their trade without being free of the Weavers' Company, *Bowring* 9044.

Weavers' Hall. See *Trade Committee*.

Weight. Weight of bales of 1830-31 lighter, *Stone* 6059—Reduction in the weight of silk in the process of manufacture in France, *Ballance* 8497-8504—Calculations founded upon weight as fallacious from difference in value, *Ballance* 8694—Consumption by weight not a fair criterion of the prosperity of trade from coarser fabrics taking less value in labour, *Poyton* 10990, 10991.

See also *Reeling. Silk, VII. 3*.

West of England. See *Manchester. Throwing Mills*.

Wheat. Average price of, 1815-1831, *Poole* 965.

Wholesale Dealers. Increase of French stocks, and Returns by wholesale dealers since 1828, *Stephens* 2950-2955, 2969, 2970—Accounts opened with a greater number of wholesale dealers formerly than at present, *Stephens* 2997-3007, 3016-3020.

Willmott, Thomas, (Analysis of his Evidence.) Silk throwster at Sherborne, in Dorsetshire, on commission, 4659-4662—When mills erected, and by what power worked, 4663—One mill in the town discontinued, 4664—Good state of trade, and employment of hands before 1826, 4665-4669—Decrease in the employment of hands since 1829, and causes, 4670, 4671—Increase of poor's rates in Sherborne, 4672-4679, 4724—Amount of assessments for poor's rate, 1816-1832, 4679—Amount of population, no increase therein, 4680, 4681—What number of hands employed belong to the parish, 4682-4684—Reduction of wages, present rate and number of hours employed, 4685-678.

Willmott, Thomas, (Analysis of his Evidence)—continued.

4697, 4721-4723 — Amount paid for winding, and amount per week that can be earned thereby, 4698-4711 — Mill people more important than the winders, 4712, 4713 — What other employment for the people besides silk winding, 4714-4718 — Want of employment and lower wages in other branches, 4720 — Depression of trade attributed to the importation of foreign thrown manufactured silks, 4725, 4767 — Manufacture of coarse silks require less labour and hands than fine, 4727-4730.

Increase in the manufacture of fine silks up to 1826, and decrease since, 4731-4736 — Duties that would relieve the throwing trade, 4737, 4738 — Ruin to throwsters by further reducing duties, 4739 — Reduction of profits and labour by previous reduction of duties, 4740-4744 — Whether an equal reduction in agricultural wages, 4745, 4746 — Effect of reduction of duty in 1826, on price of throwing and wages, 4747-4750 — From what houses silk supplied for throwing, 4751-4753 — Distance not considered a disadvantage, 4754, 4755 — Improvements in throwing mills, 4757 — Revolutions of spindles per minute, 4758-4761 — Loss of trade not owing to others throwing cheaper, 4762 — How far erection of new mills has taken away employment of the old ones, 4763-4766 — Comparison of mills in different parts of England, 4768-4774 — Trade progressively improving previous to 1826, 4775-4787 — Difference in the price of throwing, 4788, 4789 — Trade most flourishing under high duties, 4790-4795 — Prohibition would prevent smuggling, 4796-4799 — Increase of poor's rates from decrease of employment in the silk mills, 4800 — State of operatives in the glove trade, 4801-4803.

Winding. Wages of women employed in winding, and where done, and amount of work per week in Italy, *Caffi* 7194-7208.

See also *Operatives. Wages*, 1.

Windsor Castle. See *De Ponilly & Co.*

Women. See *Wages*.

Woodhouse, Mr. See *Looms*.

Woollen Trade. See *Cotton*.

Wright, John, (Analysis of his Evidence.) Operative silk throwster at Macclesfield, 11747 — No distress, 1801-1826, and great distress since, 11748-11750 — How distress attributed to the alteration of the law, 11751 — Smuggling carried on upon a small scale till reduction of duties, 11752 — Improvements in machinery due to Macclesfield and Coventry, 11753 — Comparison between Manchester and Macclesfield machinery, 11754, 11755 — Horse power actually at work at Manchester, 11756 — Horse power idle at Manchester and Congleton, 11757 — Prosperous state of the Manchester throwing trade to 1826, and depression therein since, 11758 — Reduction of duty on thrown silk would ruin the throwster, and make the manufacturer dependent upon Italy for thrown silk, 11759 — Since reduction of duties, silk trade has changed from light to heavy goods, and from fine to round silk, 11760.

(Second Examination.) Less labour in working coarse goods, and showing the export trade not so valuable as was supposed, 11761 — Reasons for the throwster having right to protection, 11762, 11763 — No other trade can employ hands idle in the silk trade, 11764 — English thrown silk rather superior to Italian, 11766, 11767 — Italian silk formerly thrown, but now changed for Bengal; very little Italian silk now thrown, 11768-11775 — Number of hands employed in throwing, and rates of wages at present and 1810-1824, 11776-11781.

Report from Select Committee on the Silk Trade with the minutes of
evidence, an appendix and index ; ordered to be printed 2. August 1832

[London] [1832]
